a presystolic murmur in certain cases of adherent pericardium. **flag s.**, dyspigmentation of the hair occurring as a band of light hair, seen in children who have recovered from kwashiorkor. **flush-tank s.**, the passage of a large amount of urine and the coincident temporary disappearance of a lumbar swelling; a sign of hydronephrosis. **forearm s.**, Leri's s. **formication s.**, Tinel's s. **Fournier's s.**, 1. the sharp delimitation characteristic of a syphilitic skin lesion. 2. saber shin. **Fränkel's s.**, excessive range of passive movement of the hip joint, indicating diminished tone of the surrounding musculature in tabes dorsalis. **Friedreich's s.**, 1. diastolic collapse of the cervical veins due to adherent pericardium. 2. lowering of the pitch of the percussion note over an area of cavitation during forced inspiration; called also *Friedreich's change of note*. **Froment's paper s.**, flexion of the distal phalanx of the thumb when a sheet of paper is held between the thumb and index finger; seen in affections of the ulnar nerve. **Fürbringer's s.**, in cases of subphrenic abscess, the respiratory movements will be transmitted to a needle inserted into the abscess, which is thus distinguished from abscess above the diaphragm. **Gaenslen's s.**, with the patient on his back on the operating table, the knee and hip of one leg are held in flexed position by the patient, while the other leg, hanging over the edge of the table, is pressed down by the examiner to produce hyperextension of the hip; pain occurs on the affected side in lumbosacral disease. **Galeazzi's s.**, in congenital dislocation of the hip, the dislocated side is shorter when both thighs are flexed 90 degrees. **Gangolphe's s.**, a serosanguineous abdominal effusion in strangulated hernia. **Garel's s.**, Heryng's s. **Gerhardt's s.**, Biermer's s. **Gianelli's s.**, Tournay's s. **Gifford's s.**, inability to evert the upper lid; seen in Graves' disease. **Gilbert's s.**, opsuria indicative of hepatic cirrhosis. **Glasgow's s.**, a systolic sound in the brachial artery in latent aneurysm of the aorta. **Goggia's s.**, in health, the fibrillary contraction produced by striking and then pinching the brachial biceps extends throughout the whole muscle; in debilitating disease, such as typhoid fever, the contraction is local. **Goldstein's s.**, wide space of distance between the great toe and the adjoining toe seen in cretinism and Down's syndrome. **Goldthwait's s.**, the patient lying supine, his leg is raised by the examiner with one hand, the other hand being placed under the patient's lower back; leverage is then applied to the side of the pelvis. If pain is felt by the patient before the lumbar spine is moved, the lesion is a sprain of the sacroiliac joint. If pain does not appear until after the lumbar spine moves, the lesion is in the sacroiliac or lumbosacral articulation. **Golonbov's s.**, tenderness on percussion over the tibia in chlorosis. **Goodell's s.**, if the woman's cervix uteri is soft she is pregnant; if it is hard she is not. **Gordon's s.**, finger phenomenon (def. 1). **Gott-ron's s.**, bluish red plaques on the backs of the fingers, especially over the knuckles, seen in dermatomyositis, and sometimes preceding the onset of muscle weakness by weeks or as long as two to three years. **Gowers's s.**, abrupt intermittent oscillation of the iris under the influence of light; seen in certain stages of tabes dorsalis. **Graefe's s.**, failure of the upper lid to move downward promptly and evenly with the eyeball in looking downward, instead it moves tardily and jerkily; seen in Graves' disease. **Grancher's s.**, equality of pitch between expiratory and inspiratory murmurs; a sign of obstruction to expiration. **Granger's s.**, if in the radiograph of an infant two years old or less, the anterior wall of the lateral sinus is visible, extensive destruction of the mastoid is indicated. **Grasset's s.**, **Grasset-Bychowski s.**, Grasset's phenomenon. **Grasset-Gaussel-Hoover s.**, when the patient in a recumbent position attempts to lift the paretic limb, there is greater downward pressure on the examiner's hand with the sound limb than is observed in the test with a normal person. **Greene's s.**, outward displacement of the free cardiac border by the expiratory movement in pleuritic effusion; it is detected by percussion. **Grey Turner's s.**, Turner's s. **Griesinger's s.**, edematous swelling behind the mastoid process; seen in thrombosis of the transverse sinus. **Griffith's s.**, lower lid lag on upward gaze, a sign of Graves' disease. **Grisolle's s.**, if, on stretching an affected portion of the skin, the papule becomes impalpable to the touch, the eruption is caused by measles; if, on the contrary, the papule can still be felt, the eruption is one of smallpox. **Grocco's s.**, 1. a sign of pleural effusion consisting in the presence of a triangular area of dullness (*Grocco's*, *Korányi-Grocco*, *paravertebral*, or *Rauchfuss' triangle*) on the back, on the side opposite to that on which the effusion is present. Called also *Grocco's triangular dullness*. 2. acute dilatation of the heart produced by muscular effort in the early stages of Graves' disease. 3. extension of the liver dullness to the left of the midspinal line, indicating enlargement of the organ. **Grossman's s.**, dilatation of the heart as a sign of pulmonary tuberculosis. **Gubler's s.**, see under *tumor*. **Guilland's s.**, brisk flexion at the hip and knee joint when the contralateral quadriceps muscle is pinched; a sign of meningeal irritation. **Gunn's s.**, a raising of a ptosed eyelid on opening the mouth and moving the jaw toward the opposite side. **Gunn's crossing s.**, a crossing of an artery over a vein in the fundus of the eye, indicative of essential hypertension. **Gunn's pupillary s.**, swinging flashlight s. **Guttmann's s.**, a humming sound heard over the thyroid in Graves' disease.

Guye's s., aprosexia in children with adenoids. **Guyon's s.**, the ballottement and palpation of a floating kidney. **Hahn's s.**, persistent rotation of the head from side to side in cerebellar disease of childhood. **Hall's s.**, a tracheal diastolic shock felt in aneurysm of the aorta. **halo s.**, a halo effect produced in the roentgenogram of the fetal head between the subcutaneous fat and the cranium; said to be indicative of intrauterine death of the fetus. **Hamman's s.**, a loud crunching, clicking sound, synchronous with the heart beat, heard in mediastinal emphysema; it is pathognomonic for pneumopericardium. **harlequin s.**, reddening of the lower half of the laterally recumbent body and blanching of the upper half, due to temporary vasomotor disturbance in newborn infants. **Hatchcock's s.**, tenderness on running the finger toward the angle of the jaw in mumps. **Haudek's s.**, a projecting shadow in radiographs of penetrating gastric ulcer, due to settlement of bismuth in pathologic niches of the stomach wall; called also *Haudek's niche*. **Heberden's s's.**, see under *node*. **Heife-Turner s.**, a widening and change in contour of the normal obturator x-ray shadow, indicative of pathologic condition of the hip joint; called also *obturator s.* **Hegar's s.**, softening of the lower segment of the uterus, an indication of pregnancy. **Heilbronner's s.**, see under *thigh*. **Heim-Kreysig s.**, a depression of the intercostal spaces occurring along with the cardiac systole in adherent pericarditis. **Helbing's s.**, medialward curving of the Achilles tendon as viewed from behind; seen in flatfoot. **Hellat's s.** (*obs.*), in mastoid suppuration, a tuning fork placed on the diseased area is heard for a shorter time than when placed on any other part. **Hellendall's s.**, Cullen's s. **Hennebert's s.**, in the labyrinthitis of congenital syphilis, compression of the air in the external auditory canal produces a rotatory nystagmus to the diseased side; rarefaction of the air in the canal produces a nystagmus to the opposite side. Called also *pneumatic s.* or *test*. **Henning's s.**, an angular deformity of the angulus of the stomach, in which it assumes a Gothic arch shape; a sign of chronic gastric ulcer. Called also *Gothic arch formation*. **Heryng's s.**, an infraorbital shadow produced by fluid or by a hypertrophied, hyperplastic, or neoplastic membrane in the maxillary antrum and observable by electric illumination of the buccal cavity; seen in diseases of the antrum of Highmore (maxillary sinus). **Hicks' s.**, light, usually painless, irregular uterine contractions during pregnancy, gradually increasing in intensity and frequency and becoming more rhythmic during the third trimester. Called also *Braxton Hicks' or Hicks' contractions*, and *Braxton Hicks' s.* **Higouménakis' s.**, clavicular s. **Hill's s.**, disproportionate femoral systolic hypertension. **Hirschberg's s.**, adduction, inversion, and slight plantar flexion of the foot on stroking the inner aspect (not the sole) of the foot from the great toe to the heel; called also *adductor reflex of foot*. **Hochsinger's s.**, 1. indicanuria in the tuberculosis of childhood. 2. see under *phenomenon*. **Hoehne's s.**, absence of uterine contractions during delivery despite repeated injections of oxytocics, regarded as a sign of rupture of the uterus. **Hoffmann's s.**, 1. increased mechanical irritability of the sensory nerves in tetany; the ulnar nerve is usually tested. 2. a sudden nipping of the nail of the index, middle, or ring finger produces flexion of the terminal phalanx of the thumb and of the second and third phalanx of some other finger; called also *digital reflex*, *Hoffmann's reflex*, and *Trömmer's s.* **Holmes' s.**, rebound phenomenon. **Homans' s.**, discomfort behind the knee on forced dorsiflexion of the foot; a sign of thrombosis in the veins of the calf. **Hoover's s.**, 1. in the normal state or in genuine paralysis, if the patient, lying on a couch, is directed to press the leg against the couch, there will be a lifting movement seen in the other leg; this phenomenon is absent in hysteria and malingering. 2. movement of the costal margins toward the midline in inspiration, occurring bilaterally in pulmonary emphysema and unilaterally in conditions causing flattening of the diaphragm, such as pleural effusion and pneumothorax. **Hope's s.**, double heart beat in aortic aneurysm. **Horn's s.**, pain produced by traction on the right spermatic cord in acute appendicitis. **Horner's s.**, Spalding's s. **Horsley's s.**, if there is a difference in the temperature in the two axillae, the higher temperature will be on the paralyzed side. **Hoyne's s.**, a sign elicited in paralytic or nonparalytic poliomyelitis: with the patient in the supine position, his head falls back when his shoulders are elevated. **Huchard's s.**, paradoxical percussion resonance in pulmonary edema. **Hueter's s.**, the absence of the transmission of osseous vibration in cases of fracture with fibrous material interposed between the fragments. **Human's s.**, chin-retraction s. **Huntington's s.**, the patient is recumbent, with his legs hanging over the edge of a table, and is told to cough. If the coughing produces flexion of the thigh and extension of the leg in the paralyzed limb, it indicates that the paralysis is due to an upper motor neuron lesion. **Hutchinson's s.**, 1. interstitial keratitis and a dull-red discoloration of the cornea in inherited syphilis. 2. see under *tooth*. 3. see under *triad*. **hyperkinesis s.**, see *Claude's hyperkinesis s.* **interosseal s.**, Souques's phenomenon. **Itard-Cholewa s.**, anesthesia of the tympanic membrane in otosclerosis. **Jaccoud's s.**, prominence of the aorta in the suprasternal notch. **Jackson's s.**, 1. [Chevalier Jackson] see *asthmatoïd wheeze*, under *wheeze*. 2. [James Jackson, Jr.] prolongation of the expira-

tory sound over the affected area in pulmonary tuberculosis. **Jellinek's s.**, the pigmentation, usually brownish, occurring on the lid margins in many cases of hyperparathyroidism; called also *Rasin's s.* **Jendrassik's s.**, paralysis of the extraocular muscles in Graves' disease. **Joffroy's s.**, absence of forehead wrinkling in Graves' disease when the patient suddenly turns his eye upward. **jugular s.**, Queckenstedt's s. **Jürgensen's s.**, delicate crepitation sometimes heard in auscultation in acute pulmonary tuberculosis. **Kanavel's s.**, a point of maximum tenderness in the palm 1 inch proximal to the base of the little finger in infection of tendon sheath. **Kantor's s.**, a thin stringlike shadow in the roentgenogram of the colon through the filling defect; seen in colitis and regional ileitis. **Karplus' s.**, a modification of the vocal resonance, in which, on auscultation over a pleural effusion, the vowel *u* spoken by the patient is heard as *a*. **Kashida's s.**, spasm of muscles and hyperesthesia produced by applying heat or cold; seen in tetany. **Keen's s.**, increased diameter of the leg at the malleoli in Pott's fracture of the fibula. **Kehr's s.**, severe pain in the left shoulder in some cases of rupture of the spleen. **Kellock's s.**, increase of the vibration of the ribs on sharp percussion with the right hand, the left hand being placed firmly on the thorax under the nipple; a sign of pleural effusion. **Kelly's s.**, if the ureter is teased with an artery forceps, it will contract like a snake or worm. **Kerandel's s.**, deep hyperesthesia accompanied by pain, often retarded, after some slight blow upon a bony projection of the body; seen in African trypanosomiasis. **Kergaradec's s.**, uterine soufflé. **Kernig's s.**, in dorsal decubitus, the patient can easily and completely extend the leg; in the sitting posture or when lying with the thigh flexed upon the abdomen the leg cannot be completely extended; it is a sign of meningitis. **Kerr's s.**, alteration of the texture of the skin below the somatic level in lesions of the spinal cord. **Kestenbaum's s.**, a decrease in number of arterioles traversing the optic disk margin as a criterion for optic atrophy. **Kleist's s.**, the fingers of the patient when gently elevated by the fingers of the examiner will hook into the examiner's fingers; indicative of frontal and thalamic lesions. **Klemm's s.**, in the roentgenogram in chronic appendicitis, there is often an indication of tympanites in the right lower quadrant. **Klippel-Feil s.**, flexion and adduction of the thumb when the patient's flexed fingers are quickly extended by the examiner; indicative of pyramidal tract disease. **Knie's s.**, unequal dilatation of the pupils in Graves' disease. **Kocher's s.**, a sign of Graves' disease: the examiner places his hand on a level with the patient's eyes and then lifts it higher; the patient's upper lid springs up more quickly than does his eyeball. **Koplik's s.**, see under *spot*. **Korányi's s.**, increase of resonance over the dorsal segment on percussion of the spinal processes of the thoracic vertebrae; a sign of pleural effusion. **Kreysig's s.**, Heim-Kreysig s. **Krisovski's (Krisowski's) s.**, cicatricial lines which radiate from the mouth in congenital syphilis. **Kussmaul's s.**, 1. distention of the jugular veins on inspiration, seen in constrictive pericarditis and mediastinal tumor. 2. convulsions and coma in stomach disease as a result of toxin absorption. 3. paradoxical pulse. **Küstner's s.**, a cystic tumor on the median line anterior to the uterus in cases of ovarian dermoids. **Laborde's s.**, Cloquet's needle s. **Ladin's s.**, a sign of pregnancy, consisting in a circular elastic area, which offers a sensation of fluctuation to the examining finger, situated in the median line of the anterior surface of the body of the uterus just above the junction of the body and the cervix. This area increases in size as pregnancy advances. **Laennec's s.**, the occurrence of rounded, gelatinous masses (Laennec's pearls) in the sputum of bronchial asthma. **Lafora's s.**, picking of the nose regarded as an early sign of cerebrospinal meningitis. **Langoria's s.**, relaxation of the extensor muscles of the thigh; a symptom of intracapsular fracture of the femur. **Larcher's s.**, grayish, cloudy discolorations of the conjunctivae that are speedily blackened; a sign of death. **Lasègue's s.**, in sciatica, flexion of the hip is painful when the knee is extended, but painless when the knee is flexed. This distinguishes the disorder from disease of the hip joint. **Laugier's s.**, a condition in which the styloid process of the radius and of the ulna are on the same level; seen in fracture of the lower part of the radius. **leg s.**, 1. Schlesinger's s. 2. Neri's s. **Leichtenstern's s.**, in cerebrospinal meningitis, tapping lightly any bone of the extremities causes the patient to wince suddenly. **Lennhoff's s.**, a furrow appearing on deep inspiration below the lowest rib and above an echinococcus cyst of the liver. **Leri's s.**, passive flexion of the hand and wrist of the affected side in hemiplegia shows no normal flexion at the elbow. **Leser-Trélat s.**, telangiectases, warts, and pigmented spots that appear suddenly and increase rapidly in number, and may indicate abdominal cancer in the elderly. It may take the form of acanthosis nigricans, dermatomyositis, amyloidosis, herpes zoster, or senile keratoses. **Leudet's s.**, see under *tinnitus*. **Levasseur's s.**, the failure of the scarificator and cupping-glass to draw blood; a sign of death. **Lhermitte's s.**, the development of sudden, transient, electric-like shocks spreading down the body when the patient flexes the head forward; seen mainly in multiple sclerosis but also in compression and other disorders of the cervical cord. **Libman's s.**, extreme tenderness, but without pain on pressure, of the tips of the mastoid bones.

Lichtheim's s., in subcortical aphasia, although the patient cannot speak, he is able to indicate with his fingers the number of syllables in the word he is thinking of. **ligature s.**, in hematuria, the development of ecchymoses in the distal part of a limb to which a ligature has been applied. **Linder's s.**, with the patient recumbent or sitting with outstretched legs, passive flexion of the head will cause pain in the leg or the lumbar region in sciatica. **Litten's s.**, see under *phenomenon*. **Livierato's s.**, vasoconstriction when the abdominal sympathetic nerve is irritated by striking the anterior abdomen along the xiphoid-umbilical line. **Lloyd's s.**, a symptom of renal calculus, consisting of pain in the loin on deep percussion over the kidney, even when pressure causes no pain. **Lombardi's s.**, the appearance of venous varicosities in the region of the spinous processes of the seventh cervical and first three thoracic vertebrae; seen in early pulmonary tuberculosis. **Lorenz's s.**, ankylotic rigidity of the spinal column, especially of the thoracic and lumbar segments; sometimes seen in incipient tuberculosis. **Lucas' s.**, distention of the abdomen in the early stages of rickets. **Luca-tello's s.**, the external (axillary) temperature is higher than the oral by 0.2–0.3 degree in hyperthyroid patients. **Ludloff's s.**, swelling and ecchymosis at the base of Scarpa's triangle together with inability to raise the thigh when in a sitting posture, a sign of traumatic separation of the epiphysis of the greater trochanter. **Lust's s.**, see under *phenomenon*. **McBurney's s.**, tenderness at a point two-thirds the distance from the umbilicus to the anterior superior spine of the ilium; indicative of appendicitis. See also under *point*. **Macewen's s.**, on percussion of the skull behind the junction of the frontal, temporal, and parietal bones, there is a more resonant note than normal in internal hydrocephalus and cerebral abscess. **McGinn-White s.**, a Q wave and late inversion of the T wave in lead III, low S-T intervals and T waves in lead II, and inverted T waves in chest leads V₂ and V₃, the electrocardiographic evidence of right ventricular dilatation due to massive pulmonary embolism, plus the clinical signs of acute cor pulmonale. **McMurray s.**, occurrence of a cartilage click during manipulation of the knee; indicative of meniscal injury. **Magendie's s.**, **Magendie-Hertwig s.**, skew deviation. **Magnan's s.**, see under *symptom*. **Mangus' s.**, after death, light ligation of a finger causes no visible change in its distal portion. **Mahler's s.**, a steady increase of pulse rate without corresponding elevation of temperature; seen in thrombosis. **Maisonneuve's s.**, marked hyperextensibility of the hand; a symptom of Colles' fracture. **Mann's s.**, 1. in Graves' disease the two eyes appear not to be on the same level. 2. lessened resistance of the scalp to a constant electric current; seen in certain traumatic neuroses. Called also *Dixon Mann's s.* **Mannkopf's s.**, increase in the frequency of the pulse on pressure over a painful spot; not present in simulated pain. **Mara-ñón's s.**, a vasomotor reaction following stimulation of the skin over the throat; seen in Graves' disease. **Marcus Gunn's pupillary s.**, swinging flashlight s. **Marfan's s.**, a red triangle at the tip of a coated tongue indicates typhoid fever; a rarely observed phenomenon. **Marie's s.**, tremor of the body or extremities in Graves' disease. **Marie-Foix s.**, withdrawal of lower leg on transverse pressure of tarsus or forced flexion of toes, even when the leg is incapable of voluntary movement. **Marin-nesco's s.**, Marinesco's succulent hand; see under *hand*. **Masi-ni's s.**, marked dorsal extension of the fingers and toes in mentally unstable children. **Mayo's s.**, relaxation of the muscles controlling the lower jaw, indicative of profound anesthesia. **Means' s.**, lag of the eyeball on upward gaze in Graves' disease. **Meltzer's s.**, loss of the normal second sound, heard on auscultation of the heart after swallowing; symptomatic of occlusion or contraction of the lower part of the esophagus. **Mendel-Bekhterev s.**, see under *reflex*. **meniscus s.**, the radio-scopic appearance of a crescentic shadow made by the crater of a gastric ulcer: when the convexity of the crescent points outward the ulcer is on the lesser curvature; when the convexity points downward the ulcer is distal to the angular incisure. **Mennell's s.**, an examining thumb is placed over the posterosuperior spine of the sacrum and then made to slide, first outward and then inward. If on pressure over the former point tenderness is detected, it is due to a sensitive deposit in the structures of the gluteal aspect of the posterosuperior spine. If the tenderness is over the inner point, it is probable that the superior ligaments of the sacral iliac joint are strained and sensitive. If the tenderness is increased by pressure backward on the anterosuperior aspect of the ilium and decreased by pulling forward the crest from behind, this is positive proof that it is caused by the sensitive ligaments. **Meunier's s.**, daily loss of weight in measles, following the incubative stage and preceding the eruptive stage. **Meyer's s.**, fornication of the hands and sometimes of the feet, experienced particularly after immersion of the extremities in water; once used to distinguish the eruptive stage of scarlet fever from other eruptions. **Michelson-Weiss s.** (*obs.*), in otitis media associated with tuberculosis of the lungs, the patient is able to hear his own respiratory sounds with his affected ear. **Milian's s.**, in subcutaneous inflammation of the head and face, the ears are not involved but in skin diseases they are. **Minor's s.**, the method of rising from a sitting position characteristic of the patient with sciatica; he supports himself on the healthy side,

placing one hand on the back, bending the affected leg and balancing on the healthy leg. **Mirchamp's s.**, when a sapid substance, such as vinegar, is applied to the mucous membrane of the tongue, a painful reflex secretion of saliva in the gland about to be affected is indicative of sialadenitis, e.g., mumps. **Möbius' s.**, inability to keep the eyeballs converged in Graves' disease; due to insufficiency of the internal recti muscles. **Moebius' s.**, Möbius' s. **Monteverde's s.**, failure of any response to the subcutaneous injection of ammonia; a sign of death. **Morquio's s.**, the patient lying supine resists all attempts to raise the trunk to a sitting posture until the legs are passively flexed; noticed in epidemic poliomyelitis. **Moschcowitz's s.**, see under *tests*. **Mosler's s.**, sternal tenderness in acute myeloblastic anemia. **moulage s.**, a waxy cast appearance of bowel segments, a roentgenographic sign of celiac disease. **Müller's s.**, a sign of aortic insufficiency consisting of pulsation of the uvula and redness of the tonsils and velum palati, occurring synchronously with the action of the heart. **Munson's s.**, abnormal bulging of the lower lid when the patient rolls his eyes downward, caused by abnormal curvature of the cornea (keratocornus). **Murat's s.**, in the tuberculous patient there is vibration of the affected side of the chest with a feeling of discomfort when speaking. **Murphy's s.**, a sign of gallbladder disease consisting of inability of the patient to take a deep inspiration when the physician's fingers are pressed deeply beneath the right costal arch, below the hepatic margin. **Musset's s.**, rhythmical jerking movement of the head; seen in cases of aortic aneurysm and aortic insufficiency. **Myerson's s.**, ready induction of blepharospasm when the frontalis muscle is tapped, a sign of Parkinson's disease. **neck s.**, Brudzinski's s., def. 1. **Negro s.**, cogwheel phenomenon. **Neri's s.**, 1. a sign of organic hemiplegia, consisting in the spontaneous bending of the knee of the affected side as the leg is passively lifted, the patient being in the dorsal position. 2. with the patient standing, forward bending of the trunk will cause flexion of the knee on the affected side in lumbosacral and iliosacral lesions. **niche s.**, Haudek's s. **Nicoladoni's s.**, Branham's s. **Nikolsky's s.**, easy separation of the outer portion of the epidermis from the basal layer on exertion of firm sliding pressure by the finger or thumb, as in pemphigus vulgaris and some other bullous diseases. **Ober's s.**, see under *tests*. **objective s.**, one that can be seen, heard, or felt by the diagnostician; called also *physical s.* **obturator s.**, 1. pain on outward pressure on the obturator foramen as a sign of inflammation in the sheath of the obturator nerve probably caused by appendicitis. 2. see *Hefke-Turner s.* **Oliver's s.**, tracheal tugging; see under *tugging*. **ophthalmoscopic s.**, as death approaches, the blood in the retinal vessels gradually ceases to move and the column of blood splits into fragments. **Oppenheim's s.**, dorsiflexion of the big toe on stroking downward the medial side of the tibia; seen in pyramidal tract disease. **orange-peel s.**, a sign for distinguishing lipoma: on compressing the tumor between the thumb and forefinger, it will be perceived that the skin overlying the mass is irregularly dimpled by the downward traction of the vertical trabeculae; called also *signe de peau d'orange*. **orbicularis s.**, in hemiplegia, inability to close the eye on the paralyzed side without closing the other. **Ortolani's s.**, see under *click*. **Osler's s.**, small, painful, erythematous swellings in the skin of the hands and feet in malignant endocarditis; Osler's nodes. **palmoplantar s.**, Filpovitch's s. **Parkinson's s.**, see under *facies*. **Parrot's s.**, 1. dilatation of the pupil on pinching the skin of the neck; seen in meningitis. 2. bony nodes on the outer table of the skull of infants with congenital syphilis, giving it a buttock shape. **Pastia's s.**, hemorrhagic lines appearing in body creases, as in the antecubital fossae, inguinal areas, and the wrists, during scarlet fever; they are visible at the onset of the rash and persist after its desquamation. **patent bronchus s.**, the radiologic finding of an unobstructed bronchus supplying a collapsed lung, lobe, or segment. **Patrick's s.**, see under *tests*. **Pende's s.**, André-Thomas s. **Perez's s.**, a friction sound heard over the sternum when the patient raises and drops his arms; a sign of mediastinal tumor or of aneurysm of the arch of the aorta. **peroneal s.**, dorsal flexion and abduction of the foot, a sign of latent tetany elicited by tapping the peroneal nerve just below the head of the fibula, while the knee is relaxed and slightly flexed. **Pfuhl's s.**, inspiration increases the force of flow in paracentesis in the case of subphrenic abscess, but lessens it in the case of pyopneumothorax. This distinction is lost when the diaphragm is paralyzed. **Pfuhl-Jaffé s.**, in pyopneumothorax the liquid issues from the exploratory puncture or incision with considerable force during inspiration; in true pneumothorax during expiration. **physical s.**, objective s. **Piltz's s.**, 1. attention reflex of pupil; see under *reflex*. 2. Westphal-Piltz phenomenon. **Pins' s.**, Ewart's s., def. 2. **Piotrowski's s.**, percussion of the anterior tibialis muscle produces dorsal flexion and supination of the foot. When this reflex is excessive it indicates organic disease of the central nervous system. Called also *anticus s.* or *reflex*. **Piskacek's s.**, asymmetrical enlargement of the corpus uteri, a sign of pregnancy. **Pitres' s.**, 1. hyperesthesia of the scrotum and testes in tabes dorsalis. 2. anterior deviation of the sternum in pleuritic effusion. **placental s.**, implantation bleeding. **plumb-line s.**, the estimation in sternal displacement by a

plumb-line in the diagnosis of pleuritic effusion. **Plummer's s.**, inability to step up onto a chair or to walk up steps, in Graves' disease. **pneumatic s.**, Hennebert's s. **Pool-Schlesinger s.**, Schlesinger's s. **Porter's s.**, tracheal tugging; see under *tugging*. **Potain's s.**, 1. extension of percussion dullness over the arch of the aorta, in dilatation of the aorta, from the manubrium to the third costal cartilage on the right-hand side. 2. timbre métallique. **Pottenger's s.**, 1. intercostal muscle rigidity on palpation in pulmonary and pleural inflammatory conditions. 2. different degrees of resistance on light touch palpation, noted (1) over solid organs when compared with hollow organs; (2) over foci of disease in the lungs and pleura when compared with that over normal organs. **Prehn's s.**, elevation and support of the scrotum will relieve the pain in epididymo-orchitis, but not in torsion of the testicle. **Prévost's s.**, conjugate deviation of the head and eyes, the eyes looking toward the affected hemisphere and away from the palsied extremities; seen in hemiplegia. **pronation s.**, 1. Babinski's s. (def. 5). 2. Strümpell's s. (def. 3). **pseudo-Babinski's s.**, in poliomyelitis the Babinski reflex is modified so that only the big toe is extended, because all the foot muscles except the dorsiflexors of the big toe are paralyzed. **pseudo-Graefe's s.**, slow descent of the upper lid on looking down, and quick ascent on looking up; seen in conditions other than Graves' disease. **puddle s.**, in examination for ascites, a method for detecting free fluid in the abdominal cavity. The patient lies prone for five minutes, then rises to his hands and knees. While the examiner lightly flicks a finger against one flank, a Bowles stethoscope is moved slowly from the most dependent part of the abdomen to the flank. That part of the ventral abdomen containing the fluid "puddle" shows a loss of high-frequency vibration, which will be detected as soon as the edge of the fluid is reached, indicating the amount of fluid. **pyramid s.**, **pyramidal s.**, any sign pointing to disease of the pyramidal tract. **Quant's s.**, a T-shaped depression in the occipital bone, sometimes seen in rickets. **Queckenstedt's s.**, when the veins in the neck are compressed on one or both sides, there is a rapid rise in the pressure of the cerebrospinal fluid of healthy persons, and this rise quickly disappears when pressure is taken off the neck. But when there is a block in the vertebral canal the pressure of the cerebrospinal fluid is little or not at all affected by this maneuver. **Quénu-Muret s.**, in aneurysm, the main artery of the limb is compressed and then a puncture is made at the periphery; if blood flows, the collateral circulation is probably established. **Quincke's s.**, see under *pulse*. **Quinquaud's s.**, trembling of the patient's fingers, felt when his fingers, spread apart, are placed vertically in the palm of the examiner's hand; said to be a sign of alcoholism. **radialis s.**, Strümpell's s., def. 2. **Radovici's s.**, palmohin reflex. **Raimiste's s.**, the patient's hand and arm are held upright by the examiner; if the hand is sound, it remains upright on being released; if paretic the hand flexes abruptly at the wrist. **Ramond's s.**, rigidity of the erector spinae muscle indicative of pleurisy with effusion; the rigidity relaxes when the effusion becomes purulent. **Rasin's s.**, Jellinek's s. **Raynaud's s.**, acrocyanosis. **Remak's s.**, see under *symptom*. **Revilliod's s.**, orbicularis s. **Richardson's s.**, the application of a tight fillet to the arm as a test of death: if life is present, the veins on the distal side of the fillet become more or less distended. **Riesman's s.**, 1. a bruit heard with the stethoscope over the closed eye in Graves' disease. 2. softening of the eyeball in diabetic coma. **Ripault's s.**, external pressure upon the eye during life causes only a temporary change in the normal roundness of the pupil; but after death the change so caused may be permanent. **Ritter-Rollet s.**, see under *phenomenon*. **Riviere's s.**, an area of change in percussion note denoting a band of increased density across the back at the plane of the spinous processes of the fifth, sixth, and seventh dorsal vertebrae: a sign of pulmonary tuberculosis. **Robertson's s.**, 1. fibrillary contraction of the pectoralis muscle over the cardiac area in approaching death from heart disease. 2. absence of pupillary dilatation on pressure over alleged painful areas in malingering. 3. in ascites, fullness and tension in the patient's flanks, felt by the examiner with the patient supine. **Roche's s.**, in torsion of the testis, the epididymis cannot be distinguished from the body of the testis, whereas in epididymitis the body of the testis can be felt in the enlarged crescent of the epididymis. **Rockley's s.**, two straight edges are placed vertically at the outer edges of the orbits from the prominence of the zygomatic bone: if depression fracture of the zygomatic arch exists, the difference in the two angles is obvious. **Romaña's s.**, unilateral ophthalmia with palpebral edema, conjunctivitis, and swelling of regional lymph glands as a sign of Chagas' disease. **Romberg's s.**, swaying of the body or falling when standing with the feet close together and the eyes closed; observed in tabes dorsalis. **Rommelaere's s.**, an abnormally small proportion of normal phosphates and of sodium chloride in the urine in cancerous cachexia. **rope s.**, acute angulation between chin and larynx, due to weakness of hyoid muscles, noted in bulbar poliomyelitis. **Rosenbach's s.**, 1. absence of the abdominal skin reflex in inflammatory disease of the intestines. 2. absence of the abdominal skin reflex in pinching the skin of the abdomen on the paralyzed side in hemiplegia. 3. a fine rapid tremor of the closed eyelids in Graves' disease. 4. inability to close the eyes

immediately on command; seen in neurasthenia. **Roser's s.**, **Roser-Braun s.**, absence of dural pulsation, a sign of cerebral tumor or abscess. **Rossolimo's s.**, see under *reflex*. **Rotch's s.**, dullness on percussion of the right fifth intercostal space, a sign of pericardial effusion. **Rothschild's s.**, 1. preternatural flattening and mobility of the sternal angle; seen in tuberculosis. 2. rarefaction of the outer third of the eyebrows in thyroid inadequacy. **Roussel's s.**, sharp pain on light percussion on the subclavicular region, between the clavicle and fourth rib; a sign of incipient tuberculosis. **Rovighi's s.**, a fremitus felt on percussion and palpation of a superficial hepatic hydatid cyst. **Rovsing's s.**, pressure on the left side over the point corresponding to McBurney's point will elicit the typical pain at McBurney's point in appendicitis. **Ruggeri's s.**, see under *reflex*. **Rumpel-Leede s.**, see under *phenomenon*. **Rumpf's s.**, 1. alternating fibrillary and tonic contractions after the cessation of strong faradization; seen in traumatic neuroses. Called also *Rumpf's traumatic reaction*. 2. quickening of the pulse on pressure over a painful point; seen in neurasthenia. **Rust's s.**, see under *phenomenon*. **Saenger's s.**, a light reflex of the pupil that has ceased returns after a short stay in the dark; observed in cerebral syphilis but not in tabes dorsalis. **Salisbury and Melvin's s.**, ophthalmoscopic s. **Sansom's s.**, 1. marked increase of the area of dullness in the second and third intercostal spaces, due to pericardial effusion. 2. a rhythmical murmur heard with a stethoscope applied to the lips in aneurysm of the thoracic aorta. **Sarbo's s.**, analgesia of the peroneal nerve; sometimes noticed in tabes dorsalis. **Saunders' s.**, on wide opening of the mouth there take place in children associated movements of the hand consisting of opening of the hand and extension and separation of the fingers; called also *mouth-and-hand synkinesia*. **Schepelmann's s.**, in dry pleurisy, the pain is increased when the patient bends his body toward the normal side, whereas in intercostal neuralgia it is increased by bending toward the affected side. **Schick's s.**, stridor heard on expiration in an infant with tuberculosis of the bronchial glands. **Schlesinger's s.**, in tetany, if the patient's leg is held at the knee joint and flexed strongly at the hip joint, there will follow within a short time an extensor spasm at the knee joint, with extreme supination of the foot. Called also *Pool's phenomenon*. **Schüle's s.**, omega melancholium. **Schultze's s.**, 1. Chvostek's sign. 2. tongue phenomenon. **Schultze-Chvostek s.**, Chvostek's s. **Seeligmüller's s.**, mydrasis on the side of the face affected with neuralgia. **Séguin's s.**, see *Séguin's signal symptom*, under *symptom*. **Seidel's s.**, see under *scotoma*. **Seitz's s.**, bronchial inspiration which begins harshly and then becomes faint; indicative of a cavity in the lung. **Semon's s.**, impairment of the mobility of the vocal cords in malignant disease of the larynx. **setting-sun s.**, downward deviation of the eyes, so that each iris appears to "set" beneath the lower lid, with white sclera exposed between it and the upper lid; indicative of intracranial pressure (hemorrhage or meningoencephalitis) or irritation of the brain stem (as in kernicterus). **Shibley's s.**, in the presence of consolidation of the lung or a collection of fluid in the pleural cavity, all spoken vowels are heard through the stethoscope as "ah." **Sicar's s.**, a metallic resonance on percussion with two coins on the front of the chest and auscultation at the back; observed in some cases of effusion within the pleura. **Siebert's s.**, in Down's syndrome, the little fingers are short and curved inward. **Sieur's s.**, see *coin test*, under *tests*. **Signorelli's s.**, extreme tenderness on pressure on the retromandibular point in meningitis. **Silex's s.**, furrows radiating from the mouth in congenital syphilis. **Simon's s.**, 1. [C. E. Simon] retraction or fixation of the umbilicus during inspiration. 2. [J. Simon] absence of the usual correlation between the movements of the diaphragm and thorax; seen in beginning meningitis. **Sisto's s.**, constant crying as a sign of congenital syphilis in infancy. **Skeer's s.**, a small circle in the iris, near the pupil, in both eyes; seen in tuberculous meningitis. **Skoda's s.**, a tympanitic sound heard on percussing the chest above a large pleural effusion or above a consolidation in pneumonia. **Smith's s.**, a murmur heard in cases of enlarged bronchial glands on auscultation over the manubrium with the patient's head thrown back. **Snellen's s.**, the bruit heard with a stethoscope over the closed eye in Graves' disease. **Somagyi's s.**, see under *reflex*. **Soto-Hall s.**, with the patient flat on his back, on flexion of the spine beginning at the neck and going downward, pain will be felt at the site of the lesion in back abnormalities. **Souques's s.**, 1. when the patient seated in a chair is suddenly thrown back, the lower extremities do not extend normally or otherwise attempt to counteract the loss of balance; it indicates advanced striatal disease. 2. Souques' phenomenon. **Spalding's s.**, in the x-ray film of the fetus in utero, overriding of the bones of the vault of the skull indicates death of the fetus. **spinal s.**, tonic contraction of the spinal muscles on the diseased side in pleurisy. **spine s.**, disinclination to flex the spine anteriorly on account of pain; seen in poliomyelitis. **Squire's s.**, alternate contraction and dilatation of the pupil, indicative of basilar meningitis. **stairs s.**, difficulty in descending a stairway in tabes dorsalis. **Stellwag's s.**, retraction of the upper eyelids producing apparent widening of the palpebral opening with which is associated

infrequent and incomplete blinking; seen in Graves' disease. **Sterles' s.**, increased pulsation over the cardiac region in intrathoracic tumors. **Sterling-Okuniewski s.**, the patient is unable to put out his tongue when directed to do so; once considered to be symptomatic of louse-borne typhus fever. **Sternberg's s.**, sensitiveness to palpation of the muscles of the shoulder girdle in pleurisy. **Stewart-Holmes s.**, rebound phenomenon. **Stierlin's s.**, see under *symptom*. **Stiller's s.**, a floating tenth rib, suggestive of a tendency to neurasthenia. **Stimson's s.**, a transverse line of conjunctival inflammation, sharply demarcated along the eyelid margin, occurring in the prodromal stage of measles. **Stocker's s.**, in typhoid fever, if the bed clothes are pulled down, the patient takes no notice; but in tuberculous meningitis the patient resents the interference and immediately draws the clothes up again. **Strauss' s.**, increase of fat following the use of fatty foods in chylous ascites. **string s.**, 1. Kantor's s. 2. the stringing out of tubules, observed on pulling the tissues of an intact testis or one in which there is active spermatogenesis, a phenomenon which is prevented by the fibrosis and hyalinization about the tubules when the testis is atrophic. **Strümpell's s.**, 1. dorsal flexion of the foot when the thigh is drawn up toward the body; seen in spastic paralysis of the lower limb. Called also *tibialis s.* 2. inability to close the fist without marked dorsal extension of the wrist; called also *radialis s.* 3. pronation sign: passive flexion of the forearm caused by pronation; seen in hemiplegia. **Strunsky's s.**, a sign for detecting lesions of the anterior arch of the foot. The examiner grasps the toes and flexes them suddenly. This procedure is painless in the normal foot, but causes pain if there is inflammation of the anterior arch. **Suker's s.**, deficient complementary fixation in lateral eye rotation; seen in Graves' disease. **Sumner's s.**, on gentle palpation of the iliac fossa, a slight increase in tonus of the abdominal muscles indicates appendicitis, stone in the ureter or kidney, or a twisted pedicle of an ovarian cyst. **swinging flashlight s.**, with the patient's eyes fixed at a distance and a strong light shining before the intact eye, a crisp bilateral contraction of the pupil is noted. On moving the light to the affected eye, both pupils dilate for a short period. Then on return of the light to the intact eye, both pupils contract promptly and remain contracted. Indicative of minimal damage to the optic nerve. Called also *Marcus Gunn pupillary phenomenon* or *sign*. **Tay's s.**, see *cherry-red spot*, under *spot*. **Tellais' s.**, pigmentation of the eyelid in Graves' disease. **Testevin's s.**, the formation of a collodion-like pellicle on the urine after removing the albumin and treating with acid and then with one third of its volume of ether; said to occur during the incubation of infectious diseases. **Theilmich's lip s.**, a protrusion or pouting of the lips elicited by tapping the orbicularis oris muscle. **thermic s.**, Kashida's s. **Thomas' s.**, 1. flexion of the hip joint can be compensated by lordosis. 2. pinching of the trapezius muscle causes goose flesh above the level of a spinal cord lesion. **Thomson's s.**, Pastia's s. **Thornton's s.**, severe pain in the region of the flanks in nephrolithiasis. **tibialis s.**, Strümpell's s., def. 1. **Tinel's s.**, a tingling sensation in the distal end of a limb when percussion is made over the site of a divided nerve. It indicates a partial lesion or the beginning regeneration of the nerve. Called also *formication s.* and *distal tingling on percussion* (D.T.P.). **toe s.**, Babinski's reflex. **Tommasi's s.**, alopecia on the posteroexternal aspect of the legs, found almost exclusively in men with gout. **Tournay's s.**, unilateral dilatation of the pupil of the abducting eye on extreme lateral fixation. **Traube's s.**, a faint double sound heard in auscultation over the femoral arteries in aortic regurgitation. **Trendelenburg's s.**, see under *tests*. **trepidation s.**, patellar clonus. **Tresilian's s.**, a reddish appearance in Stensen's duct in mumps. **Trimadeau's s.**, if the dilatation above an esophageal stricture is conic, the stricture is fibrous; if cup shaped, the stricture is malignant. **Troisier's s.**, enlargement of the lymph nodes above the clavicle; a sign of intra-abdominal malignant disease or of retrosternal tumor. **Trömner's s.**, Hoffmann's s., def. 2. **Trousseau's s.**, 1. see under *phenomenon*. 2. tache cérébrale. **Turner's s.**, discoloration (bruising) of the skin of the loin in acute hemorrhagic pancreatitis. **Turyn's s.**, in sciatica, if the patient's great toe is bent dorsally, pain will be felt in the gluteal region. **Uhthoff's s.**, nystagmus occurring in multiple cerebrospinal sclerosis. **Unschuld's s.**, a tendency to cramp in the calves of the legs; an early indication of diabetes. **Uriolla's s.**, the presence in the urine of malarial patients of minute black granules of blood pigment. **Vanzetti's s.**, in sciatica the pelvis is always horizontal in spite of scoliosis, but in other lesions with scoliosis the pelvis is inclined. **Vedder's s's** (of *beriberi*), slight pressure on muscles of calf causes pain; ascertain the presence of anesthesia with a pin over anterior surface of leg; note any changes in patellar reflexes; when patient squats upon heels, note the inability to rise without use of hands. **vein s.**, a bluish cord along the midaxillary line formed by the swollen junction of the thoracic and superficial epigastric vein; seen in tuberculosis of the bronchial glands and in superior vena cava obstruction. **Vigouroux's s.**, diminished electric resistance of the skin in Graves' disease. **vital s's**, the pulse, respiration, and temperature. **Voltolini's s.**, Heryng's s. **von Graefe's s.**, Graefe's s. **Wartenberg's s.**, 1. a sign of ulnar palsy, consisting of a position of

abduction assumed by the little finger. 2. reduction or absence of the pendulum movements of the arm in walking; seen in patients with cerebellar disease. **Weber's s.**, paralysis of the oculomotor nerve of one side and hemiplegia of the opposite side. See *syndrome of Weber*. **Wegner's s.**, a broadened, discolored appearance of the epiphyseal line in infants dying from hereditary syphilis. **Weill's s.**, absence of expansion in the subclavicular region of the affected side in infantile pneumonia. **Weiss's s.**, Chvostek's s. **Wernicke's s.**, hemiopic pupillary reaction. **Westermarck's s.**, transient clearing (avascularity) of the normal radiologic shadow of pulmonary tissue distal to a pulmonary embolism. **Westphal's s.**, loss of the knee jerk in tabes dorsalis. **Widowitz's s.**, protrusion of the eyeballs and sluggish movements of the eyeballs and eyelids seen in diphtheritic paralysis. **Wilder's s.**, an early sign of Graves' disease consisting in a slight twitch of the eyeball when it changes its movement from adduction to abduction or vice versa. **Williams' s.**, a dull tympanitic resonance heard in the second intercostal space in severe pleural effusion. **Williamson's s.**, markedly diminished blood pressure in the leg as compared with that in the arm on the same side; seen in pneumothorax and pleural effusion. **Wimberger's s.**, erosion of the upper end of the tibia in early syphilis. **Winterbottom's s.**, enlargement of posterior cervical lymph nodes in African trypanosomiasis. **Wintrich's s.**, a change in the pitch of the percussion note when the mouth is opened and closed; it indicates a cavity in the lung. **Wood's s.**, relaxation of the orbicularis muscle, fixation of the eyeball, and divergent strabismus, indicative of profound anesthesia. **Wreden's s.**, presence of a gelatinous matter in the external auditory meatus in children who are born dead. **Zaufal's s.**, saddle nose.

signa (sig'nah) [L.] mark, or write; abbreviated S. or sig. on prescriptions. See *prescription*.

signature (sig'nah-tür) [L. *signatura*] 1. that part of a prescription which gives directions as to the taking of the medicine. See *prescription*. 2. any characteristic feature of a substance formerly regarded as an indication of its medicinal virtues: thus, the eyelike mark on the flower of the euphrasia was supposed to show its usefulness in eye diseases; the liver-like shape of the leaf of liverwort pointed to its use in hepatic diseases; the yellow color of saffron indicated its use in jaundice.

signaturist (sig'nah-tür'ist) one who believes in the doctrine of signatures.

signe (sên) [Fr.] sign. **s. de journal** (sên-dê-zhoor-nal'), Froment's paper sign. **s. de peau d'orange** (sên-dê-po-dor-anzh'), orange-peel sign.

significant (sig-nif'i-kant) in statistics, probably resulting from something other than chance.

Signorelli's sign (sên-yor-el'ēz) [Angelo Signorelli, Italian physician, 1876-1952] see under *sign*.

Sig. n. pro. abbreviation for L. *signa nom'ine pro'prio*, label with the proper name.

siguatera (sig'wah-ta'rah) [Sp.] ciguatera.

sikimi (sik'i-me) [Japanese] the plant *Illicium religiosum*.

sikimin (sik'i-min) a poisonous hydrocarbon, C₁₀H₁₆, found in the leaves of *Illicium religiosum*.

sikimitoxin (sik-im'i-tok'sin) a poisonous substance extracted from sikimi.

silafocoon A (sil'ah-fo'kon) chemical name: 3-[3,3,5,5,5-pentamethyl-1, 1-bis(pentamethylsiloxanyl)oxy]trisiloxanyl]propyl methacrylate polymer with methyl methacrylate, methacrylic acid, and tetraethylene glycol dimethacrylate. A hydrophilic contact lens material, (C₂₂H₅₀O₆Si₃)₁₀(C₈H₈O₂)₂(C₄H₆O₂)₇(C₁₀H₂₆O₇)₂.

Silain (si'lân) trademark for preparations of simethicone.

silandrone (si-lan'drôn) chemical name: 17β-(trimethylsiloxy)-androst-4-en-3-one; an androgenic steroid, C₂₂H₃₆O₂Si.

Silastic (si-las'tik) trademark for polymeric silicone substances having the properties of rubber; it is biologically inert and used in surgical prostheses.

silent (si'lent) producing no detectable signs or symptoms; noiseless.

silex (si'leks) a noncrystalline form of silica, as precipitated silica, used in cements.

Silex's sign (se'leks-ez) [Paul Silex, German ophthalmologist, 1858-1929] see under *sign*.

silica (sil'i-kah) [L. *silex* flint] silicon dioxide, SiO₂, or silicic anhydride. It may occur in various allotropic forms, some of which are used in dental materials.

silicate (sil'i-kât) [L. *silicus*] a salt of any of the many silicic acids.

silicatosiis (sil'i-kah-to'sis) pneumoconiosis caused by the inhalation of the dust of silicates.

silicea (si-lis'e-ah) a homeopathic preparation of silica.

siliceous, silicious (si-lish'us) containing silica or a compound of silicon.

silicoanthracosis (sil'i-ko-an'thrah-ko'sis) silicosis combined with pneumoconiosis of coal workers.

silicofluoride (sil'i-ko-floo'o-rid) fluorosilicate.

silicol (sil'i-kol) an organic silica compound, silicic oxide casein metaphosphate; used in the treatment of tuberculosis.

silicon (sil'i-kon) [L. *silix* flint] a nonmetallic light element whose dioxide is silica; symbol, Si; atomic number, 14; atomic weight, 28.086. **s. carbide**, a compound produced by the reaction of silicon and carbon at extremely high temperature, used in dentistry as an abrasive agent. **s. dioxide**, silica. **s. dioxide, colloidal** [NF], a submicroscopic fumed silica prepared by the vapor-phase hydrolysis of a silicon compound; used as a tablet diluent and as a suspending and thickening agent. **s. fluoride**, SiF_4 , a colorless gas sometimes fatal to workers in superphosphate factories.

silicone (sil'i-kōn) any organic compound in which all or part of the carbon has been replaced by silicon.

silicosiderosis (sil'i-ko-sid'er-o'sis) pneumoconiosis in which the inhaled dust is that of silica and iron.

silicosis (sil'i-ko'sis) [L. *silix* flint] pneumoconiosis due to the inhalation of the dust of stone, sand, or flint containing silicon dioxide, with formation of generalized nodular fibrotic changes in both lungs. Called also *grinders' disease*. **infective s.**, silicotuberculosis.

Silicote (sil'i-kōt) trademark for preparations of dimethicone.

silicotic (sil'i-kot'ik) pertaining to or characterized by silicosis.

silicotuberculosis (sil'i-ko-tu-ber'ku-lo'sis) tuberculous infection of the silicotic lung; infective silicosis.

siliqua (sil'i-kwah) [L.] pod, or husk. **s. oli'vae** ["husk of the olive"], the fibers which appear to encircle superficially the inferior olive of the brain; their outer and inner portions are termed *funiculus lateralis medullae oblongatae*. Called also *amiculum olivae*.

siliqueose (sil'i-kwōs) pertaining to or resembling a pod or husk; see under *cataract*.

silkworm-gut (silk'worm-gut) a strand drawn from a silk-worm which has been killed when ready to spin its cocoon; less pliable than catgut and nonabsorbable, it is used for retention sutures, which are later removed.

silhouette (se-yon-nur') [Fr.] (*obs.*) a three-bladed scalpel for operations on the eye.

Silvadene (sil'vah-dēn) trademark for a preparation of silver sulfadiazine.

silvatic (sil-vat'ik) [L. *silva* a wood or woods] pertaining to or occurring in the woods; as *silvatic plague*.

silver (sil'ver) [L. *argentum*] a white, soft, malleable, and ductile metal; symbol, Ag; atomic number, 47; atomic weight, 107.870. Its compounds are extensively used in medicine, and metallic silver is employed in surgery and in the manufacture of instruments. It is an important component in alloys used as filling materials in dentistry. **s. arsphenamine**, see under *arsphenamine*. **s. chloride**, an insoluble white salt, AgCl , that darkens in light; called *horn silver* in mineral form. **colloidal s.**, a silver preparation in which the silver exists as free ions to only a small extent. See *protein s.*, *mild*, and *protein s.*, *strong*. **s. cyanide**, a soluble salt, AgCN . **s. iodide**, an insoluble, light-yellowish binary, powdery compound, AgI , that turns black in the light; used in treatment of syphilis, nervous diseases, and conjunctivitis. **s. iodide, colloidal**, silver iodide in solution rendered stable by gelatin, an antiseptic for treating inflammations of mucous membranes. **s. nitrate** [USP], a powerful germicide, AgNO_3 , occurring as colorless or white crystals; used as an antiseptic, applied topically to the conjunctiva as a prophylactic against ophthalmia neonatorum, and also used as an antiseptic and astringent, especially in infections of the skin and mucous membranes. It has also been used to purify drinking water. **s. nitrate, toughened** [USP], a compound prepared by fusing silver nitrate with hydrochloric acid, sodium chloride, or potassium nitrate, occurring as white crystalline masses molded into pencils or cones, and containing 94.5 per cent of silver nitrate; used as a caustic and applied topically after being dipped in water. Called also *lunar caustic*, *fused silver nitrate*, and *molded silver nitrate*. **s. orthophosphate**, an insoluble yellow powder, Ag_3PO_4 . **s. oxide**, a heavy brownish-black powder, Ag_2O . **s. picrate**, yellow crystals, $\text{C}_6\text{H}_5(\text{NO}_2)_3\text{OAg} \cdot \text{H}_2\text{O}$, used as a topical anti-infective, especially in infections of the skin and mucous membranes; it has been used in the treatment of vaginal trichomoniasis and candidiasis, administered by insufflation or in pessaries. **s. protein, mild**, a preparation containing 19–23 per cent of silver, rendered colloidal by the presence of, or combination with, protein; it occurs as dark brown or almost black scales or granules and is used as a topical anti-infective in various rectal, ocular, vaginal, urethral, otic, nasal, and pharyngeal infections. **s. protein, strong**, a pale yellowish orange to brownish black powdered compound of silver and protein containing 7.5–8.5 per cent of silver, an active germicide with a local irritant and astringent effect. It may cause argyria. **s. sulfadiazine**, the silver derivative of sulfadiazine, $\text{C}_{10}\text{H}_8\text{AgN}_4\text{O}_2\text{S}$, having bactericidal activity against many gram-positive and gram-negative organisms, as well as being effective against yeasts; used as a topical anti-infective for the prevention and treatment of wound

sepsis in patients with second and third degree burns. **s. sulfate**, a moderately soluble colorless salt, Ag_2SO_4 . **s. sulfide**, a black insoluble powder, Ag_2S .

Silverman's needle (sil'ver-manz) [Irving Silverman, Brooklyn surgeon, born 1904] see under *needle*.

silverskin (sil'ver-skin) the pericarp and germ of grains which are removed in processing, as in polished rice, but which contain the thiamine.

Silvester's method (sil-ves'terz) [Henry Robert Silvester, English physician, 1828–1908] see under *respiration, artificial*.

silvestrene (sil-ves'trēn) a hydrocarbon, $\text{C}_{10}\text{H}_{16}$, obtainable from European oil of turpentine.

Silvius (sil've-us) a genus of tabanid flies found abundantly in Australia.

Simaruba (sim'ah-roo'bah) a genus of tropical American trees, several species of which are medicinal. The root bark of *S. amara* Aubl. (Simarubaceae) is a bitter tonic and astringent, and has been used in amebiasis. The active principle is simarubidin.

simarubidin (sim'ah-roo'-bi-din) the active principle, $\text{C}_{22}\text{H}_{32}\text{O}_8$, of the bark and wood of *Simaruba amara*; used experimentally in canine amebiasis.

simesthesia (sim'es-the'ze-ah) osseous sensibility.

simethicone (si-meth'i-kōn) [USP] a mixture of dimethicones and silicon dioxide, with a molecular weight between 14,000 and 21,000, occurring as a translucent, gray, viscous fluid. It is administered orally as an antifoaming agent in gastroscopy, and is also used as an antifatulent and as a releasing agent in pharmaceutical preparations. Called also *dimethicone* or *activated dimethicone*. It is used in veterinary medicine in the treatment and prevention of bloat in cattle.

similia similibus curantur (si-mil'e-ah si-mil'i-bus ku-ran'tur) [L. "likes are cured by likes"] the doctrine, or the brocard expressing it, which lies at the foundation of homeopathy; namely, that a disease is cured by those remedies which produce effects resembling the disease itself.

similimum (si-mil'i-mum) [L. "likeliest"] the homeopathic remedy which most exactly reproduces the symptoms of any disease.

Simmonds' disease (syndrome) (sim'ondz) [Morris Simmonds, physician in Hamburg, 1855–1925] see *panhypopituitarism*.

Simon's septic factor, sign (si'monz) [Charles Edmund Simon, Baltimore physician, 1866–1927] see under *factor* and under *sign*, def. 1.

Simon's sign (si'monz) [John Simon, English surgeon, 1824–1876] see under *sign*.

Simon's speculum (ze'monz) [Gustav Simon, German surgeon, 1824–1876] see under *speculum*.

Simonart's thread (band) (se'mo-narz') [Pierre Joseph Cécilien Simonart, Belgian obstetrician, 1817–1847] see under *thread*.

Simonea folliculorum (si-mo'ne-ah fō-lik'u-lo'rum) *Demo-dex folliculorum*.

Simonelli's test (si'mo-nel'ēz) [F. Simonelli, Italian physician] see under *tests*.

Simons' disease (si'monz) [Arthur Simons, Berlin physician, born 1877] lipodystrophia progressiva.

Simonsiella (si-mon'se-el'ah) a genus of blue-green algae isolated from the intestinal tracts of men and many animals; it was once thought to be a pathogen.

simple (sim'p'l) [L. *simplex*] 1. neither compound nor complex; single. 2. an old term for any herb with real or supposed medicinal virtues.

simpler (sim'pler) an herb doctor.

Simpson's forceps (simp'sunz) [Sir James Young Simpson, Scottish obstetrician, 1811–1870] see under *forceps*.

Simpson light (lamp) (simp'sun) [William Speirs Simpson, British civil engineer, died 1917] see under *light*.

Simpson's splint (simp'sunz) [William Kelly Simpson, laryngologist in New York, 1855–1914] see under *splint*.

Sims' position, etc. (simz) [James Marion Sims, New York gynecologist, 1813–1883] see under *depressor, position*, and *speculum*.

simul (sim'ul) [L.] at the same time as.

simulation (sim'u-la'shun) [L. *simulatio*] 1. the act of counterfeiting a disease; malingering. 2. the mimicking of one disease by another.

simulator (sim'u-la'tor) something that simulates, such as an apparatus that simulates conditions that will be encountered in real life. **electrocardiographic s.**, a device that produces simulations of electrocardiographic wave forms.

Simuliidae (si'mu-le'i-de) a family of flies of the suborder Nematocera, order Diptera, characterized by small size, a humped back, and short stubbed antennae of 10 or 11 segments. It contains approximately 600 species, known variously as black flies, buffalo gnats, or turkey gnats. The females of several species are vicious biters.

Simulium (si-mu'le-um) a genus of flies of the family Simuliidae. They are widely distributed and a great pest at times. S.

arcticum occurs in Alaska. *S. columbaczen'se*, a species in southern Europe which has been known to kill animals. *S. damnosum* is an intermediate host of *Onchocerca volvulus* in Africa. *S. metallicum* and *S. ochraceum* transmit *Onchocerca volvulus* in Mexico. *S. pecuarium*, the buffalo gnat, a terrible scourge to horses and cattle. *S. venustum*, a species widely distributed in North America and Denmark.

simultanagnosia (si'mul-tan'ag-no'se-ah) the inability to comprehend more than one element of a visual scene at the same time or to integrate the parts as a whole.

sinal (si'nal) pertaining to a sinus; sinusal.

sinapism (sin'ah-pizm) [L. *sinapismus*; Gr. *sinapismos*, *sinapisma*] a plaster or paste of ground mustard seed; a mustard plaster.

Sinaxar (sin'aks-ar) trademark for a preparation of styramate.

sincalide (sin'kah-lid) chemical name: 1-de(5-oxo-L-proline)-2-de-L-glutamide-5-L-methioninecaerulein; a choleric, $C_{49}H_{82}N_{10}O_{16}S_3$.

sincipital (sin-sip'i-tal) pertaining to the sinciput.

sinciput (sin'si-put) [L.] [NA] the anterior and upper part of the head.

sinefungin (sin'ē-fun'jin) chemical name: 6,9-diamino-1-(6-amino-9H-purin-9-yl)-1,5,6,7,8,9-hexadeoxy-β-D-ribo-decofuranuronic acid; an antifungal antibiotic derived from *Streptomyces griseolus*, $C_{15}H_{23}N_7O_5$.

Sinequan (sin'ē-kwan) trademark for a preparation of doxepin hydrochloride.

sinew (sin'u) the tendon of a muscle. **back s.**, the large flexor tendon at the back of the cannon bone of quadrupeds. **weeping s.**, an encysted ganglion, chiefly on the back of the hand, containing synovial fluid.

sing. abbreviation of L. *singulo'rum*, of each.

Singoserp (sing'go-serp) trademark for preparations of syrosingopine.

singultation (sing'gul-ta'shun) a hiccup.

singultous (sing-gul'tus) affected with hiccup.

singultus (sing-gul'tus) [L.] hiccup. **s. gas'tricus nervo'sus**, hiccup due to a nervous condition of the stomach.

sinigrin (sin'i-grin) potassium myronate, $CH_2CH \cdot CH_2(S \cdot C_6H_{11}O_5)N \cdot CO \cdot SO_2 \cdot OK$, a glycoside found in black mustard seed.

sinister (sin-is'ter) [L.] left; in official anatomical nomenclature, used to designate the left hand one of two similar structures, or the one situated on the left side of the body.

sinistrad (sin-is'trad) to or toward the left.

sinistral (sin'is-tral) [L. *sinistralis*] 1. pertaining to the left side. 2. a left-handed person.

sinistrality (sin'is-tral'i-te) the preferential use, in voluntary motor acts, of the left member of the major paired organs of the body, as ear, eye, hand, and leg.

sinistral (sin'is-traw'ral) [L. *sinister* + *auris* ear] hearing better with the left ear.

sinistro- (sin'is-tro) [L. *sinister* left] a combining form meaning left, or denoting relationship to the left side.

sinistocardia (sin'is-tro-kar'de-ah) [*sinistro-* + Gr. *kardia* heart] location of the heart in left side of the thorax; levocardia.

sinistrocerebral (sin'is-tro-ser'ē-bral) pertaining to or situated in the left cerebral hemisphere.

sinistrocular (sin'is-trok'u-lar) [*sinistro-* + L. *oculus* eye] left eyed; having the left eye the dominant eye.

sinistrocularity (sin'is-trok'u-lar'i-te) the state of having the left eye the dominant eye.

sinistroygyration (sin'is-tro-ji-ra'shun) [*sinistro-* + L. *gyrus* a turn] a turning to the left, as a movement of the eye or the plane of polarization.

sinistromanual (sin'is-tro-man'u-al) [*sinistro-* + L. *manus* hand] left handed.

sinistropedal (sin'is-trop'ē-dal) [*sinistro-* + L. *pes* foot] using the left foot in preference to the right.

sinistrorse (sin'is-trors) turned to the left.

sinistrose (sin'is-trōs) a levorotatory sugar sometimes found in the urine.

sinistrotorsion (sin'is-tro-tor'shun) [*sinistro-* + L. *torsio* twist] a twisting toward the left; said mainly of the eye.

sinkaline (sing'kah-lin) choline.

Sinkler's phenomenon (singk'lerz) [Wharton Sinkler, Philadelphia neurologist, 1847-1910] see under *phenomenon*.

sinoatrial (si'no-a'tre-al) pertaining to the sinus venosus and the atrium of the heart; see also under *node*.

sinoauricular (si'no-aw-rik'u-lar) sinoatrial.

sinobronchitis (si'no-brong-ki'tis) [*sino-* + Gr. *bronchos* bronchus + *-itis*] chronic paranasal sinusitis with recurrent episodes of bronchitis.

sinography (si-nog'rah-fe) [*sinus* + Gr. *graphein* to write] roentgenography of the sinuses.

sinomenine (si-nom'ē-nin) a crystalline alkaloid, $C_{19}H_{23}NO_4$, from *Sinomenium diversifolium*, a plant of eastern Asia.

Si non val. abbreviation for L. *si non va'leat*, if it is not enough.

sinopulmonary (si'no-pul'mo-ner'e) involving the paranasal sinuses and the lungs.

sinospiral (si'no-spi'ral) pertaining to the sinus venosus and having a spiral course; said of certain muscle fibers of the heart.

sinoventricular (si'no-ven-trik'u-lar) pertaining to the sinus venosus and the ventricle of the heart.

sinter (sin'ter) 1. the calcareous or silicious matter deposited by mineral springs. 2. [Ger.] to transform into a solid mass by heating without melting.

sintoc (sin'tok) the bark of *Cinnamomum sintoc*, of the East Indies; it resembles cinnamon.

Sintrom (sin'trom) trademark for a preparation of acenocoumarol.

sinuate (sin'u-āt) having a wavy margin.

sinuatrial (sin'u-a'tre-al) sinoatrial.

sinuauricular (sin'u-aw-rik'u-lar) sinoatrial.

sinuitis (sin'u-i'tis) sinusitis.

sinuotomy (si'nu-ot'o-me) sinusotomy.

sinuous (sin'u-us) [L. *sinuosus*] bending in and out; winding.

sinus (si'nus), pl. *si'nus* or *sinuses* [L. "a hollow"] 1. a cavity, or channel; [NA] a general term for such spaces as the dilated channels for venous blood in the cranium, or the air cavities in the cranial bones. 2. an abnormal channel or fistula permitting the escape of pus. **accessory s's of the nose**, s. paranasales. **air s.**, an air-containing space within the substance of a bone. **s. a'lae par'vae**, old term for s. sphenoparietalis. **anal s's**, s. *ana'les* [NA], furrows, with pouchlike recesses at the lower end, separating the rectal columns; called also s. *rectales* and *crypts of Morgagni*. **s. of anterior chamber**, the narrow space at the edge of the anterior chamber of the eye, between the border of the cornea and the root of the iris. **s. aor'tae** [NA], s. *aor'tae* [Valsal'vae], **aortic s.**, a dilatation between the aortic wall and each of the semilunar cusps of the aortic valve; from two of these sinuses the coronary arteries take origin. Called also *Petit's s.*, s. of *Morgagni*, and s. of *Valsalva*. **Arit's s.**, s. of *Maier*. **s. arte'riae pulmona'lis**, s. *trunci pulmonalis*. **articular s. of atlas**, fovea dentis atlantis. **articular s. of atlas, superior**, fovea articularis superior atlantis. **articular s. of axis, anterior**, facies articularis anterior axis. **ar'ores vertebrarum**. **s. of atlas, anterior**, fovea dentis atlantis. **basilar s.**, plexus basilaris. **s. of Bochdalek**, hiatus basilar s., plexus basilaris. **s. of Bochdalek**, hiatus pleuroperitonealis. **branchial s.**, an abnormal opening between a branchial groove and its corresponding pharyngeal pouch, homologous with an ancestral gill slit. **Breschet's s.**, s. sphenoparietalis. **s. carot'icus** [NA], **carotid s.**, the dilated portion of the internal carotid artery, situated above the division of the common carotid artery into its two main branches, or sometimes on the terminal portion of the common carotid artery, containing in its wall pressoreceptors that are stimulated by changes in blood pressure. Called also *bulbus caroticus*. **s. caverno'sus** [NA], **cavernous s.**, an irregularly shaped venous space in the dura mater at either side of the body of the sphenoid bone, extending from the medial end of the superior orbital fissure in front to the apex of the petrous temporal bone behind. It receives the superior ophthalmic vein, the superficial middle cerebral vein, and the sphenoparietal sinus, and communicates with the opposite cavernous sinus and with the transverse sinus and internal jugular vein by way of the petrosal sinuses. Commonly comprising one or more main venous channels, it contains the internal carotid artery and abducent nerve. **cerebral s.**, any of the ventricles of the brain. **cervical s.**, a temporary depression caudal to the embryonic hyoid arch, containing the succeeding branchial arches; it is overgrown by the hyoid arch and closes off as the cervical vesicle. **circular s.**, s. *circula'ris*, the venous ring around the hypophysis formed by the two cavernous and the anterior and posterior intercavernous sinuses; called also *Ridley's s.* **s. circula'ris i'ridis**, s. venosus sclerae. **coccygeal s.**, a sinus or fistula situated just over or close to the tip of the coccyx, being the remains of the end of the neurenteric canal; see also *pilonidal s.* **s. coch'leae**, vena canaliculi cochleae. **s. condylo'rum fem'o'ris**, fossa intercondylaris femoris. **s. corona'rius** [NA], **coronary s.**, the terminal portion of the great cardiac vein, which lies in the coronary sulcus between the left atrium and ventricle, and empties into the right atrium. **cortical s's**, lymph sinuses in the cortex of a lymph node, which arise from the marginal sinuses and continue into the medullary sinuses; called also *intermediate s's*. **costal s's of sternum**, incisurae costales sterni. **costodiaphragmatic s.**, recessus costodiaphragmaticus pleurae. **costomediastinal s. of pleura**, s. *costomediastinalis pleurae*. **costophrenic s.**, recessus costodiaphragmaticus pleurae. **cranial s's**, s. *durae matris*. **Cuvier's s's**, see under *duct*. **dermal s.**, a congenital sinus tract extending from the surface of the body, between the bodies of two adjacent lumbar vertebrae, to

the spinal canal. **s. du'rae ma'tris** [NA], large venous channels forming an anastomosing system between the layers of the dura mater encephali. They are devoid of valves, do not collapse when drained, and in some parts contain numerous trabeculae. They drain the cerebral veins and some diploic and meningeal veins into the veins of the neck. Those at the base of the skull also drain most of the blood from the orbit. In some places they communicate with superficial veins by small emissary vessels. Called also *cranial s's* and *venous s's of dura mater*. **s. epididym'idis** [NA], **s. of epididymis**, a long, slitlike serous pocket between the upper part of the testis and the overlying epididymis. **Eternod's s.**, a loop of vessels connecting the vessels of the chorion with those in the under side of the yolk sac. **ethmoidal s.**, **s. ethmoida'lis** [NA], one of the paranasal sinuses, located in the ethmoid bone, consisting of the cellulae ethmoidales collectively, and communicating with the ethmoidal infundibulum and bulla and with the superior and highest meatuses of the nasal cavity. **falcial s.**, **falciform s.**, old term for **s. sagittalis inferior**. **Forssell's s.**, a smooth space in the wall of the stomach surrounded by folds of the mucosa; seen on roentgen-ray examination. **frontal s.**, **s. frontalis**. **frontal s.**, **bony**, **s. frontalis osseus**. **s. fronta'lis** [NA], frontal sinus: one of the paired paranasal sinuses located in the frontal bone, and communicating by way of the nasofrontal duct with the middle meatus of the nasal cavity on the same side. See also **s. frontalis osseus**. **s. fronta'lis os'seus** [NA], bony frontal sinus: an irregular air cavity situated in the frontal bone on either side, deep to the superciliary arch; separated from its fellow of the opposite side by a bony septum, and communicating with the middle meatus of the bony nasal cavity on the same side. **Guérin's s.**, a diverticulum behind Guérin's fold. **Huguier's s.**, a depression in the tympanum between the fenestra ovalis and the fenestra rotunda. **s. interarcua'lis**, fossa tonsillaris. **s. intercaverno'si** [NA], intercavernous sinuses: two venous channels that connect the two cavernous sinuses, one passing anterior and the other posterior to the infundibulum of the hypophysis. **s. intercaverno'sus ante'rior**, the anterior of the two spaces connecting the cavernous sinuses; see **s. intercavernosi**. **s. intercaverno'sus poste'rior**, the posterior of the two spaces connecting the cavernous sinuses; see **s. intercavernosi**. **intercavernous s's**, **s. intercavernosi**. **intermediate s's**, cortical s's. **s. of internal jugular vein**, **inferior**, bulbus venae jugularis inferior. **s. of internal jugular vein**, **superior**, bulbus venae jugularis superior. **s. of kidney**, **s. renalis**. **lacteal s's**, **s. lacteus**, **s. lactif'eri** [NA], **lactiferous s's**, enlargements in the lactiferous ducts just before they open onto the mammary papilla. **laryngeal s.**, **s. of larynx**, ventriculus laryngis. **lateral s.**, **s. transversus durae matris**. **s. lie'nis** [NA], sinuses of the spleen: dilated venous sinuses, not lined by ordinary endothelial cells, found in the splenic pulp. **longitudinal s.**, **inferior**, **s. sagittalis inferior**. **longitudinal s.**, **superior**, **s. sagittalis superior**. **lunate s. of radius**, incisura ulnaris radii. **lunate s. of ulna**, incisura radialis ulnae. **lymph s's**, **lymphatic s's**, irregular tortuous spaces within lymphoid tissue (nodes) through which a continuous stream of lymph passes, to enter the efferent lymphatic vessels. See also *cortical s's*, *marginal s's*, and *medullary s's*. **s. of Maier**, a slight diverticulum from the upper part of the lacrimal sac, into which the lacrimal canaliculi open, either together or separately; called also *Arlt's sinus*. **marginal s.**, 1. marginal lakes; see under *lake*. 2. bow-shaped lymph sinuses separating the capsule from the cortical parenchyma of a lymph node, and from which lymph flows into the cortical sinuses; called also *subcapsular s's*. **mastoid s.**, see *cellulae mastoideae*. **s. maxilla'ris** [NA], **s. maxilla'ris** [Highmo'ri], maxillary sinus: one of the paired paranasal sinuses, located in the body of the maxilla on either side and communicating with the middle meatus of the nasal cavity on the same side. Called also *antrum of Highmore*. (See also **s. maxillaris osseus**.) **s. maxilla'ris os'seus** [NA], bony maxillary sinus: an air cavity of variable size and shape located in the body of each maxilla, communicating with the middle meatus of the bony nasal cavity on the same side. **maxillary s.**, **s. maxillaris**. **maxillary s.**, **bony**, **s. maxillaris osseus**. **medullary s's**, lymph sinuses in the medulla of a lymph node, which divide the lymphoid tissue into a number of medullary cords. **Meyer's s.**, **s. Mey'eri**, a small depression in the floor of the external auditory canal just in front of the tympanic membrane. **middle s. of atlas**, fovea dentis atlantis. **s. of Morgagni**, 1. see *sinus anales*. 2. sinus aortae. 3. ventriculus laryngis. **mucous s's of male urethra**, lacunae urethrales. **oblique s. of pericardium**, **s. obli'quus pericar'dii** [NA], a recess of serous pericardium that passes upward behind the left atrium and between the left and right pulmonary veins. **occipital s.**, **s. occipita'lis** [NA], a single venous sinus of the dura mater that begins in right and left branches, the marginal sinuses, and passes upward along the attached margin of the cerebellar falx to end in the confluence of the sinuses. **oral s.**, stomoderm. **paranasal s's**, **s. paranasales** [NA], the mucosa-lined air cavities in the cranial bones which communicate with the nasal cavity, including the ethmoidal, frontal, maxillary, and sphenoidal sinuses. **parasinoidal s.**, any one of several spaces in the dura mater opening

into one of the dural sinuses; called also *lacuna lateralis* or *lacus lateralis*. **s. pericar'dii**, **s. transversus pericardii**. **s. pericra'nii**, a soft fluctuating vascular tumor of the scalp which communicates directly with an intracranial sinus through a defect in the skull. **peroneal s. of tibia**, *incisura fibularis tibiae*. **Petit's s.**, **s. aortae**. **petrosal s.**, **inferior**, **s. petrosus inferior**. **petrosal s.**, **superior**, **s. petrosus superior**. **s. petro'sus infe'rior** [NA], inferior petrosal sinus: a venous sinus arising from the cavernous sinus and running along the line of the petrooccipital synchondrosis to the superior bulb of the internal jugular vein. **s. petro'sus supe'rior** [NA], superior petrosal sinus: a sinus arising at the cavernous sinus, passing along the attached margin of the cerebellar tentorium, and draining into the transverse sinus. **phrenicocostal s.**, **s. phrenicocosta'lis**, recessus costodiaphragmaticus pleurae. **pilonidal s.**, a suppurating sinus containing a tuft of hair, occurring chiefly in the coccygeal region, but also in other regions of the body. See also *coccygeal s.* **piriform s.**, recessus piriformis. **s. pleu'rae**, **pleural s.**, recessus pleurales. **pleuroperitoneal s.**, hiatus pleuroperitonealis. **s. pocula'ris**, utriculus prostaticus. **s. poste'rior ca'vi tym'pani** [NA], posterior sinus of tympanic cavity: a groove in the posterior wall of the tympanic cavity above the pyramidal eminence. **s. precervica'lis**, the depression at the side of the neck, produced in the developing embryo by the growth of the branchial arches. **prostatic s.**, **s. prostaticus** [NA], the posterolateral recess between the seminal colliculus and the wall of the urethra. **s's of pulmonary trunk**, **s. trunci pulmonalis**. **pyriform s.**, recessus piriformis. **rectal s's**, **s. recta'les**, **s. anales**. **s. rec'tus** [NA], a venous sinus of the dura mater situated in the line of union of the cerebral falx and the cerebellar tentorium, formed by the junction of the great cerebral vein and the inferior sagittal sinus, and commonly ending in the opposite transverse sinus at the confluence of the sinuses. Called also *straight s.* **renal s.**, **s. rena'lis** [NA], a cavity within the substance of the kidney, occupied by the renal pelvis, calices, vessels, nerves, and fat. **s. reu'niens**, the sinus venosus of the embryonic heart into which empty all the veins that go to the heart. **rhomboid s.**, 1. fossa rhomboidea. 2. cavum septi pellucidi. **rhomboid s. of Henle**, ventriculus terminalis medullae spinalis. **s. rhomboi'deus cer'ebri**, cavum septi pellucidi. **Ridley's s.**, **s. circularis**. **Rokitansky-Aschoff s's**, small outpouchings of the mucosa of the gallbladder extending through the lamina propria and the muscular layer. **sacrococcygeal s.**, **pilonidal s.** **sagittal s.**, **inferior**, **s. sagittalis inferior**. **sagittal s.**, **superior**, **s. sagittalis superior**. **s. sagitta'lis infe'rior** [NA], inferior sagittal sinus: a small venous sinus of the dura mater, situated in the posterior half of the lower concave border of the cerebral falx and opening into the upper end of the straight sinus. **s. sagitta'lis supe'rior** [NA], superior sagittal sinus: a single venous sinus of the dura mater which begins in front of the crista galli and extends backward in the convex border of the falx cerebri. Near the internal occipital protuberance it ends in a variable way in the confluence of the sinuses. It receives the superior cerebral veins, communicates with the lateral lacunae of adjacent dura mater, and is partially invaginated by arachnoidal granulations. **semilunar s. of tibia**, *incisura fibularis tibiae*. **sigmoid s.**, **s. sigmoi'deus** [NA], either of two venous sinuses within the dura mater that are continuations of the transverse sinuses; each curves downward from the tentorium cerebelli to become continuous with the superior bulb of the internal jugular vein. **sphenoidal s.**, **s. sphenoidalis**. **sphenoidal s.**, **bony**, **s. sphenoidalis osseus**. **s. sphenoida'lis** [NA], sphenoidal sinus: one of the paired paranasal sinuses, located in the anterior part of the body of the sphenoid bone and communicating with the highest meatus of the nasal cavity on the same side. See also **s. sphenoidalis osseus**. **s. sphenoida'lis os'seus** [NA], bony sphenoidal sinus: an air cavity of variable size and shape situated in the anterior part of the body of the sphenoid bone; separated from its fellow of the opposite side by a septum, and opening into the nasal cavity above the superior nasal concha on the same side. **sphenoparietal s.**, **s. sphenoparieta'lis** [NA], a dural venous sinus which begins at a meningeal vein next to the apex of the small wing of the sphenoid bone and which drains into the anterior part of the cavernous sinus. Called also *Breschet's s.* **s's of spleen**, **s. lie'nis**. **straight s.**, **s. rectus**. **subarachnoidal s's**, cisternae subarachnoideales. **subcapsular s's**, marginal s's (def. 2). **subpetrosal s.**, **s. petrosus inferior**. **superpetrosal s.**, **s. petrosus superior**. **tarsal s.**, **s. tar'si** [NA], the space between the calcaneus and talus, containing the interosseous ligament; called also *tarsal canal*. **tentorial s.**, **s. rectus**. **terminal s.**, a vein which encircles the vascular area in the blastoderm. **tonsillar s.**, **s. tonsilla'ris**, fossa tonsillaris. **transverse s. of dura mater**, **s. transversus durae matris**. **transverse s. of pericardium**, **s. transversus pericardii**. **s. transver'sus du'rae ma'tris** [NA], transverse sinus of dura mater: either of two large venous sinuses of the dura mater that begin in a variable fashion at the confluence of the sinuses near the internal occipital protuberance. Each follows the attached margin of the tentorium cerebelli to the petrous temporal, where it becomes the sigmoid sinus. At their origin in the

confluence, the right and left sinuses communicate with each other, and with the superior sagittal sinus and the straight sinus. **s. transversus pericardii** [NA], transverse sinus of pericardium: a passage behind the aorta and pulmonary trunk and in front of the atria; it is lined by serous pericardium. **traumatic s.**, a sinus due to trauma. **s. trunci pulmonalis** [NA], sinuses of pulmonary trunk: slight dilations in the wall of the pulmonary trunk immediately above the pulmonary valve. **s. tympani** [NA], **tympanic s.**, a deep fossa in the posterior part of the tympanic cavity; it is bounded superiorly by the eminentia pyramidalis, inferiorly by the subiculum promontorii, and it opens anteriorly into the fossula fenestrae cochleae. **s. of tympanic cavity, posterior**, s. posterior cavi tympani. **s. unguis** [NA], the space underlying the advancing free edge of the fingernail or toenail. **urogenital s.**, **s. urogenitalis** [NA], an elongated sac formed by division of the cloaca in the early embryo, communicating with the mesonephric ducts and bladder, and forming the vestibule, urethra, and vagina in the female and some of the urethra in the male. **uterine s's**, venous channels in the wall of the uterus in pregnancy. **s. of Valsalva**, s. aortae. **s. of venae cavae**, **s. vena cava**, **s. vena cava** [NA], the portion of the right atrium bounded medially by the interatrial septum and laterally by the crista terminalis, and into which the superior and inferior venae cavae empty; it is often called the sinus venosus because it develops from that embryonic structure. **s. venosus**, 1. [NA] the common venous receptacle in the embryo midheart, attached to the posterior wall of the primitive atrium; it receives the umbilical and vitelline veins and the ducts of Cuvier. 2. s. venarum cavarum. **s. venosus sclerae** [NA], venous sinus of sclera: a circular channel at the junction of the sclera and cornea, which is the main pathway for elimination of aqueous humor from the eye. Called also *Schlemm's canal*. **venous s.**, 1. a large vein or channel for the circulation of venous blood. 2. sinus venosus. **venous s's of dura mater**, s. durae matris. **venous s. of sclera**, s. venosus sclerae. **s. ventriculi**, Forssell's s. **s. vertebrales longitudinales**, old term for internal vertebral venous plexus.

sinusal (si'nus-al) pertaining to a sinus.

sinusitis (si'nū-si'tis) inflammation of a sinus. The condition may be purulent or nonpurulent, acute or chronic. Depending on the site of involvement it is known as ethmoid, frontal, maxillary, or sphenoid sinusitis. **infectious s. of turkeys**, a common, sometimes highly fatal respiratory disease of turkeys and game birds, caused by organisms of the pleuropneumonia-like group and marked by swelling below the eyes and sneezing; called also *airsack disease*.

sinusoid (si'nū-soid) [*sinus* + Gr. *eidos* form] 1. resembling a sinus. 2. a form of terminal blood channel consisting of a large, irregular anastomosing vessel, having a lining of reticuloendothelium but little or no adventitia. Sinusoids are found in the liver, suprarenals, heart, parathyroid, carotid gland, spleen, hemolymph glands, and pancreas; sinusoids in the anterior pituitary gland, adrenal cortex, and islets of Langerhans have a continuous basal lamina and a thin endothelium penetrated by pores closed by thin diaphragms (*fenestrated s's*), and in many mammals the endothelial cells lining those of the liver meet and overlap in some areas, while there are gaps between the cells in other areas (*discontinuous s's*). Called also *sinusoidal capillaries*. **myocardial s's**, blood sinusoids that lie between the myocardial bundles or fibers.

sinusoidalization (si'nū-soi'dal-i-za'shun) the application of a sinusoidal current.

sinusotomy (si'nū-sot'o-me) [*sinus* + Gr. *tomē* a cutting] incision into a sinus.

sinuventricular (si'nu-ven-trik'u-lar) sinoventricular.

SiO₂, silicon dioxide (silica).

Si op. sit. abbreviation for L. *si o'pus sit*, if it is necessary.

siphon (si'fun) [Gr. *siphōn* tube] a bent tube with two arms of unequal length, used to transfer liquids from a higher to a lower level by the force of atmospheric pressure.

siphonage (si'fun-ij) the use of the siphon, as in gastric lavage or in draining the bladder.

Siphona irritans (si-fon'ah ir'i-tans) *Haematobia irritans*.

Siphonaptera (si'fo-nap'ter-ah) [Gr. *siphon* tube + *apteros* wingless] an order of laterally compressed, highly chitinized and sclerotized small wingless blood-sucking ectoparasites of mammals and birds, commonly known as fleas. More than 800 species have been described, grouped in six or more families.

Siphunculata (si-fun'ku-la'tah) an order of insects including the lice.

Siphunculina (si-fun'ku-li'nah) a genus of dipterous insects of the family Chloropidae. **S. fuscicollis**, the common "eye-fly" of India, where it spreads conjunctivitis; trachoma may also be transmitted by it.

Sippy diet, treatment (method) (sip'e) [Bertram Welton Sippy, American physician, 1866-1924] see under *diet* and *treatment*.

siqua (si'kwah) [coined from L. *sidentis altitudinis quadratio*, the square of the sitting height] Pirquet's unit for calculating the

area of the absorptive surface of the intestine; it is the square of the sitting height (in centimeters).

sirenomelus (si'ren-om'ē-lus) [Gr. *seirēn* siren + *melos* limb] a fetus with fused legs and no feet. Cf. *sympus*.

siriasis (sir-i'ah-sis) [Gr. *seiriasis* a disease produced by the heat of the sun] sunstroke.

sirikaya (sir'i-ka'yah) the tree *Annona squamosa*, L. (Annonaceae), sugar apple or custard apple, whose fruit is edible and whose leaves are sudorific and bark purgative.

sirup (sir'up) syrup.

-sis a word termination of Greek origin, signifying state or condition. With a combining vowel it usually appears as *-asis*, *-esis*, *-iasis*, or *-osis*.

SISI short increment sensitivity index; see under *index*.

sismotherapy (sis'mo-ther'ah-pe) seismotherapy.

sisomicin (sis'o-mi'sin) chemical name: (2*S*-cis)-4-*O*-[3-amino-6-(aminomethyl)-3, 4-dihydro-2*H*-pyran-2-yl]-2-deoxy-6-*O*-[3-deoxy-4-*O*-methyl-3-(methylamino)-β-L-arabinopyranosyl-D-streptamine. An aminoglycoside antibiotic derived from *Micromonospora inyoensis*, C₁₈H₃₇N₅O₇, closely related to C₁₈ component of the gentamicin complex; it is bactericidal for many gram-negative and some gram-positive organisms. **s. sulfate**, the sulfate salt of sisomicin, (C₁₈H₃₇N₅O₇)₂·5H₂SO₄, having the antibacterial properties of the base.

sissoresia (sis'o-rek'se-ah) a tendency of the spleen to accumulate blood corpuscles.

sister (sis'ter) the nurse in charge of a hospital ward (Great Britain).

Sisto's sign (sēs'tōz) [Genero Sisto, Chilean pediatrician, died 1923] see under *sign*.

Sistrurus (sis-troo'rus) a genus of small rattlesnakes, the ground rattlesnakes, widely distributed throughout the United States, which have symmetrical plates covering the head. See table accompanying *snake*.

Sisyrinchium galaxioides (sis'i-rin'ke-um gah-lak'se-oi'dēz) a South American iridaceous plant; its bulbs are purgative and diuretic.

site (sit) a place, position, or locus. **active s.**, that subunit of an enzyme molecule which binds with the substrate molecule, inducing the conversion of the substrate into its reaction product; called also *catalytic s.* **allosteric s.**, that subunit of an enzyme molecule which binds with a nonsubstrate molecule, inducing a conformational change that results in inactivation of the enzyme for its substrate. **catalytic s.**, active s. **combining s.**, that portion of an antibody molecule that combines specifically with the antigenic determinant. **operator s.**, a site adjacent to the structural genes in the operon, believed to be the site on the DNA to which repressor molecules are bound, thereby inhibiting the synthesis of mRNA by the genes in the adjacent operon. **privileged s's**, anatomical regions without lymphatic drainage where grafted tissues or organs can be situated without provoking an immune response. Examples include the anterior chamber of the eye and meninges of the brain.

sitfast (sit'fast) an inverted conical area of dry gangrene involving the skin and superficial fascia of the neck in draft animals, caused by arrest of blood supply from pressure.

sitiology (sit'e-ol'o-je) sitology.

sitiomania (sit'e-o-ma'ne-ah) sitomania.

sito- (si'to) [Gr. *sitos* food] a combining form denoting relationship to food.

sitology (si-tol'o-je) the sum of knowledge regarding food, diet, and nutrition.

sitomania (si'to-ma'ne-ah) [*sito-* + Gr. *mania* madness] 1. excessive hunger, or morbid craving for food. 2. periodic bulimia.

sitosterol (si-tos'ter-ol) a generic term for a group of closely related natural plant sterols, the individual compounds being designated by Greek letters, and sometimes subscript numerals, as α₁, α₂, α₃, β, and γ, on the basis of differing characteristics. A pharmaceutical preparation, called *sitosterols*, consisting of β-sitosterol and related sterols of plant origin, and containing not less than 95 per cent of total sterols and not less than 85 per cent of unsaturated sterols, calculated on the dried basis as β-sitosterol, is used as an oral anticholesterolemic agent.

β-sitosterolemia (si-tos'ter-ol-e'me-ah) the presence of excessive levels of plant sterols, especially β-sitosterol, in the blood. A rare form is associated with xanthomatosis, with tuberous and tendon xanthomas appearing in childhood.

sitotaxis (si'to-tak'sis) sitotropism.

sitotherapy (si'to-ther'ah-pe) [*sito-* + Gr. *therapeia* treatment] dietetic treatment.

sitotoxin (si'to-tok'sin) any basic food poison, especially that generated in a cereal food by a plant microorganism.

sitotoxism (si'to-tok'sizm) [*sito-* + Gr. *toxikon* poison] poisoning from ingested foods; food poisoning; alimentary toxicosis.

sitotropism (si-tot'ro-pizm) [*sito-* + Gr. *tropos* a turning] response of living cells to the presence of nutritive elements.

situation (sit'u-a'shun) the combination of factors with which

an individual is confronted. In psychology, applied to the stimulus pattern, or the total sum, of all the factors affecting an individual at a given time.

situs (si'tus), pl. *si'tus* [L.] site, or position. **s. inver'sus vis'cerum**, lateral transposition of the viscera of the thorax and abdomen; a familial pattern and consanguineous parents have been reported. Complete transposition of the viscera in the absence of other defects is structurally sound, but see *dextrocardia*, *levocardia*, and *Kartagener's syndrome*. **s. perver'sus**, dislocation of any viscus. **s. sol'itus**, the normal position of the viscera. **s. transver'sus**, *s. inversus viscerum*.

Si vir. perm. abbreviation for L. *si vi'res permit'tant*, if the strength will permit.

606 (siks-o-siks) arspenamine.

Sjögren's syndrome (disease) (sho'grenz) [Henrik Samuel Conrad Sjögren, Swedish ophthalmologist, born 1899] see under *syndrome*.

Sjöqvist's method (sho'kwistz) [John August Sjövqvist, Swedish physician, 1863-1934] see under *method*.

SK 1. streptokinase. 2. Sloan-Kettering. Used with numbers, as SK 1133, SK 1424, to designate various chemical compounds which have been used experimentally in the treatment of cancer at Sloan-Kettering Institute for Cancer Research.

skatole (skat'öl) [Gr. *skōr*, *skatos* dung] chemical name: β -methylindole. A crystalline amine, with a strong characteristic odor, $C_8H_4 \cdot C(CH_3) \cdot CH \cdot NH$, from human feces. It is produced by the

decomposition of proteins in the intestine and directly from the amino acid tryptophan by decarboxylation.

skatologic (skat/'o-loj'ik) scatologic.

skatology (skah-to'l'o-je) scatology.

skatophagy (skah-tof'ah-je) scatophagy.

skatosin (skah-to'sin) a base, $C_{10}H_{16}N_2O_2$, derived from certain proteins.

skatoxyl (skah-tok'sil) an oxidation product of skatole, $CH_3 \cdot C_6H_5NO$, found in the urine in certain cases of disease of the large intestine.

skein (skān) spireme. **Holmgren's s's, test s's**, skeins of colored worsted used in Holmgren's test of color perception.

skelalgia (ske-lal'je-ah) [Gr. *skelos* leg + *algos* pain + *-ia*] pain in the leg.

skelasthenia (ske'l-as-the'ne-ah) [Gr. *skelos* leg + *a neg.* + *sthenos* strength + *-ia*] weakness of the legs.

Skelaxin (skē-laks'in) trademark for a preparation of metaxalone.

skeletal (skel'ē-tal) pertaining to the skeleton.

skeletin (skel'ē-tin) any of a number of gelatinous substances occurring in invertebrate tissue, and including chitin, sericin, spongin, etc.

skeletization (skel'ē-ti-za'shun) 1. extreme emaciation. 2. the removal of the soft parts from the skeleton.

skeletogenous (skel'ē-toj'ē-nus) producing skeletal or bony structures.

skeletogeny (skel'ē-toj'ē-ne) the formation of the skeleton; the origin and development of the skeleton.

skeletography (skel'ē-tog'rah-fe) [skeleton + Gr. *graphein* to write] a description of the skeleton.

skeletology (skel'ē-to'l'o-je) [skeleton + *-logy*] the sum of what is known regarding the skeleton.

skeleton (skel'ē-ton) [Gr. "a dried body, mummy"] the hard framework of the animal body, especially the bony framework of the body of higher vertebrate animals; the bones of the body collectively. See Plate XLIV. See *endoskeleton*, *exoskeleton*, and *splanchnoskeleton*. **appendicular s.**, the bones of the limbs; the *s. membri inferioris liberi* and *s. membri superioris liberi*. **axial s.**, the bones of the cranium, vertebral column, ribs, and sternum. **cardiac s.**, the connective tissue framework of the heart, which supports and gives attachment to the musculature; its main components are the pars membranacea septi interventricularis cordis and the anuli fibrosi cordis. **s. extremitatis inferioris liberae**, *s. membri inferioris liberi*. **s. extremitatis superioris liberae**, *s. membri superioris liberi*. **s. of heart**, cardiac *s.* **s. mem'bri inferioris li'beri** [NA], the bones of the thigh, leg, and foot; called also *s. extremitatis inferioris liberae*. **s. mem'bri superioris li'beri** [NA], the bones of the arm, forearm, and hand; called also *s. extremitatis superioris liberae*. **visceral s.**, that portion of the skeleton which protects the viscera, as the sternum, ribs, and os coxae.

skeletoptia, skeletopy (skel'ē-to'pe-ah; skel'ē-to'pe) [skeleton + Gr. *topos* place] the position of an organ in relation to the skeleton.

Skene's catheter, glands (ducts, tubules) (skēnz) [Alexander Johnston Chalmers Skene, American gynecologist, 1838-1900] see under *catheter*, and see *ductus paraurethrales*.

skenitis (ske-ni'tis) inflammation of the ductus paraurethrales (Skene's glands).

skenoscope (ske'no-skōp) [Skene's glands + Gr. *skopein* to examine] an endoscope for examining Skene's glands.

skeocytosis (ske'o-si-to'sis) [Gr. *skaïos* left + *kytos* hollow vessel + *-osis*] (*obs.*) presence of immature forms of white cells (neutrophils) in the blood; called also *shift to the left*.

skeptophylaxis (skep'to-fi-lak'sis) [Gr. *skēptēin* to support + *phylaxis* a guarding] 1. a condition in which a minute dose of a substance poisonous to animals will produce immediate temporary immunity to the action of the poison, although the blood of the animal may be highly toxic during that period of immunity. 2. the method of allergic desensitization by the preliminary injection of a small amount of the allergen as is commonly done before the injection of an antiserum.

skew (sku) deviating from a straight line; see under *deviation*. In statistics, deviating from symmetry of frequency distribution.

skewfoot (sku'foot) a general term for any deformity of the foot in which its forepart deviates toward the midline; see *metatarsus varus* and *pes varus*.

skia- (ski'ah) [Gr. *skia* shadow] a combining form denoting reference to shadows, especially of internal structures as produced by roentgen rays.

skiagram (ski'ah-gram) [skia- + Gr. *gramma* a writing] a roentgenogram.

skiagraph (ski'ah-graf) a roentgenogram.

skiagraphy (ski-ag'rah-fe) roentgenography.

skiameter (ski-am'ē-ter) [skia- + Gr. *metron* measure] an instrument for measuring the intensity of the roentgen rays, and thus determining how long an exposure is needed.

skiametry (ski-am'ē-tre) retinoscopy.

skiascope (ski'ah-skōp) retinoscope.

skiascopy (ski-as'ko-pe) [skia- + Gr. *skopein* to examine] 1. retinoscopy. 2. examination of the body by the roentgen ray; fluoroscopy.

Skillern's fracture (skil'ernz) [Penn Gaskell Skillern, American surgeon, born 1882] see under *fracture*.

skimming (skim'ing) the removing of floating matter from a liquid. **plasma s.**, the action of red cells in flowing blood which leaves a zone near the wall of a vessel that is relatively free of cells.

skin (skin) the outer integument or covering of the body, consisting of the corium, or dermis, and the epidermis, and resting upon the subcutaneous tissues; called also *cutis* [NA]. See illustration on following page. **alligator s.**, ichthyosis sauroderma. **beaters' s.**, goldbeaters' s. **bronzed s.**, bronze colored skin, as seen in Addison's disease. **chamois s.**, a soft leather of sheep skin used in surgery. **collodion s.**, the covering membrane, somewhat resembling parchment or oiled silk, in lamellar exfoliation of the newborn; see under *exfoliation*. **crocodile s.**, ichthyosis sauroderma. **elastic s.**, Ehlers-Danlos syndrome. **farmers' s.**, sailors' s. **fish s.**, the appearance of the skin in ichthyosis vulgaris. **goldbeaters' s.**, a very thin, tough membrane prepared from ox's cecum and from the intestine of other animals; see *cobalt aurate membrane*. **India rubber s.**, Ehlers-Danlos syndrome. **lax s.**, cutis laxa. **marble s.**, cutis marmorata. **parchment s.**, a dry condition of the skin of cattle and sheep, especially such a condition accompanying verminous bronchitis. **piebald s.**, a term sometimes applied to the lesions of partial albinism. **porcupine s.**, ichthyosis hystrix. **sailors' s.**, skin rendered prematurely senile by excessive exposure to sunlight, with elastosis, atrophy, telangiectasia, and actinic keratoses, sometimes eventuating in carcinoma; seen especially in fair-skinned individuals. Called also *farmers' s.* **shagreen s.**, a form of connective tissue nevus in which the lesion—a soft skin-colored or yellowish plaque up to 10 cm. by 5 cm. in size and sometimes having a rough, pigmented surface—occurs during early childhood, usually in the lumbosacral region and occasionally on the trunk. The name is derived from the resemblance of the skin to shagreen, a leather (from shark skin) having a finely granular or knobbed surface.

Skinner box (skin'er) [Burrhus Frederic Skinner, American psychologist, born 1904] see under *box*.

Skiodan (ski'o-dan) trademark for preparations of methiodal sodium.

sklero- for words beginning thus, see those beginning *sclero-*.

Skłowsky's symptom (sklow'skēz) [E. L. Skłowsky, German physician] see under *symptom*.

Skoda's sign, tympany (sko'dahz) [Josef Skoda, Austrian physician, 1805-1881] see under *sign*, and see *skodaic resonance*, under *resonance*.

skodaic (sko-da'ik) named for Josef Skoda; see under *resonance*.

skole- for words beginning thus, see those beginning *scole-*.

skopometer (sko-pom'ē-ter) an instrument for measuring color, cloudiness, and other optical phenomena of liquids without using standards for comparison.

skoto- for words beginning thus, see those beginning *scoto-*.

SKSD an abbreviation for streptokinase-streptodornase; a

The skin and its appendages (Domonkos).

compound used in skin tests to determine either primary or secondary abnormalities of cell-mediated immunity.

skull (skul) the bony framework of the head, composed of the cranial bones and the bones of the face. It includes the ethmoid, frontal, hyoid, lacrimal, nasal, occipital, palatine, parietal, sphenoid, temporal, and zygomatic bones, and the inferior nasal conchae, mandible, maxillae, and vomer. Called also *cranium*. **cloverleaf s.**, kleeblattschädel. **hot cross bun s.**, see *Parrot's sign*, def. 2. **lacuna s.**, craniolacunia. **maplike s.**, a skull marked by irregular tracings resembling outlines on a map; seen in x-ray films of the cranial bones in Hand-Schüller-Christian disease. **natiform s.**, see *Parrot's sign*, def. 2. **steeple s.**, tower s., oxycephaly. **West's lacuna s.**, **West-Engstler's s.**, a honeycomb appearance of the skull in roentgenograms, associated with spina bifida or meningocele and occasionally with encephalocele.

S.L.A. abbreviation for *L. sacrolaeva anterior* (left sacroanterior, a presentation of the fetus).

slant (slant) 1. a sloping surface of agar in a test tube. 2. a slant culture.

SLE systemic lupus erythematosus.

sleep (slēp) a period of rest for the body and mind, during which volition and consciousness are in partial or complete abeyance and the bodily functions partially suspended. Sleep has also been described as a behavioral state marked by a characteristic immobile posture and diminished but readily reversible sensitivity to external stimuli. Sleep is divisible into two stages: **NREM** (non-rapid eye movement) *sleep* and **REM** (rapid eye movement) *sleep*. **crescendo s.**, sleep which is marked by gradually increasing movements on the part of the sleeper. **deep s.**, **NREM s.** **desynchronized s.**, **REM s.** **dreaming s.**, **REM s.** **electric s.**, loss of voluntary movement and presence of general anesthesia induced by the application to the head of a rapidly interrupted electric current. **electrotherapeutic s.**, electrosleep. **fast s.**, **REM s.** **frozen s.**, treatment of cancer by local exposure of the tissues to a temperature of 40°–50° F. and a lowering of the general body temperature to 70°–90° F. **non-rapid eye movement s.**, **NREM s.** **NREM s.**, the deep, dreamless period of sleep during which the brain waves are slow and of high voltage, and autonomic activities, such as heart rate and blood pressure, are low and regular. Brief episodes of REM sleep occur at intervals during this type of sleep; in adults, about 80 per cent of sleep is NREM sleep. Called also *non-rapid eye movement s.*, *orthodox s.*, *slow wave s.*, and *synchronized s.* **orthodox s.**, **NREM s.** **paradoxical s.**, **REM s.** **paroxysmal s.**, narcolepsy. **prolonged s.**, treatment of neuroses by sustained and continuous sleep for several days under profound drug narcosis; called also *dauerschlaf* and *dauernarkose*.

rapid eye movement s., **REM s.** **REM s.**, the period of sleep during which the brain waves are fast and of low voltage, and autonomic activities, such as heart rate and respiration, are irregular. This type of sleep is associated with dreaming, mild involuntary muscle jerks, and rapid eye movements (REM). It usually occurs three to four times each night at intervals of 80 to 120 minutes, each occurrence lasting from 5 minutes to more than an hour. In adults, about 20 per cent of sleep is REM sleep and 80 per cent is NREM (non-rapid eye movement) sleep. Called also *desynchronized s.*, *paradoxical s.*, and *rapid eye movement s.* See also *REM rebound*, under *rebound*. **slow wave s.**, **NREM s.** **synchronized s.**, **NREM s.** **temple s.**, incubation, def. 4. **twilight s.**, a condition of analgesia and amnesia, produced by hypodermic administration of morphine and scopolamine. In this state the patient, while responding to pain, does not retain it in her memory. Formerly widely used in obstetrics. Called also *twilight anesthesia*, *Freiburg method*, and *seminarcosis*.

slide (slid) a glass plate on which objects are placed for microscopic examination. **Robinson-Cohen s.**, a modification of the astigmatic dial used in refraction of the eye.

slijmziekte (slim'zēk-te) a bacterial wilt disease of peanuts.

sling (sling) a bandage or suspensory for supporting all or a particular part of the body. **Glisson's s.**, a leather collar applied

Sling (Christopher).

around the neck and under the chin to which is attached an extension apparatus over a pulley at the head of the patient's bed; for applying extension to the vertebral column. **Rauchfuss' s.**, an appliance for attaching to a bed for the purpose of supporting the spine in such a way that discharges from the diseased part may escape.

slit (slit) 1. a long narrow opening or incision. 2. to make a long narrow opening or incision. **filtration s's**, slit pores. **gill s.**, a long narrow opening from the pharynx to the exterior of the body of many aquatic animals, such as fishes and salamanders, through which water is drawn to bathe the gills.

slope (slōp) 1. an inclined plane; a surface which is neither horizontal nor vertical. 2. to deviate from the horizontal and from the vertical plane; said of a surface intersecting the horizontal at

ANTERIOR VIEW OF HUMAN SKELETON

(King and Showers)

an angle between 1 and 90 degrees. **lower ridge s.**, the slope of the mandibular residual ridge in the second and third molar region as seen from the buccal side.

slough (sluf) 1. necrotic tissue in the process of separating from viable portions of the body. 2. to shed or cast off.

sloughing (sluf'ing) the formation or separation of a slough.

slows (slöz) trembles.

S.L.P. abbreviation for *L. sacrolaeva posterior* (left sacroposterior, a presentation of the fetus).

S.L.T. abbreviation for *L. sacrolaeva transversa* (left sacrotransverse, a presentation of the fetus).

Sluder's neuralgia (syndrome), operation (method) (slu'derz) [Greenfield Sluder, American laryngologist, 1865-1928] see under *neuralgia* and *operation*.

sludge (sluj) a suspension of solid or semisolid particles in a fluid which itself may or may not be a truly viscous fluid. **activated s.**, sludge from well aerated sewage, which, being well supplied with oxidizing bacteria, ensures the presence of sufficient oxidizing organisms to activate the next tankful of sewage.

sludging (sluj'ing) the settling out of solid particles from solution. **s. of blood**, see *intravascular agglutination*, under *agglutination*.

slug (slug) a large group of terrestrial gastropods closely related to the snails but having a rudimentary or absent shell.

slurry (slur'e) a watery mixture or suspension of insoluble matter.

slyke (slik) a unit of buffer value, named after D. D. Van Slyke, a pioneer in buffering analysis; abbreviated sl.

Sm chemical symbol for *samarium*.

smallpox (smaw'poks) variola; an acute infectious disease caused by a poxvirus. The incubation period is twelve days, followed by beginning of biphasic febrile course. The first phase lasts three to four days, during which there is fever and a transient red macular or petechial eruption on the trunk. It fades, the temperature recedes for a day, and then reappears when a papular eruption develops on the face, hands, and feet, vesiculates, and promptly become pustular. The lesions progress from distal points on palms, soles, arms, and legs toward the trunk. Each lesion is surrounded by others of exactly the same size and age, appearing primarily on exposed body areas, sparing the axillae and groin. The pustules umbilicate, crust, scab, and after 7 to 10 days fall off, leaving small depressed, depigmented scars. Other manifestations include pneumonia, arthritis, osteomyelitis (variole), and hemorrhage into cutaneous and oral mucosal lesions. Back pains, headache, and prostration are common accompaniments. **black s.**, hemorrhagic s. **bovine s.**, cowpox. **coherent s.**, a kind in which the pustules cohere at the edges, but do not become confluent. **confluent s.**, a severe form in which the pustules become more or less confluent. **discrete s.**, a form in which the pustules remain more or less distinct. **equine s.**, horsepox. **hemorrhagic s.**, a form in which hemorrhage occurs into the vesicles or from the mucous surfaces. **inoculation s.**, smallpox resulting from the direct, purposeful transfer of smallpox virus from a patient to a well person, which was widely practiced before the advent of vaccination. **malignant s.**, a severe and very fatal form of hemorrhagic smallpox. **mild s.**, variola minor. **modified s.**, varioloid. **ovine s.**, sheep-pox. **Sanaga s.**, variola minor.

smear (smër) a specimen for microscopic study prepared by spreading the material across the glass slide. **Pap s.**, **Papanicolaou s.**, see under *tests*.

Smee cell (sme) [Alfred Smee, English surgeon, 1818-1877] see under *cell*.

smegma (smeg'mah) [Gr. *smēgma* soap] the secretion of sebaceous glands, especially the cheesy secretion, consisting principally of desquamated epithelial cells, found chiefly beneath the prepuce. **s. embryo/num**, vernix caseosa.

smegmatic (smeg-mat'ik) pertaining to or composed of smegma.

smegmolith (smeg'mo-lith) [*smegma* + Gr. *lithos* stone] a calcareous concretion in the smegma.

smell-brain (smel'brān) rhinencephalon, def. 1.

Smellie's method, scissors (smel'ēz) [William Smellie, British obstetrician, 1697-1763] see under *method* and *scissors*.

smilacin (smi'lah-sin) [Gr. *smilakinos* pertaining to smilax] a poisonous glycoside, C₁₈H₃₀O₆, from sarsaparilla.

smilagenin (smi'lah-jen'in) a steroid precursor, C₂₇H₄₄O₃, from several species of *Smilax*; used in the manufacture of compounds of the pregnane series.

Smilax (smi'laks) [L., Gr. "bindweed"] a genus of climbing milaceous plants, which are the source of sarsaparilla; the starchy root of several species was used as food by the Indians. Several species yield a steroid precursor, smilagenin. **S. aristolochiaefolia**, Mexican sarsaparilla, a species used as a beverage flavor and for digestive disorders, kidney ailments, skin diseases, and rheumatism in several tropical countries and Mexico.

Smith's disease, sign [Eustace Smith, London physician, 1835-1914] see *mucous colitis*, under *colitis*, and see under *sign*.

Smith's dislocation, fracture [Robert William Smith, Irish surgeon, 1807-1873] see under *dislocation* and *fracture*.

Smith's operation [Henry Smith, English surgeon in India, 1862-1948] see under *operation*.

Smith's phenomenon, reaction [Theobald Smith, American pathologist, 1859-1934] see *Theobald Smith phenomenon*, under *phenomenon*, and see *anaphylaxis*.

Smith's test [Walter George Smith, Irish physician, born 1844] see under *tests*.

Smith-Petersen nail [Marius Nygaard Smith-Petersen, American orthopedic surgeon, 1886-1953] see under *nail*.

S.M.O. Senior Medical Officer (in Navy); Medical Officer of Schools.

smog (smog) a mixture of smoke and fog; a colloid system in which the disperse phase consists of a mixture of gas and moisture and the dispersion medium is air.

smoke (smök) a colloid system in which one or more solids is dispersed in a gas or vapor.

smudging (smuj'ing) a defect of speech in which the difficult consonants are omitted.

smut (smut) a disease of cereal grasses (wheat, oats, rye, Indian corn) caused by basidiomycetous fungi of the genera *Tilletia*, *Ustilago*, and *Urocystis*. See *Tilletia*, *Ustilago*, and *Urocystis*.

corn s., a smut of maize which is caused by *Ustilago maydis*; ingestion of the infected seeds cause ustilagism, a condition similar to ergotism. **rye s.**, ergot formed by the ascomycete *Claviceps purpurea*.

Sn chemical symbol for *tin* [L. *stannum*].

S.N. abbreviation for *L. secundum natu'ram*, according to nature.

snail (snāl) a gastropod mollusk with a spiral shell. Certain fresh-water snails in tropical countries are intermediate hosts of parasitic trematodes; the miracidium of the fluke developing into a cercaria in the body of the snail.

snake (snāk) a limbless reptile of the suborder Ophidia, some of which are poisonous. See also *viper*. **brown s.**, a venomous elapid snake of Australia and New Guinea belonging to the genus *Demansia*. **cabbage s.**, see *Mermithidae*. **colubrid s.**, a snake of the family Colubridae, most of which are inoffensive, but the boomslang is venomous. **coral s.**, a venomous elapid snake, *Micrurus fulvius*, found in the southern United States and tropical America, whose body is marked with bright red, yellow, and black bands. **crotalid s.**, a snake of the family Crotalidae, a pit viper. **elapid s.**, any snake of the family Elapidae, including cobras, kraits, mambas, blacksnakes, brown snakes, copperheads, tiger snakes, death adder, and coral snakes. **hair s.**, see *Gordius*. **harlequin s.**, coral s. **poisonous s.**, any snake that contains a poison, either in venom glands or in other organs or tissues; commonly, a venomous snake. **sea s.**, a snake of the family Hydrophidae. **tiger s.**, a very venomous elapid snake, *Notechis scutatus*, of Australia, whose body is chiefly brown with dark bands. **venomous s.**, any snake that secretes substances (venoms) capable of producing a deleterious effect on the blood (hematoxins) or nervous system (neurotoxins), the venom being injected into the body of the victim by the snake's bite. Collectively, they are called the *thanatophidia* or *toxicophidia*. See table on following page. **viperine s.**, any snake of the family Viperidae, the true vipers, including European vipers, Russell's viper, sand vipers, puff adders, Gaboon vipers and rhinoceros vipers.

snap (snap) a short sharp sound. **opening s.**, a short sharp sound in early diastole caused by the movement of the mitral leaflet into the ventricle at the beginning of ventricular filling.

snare (snār) a wire loop or noose for removing polyps and tumors by encircling them at the base and closing the loop. **cold s.**, a snare that has not been heated. **hot s.**, a wire snare heated by a galvanic current, and used for simultaneous coagulation and removal of tumors. Called also *galvanocaustic s.*

sneeze (snēz) 1. to expel air forcibly and spasmodically through the nose and mouth. 2. an involuntary, sudden, violent, and audible expulsion of air through the mouth and nose.

Snell's law (snelz) [Simeon Snell, English ophthalmologist, 1851-1909] Descartes's law.

Snellen's chart, etc. (snel'enz) [Hermann Snellen, ophthalmologist in Utrecht, 1834-1908] see under *chart*, *eye*, *tests*, and *test type*.

Snider match test (sni'der) [Thomas H. Snider, American physician, born 1925] see under *test*.

snore (snor) 1. rough, noisy breathing during sleep, due to vibration of the uvula and soft palate; called also *stertor*. 2. to produce such sounds during sleep.

snow (sno) a freezing or frozen mixture consisting of discrete particles or crystals. **carbon dioxide s.**, Dry Ice: solid carbon dioxide, formed by rapid evaporation of liquid carbon dioxide; it gives a temperature of about 110 degrees below zero Fahrenheit (-79° C.); it has been used in cryotherapy to freeze the skin, thus

IMPORTANT VENOMOUS SNAKES OF THE WORLD*

FAMILY AND TYPE OF FANGS	COMMON NAMES	TYPE OF VENOM	DISTRIBUTION	REMARKS
COLUBRIDAE; rear, immovable, grooved	Colubrids	Mostly mild	Warm parts of both hemispheres	Over 1000 species, the few poisonous ones not dangerous
	Example: Boomslang	Hemorrhagin	South Africa	Arboreal, timid
ELAPIDAE; front, immovable, grooved	Elapids	Predominantly neurotoxin	Mostly in Old World	Over 150 species, very poisonous
	Examples: Cobras	Mostly neurotoxin	Africa, India, Asia, Philippines, Celebes	Spitting cobra in Africa aims at eyes
	Kraits	Strong neurotoxin	India, S.E. Asia, Indonesia	Sluggish, often buried in dust
	Mambas	Neurotoxin	Tropical W. Africa	Arboreal
	Blacksnake	Neurotoxin	Australia	Large snake, wet terrain
	Copperhead	Neurotoxin	Australia, Tasmania, Solomons	Damp environment
	Brown snake	Neurotoxin	Australia, New Guinea	Slender
	Tiger snake	Strong neurotoxin	Australia	Dry environment; aggressive; very dangerous
	Death adder	Neurotoxin	Australia, New Guinea	Sandy terrain
	Coral snakes	Neurotoxin	United States, tropical America	About 26 species, 2 in southern U. S. A.
HYDROPHIDAE; front, immovable, hollow	Sea snakes	Some mild; others very toxic	Tropical, Indian and Pacific Oceans	Gentle. Rudder-like tail. Over 50 species
VIPERIDAE; front, movable, hollow	True vipers; viperines; viperids	Predominantly hematoxin	Entirely in Old World	About 50 species
	Examples: European viper	Hematoxin	Europe (rare), N. Africa, Near East	Dry rocky country
	Russell's viper	Hematoxin	S.E. Asia, Java, Sumatra	Mostly open terrain; deadly
	Sand vipers	Hematoxin	N. Sahara	Buried in sand
	Puff adder	Hematoxin	Arabia, Africa	Open terrain; sluggish
	Gaboon viper	Neurotoxin and hematoxin	Tropical W. Africa	Forests; deadly
	Rhinoceros viper	Hematoxin	Tropical Africa	Wet forests
CROTALIDAE; front, movable, hollow	Pit vipers; crotalids; crotalines	Predominantly hematoxin	Old and New Worlds; none in Africa	Over 80 species; pit between eye and nostril
	Examples: Habu viper	Neurotoxin	Warmer parts of E. Asia; Ryukyu Islands	Caves and dry rocky country
	Rattlesnakes†	Predominantly hematoxin	N., Central and S. America	South American form neurotoxic
	Bushmaster	Hematoxin	Central and S. America	Large. In wet forests
	Fer-de-lance	Hematoxin	Central America, N. South America, few West Indies	Common on plantations
	Palm vipers	Hematoxin(?)	S. Mexico, Central and South America	Arboreal; small, greenish. Bite face
	Copperhead	Hematoxin	United States	Dry stony terrain
	Water moccasin	Hematoxin	Southeast U.S. A. to Texas	Swamps
	Asiatic pit vipers	Hematoxin	Southeast Asia, Taiwan	Most arboreal

*Manual of Tropical Medicine, Hunter, Frye, and Swartzwelder.

†All rattlesnakes are venomous.

producing local anesthesia and arrest of blood flow, and, in the form of a slush, as an escharotic to destroy certain skin lesions, such as warts, moles, etc.

snowblindness (sno'blind-nes) temporary loss of sight due to injury to superficial cells of the cornea caused by ultraviolet rays of the sun reinforced by those reflected by snow.

SNS Society of Neurological Surgeons; sympathetic nervous system.

snuff (snuf) a medicinal or errhine powder to be inhaled through the nose.

snuffles (snuff'lz) a catarrhal discharge from the nasal mucous membrane in infants, generally in congenital syphilis.

SO the speno-occipital synchondrosis, a cephalometric landmark designating the most superior point at the junction of the sphenoid and occipital bones.

SO₂ sulfur dioxide.

SOAP a device for conceptualizing the process of recording the progress notes in the *problem-oriented record* (see under *record*): S indicates subjective data obtained from the patient and others close to him; O designates objective data obtained by observation, physical examination, diagnostic studies, etc.; A refers to assessment of the patient's status through analysis of the problem, possible interaction of the problems, and changes in the status of the problems; P designates the plan for patient care.

soap (sōp) [L. *sapo*] any compound of one or more fatty acids, or their equivalents, with an alkali. Soap is detergent and is much employed in liniments, enemas, and in making pills. It is also a mild aperient, antacid, and antiseptic. **animal s.**, *sapo domesticus*. **carbolic s.**, a disinfectant soap containing 10 per cent of phenol. **castile s.**, a hard soap, either white or mottled, prepared from olive oil and soda. See *sapo*, def. 2. **curd s.**, *sapo domesticus*. **green s.** [USP], a potassium soap made by the saponification of vegetable oils, excluding coconut oil and palm kernel oil, without the removal of glycerin. It is the chief ingredient of green soap tincture (q.v.). Called also *medicinal soft s.*, *sapo mollis medicinalis*, and *soft s.* **hexachlorophene liquid s.** [USP], a solution of hexachlorophene in a 10 to 13 per cent solution of potassium soap, containing in each 100 gm., 225 to 260 mg. of hexachlorophene; used as a topical anti-infective and detergent. **guaiac s.**, a resin of guaiacum saponified with liquor potassae. **hard s.**, *soda s.* **McClintock's s.**, a disinfectant soap containing an active mercury salt. **medicinal soft s.**, green s. **potash s.**, green s. **soda s.**, soap made from soda and olive oil; called also *hard s.* **soft s.**, 1. a liquid soap made from potash and some oil; called also *potash s.* and *sapo mollis*. 2. green s. **Starkey's s.**, a soap made of potassium carbonate, turpentine oil, and Venice turpentine in equal parts. **superfatted s.**, a soap having an excess of fat over that necessary to neutralize all the alkali. **zinc s.**, a soap containing zinc oxide or zinc sulfate; for use as an ointment or plaster.

socaloin (so-kal'o-in) a variety of aloin, C₁₅H₁₆O₇, from Socotrine aloes.

socia (so'she-ah) [L. "a comrade, associate"] a detached part or exclave of an organ. **s. parot'idis**, accessory parotid gland.

socialization (so'shā-lī-za'shun) the process by which society integrates the individual, and the individual learns to behave in socially acceptable ways.

socioacusic (so'se-o-ah-ku'sis) the acceleration of the normal hearing loss associated with aging, which results from the noise encountered in modern civilization.

sociobiologic, sociobiological (so'se-o-bi'o-loj'ik; so'se-o-bi'o-loj'i-kal) pertaining to sociobiology.

sociobiologist (so'se-o-bi-ol'o-jist) an individual trained in sociobiology.

sociobiology (so'se-o-bi-ol'o-je) the branch of theoretical biology which proposes that all animal (including human) behavior has a biological basis, which is controlled by the genes; the study of the biological basis of behavior.

sociogenic (so'se-o-jen'ik) arising from or imposed by society.

sociologist (so'se-ol'o-jist) an individual trained in sociology.

sociology (so'se-ol'o-je) [L. *socius* fellow + *-logy*] the science dealing with social relations and phenomena.

sociometry (so'se-om'ē-tre) [L. *socius* fellow + *metrum* a measure] the branch of sociology concerned with the measurement of human social behavior.

sociopath (so'se-o-path'') a person with an antisocial (sociopathic) personality (q.v.).

sociopathic (so'se-o-path'ik) pertaining to a person with an antisocial personality (q.v.); antisocial.

sociopathy (so'se-op'ah-the) the condition of being antisocial (sociopathic).

sociotherapy (so'se-o-ther'ah-pe) any treatment emphasizing socioenvironmental and interpersonal rather than intrapsychic factors.

socket (sok'et) a hollow or depression, into which a corresponding part fits. **dry s.**, a condition sometimes occurring after tooth extraction, resulting in exposure of bone with localized osteomyelitis of an alveolar crypt, and symptoms of severe pain;

called also *alveolar osteitis*, *alveolitis sicca dolorosa*, and *localized alveolar osteitis*. **tooth s's**, the dental alveoli, the cavities in the maxilla and mandible in which the teeth are embedded; called also *alveoli dentales maxillae* and *alveoli dentales mandibulae*.

soda (so'dah) a term loosely applied to sodium bicarbonate (baking s.), sodium hydroxide (caustic s.), or sodium carbonate (washing s.). **baking s.**, sodium bicarbonate. **bicarbonate of s.**, sodium bicarbonate. **caustic s.**, sodium hydroxide. **chlorinated s.**, a mixture of sodium chloride and sodium hypochlorite. **s. cum cal'ce**, an escharotic preparation of equal parts of sodium hydroxide and lime. **s. lime**, [NF], hydroxide with sodium or potassium hydroxide, or both; used as adsorbent of carbon dioxide in equipment for metabolism tests, inhalant anesthesia, or oxygen therapy. **washing s.**, sodium carbonate.

sodiarsphenamine (so'di-ars-fen'ah-min) sodium arsphenamine; see under *arsphenamine*.

sodii (so'de-i) [L.] genitive of *sodium*.

sodicitrate (so'de-o-sit'rāt) a compound containing sodium and a salt of citric acid.

sodiotartrate (so'de-o-tar'trāt) a compound containing sodium and a salt of tartaric acid.

sodium (so'de-um), gen. *so'dii* [L. *na'trium*, gen. *na'trii*] a soft, silver white, alkaline metallic element; symbol, Na; atomic number, 11; atomic weight, 22.990; specific gravity, 0.971. With a valence of 1, it has a strong affinity for oxygen and other nonmetallic elements. Sodium provides the chief cation of the extracellular body fluids. See also *sodium pump*, under *pump*. The salts of sodium are the most widely used salts in medicine. (NOTE: For sodium salts not listed below, see the name of the active ingredient.) **s. acetate** [USP], the trihydrate sodium salt of acetic acid, C₂H₃NaO₂·3H₂O, occurring as colorless, transparent crystals, or white, granular crystalline powder, or white flakes; used as a source of sodium ions in solutions for hemodialysis and peritoneal dialysis. It has also been used as a systemic and urinary alkalinizer, diuretic, and expectorant. **s. acid phosphate**, s. biphosphate, NaH₂PO₄. **s. alginate** [NF], a purified carbohydrate product extracted from brown seaweeds with dilute alkali; used as a suspending agent. It is also used for its emulsifying, stabilizing, thickening, and water-binding qualities in foods, medicines, and cosmetics. **s. alizarinsulfonate**, chemical name: 9,10-dihydro-3,4-dihydroxy-9,10-dioxo-2-anthracenesulfonic acid sodium salt. A dye, C₁₄H₉O₂(OH)₂SO₃Na·H₂O, occurring as a yellow-brown or orange-yellow powder; used as a stain in microscopy, as a reagent for aluminum, as an acid-base indicator, and in the determination of fluorine. Called also *alizarin red S* and *alizarine water-soluble red*. **s. amylosulfate**, the sodium salt of the sulfated form of amylopectin, derived from potatoes; an enzyme inhibitor, it has been used in the treatment of peptic ulcer. **s. antimony gluconate**, antimony sodium gluconate. **s. antimonyltartrate**, antimony sodium tartrate; see under *antimony*. **s. antimonylthioglycollate**, antimony sodium thioglycollate. **s. arsenate**, Na₂HAsO₄, an odorless, amorphous white powder used when effects of arsenic are desired. **s. ascorbate** [USP], the monosodium salt of ascorbic acid, C₆H₇NaO₆, occurring as white or very faintly yellow crystals or crystalline powder; used in the preparation of parenteral dosage forms of ascorbic acid. **s. aurothiomalate**, gold sodium thiomalate; see under *gold*. **s. aurothiosulfate**, gold sodium thiosulfate; see under *gold*. **s. benzoate** [NF], the sodium salt of benzoic acid, C₇H₅NaO₂, occurring as a white, granular or crystalline powder; used as an antifungal preservative in pharmaceutical preparations and foods. It may also be used as a test for liver function, administered orally or intravenously. **s. bicarbonate** [USP], a white, crystalline powder, NaHCO₃, chiefly used as a gastric antacid. It is also used to combat systemic acidosis and to alkalize urine. In aqueous solution it is used locally for washing the nose, mouth, and vagina, and as a cleansing enema; in saturated solution it is used as a dressing for minor burns. Called also *baking soda* and *bicarbonate of soda*. **s. biphosphate** [USP], the monohydrate monosodium salt of phosphoric acid, NaH₂PO₄·H₂O, occurring as colorless crystals or white, crystalline powder. It is given orally with sodium phosphate as an antihypercalcemic; orally and rectally with sodium phosphate as a cathartic; and orally as a urinary acidifier. **s. bisulfite** [NF], a white or yellowish white granular powder or crystals, NaHSO₃, used as an antioxidant in various pharmaceutical preparations. **s. borate** [NF], the sodium salt of boric acid, Na₂B₄O₇, occurring as a white, crystalline powder, or as colorless transparent crystals; used as an alkalinizing agent in pharmaceutical preparations. It has also been used for its weak antibacterial and mild astringent properties in lotions, gargles, and mouthwashes. Called also *borax*, *sodium pyroborate*, and *s. tetraborate*. **s. bromide**, a sedative, NaBr, occurring in white or colorless crystals; used occasionally in the management of grand mal seizures. See also *bromide* and *brominism*. **s. cacodylate**, an arsenical remedy, (CH₃)₂AsO₃·ONa·3H₂O, in the form of white crystals, or a white, granular powder, soluble in water; formerly used in tuberculosis, anemia, malaria, psoriasis, etc. **s. caprylate**, the sodium salt of caprylic acid; used in treatment of fungal infections of the skin. **s. carbonate** [NF], a compound, Na₂CO₃·H₂O, occurring as colorless crystals or as a white,

crystalline powder, used as an alkalinizing agent in pharmaceutical preparations. It has also been used as a lotion or bath in the treatment of scaly skin, and as a detergent. Called also *sal soda* and *washing soda*. **s. caseinate** casein-sodium. **s. chlorate**, a salt, NaClO_3 , with properties similar to those of potassium chlorate, and occurring in colorless or white crystals or granules. It has been used as an antiseptic wash. **s. chloride**, common salt or table salt: a mineral, NaCl , soluble in water and occurring as colorless, cubic crystals or white, crystalline powder, found widely distributed over the earth, in sea water, etc., which is a necessary constituent of the body and consequently of the diet. It makes up over 90 per cent of the inorganic constituents of the blood serum and is the principal salt involved in maintaining osmotic tension of blood and tissues. It is used in medicine [USP] for many purposes, as in the preparation of isotonic and physiologic saline solutions; as a fluid and electrolyte replenisher, an isotonic vehicle for drugs, an antihypercalcemic, and an antidote to silver nitrate poisoning, administered by intravenous infusion; as a topical anti-inflammatory; to irrigate wounds and body cavities; as an enema to flush the colon and promote evacuation; as a mucolytic, administered by inhalation; and as a topical osmotic agent in ophthalmology. Also used widely as a food preservative and seasoning. **s. citrate** [USP], the trisodium of citric acid, $\text{C}_6\text{H}_5\text{Na}_3\text{O}_7$, occurring as colorless crystals, or white, crystalline powder; used as an anticoagulant for blood or plasma that is to be fractionated or for blood that is to be stored. It is also administered orally as a urinary alkalinizer. **s. dimethylarsenate**, s. cacodylate. **s. fluoride** [USP], a white, odorless powder, NaF , used in the fluoridation of water, and also applied locally to the teeth, in 2 per cent solution, to reduce the incidence of dental caries. **s. fluosilicate**, s. silicofluoride. **s. folate**, chemical name: sodium N [(2-amino-4-hydroxy-6-pteridyl)methyl]amino]benzoyl]glutamate. A water-soluble compound, $\text{C}_{15}\text{H}_{16}\text{N}_4\text{NaO}_8$, used in various anemias and in sprue. **s. glutamate**, the monosodium salt of L-glutamic acid, $\text{COOH}\cdot\text{CHNH}_2\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{COONa}$, occurring as a white or nearly white crystalline powder; used in treatment of encephalopathies associated with hepatic disease. It is also used to enhance the flavor of foods and tobacco. See also *Chinese restaurant syndrome*, under *syndrome*. **s. glycerophosphate**, a compound, $\text{C}_3\text{H}_5(\text{OH})_2\cdot\text{PO}_4\text{Na}_2$, formerly thought useful in various conditions of disordered metabolism. **s. glycocholate**, a yellowish white, bitter salt, $\text{NaC}_{26}\text{H}_{42}\text{O}_6\text{N}$, with a pH of 6.6; used as a laboratory reagent. **s. gold thiosulfate**, gold sodium thiosulfate; see under *gold*. **s. hydrate**, s. hydroxide. **s. hydroxide** [NF], a caustic alkali, NaOH , occurring as white, or nearly white, fused masses, in small pellets, flakes, sticks, and other forms; used as an alkalinizing agent in pharmaceutical preparations. Called also *caustic soda* and *s. hydrate*. **s. hypochlorite**, the sodium salt of hypochlorous acid, NaClO , having germicidal and disinfectant properties. **s. hypophosphite**, a salt, $\text{NaPH}_2\text{O}_2\cdot\text{H}_2\text{O}$, occurring in colorless, rectangular plates, or as a white, granular powder. **s. hyposulfite**, s. thiosulfate. **s. iodate**, a white crystalline powder, NaIO_3 , which has been used as an antiseptic in diseases of the mucous membranes. **s. iodide** [USP], a binary haloid, NaI , occurring in colorless crystals or white crystalline powder, used in various conditions as a source of iodine. It is also used as an expectorant. **s. ipodate** [NF], chemical name: sodium 3-[[dimethylamino)methylene]amino]-2,4,6-triiodohydrocinamate. A white to off-white, odorless, fine crystalline powder, $\text{C}_{12}\text{H}_{13}\text{I}_3\text{N}_2\text{NaO}_2$, used as a radiopaque medium in cholecystography. **s. lactate** [USP], $\text{C}_3\text{H}_5\text{NaO}_3$, the sodium salt of racemic or inactive lactic acid, $\text{C}_3\text{H}_5\text{NaO}_3$, used intravenously in one-sixth molar solution as a fluid and electrolyte replenisher to combat acidosis. **s. lauryl sulfate** [NF], an anionic surfactant, $\text{CH}_3(\text{CH}_2)_{10}\text{CH}_2\text{OSO}_3\text{Na}$, occurring in white or light yellow crystals; used as a wetting agent, emulsifying aid, and detergent in various cosmetic and dermatologic preparations, and as an ingredient of tooth pastes. Called also *irium*. **s. metabisulfite** [NF], chemical name: disulfurous acid disodium salt. An antioxidant, $\text{Na}_2\text{S}_2\text{O}_5$, occurring as white crystals or as a white to yellowish crystalline powder; used in pharmaceutical preparations. **s. methylarsonate**, a crystalline powder, $\text{CH}_3\text{AsO}(\text{ONa})_2\cdot 5\text{H}_2\text{O}$, easily soluble in water and less soluble in alcohol, sometimes employed for its arsenical effects. **s. monofluorophosphate** [USP], chemical name: phosphorofluoridic acid disodium salt. A dental caries prophylactic, Na_2PFO_3 , occurring as a white to slightly gray powder; applied topically to the teeth. **s. nitrate**, a compound, NaNO_3 , occurring as colorless crystals or in white granules or powder; formerly used as a diuretic and in treatment of dysentery, but now used as a reagent and in certain industrial processes; called also *Chile salt peter*. **s. nitrite** [USP], a compound, NaNO_2 , occurring as a white to slightly yellow, granular powder or as white or nearly white, opaque fused masses or sticks, used as an antidote for cyanide poisoning. It is also used in the relief of the pain of angina pectoris, Raynaud's disease, asthma, and such conditions as lead colic and spastic colitis. **s. nitroferriyanide**, s. nitroprusside. **s. nitroprusside**, chemical name: (OC-6-22)-pentakis(cyano-C)nitrosylferrate(2-)-disodium dihydrate. An antihypertensive, $\text{Na}_2[\text{Fe}(\text{CN})_5\text{NO}]\cdot 2\text{H}_2\text{O}$, occurring as reddish brown crystals or powder; used in the treatment of hypertensive crisis and to produce controlled hypo-

tension during surgery, administered by intravenous infusion. Sterile sodium nitroprusside conforms to USP specifications. It is also used as a reagent and testing solution. Called also *s. nitroferriyanide*. **s. oleate**, the sodium salt of oleic acid, $\text{C}_{17}\text{H}_{33}\text{COONa}$, formerly considered useful in treatment of gallstones. **s. oxybate**, chemical name: sodium 4-hydroxybutyrate; a hypnotic agent, $\text{C}_4\text{H}_7\text{NaO}_3$, used as an adjunct in anesthesia. **s. para-aminosalicylate**, s. aminosalicylate. **s. perborate**, a compound, $\text{NaBO}_3\cdot 4\text{H}_2\text{O}$, prepared by interaction of boric acid or sodium borate with sodium or hydrogen peroxide. It is an antiseptic compound, used in 2 per cent solution as a mouthwash and in a 10-20 per cent powder in dentifrices. **s. peroxide**, a white powder, Na_2O_2 , soluble in water in which it liberates oxygen, which has been used externally in acne, and as a dental bleach. **s. phenolsulfonate**, chemical name: hydroxybenzenesulfonic acid sodium salt. An odorless, saline compound, $\text{NaC}_6\text{H}_5\text{OSO}_3\cdot 2\text{H}_2\text{O}$, in colorless transparent prisms or crystalline granules; formerly used as an intestinal antiseptic. **s. phosphate** [USP], the heptahydrate monosodium salt of phosphoric acid, $\text{Na}_2\text{HPO}_4\cdot 7\text{H}_2\text{O}$, occurring as a colorless or white, granular salt. It is given orally as a cathartic; orally and rectally with sodium biphosphate as a cathartic; and orally with sodium biphosphate as an antihypercalcemic. **s. phosphate, dried** [USP], the anhydrous salt, $\text{NaHPO}_4\cdot x\text{H}_2\text{O}$, dried at 105°C . for four hours; used as an oral cathartic. **s. phosphate, effervescent** [USP], a dry granular mixture of citric acid, dried sodium phosphate, tartaric acid, and sodium bicarbonate; used as an oral cathartic. **s. phosphate, exsiccated**, dried *s. phosphate*. **s. phytate**, the sodium salt of phytic acid, $\text{C}_6\text{H}_5\text{Na}_5\text{O}_{24}\text{P}_6$; a calcium chelating agent. **s. polyphosphate**, disodium salt of polyphosphoric acid; a pharmaceutical aid, $(\text{NaPO}_3)_n$. **s. polystyrene sulfonate** [USP], a cation-exchange resin prepared in the sodium form, each gram of which exchanges 110 to 135 mg. of potassium, calculated on the anhydrous basis; used in the treatment of hyperpotassemia. **potassium s. tartrate**, see under *potassium*. **s. propionate** [NF], the sodium salt of propionic acid, $\text{CH}_3\text{CH}_2\text{COONa}$, occurring as colorless, transparent crystals or as a granular, crystalline powder, having antifungal properties; used alone or in combination with calcium propionate or other agents as a preservative to inhibit mold production in bakery and dairy products and other foods and in pharmaceuticals. It is also used as a topical antifungal in the treatment of various mycoses. **s. psylliate**, the sodium salt of the liquid fatty acids obtained by hydrolysis of the fixed oil of the seeds of *Plantago ovata*; used as a sclerosing agent. **s. pyroborate**, s. borate. **s. pyrophosphate**, a compound, $\text{Na}_4\text{P}_2\text{O}_7$, produced by heating sodium phosphate at a red heat; used in detergents. **radioactive s.**, radioisodium. **s. salicylate** [USP], the monosodium salt of salicylic acid, $\text{C}_7\text{H}_5\text{NaO}_3$, occurring as an amorphous or microcrystalline powder or as scales; used as an analgesic, antipyretic, and antirheumatic, administered orally. **s. santoninate**, a colorless crystalline compound, $\text{C}_{15}\text{H}_{19}\text{NaO}_4\cdot 3\frac{1}{2}\text{H}_2\text{O}$, once used as a vermifuge. **s. silicate**, a compound of sodium, silicon, and oxygen in various ratios, formerly used as an antiseptic, and in tuberculosis, bronchial asthma, and arteriosclerosis. **s. silicofluoride**, a white, granular powder, Na_2SiF_6 , which is toxic in high concentrations. It is sometimes added to water to produce 0.7 to 1 part per million of fluorine, to prevent dental caries and is sometimes used in insecticides. Called also *s. fluosilicate*. **s. stearate** [NF], a mixture of sodium stearate, sodium palmitate, and small amounts of the sodium salts of other fatty acids; used as a stiffening and emulsifying agent in pharmaceutical preparations. **s. stibocaptate**, stibocaptate. **s. stibogluconate**, antimony sodium gluconate. **s. succinate**, chemical name: succinic acid sodium salt. A compound, $\text{C}_4\text{H}_4\text{Na}_2\text{O}_4$, used as a respiratory stimulant, analeptic, urinary alkalinizer, diuretic, and laxative. It has also been used as a hepatic stimulant. **s. sulfate** [USP], the decahydrate disodium salt of sulfuric acid, $\text{Na}_2\text{SO}_4\cdot 10\text{H}_2\text{O}$, occurring as large, colorless, transparent crystals, or as a granular powder; used as an antihypercalcemic and antidote to barium poisoning, administered by intravenous infusion. It is also used orally as a cathartic or laxative and has been applied topically as a lymphagogue for infected wounds. Called also *Glauber's salt*. **s. sulfite**, a compound, $\text{Na}_2\text{SO}_3\cdot 7\text{H}_2\text{O}$, occurring as colorless, efflorescent crystals; formerly used in treatment of dyspepsia, and externally in parasitic infections. **s. sulfite, anhydrous**, a fairly stable compound, Na_2SO_3 , occurring as small white crystals or powder; used as a reagent. **s. sulfite, exsiccated**, s. sulfite, anhydrous. **s. sulfocarbonate**, s. phenolsulfonate. **s. tetraborate**, s. borate. **s. tetradeacyl sulfate**, an anionic surfactant with sclerosing properties, $\text{C}_{14}\text{H}_{29}\text{NaSO}_4$, occurring as a white, waxy solid; used as a wetting agent and in the treatment of varicose veins and hemorrhoids. **s. thiamylal**, chemical name: sodium 5-allyl-5-(1-methylbutyl)-2-thiobarbiturate; an ultrashort-acting barbiturate, $\text{C}_{15}\text{H}_{17}\text{N}_2\text{NaO}_2\text{S}$. A sterile mixture of sodium thiamylal with anhydrous sodium carbonate (*s. thiamylal for injection* [NF]) is used intravenously as the sole anesthetic in relatively short surgical procedures, as a supplement to local anesthetics during regional and spinal anesthesia, and for induction prior to general anesthesia in prolonged surgical procedures. **s. thiosulfate** [USP], a compound, $\text{Na}_2\text{S}_2\text{O}_3\cdot 5\text{H}_2\text{O}$, occurring as large colorless crystals or as

a coarse crystalline powder, used intravenously as an antidote to cyanide poisoning. It is also used in solution as a foot bath to prevent ringworm infection at swimming pools and public shower-baths, topically in tinea versicolor, and in measuring the volume of extracellular body fluid and the renal glomerular filtration rate. It was formerly used in the treatment of arsenic poisoning. **s. trimetaphosphate**, the trisodium salt of metaphosphoric acid; a pharmaceutical aid, $\text{Na}_3\text{P}_3\text{O}_6$.

sodokosis (so'do-ko'sis) rat-bite fever.

sodoku (so'do-koo) [Japanese so rat + *doku* poison] the spirillary form of rat-bite fever (see under *fever*), caused by *Spirillum minor*.

sodomist (sod'o-mist) one who practices sodomy.

sodomite (sod'o-mit) sodomist.

sodomy (sod'o-me) [after the city of *Sodom*] a form of paraphilia, variously defined by law to include sexual contact between humans and animals of other species, and mouth-genital or anal contact between humans; in medical usage, it is restricted to human-animal sexual contact and anal intercourse.

sodophthalyl (so'do-thal'il) disodoquinone phenolphthalein; used as a laxative.

Soemmering's foramen, gray substance (ganglion), spot (sem'er-ingz) [Samuel Thomas Soemmering, German anatomist, 1755-1830] see *fovea centralis retinae*, *macula retinae*, and *substantia nigra*.

softening (sof'en-ing) [Gr. *malakia*] the process of becoming soft; any morbid process of becoming soft, as of the brain or spinal cord, or of the vascular coats. **anemic s.**, disintegration of brain matter from deficient blood supply. **s. of the brain**, 1. a popular designation for paralytic dementia. 2. true softening of the brain substance; encephalomalacia. **colliquative s.**, softening in which the tissues become liquefied. **gray s.**, a stage in which the fat produced by degeneration has been more or less absorbed. **green s.**, a stage in which there is green pus present in the degenerated spot. **hemorrhagic s.**, softening of a part due to hemorrhage into it. **inflammatory s.**, a form of red softening due to inflammation. **mucoid s.**, myxomatous degeneration. **pyriform s.**, yellow s. **red s.**, softening of a patch or of patches of brain substance, with local redness due to congestion. **s. of the stomach**, gastromalacia; softening of the stomach walls due to an extremely acid condition of its contents, a condition usually seen after death. **white s.**, the stage next following yellow softening, in which the spot has become white from the presence of fatty deposit. **yellow s.**, the second of the three stages of the myelic process, characterized by fatty degeneration; the stage following red softening, in which the patch has become yellow as a result of degenerative changes in the brain substance.

soja bean (so'yah) soy bean.

sokosha (so-ko'shah) rat-bite fever.

Sol. solution.

sol (sol) 1. a colloid system in which the dispersion medium is liquid. 2. a contraction of *solution*. **metal s.**, a colloidal dispersion of a metal in a liquid. Such dispersions often have catalytic properties similar to those of enzymes, and are therefore sometimes called inorganic enzymes. **solid s.**, a colloidal system in which both the dispersed phase and the dispersion medium are solids.

Solanaceae (söl'ah-na'se-e) a large family of widely distributed herbs, shrubs, and trees, having great economic importance, and including many poisonous species and numerous species that have medicinal properties. *Atropa*, *Capsicum*, *Datura*, *Duboisia*, *Hyoscyamus*, *Nicotiana*, *Scopolia*, and *Solanum* are some of the important genera.

solanaceous (söl'ah-na'shus) of or pertaining to the family Solanaceae.

solandrine (so-lan'drin) pseudohyoscyamine.

solanine (so'lah-nēn) solatunine; a steroidal glycoalkaloid, $\text{C}_{45}\text{H}_{73}\text{NO}_{15}$, found in several species of *Solanum*; formerly used in bronchitis, epilepsy, and asthma. On hydrolysis, it yields solanidine and three sugars. Its aglycone portion is considered most toxic.

solanocyte (so-lah'no-sit) flame cell.

solanoid (so'lah-noid) [L. *solanum* potato + Gr. *eidos* form] resembling a raw potato in texture.

solanoma (so'lah-no'mah) (obs.) scirrhous carcinoma.

Solanum (so-la'num) [L. "nightshade"] a genus of solanaceous plants, including the potato, tomato, egg plant, several of the nightshades, and many poisonous and medicinal species. **S. carolinense** L. (Solanaceae), a plant of the United States. The fluid extracts of the root and berries were formerly used as anticonvulsive and sedative agents in epilepsy. The fruit is listed as poisonous to both animals and humans. Also known as *bull nettle*, *sand-brier*, *radical weed*, and *horse nettle*. **S. tuberosum** L., the common potato.

solapson (so-lap'sōn) chemical name: 1,1'-[sulfonylbis(p-phenyleneimino)]bis[3-phenyl-1,3-propanedisulfonic acid] tetrasodium salt. An antibacterial derivative of dapsone, $\text{C}_{30}\text{H}_{28}\text{N}_2\text{Na}_4$ -

O_{14}S_8 , having actions similar to those of the parent compound but less toxic; used as a leprostatic, administered orally and intramuscularly. Called also *solasulfone*.

solar (so'lar) [L. *solaris*] 1. pertaining to the sun. 2. denoting the great sympathetic plexus and its principal ganglia (especially the celiac); so called because of their radiating nerves.

solarium (so-la're-um) [L.] a room especially designed to allow exposure to light of the sun or to artificial light.

solasulfone (so'lah-sul'fōn) solapson.

solation (so-la'shun) the conversion of a gel into a sol.

Soldaini's test (reagent) (sol'dah-e'nēz) [Arturo Soldaini, Italian chemist] see under *tests*.

solder (sod'er) 1. a fusible alloy of metals used to unite the edges or surfaces of two pieces of metal. 2. to produce a union between two pieces of metal by use of a fusible alloy.

sole (söl) [L. *solea*; *planta*] the bottom of the foot; called also *planta pedis* [NA]. **convex s.**, **dropped s.**, pumiced foot.

solen- (so'lē-no) [Gr. *sōlēn* a channel, gutter, pipe] a combining form denoting relationship to a pipe or gutter; tubular or grooved.

Solenoglyph (so'lē-nog'li-fah) [*solen-* + Gr. *glyphein* to cut out with a knife] a group of venomous snakes with fangs that are hollow like a hypodermic needle and that normally fold back against the roof of the mouth but can be erected for striking and piercing. Examples are the massasauga and the rattlesnakes.

solenoid (so'lē-noid) [Gr. *sōleno-eides* pipe-shaped, grooved] a coil of wire spaced equally between turns, which acts like a magnet when an electric current is passed through it.

solenoma (so'lē-no'mah) (obs.) endometrial carcinoma.

solenonych (so'lē-no-nik'e-ah) [*solen-* + Gr. *onyx*, *onychos* nail + *-ia*] dystrophia unguis mediana canaliformis.

Solenopotes (so'lē-no-po'tēz) [*solen-* + Gr. *pōtēs* a drinker] a genus of lice of the order Anoplura. **S. capilla'tus**, a species of sucking lice occasionally found parasitic on cattle.

Solenopsis (so'lē-nop'sis) a genus of stinging ants, including the fire ants that attack man and inflict painful burning stings and may cause severe local and systemic reactions; *S. geminata* is indigenous to the United States; *S. saevissima richteri* is a viciously aggressive South American species that has been imported into the United States and gained a strong foothold.

solferino (sol'fer-e'no) fuchsin.

Solganal (sol'gah-nal) trademark for a preparation of aurothio-glucose.

solid (sol'id) [L. *solidus*] 1. not fluid or gaseous; not hollow. 2. a substance or tissue not fluid or gaseous. **color s.**, a three-dimensional geometrical body, devised to show the relation of all hues and brightnesses, including black, white, and grays, in their various modes.

Solidago (sol'i-da'go) [L.] a genus of composite-flowered plants: the golden-rods. *S. virgaur'ea* L., of Europe and North America, is aromatic and diuretic. Some species are considered to be toxic to livestock.

solidism (sol'i-dizm) [L. *solidus* solid] the obsolete doctrine that changes in the solids of the body, e.g., their expansion or contraction, are the causes of every disease.

solidist (sol'i-dist) one who accepts the doctrine of solidism.

solidistic (sol'i-dis'tik) pertaining to solidism or to the solidists.

solipsism (söl'ip-sizm) [L. *solus* alone + *ipse* one's self] the belief that the world exists only in the mind of the individual, or that it consists solely of the individual himself and his own experiences.

solipsistic (söl'ip-sis'tik) pertaining to or characterized by solipsism.

solitary (sol'i-ter'e) [L. *solitarius*] placed alone; not grouped with others.

sol-lunar (sol-lu'nar) [L. *sol* sun + *luna* moon] pertaining to or caused by the sun and moon.

solpugid (sol-pu'jid) an individual of the order Solpugida.

Solpugida (sol'pu-jid'ah) the solpugids, a family of hairy, jointed spiders (class Arachnida) that are differentiated from true spiders by having a segmented abdomen, which is more broadly joined to the cephalothorax; solpugids are capable of inflicting deep painful bites and are found mainly in desert, tropical, and subtropical areas.

solubility (sol'u-bil'i-tye) the quality or fact of being soluble; susceptibility of being dissolved.

soluble (sol'u-b'l) [L. *solubilis*] susceptible of being dissolved.

Solu-Cortef (sol'u-kor'tef) trademark for a preparation of hydrocortisone sodium succinate.

solum (so'lum), pl. *so'la* [L.] [NA] the bottom or lowest part. **s. tym'pani**, paries jugularis cavi tympani.

solute (so'lüt) a substance dissolved in a solvent; a solution consists of a solute and a solvent.

solutio (so-lu'she-o) [L., from *solvere* to dissolve] solution.

solution (so-lu'shun) [L. *solutio*] 1. a homogeneous mixture of one or more substances (solutes) dispersed molecularly in a sufficient quantity of dissolving medium (solvent). The solute may be gas, liquid, or solid; the solvent is usually liquid, but may be

solid, as in a solid solution of copper in silver (sterling silver). In pharmacology, a liquid preparation containing one or several soluble chemical substances usually dissolved in water and not, for various reasons, falling into another category. 2. the process of dissolving. 3. a loosening or separation. **A.C.D. s., acid citrate dextrose s.**, see *anticoagulant citrate dextrose s.* **acetylcysteine s.** [USP], a sterile solution of acetylcysteine in water, prepared with the aid of sodium hydroxide, containing 95 to 105 per cent of the labeled amount of acetylcysteine; administered by nebulization or installation for adjunct therapy in bronchopulmonary disorders when mucolysis is desired. **Albright's s.**, one consisting of 75 gm. of sodium citrate, 25 gm. of potassium citrate, 140 gm. of citric acid, and 1000 ml. of water; used in the treatment of renal tubular acidosis. **alcoholic s.**, a solution in which alcohol is used as the solvent. **Alsever's s.**, a solution for preserving sheep's red blood cells for use in complement fixation tests. **aluminum acetate topical s.** [USP], a preparation of aluminum subacetate solution, glacial acetic acid, and water, containing, in each 100 ml., 4.8–5.8 gm. of aluminum acetate, and used topically on the skin and mucous membranes, diluted with 10 to 40 parts of water, as an astringent. It is also used as a topical antiseptic and antipruritic in a wide variety of dermatologic conditions. Called also *Burow's s.* **aluminum subacetate topical s.** [USP], a solution containing aluminum sulfate, acetic acid, precipitated calcium carbonate, and water, yielding, from each 100 ml., 2.3–2.6 gm. aluminum oxide and 5.43–6.13 gm. acetic acid, and used topically on the skin and mucous membranes as an astringent. It is also used as a topical antiseptic and as a wet dressing in various skin diseases. **amaranth s.**, a clear, vivid red solution of amaranth in purified water containing, in each 100 ml., 0.9–1.1 gm. of amaranth; used as a coloring agent. **amaranth s., compound**, a solution composed of amaranth solution, caramel, alcohol, and purified water; used as a coloring agent. **aminoacetic acid sterile s.**, a sterile, aqueous solution containing 95 to 105 per cent of the labeled amount of aminoacetic acid; used as a nutrient. **aminobenzoic acid s.** [USP], a straw-colored solution containing 5 per cent aminobenzoic acid; applied topically to the skin as a sunscreensing agent. **ammonia s., diluted**, a colorless, transparent liquid of alkaline reaction, containing, in each 100 ml., 9–10 gm. of ammonia; used as a pharmaceutical necessity. Called also *ammonia water* or *diluted ammonium hydroxide solution*. **ammonia s., strong** [NF], a colorless, transparent liquid, strongly alkaline in reaction, containing 27–30 per cent of ammonia; used as a solvent and a source of ammonia. **ammoniacal silver nitrate s.**, a mixture of silver nitrate, purified by water and strong ammonia solution; used as a dental protective. **ammonium acetate s.**, a clear, colorless liquid, containing ammonium acetate, which has been used as a diaphoretic and diuretic. Called also *spirit of Mindererus*. **ammonium citrate s., alkaline**, a preparation of dibasic ammonium citrate and strong ammonia solution; used in tests for zinc. **ammonium hydroxide s., diluted**, ammonia s., diluted. **ammonium hydroxide s., stronger**, ammonia s., strong. **anisotonic s.**, a solution having tonicity differing from that of the standard of reference. **antazoline phosphate ophthalmic s.**, a sterile, aqueous solution, containing 90 to 100 per cent of the labeled amount of antazoline phosphate; used topically in the eye as an antihistaminic. **anticoagulant citrate dextrose s.** [USP], a sterile solution used as an anticoagulant for storage of whole blood obtained for transfusion purposes, and consisting of dihydrous trisodium citrate, monohydrous citric acid, and dextrose. Formerly called *anticoagulant citrate dextrose s.* **anticoagulant citrate phosphate dextrose s.** [USP], a sterile solution used as an anticoagulant for storage of whole blood, and consisting of anhydrous citric acid, dihydrous sodium citrate, monohydrous sodium biphosphate, and monohydrous dextrose. **anticoagulant heparin s.** [USP], a sterile solution used as an anticoagulant, containing sodium heparin and sodium chloride in water for injection. **anticoagulant sodium citrate s.** [USP], an aqueous solution of sodium citrate containing 3.80–4.20 gm. per cent sodium citrate; used as an anticoagulant for plasma and for blood for fractionation. Formerly called *sodium citrate anticoagulant s.* **antipyrine and benzocaine s.** [NF], a solution of antipyrine and benzocaine in glycerin, containing 90 to 110 per cent of the labeled amount of antipyrine and benzocaine; instilled in the ear as a local anesthetic. **antiseptic s.**, a clear, colorless liquid, containing boric acid, thymol, chlorothymol, menthol, eucalyptol, methyl salicylate, thyme oil, alcohol, and purified water, used as an antibacterial for external and oral use. **aqueous s.**, a solution in which water is used as the solvent. **aromatic s., alkaline**, a preparation of glycerin, potassium bicarbonate, sodium borate, and other ingredients; used as a mouthwash. **arsenic chloride s.**, a partly hydrolyzed solution of antimony trichloride in water. **arsenical s.**, potassium arsenite s. **arsenious acid s.**, a clear, colorless, odorless liquid, with an acid reaction, containing arsenic trioxide. **atropine sulfate ophthalmic s.** [USP], a sterile, aqueous solution containing 93 to 107 per cent of the labeled amount of atropine sulfate; applied topically to the conjunctiva as an anticholinergic to produce mydriasis or cycloplegia. **Benedict's s.**, sodium citrate, sodium carbonate, and

copper sulfate water solution. Its normal blue color changes to yellow, orange, or red in the presence of a reducing sugar such as glucose. It is used in urinalysis. **benzalkonium chloride s.** [USP], a clear, colorless, aqueous solution, with an aromatic odor and a slightly bitter taste, which contains 95–105 per cent of the labeled amount of benzalkonium chloride in concentrations of 1 per cent or more, and 93–107 per cent of the labeled amount in concentrations of less than 1 per cent; used as a topical antiseptic, effective against gram-positive and gram-negative bacteria and certain viruses, fungi, yeasts and protozoa. It is also used as an antimicrobial preservative in ophthalmic solutions. **benzethonium chloride topical s.** [USP], a clear colorless liquid, without odor and with a slightly bitter taste, which contains 95–105 per cent of the labeled amount of benzethonium chloride; used as a local anti-infective, applied topically to the skin and nasal mucosa, and as a preservative in pharmaceutical preparations. **Bonain's s.**, an anesthetic and antiseptic solution used in operations on the tympanic membrane, consisting of equal parts of menthol, phenol, and cocaine hydrochloride. **boric acid s.**, a clear, colorless, odorless liquid, each 100 ml. of which contains at least 4.25 gm. of boric acid; used as an external anti-bacterial. **Bouin's s.**, see under *fluid*. **buffer s.**, a solution which resists appreciable change in its hydrogen ion concentration when acid or alkali is added to it. **Burnett's s.**, see under *fluid*. **Burow's s.**, aluminum acetate s. **butacaine sulfate s.** [USP], a sterile solution containing 95–105 per cent of the labeled amount of butacaine sulfate in water; used to produce topical anesthesia of the eye. **s. C3**, a solution resembling intracellular fluid used in perfusion of tissues or organs prior to freezing them for preservation, as of kidneys for transplantation; called also *Collins's s.* **calciferol s.**, ergocalciferol s. **calcium cyclamate and calcium saccharin s.**, a clear, colorless solution containing 90 to 110 per cent of the labeled amounts of calcium cyclamate and calcium saccharin; used as a non-nutritive sweetener. **calcium hydroxide topical s.** [USP], clear, colorless liquid with an alkaline reaction, each 100 ml., at 25° C., containing not less than 140 mg. of calcium hydroxide; used in preparing various astringent solutions and lotions. It has been added to infant formulas to decrease the curd size formed from cow's milk, and is used as an antacid in infants. Called also *aqua calcis* and *lime water*. **carbapol ophthalmic s.** [USP], a sterile solution of carbol in an isotonic, aqueous medium, containing 95 to 105 per cent of the labeled amount of carbol; used as a cholinergic applied topically to the conjunctiva in the treatment of glaucoma. **carbol-fuchsin topical s.** [USP], a dark purple solution containing, in each 1000 ml., basic fuchsin (3 gm.), phenol (45 gm.), resorcinol (100 gm.), acetone (50 ml.), alcohol (100 ml.), and purified water; used as a local antifungal in the treatment of dermatophytosis, tinea, and other skin infections. Called also *Castellani's paint*. **carmine s.**, a deep red, rather viscous liquid, compounded of carmine, diluted ammonia solution, glycerin, and water; used as a coloring agent. **Carnoy's s.**, an acid fixative used for studying the cell nucleus and chromosomes, composed of: 3 parts absolute ethanol, 1 part glacial acetic acid (or Bowin's fluid), 5 parts saturated picric acid, 5 parts 40 per cent formaldehyde (formalin), and 1 part glacial acetic acid. **carphenazine maleate s.** [USP], a solution containing 95–110 per cent of the labeled amount of carphenazine maleate; used as an antipsychotic in the treatment of acute and chronic schizophrenic reactions in hospitalized patients. **centinormal s.**, hundredth-normal s. **cetylpyridinium chloride s.** [USP], a clear solution containing 95 to 105 per cent of the labeled amount of cetylpyridinium chloride; used as a local anti-infective applied topically to the skin and mucous membranes, and as a preservative in pharmaceutical preparations. **chloramphenicol ophthalmic s.** [USP], a sterile, buffered solution, containing 90–130 per cent of the labeled amount of chloramphenicol; used as an antibacterial, applied topically to the conjunctiva. **chloramphenicol for ophthalmic s.** [USP], a sterile, dry mixture of chloramphenicol and suitable buffers, containing 90–120 per cent of the labeled amount of chloramphenicol; used as an antibacterial, applied topically to the conjunctiva. **chymotrypsin for ophthalmic s.** [USP], a sterile preparation containing 80–120 per cent of the labeled potency of chymotrypsin; used for enzymatic zonulolysis for intracapsular lens extraction, applied by irrigation to the posterior chamber of the eye, under the iris. **clindamycin palmitate hydrochloride for oral s.** [USP], a dry mixture containing clindamycin palmitate hydrochloride equivalent to 90–120 per cent of the labeled amount of clindamycin; used as an antibacterial, primarily in the treatment of penicillin-resistant gram-positive infections and in patients allergic to penicillin. **cloxacillin sodium for oral s.** [USP], a preparation containing 90–120 per cent of the labeled amount of cloxacillin; used as an oral antibacterial, primarily in the treatment of infections due to penicillinase-resistant staphylococci. **coal tar topical s.** [USP], a solution of coal tar and polysorbate 80 in alcohol, used, diluted, as a local antieczematogenic. **cochineal s.**, a dark, purplish red fluid with a slightly aromatic odor, compounded of cochineal, potassium carbonate, alum, potassium bitartrate, glycerin, and water; used as a coloring agent. **Cohn's s.**, a synthetic medium for growing yeast and molds, containing monopotassium acid phosphate, calcium phosphate,

magnesium sulfate, and ammonium tartrate, in water. **Col-lins' s.**, s. C3. **colloid s.**, **colloidal s.**, a preparation consisting of minute particles of matter suspended in a solvent, the solvent being called the continuous phase, and the suspended matter, the disperse phase. Called also *disperse system*. See *dispersoid* and *emulsoid*. **contrast s.**, a solution of a substance opaque to the roentgen ray, used to facilitate roentgen visualization of some organ or structure in the body. **cresol s.**, **compound**, cresol s., saponated. **cresol s.**, **saponated**, a mixture of cresol, vegetable oil, potassium hydroxide, alcohol, and water, and containing, in each 100 ml., 46–52 ml. of cresol; used as a disinfectant. Called also *compound cresol s.* **crystal violet s.**, methylosaniline chloride s. **cyanocobalamin Co 57 s.** [USP], a clear colorless to pink solution, suitable for oral administration, containing cyanocobalamin in which a portion of the molecules contain radioactive cobalt (^{57}Co); used as a diagnostic aid in pernicious anemia. **cyanocobalamin Co 60 s.** [USP], a clear colorless to pink solution suitable for oral administration, containing cyanocobalamin in which a portion of the molecules contain radioactive cobalt (^{60}Co); used as a diagnostic aid in pernicious anemia. Formerly called *radiocyanocobalamin s.* **cyclopentamine hydrochloride s.** [USP], a solution of cyclopentamine hydrochloride in a suitable isotonic vehicle, containing 95 to 105 per cent of the labeled amount of cyclopentamine hydrochloride; applied intranasally as a vasoconstrictor to reduce nasal congestion. **cyclopentolate hydrochloride ophthalmic s.** [USP], a sterile solution of cyclopentolate hydrochloride in a buffer, isotonic, aqueous medium, containing 95 to 105 per cent of the labeled amount of cyclopentolate hydrochloride; applied topically to the conjunctiva as an anticholinergic. **Cza-pek-Dox s.**, a solution used for growing molds, containing glucose, sodium nitrate, monopotassium phosphate, potassium chloride, magnesium sulfate, iron sulfate, and water. **Dakin's s.**, **Dakin's s., modified**, sodium hypochlorite s., diluted. **dec-imolar s.**, a solution having one-tenth the concentration of a molar solution. **decinormal s.**, tenth-normal s. **demeca-rium bromide ophthalmic s.** [USP], a sterile, aqueous solution containing 92 to 108 per cent of the labeled amount of demecarium bromide; applied topically to the conjunctiva as a cholinergic in treatment of glaucoma and convergent strabismus. **dexamethasone sodium phosphate ophthalmic s.** [NF], a sterile, aqueous solution containing 90 to 115 per cent of the labeled amount of dexamethasone phosphate; applied topically to the eye as an anti-inflammatory glucocorticoid. **diatrizoate sodium s.** [USP], a solution of diatrizoate sodium in purified water, or a solution of diatrizoic acid in purified water prepared with the aid of sodium hydroxide; used orally as a diagnostic radiopaque medium in radiography of the gastrointestinal tract. **diethyltoluamide topical s.** [USP], a solution of diethyltoluamide in alcohol or isopropyl alcohol, containing 92 to 108 per cent of the labeled amount of diethyltoluamide; applied to the skin and clothing to repel arthropods. **dioctyl calcium sulfosuccinate s.**, a clear solution containing 95 to 105 per cent of the labeled amount of dioctyl calcium sulfosuccinate; used as a wetting agent and as a nonlaxative fecal matter softener. **dioctyl sodium sulfosuccinate s.**, docusate sodium s. **diphenox-y-late hydrochloride and atropine sulfate oral s.** [USP], a solution containing 93 to 107 per cent of the labeled amount of diphenoxylate hydrochloride and 80 to 120 per cent of the labeled amount of atropine sulfate; used as an antiperistaltic in treatment of diarrhea. **disclosing s.**, a solution which is used for the purpose of making something apparent, such as one to be painted on the surface of a tooth in order to stain, and thus render visible, foreign matter or bacterial plaques. **Dobell's s.**, sodium bo-rate s., compound. **docusate sodium s.** [USP], a solution containing 95 to 105 per cent of the labeled amount of docusate sodium; used as a fecal softener, administered rectally. Called also *dioctyl sodium sulfosuccinate s.* **double-normal s.**, a solution having double the strength of a normal solution; designated 2 N. **dyclonine hydrochloride topical s.** [USP], a sterile, aqueous solution containing 92 to 108 per cent of the labeled amount of dyclonine hydrochloride; used as a topical anesthetic. **echothiophate iodide for ophthalmic s.** [USP], a preparation containing 95–115 per cent of the labeled amount of echothiophate iodide; a cholinergic used as a miotic in the treatment of certain forms of glaucoma, applied topically to the conjunctiva. **dl-ephedrine hydrochloride s.**, racephedrine hydrochloride s. **ephedrine sulfate s.** [USP], a clear, colorless solution with a slightly camphoraceous odor and taste, and a neutral or acid reaction, used as a nasal vasoconstrictor. **epinephrine s.** [USP], a nearly colorless, slightly acid solution of epinephrine in purified water, prepared with the aid of hydrochloric acid, each 100 ml. containing 90–115 mg. of epinephrine; used as a vasoconstrictor. **epinephrine bitartrate ophthalmic s.** [USP], a buffered, aqueous solution, containing 90–115 per cent of the labeled amount of epinephrine bitartrate; used to reduce intraocular pressure in the management of simple chronic (open-angle) glaucoma, applied topically to the conjunctiva. **epinephryl borate ophthalmic s.** [USP], a sterile solution containing epinephryl borate equivalent to 90–115 per cent of the labeled amount of epinephrine; used as an adrenergic in ophthalmology, administered by instillation into the eye. **ergocalciferol**

oral s. [USP], a solution of ergocalciferol in an edible vegetable oil, in polysorbate 80, or in propylene glycol, containing, in each gram, not less than 0.25 mg. of ergocalciferol; used in the prophylaxis and treatment of vitamin D deficiency. Called also *calciferol s.* **erythrosine sodium topical s.** [USP], a preparation containing 90–110 per cent of the labeled amount of erythrosine sodium in purified water; applied topically to the teeth to disclose plaque. **etheral s.**, a solution in which ether is used as the solvent. **Farrant's s.**, a mounting preparation used in bacteriological work, containing glycerin, water, arsenious acid solution, and gum arabic. **Fehling's s.**, dissolve 34.66 gm. of copper sulfate in water to make 500 ml., dissolve 173 gm. of crystallized potassium sodium tartrate and 50 gm. of sodium hydroxide in water to make 500 ml. Keep the two solutions in small well-stoppered bottles; for use, mix equal parts of the two solutions. **ferric chloride s.**, a yellowish orange liquid with a faint odor of hydrochloric acid and an acid reaction, containing 37.2–42.7 gm. of ferric chloride and 3.85–6.6 gm. of hydrochloric acid in each 100 ml.; formerly used as a hematinic in the treatment of iron deficiency anemias. **ferric subsulfate s.**, a red-dish-brown, almost odorless, aqueous solution of basic ferric sulfate, used as an astringent. **ferrous sulfate oral s.** [USP], a solution containing 94–106 per cent of the labeled amount of ferrous sulfate; used as a hematinic in the treatment of iron deficiency anemia. **fiftieth-normal s.**, a solution having one-fiftieth the strength of a normal solution; designated N/50 or 0.02 N. **fixative s.**, see *fixative*. **Flemming's s.**, a solution for hardening histological specimens, consisting of chromium trioxide, osmium tetroxide, glacial acetic acid, and water. **fluocinolonide acetone topical s.** [USP], a solution containing 90–110 per cent of the labeled amount of fluocinolonide acetone; used as an anti-inflammatory in glucocorticoid-responsive dermatoses. **fluorouracil topical s.** [USP], a preparation containing 90–110 per cent of the labeled amount of fluorouracil; used as an antineoplastic in the treatment of actinic keratoses. **Foni-o's s.**, a solution of magnesium sulfate in water, used as a diluent for blood platelets. **formaldehyde s.** [USP], a solution of formaldehyde in water, containing not less than 37 per cent of formaldehyde; used as a disinfectant. Called also *formalin* and *formol*. **formol-Zenker s.**, a fixing solution consisting of Zenker's solution and formaldehyde solution. **Fowler's s.**, potassium arsenite s. **gelatin s.**, **special intravenous**, a 5 or 6 per cent sterile, pyrogen-free solution of gelatin in isotonic sodium chloride solution; used as a plasma volume expander. **gentian violet topical s.** [USP], a purple liquid with a slight odor of alcohol, containing gentian violet, alcohol, and purified water, each 100 ml. containing 0.95–1.05 gm. of gentian violet; used topically as an anti-infective. Called also *crystal violet s.* and *methylosaniline chloride s.* **Gilson's s.**, a fixative solution consisting of mercuric chloride, nitric acid, glacial acetic acid, 70 per cent alcohol, and water. **glycerin oral s.** [USP], a preparation containing 95–105 per cent of the labeled amount of glycerin; used as a diuretic to reduce intraocular pressure in glaucoma and before cataract surgery. **gold s.**, any of a variety of gold compounds available for medicinal purposes with differences in their physical properties and clinical effectiveness, e.g., aurothioglucose, aurothioglucanide, gold sodium thiomalate, and gold sodium thiosulfate. See also *gold ^{198}Au s.* **gold ^{198}Au s.**, a sterile, pyrogen-free, cherry-red, colloidal solution of radiogold (^{198}Au) stabilized by the addition of gelatin and suitable reducing agents, used by intracavitary or interstitial injection in the treatment of certain types of cancer. Called also *radiogold s.* **Gowers' s.**, a solution of sodium sulfate, glacial acetic acid, and water, used for the dilution of blood prior to enumerating red blood cells microscopically with a hemocytometer. **Gram's s.**, see *Table of Stains and Staining Methods*, under *stain*. **gram molecular s.**, molar s. **half-normal s.**, a solution having half the strength of a normal solution; designated N/2. **haloperidol oral s.** [USP], a solution containing 90 to 110 per cent of the labeled amount of haloperidol; used as a tranquilizer, especially in the management of psychoses and for control of the manifestations of Gilles de la Tourette's syndrome. **Hamdi's s.**, a solution for preserving histological specimens, consisting of sodium sulfate, salt, glycerin, and water. **Harrington's s.**, a solution for hand disinfection, consisting of alcohol, hydrochloric acid, water, and corrosive mercuric chloride. **Hartman's s.**, a solution once used for dentin desensitization, consisting of thymol, 95 per cent ethyl alcohol, and sulfuric ether. **Hayem's s.**, a solution used in diluting blood prior to enumerating red blood cells microscopically with a hemocytometer, and consisting of mercury bichloride, sodium chloride, sodium sulfate, and water. **hexyl-caine hydrochloride topical s.** [NF], a clear, colorless, aqueous solution containing 93 to 107 per cent of the labeled amount of hexylcaine hydrochloride; applied topically as a local anesthetic. **homatropine hydrobromide ophthalmic s.** [USP], a sterile, buffered, aqueous solution containing 95 to 105 per cent of the labeled amount of homatropine hydrobromide; applied topically to the conjunctiva to produce cycloplegia and mydriasis. **hundredth-normal s.**, a solution having one-hundredth the strength of a normal solution; designated N/100 or 0.01 N. **hydrogen dioxide s.**, hydrogen peroxide s. **hydrogen peroxide topical s.** [USP], a solution containing 2.5–3.5 gm. of

hydrogen peroxide per 100 ml.; used as a topical anti-infective to the skin and mucous membrane. Called also *hydrogen dioxide solution*. **hydroxyamphetamine hydrobromide ophthalmic s.** [USP], a sterile, buffered, aqueous solution containing 0.95 to 1.05 per cent of hydroxyamphetamine hydrobromide; applied topically to the conjunctiva as a mydriatic. **hydroxypropyl methylcellulose ophthalmic s.** [USP], a sterile solution containing 85–115 per cent hydroxypropyl methylcellulose; applied topically to the conjunctiva to protect the cornea during certain ophthalmic procedures and to lubricate the cornea. **hyperbaric s.**, a solution having a greater specific gravity than a standard of reference, such as one used for spinal anesthesia having a specific gravity greater than that of the spinal fluid, causing it to migrate downward and produce anesthesia below the level of injection. **hypertonic s.**, see *hypertonic*. **hypobaric s.**, a solution having a specific gravity less than that of a standard of reference, such as one used for spinal anesthesia having a specific gravity less than that of the spinal fluid, causing it to migrate upward and produce anesthesia above the level of injection. **hypotonic s.**, see *hypotonic*. **idoxuridine ophthalmic s.** [USP], a sterile, aqueous solution containing 0.09 to 0.11 per cent of idoxuridine; used as an antiviral agent in the treatment of herpes virus keratitis, applied topically to the conjunctiva. **iodine topical s.** [USP], a transparent, reddish brown liquid, with the odor of iodine, consisting of iodine and sodium iodide in purified water, each 100 ml. of which contains 1.8–2.2 gm. of iodine and 2.1–2.6 gm. of sodium iodide; used as a local anti-infective. **iodine s., compound**, iodine s. strong. **iodine s., strong** [USP], a transparent, deep brown liquid, with the odor of iodine, consisting of iodine and potassium iodide in purified water, each 100 ml. containing 4.5–5.5 gm. of iodine and 9.5–10.5 gm. of potassium iodide. It is used as a source of iodine. Called also *compound iodine s.* and *Lugol's s.* **iron and ammonium acetate s.**, a clear, reddish brown liquid, with an aromatic odor, compounded of ferric chloride tincture, diluted acetic acid, ammonium acetate solution, aromatic elixir, glycerin, and distilled water. Formerly used as a hematinic and as a diuretic. Called also *Basham's mixture*. **isobaric s.**, a solution having the same specific gravity as a standard of reference, such as one used for spinal anesthesia having a specific gravity the same as that of the spinal fluid, causing it to remain and produce anesthesia at the level of injection. **isofluorophate ophthalmic s.**, a sterile solution containing 0.09–0.11 per cent of isofluorophate in a suitable vegetable oil; used as a cholinergic in the treatment of glaucoma, applied topically to the conjunctiva. **isotonic s.**, see *isotonic*. **Kaiserling s.**, 1. *for fixation*: formalin 400 ml., water 2,000 ml., potassium nitrate 30 gm., potassium acetate 60 gm. 2. *for restoring color*: alcohol 80 per cent. 3. *for preservation*: potassium acetate 200 gm., glycerol 400 ml., sodium arsenate 100 gm., water 2,000 ml. **Labarraque's s.** [NF], sodium hypochlorite solution, diluted with an equal volume of water. **Lang's s.**, see under *fluid*. **Lange's s.**, a solution of colloidal gold. **lead subacetate s.**, an aqueous solution of lead acetate and lead monoxide; used as an astringent and as a local sedative. **lead subacetate s., diluted**, a colorless, slightly turbid liquid, with a sweet, astringent taste, prepared by diluting lead subacetate solution with water. **lime s., sulfated**, a solution of lime and sublimed sulfur in water; formerly much used as a keratolytic in acne vulgaris and seborrhea. Called also *Vleming's s.* **liver s.**, a brownish liquid prepared from mammalian livers and containing the soluble thermostable fraction which stimulates hematopoiesis in patients with pernicious anemia. Called also *liquid liver extract*. **Locke's s.**, a solution of sodium chloride, calcium chloride, potassium chloride, sodium bicarbonate, and dextrose; used in physiological experiments to keep the mammalian heart beating. **Locke's s., citrated**, a solution of sodium chloride, potassium chloride, calcium chloride, sodium citrate, and water, with pH adjusted to 7.4. **Locke-Ringer's s.**, a test solution containing sodium chloride, potassium chloride, calcium chloride, magnesium chloride, sodium bicarbonate, dextrose, and water. **Lugol's s.**, iodine s., strong. **Magendie's s.**, a solution for paracenteral use containing morphine sulfate. **magnesium citrate oral s.** [USP], a colorless to slightly yellow, clear, effervescent liquid, with a sweet, acidulous taste and a lemon flavor, which consists of magnesium carbonate, anhydrous citric acid, syrup, talc, lemon oil, potassium bicarbonate, and purified water, each 100 ml. containing an amount of magnesium citrate equal to 1.55–1.9 gm. magnesium oxide. It is used as a cathartic. **malt extract s.**, a solution of malt extract in water; used as a bacteriological culture medium. **Massier's s.**, a solution used as a spray in laryngitis, consisting of resorcinol (1.5 gm.), menthol (0.1 gm.), 3.0 strong tincture of iodine, and glycerin (30 ml.). **Mencièr's s.**, see under *mixture*. **merbromin s.**, a clear, red liquid with a yellow-green fluorescence, compounded of merbromin and water, each 100 ml. of which contains 1.8–2.2 gm. of merbromin; used as an antibacterial. **merbromin s., surgical**, a clear, red liquid with a yellow-green fluorescence, compounded of merbromin, water, acetone, and neutralized alcohol, the merbromin containing 24–26.7 per cent of mercury, and 18–21.3 per cent of bromine; used as an antibacterial. **methoxsalen topical s.** [USP], a preparation containing 9.2–10.8

mg. of methoxsalen per milliliter; used in conjunction with exposure to ultraviolet light to facilitate repigmentation in idiopathic vitiligo, and also as a suntan accelerator and sun protectant. **methylcellulose ophthalmic s.** [USP], a sterile solution containing 85–115 per cent of the labeled amount of methylcellulose; applied topically to protect the cornea during certain ophthalmic procedures and to lubricate the cornea. **methylosaniline chloride s., gentian violet s. molar s.**, a solution containing 1 mole of solute dissolved in 1,000 gm. of solvent. **molar s.**, a solution each liter of which contains 1 gram-molecule of the dissolved substance: designated M/1 or 1 M. The concentration of other solutions may be expressed in relation to that of molar solutions as tenth-molar (M/10 or 0.1 M), etc. **molecular disperse s.**, a solution in which the dispersed particles have a diameter of about 0.1 micromicron. **Monzel's s.**, ferric subsulfate s. **Naegeli's s.**, a synthetic culture medium containing dibasic potassium phosphate, magnesium sulfate, calcium chloride, and ammonium tartrate, in water; used for growing yeasts and molds. **nafcillin sodium for oral s.** [USP], a preparation containing nafcillin sodium equivalent to 90–120 per cent of the labeled amount of nafcillin; used as an antibacterial, chiefly in the treatment of resistant staphylococcal infections. **naphazoline hydrochloride nasal s.** [USP], a solution containing 90–110 per cent of the labeled amount of naphazoline hydrochloride in water; used as a vasoconstrictor, applied topically to the nasal mucosa. **naphazoline hydrochloride ophthalmic s.** [USP], a solution containing 90–110 per cent of the labeled amount of naphazoline hydrochloride in water; used as a vasoconstrictor, applied topically to the conjunctiva. **neomycin sulfate oral s.** [USP], a solution containing, in each 5 ml. of solution, an amount of neomycin sulfate equivalent to 90 to 125 per cent of the equivalent of 87.5 mg. of neomycin base; used as an antibacterial. **neomycin and polymyxin B sulfates and gramicidin ophthalmic s.** [USP], a sterile isotonic solution containing 90 to 130 per cent of the labeled amounts of neomycin base, polymyxin B sulfate, and gramicidin; applied topically to the eye as a local anti-infective. **Nessler's s.**, see under *reagent*. **nitrofurazone topical s.** [USP], a solution containing 95–105 per cent of the labeled amount of nitrofurazone; used as a local anti-infective against a wide variety of gram-negative and gram-positive bacteria in the treatment of many skin lesions, especially second and third degree burns and to aid healing and prevent infection of skin grafts, applied topically. **nitromersol topical s.** [USP], a clear, reddish orange liquid, compounded of nitromersol, sodium hydroxide, monohydrated sodium carbonate, and purified water, each 100 ml. of which yields 180–220 mg. of nitromersol; used as a topical anti-infective. **normal s.**, a solution each liter of which contains 1 gram equivalent weight of the dissolved substance: designated N/1 or 1 N. **normal saline s., normal salt s., physiological salt s.** **normobaric s.**, isobaric s. **ophthalmic s.**, a sterile solution, essentially free from foreign particles and suitably compounded and dispensed, for instillation into the eye. **Orth's s.**, a solution for fixing histological specimens, consisting of Müller's fluid and formaldehyde solution. **oxacillin sodium for oral s.** [USP], a preparation containing 90–120 per cent of the labeled amount of oxacillin; used as an antibacterial, primarily in the treatment of infections due to penicillinase-resistant staphylococci. **oxymetazoline hydrochloride nasal s.** [USP], a solution of oxymetazoline hydrochloride in water adjusted to a suitable pH and tonicity, containing 95 to 115 per cent of the labeled amount of oxymetazoline hydrochloride; instilled into the nostrils as a vasoconstrictor. **paramethadione oral s.** [USP], a solution of paramethadione in dilute alcohol, containing, in each milliliter, 282 to 318 mg. of paramethadione; used as an anticonvulsant, especially in petit mal epilepsy. **parathyroid s.**, parathyroid injection. **Pasteur's s.**, a solution of ammonium tartrate, cane sugar, and ash from yeast, in water; used as a medium for growing yeasts and molds. **Perenyi's s.**, an embryological fixing solution, consisting of 10 per cent solution of nitric acid, alcohol, and 0.5 per cent solution of chromic acid. **phenylephrine hydrochloride nasal s.** [USP], a clear, colorless, or slightly yellow liquid, which contains 95–105 per cent of the labeled amount of phenylephrine hydrochloride; used as a nasal vasoconstrictor, applied topically. **phenylephrine hydrochloride ophthalmic s.** [USP], a sterile, buffered, aqueous solution containing 90 to 115 per cent of the labeled amount of phenylephrine hydrochloride; applied topically to the conjunctiva as a vasoconstrictor to produce mydriasis without cycloplegia. **physiological salt s., physiological sodium chloride s.**, an aqueous solution of sodium chloride having an osmolality similar to that of blood serum. **physostigmine salicylate ophthalmic s.** [USP], a sterile, aqueous solution containing 90–110 per cent of the labeled amount of physostigmine salicylate; used as a cholinergic to produce miosis and to decrease intraocular pressure in the treatment of glaucoma, applied topically to the conjunctiva. **Pickrell's s.**, a solution of sulfadiazine in ethanolamine, with sodium benzoate as a preservative. **pilocarpine hydrochloride ophthalmic s.** [USP], a sterile, buffered, aqueous solution containing 90 to 110 per cent of the labeled amount of pilocarpine hydrochloride; applied topically to the conjunctiva as

a cholinergic. **pilocarpine nitrate ophthalmic s.** [USP], a sterile, buffered, aqueous solution containing 90 to 110 per cent of the labeled amount of pilocarpine nitrate; applied topically to the conjunctiva as a cholinergic. **Pitkin's s.**, a solution of procaine in a solvent having a specific gravity lower than that of the spinal fluid; used as a spinal anesthetic. **pituitary s., pituitary s., posterior, posterior pituitary injection.** **potassium arsenite s.**, a solution of arsenic trioxide, potassium bicarbonate, and alcohol in water. It has been used in the treatment of chronic myelogenous leukemia and chronic dermatitides. In veterinary medicine, it is used in the treatment of pulmonary emphysema, chronic nonparasitic dermatitides, chronic coughs, and general debility. Called also *arsenical s.*, *Fowler's solution*, and *kali arsenicosum*. **potassium iodide oral s.** [USP], a solution containing 97–103 gm. of potassium iodide in each ml.; used as an expectorant, as a source of iodine in thyrotoxic crises and in the preparation of thyrotoxic patients for thyroidectomy, and as an antifungal in the treatment of lymphocutaneous sporotrichosis, administered orally. **povidone-iodine topical s.** [USP], a reddish brown, transparent solution of povidone-iodine and water, containing 85 to 120 per cent of the labeled amount of iodine; applied topically as an anti-infective. **prednisolone sodium phosphate ophthalmic s.** [USP], a sterile solution of prednisolone sodium phosphate in a buffered, aqueous medium, containing 90 to 115 per cent of the labeled amount of prednisolone phosphate, present as the disodium salt; used as an anti-inflammatory adrenocortical steroid. **prochlorperazine edisylate oral s.** [USP], a solution containing 92–108 per cent of the labeled amount of prochlorperazine; used as an antiemetic and tranquilizer, administered orally. **promazine hydrochloride oral s.** [USP], a solution containing 95–110 per cent of the labeled amount of promazine hydrochloride; used mainly as an antipsychotic agent, administered orally. **proparacaine hydrochloride ophthalmic s.** [USP], a sterile, aqueous solution containing 95 to 110 per cent of the labeled amount of proparacaine hydrochloride; applied topically to the conjunctiva as an anesthetic. **racephedrine hydrochloride s.**, a clear, colorless solution with a camphoraceous odor and taste, compounded of racephedrine hydrochloride, chlorobutanol, and Ringer's solution, each 100 ml. of which contains between 930 mg. and 1.07 gm. of racephedrine; used as an adrenergic. Called also *dl-ephedrine hydrochloride s.* **radiocyanocobalamin s.**, radioactive cyanocobalamin. **radiogold s.**, gold ^{198}Au s. **Randall's s.**, a solution consisting of the acetate, bicarbonate, and citrate salts of potassium; used especially in the treatment of potassium deficiency, administered orally. **Rees-Ecker s.**, see under *fluid*. **Ringer's s.**, see under *irrigation*. **Ruge's s.**, a solution of glacial acetic acid, 40 per cent formalin, and water; used as a stain. **saline s., salt s.**, a solution of sodium chloride, or common salt, in purified water. **saturated s.**, a solution in which the solvent has taken up all of the dissolved substance that it can hold in solution. **Schallibaum's s.**, a solution of celloidin and oil of cloves used in histological work to attach paraffin sections to slides. **sclerosing s.**, a solution of an irritant substance for injection into a vein to produce obliteration of the vein, or into a hernia to induce fibrous formation and obliteration of the sac. **scopolamine hydrobromide ophthalmic s.** [USP], a sterile, buffered, aqueous solution, containing 90 to 110 per cent of the labeled amount of scopolamine hydrobromide; used as a mydriatic and cycloplegic, applied topically to the conjunctiva. **semi-normal s.**, half-normal s. **Seyderhelm's s.**, a colloidal mixture of Congo red and trypan blue, for staining urinary sediment. **Shohl's s.**, a solution containing 140 gm. citric acid and 98 gm. hydrated crystalline salt of sodium citrate, distilled water to make 1000 ml.; used to correct electrolyte imbalance in the treatment of renal tubular acidosis. **silver nitrate s., ammoniacal**, a clear, colorless, almost odorless liquid, compounded of silver nitrate, water, and strong ammonia solution, and containing, in each 100 ml., 28.5–30.5 gm. of silver, and 9.0–9.7 gm. of ammonia; used as a dental protective to fill minute crevices in teeth. **silver nitrate ophthalmic s.** [USP], a solution of silver nitrate in a buffered water medium, containing 0.95–1.05 per cent of AgNO_3 ; used as a local anti-infective applied topically to the conjunctiva as a prophylactic against ophthalmia neonatorum. **sodium borate s., compound**, a solution containing sodium borate, sodium bicarbonate, liquefied phenol, glycerin, and purified water; formerly used as a gargle or mouth wash. **sodium chloride s.**, see under *irrigation*. **sodium cyclamate and sodium saccharin s.**, a clear, colorless solution containing 90 to 110 per cent of the labeled amounts of sodium cyclamate and sodium saccharin; used as a non-nutritive sweetener. **sodium fluorescein ophthalmic s.** [USP], a sterile buffered solution containing, in each 100 ml., 1.86 to 2.10 gm. of sodium fluorescein, and a suitable antimicrobial agent; applied topically to the conjunctiva as a corneal trauma indicator. **sodium fluoride oral s.** [USP], a solution containing 95–105 per cent of the labeled amount of sodium fluoride; used as a dental caries prophylactic, used in the fluoridation of water and applied topically to the teeth. **sodium hypochlorite s.** [USP], a clear, pale, greenish yellow liquid with the odor of chlorine, containing 4–6 per cent of sodium hypochlorite; used as a disinfectant for utensils, etc., but not suitable for application to

wounds. It has also been used as a deodorant and bleaching agent. **sodium hypochlorite s., diluted**, a colorless to light yellow liquid with a faint odor of chlorine, compounded of sodium hypochlorite solution, sodium bicarbonate, and water, each 100 ml. containing 450–500 mg. of sodium hypochlorite; used as a topical anti-infective. It is also used for wound irrigation, and has been used to irrigate the urinary bladder. Called also *Dakin's antiseptic*, *Dakin's fluid*, *Dakin's s.*, *Dakin's modified s.*, and *surgical s. of chlorinated soda*. See also *Carrel's treatment*, under *treatment*. **sodium iodide I 125 s.** [USP], a solution suitable for either oral or intravenous administration, containing radioiodine (^{125}I) as sodium iodide; used in the determination of thyroid function. **sodium iodide I 131 s.** [USP], a solution suitable for either oral or intravenous use, containing radioiodine (^{131}I) as sodium iodide; used for thyroid function determination and thyroid scans, as a thyroid inhibitor in the treatment of hyperthyroidism and cardiac diseases associated with hyperthyroidism, and for the palliation of thyroid cancer. **sodium phosphate s.**, a clear colorless liquid without odor and with a salty taste, the consistency of thick syrup, each 100 ml. of which contains the equivalent of 71–79 gm. of sodium phosphate; used as a mild saline cathartic. It was formerly administered orally or intravenously in the treatment of lead poisoning. **sodium phosphate P 32 s.** [USP], a solution suitable for either oral or intravenous administration, containing radiophosphorus (^{32}P) as sodium phosphate; used especially as an antiproliferative and as a diagnostic aid for localization of tumors, e.g., intraocular and brain lesions, and has been used in the treatment of certain leukemias. Formerly called *sodium radiophosphate s.* **sodium phosphate and biphosphate oral s.** [USP], a solution of sodium phosphate and sodium biphosphate, or sodium phosphate and phosphoric acid, in purified water, containing in each 100 ml., 17.1–18.9 gm. of sodium phosphate and 45.6–50.4 gm. of sodium biphosphate; used as a cathartic. **sodium radioiodide s.**, sodium iodide I 131 s. **sodium radiophosphate s.**, sodium phosphate P 32 s. **sorbitol s.** [USP], a clear, colorless, syrupy liquid with a sweet taste, containing in each 100 ml., 69–71 gm. of total solids consisting essentially of D-sorbitol with a small quantity of mannitol and other isomeric polyhydric alcohols; used as a flavored humectant in pharmaceutical preparations. **standard s.**, one which contains in each liter a definitely stated amount of reagent; usually expressed in terms of normality (equivalent weights of solute per liter of solution) or molarity (g.mol.wts. of solute per liter of solution). **sulfacetamide sodium ophthalmic s.** [USP], a sterile solution containing 95–105 per cent of the labeled amount of sulfacetamide sodium; used as an antibacterial in sulfonamide-responsive eye infections, applied topically to the conjunctiva. **sulfisoxazole diolamine ophthalmic s.** [USP], a sterile solution containing sulfisoxazole diolamine equivalent to 90–115 per cent of the labeled amount of sulfisoxazole; used as an antibacterial in the treatment of sulfonamide-responsive eye infections. **supersaturated s.**, an unstable solution that contains more of the solute than it can permanently hold. **surgical s. of chlorinated soda**, see *sodium hypochlorite s., diluted*. **susa s.**, a decalcifying solution composed of corrosive sublimate, sodium chloride, trichloroacetic acid, glacial acetic acid, formalin, and water. **tenth-normal s.**, one having one-tenth the strength of a normal solution; designated N/10 or 0.1 N. **test s's**, standard solutions (in purity and concentration) of specified chemical substances used in performing certain test procedures. **tetracaine hydrochloride ophthalmic s.** [USP], a sterile aqueous solution containing 90–110 per cent of the labeled amount of tetracaine hydrochloride; used as a topical anesthetic, applied to the conjunctiva. **tetracaine hydrochloride topical s.** [USP], an aqueous solution containing 95–105 per cent of tetracaine hydrochloride; used as a topical anesthetic, applied to the mucous membranes of the nose and throat. **tetrahydrozoline hydrochloride nasal s.** [USP], a solution of tetrahydrozoline hydrochloride in water adjusted to a suitable tonicity, containing 90 to 110 per cent of the labeled amount of tetrahydrozoline hydrochloride; a vasoconstrictor applied in 0.05 or 0.1 per cent solution as nasal drops or spray, or in 0.05 solution to the eye. **tetrahydrozoline hydrochloride ophthalmic s.** [USP], a sterile, aqueous solution containing 90 to 110 per cent of the labeled amount of tetrahydrozoline hydrochloride; a vasoconstrictor applied to the eye in 0.05 per cent solution. **thimerosal topical s.** [USP], a clear solution having a characteristic odor, compounded of thimerosal, ethylenediamine, monoethanolamine, sodium chloride, sodium borate, and purified water, each 100 ml. containing 95 to 105 mg. of thimerosal; applied topically as an anti-infective. **thioridazine hydrochloride oral s.** [USP], a solution containing, in each 100 ml., 2.70 to 3.30 gm. of thioridazine hydrochloride; used as a tranquilizer. **thousandth-normal s.**, a solution having one-thousandth the strength of a normal solution; designated N/1,000 or 0.001 N. **Toison's s.**, a fluid used in diluting blood for the counting of the erythrocytes, consisting of crystal violet, sodium chloride, sodium sulfate, glycerin, and water. **tolnaftate topical s.** [USP], a solution containing 90 to 115 per cent of the labeled amount of tolinaftate; used as a topical antifungal. **tribromoethanol s., tribromethyl alcohol s.**, a preparation containing in each 100 ml., 95–105 gm.

of tribromoethanol in amylene hydrate; used as a rectally administered basal anesthetic, and has been used as an anticonvulsant. Called also *bromethol*. **tribromoethyl alcohol s.**, tribromoethanol s. **trimethadione s.** [USP], a solution containing 94 to 106 per cent of the labeled amount of trimethadione; used as an oral anticonvulsant for control of petit mal seizures. **tropicamide ophthalmic s.** [USP], a sterile solution of tropicamide in a suitable buffered, aqueous medium, containing 95 to 105 per cent of tropicamide; applied topically to the conjunctiva as an anticholinergic. **tuaminoheptane sulfate nasal s.** [USP], a solution of tuaminoheptane sulfate, sodium hydroxide, phenylmercuric nitrate, monobasic potassium nitrate, sodium chloride, and purified water; used as an adrenergic applied topically to the nasal mucosa to relieve congestion. **Tyrole's s.**, a modified Locke's solution containing magnesium. **Vlem-inckx's s.**, lime s., sulfated. **volumetric s.**, one which contains a specific quantity of solute per stated unit of volume; see also *standard s.* **xylometazoline hydrochloride nasal s.** [USP], a solution of xylometazoline hydrochloride in water adjusted to a suitable pH and tonicity, containing 90 to 110 per cent of the labeled amount of $C_{10}H_{14}N_2 \cdot HCl$; applied topically as a vasoconstrictor in nasal congestion. **Zenker's s.**, a fixative solution consisting of mercury bichloride, potassium dichromate, glacial acetic acid, and water. **Ziehl's s.**, see *Table of Stains and Staining Methods*. **zinc sulfate ophthalmic s.** [USP], a sterile solution of zinc sulfate in water rendered isotonic by the addition of suitable salts, containing 95 to 105 per cent of the labeled amount of zinc sulfate; applied topically to the conjunctiva as an astringent. Considered specific for conjunctivitis due to *Hemophilus duplex*.

solv. abbreviation for *L. sol've*, dissolve.

solvable (sol'vah-b'l) soluble.

solvate (sol'vāt) a compound of one or more molecules of a solvent with the ions or with the molecules of a dissolved substance.

solvation (sol-va'shun) chemical combination of a solvent with the solute.

solvent (sol'vent) [*L. solvens*] 1. dissolving; effecting a solution. 2. a liquid that dissolves or that is capable of dissolving; the component of a solution that is present in greater amount. Cf. *solute*.

solvolysis (sol-vol'fī-sis) a general term for double decomposition reactions of the type of hydrolysis, ammonolysis, and sulfolysis.

Soma (so'mah) trademark for preparations of carisoprodol.

soma (so'mah) [*Gr. sōma* body] 1. the body as distinguished from the mind. 2. the body tissue as distinguished from the germ cells. 3. the cell body.

somal (so'mal) somatic.

somalin (som'ah-lin) a cardioactive glycoside from plants of the genus *Adenium*.

somaplasm (so'mah-plazm) somatoplasm.

somasthenia (sōm'as-the'ne-ah) [*soma* + *a* neg. + *Gr. sthenos* strength + *-ia*] a condition of bodily weakness, poor appetite and sleep, and inability to maintain a normal active life without easy exhaustion.

somatalgia (so'mah-tal'je-ah) [*somato-* + *Gr. algos* pain + *-ia*] bodily pain.

somatasthenia (so'mat-as-the'ne-ah) somasthenia.

somatesthesia (so'mat-es-the'ze-ah) [*somato-* + *Gr. aisthēsis* perception + *-ia*] the consciousness of having a body.

somatesthetic (so'mat-es-thet'ik) pertaining to somatesthesia.

somatic (so-mat'ik) [*Gr. sōmatikos*] 1. pertaining to or characteristic of the soma or body. 2. pertaining to the body wall in contrast to the viscera.

somaticosplanchnic (so-mat'fī-ko-splank'nik) somaticovisceral.

somaticovisceral (so-mat'fī-ko-vis'er-al) pertaining to the body proper and viscera.

somatist (so'mah-tist) one who believes that neuroses and psychoses are of physical origin and are based on bodily lesions.

somatization (so'mah-ti-za'shun) in psychiatry, the conversion of mental experiences or states into bodily symptoms.

somato- (so'mah-to) [*Gr. sōma, sōmatos* body] a combining form denoting relationship to the body.

somatoceptor (so-mat'o-sep'tor) a receptor concerned in receiving stimuli of the skeletal and somatic musculature.

somatochrome (so-mat'o-krōm) [*somato-* + *Gr. chrōma* color] any nerve cell which has a well marked cell body completely surrounding the nucleus, its colorable protoplasm having a distinct contour; used also adjectively.

somatoderm (so-mat'o-derm) [*somato-* + *Gr. derma* skin] the somatic layer of mesoderm.

somatodidymus (so'mah-to-did'fī-mus) a double fetus exhibiting somatodymia.

somatodymia (so'mah-to-dim'e-ah) [*somato-* + *Gr. didymos* twin + *-ia*] a developmental anomaly resulting in the production of conjoined twins whose trunks are fused into one.

somatogenesis (so'mah-to-jen'ē-sis) [*somato-* + *Gr. genesis* production] the formation or emergence of bodily structure out of hereditary sources; the formation of somatoplasm out of germ plasm.

somatogenetic (so-mat'o-jē-net'ik) 1. pertaining to somatogenesis. 2. somatogenic.

somatogenic (so'mah-to-jen'ik) [*somato-* + *Gr. gennan* to produce] originating in the cells of the body, as a disease process; opposed to psychogenic.

somatogram (so-mat'o-gram) [*somato-* + *Gr. gramma* a writing] a roentgenogram of the body.

somatology (so'mah-to-l'o-je) [*somato-* + *-logy*] the sum of what is known regarding the body; the study of the anatomy and physiology of the body.

somatome (so'mah-tōm) [*soma* + *Gr. temnein* to cut] 1. an appliance for cutting the body of the fetus. 2. a somite.

somatomedin (so'mah-to-me'din) any of a group of peptides formed in the liver (molecular weight, approximately 8000) and found in plasma which mediate the effect of growth hormone (somatotropin) on cartilage; they are responsible for uptake of sulfate and increased synthesis of collagen and other proteins by cartilage. Somatomedins also increase ribonucleic acid (RNA) synthesis and promote deoxyribonucleic acid (DNA) synthesis. Postulated as a "second messenger" in the somatotrophic actions of growth hormone. Called also *sulfation factor*.

somatomegaly (so'mah-to-meg'ah-le) [*somato-* + *Gr. megaleios* stately + *-ia*] abnormal size of body; gigantism.

somatometry (so-mah-tom'ē-tre) [*somato-* + *Gr. metron* measure] measurement of the body.

somatonic (so'mah-tom'ik) pertaining to a somatome.

somatopagus (so'mah-top'ah-gus) [*somato-* + *Gr. pagos* thing fixed] a double fetus with trunks more or less merged.

somatopathic (so'mah-to-path'ik) [*somato-* + *Gr. pathos* disease] pertaining to or characterized by somatopathy.

somatopathy (so'mah-top'ah-the) a bodily disorder as distinguished from a mental one.

somatophrenia (so'mah-to-fre'ne-ah) [*somato-* + *Gr. phrēn* mind + *-ia*] a mental condition which exaggerates or imagines body ills.

somatoplasm (so-mat'o-plazm) [*somato-* + *Gr. plasma* anything formed or molded] the protoplasm of the body cells as distinguished from that of the germ cells. Cf. *germ plasm*.

somatopleural (so'mah-to-ploor'al) pertaining to the somatopleure.

somatopleure (so-mat'o-ploor) [*somato-* + *Gr. pleura* side] the embryonic body wall, formed by ectoderm and somatic mesoderm.

somatopsychic (so'mah-to-si'kik) [*somato-* + *Gr. psychē* soul] pertaining to both body and mind; denoting a physical disorder that produces mental symptoms.

somatopsychosis (so'mah-to-si-ko'sis) [*somato-* + *psychosis*] Southard's name for a mental disease symptomatic of bodily disease.

somatoschisis (so'mah-tos'kī-sis) [*somato-* + *Gr. schisis* fissure] a developmental anomaly characterized by a fissure of the trunk.

somatocopy (so'mah-tos'ko-pe) [*somato-* + *Gr. skopein* to examine] viewing or examination of the body.

somatosexual (so'mah-to-seks'u-al) [*somato-* + *L. sexus* sex] pertaining to both physical and sex characteristics; pertaining to the physical manifestations of sexual development.

somatosplanchnopleuric (so'mah-to-splank'no-ploor'ik) pertaining to the somatopleure and the splanchnopleure.

somatostatin (so'mah-to-stat'in) a cyclic tetradecapeptide elaborated primarily by the median eminence of the hypothalamus and by the delta cells of the islets of Langerhans; it inhibits release of somatotropin, thyrotropin, and corticotropin by the adenohypophysis, of insulin and glucagon by the pancreas, or gastrin by the gastric mucosa, of secretin by the intestinal mucosa, and of renin by the kidney.

somatotherapy (so'mah-to-ther'ah-pe) [*somato-* + *Gr. therapeia* treatment] treatment aimed at curing the ills of the body.

somatotonia (so'mah-to-to'ne-ah) [*somato-* + *Gr. tonostension* + *-ia*] a group of personality traits dominated by muscular activity and vigorous body assertiveness (Sheldon).

somatotopic (so'mah-to-top'ik) related to particular areas of the body; describing the organization of the motor area of the brain, control of the movement of different parts of the body being centered in specific regions of the cortex.

somatotridymus (so'mah-to-trid'fī-mus) [*somato-* + *Gr. tri-three* + *didymos* twin] a monster with three trunks.

somatotrope (so-mat'o-trōp) any of the acidophils (alpha cells) of the adenohypophysis that stain preferentially with orange G, and are thought to be responsible for the secretion of growth hormone. Called also *somatotropic cell*.

somatotroph (so-mat'o trōf) somatotrope.

somatotrophic (so'mah-to-trōf'ik) [*somato-* + *Gr. trophē* nour-

ishment] having a stimulating effect on body nutrition and growth.

somatotrophin (so'mah-to-tro'fin) somatotropin.

somatotropic (so'mah-to-trop'ik) [*somato-* + Gr. *tropos* a turning] 1. having an affinity for or attacking the body or the body cells; also having an influence on the body. 2. having the properties of somatotropin.

somatotropin (so'mah-to-tro'pin) growth hormone; see under *hormone*.

somatotype (so-mat'o-tip) [*somato-* + *type*] a particular category of body build, determined on the basis of certain physical characteristics. See *ectomorph*, *endomorph*, and *mesomorph*.

somatotyping (so-mat'o-tip'ing) a method of studying objectively the physical types of individuals.

somatotypy (so-mat'o-ti'pe) the determination of the type of body build.

somatropin (so-mat'ro-pin) somatotropin.

Sombulex (som'bu-leks) trademark for a preparation of hexobarbital.

somesthesia (so'mes-the'ze-ah) somatesthesia.

somesthetic (so'mes-thet'ik) somatesthetic.

somite (so'mit) one of the paired, blocklike masses of mesoderm, arranged segmentally alongside the neural tube of the embryo, forming the vertebral column and segmental musculature; called also *mesoblastic* or *mesodermal segment*.

somnambulance (som-nam'bu-lans) somnambulism.

somnambulation (som-nam'bu-la'shun) somnambulism.

somnambulism (som-nam'bu-lizm) [L. *somnambulismus*; *somnus* sleep + *ambulare* to walk] 1. sleep walking; habitual walking in the sleep. Called also *noctambulation*. 2. a hypnotic state in which the subject has the full possession of his senses but no subsequent recollection.

somnambulist (som-nam'bu-list) a person who walks in his sleep.

somni- (som'ne) [L. *somnus* sleep] a combining form denoting relationship to sleep.

somnifacient (som'ni-fa'shent) [*somni-* + L. *facere* to make] 1. causing sleep; hypnotic. 2. an agent that induces sleep.

somniferous (som-nif'er-us) [*somni-* + L. *ferre* to bring] inducing or causing sleep.

somnific (som-nif'ik) somniferous.

somniloquence (som-nil'o-kwens) somniloquism.

somniloquism (som-nil'o-kwizm) [*somni-* + L. *loqui* to speak] the habit of talking in one's sleep.

somniloquist (som-nil'o-kwist) one who talks in his sleep.

somniloquy (som-nil'o-kwe) somniloquism.

somnipathist (som-nip'ah-thist) [*somni-* + Gr. *pathos* disease] a person in or subject to hypnotic trance.

somnipathy (som-nip'ah-the) [*somni-* + Gr. *pathos* disease] any disorder of sleep; a condition of hypnotic trance.

somnokinematograph (som'no-sin'e-mat'o-graf) [*somnus* + *cinematograph*] an apparatus for recording movements made during sleep.

somnolence (som'no-lens) [L. *somnolentia* sleepiness] sleepiness; also unnatural drowsiness.

somnolent (som'no-lent) [L. *somnolentus*] affected with somnolence; sleepy.

somnolentia (som'no-len'she-ah) [L.] 1. drowsiness, or somnolence. 2. sleep drunkenness; a condition of incomplete sleep marked by loss of orientation and by excited or violent behavior.

somnolism (som'no-lizm) a state of hypnotic trance.

Somnos (som'nos) trademark for preparations of chloral hydrate.

somnus (som'nus) [L.] sleep.

somosphere (so'mo-sfer) [Gr. *sōma* body + *sphaira* sphere] one of the elements of the archiplasm.

sonarography (so'nar-og'rah-fe) ultrasonic scanning that provides a two-dimensional image corresponding to clear sections of acoustic interfaces in tissues.

sonde (sond) [Fr.] sound. **s. coudé** (sond'koo-da') [Fr. "bend sound"], a catheter with an elbow, or sharp, beaklike bend, near the end.

sone (sōn) a unit of loudness, being the loudness of a simple tone of 1,000 cycles per second, 40 decibels above a listener's threshold.

sonicate (son'i-kāt) 1. to expose to sound waves; to disrupt bacteria by exposure to high-frequency sound waves. 2. the products of such disruption.

sonication (son'i-ka'shun) exposure to sound waves; disruption of bacteria by exposure to high-frequency sound waves.

sonifer (son'i-fer) [L. *sonus* sound + *ferre* to bear] a variety of ear trumpet.

Sonilyn (son'i-lin) trademark for a preparation of sulfachlorpyridazine.

sonitus (son'i-tus) [L. "sound"] a sounding or tinkling in the ears; tinnitus aurium.

Sonne dysentery (son'e) [Carl Olaf *Sonne*, Danish bacteriologist, 1882-1948] see under *dysentery*.

sonogram (so'no-gram) a record or display obtained by ultrasonic scanning.

sonographic (so'no-graff'ik) ultrasonographic.

sonography (so-nog'rah-fe) ultrasonography.

sonolucency (so'no-loo'sen-se) the property of being sonoluculent.

sonoluculent (so'no-loo'sent) in ultrasonography, permitting the passage of ultrasound waves without reflecting them back to their source (without giving off echoes).

sonorous (so-no'rus) [L. *sonorus*] resonant; sounding.

sophistication (so-fis'ti-ka'shun) [Gr. *sophistikos* deceitful] the adulteration of food or medicine.

sophomania (sof'o-ma'ne-ah) [Gr. *sophos* wise + *mania* madness] an irrational belief in one's own great wisdom.

Sophora (so-f'o-ra) [Arabic *sofara*] a genus of leguminous trees and shrubs. The root and seed of *S. tomentosa* are used in India to arrest choleraic vomiting. Some species are poisonous; see *loco*.

sophoretin (sof'o-re'tin) quercetin.

sophorin (sof'o-rin) rutin.

sophorine (sof'o-rēn) cytosine.

sopor (so'por) [L.] sound, deep, or profound sleep.

soporiferous (so'po-rif'er-us) [L. *sopor* deep sleep + *ferre* to bring] inducing deep or profound slumber.

soporific (so'po-rif'ik, so'po-rif'ik) [L. *soporificus*] 1. causing or inducing profound sleep. 2. a drug or other agent which induces sleep.

soporous (so'por-us) [L. *soporus*] associated or affected with coma or profound slumber.

S. op. s. abbreviation for L. *si o'pus sit*, if it is necessary.

Sorangiaceae (so-ran'je-a'se-e) a systematic family of Schizomycetes, order Myxobacterales, made up of saprophytic soil microorganisms, and comprising a single genus, *Sorangium*.

Sorangium (so-ran'je-um) a genus of Schizomycetes of the order Myxobacterales, family Sorangiaceae.

Soranus (so-ran'us) of **Ephesus** (2nd century A.D.) a celebrated Greek physician of the Methodist school, and the most renowned gynecologist and obstetrician of antiquity. He practiced in Alexandria and, later, in Rome. His surviving writings on obstetrics, gynecology, and pediatrics are outstanding.

sorb (sorb) to attract and retain substances by absorption or adsorption.

sorbefacient (sor'bē-fa'shent) [L. *sorbere* to suck + *facere* to make] 1. promoting absorption. 2. an agent that promotes absorption.

sorbent (sor'bent) an agent that sorbs.

sorbin (sor'bin) sorbose.

sorbinose (sor'bi-nōs) sorbose.

sorbitan (sor'bi-tan) a generic name for an anhydride of sorbitol, C₆H₆O(OH)₄, the fatty acids of which (s. monolaurate [NF], s. monooleate, s. monopalmitate [NF], s. monostearate [NF], s. sesquioleate, s. trioleate, s. tristearate) are surfactants; called also *sorbitol anhydride*. See also *polysorbate*.

sorbite (sor'bit) sorbitol.

sorbitol (sor'bi-tol) a crystalline, hexahydric alcohol, CH₂OH·(CHOH)₄CH₂OH, first found in ripe berries of the tree *Sorbus aucuparia*, and occurring in small quantities in other berries, cherries, plums, pears, etc. It is formed in mammals from glucose and is then converted to fructose; this process is responsible for fructose found in seminal plasma. It is also found in lens deposits in *diabetes mellitus*. A pharmaceutical preparation [NF] is obtained by catalytic hydrogenation of glucose and certain other sugars; it contains between 91 and 100.6 per cent sorbitol, calculated on the anhydrous basis; used as a sweetening agent and tablet excipient in pharmaceutical preparations and, in a 50 per cent solution, as an intravenous osmotic diuretic.

Sorbitrate (sor'bi-trāt) trademark for a preparation of isosorbide dinitrate.

sorbose (sor'bōs) a ketohexose, CH₂OH(CHOH)₃CO·CH₂OH, resembling levulose in its properties.

Sordariaceae (sor'dah-re-a'se-e) a family of fungi of the order Sphaeriales, series Pyrenomycetes, including the genus *Neurospora*.

sordes (sor'dēz) [L. "filth"] **s. gas'tricae**, undigested food, mucus, etc., in the stomach.

sore (sōr) 1. a popular term for almost any lesion of the skin or mucous membranes. 2. painful. **bed s.**, decubitus ulcer. **canker s.**, aphthous stomatitis. **chrome s.**, chrome ulcer. **Cochin s.**, tropical ulcer. **Cochin China s.**, cutaneous leishmaniasis. **cold s.**, herpes febrilis, especially of the lips or face. **Delhi s.**, cutaneous leishmaniasis. **desert s.**, a form of tropical ulcer resembling varicose ulcer and appearing on the face, back of hands and lower extremities. It occurs in desert areas

of Africa, Australia and the Near East. Called also *Gallipoli s.*, *Umballa s.*, *veldt s.* and *Barcoo rot.* **fungating s.**, see under *chancr.* **Gallipoli s.**, desert s. **hard s.**, chancre, def 1. **Kandahar s.**, **Lahore s.**, **Madagascar s.**, cutaneous leishmaniasis. **mixed s.**, see under *chancr.* **Moulton s.**, cutaneous leishmaniasis. **Naga s.**, a form of tropical ulcer occurring among workers in tea gardens in Assam; see *tropical ulcer* (def. 1), under *ulcer*. **Natal s.**, **oriental s.**, **Penjdeh s.**, cutaneous leishmaniasis. **pressure s.**, decubitus ulcer. **soft s.**, chancroid. **summer s's**, cutaneous habronemiasis. **tropical s.**, cutaneous leishmaniasis. **Umballa s.**, desert s. **veldt s.**, desert s. **venereal s.**, any sore that accompanies or manifests a venereal disease, especially a chancroid.

Sørensen's reagent (sor'en-senz) [Sören Peer Lauritz Sørensen, Danish biochemist, 1868–1939] see under *reagent*.

sore throat (sôr thrôt) see *laryngitis*, *pharyngitis*, and *tonsillitis*. **clergyman's s. t.**, dysphonia clericorum. **diphtheria s. t.**, diphtheria. **epidemic streptococcal s. t.**, septic s. t. **Fothergill's s. t.**, scarlatina angiosa. **hospital s. t.**, septic inflammation of the pharynx and fauces sometimes affecting nurses and interns in hospitals. **putrid s. t.**, gangrenous pharyngitis. **septic s. t.**, a severe type of sore throat occurring in epidemics, marked by intense local hyperemia with or without a grayish exudate and enlargement of the cervical lymph glands. It is usually caused by *Streptococcus pyogenes* and sometimes by *S. equisimilis*. The infection is probably largely spread by droplets or in air, but is also transmitted by direct contact and by food and milk. Called also *streptococcal sore throat* and *streptococcal tonsillitis*. **spotted s. t.**, follicular tonsillitis. **streptococcal s. t.**, septic s. t. **ulcerated s. t.**, gangrenous pharyngitis.

Soret band, effect (phenomenon) (so-ra') [C. Soret, French physicist, died 1931] see under *band* and *effect*.

soroche, sorroche (so-ro'cha) [Sp. "antimony"] mountain sickness of the Andes, incorrectly ascribed to metallic exhalations.

sororiation (so-ro're-a'shun) [L. *sororiare* to increase together] increase in size of the breasts at puberty.

sorption (sorp'shun) [L. *sorbere* to suck in] the process or state of being sorbed; absorption or adsorption.

S.O.S. abbreviation for L. *si o'pus sit*, if it is necessary.

sotalol hydrochloride (so'tah-lôl) chemical name: N-[4-(1-hydroxy-2-[(1-methylethyl)amino]ethyl)phenyl]methanesulfonamide monohydrochloride; a beta-adrenergic blocking agent, C₁₂H₂₀N₂O₄·HCl, having the same actions as propranolol (q.v.).

soterenol hydrochloride (so-ter'ë-nôl) chemical name: 2'-hydroxy-5'-[1-hydroxy-2-(isopropylamino)ethyl]methanesulfonanilide; an adrenergic with bronchodilator properties, C₁₂H₂₀N₂O₄·S·HCl.

soteria (so-tër'e-ah) [Gr. *sôtēria* a way or means of safety; a guarantee of safekeeping] (*obs.*) the experiencing of a feeling of security and protection, apparently out of proportion to the stimulus, derived from an external object, which becomes a neurotic object-source of comfort.

Soto-Hall sign (so'to-hawl) [Ralph Soto-Hall, San Francisco surgeon, born 1899] see under *sign*.

Sottas disease (sot'tahz) [Jules Sottas, French neurologist, born 1866] progressive hypertrophic interstitial neuropathy.

Sotheau's operation (so-tôz) [Augusté Joseph Henri Sotheau, French surgeon, 1802–1851] see under *operation*.

soudan (soo-dan') Sudan.

souffle (soof'fl) [Fr. "a puff"; L. *suffare* to blow] a soft, blowing, auscultatory sound; called also *bruit de soufflet* and *bellows murmur*. **cardiac s.**, any cardiac or vascular murmur of a blowing quality. **fetal s.**, a blowing sound sometimes heard in pregnancy; supposed to be due to compression of the umbilical vessels. **funic s.**, **funicular s.**, a hissing souffle synchronous with the fetal heart sounds, and supposed to be produced in the umbilical cord. **placental s.**, a souffle supposed to be produced by the blood current in the placenta. **splenic s.**, a sound said to be sometimes audible over a diseased spleen. **umbilical s.**, **funic s.** **uterine s.**, a sound made by the blood within the arteries of the gravid uterus.

sound (sownd) [L. *sonus*] 1. the effect produced on the organ of hearing and its central connections by the vibrations of the air or other medium. 2. mechanical radiant energy, the motion of particles of the material medium through which it travels (air, water, or solids) being along the line of transmission (longitudinal); such energy, of frequency between 8 and 20,000 cycles per second, provides the stimulus for the subjective sensation of hearing. 3. an instrument to be introduced into a cavity to detect a foreign body or to dilate a stricture. 4. a noise, normal or abnormal, heard within the body; for other sounds see under *bruit*, *fremitus*, *murmur*, and *rale*. **auscultatory s.**, any sound heard on auscultation. **bandbox s.**, a highly resonant sound elicited by percussion over the chest in cases of emphysema of the lung. **Beatty-Bright friction s.**, the friction sound of pleurisy. **bell s.**, *bruit d'airain*. **Belloccq's s.**, see under *cannula*. **bellows s.**, a double murmur (systolic and diastolic) resembling the sound made by a bellows. **Béniqué's s.**, a lead or tin

sound, having a wide curve, for dilating urethral strictures. **bottle s.**, amphoric *râle*. **cardiac s's**, heart s's. **coin s.**, *bruit d'airain*. **cracked-pot s.**, a percussion sound indicative of a pulmonary cavity into which the breath may pass. **cracked-pot s.**, *cranial*, a peculiar sound due to the separation of the cranial sutures; seen in children with raised intracranial pressure. **ejection s's**, high-pitched clicking sounds occurring very shortly after the first heart sound, attributed to sudden distention of a dilated pulmonary artery or aorta or to forceful opening of the pulmonic or aortic cusps; most often heard in septal defects or patent ductus associated with high pulmonary resistance and hypertension. Called also *ejection clicks*. **ento-tic s's**, sounds that originate within the ear, such as tinnitus. **esophageal s.**, a long, flexible sound for exploring the esophagus. **first s.**, see *heart s's*. **flapping s.**, the peculiar sound made by the closure of the heart valves. **fourth s.**, see *gallop rhythm*, under *rhythm*. **friction s.**, any sound produced by the rubbing of one surface over another. **heart s's**, the sounds heard over the cardiac region, which are produced by the functioning of the heart. The *first*, occurring at the beginning of ventricular systole, is dull, firm, and prolonged, and is heard as a "lubb" sound; the *second*, produced essentially by closure of the semilunar valves, is shorter and sharper than the first, and is heard as a "dupp" sound; the *third*, produced by vibrations of the ventricular walls when they are suddenly distended by the rush of blood from the atria, is weak, low-pitched, and dull, and is usually audible only in children and young adults; and the *fourth*, produced by atrial contraction and ventricular filling, is low-pitched and short, and is rarely audible in the normal heart. Called also *cardiac s's*. **hippocratic s.**, the succussion sound heard in pyopneumothorax or seropneumothorax. **Korotkoff s's**, sounds heard during auscultatory determination of blood pressure, produced by sudden distention of the artery, the walls of which were previously relaxed because of the proximally placed pneumatic cuff. **lacrimal s.**, a sound of small caliber for use in the lacrimal canal. **metallic s.**, a sound having a metallic quality heard especially over cavities in the chest. **muscle s.**, the sound heard over a muscle when in a condition of contraction. **peacock s.**, a quality of voice due to various defects and lesions of the air passages. **percussion s.**, any sound obtained by percussion. **physiological s's**, sounds heard when the auditory canals are plugged, caused by the rush of blood through blood vessels in or near the inner ear and by adjacent muscles in continuous low frequency vibration. **pistol-shot s.**, a sharp sound accompanying each pulsation heard with the stethoscope pressed over the femoral artery in aortic insufficiency. **respiratory s.**, any sound heard on auscultation over any portion of the respiratory tract. **second s.**, see *heart s's*. **second s.**, **pulmonic**, the audible vibrations related to the closure of the pulmonary semilunar valve; abbreviated P₂. **shaking s.**, succussion s. **subjective s.**, 1. phonism. 2. the sound sometimes produced by the blood current in the examiner's ears during auscultation. **succussion s's**, splashing sounds heard on succussion over a distended stomach and in hydropneumothorax. **third s.**, see *heart s's*. **tick-tack s's**, heart sounds in which there is little or no difference in the quality of the first and second sounds. **to-and-fro s.**, a friction sound or murmur heard with both systole and diastole. **urethral s.**, a long, slim, slightly conical instrument of steel for exploring and dilating the urethra. **vesicular breath s's**, sounds heard on auscultation over the normal lung during respiration. **water-wheel s.**, *bruit de moulin*. **white s.**, that produced by a mixture of all frequencies of mechanical vibration perceptible as sound. **Winternitz's s.**, a double-current catheter. **xiphisternal crunching s.**, a peculiar sound, of unknown origin, frequently heard (20 per cent of healthy men) over the lower sternum and xiphoid process.

Souques's phenomenon, sign (soo'kez) [Alexandre Achille Souques, French neurologist, 1860–1944] see under *phenomenon* and *sign*.

Soxhlet's apparatus (soks'lets) [Franz Ritter von Soxhlet, German chemist, 1848–1926] see under *apparatus*.

soya (soi'ah) see *soy bean*.

soybean (soi'bēn) the bean of the leguminous plant, *Soja hispida* (*Glycine soja*) or Chinese bean. It contains little starch and is rich in protein. From it is prepared a meal which is used as a protein supplement. It also furnishes an enzyme, urease. See *urease*.

Soymida febrifuga (soi'mi-dah feb-rif'u-gah) a tree of southern Asia; the bark is bitter, astringent, and aromatic.

sp. abbreviation for L. *spir'itus*, spirit.

space (spās) 1. a delimited area. 2. an actual or potential cavity of the body; called also *spatium* [NA]. 3. the expanse of the universe beyond the earth and its atmosphere. **anatomical dead s.**, see *dead s.* **apical s.**, the region between the wall of the alveolus and the apex of the root of a tooth. **arachnoid s.**, see *cavum subarachnoideale* and *cavum subdurale*. **axillary s.**, axilla. **Blessig's s's**, see under *cyst*. **Bogros's s.**, a region bounded by the peritoneum above and the fascia transversalis below, in which the lower part of the external iliac artery can be found without cutting the peritoneum; called also

retroinguinal s. **Bowman's s.**, capsular s. **bregmatic s.**, the anterior fontanel (fonticulus frontalis). **Burns' s.**, fossa jugularis, def. 1. **capsular s.**, a narrow chalice-shaped cavity between the glomerular and the capsular epithelium of the glomerular capsule of the kidney; called also *Bowman's space*. **cartilage s's**, the spaces in hyaline cartilage which contain the cartilage cells. **cathodal dark s.**, Crookes s. **cell s's**, the spaces in the ground substance of connective tissue enclosing the connective tissue corpuscles. **chyle s's**, the central lymphatic spaces of the villi of the intestine. **circumferential s.**, the space between the ciliary body and the equator of the lens. **Colles' s.**, a space under the perineal fascia containing the transversus perinei, ischiocavernosus, and bulbocavernosus muscles, the posterior scrotal or labial vessels and nerves, and the bulbous portion of the urethra. **complemental s.**, portions of the pleural cavity that are not occupied by lung tissue, such as the triangular spaces below the lower borders of the lungs and irregular spaces about the heart. **corneal s's**, the spaces between the lamellae of the substantia propria of the cornea which contain corneal cells and tissue fluid. **Cotunnus' s.**, the space within the membranous labyrinth. **Crookes s.**, a dark space at the cathode of a nearly exhausted roentgen-ray tube through which a current is being passed; called also *cathodal dark s.* **cupular s.**, pars cupularis recessus epitympanici. **Czermak's s's**, spatia interglobularia; see under *spatium*. **dead s.**, 1. space remaining after incomplete closure of surgical or other wounds, permitting the accumulation of blood or serum and resultant delay in healing. 2. in the respiratory tract: (a) *anatomical dead space*, those portions, from the nose and mouth to the terminal bronchioles, in which exchange of oxygen and carbon dioxide does not occur, and (b) *physiologic dead space*, which reflects nonuniformity of ventilation and perfusion in the lung, is the anatomical dead space plus the space in alveoli occupied by air that does not participate in oxygen-carbon dioxide exchange. **s's in dentin**, spatia interglobularia. **Disse's s's**, small spaces which separate the sinusoids of the liver from the liver cells and which carry the lymph of the liver. **Douglas' s.**, excavatio rectouterina. **epicerebral s.**, the potential space between the brain and the pia mater. **epidural s.**, cavum epidurale. **episcle-ral s.**, spatium episclerale. **epispinal s.**, the potential space between the substance of the spinal cord and the pia mater. **epitympanic s.**, recessus epitympanicus. **escapement s's**, spaces which permit the escape of material being comminuted between the occlusal surfaces of the teeth, provided by the cusps and ridges, sulci and developmental ridges of the teeth, and the embrasures between the teeth. **Faraday's dark s.**, the dark region separating the negative glow from the positive column in a Crookes tube. **s's of Fontana**, spaces beneath the pectinate ligament of the iridocorneal angle, present throughout life in lower animals and up to six months of gestation in the human eye; thereafter smaller rudimentary spaces in the human eye serve to drain the aqueous humor from the anterior chamber into the canal of Schlemm. Called also *spatia anguli iridocornealis* [NA]. **free way s.**, interocclusal distance (clearance). **globular s's of Czermak**, spatia interglobularia. **H. s.**, Holzknicht's s. **haversian s.**, haversian canal (canalis nutricius ossis [NA]). **Henke's s.**, a space containing connective tissue between the spinal column and the pharynx and esophagus. **His's peri-vascular s.**, the space between the adventitia of the blood vessels of the brain and spinal cord and the perivascular limiting membrane of glia tissue. **Holzknicht's s.**, the middle one of the three clear lung fields in the roentgenogram of the chest in oblique projection when the rays pass from the left posteriorly to the right anteriorly; called also *H. s.*, *prevertebral s.*, and *retrocar-diac s.* **iliocostal s.**, the area between the twelfth rib and the crest of the ilium. **interarytenoid s.**, pars intercartilaginea rimae glottidis. **intercostal s.**, spatium intercostale. **inter-cristal s.**, 1. all of the area within the inner membrane of a mitochondrion. 2. the clefts between the inward extensions of the mitochondrial membrane space. **intercrural s.**, a trian-gular space between the crura cerebri. **interfascial s.**, spa-tium intervaginale. **interglobular s's (of Owen)**, spatia interglobularia. **interlamellar s's**, the spaces between the lamellae of the cornea. **interocclusal rest s.**, interocclusal distance (clearance). **interosseous s's of metacarpus**, spatia interossea metacarpi. **interosseous s's of metatar-sus**, spatia interossea metatarsi. **interpeduncular s.**, fossa interpeduncularis. **interpleural s.**, mediastinum, def. 2. **interproximal s.**, **interproximate s.**, the space between the proximal surfaces of adjoining teeth; sometimes used to designate especially the space between the proximal surfaces of adjoining teeth that is gingival to the area of contact (*septal s.*). Cf. *embrasure*. **interradicular s.**, the space between roots; in dentistry, the entire extent of the space between the roots of a tooth, from apex to base. **interseptal s.**, a space between the two folds uniting to form the spurious septum in the heart of the early embryo. **intervaginal s.**, spatium episclerale. **inter-vaginal s's of optic nerve**, spatia intervaginalia nervi optici. **intervillous s.**, the cavernous space of the placenta into which project the chorionic villi and through which maternal blood circulates. **s's of iridocorneal angle**, spatia anguli irido-cornealis. **Kiernan's s's**, the triangular spaces bounded by

invaginated Glisson's capsule between the liver lobules, contain-ing the larger interlobular branches of the portal vein, hepatic artery, and hepatic duct. **Kiessbach's s.**, see under *area*. **Kretschmann's s.**, a depressed area in the recessus epitympan-icus, below Prussak's space. **Larrey's s's**, intervals between those parts of the diaphragm which are attached to the ribs and that which is attached to the sternum. **leeway s.**, see *Nance's leeway s.* **Lesgaft's s.**, a rhombus which in some persons ex-ists between the external oblique muscle in front, the latissimus dorsi behind, the serratus posticus above, and the internal oblique below; frequently the site of pointing of an abscess, or occurrence of a hernia. Called also *Lesgaft's triangle* and *Grynfelt's triangle*. **lymph s.**, any space in tissue occupied by lymph. **Magen-die's s's**, subarachnoid spaces between the pia and arachnoid, corresponding to the principal sulci of the brain. **Mala-carne's s.**, substantia perforata posterior. **Marie's quadri-lateral s.**, see *quadrilateral s. of Marie*. **marrow s.**, cavum medullare ossium. **Meckel's s.**, cavum trigeminale. **medi-astinal s.**, mediastinum, def. 2. **medullary s.**, the central cavity and the intervals between the trabeculae of bone which contain the marrow. **midpalmar s.**, the palmar space lying between the middle metacarpal bone and the radial side of the hypothenar eminence. **mitochondrial membrane s.**, a narrow space between the inner and outer membranes of a mitochondrion, including its inward projections between the cristae. **Mohrenheim's s.**, a groove on the deltoid muscle for the cephalic vein and a branch of the acromiothoracic artery. **Nance's leeway s.**, the amount by which the space occupied by the deciduous canine and first and second deciduous molars exceeds that occupied by the canine and premolar teeth of the permanent dentition, usually averaging 1.7 mm. on each side of the dental arch. **Nuel's s's**, fluid-filled spaces in the organ of Corti between the outer hair cells, communicating with the inner tunnel through the spaces between the pillar cells. Called also *outer tunnel*. **Obersteiner-Redlich s.**, see under *area*. **palmar s.**, a large fascial space in the hand, divided by a fibrous septum into the midpalmar space and the thenar space. **para-pharyngeal s.**, pharyngomaxillary s. **parasinoidal s's**, lateral lacunae in the dura mater, along the superior sagittal sinus, which receive meningeal and diploic veins. **Parona's s.**, a space between the pronator quadratus muscle and the deep flexor tendons in the forearm, about 5 cm. above the wrist, in direct continuity with the tendon sheaths and the midpalmar space. **perforated s.**, **anterior**, substantia perforata ante-rior. **perforated s.**, **posterior**, substantia perforata poste-rior. **periaxial s.**, a fluid-filled cavity surrounding the nu-clear bag and myotubule regions of a muscle spindle. **peri-chorioidal s.**, **perichorioidal s.**, spatium perichorioidale. **perilymphatic s.**, spatium perilymphaticum. **perineal s.**, **deep**, spatium perinei profundum. **perineal s.**, **superfi-cial**, spatium perinei superficialis. **perineuronal s.**, the ex-tracellular compartment surrounding nerve cells of the central nervous system; its histologic appearance as a space is an artefact. **perinuclear s.**, see under *cisterna*. **peripharyngeal s.**, **retropharyngeal s.** **perioplasmic s.**, a zone between the plasma membrane and the outer membrane of the cell wall of gram-negative bacteria. **perisinusoidal s's**, Disse's s's. **perivascular s.**, a lymph space occurring within the walls of an artery. **perivitelline s.**, a space between the ovum and the zona pellucida; in the ovum of some animals, a fluid-filled space separating the fertilization membrane from the surface of the egg. **pharyngomaxillary s.**, the space included between the lateral wall of the pharynx, the internal pterygoid muscle, and the cervical vertebrae. **phrenocostal s.**, the space between the outer edge of the diaphragm and the costal surface. **physio-logic dead s.**, see *dead s.* **pneumatic s.**, a portion of bone occupied by air-containing cells; applied especially to spaces in the bones of the head constituting the paranasal sinuses. **Poi-seuille's s.**, that part of the lumen of a tube where no flow of liquid occurs, as next to the wall of a blood vessel, where the red cells are virtually motionless and constitute a layer over which the inner layers of liquid slide. **popliteal s.**, fossa poplitea. **postperforated s.**, substantia perforata posterior. **preperi-toneal s.**, spatium retropubicum. **preputial s.**, the space between the prepuce and the glans penis. **prevertebral s.**, Holzknicht's s. **prevesical s.**, spatium retropubicum. **pre-zonular s.**, portion of the eyeball anterior to the zonula ciliaris, occupied by the aqueous humor. **proximal s.**, **proximate s.**, interproximal s. **Prussak's s.**, recessus membranae tym-pani superior. **quadrilateral s. of Marie**, a space in the cerebral hemisphere bounded externally by the cortex, medially by the internal capsule, and anteriorly and posteriorly by the insula. **retrobulbar s.**, the space lying behind the fascia of the bulb of the eye, containing the eye muscles and the ocular vessels and nerves. **retrocardiac s.**, Holzknicht's s. **re-troinguinal s.**, Bogros' s. **retromylohyoid s.**, the part of the alveololingual sulcus distal to the lingual tuberosity (the distal end of the mylohyoid ridge). **retro-ocular s.**, retrobulbar s. **retroperitoneal s.**, spatium retroperitoneale. **retrophar-yngeal s.**, the space behind the pharynx, containing areolar tissue. **retropubic s.**, **Retzius s.**, spatium retropubicum. **Robin's s's**, minute lymph spaces in the external coat of an

artery communicating with lymphatic vessels. **Schwalbe's s's**, spatia intervaginalia nervi optici. **semilunar s.**, see *Traube's semilunar s.* **sepal s.**, that portion of the interproximal space gingival to the contact area of adjacent teeth in a dental arch. **subarachnoid s.**, cavum subarachnoideale. **subchorial s.**, see under *lake*. **subdural s.**, cavum subdurale. **subepicranial s.**, the potential space between the epicranial muscle and the pericranium; it is traversed by small arteries which supply the pericranium and by the emissary veins connecting the intracranial venous sinuses with the superficial veins of the scalp. **subgingival s.**, gingival crevice. **submaxillary s.**, trigonum submandibulare. **subphrenic s.**, the space between the diaphragm and subjacent organs. **subumbilical s.**, the somewhat triangular space within the body cavity just below the umbilicus. **suprasternal s.**, fossa jugularis, def. 1. **Tarin's s.**, recessus anterior fossae interpeduncularis [Tarin]. **Tenon's s.**, spatium episclerale. **thenar s.**, the palmar space lying between the middle metacarpal bone and the tendon of the flexor pollicis longus. **thiocyanate s.**, a quantitative expression of the space occupied by the extracellular fluid in the body, computed after intravenous injection of sodium thiocyanate. **thyrohyal s.**, the depressed space between the thyroid cartilage and hyoid bone in front. **Traube's semilunar s.**, an area on the left side and front of the lower part of the chest, over which the air in the stomach produces a vesiculotympanic sound. **Tröltsch's s's**, see *recessus membranae tympani anterior* and *recessus membranae tympani posterior*. **urogenital s.**, rima pudendi. **Virchow-Robin s's**, potential spaces surrounding blood vessels for a short distance as they enter the brain, the inner wall being formed by a prolongation of a membrane like the arachnoid, and the outer wall by a continuation of the pia; the intervening channel communicates with the subarachnoid space. **Westberg's s.**, the space between the pericardium and the beginning of the aorta. **yolk s.**, the space formed by retraction of the vitellus of the ovum from the zona pellucida. **Zang's s.**, fossa supraclavicularis minor. **zonular s's**, spatia zonularia.

spadic (spa'dik) the native name in western South America for the leaves of the coca plant, used for chewing.

spagyric (spah-jir'ik) [Gr. *span* to draw + *ageirein* to bring together] pertaining to the obsolete paracelsian system of medicine.

spagyrist (spaj'i-rist) a follower of the paracelsian system of medicine.

Spallanzani's law (spal'an-zan'ez) [Lazaro Spallanzani, eminent Italian anatomist, 1729-1799] see under *law*.

spallation (spawl-la'shun) splintering; the process of breaking into small bits; see *spallation products*, under *product*.

span (span) 1. a measurement of reach or extent. 2. the distance in a fully extended hand between the tips of the thumb and little finger.

Spaniopsis (span'i-op'sis) a genus of blood-sucking flies of the family Rhagionidae found in Australia.

Spanish windlass (span'ish wind'las) see *windlass*.

spano- (span'o) [Gr. *spanos* scarce] a combining form meaning scanty or scarce.

spanopnea (span'op-ne'ah) [*spano-* + Gr. *pnoia* breath] a nervous affection, with slow, deep breathing and a subjective feeling of dyspnea.

spar (spar) a nonmetallic, rather lustrous mineral. **Iceland s.**, a crystalline form of calcium carbonate, usually found in Iceland, and used in making Nicol prisms.

sparganosis (spar'gah-no'sis) infection with the migrating larvae (spargana) of any of several species of pseudophyllidean tapeworms, which invade the subcutaneous tissues, causing inflammation and fibrosis suggestive of cellulitis.

sparganum (spar-ga'num), pl. *sparga'na* [Gr. *sparganon* swaddling clothes] the larval stage (plerocercoid) of various pseudophyllidean cestodes, especially of the genera *Diphyllobothrium* and *Spirometra*, which may migrate in the subcutaneous tissues of man and other animals (see *sparganosis*). Also, a genus name applied to such larvae, usually when the adult stage is not known.

Sparine (spar'en) trademark for preparations of promazine hydrochloride.

spark (spark) a flash of light attended with a crackling sound, made by a discharge of electricity. **direct s.**, an electric spark which passes through the body from electrodes without the use of a Leyden jar.

sparteine (spar'te-in) [L. *spartium* broom] chemical name: dodecahydro-7,14-methano-2H,6H-dipyrido[1,2-a:1',2'-e][1,5]diazocine. An alkaloid C₁₅H₂₆N₂, obtained from the legumes *Cystisus scoparius* (L.) Link. (broom), *Lupinus luteus* L. (yellow lupin bean), *L. niger* Hort. (black lupin bean), and *Anagyris foetida* L. (Mediterranean stinkbush). It is poisonous, and acts like digitalis. **s. sulfate**, the pentahydrate sulfate salt of sparteine, C₁₅H₂₆N₂·5H₂SO₄, used as an oxytocic for the induction of labor and stimulation of hypotonic or subnormal uterine contractions. Formerly used as a substitute for digitalis.

spartium (spar'she-um) [Gr. *sparton*] *scoparius*.

spasm (spazmi) [L. *spasmus*; Gr. *spasmos*] 1. a sudden, violent, involuntary contraction of a muscle or a group of muscles, attended by pain and interference with function, producing involuntary movement and distortion. 2. a sudden but transitory constriction of a passage, canal, or orifice. **s. of accommodation**, spasm of the ciliary muscles, producing excess of accommodation for near objects. **athetoid s.**, a spasm in which the affected member makes movements like those of athetosis. **Bell's s.**, convulsive tic. **bronchial s.**, spasmodic contraction of the muscular coat of the bronchial tubes, such as occurs in asthma. **cadaveric s.**, rigor mortis causing movements of the limbs. **canine s.**, risus sardonius. **carpopedal s.**, spasm of the hand or foot, or of the thumbs and great toes, seen in tetany. **cerebral s.**, spasm due to a cerebral lesion. **clonic s.**, a spasm in which rigidity of the muscles is followed immediately by relaxation. **cynic s.**, risus sardonius. **dancing s.**, saltatory s. **diffuse esophageal s.**, strong, incoordinated, nonpropulsive contractions of the esophagus evoked by deglutition, especially in the elderly; on barium radiography, the esophageal lumen appears as an irregular series of concentric narrowings, or a spiral coil (curling). Called also *esophageal dysrhythmia*. **esophageal s.**, diffuse esophageal s. **facial s.**, tonic spasm of the muscles supplied by the facial nerve, either involving the entire side of the face or confined to a limited region around the eye. **fixed s.**, permanent rigidity of a muscle or set of muscles. **functional s.**, occupation neurosis. **glottic s.**, laryngospasm. **habit s.**, tic. **handicraft s.**, occupation neurosis. **histrionic s.**, convulsion of the facial muscles analogous to writers' cramp. **infantile massive s's**, jackknife seizure. **inspiratory s.**, spasmodic contraction of the muscles of inspiration. **intention s.**, muscular spasm occurring on attempting voluntary movement. **lock s.**, a firm tonic spasm that seems to lock the fingers together, as in writers' cramp and in similar affections. **malleatory s.**, malleation. **massive s.**, a seizure characterized by contraction of most of the body musculature. **mixed s.**, a spasm in which there are both extensor and flexor movements. **mobile s.**, athetosis. **myopathic s.**, that which accompanies a disease of the muscles. **nictitating s.**, winking s. **nodding s.**, clonic spasm of the sternomastoid muscles, producing bowing motions; called also *salaam convulsions*. **occupation s.**, occupation neurosis. **perineal s.**, perineal vaginismus. **phonatory s.**, spasm of the tensors of the vocal bands. **professional s.**, occupation neurosis. **progressive torsion s.**, dystonia musculorum deformans. **respiratory s.**, spasm of the muscles of respiration. **retrocollic s.**, spasmodic retroflexion of the head. **Romberg's s.**, masticatory spasm of the muscles supplied by the fifth nerve. **rotatory s.**, intermittent spasm of the splenius muscle causing rotation of the head. **salaam s.**, nodding s. **saltatory s.**, clonic spasm of the muscles of the legs, producing a peculiar jumping or springing motion whenever the patient stands. Called also *Bamberger's disease*, *palmus*, and *saltatory tic*. **syncronic s.**, clonic spasm of more than one muscle. **tetanic s.**, 1. the muscular spasm occurring in tetanus. 2. tonic spasm. **tonic s.**, spasm in which rigidity persists for a considerable time. **tonoclonic s.**, a convulsive twitching of the muscles. **torsion s.**, spasm marked by a twisting or turning of the body, especially of the pelvis, as in dystonia musculorum deformans. **toxic s.**, that which is due to a poison. **winking s.**, spasmodic twitching of the orbicularis palpebrarum muscle and of the eyelid. **writers' s.**, writers' cramp.

spasmo- (spaz'mo) [L. *spasmus*; Gr. *spasmos*] a combining form denoting relationship to a spasm.

spasmodic (spaz-mod'ik) [Gr. *spasmōdēs*] of the nature of a spasm.

spasmodogen (spaz'mo-jen) [*spasmo-* + Gr. *gennan* to produce] a substance that produces or causes spasms.

spasmodogenic (spaz'mo-jen'ik) relating to the production of or causing spasms.

spasmology (spaz-mol'o-je) [*spasmo-* + *-logy*] the sum of what is known regarding spasms.

spasmodygmus (spaz'mo-lig'mus) [*spasmo-* + Gr. *lygmus* hiccup] hiccup.

spasmodysant (spaz-mol'i-zant) 1. relieving or relaxing spasms. 2. an agent that relieves spasm.

spasmolysis (spaz-mol'i-sis) the elimination or checking of spasm.

spasmolytic (spaz'mo-lit'ik) checking spasms; antispasmodic.

spasmophile (spaz'mo-fil) spasmophilic.

spasmophilia (spaz'mo-fil'e-ah) [*spasmo-* + Gr. *philein* to love] spasmophilic diathesis; a condition in which the motor nerves show abnormal sensitiveness to mechanical or electric stimulation, and the patient shows a tendency to spasm, tetany, and convulsions.

spasmophilic (spaz'mo-fil'ik) marked by a tendency to spasms.

spasmodin (spaz'mo-tin) a poisonous ecboic and acid principle, C₂₀H₂₁O₉, from ergot, which has oxytocic but not hallucinogenic properties.

spasmus (spaz'mus) [L.] spasm. **s. nu'tans**, nodding spasm.

spastic (spas'tik) [Gr. *spastikos*] 1. of the nature of or characterized by spasms. 2. hypertonic, so that the muscles are stiff and the movements awkward; see *cerebral palsy*, under *palsy*. 3. a person exhibiting spasticity, such as occurs in spastic paralysis or in cerebral palsy.

spasticity (spas-tis'i-te) a state of hypertonicity, or increase over the normal tone of a muscle, with heightened deep tendon reflexes. **clasp-knife s.**, the phenomenon occurring when a hypertonic muscle is passively stretched: after initial increased resistance there is a sudden relaxation.

spatia (spa'she-ah) [L.] plural of *spatium*.

spatial (spa'shal) pertaining to space.

spatic (spa'tik) pertaining to a space, especially an interproximal space.

spatium (spa'she-um), pl. *spa'tia* [L.] a space or delimited area; [NA] a general term for an actual or potential open region. **spa'tia an'guli i'ridis** [Fonta'nae], **spa'tia an'guli iridocornea'lis** [NA], spaces of the iridocorneal angle: the spaces between the fibers of the pectinate ligament through which communication is effected between the anterior chamber and the canal of Schlemm. See also *Fontana's spaces*, under *space*. **s. episclera'le** [NA], episcleral space: the space between the bulbar fascia and the eyeball; called also *s. intervaginale*, *s. interfasciale* [Tenoni], *intervaginal space*, and *Tenon's space*. **s. intercosta'le** [NA], intercostal space: the space intervening between two adjacent ribs. **spa'tia intercosta'lia**, see *spatium intercostale*. **s. interfascia'le** [Teno'ni], *s. episclerale*. **spa'tia interglobula'ria** [NA], interglobular spaces: numerous small irregular spaces in the deeper parts of the dentin of the crown of a tooth, representing areas of incompletely calcified dentin. Called also *interglobular spaces of Owen* and *interglobular dentin*. **spa'tia interos'sea metacar'pi** [NA], interosseous spaces of the metacarpus: the four spaces between the metacarpal bones. **spa'tia interos'sea metatar'si** [NA], interosseous spaces of metatarsus: the four spaces between the metatarsal bones. **s. intervagina'le**, former NA term for *s. episclerale*. **spa'tia intervagina'lia ner'vi op'tici** [NA], intervaginal spaces of optic nerve: the subdural and subarachnoid spaces between the internal and external sheaths of the optic nerve; called also *Schwalbe's spaces*. **s. perichorioidea'le**, **s. perichorioidea'le** [NA], perichoroidal space: any of the spaces between the laminae of the nonvascular layer of the choroid nearest the sclera. **s. perilymphat'icum** [NA], perilymphatic space: the fluid-filled space separating the membranous part of the osseous labyrinth; called also *Retzius space*. **s. perine'i profun'dum** [NA], deep perineal space: the area between the superior and inferior fascia of the urogenital diaphragm. **s. perine'i superficia'le** [NA], superficial perineal space: the region between the inferior fascia of the urogenital diaphragm and the membranous layer of the superficial perineal fascia; it contains the root of the penis and associated muscles. **s. retroperitonea'le** [NA], retroperitoneal space: the space between the posterior parietal peritoneum and the posterior abdominal wall, containing the kidneys, suprarenal glands, ureters, duodenum, ascending and descending colon, pancreas, and the large vessels and nerves. **s. retropu'bicum** [NA], retropubic space: the extraperitoneal space between the inferior aspect of the apex of the bladder, and the transversalis fascia and the posterosuperior aspect of the pubic symphysis, extending along the sides of the bladder to the lateral ligaments and limited below by the puboprosthetic ligaments. **spa'tia zonula'ria** [NA], zonular spaces: the lymph-filled interstices between the fibers of the zonula ciliaris, communicating with the posterior chamber of the eye; called also *Petit's canal*.

spatula (spach'ü-lah) [L.] a flat, blunt, usually flexible instrument, used for spreading plasters and for mixing ointments and masses; a spatulate structure. **s. mal'lei**, the flat end of the handle of the malleus, attached to the membrana tympani.

spatular (spach'ü-lar) spatulate.

spatulate (spach'ü-lät) 1. having a flat blunt end. 2. to mix or manipulate with a spatula.

spatulation (spach'ü-la'shun) the mixing of combined materials to a homogeneous mass by repeatedly scraping them up and smoothing out the mass on a flat surface with a spatula.

spavin (spav'in) in general, an exostosis, usually medial, of the tarsus of equines, distal to the tibiotarsal articulation and often involving the metatarsals. **blood s.**, a dilatation of either or both of the medial metatarsal or of the saphenous veins, forming a soft enlargement on the dorsomedial surface of the tarsus in equines. **bog s.**, a distention of the synovial capsule of the tibiotarsal joint in equines. **bone s.**, osteoperiostitis or arthritis of the intertarsal or tarsometatarsal articulations in equines, commonly followed by exostosis and ankylosis. Classified as visible, occult, anterior, posterior and high. **Jack s.**, a very large exostotic spavin.

spavined (spav'ind) affected with spavin.

spay (spa) to castrate a female animal, usually by oophorohysterectomy.

SPCA serum prothrombin conversion accelerator (blood coagulation factor VII).

spear-mint (spēr'mint) [NF] the dried leaf and flowering top of *Mentha spicata* (*M. viridis*), common spearmint, or of *Mentha caridiaca*, Scotch spearmint; used as a flavoring agent.

specialism (spesh'al-izm) limitation of practice or study to a particular branch of medicine or surgery.

specialist (spesh'al-ist) a physician whose practice is limited to a particular branch of medicine or surgery, especially one who, by virtue of advanced training, is certified by a specialty board as being qualified to so limit his practice. **clinical nurse s.**, **nurse s.**, see under *nurse*.

specialization (spesh'al-i-za'shun) in medicine, medical practice limited to some special department of medicine or surgery.

specialty (spesh'al-te) the field of practice of a specialist.

speciation (spe'se-a'shun) the evolutionary formation of new species, or the process of such formation.

species (spe'shēz, spe'sēz) [L.] 1. a taxonomic category subordinate to a genus (or subgenus), and superior to a subspecies or variety, composed of individuals possessing common characters distinguishing them from other categories of individuals of the same taxonomic level. In taxonomic nomenclature, species are designated by the genus name followed by a Latin or latinized adjective or noun. 2. (*obs.*) a mixture of dried herbs, seeds, or barks, used chiefly as a decoction. **diouulatory s.**, a species of animal, the females of which ordinarily discharge two ova in one ovulatory cycle. **monovulatory s.**, a species of animal, the females of which usually discharge only one ovum in any one ovulatory cycle. **polyovulatory s.**, a species of animal, the females of which normally discharge several (3–16) ova at each ovulatory cycle. **type s.**, the original species from which a description of the genus of organisms is made.

species-specific (spe'sēz-spē-sif'ik) characteristic of a particular species; having a characteristic effect on, or interaction with, cells or tissues of members of a particular species; said of an antigen, drug, or infective agent.

specific (spē-sif'ik) [L. *specificus*] 1. pertaining to a species. 2. produced by a single kind of microorganism. 3. restricted in application, effect, etc., to a particular structure, function, etc. 4. a remedy specially indicated for any particular disease. 5. in immunology, pertaining to the special affinity of antigen for the corresponding antibody.

specificity (spes'f-i-fis'i-te) the quality or state of being specific. **neuronal s.**, the invariance of the locations, trajectories, and spatial arrangement of neurons in all members of the same species. **organ s.**, the state of being organ-specific. **species s.**, the state of being species-specific.

specificness (spe-sif'ik-nes) specificity.

specimen (spes'i-men) 1. a sample or part of a thing, or of several things, taken to show or to determine the character of the whole, as a specimen of urine. 2. a preparation of tissue for pathological examination or of a normal tissue, organ, or organism for study of its structure. **corrosion s.**, a preparation of an organ, such as the liver, by injection of certain of its structures, as the arteries and veins, and chemical digestion of surrounding substance.

spectacles (spek'tah-k'lz) [L. *spectacula*; *spectare* to see] a pair of lenses in a frame to assist vision; see also *glasses* and *lens*. **compound s.**, spectacles fitted with extra colored glasses, or extra lenses, to be used as occasion requires. **decentered s.**, spectacles with lenses formed from eccentric portions of two convex lenses. **divided s.**, bifocal glasses. **Masselon's s.**, spectacles with an attachment for keeping the upper lid raised in cases of paralytic ptosis. **mica s.**, spectacles of sheet mica used to protect the eye from foreign bodies. **pantoscopic s.**, bifocal glasses. **periscopic s.**, spectacles with either menisci or concavoconvex lenses, with the concave surfaces toward the eyes; they allow the eyes considerable latitude of motion. **prismatic s.**, spectacles with prismatic lenses for correcting muscular defects. **pulpit s.**, spectacles containing the lenses in the lower segments of the glasses only. **stenopeic s.**, spectacles fitted with metal plates, having each a small central aperture. **tinted s.**, spectacles of a glass so colored as to protect the eyes from the effects of too bright light. **wire frame s.**, a kind of spectacles of wire gauze worn to protect the eye from the entrance of foreign bodies.

spectinomycin (spek'ti-no-mi'sin) chemical name: decahydro-4a,7,9-trihydroxy-2-methyl-6,8-bis(methylamino)-4H-pyrano[2,3-b][1,4]-benzodioxin-4-one. An antibiotic, C₁₄H₂₄N₂O₇, derived from *Streptomyces spectabilis*, that has moderate antibacterial activity against many gram-positive and gram-negative organisms, but is especially effective against *Neisseria gonorrhoeae*. It is also used in veterinary medicine in bacterial enteritis and coccidiosis of dogs. **s. hydrochloride**, the pentahydrate dehydrochloride salt of spectinomycin, C₁₄H₂₄N₂O₇·2HCl·5H₂O, having the same actions as the base. A preparation suitable for intramuscular administration [USP] is used in the treatment of acute gonorrheal urethritis and proctitis in the male and acute gonorrheal cervicitis and proctitis in the female when due to susceptible strains of *Neisseria gonorrhoeae*.

spectra (spek'trah) plural of *spectrum*.

spectral (spek'tral) pertaining to a spectrum; performed by means of a spectrum.

spectrin (spek'trin) a contractile protein attached to glycophorin at the cytoplasmic surface of the cell membrane of erythrocytes, considered to be important in the determination of red-cell shape.

spectrochrome (spek'tro-kröm) [L. *spectrum* + Gr. *chrōma* color] a term applied to a method of treatment consisting of exposure of the part to be treated to light of various colors.

spectrocolorimeter (spek'tro-kul'or-im'ē-ter) an ophthalmospectroscope used in detecting color blindness for one color.

spectrofluorometer (spek'tro-floo'or-om'ē-ter) an optical instrument for analysis of fluorescence spectra.

spectrograph (spek'tro-graf) an instrument for photographing spectra on a sensitive photographic plate. **mass s.**, mass spectrometer.

spectrometer (spek-trom'ē-ter) 1. an instrument for measuring the index of refraction by measuring the external angle of a prism of the substance. 2. a spectroscope for measuring the wavelengths of rays of a spectrum. **mass s.**, an analytical instrument which identifies a substance by sorting a stream of electrified particles (ions) according to their mass; the sorting is most commonly done as follows: when the stream of charged particles enters a magnetic field, it is deflected into a semicircular path, ultimately striking a photographic plate or photomultiplier tube sensor. Called also *mass spectrograph*. **Mossbauer s.**, an instrument that detects small changes in interaction between an atomic nucleus and its environment caused by changes in temperature, pressure, and chemical state; used in chemical-physical research with applications in medicine.

spectrometry (spek-trom'ē-tre) [L. *spectrum* image + *metrum* measure] the determination of the places of the lines in a spectrum.

spectrophotofluorometer (spek'tro-fo'to-floo'or-om'ē-ter) an analytical instrument combining the techniques of spectrophotometry and fluorescence analysis.

spectrophotometer (spek'tro-fo-tom'ē-ter) [*spectrum* + *photometer*] 1. an apparatus for measuring the light sense by means of a spectrum. 2. an apparatus for estimating the quantity of coloring matter in solution by the quantity of light absorbed (as indicated by the spectrum) in passing through the solution. **absorption s.**, an analytical instrument for comparing the absorption of radiation of a given wavelength against a standard to identify a sample material.

spectrophotometry (spek'tro-fo-tom'ē-tre) the use of the spectrophotometer.

spectropolarimeter (spek'tro-po'lar-im'ē-ter) a combined spectroscope and polariscope for determining optical rotation.

spectropyrheliometer (spek'tro-pir-he'le-om'ē-ter) [*spectrum* + Gr. *pyr* fire + *hēlios* sun + *metrum* measure] an instrument for measuring the radiation from the sun.

spectroscope (spek'tro-skōp) [*spectrum* + Gr. *skopein* to examine] an instrument for developing and analyzing spectra.

spectroscopic (spek'tro-skop'ik) of, pertaining to, or performed by, the spectroscope.

spectroscopy (spek-tros'ko-pe) the propagation and analysis of spectra; examination by means of a spectroscope.

spectrum (spek'trum), pl. *spec'tra* [L. "apparition"] a charted band of wavelengths of electromagnetic vibrations obtained by refraction and diffraction. See *invisible s.* and *visible s.* By extension, a measurable range of activity, such as the range of bacteria affected by an antibiotic (antibacterial s.) or the complete range of manifestations of a disease. **absorption s.**, the spectrum afforded by light which has passed through various gaseous media, each gas absorbing those rays of which its own spectrum is composed. **action s.**, the range of wavelength of incident light producing a response in the material under study (e.g., the inactivation of an enzyme); also, a graph plotting the magnitude of the response as a function of the wavelength of the incident light. **broad-s.**, effective against a wide range of microorganisms; said of an antibiotic. **chemical s.**, that part of the spectrum which includes the ultraviolet or actinic rays. **chromatic s.**, that portion of the range of wavelengths of electromagnetic vibrations (from 7700 to 3900 A.U.) which gives rise to the sensation of color (red to violet) to the normally perceptive eye; coincident with the visible spectrum. **color s.**, chromatic s. **continuous s.**, one in which Fraunhofer's lines are not developed. **diffraction s.**, a spectrum formed by the passage of light through a diffraction grating. **electromagnetic s.**, the continuous range of electromagnetic energy from cosmic rays to electric waves, including gamma, x-, and ultraviolet rays, visible light, infrared waves, and radio waves. **fortification s.**, teichopsia. **gaseous s.**, one which is afforded by an incandescent gas. **invisible s.**, that made up of vibrations of wavelengths less than 3900 A.U. (ultraviolet, grenz rays, x-rays, and gamma rays) and between 7700 and 120,000 A.U. (infrared). **ocular s.**, after-image. **prismatic s.**, one produced by the passage of light through a prism. **solar s.**, that portion of the

range of wavelengths of electromagnetic vibrations emanating from the sun, including the visible (chromatic, or color) spectrum and small portions of the infrared and ultraviolet radiations at either extreme. **thermal s.**, that portion of the range of wavelengths of electromagnetic vibrations (> 7700 A.U.) containing the infrared or heat rays. **toxin s.**, a diagrammatic representation of the neutralizing power of an antitoxin. **visible s.**, that portion of the range of wavelengths of electromagnetic vibrations (from 7700 to 3900 A.U.) which is capable of stimulating specialized sense organs and is perceptible as light. **x-ray s.**, the spectrum of a heterogeneous beam of roentgen rays produced by a suitable grating, generally a crystal.

speculum (spek'u-lum), pl. *spec'ula* [L. "mirror"] 1. an instrument for exposing the interior of a passage or cavity of the body. 2. the septum pellucidum. **Bozeman's s.**, a bivalve speculum the blades of which remain parallel when separated. **Brinkerhoff's s.**, a rectal speculum consisting of a conical tube having a closed extremity, but provided with a sliding bar on the side which provides an opening. **Cook's s.**, a three-pronged rectal speculum. **duck-billed s.**, a form of two-valved vaginal speculum. **eye s.**, an appliance for keeping the eyelids apart. **Fergusson's s.**, a cylindrical vaginal speculum made of silvered glass. **Fränkel's s.**, a form of nasal speculum. **Gruber's s.**, a form of ear speculum. **Hartmann's s.**, a form of nasal speculum. **s. Helmon'tii**, centrum tendineum. **Kelly's s.**, a rectal speculum tubular in shape and fitted with an obturator; called also *Kelly's sphincteroscope*. **Martin's s.**, **Martin and Davy s.**, a rectal speculum consisting of a conical cylinder with an obturator. **Mathews' s.**, a four-pronged rectal speculum. **Politzer's s.**, a form of ear speculum. **Sims' s.**, a double duck-billed vaginal speculum. **stop s.**, an eye speculum with an appliance for controlling the degree to which its branches spread. **wire bivalve s.**, a two-valved vaginal speculum made of heavy wire.

Spee's curve (spāz) [Ferdinand Graf von *Spee*, German embryologist, born 1855] see under *curve*.

speech (spēch) the utterance of vocal sounds conveying ideas. **clipped s.**, speech in which the words are slurred over and uncompleted; sometimes one of the features of dementia paralytica. **echo s.**, echolalia. **esophageal s.**, speech produced by vibration of the column of air in the esophagus against the contracting cricopharyngeal sphincter, after laryngectomy. **explosive s.**, loud, sudden enunciation, seen in certain brain diseases. **incoherent s.**, speech in which the consecutive ideas expressed are not related; due to disturbance of the train of thought. **jumbled s.**, anarthria. **mirror s.**, a speech abnormality in which the order of syllables in a sentence is reversed. **plateau s.**, speech which is characterized by a level, monotonous, unvaried pitch. **pressured s.**, a rapid, accelerated, frenzied speech, which may exceed the ability of the vocal musculature to articulate or may be incoherent to the listener. **scamping s.**, clipped s. **scanning s.**, speech in which the syllables are separated by pauses. **slurred s.**, clipped s. **staccato s.**, speech in which each syllable is uttered separately; seen in multiple sclerosis.

Spemann's induction [Hans *Spemann*, German zoologist, 1869–1941; noted for his researches on embryonic development, and winner of the Nobel prize for medicine and physiology in 1935] see under *induction*.

Spencer-Parker vaccine (spen'ser-par'ker) [Roscoe Roy *Spencer*, American physician, born 1888; Ralph Robinson *Parker*, American zoologist, 1888–1949] see under *vaccine*.

Spencer Wells facies see *Wells*.

Spengler's fragments, immune body, tuberculin (speng'lerz) [Carl *Spengler*, Swiss physician, 1860–1937] see under *fragment, body, and tuberculin*.

Spens' syndrome (spenz) [Thomas *Spens*, Scottish physician, 1764–1842] Adams-Stokes disease.

sperm (sperm) [Gr. *sperma* seed] 1. the semen or testicular secretion. 2. one of the mature germ cells of a male animal; see *spermatozoon*. **muzzled s.**, spermatozoa which are unable to adhere to the ovum.

sperma (sper'mah) semen.

spermaceti (sper'mah-set'e) [Gr. *sperma* seed + *kētos* whale] a waxy substance obtained from the head of the sperm whale, *Physeter macrocephalus*, occurring as white, somewhat translucent, slightly unctuous masses, having a crystalline fracture and a pearly luster; used in the preparation of ointment bases, such as cold cream and rose water ointment. **synthetic s.**, cetyl esters wax.

spermacrasia (sper'mah-kra'zhe-ah) [Gr. *sperma* seed + *akrasia* ill mixture] deficiency of spermatozoa in the semen.

spermagglutination (sperm'ah-gloo'ti-na'shun) the agglutination of spermatozoa.

spermalist (sper'mah-list) spermist.

spermase (sper'mās) an oxidizing enzyme found in barley.

spermateliosis (sper'mah-te'le-o'sis) spermiogenesis.

spermatemphraxis (sper'mat-em-frak'sis) [Gr. *sperma* seed + *emphraxis* stoppage] obstruction to the discharge of semen.

spermatic (sper-mat'ik) [L. *spermaticus*; Gr. *spermatikos*] pertaining to the semen; seminal.

spermaticide (sper-mat'i-sid) spermicide.

spermatid (sper'mah-tid) a cell derived from a secondary spermatocyte by fission, and developing into a spermatozoon; called also *spermatoblast*.

spermatin (sper'mah-tin) an albuminoid substance derived from the semen; it is related to mucin and to nuclealbumin.

spermatism (sper'mah-tizm) [Gr. *spermatismos*] the production or discharge of semen.

spermatitis (sper'mah-ti'tis) inflammation of a vas deferens; deferentitis or funiculitis.

spermato-, spermo- (sper'mah-to, sper'mo) [Gr. *sperma*, *spermato* seed] combining form denoting relationship to seed, specifically to the male generative element.

spermatoblast (sper'mah-to-blast') [*spermato-* + Gr. *blastos* germ] a term originally applied to the supporting cells of Sertoli, but now used with the same meaning as *spermatid*.

spermatocele (sper'mah-to-sēl') [*spermato-* + Gr. *kēlē* tumor] a cystic distention of the epididymis or the rete testis containing spermatozoa.

spermatocelectomy (sper-mat'o-sē-lek'to-me) [*spermatocele* + Gr. *ektomē* excision] operative excision of a lesion of the epididymis (spermatocele).

spermatocidal (sper'mah-to-si'dal) spermicidal.

spermatocyst (sper'mah-to-sist') [*spermato-* + Gr. *kystis* sac, bladder] 1. a seminal vesicle. 2. a spermatocele.

spermatocystectomy (sper'mah-to-sis-tek'to-me) [*spermatocyst* + Gr. *ektomē* excision] excision of the seminal vesicles.

spermatocystitis (sper'mah-to-sis-ti'tis) seminal vesiculitis.

spermatocystotomy (sper'mah-to-sis-tot'o-me) [*spermatocyst* + Gr. *tomē* a cutting] the operation of making an incision into the seminal vesicles for the purpose of drainage.

spermatocytal (sper'mah-to-si'tal) pertaining to a spermatocyte.

spermatocyte (sper'mah-to-sit') [*spermato-* + *-cyte*] the parent cell of a spermatid. **primary s.**, a cell derived from a spermatogonium and dividing into two secondary spermatocytes; called also *spermiocyte*. **secondary s.**, one of the two cells into which a primary spermatocyte divides, and which in turn gives origin to spermatids; called also *prespermatid*.

spermatocytogenesis (sper'mah-to-si'to-jen'ē-sis) the first

stage of formation of spermatozoa in which the spermatogonia develop into spermatocytes and then into spermatids.

spermatocytoma (sper'mah-to-si-to'mah) seminoma.

spermatogenesis (sper'mah-to-jen'ē-sis) [*spermato-* + Gr. *genesis* production] the process of formation of spermatozoa, including spermatocytogenesis and spermiogenesis.

spermatogenic (sper'mah-to-jen'ik) [*spermato-* + Gr. *gennan* to produce] producing semen or spermatozoa.

spermatogenous (sper'mah-toj'ē-nus) spermatogenic.

spermatogeny (sper'mah-toj'ē-ne) spermatogenesis.

spermatogone (sper'mah-to-gōn') spermatogonium.

spermatogonia (sper'mah-to-go'ne-ah) plural of *spermatogonium*.

spermatogonium (sper'mah-to-go'ne-um), pl. *spermatogonia* [*spermato-* + Gr. *gonē* generation] an undifferentiated germ cell of a male, originating in a seminiferous tubule and dividing into two primary spermatocytes; called also *spermatophore*, *spermatospore*, and *spermospore*.

spermatoid (sper'mah-toid) [*spermato-* + Gr. *eidos* form] resembling semen.

spermatology (sper'mah-tol'o-je) [*spermato-* + *-logy*] the sum of what is known regarding the semen.

spermatolysin (sper'mah-tol'i-sin) a substance causing spermatolysis.

spermatolysis (sper'mah-tol'i-sis) [*spermato-* + Gr. *lysis* dissolution] destruction or solution of spermatozoa.

spermatolytic (sper'mah-to-lit'ik) pertaining to, characterized by, or causing spermatolysis.

spermatomere (sper'mah-to-mēr') spermatomerite.

spermatomerite (sper'mah-to-me'rīt) [*spermato-* + Gr. *meros* part] one of the chromosomes into which the sperm nucleus resolves during fertilization of the ovum.

spermatomicron (sper'mah-to-mi'kron) a minute particle found in the semen of various animals; seen best with a dark-field microscope, when they show brownian motion.

spermatopathia (sper'mah-to-path'e-ah) [*spermato-* + Gr. *pathos* affection] a morbid condition of the semen.

spermatopathy (sper'mah-top'ah-the) spermatopathia.

spermatophore (sper'mah-to-fōr') [*spermato-* + Gr. *phorein* to carry] 1. a capsule, containing several spermatozoa, extruded by some of the lower animals. 2. spermatogonium.

spermatopoietic (sper'mah-to-poi-et'ik) [*spermato-* + Gr.

Specula: A, Vienna nasal speculum; B, Brinckerhoff rectal speculum; C, speculum for otoscope; D, Graves vaginal speculum.

poiētikos creative, productive] subserving or promoting the secretion of semen.

spermatorrhea (sper'mah-to-re'ah) [*spermato-* + Gr. *rhoia* flow] involuntary, too frequent, and excessive discharge of semen without copulation.

spermatoschesis (sper'mah-tos'kē-sis) [*spermato-* + Gr. *schesis* check] suppression of the secretion of semen.

spermatosome (sper-mat'o-sōm) spermatozoon.

spermatospore (sper-mat'o-spōr) [*spermato-* + Gr. *sporos* spore] a spermatogonium.

spermatotoxin (sper'mah-to-tok'sin) spermotoxin.

spermatoovum (sper'mat-o'vum) [*spermato-* + L. *ovum* egg] a fertilized ovum.

spermatoxin (sper'mah-tok'sin) spermotoxin.

spermatozoa (sper'mah-to-zo'ah) [Gr.] plural of *spermatozoon*.

spermatozoal (sper'mah-to-zo'al) pertaining to spermatozoa.

spermatozoicide (sper'mah-to-zo'i-sid) spermicide.

spermatozoid (sper'mah-to-zoid) [*spermatozoon* + Gr. *eidos* form] 1. spermatozoon. 2. the male germ cell in plants.

spermatozoon (sper'mah-to-zo'on), pl. *spermatozo'a* [*spermato-* + Gr. *zōon* animal] a mature male germ cell, the specific output of the testes. It is the generative element of the semen which serves to fertilize the ovum. It consists of a head (or nucleus), a neck, a middle piece, and a tail with an end piece. Spermatozoa, formed in the seminiferous tubules, are derived from spermatogonia, which first develop into spermatocytes, which, in turn, undergo meiosis to produce spermatids; the spermatids then differentiate into spermatozoa.

Human spermatozoon: side view (in cross-section) and flat view.

spermaturia (sper'mah-tu're-ah) [*spermato-* + Gr. *ouron* urine + *-ia*] seminuria.

spermectomy (sper-mek'to-me) excision of a portion of the spermatic cord.

spermia (sper'me-ah) [L.] plural of *spermium*.

spermiation (sper'me-a'shun) the freeing of mature spermatozoa from the Sertoli cells.

spermicidal (sper'mi-si'dal) [*sperm* + L. *caedere* to kill] destructive to spermatozoa.

spermicide (sper'mi-sid) an agent that is destructive to spermatozoa.

spermid (sper'mid) spermatid.

spermidine (sper'mi-din) a polyamine, $\text{NH}_2(\text{CH}_2)_3\text{NH}(\text{CH}_2)_4\text{NH}_2$, first found in human semen but now known to occur in almost all tissues, in association with nucleic acids; it is formed from putrescine and is itself a precursor of spermine.

spermiduct (sper'mi-dukt) [*sperm* + L. *ductus* duct] the ejaculatory duct and vas deferens together.

spermine (sper'min) a polyamine, $\text{NH}_2(\text{CH}_2)_3\text{NH}(\text{CH}_2)_4\text{NH}(\text{CH}_2)_3\text{NH}_2$, first found in human semen but now known to occur in almost all tissues in association with nucleic acids, being formed from spermidine. **s. phosphate**, the substance, $(\text{C}_2\text{H}_5\text{N})_4\text{H}_4\text{Ca}(\text{PO}_4)_2$, of which the Charcot-Neumann crystals are composed; found also in various organs and secretions in leukemia, asthma, and emphysema.

spermocyte (sper'me-o-sit') [*spermia* + *-cyte*] a primary spermatocyte.

spermiogenesis (sper'me-o-jen'ē-sis) the second stage in the formation of spermatozoa in which the spermatids transform into spermatozoa.

spermiogonium (sper'me-o-go'ne-um) spermatogonium.

spermiogram (sper'me-o-gram) a diagram of the various cells formed during the development of the sperm.

spermioteleosis (sper'me-o-te'le-o'sis) [*spermio-* + Gr. *teleiōsis* perfection, completion] the progressive development of the spermatogonium through the successive changes necessary for becoming a mature spermatozoon.

spermioteleotic (sper'me-o-te'le-ot'ik) [*spermio-* + Gr. *teleiōtikos* perfective] pertaining to or characteristic of spermioteleosis.

spermist (sper'mist) a believer in the theory of preformation, which held that the spermatozoon was a complete miniature individual.

spermium (sper'me-um), pl. *sper'mia*. The mature spermatozoon.

spermo- see *spermato-*.

spermoblast (sper'mo-blast) [*spermo-* + Gr. *blastos* germ] a spermatid.

spermocytoma (sper'mo-si-to'mah) seminoma.

spermolith (sper'mo-lith) [*spermo-* + Gr. *lithos* stone] a calculus in the spermiduct.

spermoloropexis (sper'mo-lo'ro-pek'sis) spermoloropexy.

spermoloropexy (sper'mo-lo'ro-pek'se) [*spermo-* + Gr. *lōron* thigh + *pēxis* fixation] fixation of the spermatic cord to the periosteum of the pubes in operation for undescended testicle.

spermolysin (sper-mol'i-sin) spermotoxin.

spermolysis (sper-mol'i-sis) spermatolysis.

spermolytic (sper'mo-lit'ik) spermatolytic.

spermoneuralgia (sper'mo-nu-ral'je-ah) [*spermo-* + Gr. *neuron* nerve + *-algia*] neuralgic pain in the spermatic cord.

Spermophilus (sper-mof'i-lus) a genus of rodents which harbor organisms transmissible to man. *S. beecheyi*, the ground squirrel of California, is extensively infected with plague, and, along with *S. mol'lis*, the ground squirrel of Utah, and *S. oregonus* of Oregon, is a natural reservoir of *Francisella tularensis*.

spermophlebotasia (sper'mo-fle'bek-ta'ze-ah) [*spermo-* + Gr. *phelps* vein + *ektasis* distention + *-ia*] varicosity of the spermatic veins.

spermoplasm (sper'mo-plazm) [*spermo-* + Gr. *plasma* plasm] the protoplasm of the spermatids.

spermosphere (sper'mo-sfēr) [*spermo-* + Gr. *sphaira* sphere] a group or mass of spermatids formed by the segmentation of a secondary spermatocyte.

spermospore (sper'mo-spōr) spermatogonium.

spermotoxic (sper'mo-tok'sik) pertaining to a spermotoxin.

spermotoxin (sper'mo-tok'sin) a toxin destructive to spermatozoa; especially an antibody produced by injecting an animal with spermatozoa.

spes (spēs) [L.] hope. **s. phthis'ica**, a feeling of hopefulness of recovery frequently characteristic of patients with tuberculosis.

SPF specific-pathogen free, a term applied to animals reared for use in laboratory experiments, and known to be free of specific pathogenic microorganisms.

sp. gr. specific gravity.

sph. spherical or spherical lens.

sphacelate (sfas'ē-lāt) to become gangrenous.

sphacelation (sfas'ē-la'shun) the formation of a sphacelus; mortification.

sphacelism (sfas'ē-lizm) [Gr. *sphakelismos*] sphacelation or necrosis; sloughing.

sphaceloderma (sfas'ē-lo-der'mah) [*sphacelus* + Gr. *dermaskin*] gangrene of the skin, or an ulcer resulting from it.

sphacelotoxin (sfas'ē-lo-tok'sin) [*sphacelus* + Gr. *toxikon* poison] 1. spasmotin. 2. a poisonous, yellow resin obtainable from ergot.

sphacelous (sfas'ē-lus) affected with gangrene; sloughing.

sphacelus (sfas'ē-lus) [L.; Gr. *sphakelos*] a slough or mass of gangrenous tissue; mortification.

sphaer- for words beginning thus, see also those beginning *spher-*.

Sphaeranthus (sfe-ran'thus) a genus of herbaceous plants of Asia. *S. indicus* L. furnishes a purported aphrodisiac oil. It is also used in India as an anthelmintic.

Sphaeria (sfe're-ah) a former genus of fungi, the species of which are now included in various genera. **S. sinen'sis**, *Cor-dyceps sinensis*.

Sphaeriales (sfe're-a'lēz) an order of ascomycetes of the series Pyrenomycetes, including the family Sordariaceae.

sphaero- for words beginning thus, see also those beginning *sphero-*.

Sphaeroides maculatus (sfe'roi-dēz mak'u-la'tus) the Atlantic Coast puffer fish that contains a potent toxin concentrated

in the gonads and viscera, which when eaten without special cooking preparation causes generalized paralysis and, in severe cases, unconsciousness and death.

Sphaerophorus (sfe-ro'fo-rus) *Bacteroides*. **S. necrophorus**, *Fusobacterium necrophorum*.

Sphaerotilus (sfe-ro'ti-lus) a genus of microorganisms of the family Chlamydobacteriaceae, order Chlamydobacteriales, made up of attached or free-floating filaments, frequently showing false branching. It includes three species, *S. dicho'tomus*, *S. flu'tans*, and *S. na'tans*.

sphagiasmus (sfa'je-az'mus) [Gr. *sphagiasmos* a slaying, sacrificing] 1. contraction of the neck muscles in an epileptic attack. 2. petit mal; see *epilepsy*.

sphagitides (sfah-jit'i-dēz) [Gr. *sphagitis* jugular; *sphagē* throat] an old name for the so-called jugular vessels.

sphagitis (sfa-jit'is) [Gr. *sphagē* throat + *-itis*] any throat inflammation.

sphenethmoid (sfen-eth'moid) sphenothmoid.

sphenion (sfe'ne-on), pl. *sphē'nia* [Gr. *sphēn* wedge + *on* neuter ending] the cranial point at the sphenoid angle of the parietal bone.

spheno- (sfe'no) [Gr. *sphēn* wedge] a combining form denoting relationship to the sphenoid bone or to a wedge, or meaning wedge-shaped.

sphenobasilar (sfe'no-bas'i-lar) pertaining to the sphenoid bone and the basilar part of the occipital bone.

sphenoccipital (sfe'no-sip'i-tal) sphenoccipital.

sphenocephalus (sfe'no-sef'ah-lus) a fetus exhibiting sphenoccephaly.

sphenocephaly (sfe'no-sef'ah-le) [*spheno-* + Gr. *kephalē* head] a developmental anomaly characterized by a wedge-shaped appearance of the head.

sphenoethmoid (sfe'no-eth'moid) denoting the curved plate of bone in front of the lesser wing of the sphenoid bone.

sphenofrontal (sfe'no-frun'tal) pertaining to the sphenoid and frontal bones.

sphenoid (sfe'noid) [*spheno-* + Gr. *eidos* form] wedge-shaped; designating especially a very irregular wedge-shaped bone at the base of the skull (os sphenoidale, or sphenoid bone).

sphenoidal (sfe-noi'dal) pertaining to the sphenoid bone.

sphenoiditis (sfe'noi-di'tis) inflammation of the sphenoidal sinus.

sphenoidostomy (sfe'noi-dos'to-me) [*sphenoid* + Gr. *stomoun* to provide with an opening, or mouth] operative removal of the anterior wall of the sphenoidal sinus.

sphenoidotomy (sfe'noi-dot'o-me) incision into the sphenoidal sinus.

sphenomalar (sfe'no-ma'lar) sphenozygomatic.

sphenomaxillary (sfe'no-mak'si-ler'e) pertaining to the sphenoid bone and the maxilla.

sphenometer (sfe-nom'ē-ter) [*spheno-* + Gr. *metron* measure] an instrument for measuring a wedge of bone removed in operations for correcting curvatures.

spheno-occipital (sfe'no-ok-sip'i-tal) pertaining to the sphenoid and occipital bones.

sphenopagus (sfe'no-pah-gus) [*spheno-* + Gr. *pagos* a thing fixed] symmetrical twins conjoined at the sphenoid bone at the base of the skull.

sphenopalatine (sfe'no-pal'ah-tin) pertaining to or in relation with the sphenoid and palatine bones.

sphenoparietal (sfe'no-pah-ri'ē-tal) pertaining to the sphenoid and parietal bones.

sphenopetrosal (sfe'no-pe-tro'sal) pertaining to the sphenoid bone and the petrosa.

sphenorbital (sfe-nor'bī-tal) pertaining to the sphenoid bone and the orbits.

sphenosquamosal (sfe'no-skwa-mo'sal) pertaining to the sphenoid bone and the squamous portion of the temporal bone.

sphenotemporal (sfe'no-tem'po-ral) pertaining to the sphenoid and temporal bones.

sphenotic (sfe-not'ik) [*spheno-* + Gr. *ous* ear] denoting a fetal bone which becomes that part of the sphenoid which is adjacent to the carotid groove.

sphenotresia (sfe'no-tre'ze-ah) [*spheno-* + Gr. *trēsīs* boring] boring of the skull in craniotomy.

sphenotribe (sfe'no-trib) [*spheno-* + Gr. *tribein* to rub] an instrument for crushing the basal portion of the fetal skull.

sphenotripsy (sfe'no-trip'se) the crushing of the fetal head with the sphenotribe.

sphenoturbinial (sfe'no-tur'bī-nal) denoting a thin, curved bone in front of each of the lesser wings of the sphenoid, with which bone it becomes fused.

sphenovomerine (sfe'no-vo'mer-in) pertaining to the sphenoid and to the vomer.

sphenozygomatic (sfe'no-zi'go-mat'ik) pertaining to the sphenoid and zygomatic bones.

sphere (sfēr) [Gr. *sphaira* sphere] a ball, globe, or orb. **attraction s.**, centrosome. **embryotic s.**, the morula. **Morgagni's s's**, Morgagni's globules. **segmentation s.**, 1. the morula. 2. a blastomere. **vitelline s.**, yolk s., the morula.

spheresthesia (sfe'res-the'ze-ah) [Gr. *sphaira* sphere + *aisthēsis* perception + *-ia*] a morbid sensation of a lump or ball in the throat; globus hystericus.

spherical (sfe'fī-kal) [Gr. *sphairikos*] pertaining to a sphere; sphere-shaped.

sphero- (sfe'ro) [Gr. *sphaira* a ball or globe] a combining form meaning round, or denoting relationship to a sphere.

spherocylinder (sfe'ro-sil'in-der) a combined spherical and cylindrical lens.

spherocyte (sfe'ro-sit) [*sphero-* + Gr. *kytos* cell] a small, globular, completely hemoglobinated erythrocyte without the usual central pallor, found characteristically in hereditary spherocytosis but also observed in acquired hemolytic anemia.

spherocytic (sfe'ro-sit'ik) characterized by the presence of spherocytes.

spherocytosis (sfe'ro-si-to'sis) the presence of spherocytes in the blood. **hereditary s.**, a congenital, familial form of hemolytic anemia characterized by spherocytosis, abnormal fragility of erythrocytes, jaundice, and splenomegaly. Called also *globe cell anemia*, *congenital hemolytic icterus*, *constitutional hemolytic anemia*, *chronic familial icterus*, *chronic acholuric jaundice*, and *acholuric jaundice*.

spheroid (sfe'roid) [*sphero-* + Gr. *eidos* form] a globular body, or one resembling a sphere.

spheroidal (sfe-roi'dal) having the form or shape of a sphere.

spheroidin (sfe-roi'din) [*Sphaeroides* (Gr. *sphaira* sphere) a puffer fish + *-in*, suffix denoting a chemical compound] a toxic fraction from tetradotoxin, believed to have the empirical formula C₁₂H₁₇O₁₃N₃.

spherolith (sfe'ro-lith) [*sphero-* + Gr. *lithos* stone] any of the minute spherical deposits found in the kidney tissue of the newborn; they are probably uratic deposits.

spheroma (sfe-ro'mah) a globular tumor.

spherometer (sfe-rom'ē-ter) [*sphero-* + Gr. *metron* measure] an instrument for measuring the curvature of a surface.

Spherophorous (sfer-of'o-rus) *Sphaerophorus*.

spheroplast (sfer'o-plast) a spherical bacterial or plant cell, produced in hypertonic media under conditions that result in partial absence of the cell wall which no longer serves as a supporting structure. Cf. *protoplast*, def. 3.

spherospermia (sfe-ro-sper'me-ah) [*sphero-* + Gr. *sperma* seed] a round, tailless spermatozoon.

spherule (sfer'ül) 1. a small sphere. 2. a spherical multinucleate cell of the parasitic stage of *Coccidioides immitis*, in which endospores are developed. **s's of Fulci**, numerous spherical red bodies seen in the spinal cord in inflammatory conditions of the cord. **rod s.**, the pear-shaped ending of a retinal rod cell, which synapses with the bipolar and horizontal cells in the outer plexiform layer.

sphincter (sfink'ter) [L.; Gr. *sphinktēr* that which binds tight] a ringlike band of muscle fibers that constricts a passage or closes a natural orifice; called also *musculus sphincter* [NA]. **s. a'ni**, see *musculus sphincter ani externus* and *musculus sphincter ani internus*. **s. of Boyden**, a superior choledochal sphincter encircling the common bile duct just proximal to the duodenum. **cardiac s.**, **cardioesophageal s.**, muscle fibers about the opening of the esophagus into the stomach. **cornual s.**, tubal s. **s. of eye**, *musculus orbicularis oculi*. **gastroesophageal s.**, the terminal few centimeters of the esophagus, which prevents reflux of gastric contents into the esophagus. **Giordano's s.**, *musculus sphincter ductus choledochi*. **Henle's s.**, muscle fibers surrounding the prostatic urethra. **hepatic s.**, a thickened portion of the muscular coat of the hepatic veins near their entrance into the inferior vena cava. **s. of hepatopancreatic ampulla**, *musculus sphincter ampullae hepatopancreaticae* [NA]. **Hyrtl's s.**, an incomplete band or thickening of the muscle fibers in the rectum a few inches above the anus in the upper part of the rectal ampulla; called also *rectal s.* **inguinal s.**, a ring of muscle fibers around the spermatic cord at the internal opening of the inguinal canal. **s. i'ridis**, *musculus sphincter pupillae*. **Lütken's s.**, a thickening of the muscle fibers in the neck of the gallbladder. **Nélaton's s.**, an occasional and often incomplete band of muscle fibers about the rectum at the level of the prostate. **O'Beirne's s.**, circular muscle fibers in the wall of the large intestine at the junction of the sigmoid colon and rectum. **s. oc'uli**, *musculus orbicularis oculi*. **Oddi's s.**, the sheath of muscle fibers investing the associated bile and pancreatic passages as they traverse the wall of the duodenum; called also *musculus sphincter ampullae hepatopancreaticae* [NA] and *Oddi's muscle*. **s. o'ris**, *musculus orbicularis oris*. **palatopharyngeal s.**, a transverse band of muscle fibers in the posterior wall of the pharynx, derived from the superior constrictor or palatopharyngeal muscle, which contracts

during swallowing to form Passavant's bar; it also contracts during speech in persons with cleft palate. **pharyngoesophageal s.**, a region of higher muscular tone at the junction of the pharynx and esophagus, which is involved in movements of swallowing. **precapillary s.**, a smooth muscle fiber encircling a true capillary where it originates from the arterial capillary, which can open and close the capillary entrance. **prepyloric s.**, a band of muscle fibers in the wall of the stomach proximal to the pyloric sphincter. **s. pupil/lae**, musculus sphincter pupillae. **pyloric s.**, a thickening of the circular muscle of the stomach around its opening into the duodenum; called also *musculus sphincter pylori* [NA]. **rectal s.**, Hyrtl's s. **tubal s.**, an encircling band of muscle fibers at the junction of the uterine tube and the uterus. **s. ure/thrae**, musculus sphincter urethrae. **s. vagi/nae**, the musculus bulbospongiosus in the female. **s. vesi/cae**, musculus sphincter vesicae urinariae.

sphincteral (sfingk'ter-al) pertaining to a sphincter.

sphincteralgia (sfingk'ter-al'je-ah) [*sphincter* + Gr. *algos* pain + *-ia*] pain in a sphincter muscle, as of the anus.

sphincterectomy (sfingk'ter-ek'to-me) [*sphincter* + Gr. *ektomē* excision] excision of any sphincter, such as the sphincter iridis.

sphincteric (sfingk-ter'ik) pertaining to a sphincter.

sphincterismus (sfingk'ter-iz'mus) spasm of the sphincter ani.

sphincteritis (sfingk'ter-i'tis) inflammation of a sphincter, particularly of the sphincter of Oddi.

sphincterolysis (sfingk'ter-ol'i-sis) [*sphincter* + Gr. *lysis* dissolution] the operation of separating the iris from the cornea in anterior synechia.

sphincteroplasty (sfingk'ter-o-plas'te) [*sphincter* + Gr. *plassein* to mold] surgical repair of a defective sphincter.

sphincteroscope (sfingk'ter-o-skōp') [*sphincter* + Gr. *skopein* to examine] a speculum for inspecting the anal sphincter. **Kelly's s.**, see under *speculum*.

sphincteroscopy (sfingk'ter-os'ko-pe) inspection of the anal sphincter.

sphincterotome (sfingk'ter-o-tōm') an instrument for cutting a sphincter.

sphincterotomy (sfingk'ter-ot'o-me) [*sphincter* + Gr. *tomē* a cutting] division of a sphincter. **internal s.**, incision of the internal sphincter of the anus.

sphingo- [Gr. *sphingein* to bind fast] a combining form denoting relationship to sphingosine or a sphingolipid.

sphingogalactoside (sfing'go-gah-lak'to-sid) a substance composing part of the material characteristic of the spleen in Gaucher's disease.

sphingoglycolipid (sfing'go-gli'ko-lip'id) any glycolipid that contains sphingosine, including the cerebroside, globosides, hematosides, and gangliosides.

sphingoin (sfing'go-in) a leukomaine, $C_{17}H_{35}NO_2$, from the substance of the brain.

sphingol (sfing'gol) an alcohol, $C_9H_{19}O$, obtained from sphingomyelinic acid by hydrolysis.

sphingolipid (sfing'go-lip'id) [Gr. *sphingein* to bind tight + *lipid*] a lipid containing sphingosine; a fatty acid is attached to the nitrogen atom, and these *N*-acylsphingosines are called ceramides. Sphingolipids are combinations of different compounds with the hydroxyl group of ceramides, e.g., sphingomyelins (with phosphoryl choline), gangliosides (with branched-chain oligosaccharides), and cerebroside (with glucose or galactose). They occur in membranes and in particularly high concentrations in brain and nerve tissue.

sphingolipidoses (sfing'go-lip'i-do'sēz) [Gr.] plural of *sphingolipidosis*.

sphingolipidosis (sfing'go-lip'i-do'sis), pl. *sphingolipidoses*. A general designation applied to diseases characterized by abnormal storage of sphingolipids, such as Gaucher's disease, Niemann-Pick disease, generalized gangliosidosis, and Tay-Sachs disease. **cerebral s.**, a group of hereditary disorders transmitted as an autosomal recessive trait and due to an inborn defect of lipid metabolism in which sphingolipids accumulate in the brain. They are characterized by cerebromacular degeneration, progressive dementia, progressive loss of vision resulting in blindness, paralysis, and death, and are classified according to age of onset. The *infantile form* usually occurs between 4 and 6 months of age, chiefly affecting children of Jewish ancestry, and marked by a cherry-red spot with a gray-white border on both retinas; called also *Sachs' or Tay-Sachs disease*. The *late infantile form* occurs between 3 and 4 years of age, shows no racial predilection, and progresses more slowly than the infantile form. The cherry-red spot seen in the infantile form is frequently absent, but there are pigmentary changes of the retina. Called also *Bielschowsky's or Bielschowsky-Jansky disease*. The *juvenile form* shows no racial predilection, occurs between 5 and 10 years of age, and is marked by "salt and pepper" pigmentation of the retina; called also *Batten-Mayou, Spielmeier-Vogt, and Vogt-Spielmeier disease*. The *late juvenile, or adult, form* occurs between the ages of 15 and 26, and shows no racial predilection or ocular lesions; clinical findings

are those of cerebellar or basal ganglia disorders. Called also *Kufs' disease*.

sphingolipodystrophy (sfing'go-lip'o-dis'tro-fe) any of a group of disorders of sphingolipid metabolism, including Gaucher's disease, metachromatic leukodystrophy, Niemann-Pick disease, etc.

sphingomyelin (sfing'go-mi'ē-lin) a general designation of a group of phospholipids which on hydrolysis yield phosphoric acid, choline, sphingosine, and a fatty acid. They occur primarily in nervous tissue and generally in membranes.

sphingomyelinosis (sfing'go-mi'ē-lin-o'sis) Niemann-Pick disease.

sphingophospholipid (sfing'go-fos'fo-lip'id) a sphingolipid containing sphingosine or a related base and phosphorylcholine.

sphingosine (sfing'go-sin) a long-chain, mono-unsaturated aliphatic amino alcohol, $C_{18}H_{37}O_2N$, usually present in sphingomyelin.

sphygmie (sfig'mik) [Gr. *sphygmikos*] pertaining to the pulse; see *sphygmie period*, under *period*.

sphygmo- (sfig'mo) [Gr. *sphygmos* pulse] a combining form denoting relationship to the pulse.

sphygmobologram (sfig'mo-bo'lo-gram) a tracing made by the sphygmobolometer.

sphygmobolometer (sfig'mo-bo-lom'ē-ter) [*sphygmo-* + Gr. *bōlos* mass + *metron* measure] an instrument for measuring and recording the energy of the pulse wave, and so, indirectly, the strength of the systole.

sphygmobolometry (sfig'mo-bo-lom'ē-tre) the use of the sphygmobolometer.

sphygmocardiogram (sfig'mo-kar'de-o-gram) the tracing made by a sphygmocardiograph.

sphygmocardiograph (sfig'mo-kar'de-o-graf) [*sphygmo-* + Gr. *kardia* heart + *graphein* to write] an instrument for recording the pulse waves and heart beat at the same operation.

sphygmocardiograph (sfig'mo-kar'de-o-skōp) [*sphygmo-* + Gr. *kardia* heart + *skopein* to examine] an apparatus that records or displays the behavior of the pulse, heart action, and sounds.

sphygmochronograph (sfig'mo-kro'no-graf) [*sphygmo-* + Gr. *chronos* time + *graphein* to write] a form of self-registering sphygmograph.

sphygmodynamometer (sfig'mo-di'nah-mom'ē-ter) [*sphygmo-* + Gr. *dynamis* power + *metron* measure] an instrument for determining the force of the pulse.

sphygmogenin (sfig-moj'e-nin) [*sphygmo-* + Gr. *gennan* to produce] epinephrine.

sphygmogram (sfig'mo-gram) [*sphygmo-* + Gr. *gramma* a writing] a sphygmographic tracing; the record or tracing made by a sphygmograph. It consists of a curve having a sudden rise (*primary elevation*), followed by a sudden fall, after which there is a gradual descent marked by a number of secondary elevations.

Radial sphygmogram from a healthy individual: *p*, The percussion wave; *t*, tidal or predicrotic wave; *n*, dicrotic or aortic notch; *d*, dicrotic wave; *E*, the sphygmie period during which the semilunar valves are open. (Hay.)

sphygmograph (sfig'mo-graf) [*sphygmo-* + Gr. *graphein* to write] an instrument for registering the movements, form, and force of the arterial pulse. Vierordt's sphygmograph (1835) and Marey's (1860) were the earliest. The latter, variously modified, is the kind principally used.

sphygmographic (sfig'mo-graf'ik) pertaining to the sphygmograph.

sphygmography (sfig-mog'rah-fe) the production of pulse tracings with the sphygmograph.

sphygmoid (sfig'moid) [*sphygmo-* + Gr. *eidos* form] resembling the pulse.

sphygmology (sfig-mol'o-je) [*sphygmo-* + *-logy*] the sum of what is known regarding the pulse.

sphygmomanometer (sfig'mo-mah-nom'ē-ter) an instrument for measuring blood pressure in the arteries. There are many forms of the instrument, each named for the person who devised it, as *Riva-Rocci's*, *Faught's s.*, *Erlanger's s.*, *Janeway's s.*, *Mosso's s.*, *Rogers' s.*, *Staunton's s.*, *Tycos s.*

sphygmometer (sfig-mom'ē-ter) [*sphygmo-* + Gr. *metron* measure] an instrument for measuring the force and frequency of the pulse.

sphygmometrograph (sfig'mo-met'ro-graf) an apparatus for recording the maximal and minimal arterial pressures.

sphygmometroscope (sfig'mo-met'ro-skōp) an instrument for taking the blood pressure by the auscultatory method.

sphygmo-oscillometer (sfig'mo-os'f-lom'ē-ter) a form of

sphygmomanometer in which the disappearance and reappearance of the pulse are indicated by an oscillating needle.

sphygmopalpation (sfīg'mo-pal-pa'shun) the act of palpating or feeling the pulse.

sphygmophone (sfīg'mo-fōn) [*sphygmo-* + Gr. *phōnē* sound] an apparatus for rendering audible the vibrations of the pulse.

sphygmoplethysmograph (sfīg'mo-plē-thiz'mo-graf) a plethysmograph which traces a record of the pulse, together with the curve of fluctuation of volume.

sphygmoscope (sfīg'mo-skōp) [*sphygmo-* + Gr. *skopein* to examine] a device for rendering the pulse beat visible. **Bishop's s.**, an apparatus for measuring the blood pressure, especially the diastolic pressure.

sphygmoscopy (sfīg-mos'ko-pe) examination of the pulse.

sphygm systole (sfīg'mo-sis'to-le) [*sphygmo-* + *systole*] that part of the sphygmogram that corresponds to the systole of the heart.

sphygmotonogram (sfīg'mo-to'no-gram) (*obs.*) the graphic record produced by the sphygmotonograph.

sphygmotonograph (sfīg'mo-to'no-graf) [*sphygmo-* + Gr. *tonos* tension + *graphein* to write] (*obs.*) an instrument for recording simultaneously the blood pressure, the carotid or jugular pulse, the brachial pulse, and the time in fifths of a second.

sphygmotonometer (sfīg'mo-to-nom'ē-ter) [*sphygmo-* + Gr. *tonos* tension + *metron* measure] an instrument for measuring the elasticity of the arterial walls.

sphygmoviscosimetry (sfīg'mo-vis'ko-sim'ē-tre) [*sphygmo-* + *viscosity* + Gr. *metron* measure] measurement of the blood pressure and the viscosity of the blood.

sphyrectomy (sfi-rek'to-me) [Gr. *sphyrā* malleus + *ektomē* excision] surgical removal of the malleus.

sphyrotomy (sfi-rot'o-me) [Gr. *sphyrā* malleus + *tomē* a cutting] surgical removal of a portion of the malleus.

spica (spi'kah) [L. "ear of wheat"] a figure-of-8 bandage with turns that cross one another usually at the shoulder or hip; see under *bandage*.

spicular (spik'u-lar) pertaining to a spicule.

spicule (spik'ūl) [L. *spiculum*] a sharp, needle-like body.

spiculum (spik'u-lum), pl. *spic'ula* [L.] spicule.

spider (spi'der) 1. an arthropod of the class Arachnida, some species of which have venomous bites. Cf. *arachnidism*. 2. a spider-like nevus; see *vascular s.* **arterial s.**, *vascular s.* **banana s.**, *Heteropoda venatoria*. **black widow s.**, see *Latrodectus*. **brown recluse s.**, *Loxosceles reclusa*. **cat-headed s.**, *Mastophora gasteracanthoides*. **comb-footed s.**, see *Theridiidae*. **European wolf s.**, *European tarantula*. **funnel-web s.**, see *Atrax*. **jointed s.**, see *Solpugida*. **lynx s.**, *Peucetia viridans*. **tree funnel-web s.**, *Atrax formidabilis*. **vascular s.**, a telangiectasis composed of small vessels a few millimeters long radiating from a central arteriole, the whole somewhat resembling the legs of a spider. They may occur singly or numerous, most often in children and pregnant women, but also in persons with liver disease. The upper chest and arms are most frequently affected, but they may occur anywhere. Called also *spider nevus*, *nevus araneus*, or *stellate angioma*. **wandering s.**, *Ctenus ferus*.

spider burst (spi'der burst) radiating lines of capillaries on the leg caused by venous dilatation but without distinct varicosity.

Spiegelberg's sign (spig'el-bergz) [Otto Spiegelberg, German gynecologist, 1830-1881] see under *sign*.

Spiegel's line (spig'elz) [Adriaan van der Spiegel (L. *Spigeli*), Flemish anatomist, 1578-1625] *linea semilunaris*.

Spiegler's test (reagent) (spe'glerz) [Eduard Spiegler, dermatologist of Vienna, 1860-1908] see under *tests*.

Spigelia (spi-je'le-ah) [Adriaan van der Spiegel, 1578-1625] a genus of loganiaceous plants; the rhizome and roots of *S. marilandica* L. (pinkroot) have been used as an anthelmintic.

spigelian (spi-je'le-an) named for Adriaan van der Spiegel (L. *Spigeli*), Flemish anatomist, 1578-1625, as *spigelian* line (*linea semilunaris*) or *spigelian* lobe (*lobus caudatus*).

spigeline (spi-je'lēn) an alkaloid resembling coniine and nicotine occurring in *Spigelia marilandica* L., a perennial herb of Eastern North America.

spignet (spig'net) *Aralia*.

spike (spik) a sharp upward deflection in a curve, such as the main deflection of the oscillographic tracing of the action potential wave, the following smaller wave being called the *after-potential*. See also under *potential*.

spikenard (spik'nard) [L. *nardus*, or *spica nardi*] the plant *Nardostachys jatamansi* and various fragrant valerianaceous and other plants; now chiefly used in oriental medicine for nervous disorders. **American s.**, *Aralia*. **false s.**, *Andropogon nardus*, an aromatic and stimulant East Indian grass; also *Smilacina racemosa*, a North American plant.

Spilanthes (spi-lan'thēz) [Gr. *spilos* spot + Gr. *anthos* flower] a genus of composite-flowered plants. *S. acmella* Murr., the Para

cross of tropical America and Asia, was formerly used as a remedy for toothache. It is also a powerful mosquito larvicide.

spillway (spil'wa) a channel or passageway through which food escapes from the occlusal surfaces of the teeth during mastication. The occlusal, developmental, and supplemental grooves, as well as the incisal, occlusal, labial, buccal, and lingual embrasures, become spillways during function.

spina (spi'nah), pl. *spi'nae* [L.] a spine: a thornlike process or projection; [NA] a general term for such a process. **s. angularis**, *spina ossis sphenoidalis*. **s. bif'ida**, a developmental anomaly characterized by defective closure of the bony encasement of the spinal cord, through which the cord and meninges may (s. *bifida cystica*) or may not (s. *bifida occulta*) protrude. **s. bif'ida antē'rior**, a defect of closure on the anterior surface of the bony spinal canal, often associated with defective development of the abdominal and thoracic viscera. **s. bif'ida aper'ta**, s. *bifida cystica*. **s. bif'ida cyst'ica**, *spina bifida* in which there is protrusion through the defect of a cystic swelling involving the meninges (meningocoele), spinal cord (myelocoele), or both (meningomyelocoele). **s. bif'ida manifes'ta**, s. *bifida cystica*. **s. bif'ida occul'ta**, *spina bifida* in which there is a defect of the bony spinal canal without protrusion of the cord or meninges. **s. bif'ida poste'rior**, a defect of closure on the posterior surface of the bony spinal canal. **s. fronta'lis**, s. *nasalis ossis frontalis*. **s. hel'icis** [NA], spine of helix: a small, forward-projecting cartilaginous process on the anterior portion of the helix at about the junction of the helix and its crus, just above the tragus. **s. ili'aca antē'rior infe'rior** [NA], anterior inferior iliac spine: a blunt bony process projecting forward from the lower part of the anterior margin of the ilium, just above the acetabulum. **s. ili'aca antē'rior supe'rior** [NA], anterior superior iliac spine: a blunt bony projection on the anterior border of the ilium, forming the anterior end of the iliac crest. **s. ili'aca poste'rior infe'rior** [NA], posterior inferior iliac spine: a blunt bony projection from the posterior border of the ilium, corresponding to the posterior lower extremity of the facies auricularis and the posterior upper extremity of the incisura ischiadica major. **s. ili'aca poste'rior supe'rior** [NA], posterior superior iliac spine: a blunt bony projection on the posterior border of the ilium, forming the posterior end of the iliac crest. **s. intercondyloi'dea**, eminencia intercondylaris. **s. ischiad'ica** [NA], ischial spine: a strong process of bone projecting backward and medialward from the posterior border of the ischium, on a level with the lower border of the acetabulum and serving to separate the major and minor ischiadic notches. **s. mea'tus**, s. *suprameatum*. **s. menta'lis** [NA], mental spine: any of the small bony projections (usually four in number) located on the internal surface of the mandible, near the lower end of the midline, serving for attachment of the genioglossal and geniohyoid muscles. Called also *genial apophysis*. **s. nasa'lis antē'rior maxil'lae** [NA], anterior nasal spine of maxilla: the sharp anterosuperior projection at the anterior extremity of the nasal crest of the maxilla. **s. nasa'lis os'sis fronta'lis** [NA], nasal spine of frontal bone: a rough and somewhat irregular process of bone projecting downward and forward from the front part of the inferior surface of the pars nasalis of the frontal bone and fitting between the nasal bones and the ethmoid bone; called also *spina frontalis*. **s. nasa'lis os'sis palati'ni** [NA], **s. nasa'lis poste'rior os'sis palati'ni**, nasal spine of palatine bone: a small, sharp, backward-projecting bony spine forming the medial posterior angle of the horizontal portion of the palatine bone; called also *posterior nasal spine*. **s. os'sis sphenoida'lis** [NA], spine of sphenoid bone: a small bony process projecting downward from the inferior aspect of the great wing of the sphenoid bone where the wing projects into the angle between the petrous and squamous portions of the temporal bone; it is just posterior to the foramen spinosum and serves for attachment of the sphenomandibular and pterygospinous ligaments. Called also *s. angularis*. **spi'nae palati'nae** [NA], palatine spines: ridges which are laterally placed on the inferior surface of the maxillary part of the hard palate, separating the palatine sulci. **s. scap'ulae** [NA], spine of scapula: a triangular plate of bone attached by one edge to the back of the scapula, its tip being at the vertebral border of the scapula; it passes laterally toward the shoulder joint and at its base bears the acromion. **s. su'pramea'tum** [NA], suprameatal spine: a pointed process that sometimes projects from the temporal bone, just above and at the back of the external acoustic meatus. **s. tib'iae**, *tuberositas tibiae*. **s. trochlea'ris** [NA], trochlear spine: a spicule of bone on the anteromedial part of the orbital surface of the frontal bone for attachment of the trochlea of the superior oblique muscle; when absent, it is represented by the trochlear fovea. **s. tympan'ica ma'jor** [NA], greater tympanic spine: a spine of the temporal bone forming the anterior edge of the tympanic notch (deficient part of tympanic sulcus). **s. tympan'ica mi'nor** [NA], lesser tympanic spine: a spine of the temporal bone forming the posterior edge of the tympanic notch. **s. vento'sa**, a true dactylitis occurring mostly in infants and young children, characterized by enlargement of the fingers or toes, with caseation, sequestration, and sinus formation.

spinacin (spi'nah-sin) a protein obtained from the cytoplasm of

the cells of spinach leaves. It is insoluble in water and in salt solutions, but soluble in very slight excess of either acid or alkali.

spinae (spi'ne) [L.] plural of *spina*.

spinal (spi'nal) [L. *spinalis*] pertaining to a spine or to the vertebral column. See also under *animal*.

spinalgia (spi-nal'je-ah) [*spine* + Gr. *algos* pain + *-ia*] pain in the spinal region. **Petrushky's s.**, tenderness in the interscapular region in tuberculosis of the bronchial lymph nodes.

spinalis (spi-na'lis) [L.] spinal.

spinant (spi'nant) any agent that acts directly upon the spinal cord, increasing its reflex activity.

spinat (spi'nāt) [L. *spinatus*] having thorns; shaped like a thorn.

spindle (spin'd'l) 1. the fusiform figure occurring in the cell nucleus during the metaphase of mitosis, composed of microtubules radiating from the centrioles and connecting the chromosomes at their centromeres. Called also *achromatic s.*, *mitotic s.*, and *nuclear s.* 2. see *brain waves*, under *wave*. 3. muscle s. **aortic s.**, the dilated part of the aorta just below the isthmus. **Axenfeld-Krukenberg s.**, Krukenberg's s. **Bütschli's nuclear s.**, spindle, def. 1. **central s.**, the bundle of fibers in the axial part of the spindle of an amphiaster. **cleavage s.**, any spindle formed during cleavage of the ovum. **enamel s's**, spindle-shaped extensions of the dentinal tubules passing across the dentinoenamel junction into the enamel. **His's s.**, aortic s. **Krukenberg's s.**, a vertical spindle-shaped, brownish-red opacity on the posterior surface of the cornea. **Kühne's s.**, muscle s. **mitotic s.**, spindle, def. 1. **muscle s.**, a mechanoreceptor found between skeletal muscle fibers; the muscle spindles are arranged in parallel with muscle fibers, and respond to passive stretch of the muscle but cease to discharge if the muscle contracts isotonically, thus signaling muscle length. The muscle spindle is the receptor responsible for the stretch or myotatic reflex. **neuromuscular s.**, muscle s. **neurotendinal s.**, Golgi tendon organ. **nuclear s.**, see *spindle*, def. 1. **tendon s.**, Golgi tendon organ. **tigroid s's**, Nissl bodies. **urine s's**, spindle-shaped, urine-filled segments of the ureter due to incomplete occlusion of the ureter during peristalsis.

spine (spin) 1. a thornlike process or projection; called also *spina* [NA]. 2. the spinal column (columna vertebralis) [NA]. 3. the central ridge on the internal surface of a horse's hoof, between the branches of the frog; called also *frog stay*. **alar s.**, angular s., spina ossis sphenoidalis. **bamboo s.**, the ankylosed spine produced by rheumatoid spondylitis; so called because of the roentgenographic appearance caused by lipping of the vertebral margins. **basilar s.**, tuberculum pharyngeum. **Civinini's s.**, processus pterygospinosus. **cleft s.**, see *spina bifida*. **dendritic s.**, gemmule, def. 2. **dorsal s.**, columna vertebralis. **Erichsen's s.**, an obscure condition occurring as the result of alleged accidental injury to the vertebral column. **ethmoidal s. of Macalister**, crista sphenoidalis. **frontal s.**, external, spina nasalis ossis frontalis. **s. of greater tubercle of humerus**, crista tuberculi majoris. **s. of helix**, spina helix. **hemal s.**, a ventral projection from the hemal arch, which is attached to the underside of certain vertebral centra in lower vertebrates. **s. of Henle**, spina supra meatum. **hystrical s.**, simulated vertebral disease in neurotic patients. **iliac s.**, anterior inferior, spina iliaca anterior inferior. **iliac s.**, anterior superior, spina iliaca anterior superior. **iliac s.**, posterior inferior, spina iliaca posterior inferior. **iliac s.**, posterior superior, spina iliaca posterior superior. **iliopectineal s.**, eminentia iliopubica. **intercondyloid s.**, eminentia intercondylaris. **ischial s.**, s. of ischium, spina ischiadica. **jugular s.**, processus jugularis ossis occipitalis. **kissing s's**, a condition in which the spinous processes of adjacent vertebra are in contact; called also *Baastup's disease* or *syndrome*. **s. of lesser tubercle of humerus**, crista tuberculi minoris. **s. of maxilla**, spina nasalis anterior maxillae. **mental s.**, spina supræmeatum. **mental s.**, spina mentalis. **mental s.**, external, protuberantia mentalis. **nasal s.**, anterior, spina nasalis anterior maxillae. **nasal s.**, posterior, spina nasalis ossis palatini. **nasal s. of frontal bone**, spina nasalis ossis frontalis. **nasal s. of maxilla, anterior**, spina nasalis anterior maxillae. **nasal s. of palatine bone**, spina nasalis ossis palatini. **neural s.**, processus spinosus vertebrae. **obturator s.**, crista obturatoria. **occipital s.**, external, protuberantia occipitalis externa. **occipital s.**, internal, protuberantia occipitalis interna. **palatine s's**, spinae palatinae. **peroneal s. of os calcis**, trochlea peronealis calcanei. **pharyngeal s.**, tuberculum pharyngeum. **poker s.**, the ankylosed spine produced by rheumatoid spondylitis; so called because of its rigidity. **s. of pubic bone**, s. of pubis, tuberculum pubicum ossis pubis. **railway s.**, traumatic neurosis following spinal injury. **rigid s.**, poker s. **s. of scapula**, spina scapulae. **sciatic s.**, spina ischiadica. **s. of sphenoid bone**, sphenoidal s., spina ossis sphenoidalis. **suprameatal s.**, spina supræmeatum. **s. of tibia**, tibial s., tuberositas tibiae. **trochanteric s.**, greater, labium laterale lineae asperae femoris. **trochanteric s.**, lesser, labium mediale lineae asperae femoris. **trochlear s.**, spina trochlearis. **tympanic s.**, anterior, tympanic s., greater, spina

tympanica major. **tympanic s.**, lesser, tympanic s., posterior, spina tympanica minor. **typhoid s.**, a painful condition of the spine due to osteomyelitis of the vertebrae following typhoid fever. **s. of vertebra**, processus spinosus vertebrae.

Spinelli's operation (spe-nel'ēz) [Pier Giuseppe Spinelli, Italian gynecologist, 1862–1929] see under *operation*.

spinifugal (spi-nif'u-gal) [L. *spina* spine + *fugere* to flee] going, conducting, or moving away from the spinal cord.

spinipetal (spi-nip'e-tal) [L. *spina* spine + *petere* to seek] tending, conducting, or moving toward the spinal cord.

Spinitectus gracilis (spi'ne-tek'tus gras'i-lis) a parasitic nematode in the intestines of fishes in the United States.

spinnbarkeit (spin'bahr-ki't) [Ger.] the formation of a thread by mucus from the cervix uteri when spread onto a glass slide and drawn out by a coverglass; the time at which it can be drawn to the maximum length usually precedes or coincides with the time of ovulation.

spinobulbar (spi'no-bul'bar) pertaining to the spinal cord and the medulla oblongata.

spinocellular (spi'no-sel'u-lar) containing, made up of, or marked by prickle cells.

spinocerebellar (spi'no-ser'e-bel'ar) pertaining to the spinal cord and the cerebellum.

spinocortical (spi'no-kor'ti-kal) corticospinal.

spinocostalis (spi'no-kos-ta'lis) the serratus posterior superior and inferior muscles together.

spinogalvanization (spi'no-gal'vah-ni-za'shun) galvanization of the spinal cord, performed by moving the anode slowly up and down the spine.

spinoglenoid (spi'no-gle'noid) pertaining to the spine of the scapula and the glenoid cavity.

spinogram (spi'no-gram) a roentgenogram of the spine or of the spinal cord.

spinopetal (spi-nop'e-tal) spinipetal.

spinose (spi'nōs) spinous.

spinotectal (spi'no-tek'tal) tectospinal.

spinous (spi'nus) [L. *spinus*] 1. like a spine; acanthoid. 2. pertaining to a spine or to a spinelike process.

spintharoscope (spin-thar'i-skōp) [Gr. *spintharisspark* + *skopein* to examine] an instrument for viewing the emanations of radium.

spintherism (spin'ther-izm) [Gr. *spinthērizēin* to emit sparks] synchysis scintillans.

spintrometer (spin'ther-om'ē-ter) [Gr. *spinthēr* spark + *metron* measure] an apparatus for measuring the changes which occur in the vacuum of the roentgen-ray tube, and hence the penetrating power of the rays.

spintheropia (spin'ther-o'pe-ah) [Gr. *spinthēr* spark + *ōpē* sight + *-ia*] synchysis scintillans.

spintometer (spin-tom'ē-ter) spintrometer.

piperone (spip'ē-rōn) chemical name: 8-[3-(p-fluorobenzoyl)-propyl]-1-phenyl-1,3,8-triazaspiro[4.5]decan-4-one; a tranquilizer, C₂₃H₂₆FN₃O₂, used in treatment of schizophrenia.

spir. abbreviation for L. *spir'itus*, spirit.

spir- see *spiro*.

spiracle (spir'ah-k'l) [L. *spirare* to breathe] a breathing orifice of arthropods; an accessory opening for the intake of water in the respiratory system of cartilaginous fish.

spiradenoma (spi'rad-ē-no'mah) [Gr. *speira* coil + *adenoma*] adenoma sudoriparum. **cylindromatous s.**, cylindroma, def. 2. **eccrine s.**, a benign, solitary, deep-seated nodule arising from the coil portion of an eccrine gland; it is covered by normal appearing skin and may be accompanied by paroxysmal pain.

spiral (spi'ral) [L. *spiralis* from *spira*; Gr. *speira*] 1. winding about a center like a coil or the thread of a screw. 2. anything coiled or winding about a center. **Curschmann's s's**, coiled mucinous fibrils sometimes found in the sputum of bronchial asthma. **Golgi-Rezzonico s.**, see under *thread*. **Herxheimer's s's**, see under *fiber*. **Perroncito's s's**, see under *apparatus*. **tendon s.**, a spiral receptor connected with a tendon.

Spiranthes (spi-ran'thēz) [Gr. *speira* coil + *anthos* flower] a genus of orchidaceous plants. **S. autumnalis**, a species reputed to be aphrodisiac. **S. diuretica**, a species of Chile, said to be a valuable diuretic.

spireme (spi'rēm) [Gr. *speirēma* coil] the threadlike, continuous or segmented figure formed by the chromosome material during the prophase of mitosis or meiosis. Called also *skein*.

spirilla (spi-ril'ah) [L.] plural of *spirillum*.

Spirillaceae (spi'ril-la'se-e) a family of Schizomycetes (order Pseudomonadales, suborder Pseudomonadineae), made up of gram-negative, simple curved or spirally twisted rods, frequently forming chains of spirally twisted cells. It includes 10 genera: *Cellfalcicula*, *Cellvibrio*, *Desulfovibrio*, *Methanobacterium*, *Micro-*

cyclus, *Myconostoc*, *Paraspirillum*, *Selenomonas*, *Spirillum*, and *Vibrio*.

spirillemia (spi'ril-e'me-ah) [*spirilla* + Gr. *haima* blood + *-ia*] the presence of spirilla in the blood.

spirillicidal (spi-ril'i-si'dal) destroying spirilla.

spirillicide (spi-ril'i-sid) [*spirilla* + L. *caedere* to kill] 1. destroying spirilla. 2. an agent that destroys spirilla.

spirillicidin (spi-ril'i-si'din) a substance formed in the blood of patients immunized against spirilla and capable of destroying spirilla.

spirillolysis (spi'ri-lol'i-sis) [*spirilla* + Gr. *lysis* dissolution] the breaking up or destruction of spirilla.

spirillosis (spi'rī-lo'sis) 1. any disease condition attended or marked by the presence of spirilla in the body. 2. fowl spirochetosis.

spirillotropic (spi'rī-lo-trop'ik) having an affinity for spirilla.

spirillotropism (spi'rī-lo'trop-iz'm) [*spirilla* + Gr. *tropos* a turning] the property of having an affinity for spirilla.

Spirillum (spi-ril'um) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of cells which form long spirals, or portions of a turn. It includes nine species: *S. itersoni*, *S. kutscheri*, *S. lipoferum*, *S. mi'nus*, *S. serpens*, *S. ten'ue*, *S. undula*, *S. virginianum*, and *S. vol'utans*. Many of the organisms placed in this genus in earlier taxonomic nomenclature have been reclassified in other genera. **S. mi'nor**, **S. mi'nus**, a species that is a normal parasite of the nasopharynx of rats and mice, which can assume a pathogenic role for the rodent host. It is the etiologic agent of the spirillary form of rat-bite fever.

spirillum (spi-ril'um), pl. *spiril'la* [L.] 1. a relatively rigid, spiral-shaped bacterium. 2. an organism of the genus *Spirillum*. **Deneke's s.**, *Vibrio tyrogenus*. **s. of Finkler and Prior**, *Vibrio proteus*. **s. of Vincent**, *Borrelia vincentii*.

spirit (spir'it) [L. *spiritus*] 1. any volatile or distilled liquid. 2. a solution of a volatile material in alcohol. **ammonia s.**, aromatic ammonia s. **ammonia s.**, aromatic [USP], s. of ammonia, aromatic, a preparation compounded of ammonia, ammonium carbonate, strong ammonia solution, lemon oil, lavender oil, myristica oil, alcohol, and purified oil, and containing, in each 100 ml., 1.7–2.1 gm. ammonia and 3.5–4.5 gm. ammonium carbonate; used as a respiratory stimulant in syncope, weakness, or threatened faint. In veterinary medicine, it is used as a respiratory and circulatory stimulant, and sometimes as a carminative and antacid. Called also *ammonia s.* **anise s.**, a mixture of anise oil and alcohol; used as a carminative. **benzaldehyde s.**, a mixture of benzaldehyde, alcohol, and distilled water; used as a flavoring agent. **camphor s.** [USP], a solution of camphor and alcohol, each 100 ml. of which contains 9–11 gm. of camphor; used topically as a local irritant. It was formerly used for the treatment of diarrhea, and in hysteria and nervous excitement. **cardamom s., compound**, a preparation of cardamom oil, orange oil, cinnamon oil, clove oil, anethole, caraway oil, and alcohol, used as a flavoring vehicle. **cinnamon s.**, an alcoholic solution of cinnamon oil, each 100 ml. of which contains 9–11 ml. of the oil; used as a flavoring agent. **ether s.**, a transparent, colorless liquid with a burning sweetish taste and an ether odor, consisting of ethyl oxide and alcohol; formerly used as a carminative. Called also *Hoffmann's drops*. **ether s., compound**, a mixture of ethyl oxide, alcohol, and ethereal oil, which has been used as a carminative. In veterinary medicine, it is used as a stomachic and carminative. **ethyl nitrite s.**, an alcoholic solution containing 3.5–4.5 per cent of ethyl nitrite, which has been used as a diaphoretic and diuretic. Called also *s. of nitrous ether* and *sweet s. of nitre*. **glyceryl trinitrate s.**, nitroglycerin s. **lavender s.**, an alcoholic solution of lavender oil; each 100 ml. of which contains 4–6 ml. of lavender oil; used as a flavoring agent. **methylated s.**, denatured alcohol. **s. of Mindererus**, ammonium acetate solution. **nitroglycerin s.**, a clear, colorless liquid with the odor of alcohol, compounded of nitroglycerin 1–1.1 per cent in alcohol; used as a coronary vasoconstrictor. Called also *glyceryl trinitrate s.* **s. of nitrous ether**, ethyl nitrite s. **orange s., compound** [USP], an alcoholic preparation containing orange, lemon, coriander, and anise oils; used as a flavoring agent. **peppermint s.** [USP], a preparation of peppermint, peppermint oil, and alcohol, used as a digestive aid and flavor. Called also *essence of peppermint*. **perfumed s.**, an aqueous solution of various fragrant oils, such as bergamot, lavender, lemon, orange flower, and rosemary, with alcohol, to which ethyl acetate has been added. **proof s.**, a product containing 50 per cent by volume of C₂H₅OH. **rectified s.**, alcohol. **spearmint s.**, an alcoholic solution of spearmint oil and powdered spearmint, each 100 ml. of which contains 9–11 ml. of spearmint oil. It has been used as a carminative. **sweet s. of nitre**, ethyl nitrite s. **s. of turpentine**, turpentine oil. **vanillin s., compound**, a preparation of vanillin and cardamom, cinnamon, and orange oils in alcohol; used as a flavoring agent. **s. of wine**, alcohol.

spirituous (spir'it-u-us) [L. *spirituosus*] alcoholic; containing a considerable proportion of alcohol.

spiro-, spir- 1. [Gr. *speira* coil] a combining form denoting rela-

tionship to a coil or spiral. 2. [L. *spirare* to breathe] a combining form denoting relation to the breath or to breathing.

Spiro's test (spe'ro) [Karl Spiro, German chemist, 1867–1932] see under *tests*.

Spirocercera sanguinolenta (spi'ro-ser'kah sang'gwī-no-len'tah) a nematode of the family Spirochaetidae, found in the walls of the aorta, esophagus, and stomach of dogs.

Spirochaeta (spi'ro-ke'tah) [Gr. *speira* coil + *chaitē* hair] a genus of microorganisms of the family Spirochaetaceae, order Spirochaetales, made up of flexible, undulating, spiral rods, found in fresh- or sea-water slime, especially when hydrogen sulfide is present. It includes five species: *S. daxon'sis*, *S. eurytrep'ta*, *S. mari'na*, *S. plica'tilis*, and *S. stenostrep'ta*. Most of the organisms placed in this genus in earlier taxonomic nomenclature have been reclassified in other genera. **S. grippotypho'sa**, *Leptospira grippotyphosa*. **S. pseudoicterogenes**, the name used in Germany to designate *Leptospira biflexa*.

Spirochaetaceae (spi'ro-ke-ta'se-e) a family of Schizomycetes (order Spirochaetales), made up of coarse spiral organisms, 30 to 5000 μ long, with definite protoplasmic structures, found in the intestinal tracts of bivalve mollusks and in stagnant fresh or salt water. It includes three genera: *Cristaspira*, *Saprosira*, and *Spirochaeta*.

Spirochaetales (spi'ro-ke-ta'lēz) an order of class Schizomycetes, made up of slender, undulating, motile organisms, 6 to 500 μ long, in the form of spirals with at least one complete turn. It includes two families, Spirochaetaceae and Treponemataceae.

spirochetal (spi'ro-ke'tal) pertaining to or caused by spirochetes.

spirochete (spi'ro-kēt) 1. a spiral bacterium; a general term for any microorganism of the order Spirochaetales. 2. an organism of the genus *Spirochaeta*. **Dutton's s.**, *Borrelia duttonii*.

spirochetemia (spi'ro-ke-te'me-ah) [*spirochete* + Gr. *haima* blood + *-ia*] the presence of spirochetes in the blood.

spirocheticidal (spi'ro-ke'ti-si'dal) [*spirochete* + L. *caedere* to kill] destructive to spirochetes.

spirocheticide (spi'ro-ke'ti-sid) an agent that causes the destruction of spirochetes.

spirochetogenous (spi'ro-ke-toj'ē-nus) caused by spirochetes.

spirochetylysin (spi'ro-ke-to'l'i-sin) a substance which causes lysis of spirochetes.

spirochetolysis (spi'ro-ke-to'l'i-sis) [*spirochete* + Gr. *lysis* dissolution] the destruction of spirochetes by lysis.

spirochetolytic (spi'ro-ke'to-lit'ik) pertaining to, characterized by, or causing spirochetolysis.

spirochetosis (spi'ro-ke-to'sis) infection with spirochetes. **s. arthrit'ica**, spirochetosis in which there is rheumatoid involvement of the joints. **bronchopulmonary s.**, bronchospirochetosis. **fowl s.**, a septicemic disease of fowls caused by the spirochete *Borrelia anserina*, and spread by the fowl tick *Argas persicus*; called also *spirillosis*. **icterogenic s.**, **s. icterohaemorrhag'ica**, leptospiral jaundice.

spirocheturia (spi'ro-ke-tu're-ah) [*spirochete* + Gr. *ouron* urine + *-ia*] the presence of spirochetes in the urine.

spirofibrilla (spi'ro-fi-bril'lah), pl. *spirofibril'lae* [*spiro-* (1) + L. *fibrilla*] Fayod's name for one of the hypothetical hollow, twisted fibrils forming the spirospartae.

spiogram (spi'ro-gram) [L. *spirare* to breathe + Gr. *gramma* a writing] a tracing or graph of respiratory movements.

spiograph (spi'ro-graf) [L. *spirare* to breathe + Gr. *graphein* to write] an instrument for registering the respiratory movements.

spiographidin (spi'ro-graf'i-din) (*obs.*) a hyalin derived from spiographin.

spiographin (spi-rog'rah-fin) a hyalogen derivable from the cartilage and skeletal structures of *Spirographis*, a marine worm.

spiography (spi-rog'rah-fe) the graphic measurement of breathing, including breathing movements and breathing capacity.

Spirogyra (spi'ro-ji'rah) a genus of fresh-water green algae having spiral chlorophyll bands and forming slimy masses in still waters and slow streams.

spiroid (spi'roid) resembling a spiral.

spiro-index (spi'ro-in'deks) [L. *spirare* to breathe + *index*] the value obtained by dividing the vital capacity by the height of the individual.

spiro lactone (spi'ro-lak'tōn) a group of compounds bearing 17 α -propionic acid as gamma-lactone with 17 β -hydroxyl, capable of opposing the action of sodium-retaining steroids on renal transport of sodium and potassium. Three such compounds have been studied. The first contained angular methyl at C₁₃ and C₁₀, and is 3-(3-keto-17 β -hydroxy-4-androsten-17 α -yl)-propionic acid- γ -lactone; the second, without angular methyl at C₁₀, is more potent, and the third (spironolactone), with a thioacetyl group at C₇, is highly active orally.

spiroma (spi-ro'mah) spiradenoma.

spirometer (spi-rom'ē-ter) [L. *spirare* to breathe + *metrum* mea-

sure] an instrument for measuring the air taken into and exhaled from the lungs.

Spirometra (spi/'ro-met/rah) [spiro-(1) + Gr. *metra* womb, uterus] a genus of tapeworms of the family Diphylobothriidae, order Pseudophyllidea, which are parasites of fish-eating cats, dogs, and birds. Infection in man is caused by eating inadequately cooked fish. **S. erinacei** Europa/ai, a species parasitic in man, dogs, and cats. **S. mansoni** des, a species parasitic in dogs and cats, especially bobcats, which may cause diarrhea and anemia; infection with the larvae may cause sparganosis in man.

spirometric (spi/'ro-met/rik) pertaining to spirometry or the spirometer.

spirometry (spi-rom/'ē-tre) the measurement of the breathing capacity of the lungs. **bronchoscopic s.**, bronchosprometry.

Spirotrichia (spi/'ro-ne/mah) [Gr. *speira* coil + *nēma* thread] a name in Pribram's classification for a genus of spiral-shaped organisms, most of which are now included in the genus *Borrelia*.

spironolactone (spi-ro/'no-lak/tōn) [USP] chemical name: 7α-(acetylthio)-17-hydroxy-3-oxo-pregn-4-ene-21-carboxylic acid γ-lactone acetate. A spiro lactone, C₂₄H₃₂O₄S, occurring as a light-cream-colored to light tan, crystalline powder; it is an aldosterone antagonist, which increases urinary excretion of sodium and chloride, reduces excretion of potassium and ammonium and decreases the titratable acidity of urine. It is used in treatment of edema and ascites of hepatic cirrhosis, edema of congestive heart failure, and nephrotic syndrome.

spiophore (spi/'ro-fōr) [L. *spirare* to breathe + Gr. *phorein* to bear] an apparatus to effect artificial respiration.

Spiroptera neoplastica (spi-rop/'ter-ah ne/'o-plas/'ti-kah) a nematode which produces gastric carcinoma in certain species of rats.

Spiroschaudinia (spi/'ro-shaw-din/'e-ah) a genus name proposed by Sambon (1907) for a group of spiral-shaped microorganisms found in the blood, most of which are now included in the genus *Borrelia*.

spiroscope (spi/'ro-skōp) [L. *spirare* to breathe + Gr. *skochein* to examine] an apparatus for respiration exercises by which the patient can see the amount of water displaced in a given time and thus gauge his respiratory capacity.

spiroscopy (spi-ros/'ko-pe) the use of the spiroscope.

spirosparta (spi/'ro-spar/'tah), pl. *spirospartae* [Gr. *speira* coil + *spartē* a rope] Fayod's name for one of the ropelike structures, formed by spirofibrillae, which constitute the protoplasm and nuclei of vegetable cells.

Spiotricha (spi/'ro-trik/'ah) [spiro- + Gr. *thrix* hair] an order of ciliate protozoa of the subclass Euciliata; it includes the suborder Hypotricha.

Spiruroidea (spi/'roo-roi/'de-ah) a superfamily of phasmid nematodes, including the genera *Gnathostoma*, *Gongylonema*, *Habronema*, *Physaloptera*, *Physicocephalus*, *Spirocerca*, and *Thelazia*.

spissated (spis/'āt-ed) [L. *spissatus*] inspissated; thickened by evaporation.

spissitude (spis/'i-tūd) [L. *spissitudo*] the state or quality of being inspissated.

Spitzka's nucleus, tract (spits/'kahz) [Edward Charles Spitzka, New York neurologist, 1852-1914] see *Perlia's nucleus*, under *nucleus*, and see *tractus dorsolateralis*.

Spitzka-Lissauer tract (column) (spits/'kah lis/'ow-er) [E. C. Spitzka; Heinrich Lissauer, German neurologist, 1861-1891] tractus dorsolateralis.

Spivack's operation (spiv/'aks) [Julius Leo Spivack, American surgeon, 1889-1956] see under *operation*.

splanchnapophyseal (splanck/'nap-o-fiz/'e-al) pertaining to a splanchnapophysis.

splanchnapophysis (splanck/'nah-pof/'i-sis) [splanchno- + *apophysis*] a skeletal element, like the lower jaw, connected with the alimentary canal.

splanchnectopia (splanck/'nek-to/'pe-ah) [splanchno- + Gr. *ek-topos* out of place + *-ia*] displacement of a viscus.

splanchnesthesia (splanck/'nes-the/'ze-ah) [splanchno- + Gr. *aisthēsis* perception + *-ia*] visceral sensation.

splanchnesthetic (splanck/'nes-thet/'ik) pertaining to splanchnesthesia.

splanchnic (splanck/'nik) [Gr. *splanchnikos*; L. *splanchnicus*] pertaining to the viscera.

splanchnicectomy (splanck/'ne-sek/'to-me) [splanchnic + Gr. *ek-tomē* excision] excision of a section (resection) of the greater splanchnic nerve; splanchnic neurectomy. This operation is combined with sympathectomy for the relief of essential hypertension.

splanchnicotomy (splanck/'ne-kot/'o-me) [splanchnic + Gr. *tomē* a cutting] division of a splanchnic nerve.

splanchno- (splanck/'no) [Gr. *splanchnos* viscus] a combining form denoting relationship to a viscus, or to the splanchnic nerve.

splanchnoblast (splanck/'no-blast) [splanchno- + Gr. *blastos* germ] the rudiment or anlage of any viscus.

splanchnoceale (splanck/'no-sēl) [splanchno- + Gr. *kēlē* hernia] hernial protrusion of a viscus.

splanchnocoele (splanck/'no-sēl) [splanchno- + Gr. *koilos* hollow] that portion of the embryonic body cavity, or coelom, from which are developed the abdominal, pericardial, and pleural cavities; called also *pleuroperitoneal cavity*.

splanchnocranium (splanck/'no-kra/'ne-um) [splanchno- + *cranium*] those parts of the skull that are of branchial arch origin.

splanchnoderm (splanck/'no-derm) splanchnopleure.

splanchnodiastasis (splanck/'no-di-as/'tah-sis) [splanchno- + Gr. *diastasis* separation] separation of a viscus; displacement of a viscus.

splanchnography (splanck-nog/'rah-fe) [splanchno- + Gr. *graphein* to write] the descriptive anatomy of the viscera.

splanchnolith (splanck/'no-lith) [splanchno- + Gr. *lithos* stone] an intestinal calculus or concretion.

splanchnologia (splanck/'no-lo/'je-ah) splanchnology; in NA terminology *splanchnologia* encompasses the nomenclature relating to the viscera.

splanchnology (splanck-nol/'o-je) [splanchno- + Gr. *logos* treatise] the scientific study of the viscera of the body; applied also to the body of knowledge relating thereto.

splanchnomegalia (splanck/'no-mē-ga/'le-ah) splanchnomegaly.

splanchnomegaly (splanck/'no-meg/'ah-le) [splanchno- + Gr. *megas* large] enlargement of the viscera; visceromegaly.

splanchnomicria (splanck/'no-mik/'re-ah) [splanchno- + Gr. *mikros* small] abnormal smallness of the viscera.

splanchnopathy (splanck-nop/'ah-the) [splanchno- + Gr. *pathos* disease] disease of the abdominal viscera.

splanchnopleural (splanck/'no-ploor/'al) pertaining to the splanchnopleure.

splanchnopleure (splanck/'no-ploor) [splanchno- + Gr. *pleura* side] the layer formed by the union of the splanchnic mesoderm with endoderm; from it are developed the muscles and the connective tissue of the digestive tube.

splanchnoptosis (splanck/'no-to/'sis) [splanchno- + Gr. *ptōsis* falling] the prolapse, or downward displacement, of the viscera; called also *visceroptosis*.

splanchnosclerosis (splanck/'no-skle-ro/'sis) [splanchno- + Gr. *sklērosis* hardening] induration of the viscera.

splanchnoscopy (splanck-nos/'ko-pe) [splanchno- + Gr. *skochein* to examine] inspection of the viscera by endoscopy.

splanchnoskeleton (splanck/'no-skel/'e-ton) [splanchno- + Gr. *skeleton* a dried body, mummy] the totality of the skeletal structures connected with the viscera, especially the bony structure that forms within certain organs of animals, as in the gills, tongue, eye, penis, etc.

splanchnosomatic (splanck/'no-so-mat/'ik) [splanchno- + Gr. *σμάτικος* of or for the body] pertaining to the viscera and the body proper.

splanchnotomy (splanck-not/'o-me) [splanchno- + Gr. *tomē* a cutting] the anatomy or dissection of the viscera.

splanchnotribe (splanck/'no-trib) [splanchno- + Gr. *tribein* to crush] an instrument for crushing the intestine and so closing its lumen.

S-plasty in plastic surgery, a technique for distributing the contractile forces of wound healing in more than one direction by making an S-shaped incision, instead of a straight line, in areas where skin is loose.

splayfoot (spla/'foot) flatfoot; talipes valgus.

spleen (splēn) [Gr. *splēn*; L. *splen*] a large glandlike but ductless organ situated in the upper part of the abdominal cavity on the left side and lateral to the cardiac end of the stomach. Called also *lien* [NA]. It is of a flattened oblong shape and about 125 mm. long, the largest structure in the lymphoid system; it has a purple color and a pliable consistency, and is distinguished by two types of tissue: red pulp and white pulp (see under *pulp*). It disintegrates the red blood cells and sets free the hemoglobin, which the liver converts into bilirubin; gives rise to new red blood cells during fetal life and in the newborn; serves as a reservoir of blood, produces lymphocytes and plasma cells, and has other important functions, the full scope of which is not entirely determined. **accessory s.**, a connected or detached outlying portion, or exclave, of the spleen; called also *lien accessorius*. **bacon s.**, a spleen with areas of amyloid degeneration, giving its cut surfaces the appearance of fried bacon. **cyanotic s.**, a contracted form of spleen due to passive congestion. **diffuse waxy s.**, amyloid degeneration of the spleen involving especially the coats of the venous sinuses and the reticulum of the organ. **enlarged s.**, splenomegaly. **flecked s. of Feitis**, multiple necroses of the spleen, characterized by nonembolic multiple areas of anemic necrosis. **floating s.**, a spleen displaced and preternaturally movable; called also *wandering s.* **Gandy-Gamna s.**, siderotic splenomegaly. **hard-baked s.**, a condition of the spleen in Hodgkin's disease, marked by the presence of grayish areas resembling the diseased lymph nodes in structure. **lardaceous s.**, waxy s. **movable s.**, floating s. **porphyry s.**, a spleen which is the seat

of nodular infiltration. **sago s.**, a spleen having on its cut surface the appearance of grains of sago; due to amyloid infiltration. **speckled s.**, flecked s. of Feitis. **wandering s.**, floating s. **waxy s.**, a spleen affected with amyloid degeneration; called also *lardaceous s.*

splen (splen) [Gr. *splēn*] spleen.

splen- see *spleno-*.

splenadenoma (splēn'ad-ē-no'mah) [*splen-* + Gr. *adēn* gland + *-oma*] hyperplasia of the spleen pulp.

splenalgia (splē-nal'je-ah) [*splen-* + Gr. *algos* pain + *-ia*] neuralgic pain in the spleen.

splenatrophy (splen-at'ro-fe) atrophy of the spleen.

splenauxe (splē-naw'k'se) [*splen-* + Gr. *auxē* increase] splenomegaly.

splenceratosis (splen'ser-ah-to'sis) splenokeratosis.

splenculus (spleng'ku-lus) [L. "little spleen"] an accessory spleen, or splenic exclave.

splenectasis (splē-nek'tah-sis) [*splen-* + Gr. *ektasis* enlargement] splenomegaly.

splenectomy (splē-nek'to-miz) to remove the spleen.

splenectomy (splē-nek'to-me) [*splen-* + Gr. *ektomē* excision] excision or extirpation of the spleen.

splenectopia (splē-nek'to-pe-ah) [*splen-* + Gr. *ek* out + *topos* place + *-ia*] displacement of the spleen; wandering or floating spleen.

splenectomy (splē-nek'to-pe) splenectopia.

splenelcosis (splē-nel-ko'sis) [*splen-* + Gr. *helkōsis* ulceration] ulceration of the spleen.

splenemia (splē-ne'me-ah) [*splen-* + Gr. *haima* blood + *-ia*] congestion of the spleen with blood.

splenemphraxis (splē-nem-frak'sis) [*splen-* + Gr. *emphraxis* stoppage] congestion of the spleen.

spleneolus (splē-ne'o-lus) - accessory spleen.

splenic (splē-net'ik) affected with splenic disorder; ill humored.

splenic (splē-ne-al) pertaining to the splenium or to the splenius muscle.

splenic (splēn'ik) [Gr. *splēnikos*; L. *splenicus*] pertaining to the spleen; lienal.

splenicterus (splē-ik'ter-us) [*splen-* + Gr. *ikteros* jaundice] inflammation of the spleen associated with jaundice.

splenification (splēn'i-fi-ka'shun) splenization.

spleniform (splēn'i-form) resembling the spleen.

spleniserrate (splēn'i-ser'āt) pertaining to the splenius and the serratus muscles.

splenitis (splē-ni'tis) [*splen-* + *-itis*] inflammation of the spleen, a condition usually produced by pyemia. It is attended by enlargement of the organ with pus, and is marked by much local pain. **spodogenous s.**, that due to accumulation of foreign particles in the spleen.

splenium (splē-ne-um) [L.; Gr. *splēnion*] a bandlike structure; a bandage or compress. **s. cor'poris callo'si** [NA], the posterior rounded end of the corpus callosum.

splenization (splēn'i-za'shun) that condition of a part, especially the lung, in which it has the appearance of the tissue of the spleen, owing to engorgement and condensation. **hypostatic s.**, splenization produced by hypostatic pneumonia.

spleno-, splen- [Gr. *splēn* spleen] a combining form denoting relationship to the spleen.

splenoblast (splē-no-blast) the cell from which a splenocyte develops.

splenocele (splē-no-sēl) [*spleno-* + Gr. *kēlē* hernia] hernia of the spleen.

splenceratosis (splē-no-ser'ah-to'sis) splenokeratosis.

splencleisis (splē-no-kli'sis) [*spleno-* + Gr. *kleisis* closure] irritation of the surface of the spleen to induce the development of new fibrous tissue.

splenicolic (splē-no-kol'ik) [*spleno-* + Gr. *kolon* colon] pertaining to the spleen and colon.

splenocyte (splēn'o-sīt) the monocyte characteristic of the spleen.

splenodynia (splē-no-din'e-ah) [*spleno-* + Gr. *odynē* pain + *-ia*] pain in the spleen.

splenogenous (splē-noj'ē-nus) arising in or formed by the spleen.

splenogram (splē-no-gram) 1. a roentgenogram of the spleen. 2. a differential count of the cells found in a stained preparation of material obtained by splenic puncture.

splenography (splē-nog'rah-fe) [*spleno-* + Gr. *graphein* to write] 1. roentgenography of the spleen. 2. a description of the spleen.

splenohepatomegalia (splē-no-hep'ah-to-me-ga'le-ah) splenohepatomegaly.

splenohepatomegaly (splē-no-hep'ah-to-meg'ah-le) [*spleno-* +

Gr. *hēpar* liver + *megas* large] enlargement of the spleen and liver.

splenooid (splē'noid) [*spleno-* + Gr. *eidos* form] resembling the spleen.

splenoikeratosis (splē-no-ker'ah-to'sis) [*spleno-* + Gr. *keras* horn + *-osis*] hardening of the spleen.

splenolaparotomy (splē-no-lap'ah-rot'o-me) laparosplenotomy.

splenology (splē-nol'o-je) [*spleno-* + *-logy*] the sum of knowledge regarding the spleen, its functions and diseases.

splenolymphatic (splē-no-lim-fat'ik) pertaining to the spleen and lymph nodes.

splenolysin (splē-nol'i-sin) [*spleno-* + Gr. *lyein* to dissolve] a lysin destructive to splenic tissue.

splenolysis (splē-nol'i-sis) destruction of spleen tissue.

splenoma (splē-no'mah), pl. *splenomas* or *spleno'mata* [*spleno-* + *-oma*] a tumor of the spleen.

splenomalacia (splē-no-mah-la'she-ah) [*spleno-* + Gr. *malakia* softness] abnormal softness of the spleen; softening of the spleen.

splenomedullary (splē-no-med'u-ler'e) of or pertaining to the spleen and bone marrow.

splenomegalia (splē-no-me-ga'le-ah) splenomegaly.

splenomegaly (splē-no-meg'ah-le) [*spleno-* + Gr. *megas* large] enlargement of the spleen. **congestive s.**, enlargement of the spleen occurring secondary to portal hypertension, with ascites, anemia, thrombocytopenia, leukopenia, and episodic hemorrhage from the gastrointestinal tract. Called also *Banti's syndrome*. See also *Banti's disease*, under *disease*. **Egyptian s.**, that caused by *Schistosoma mansoni*. **Gaucher's s.**, see under *disease*. **hemolytic s.**, hemolytic anemia. **infective s.**, **infectious s.**, splenomegaly associated with an infection. **myelophthisic s.**, enlargement of the spleen marked by decrease in myeloid tissue and by fibrosis. **Niemann's s.**, Niemann-Pick disease. **siderotic s.**, splenomegaly characterized by marked fibrosis with deposit of iron and calcium (Gamna nodules); called also *Gandy-Nanta disease*. **spodogenous s.**, enlargement of the spleen attributed to accumulation of erythrocytes in the organ. **thrombophlebitic s.**, Opitz's disease. **tropical s.**, **febrile**, **kala-azar**.

splenometry (splē-nom'ē-tre) determination of the size of the spleen.

splenomyelogenous (splē-no-mi'ē-loj'ē-nus) formed in the spleen and bone marrow; splenomedullary.

splenomyelomalacia (splē-no-mi'ē-lo-mah-la'she-ah) [*spleno-* + Gr. *myelos* marrow + *malakia* softening] softening of the spleen and bone marrow.

splenoncus (splē-nong'kus) [*spleno-* + Gr. *onkos* bulk, mass] tumor of the spleen.

splenonephric (splē-no-nef'rik) pertaining to the spleen and the kidney.

splenonephroptosis (splē-no-nef'rop-to'sis) [*spleno-* + Gr. *nephros* kidney + *ptōsis* falling] downward displacement of the spleen and kidney on the same side.

splenopancreatic (splē-no-pan'kre-at'ik) pertaining to the spleen and the pancreas.

splenoparectasis (splē-no-pah-rek'tah-sis) [*spleno-* + Gr. *parektasis* extension] excessive enlargement of the spleen.

splenopathy (splē-nop'ah-the) [*spleno-* + Gr. *pathos* disease] any disease of the spleen.

splenopexia (splē-no-pek'se-ah) splenopexy.

splenopexis (splē-no-pek'sis) splenopexy.

splenopexy (splē-no-pek'se) [*spleno-* + Gr. *pexis* fixation] surgical fixation of a mobile spleen.

splenoehrenic (splēn-o-fren'ik) [*spleno-* + Gr. *phrēn* diaphragm] pertaining to the spleen and diaphragm.

splenopneumonia (splēn'o-nu-mo'ne-ah) pneumonia attended with splenization of the lung.

splenoportography (splē-no-por-tog'rah-fe) splenic portography.

splenoptosis (splē-nop-to'se-ah) splenoptosis.

splenoptosis (splē-nop-to'sis) [*spleno-* + Gr. *ptōsis* falling] prolapse or downward displacement of the spleen.

splenorenal (splē-no-re'nal) pertaining to the spleen and kidney, or to splenic and renal veins.

splenorenopexy (splē-no-re'no-pek'se) nephrosplenopexy.

splenorrhagia (splē-no-ra'je-ah) [*spleno-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the spleen.

splenorrhaphy (splē-nor'ah-fe) [*spleno-* + Gr. *rhaphe* suture] surgical repair of the spleen.

splenosis (splē-no'sis) a condition in which multiple implants of splenic tissue are present throughout the peritoneal cavity. **pericardial s.**, development between the heart and pericardium of splenic tissue deliberately introduced into the pericardial cavity as a means of increasing the blood supply to the heart muscle.

splenotomy (sple-not/o-me) [*spleno-* + Gr. *tomē* a cutting] surgical incision of the spleen.

splenotoxin (sple/'no-tok/'sin) a toxin produced by or acting on the spleen.

splenulus (splen/'u-lus) little spleen; an accessory spleen.

splenunculus (sple-nung/'ku-lus) lienunculus.

splint (splint) 1. a rigid or flexible appliance for the fixation of displaced or movable parts. 2. [pl.] a condition characterized by development of exostoses on the rudimentary second or fourth metacarpal or metatarsal bone in the horse. **abutment s.**, adjacent tooth restorations that have been rigidly united at their proximal contact areas to form a multiple abutment. **Agnew's s.**, 1. one for fracture of the patella. 2. one used in fracture of the metacarpus. **airplane s.**, one which holds the arm in abduction; see illustration. **anchor s.**, a splint for fracture of the jaw, with metal loops fitting over the teeth and held together by a rod. **Anderson s.**, a splint for external internal fixation of fractures: two or more long screws, Kirschner wire, or nails are inserted through the tissues into the bone above and below the fracture; each group of screws, wires or nails is attached to an external plate and the plates are joined by an adjustable screw. **Angle's s.**, a splint for fracture of the mandible; see illustration. **Asch's s.**, a tube splint for fracture of the nose. **Ashhurst's s.**, a bracketed splint of wire with a foot piece; made to cover the thigh and leg, and used after excision of the knee joint. **Balkan s.**, see under *frame*. **banjo traction s.**, a splint for the fingers constructed from a steel rod shaped like a banjo. **Bavarian s.**, a dressing formed by two pieces of flannel, folded once and sutured along the margin of the fold; between the layers of each fold, plaster cream is introduced, the seam serving as a hinge in the removal of the splint. **Böhler s.**, a piece of wood measuring 12 × 6 × 2 inches, rounded at the upper end to fit the axilla. **Bond's s.**, a form of splint for fracture of the lower end of the radius. **Bowly's s.**, a splint for fracture of the shaft of the humerus. **bracketed s.**, a splint composed of two pieces of metal or wood joined by brackets. **Cabot's s.**, a posterior wire splint (see illustration). **cap s.**, a plastic or metallic fracture or stabilization appliance designed to cover the crowns of the teeth and usually cemented to them. **Carter's intranasal s.**, a fenestrated steel bridge, the wings of which are connected by a hinge; used in the bridge splint operation for depressed bridge of the nose. **Chandler felt collar s.**, see illustration. **Chatfield-Girdleston s.**, an apparatus for enabling a paralyzed poliomyelitis patient with bilateral deltoid paralysis to walk with crutches. **clavicular cross s.**, see illustration. **coaptation s's**, small splints adjusted about a fractured limb for the purpose of producing coaptation of fragments. **Cramer's s.**, a flexible wire splint consisting of parallel stout wires between which smaller wires are stretched like the rounds of a ladder. **Denis Browne s.**, a splint for the correction of talipes equinovarus. **drop foot s.**, see illustration. **Dupuytren's s.**, a splint to prevent eversion in Pott's fracture. **dynamic s.**, a support or protective apparatus for the hand or any other part of the body which also aids in initiating and performing motion of that part or adjacent parts and assists in dealing with the forces resulting from the action, thus assisting in those motions necessary to perform the activities of daily living. **Engelmann s.**, a big splint consisting of two strips of metal connecting at the top with a ring which fits over the thigh as high as it can be pushed up against the crotch. It is fastened at the lower end with a spike in each side which is driven into the shoe between the sole and upper, close to the heel. **Essig-type s.**, a stainless steel wire passed labially and lingually around a segment of the dental arch and held in position by individual ligature wires around the contact areas of the teeth; used to stabilize fractured or repositioned teeth. **Fox's s.**, an apparatus for fractured clavicle. **fracture s.**, any device fabricated of metal or plastic and used to fix segments in the treatment of fractures or facial deformities. Also, a plastic material contoured to the lingual and buccal-labial aspects of the teeth and fixed with wire or cement. **Frejka pillow s.**, one used for maintaining abduction and flexion of the femurs in congenital dislocation of the hip. **functional s.**, dynamic s. **Gibson's s.**, a form of Thomas splint. **Gilmer's s.**, a stainless steel wire fastening for holding the lower teeth to the upper ones in fracture of the mandible. **Gooch s.**, a flexible coaptation splint consisting of strips of wood arranged edge to edge and glued to cloth or leather. **Gordon's s.**, a side splint for the arm and hand in Colles' fracture. **Gunning's s.**, an interdental splint used in treating fractured mandible or maxilla. **Hodgen s.**, a wire splint for fracture of the femur below the upper third; see illustration. **interdental s.**, a plastic or metallic appliance for application to the dentition of the labial and/or lingual aspects to provide lugs for applying mandibular and/or maxillofacial traction or fixation. **Jones' nasal s.**, a splint for fracture of the nasal bones. **Kanavel's cock-up s.**, a splint for application to stiffened hands; see illustration. **Keller-Blake s.**, a hinged half-ring modification of the Thomas traction splint for fracture of the femur. **Kingsley s.**, a splint consisting of a base plate, precisely adapted to the upper dental arch, with stout metal arms that extend out through the mouth and then curve backward along the sides of the cheek to provide fixation to a head cap; used for fractures of the jaw. **Kirsch-**

ner wire s., a splint used to hold multiple metacarpophalangeal joints in flexion following excision of the collateral ligaments. **knee s.**, see illustration. **labial s.**, an appliance of plastic or metal, or both, made to conform to the outer aspect of the dental arch; used in the management of jaw and facial injuries. **Levis' s.**, a splint of perforated metal extending from below the elbow to the end of the palm. **lingual s.**, one similar to the labial splint, but conforming to the inner aspect of the dental arch. **Liston's s.**, a simple straight splint adapted to the side of the leg and body. **live s.**, dynamic s. **McIntire's s.**, a posterior splint for the leg and thigh, in the form of a double inclined plane. **Mason's s.**, a splint for the after-treatment of amputation at the elbow. **Middeldorp's s.**, see under *triangle*. **plaster s.**, a splint composed of gauze impregnated with plaster of Paris. See illustration. **plastic s.**, an inflatable double-walled plastic tube for limb immobilization. **poroplastic s.**, a splint which can be softened with water and molded upon the limb. **Porzett s.**, a splint for controlling movement of the arms and of the head of the child after harelip operations. **Sayre's s.**, one of three varieties of splint: one for the ankle, one for the knee, and one for use in hip joint disease. **shin s's**, strain of the flexor digitorum longus muscle occurring in athletes, marked by pain along the shin bone. **Simpson's s.**, a shaped tampon of compressed cotton for inserting into the nasal fossa. **Stader s.**, a splint for external-internal fixation of fractures, consisting of a metal bar having a steel pin at each end for insertion into the bone on either side of the fracture so that the bar bridges the fracture; the ends of the fractured bone are drawn together by adjusting screws. **Stromeyer's s.**, a splint consisting of two hinged portions which can be fixed at any angle. **T s.**, a T-shaped splint made by tacking a transverse piece of splint board across the end of a vertical piece. **Taylor s.**, a steel support for the spine, used in disease or mechanical derangement of the spine; called also *Taylor's apparatus*. See illustration. **therapeutic s.**, dynamic s. **Thomas' knee s.**, a splint for removing the pressure of the weight of the body from the knee joint by transferring it to the ischium and perineum; see illustration. **Thomas' posterior s.**, a form of splint used in hip joint disease. **Tobruk s.**, an immobilizing split plaster cast applied from the foot to the groin, with skin traction tapes through openings in the plaster and connected with a Thomas splint. It was used in the North African campaign of World War II. **Toronto s.**, 1. a splint for poliomyelitis cases in which adjustable splints for the arms and legs are used with and attached to a Bradford frame. 2. a splinting catheter for use in the ureter after plastic operation. **Valentine's s.**, a splint for fracture of the clavicle. **Volkman's s.**, a guttered splint with a foot piece and two lateral supports, for fracture of the lower extremity. **Wertheim s.**, a splint for fracture of a metacarpal bone.

splinter (splin/'ter) 1. a small slender fragment, as a piece of fractured bone. 2. to break into small fragments.

splinting (splint/'ing) 1. application of a splint, or treatment by use of a splint. 2. in dentistry, the application of a fixed restoration to join two or more teeth into a single rigid unit. 3. rigidity of muscles occurring as a means of avoiding pain caused by movement of the part.

splints (splintz) see *splint*, def. 2.

splitting (split/'ing) division into fragments. In chemistry, the separation of a complex substance into two or more simpler substances. **s. of heart sounds**, the presence of two components in the first or second heart sound complexes; used chiefly to denote the separation of the elements of the second sound, which is related to closure of the aortic and pulmonary semilunar valves. **sagittal s. of mandible**, intraoral osteotomy of the ascending mandibular ramus and posterior body of the mandible in the sagittal plane for correction of prognathism, retrognathism, or open bite; an alternative procedure confines the split to the body of the mandible.

spodiomyelitis (spo-'de-o-mi/'ē-li/'tis) [Gr. *spodios* ash colored + *myelos* marrow + *-itis*] acute anterior poliomyelitis.

spodo- (spod/'o) [Gr. *spodos* ashes] a combining form denoting relation to waste materials.

spodogenous (spo-doj/'ē-nus) [*spodo-* + Gr. *gennan* to produce] pertaining to or caused by waste materials in an organ.

spodogram (spod/'o-gram) [*spodo-* + Gr. *gramma* a mark] the pattern created by the ash after incineration of a minute amount of tissue or other material; called also *ash picture*.

spodography (spo-dog/'rah-fe) [*spodo-* + Gr. *graphein* to write] the incineration of a minute quantity of tissue and observation of the ashes (spodogram) under a dark-field microscope, as a means of studying the mineral constituents of the cells.

spondee (spon-de) any word (e.g., pancake) of two syllables having equal stress on each syllable; used in tests of speech reception threshold.

spondyl- (spon/'dil) see *spondylo-*.

spondylalgia (spon/'dī-lal/'je-ah) pain in a vertebra.

spondylarthritis (spon/'dīl-ar-thri/'tis) [*spondyl-* + Gr. *arthron* joint + *-itis*] arthritis of the spine. **s. ankylopoiet/ica**, rheumatoid s.

spondylarthrocace (spon'dil-ar-throk'ah-se) [*spondyl-* + Gr. *arthron* joint + *kakē* badness] tuberculosis of the vertebrae.

spondyloarthropathy (spon'di-lo-ar-throp'ah-the) disease of the joints of the spine.

spondyloxarthrosis (spon'dil-eks'ar-thro'sis) [*spondyl-* + Gr. *exarthrosis* dislocation] dislocation of a vertebra.

spondylitic (spon'di-lit'ik) pertaining to or characterized by spondylitis.

spondylitis (spon'di-li'tis) inflammation of the vertebrae. **s. ankylopoiet'ica**, **s. ankylo'sans**, **ankylosing s.**, **rheumatoid s.** **Bekhterev's s.**, **rheumatoid s.** **s. deformans**, **rheumatoid s.** **hypertrophic s.**, spondylitis with evidences of hypertrophic changes in the vertebrae. **s. infectio'sa**, inflammation of the vertebrae caused by a specific pathogen. **Kümmell's s.**, see under *disease*. **Marie-Strümpell s.**, **rheumatoid s.** **muscular s.**, a morbid condition of the spine resulting from muscular weakness and not a true inflammation. **post-traumatic s.**, Kümmell's disease. **rheumatoid s.**, the form of rheumatoid arthritis that affects the spine. It is a systemic illness of unknown etiology, affecting young males predominantly, and producing pain and stiffness as a result of inflammation of the sacroiliac, intervertebral, and costovertebral joints; paraspinal calcification, with ossification and ankylosis of the spinal joints, may cause complete rigidity of the spine and thorax. Called also *Bekhterev's disease* and *Marie-Strümpell disease*. **rhizomelic s.**, **s. rhizome'lica**, **s. rhizomé'lique**, **rheumatoid s.** **traumatic s.**, spondylitis occurring as a result of injury to the vertebrae. **s. tuberculo'sa**, **tuberculous s.**, tuberculosis of the spine. **s. typho'sa**, inflammation of the vertebrae following typhoid fever.

spondylizema (spon'di-li-ze'mah) [*spondyl-* + Gr. *izēmia* depression] downward displacement of a vertebra in consequence of the destruction or softening of the one below it.

spondylo-, **spondyl-** [Gr. *spondylos* vertebra] combining form denoting relationship to a vertebra, or to the spinal column.

spondyllocace (spon'di-lok'ah-se) [*spondylo-* + Gr. *kakē* badness] tuberculosis of the vertebrae.

spondylodesis (spon'di-lod'ē-sis) [*spondylo-* + Gr. *desis* binding] the operation of fusing the vertebrae by a short bone graft in cases of tuberculous spine.

spondylodidymia (spon'di-lo-di-dim'e-ah) [*spondylo-* + Gr. *didymos* twin + *-ia*] teratic union of twins by the vertebrae.

spondylodymus (spon'di-lod'i-mus) twin fetuses united by the vertebrae.

spondylodynia (spon'di-lo-din'e-ah) [*spondyl-* + Gr. *odynē* pain + *-ia*] pain in a vertebra.

spondylolisthesis (spon'di-lo-lis'the-sis) [*spondyl-* + Gr. *olisthanein* to slip] forward displacement of one vertebra over another, usually of the fifth lumbar over the body of the sacrum, or of the fourth lumbar over the fifth, usually due to a developmental defect in the pars interarticularis.

Spondylolisthesis of fifth lumbar vertebra over the sacrum (Meschan).

spondylolisthetic (spon'di-lo-lis-thet'ik) pertaining to or caused by spondylolisthesis.

spondylolysis (spon'di-lol'i-sis) [*spondylo-* + Gr. *lysis* dissolution] dissolution of a vertebra; a condition marked by platyspondylia, aplasia of the vertebral arch, and separation of the pars interarticularis.

spondylomalacia (spon'di-lo-mah-la'she-ah) softening of vertebrae. **s. traumat'ica**, Kümmell's disease.

spondylopathy (spon'di-lop'ah-the) [*spondylo-* + Gr. *pathos* disease] any disorder of the vertebrae. **traumatic s.**, Kümmell's disease.

spondyloptosis (spon'di-lo-to'sis) spondylolisthesis.

spondylopyosis (spon'di-lo-pi-o'sis) [*spondylo-* + Gr. *pyōsis* suppuration] suppuration of a vertebra or of vertebrae.

spondyloschisis (spon'di-lo-s'ki-sis) [*spondylo-* + Gr. *schisis* fissure] congenital fissure of a vertebral arch.

spondylosis (spon'di-lo'sis) ankylosis of a vertebral joint; also, a general term for degenerative changes due to osteoarthritis. **cervical s.**, degenerative joint disease affecting the cervical vertebrae, intervertebral disks, and surrounding ligaments and connective tissue, sometimes with pain or paresthesia radiating down the arms as a result of pressure on the nerve roots. **s. chron'ica ankylopoiet'ica**, **rhizomelic s.**, **rheumatoid spondylitis**. **lumbar s.**, degenerative joint disease affecting

the lumbar vertebrae and intervertebral disks, causing pain and stiffness, sometimes with sciatic radiation due to nerve root pressure by associated protruding disks or osteophytes. **s. uncovertebra'lis**, cervical spondylosis affecting the uncinate process of a vertebra.

spondylosyndesis (spon'di-lo-sin'de-sis) [*spondylo-* + Gr. *syndesis* a binding together] operative immobilization or ankylosis of the spine; spinal fusion.

spondylotherapy (spon'di-lo-ther'ah-pe) [*spondylo-* + Gr. *therapeia* treatment] treatment by physical methods applied to the spinal region; spinal therapeutics.

spondylotic (spon'di-lot'ik) pertaining to or due to spondylosis.

spondylotomy (spon'di-lot'o-me) [*spondylo-* + Gr. *temnein* to cut] rachitomy.

spondylous (spon'di-lus) pertaining to a vertebra; vertebral.

spongariion (spon-ga're-on) [Gr.] an ancient eye salve.

sponge (spunj) [L., Gr. *spongia*] 1. the elastic fibrous skeleton of certain marine animals; used mainly as an absorbent. 2. an absorbent pad of folded gauze or cotton. **Bernays' s.**, compressed disks of cotton which expand under moisture; used in checking epistaxis. **ear s.**, a small piece of sponge attached to a handle and used for washing the ear. **fibrin s.**, a spongy form of fibrin, used as a hemostatic. **gelatin s.**, a spongy form of denatured gelatin used as a hemostatic, especially when wet with thrombin. **gelatin s., absorbable** [USP], a sterile, absorbable, water-insoluble gelatin-base sponge; used as a local hemostatic.

spongeitis (spon'je-i'tis) spongiitis.

spongia (spon'je-ah) [L.; Gr.] sponge. **s. gelati'na absorbenda**, absorbable gelatin sponge.

spongiform (spon'ji-form) [L. *spongia* sponge + *forma* shape] resembling a sponge.

spongiitis (spon'je-i'tis) inflammation of the corpus spongiosum of the penis; periurethritis.

spongin (spon'jin) a horny, albuminoid material forming the basis of sponge.

spongio- [L., Gr. *spongia* sponge] a combining form meaning like a sponge, or denoting relationship to a sponge.

spongioblast (spun'je-o-blast') [*spongio-* + Gr. *blastos* germ] 1. any of the embryonic epithelial cells, developed about the neural tube, which become transformed, some into neuroglial and some into ependymal cells. 2. amacrine (def. 2).

spongioblastoma (spun'je-o-blas-to'mah) a tumor containing spongioblasts; gliosarcoma or glioblastoma. **s. multiforme**, one in which the cells are of various forms of arrangements; called also *glioma multiforme*. **s. unipola're**, one in which the spongioblasts are mostly unipolar.

spongiocyte (spun'je-o-sit') 1. a neuroglial cell. 2. one of the cells with spongy vacuolated protoplasm in the cortex of the suprarenal gland.

spongiocytoma (spun'je-o-si-to'mah) spongioblastoma.

spongioid (spun'je-oid) [*spongio-* + Gr. *eidōs* form] resembling a sponge in structure or appearance.

spongioplasm (spun'je-o-plazm) [*spongio-* + Gr. *plasma* anything formed or molded] 1. a substance which forms the network of fibrils pervading the cell substance and forming the reticulum of the fixed cell. 2. the granular material of an axon.

spongiosa (spon'je-o'sah) [L.] spongy; sometimes used alone to mean the substantia spongiosa ossium.

spongiosaplasty (spon'je-o'sah-plas'te) autoplasty of the substantia spongiosa ossium to potentiate formation of new bone or to cover bone defects.

spongiosis (spun'je-o'sis) intercellular edema of the spongy layer (malpighian layer) of the skin.

spongiositis (spun'je-o-si'tis) inflammation of the corpus spongiosum of the penis.

spongiotic (spon'je-ot'ik) pertaining to or characterized by spongiosis.

spongosterol (spon-gos'ter-ol) a mono-unsaturated sterol, 24α-methyl-22-cholestene-3β-ol, found in certain sponges.

spongy (spun'je) of a spongelike appearance or texture.

spontaneous (spon-ta'ne-us) [L. *spontaneus*] 1. voluntary; instinctive. 2. occurring without external influence.

Spontin (spon'tin) trademark for a lyophilized preparation of ristocetins A and B.

spool (spōol) a tubular surgical instrument around which suture material is usually wound. **Carassini's s.**, a sectional spool made of aluminum for use in end-to-end intestinal anastomosis.

spoon (spōon) a metallic instrument with an oval bowl to which a handle is attached. **Bunge's s.**, an instrument for eviscerating the eyeball. **Daviel's s.**, an instrument used in removing the crystalline lens from the eye. **excavator s.**, a spoon-shaped dental excavator. **marrow s.**, a gouge for removing marrow from bones. **sharp s.**, a spoon with a sharp-edged

bowl; used for scraping away granulations, etc. **test s.**, a small spoon with a spatula-like handle for taking up small quantities of a powder, etc., in chemical experiments. **Volkmann's s.**, sharp s.

sporadic (spo-rad'ik) [Gr. *sporadikos* scattered; L. *sporadicus*] not widely diffused or epidemic; occurring only occasionally.

sporadin (spo'rah-din) trophozoite.

sporadoneure (spo-rad'o-nūr) [Gr. *sporadikos* sporadic + *neuron* nerve] an isolated nerve cell occurring in any of the tissues.

sporangia (spo-ran'je-ah) [L.; Gr.] plural of *sporangium*.

sporangial (spo-ran'je-al) pertaining to a sporangium.

sporangiphore (spo-ran'je-o-för) the threadlike stalk which bears at its tip the sporangium of phycomycetous molds.

sporangiospore (spo-ran'je-o-spör) a spore contained in a sporangium.

sporangium (spo-ran'je-um), pl. *sporan'gia* [spore + Gr. *angeion* vessel] any encystment containing spores or sporelike bodies, as in certain of the fungi. See *spore*.

sporulation (spo-ra'shun) sporulation.

spore (spör) [L. *spora*; Gr. *sporos* seed] 1. a refractile, oval body formed within bacteria, especially *Bacillus* and *Clostridium*, which is regarded as a resting stage during the life history of the cell, and is characterized by its resistance to environmental changes. Called also *bacterial s.* 2. the reproductive element, produced sexually or asexually, of one of the lower organisms, such as protozoa, fungi, algae, etc. Spores arising as a result of a nonsexual process include: *conidia*, which are deciduous and develop from the hyphae by budding; *aleuriospores*, which are nondeciduous and also develop from the hyphae by budding; *endospores*, which are formed in the interior of special spore cases called *sporangia*; *zoospores*, which are flagellated motile spores formed in cases known as *zoosporangia*; and *chlamydospores*, which are resting spores, with thick walls, produced by enlargement of special cells. Those arising as a result of a sexual process include: *ascospores*, which are contained in special spore cases called *asci*; *basidiospores*, which are formed at the ends of club-shaped structures called *basidia*; *zygospores*, which are formed by conjugation between two morphologically identical cells, or from the fusion of like gametangia; and *oospores*, which are formed by heterogamous fertilization. See also *sporulation*. **asexual s.**, a spore produced by various methods, but not involv-

develops; also used to refer to similar stages in other sporozoa, e.g., *Isospora* and *Toxoplasma*.

sporocyst (spo'ro-sist) [sporo- + Gr. *kystis* sac, bladder] 1. any cyst or sac containing spores or reproductive cells, especially in lower eukaryotic organisms, e.g., protists. 2. a saclike organism which develops from a miracidium in the body of a snail host and contains germ cells which give rise to other sporocysts or to rediae in the life cycle of certain helminths. 3. the stage formed from a sporoblast, within the oocyst, in which sporozoites develop; it is differentiated from the sporoblast by the presence of a cyst wall.

Sporocytophaga (spo'ro-si-to'fah-gah) [Sporo- + Gr. *phagein* to eat] a genus of bacteria of the family Myxococcaceae.

sporoduct (spo'ro-dukt) a tubelike structure in the walls of certain sporocysts through which the spores are given off.

sporogenesis (spo'ro-jen'ë-sis) [sporo- + Gr. *genesis* production] the formation of spores; reproduction by spores.

sporogenic (spo'ro-jen'ik) capable of developing into or producing spores.

sporogenous (spo-roj'ë-nus) [sporo- + Gr. *gennan* to produce] reproduced by spores.

sporogeny (spo-roj'ë-ne) [sporo- + Gr. *gennan* to produce] the development of spores.

sporogony (spo-roj'o-ne) [sporo- + Gr. *goneia* generation] the sexual cycle of sporozoa, especially the life cycle of the malarial parasite (*Plasmodium*) in the stomach and body of the mosquito, in which the encysted zygote undergoes multiple divisions, giving rise to sporozoites. Cf. *schizogony*.

sporont (spo'ront) [sporo- + Gr. *ön*, *ontos* being] a mature protozoon in its sexual cycle. Cf. *schizont*.

sporophore (spo'ro-för) [sporo- + Gr. *phorein* to bear] that part of an organism that supports the spores.

sporophyte (spo'ro-fit) [sporo- + Gr. *phyton* plant] the diploid or asexual stage in the antithetic alternation of generation.

sporoplasm (spo'ro-plazm) [sporo- + Gr. *plasma* anything formed or molded] the protoplasm of spores.

sporoplastic (spo'ro-plaz'mik) pertaining to or of the nature of sporoplasm.

Sporothrix (spo'ro-thriks) a genus of imperfect fungi of the family Moniliaceae, order Moniliales. *S. schenckii* (formerly called *Sporotrichum schenckii*) causes sporotrichosis, and many species, including *S. carnis*, cause the formation of white mold on meat in cold storage.

Various types of spores in fungi: 1, conidiospores; 2, chlamydospores; 3, sporangia; 4, basidiospores; 5, ascospores; 6, zygospores (de Rivas).

ing a sexual process. **bacterial s.**, see *spore*, def. 1. **black s's of Ross**, pigmented malarial oocysts in the stomach wall of a mosquito. **swarm s.**, a spore made up of numerous active motile individuals; a zoospore. **washed s's**, spores of bacteria which have been freed from their toxin by washing.

sporenrest (spo'ren-rest) [Ger.] residual body.

sporetia (spo-re'she-ah) that part of the extranuclear chromatin of a cell that is concerned in the reproductive function of the cell.

sporicidal (spo'ri-si'dal) [spore + L. *caedere* to kill] destroying spores.

sporicide (spo'ri-sid) an agent that destroys spores.

sporidesmin (spör'i-des'min) a poisonous substance isolated from the fungus *Pithomyces chartarum* (class Deuteromycetes), which causes facial eczema and liver damage in sheep and cattle in New Zealand and Australia.

sporiferous (spo-ri'fer-us) [spore + L. *ferre* to bear] producing or bearing spores.

sporiparous (spo-rip'ah-rus) [spore + L. *parere* to produce] producing spores.

sporo- (spo'ro) [Gr. *sporos* seed] a combining form denoting relationship to a spore.

sporoagglutination (spo'ro-ah-gloo'ti-na'shun) agglutination of spores in the diagnosis of sporotrichosis.

sporoblast (spo'ro-blast) [sporo- + Gr. *blastos* germ] one of the bodies developed within the oocyst of the malarial parasite (*Plasmodium*) in the mosquito from which the sporozoite later

Sporothrix schenckii (de Rivas).

sporotrichin (spo-rot'ri-kin) a derivative of *Sporothrix schenckii* used as a skin test in the diagnosis of sporotrichosis.

sporotrichosis (spo'ro-tri-ko'sis) a chronic fungal infection caused by *Sporothrix schenckii*, occurring in three forms. The *cutaneous lymphatic form* is characterized by a single pustule, papule, or nodule at the site of invasion, followed by lymphatic spread and the development of multiple, painless, subcutaneous granulomas, which tend to break down and form indolent ulcers or cold abscesses. The *disseminated form* is marked by multiple, painless, cutaneous or subcutaneous nodules, which may form cold abscesses, ulcers, or fistulas; this form may involve the muscles, joints, bones, eyes, gastrointestinal system, mucous membranes, and nervous system. The *pulmonary form* results from the inhalation of spores and causes acute disease or chronic granulomas similar to those seen in other mycoses.

sporotrichotic (spo'ro-tri-ko'tik) 1. pertaining to or caused by fungi of the genus *Sporothrix*. 2. pertaining to sporotrichosis.

Sporotrichum (spo-rot'ri-kum) [sporo- + Gr. *thrix* hair] a genus of soil-inhabiting imperfect fungi of the family Moniliaceae, order Moniliales, which formerly included the etiologic agent of sporotrichosis. See *Sporothrix*.

Sporovibrio (spör'o-vib'bre-o) a genus of hydrogen bacteria.

Sporozoa (spo'ro-zo'ah) [sporo- + Gr. *zōon* animal] a subphylum of diverse endoparasitic protozoa characterized by the lack of locomotor organs in the adult stages and by a complex life cycle usually involving an alternation of a sexual with an asexual generation. It includes the orders Gregarinida, Coccidia, Haemosporidia, Sarcosporidia, Microsporidia, and Myxosporidia.

sporozoa (spo'ro-zo'ah) [Gr.] plural of *sporozoan*.

sporozoan (spo'ro-zo'an) 1. pertaining to sporozoa. 2. a sporozoan.

sporozoite (spo'ro-zo'it) [spo- + Gr. *zōon* animal] ... A spore formed after fertilization; any of the elongated, nucleated cells formed by division of the encysted zygote (sporogony) of a sporozoon, which undergo multiple fission (schizogony) to give rise to merozoites. In malaria, the sporozoites are the forms of *Plasmodium* which are liberated from the oocysts in the mosquito, accumulate in the salivary glands, and are transferred to man when the mosquito bites. Called also *falciform body*. See illustration accompanying *Plasmodium*.

sporozooid (spo'ro-zo'oid) 1. resembling a sporozoon. 2. a falciform body resembling a sporozoon.

sporozoon (spo'ro-zo'on), pl. *sporozo'a*. Any organism or species belonging to the subphylum Sporozoa.

sporozoosis (spo'ro-zo-o'sis) infection with sporozoa.

sport (spōrt) a mutation; *lusus naturae*.

sporular (spōr'u-lar) pertaining to a spore.

sporulation (spōr'u-lā'shun) the formation of spores. A form of reproduction seen in lower eukaryotic organisms, such as protozoa, fungi, most algae, etc., consisting of spontaneous division of the cell into four or more daughter elements, each with a part of the original cell nucleus. Also, in response to conditions no longer favorable for growth of the cell, the formation, by certain bacteria, of a resting spore, which is resistant to adverse environmental conditions; on restoration of a favorable environment, the cell becomes vegetative again. Called also *spore formation*. See also *spore*. **endogenous s.**, sporulation of a protozoon within its host. **exogenous s.**, sporulation of a protozoon to produce the infection of fresh hosts.

sporule (spōr'ūl) a small spore.

spot (spot) a circumscribed area or place distinguished by its color; a locus or macula; see also *tâche*. **acoustic s's**, the maculae sacculi and maculae utriculi. **Bitot's s's**, superficial, foamy gray, triangular spots on the conjunctiva, consisting of keratinized epithelium; they are associated with vitamin A deficiency. See also *xerosis conjunctivae*. **blind s.**, the area marking the site of entrance of the optic nerve on the retina (optic disk); so called because there are no sensory receptors in this region and hence no response to stimuli restricted to it. **blind s., mental**, mental scotoma. **blue s.**, 1. [pl.] maculae caeruleae. 2. mongolian spot. **Brushfield's s's**, small white spots on the periphery of the iris, usually crescentic, with the concavity outward, frequently but not exclusively seen in children with Down's syndrome. **café au lait s's** (kah-fa'o-la') [Fr.], pigmented macules of a distinctive light brown color, like coffee with milk, as in neurofibromatosis and Albright's syndrome. **Carleton's s's**, sclerosed spots in the bones in gonorrheal disease. **Cayenne pepper s's**, minute, punctate telangiectases (cherry angiomas) lying within individual dermal papillae in lesions of angioma serpiginosum. **cherry-red s.**, a red circular area (the choroid) surrounded by gray-white retina, seen through the fovea centralis of the eye in the infantile and sometimes in the late infantile form of amaurotic familial idiocy; called also *Tay's sign* or *spot*. **Christopher's s's**, Maurer's dots; see under *dot*. **chromatin s.**, sex chromatin. **cold s.**, see *temperature s's*. **cotton-wool s's**, white or gray soft-edged opacities in the retina composed of cytoid bodies; seen in hypertensive retinopathy, lupus erythematosus, and numerous other conditions. Called also *cotton-wool exudates* or *patches*. **cribriform s's**, maculae cribrosae. **deaf s.**, deaf point. **De Morgan's s's**, cherry angiomas. **embryonic s.**, see under *disk*. **epigastric s.**, a point of tenderness exactly over the xiphoid process. **eye s.**, 1. the rudiment of an eye in the embryo. 2. eyespot. 3. stigma (def. 5). **flame s's**, flame-shaped hemorrhages. **focal s.**, the part of the target of an x-ray tube which is bombarded by the focused electron stream when the tube is energized. **Fordyce's s's**, enlarged and ectopic sebaceous glands that appear as minute yellow papules on the oral mucosa; called also *Fordyce's disease* or *granules*. **Forschheimer's s's**, a fleeting exanthem consisting of discrete rose spots on the soft palate, which may coalesce into a red blush and may extend over the fauces; sometimes seen in rubella just prior to the onset of the skin rash. **germinal s.**, the nucleolus of an ovum. **Graefe's s's**, spots over the vertebrae, pressure on which produces relaxation of blepharofacial spasm. **hot s.**, 1. see *temperature s's*. 2. the sensitive area of a neuroma. 3. an area of increased density on an x-ray or thermographic film. **hypnogenetic s.**, any superficial area the stimulation of which will bring on sleep. **Janeway's s's**, small nodular hemorrhagic spots on the palms and soles in cases of subacute bacterial endocarditis. **Koplik's s's**, small, irregular, bright red spots on the buccal and lingual mucosa, with a minute bluish white speck in the center of each; seen in the prodromal stage of measles. Called also *Koplik's sign*. **light s.**, cone of light; see under *cone*. **liver s.**, a lay term for brownish spots on the face, neck, or back of the hand in many older people. **Mariotte's s.**, blind s. **Maurer's s's**, see under *dot*. **Maxwell's s.**, macula retinae. **milk s's**, 1. whitish spots of fibrous thickening seen on the visceral layer of the pericardium in postmortem examination. 2. dense masses of macrophages in the subserous connective tissue of the pleura and peritoneum. **mongolian s.**, a flat, smooth, brown to grayish

blue nevus, 2 to 15 cm. in diameter, consisting of an excess of dermal melanocytes, typically found at birth in the sacral region in Orientals, Negroes, American Indians, and many southern European babies, and usually disappearing completely during childhood. Exceptionally, it may occur on almost any other part of the body. See *nevus of Ota* and *nevus of Ito*, under *nevus*. **pain s's**, spots on the skin where alone the sense of pain can be produced by a stimulus. **pelvic s's**, round or oval shadows often seen on fluoroscopic examination in the region of the inferior spine of the ilium and the horizontal ramus of the pubic bone. **plague s's**, ecchymotic or purpuric spots seen in some cases of bubonic plague. **rose s's**, an eruption of rose-colored spots, appearing on the abdomen and loins during the first seven days of typhoid fever; called also *typhoid spots*. **Roth's s's**, round or oval white spots sometimes seen in the retina early in the course of subacute bacterial endocarditis. **sacral s.**, mongolian s. **sacral bald s.**, sacrococcygeal dimple, a congenital abnormality in the sacrococcygeal region marked by the absence of hair follicles on the epidermis. **Soemmering's s.**, macula retinae. **soldier's s's**, milk s's, def. 1. **spongy s.**, zona vasculosa. **Stephen's s's**, Maurer's dots. **Tardieu's s's**, spots of ecchymosis under the pleura following death by suffocation. **Tay's s.**, cherry-red s. **temperature s's**, hot and cold spots: spots on the skin normally anesthetic to pain and pressure and sensitive respectively to heat and cold; they are arranged in lines, often somewhat curved, and show the peculiar arrangement of the end-organ with respect to the temperature sense. **tendinous s's**, maculae albiae. **Trousseau's s.**, tache cérébrale. **typhoid s's**, rose s's. **vital s.**, a name sometimes given to any of the major autonomic centers in the pons and medulla oblongata which are indispensable to life. **Wagner's s.**, the nucleolus of the human ovum. **warm s's**, minute areas in the skin that are peculiarly sensitive to temperatures above body temperature; see *temperature s's*. **Willner's s's**, efflorescent spots, soon becoming pustules, on the internal layer of the prepuce; seen in the early stages of smallpox. **yellow s.**, macula retinae.

sprain (sprān) a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. **riders' s.**, sprain of the adductor longus muscle of the thigh, resulting from strain in riding horseback. **Schlatter's s.**, Osgood-Schlatter disease.

spray (spra) a liquid minutely divided or nebulized as by a jet of air or steam. **ether s.**, ether applied in a nebulized form to produce local anesthesia by chilling the part. **needle s.**, a water spray administered through a device having needle-sized jets. **Peet-Schultz s. (obs.)**, a nasal spray for preventive application against poliomyelitis. **Pickrell's s.**, a solution of 3.5 per cent sulfathiazine in 6 per cent triethanolamine for spraying on burned areas; called also *Pickrell's method*. **Tucker's s. (obs.)**, a nasal spray for asthma containing 1 per cent cocaine and 5 per cent potassium nitrate. **tyrothricin s.**, a solution of tyrothricin and water, made with suitable, harmless, solubilizing and wetting agents; it may contain a small proportion of alcohol and a suitable vasoconstrictor. It is used as a topical antibiotic.

spreader (spred'er) an instrument for distributing something over a broader area. **root canal s.**, a pointed instrument of variable diameter and taper, specifically designed for laterally condensing the root canal filling material.

Sprengel's deformity (spreng'elz) [Otto Gerhard Karl Sprengel, German surgeon, 1852-1915] see under *deformity*.

sprew (sproo) sprue.

spring (spring) an elastic wire attached to a denture or other appliance. **auxiliary s.**, a short piece of wire attached to an orthodontic appliance to serve as a lever to apply force to a tooth or teeth. **coil s.**, lengths of coil spring used as a part of orthodontic appliances to open or to close spaces between teeth. **Z s.**, a spring bent in the form of a Z with a coil loop at each end, used to move an individual tooth or groups of teeth buccally or labially.

sprue (sproo) 1. a chronic form of malabsorption syndrome occurring in both tropical and nontropical forms; called also *catarrhal dysentery*. 2. in dentistry, the hole through which metal or other material is poured or forced into a mold. **nontropical s.**, a malabsorption syndrome affecting both children and adults, precipitated by the ingestion of gluten-containing foods; its etiology is unknown, but a hereditary factor has been implicated. Pathologically, the proximal intestinal mucosa loses its villous structure, surface epithelial cells exhibit degenerative changes, and their absorptive function is severely impaired. It is characterized by diarrhea in which the stools are bulky, frothy, fatty (steatorrhea), and fetid (occasionally, malabsorption may be associated with the passage of a single bulky stool without diarrhea), and by abdominal distention, flatulence, weight loss, asthenia, deficiency of vitamins B, D, and K, and electrolyte depletion. Called also *celiac disease* and *gluten enteropathy*. In the *infantile form* the onset is insidious, and is marked by irritability, loss of appetite, weakness, extreme wasting, growth retardation, and celiac crisis; called also *infantile celiac disease*. The *adult form* is marked by extreme lassitude, fatigue, difficulty in breathing, clubbing of the fingers, bone pain, cramping of the muscles, tetany, abdominal distention during the day, megacolon, tympanitis, and

skin pigmentation; called also *adult celiac disease*. **tropical s.**, a malabsorption syndrome occurring in the tropics and subtropics. Protein malnutrition is usually precipitated by the malabsorption, and anemia due to folic acid deficiency is particularly common. Administration of antibiotics (especially tetracycline) and folic acid usually results in remission. Called also *Ceylon sore mouth*, *Cochin-China diarrhea*, *psilosis stomatitis intertropica*, and *stomatitis tropica*.

Spt. abbreviation for *L. spir'itus*, spirit.

spur (sper) a projecting body, as from a bone. In dentistry, a piece of metal projecting from a plate, band, or other dental appliance. **calcaneal s.**, a bone excrescence on the lower surface of the calcaneus which frequently causes pain on walking. **Morand's s.**, calcar avis. **occipital s.**, an abnormal process of bone on the occipital bone behind the posterior process of the atlas. **olecranon s.**, an abnormal process of bone at the insertion of the triceps muscle.

spurious (spu're-us) [*L. spurius*] simulated; not genuine; false.

sputamentum (spu'tah-men'tum) [*L.*] sputum.

sputum (spu'tum) [*L.*] matter ejected from the lungs, bronchi, and trachea, through the mouth. **s. aerogino'sum**, green s. **albuminoid s.**, a yellowish, frothy sputum of persons from whom large amounts of pleural fluid have been withdrawn; believed to be due to pulmonary edema. **s. coc'tum**, the opaque mucus of the later stages of bronchitis and laryngitis. **s. cru'dum**, the clear, tenacious mucus of the early stages of laryngitis and bronchitis. **s. cruen'tum**, bloody sputum. **globular s.**, sputum in yellow spherical lumps; said to be characteristic of the late stages of tuberculosis. **green s.**, sputum stained with a green pigment, as in certain cases of jaundice. **icteric s.**, sputum stained with a greenish or yellow tint by bile pigments, as in jaundice. **moss-agate s.**, a grayish, opalescent, gelatinous mottled sputum, usually projected from the mouth in a more or less globular form during coughing; characteristic of diseases of the trachea (Chevalier Jackson). **nummular s.**, sputum in rounded disks, shaped somewhat like coins. **prune juice s.**, dark, reddish brown, bloody sputum of certain forms of pneumonia, cancer of the lung, gangrene, etc. **rusty s.**, sputum stained with blood or blood pigments; seen in pneumonia, etc.

SQ abbreviation (symbol) for *subcutaneous*.

squalene (skwa'l'en) an unsaturated terpene hydrocarbon, $[(CH_3)_2C:CH(CH_2)_2C(CH_3):CH(CH_2)_2C(CH_3):CH_2]_6$, from the liver oil of sharks and certain other elasmobranch fishes; it is an intermediate in cholesterol biosynthesis (by way of lanosterol) in all animals examined. It is found in small amounts in human blood plasma and in increased amounts in viral influenza. A preparation [NF] is used as an oleaginous vehicle in pharmaceuticals.

squama (skwa'mah), pl. *squa'mae* [*L.*] a scale or platelike structure; [*NA*] a general term for such a structure. **s. alveola'ris**, a thin plate covering the bare areas of pulmonary alveoli. **frontal s.**, **s. of frontal bone**, **s. fronta'lis** [*NA*], the broad, curved portion of the frontal bone, situated above the supraorbital margin and forming the forehead. **mental s.**, **external**, protuberantia mentalis. **occipital s.**, **s. occipitalis**. **occipital s.**, **superior**, os interparietale. **s. occipita'lis** [*NA*], occipital squama: the largest of the four parts of the occipital bone, extending from the posterior edge of the foramen magnum to the lambdoid suture, its external surface bearing the external occipital protuberance and nuchal lines. **perpendicular s.**, **s. frontalis**. **temporal s.**, **s. of temporal bone**, **s. tempora'lis**, pars squamosa ossis temporalis.

squamae (skwa'me) [*L.*] plural of *squama*.

squamate (skwa'māt) [*L. squamatus*, from *squama* scale] scaly; having or resembling scales.

squamization (skwa'mah-ti-za'shun) the transformation of cells of other types into squamous cells; squamous metaplasia.

squame (skwām) [*L. squama*] a scale or scalelike substance.

squamocellular (skwa'mo-sel'u-lar) [*L. squama* scale + *cellula* cell] having squamous cells.

squamofrontal (skwa'mo-fron'tal) pertaining to the squama frontalis.

squamomastoid (skwa'mo-mas'toid) pertaining to the squamous and mastoid portions of the temporal bone.

squamo-occipital (skwa'mo-ok-sip'i-tal) pertaining to the squama occipitalis.

squamoparietal (skwa'mo-pah-ri'ē-tal) pertaining to the pars squamosa ossis temporalis and the parietal bone.

squamopetrosal (skwa'mo-pe-tro'sal) pertaining to the squamous and petrous portions of the temporal bone.

squamosa (skwa-mo'sah) [*L.*] scaly, or platelike; see *pars squamosa*.

squamosal (skwa-mo'sal) squamous.

squamosoparietal (skwa-mo'so-pah-ri'ē-tal) squamoparietal.

squamosphenoid (skwa'mo-sfe'noid) pertaining to the squamous portion of the temporal bone and to the sphenoid bone.

squamotemporal (skwa'mo-tem'po-ral) pertaining to the squamous portion of the temporal bone.

squamous (skwa'mus) [*L. squamosus* scaly] scaly, or platelike.

squamozygomatic (skwa'mo-zi'go-mat'ik) pertaining to the squamous portions of the temporal bone and the zygomatic bone.

squatting (skwot'ing) a position of flexion of the knees and hips, the buttocks being lowered to the level of the heels. It is sometimes adopted by the parturient at delivery. Children with certain types of cyanotic cardiac defects, particularly those with tetralogy of Fallot, frequently adopt the position.

squeeze (skwēz) subjection to pressure; compression. **tussive s.**, the compression of the lung in coughing, which is said to force material from the alveoli and smaller air passages into the bronchi.

squill (skwil) [*L. scilla*; *Gr. skilla*] the fleshy inner scales of the bulb of the white variety of *Urginea maritima* (*L.*) Baker (a liliaceous plant). It contains glucosillaren A, scillaren A, proscillaridin A, other related cardioactive glycosides, and several other principles, and has been used as a diuretic, emetic, expectorant, and cardiotonic. The red variety is used as a rat poison. Called also *scilla*.

squillitic (skwil-lit'ik) [*L. scilliticus*; *Gr. skillitikos*] pertaining to or containing squill.

squint (skwint) strabismus; for types of squint not entered here, see under *strabismus*. **accommodative s.**, convergent strabismus. **comitant s.**, **concomitant s.**, concomitant strabismus. **convergent s.**, esotropia. **divergent s.**, exotropia. **upward and downward s.**, hypertropia.

Squire's catheter (skwīrz) [Trumann Hoffman *Squire*, American surgeon, 1823-1889] vertebral catheter.

S.R. sedimentation rate (see *erythrocyte sedimentation rate*, under *rate*); sigma reaction.

Sr chemical symbol for *strontium*.

SRF somatotropin releasing factor; see *growth hormone releasing hormone*, under *hormone*.

SRH somatotropin releasing hormone; see *growth hormone releasing hormone*, under *hormone*.

S.R.N. State Registered Nurse (England and Wales).

sRNA soluble ribonucleic acid; see *ribonucleic acid*, under *acid*.

SRS-A slow reacting substance.

ss. abbreviation for *L. se'mis*, one half.

Ssabanejew-Frank operation (sab-an'ej-ef frank) [Ivan *Ssabanejew*, Russian surgeon, born 1856; Rudolf *Frank*, Vienna surgeon, 1862-1913] see *Frank's operation*, under *operation*.

S.S.D. source-skin distance.

SSS specific soluble substance (polysaccharide hapten).

s.s.s. abbreviation for *L. stra'tum su'per stra'tum*, layer upon layer.

S.S.V. abbreviation for *L. sub sig'no vene'ni*, under a poison label.

St. abbreviation for *L. stet*, let it stand; or *stent*, let them stand.

S. T. 37 trademark for a solution of hexylresorcinol.

stab (stab) see under *culture*, and see *staff cell*, under *cell*.

stabilarsan (sta-bil'ar-san) a double glycoside of arspenamine, $C_6H_{11}O_5 \cdot NH(OHC_6H_4As)$.

stabilate (sta'bi-lāt) a population of organisms preserved in viable condition on a unique occasion; distinguished from a strain because of its assured stability.

stabile (sta'bil, sta'bil) [*L. stabilis* stable, abiding] not moving; stationary; resistant to chemical change; opposed to *labile*. **heat s.**, thermostat.

stability (sta-bil'i-te) the quality of maintaining a constant character in the presence of forces which threaten to disturb it; resistance to change. **dimensional s.**, the resistance of a material to change in its shape or measurements.

stabilization (sta'bil-i-za'shun) the creation of a stable state.

stabilograph (sta'bil-o-graf'') an instrument for measuring motor instability (sway patterns) during alcohol withdrawal.

stable (sta'bil) not moving, fixed, firm; resistant to change.

staccato (stah-kah'to) [Ital. "detached"] denoting a manner of utterance in which the speech is delivered in a quick, jerky manner, with an interval between each two syllables.

stachydrine (stah-kid'rin) chemical name: *N*-methylproline-methylbetaine. An alkaloid, $C_7H_{13}NO_2$, found in various plants, such as alfalfa, chrysanthemum, citrus, and species of hedge nettles.

stachyose (stak'e-ōs) an indigestible tetrasaccharide, $C_{24}H_{42}O_{21}$, from the tubers of the hedge nettle, *Stachys tubifera*, the seeds of various leguminous plants, and the roots and rhizomes of various labiate plants.

Stacke's operation (stak'ez) [Ludwig *Stacke*, German otologist, 1859-1918] see under *operation*.

stactometer (stak-tom'ē-ter) [*Gr. staktos* oozing out in drops + *metron* measure] an instrument for measuring drops.

Stader splint (sta'der) [Otto *Stader*, American veterinary surgeon] see under *splint*.

Staderini's nucleus (stad'er-e-nēz) [Rutilio Staderini, Italian anatomist] nucleus intercalatus.

stadium (sta'de-um), pl. *sta'dia* [L.; Gr. *stadion* course] a stage or period in a disease. See *stage*, def. 1. **s. ac'mes**, the height of a disease. **s. augmen'ti**, s. incrementi. **s. calo'ris**, the hot stage of a fever or disease. **s. decremen'ti**, the period of decrease of severity in a disease; the defervescence of fever. **s. defervescent'iae**, s. decrementi. **s. fluorescen'tiae**, eruptive stage (of an exanthem). **s. frig'oris**, the cold stage of an intermittent fever. **s. incremen'ti**, the period of increase in the intensity of a disease; the stage of development of fever. **s. invasio'nis**, the incubative stage. **s. sudo'ris**, the sweating stage.

Staehelin's test (sta'ē-linz) [Rudolf Staehelin, Swiss internist, 1875-1943] see under *tests*.

Staff (staf) 1. a wooden rod or rodlike structure. 2. a grooved director used as a guide for the knife in lithotomy. 3. the professional personnel of a hospital. 4. see under *cell*. **s. of Æsculapius**, a rod or staff with a snake entwined around it, which always appeared in the ancient representations of Æsculapius,

Staff of Æsculapius.

the god of medicine. It is the symbol of medicine and is the official insignia of the American Medical Association. **attending s.**, the corps of attending physicians and surgeons of a hospital. **consulting s.**, the corps of physicians and surgeons attached to a hospital who do not visit regularly, but may be consulted by members of the attending staff. **house s.**, the resident physicians and surgeons of a hospital. **s. of Wrisberg**, a slight mounding up of the mucosa over Wrisberg's cartilage (cartilago cuneiformis) seen in the normal larynx during examination with the laryngoscope.

stage (stāj) 1. a period or distinct phase in the course of a disease, the life history of an organism, or any biological process. See also *staging*. 2. the platform of a microscope on which a slide is placed for viewing of the specimen. **algid s.**, a condition characterized by a flickering pulse, subnormal temperature, and varied nervous symptoms. **amphibolic s.**, the stage which intervenes between the acme and the decline of an attack. **anal s.**, in psychoanalysis, the stage of psychosexual development from 12 months to as late as 36 months, characterized by libidinous experience of anal function; it follows the oral stage and precedes the phallic stage. **asphyxial s.**, the preliminary stage of an attack of epidemic cholera, marked by cramps, severe pain, and great thirst. **cold s.**, the chill or rigor of a malarial attack. **defervescent s.**, stadium decrementi. **eruptive s.**, that period during the course of an eruptive fever or exanthem when the rash is present. **expulsive s.**, the stage of labor during which the child is being expelled from the uterus; the second stage of labor. **s. of fervescence**, pyrogenetic s. **first s.** (of labor), the earliest stage of labor, ending with dilatation of the os uteri. **fourth s.** (of labor), a name sometimes applied to the immediate postpartum period. **genital s.**, in psychoanalysis, the psychosexual stage in which libidinous pleasure is associated with the genitals; the adult sexual stage, which follows the latent period. **hot s.**, the period of pyrexia in a malarial paroxysm. **incubative s.**, incubation period. **knäuel s.**, skein. **s. of latency**, 1. the incubation period of any infectious disorder. 2. the quiescent period following an active period in certain infectious diseases, during which the pathogen remains dormant for a variable length of time before again initiating signs of active disease. **mechanical s.**, a platform of a microscope by which the specimen being viewed can be moved in either of two mutually perpendicular directions. **oral s.**, in psychoanalysis, the first stage of the infantile period in psychosexual development, lasting from birth to 12 months, or even to 24 months of age, in which sensual or libidinous pleasure is associated with oral activities; it is followed by the anal stage. **phallic s.**, in psychoanalysis, the psychosexual stage from about two and a half to six years of age, during which sexual interest, curiosity, and pleasurable experience center about the penis in boys, and in girls, to a lesser extent, the clitoris; it follows the anal stage and precedes the latency period. **placental s.**, third s. **precystic s.**, the stage in the life cycle of an ameba in which it becomes nonmotile and secretes a wall about itself to become a cyst. **preeruptive s.**, the stage after infection and before eruption. **premenstrual s.**, the condition of the uterine mucosa after ovulation and the formation of a corpus luteum. **prodromal s.**, the period of early signs of disease, occurring at the end of the incubative stage of an infection and just before the appearance of its characteristic signs; it is typified by the preeruptive cough,

fever, and conjunctivitis of measles and the grippal symptoms that precede the meningeal and paralytic signs of poliomyelitis. **progestational s.**, the secretory stage of the endometrial cycle immediately preceding menstruation or implantation of the ovum. **proliferative s.**, the phase of the uterine mucosa following the first stage of rest: the mucosa shows hypertrophy of the glands and increase of the lining epithelium. **pyretogenic s.**, **pyrogenetic s.**, the stage of invasion of a febrile attack. **Ranke's s's**, the hypothesis that tuberculosis of the lungs develops in three stages: (1) the primary focus, (2) generalized spread of the tubercle bacillus, and (3) isolated organ tuberculosis, chiefly of the lungs. **rest s.**, the stage of the uterine mucosa immediately following the completion of menstruation. **resting s.**, the stage of a cell or its nucleus when no mitotic changes are going on; interphase. **ring s.**, see *signet ring*, under *ring*. **second s.** (of labor), period during which the infant is expelled from the uterus and vagina. **seral s.**, any of the individual transitional series of communities of an ecological sere, which finally leads to a stable, mature *climax community*. Called also *seral community*. **stepladder s.**, an early stage of enteric fever; so called from the peculiar form of the temperature curve. **sweating s.**, the final stage of a malarial paroxysm, marked by sweating. **third s.** (of labor), the period following expulsion of the infant and ending with expulsion of the placenta and membranes from the uterus. **transitional pulp s.**, a condition of the dental pulp tissue characterized by the presence of lymphocytes and macrophages; commonly found as a result of dental caries. **ugly duckling s.**, a dental development stage in the mixed dentition when the upper central and lateral incisors may be flared, before the maxillary canine teeth erupt. **vegetative s.**, resting s. **zooglea s.**, the stage in the life history of a microorganism in which it forms zooglea.

staggers (stag'erz) 1. gid. 2. a form of vertigo occurring in decompression sickness. **blind s.**, 1. gid. 2. an acute form of selenium poisoning in animals. **grass s.**, locoism. **sleepy s.**, **stomach s.**, a disease of horses, of unknown causation, but usually associated with the eating of moldy hay and grain; called also *forage poisoning*.

staging (sta'jing) 1. the determination of distinct phases or periods in the course of a disease, the life history of an organism, or any biological process. 2. the classification of neoplasms according to the extent of the tumor; see *TNM s.* **TNM s.**, staging of tumors according to three basic components: primary tumor (T), regional nodes (N), and metastasis (M). Subscripts are used to denote size and degree of involvement; for example, 0 indicates undetectable, and 1, 2, 3, and 4 a progressive increase in size or involvement. Thus a tumor may be described as T₁N₂M₀.

Stahl's ear (stahlz) [Friedrich Karl Stahl, German physician, 1811-1873] see under *ear*.

Stahr's gland (stahrz) [Hermann Stahr, German anatomist and pathologist, born 1868] see under *gland*.

stain (stān) 1. any dye, reagent, or other material used in producing coloration, such as a substance used in coloring tissues or microorganisms for microscopical study. See *Table of Stains and Staining Methods* and names of specific compounds. 2. a superficial discoloration, or an artificially colored spot in the skin. **acid s.**, a stain which is acid in reaction and more readily colors the protoplasm of cells. **after s.**, see *after-stain*. **basic s.**, a stain which is basic in reaction and shows an affinity for the nuclei of cells. **contrast s.**, material used to color an unstained portion of a tissue after another portion has been stained with another dye. **counter s.**, see *counterstain*. **differential s.**, one which facilitates differentiation of various elements in a specimen. **electron s's**, substances containing heavy atoms, such as osmic tetroxide, uranyl, and lead ions, which, under certain conditions, act as "electron stains," comparable to histologic stains, by combining selectively with certain regions of the specimen; used in the visualization of the ultrastructure. **heavy-metal s.**, any of the elements of high atomic weight often used as stains in electron microscopy. **lipoid s.**, a stain made from any fatlike, or lipid, substance, e.g., Sudan III. **metachromatic s.**, a stain that colors certain cell constituents a color different from that of the stain itself. **neutral s.**, a combination of an acid and a basic stain for staining neutrophil tissues. **nuclear s.**, a stain which has a special affinity for the nuclei of cells. **plasmatic s.**, **plasmic s.**, a stain which colors the tissue uniformly throughout. **port-wine s.**, nevus flammeus. **protoplasmic s.**, a stain which has a special affinity for the protoplasm of cells. **selective s.**, a stain which has a special affinity for a certain tissue element, staining it more vividly than, or to the exclusion of, other elements of the same specimen. **tumor s.**, an area of increased density in a radiograph due to collection of contrast material in distorted and abnormal vessels, prominent in the capillary and venous phase of arteriography, and presumed to indicate neoplasm.

staining (stān'ing) the artificial coloration of a substance, such as the introduction or application of material to facilitate examination of tissues, microorganisms, or other cells under the microscope. In dentistry, the modification of the color of a tooth or denture base. For various methods, see *Table of Stains and Staining Methods*. **bipolar s.**, staining at the two poles only, or staining differently at the two poles. **differential s.**, stain-

ing with a substance for which different bacteria or different elements of the bacteria or specimen being stained show varying affinities, resulting in their differentiation. **double s.**, staining with two different dyes which have an affinity for different tissue elements. **fluorescent s.**, the coloration of tissues with a fluorescent dye. **intravital s.**, vital s. **multiple s.**, staining with several different dyes to facilitate identification of different tissue elements. **negative s.**, staining of the background and not the organism, to facilitate the microscopical study of bacteria. **polar s.**, staining in which the ends of the rod stain deeply while the central portion of the organism is nearly or quite unstained, as in the pasteurellas. **postvital s.**, staining

that occurs after death of a tissue which has been previously stained by vital methods. **preagonal s.**, vital s. **simple s.**, staining with a single substance, such as the staining of microorganisms with a single dye. **substantive s.**, the coloration of tissues by direct absorption of dyes in which they are immersed. **supravital s.**, staining of living tissue removed from the body, but before cessation of the chemical life of the cells. **triple s.**, staining with three different dyes to facilitate identification of the different elements. **vital s.**, staining of a tissue by a dye which is introduced into a living organism and which, by virtue of affinity for certain tissues, will stain those tissues; called also *intravital staining*.

TABLE OF STAINS AND STAINING METHODS

Listing some of the preparations and methods commonly employed in histologic and pathologic technique (*arranged alphabetically*). For other stains, see under *blue, red, etc.*

Achucarro's s., a silver-tannin stain for impregnating connective tissue.

acid-fast s., a staining procedure for demonstrating acid-fast microorganisms. After being stained with carbolfuchsin, either hot or by prolonged (16–24 hour) exposure, the microorganisms resist decolorization with dilute acid and do not show the counterstain (usually methylene blue) that is taken up by the decolorized, non-acid-fast microorganisms and tissue elements. Called also *Ziehl-Neelsen s. or method*.

acid fuchsin s., a diffuse stain containing acid fuchsin and diluted hydrochloric acid in purified water, for demonstrating axons.

Albert's diphtheria s., a stain containing toluidine blue and methyl (or malachite) green. Following treatment with iodine solution, the metachromatic granules appear black, the bars dark green to black, and the remainder of the diphtheria bacillus a light green.

alum-carmine s., a preparation of ordinary alum and carmine.

Alzheimer s., a methylene blue and eosin polychrome stain for demonstrating Negri bodies.

Anthony's capsule s., a method of staining the capsules of bacteria in which the microorganisms are heavily stained with acetic acid-crystal violet, followed by treatment with copper sulfate solution. The bacterial cells appear dark blue, and the capsules bluish violet.

azan s., Heidenhain's modification of Mallory's triple stain.

basic fuchsin s., a stain containing basic fuchsin in distilled water.

Benda's s., a method for demonstrating nerve tissue.

Bensley's neutral gentian orange G s., a preparation used for demonstrating secretion granules.

Best's carmine s., a stain for demonstrating glycogen.

Bethe's method, a method of fixing methylene blue stains of nerve fibers.

Bielschowsky's s., an ammoniacal silver stain for demonstrating axons and neurofibrils.

Bodian method, a method of staining nerve fibers and nerve endings with colloidal silver.

Bowie s., a stain used to demonstrate the slightly basophilic cytoplasm and the specific granules of juxtaglomerular cells.

C method, C-staining method, centric heterochromatin method.

Cajal method, a method of staining astrocytes by a gold chloride-mercuric chloride compound.

Cajal's double method, a method of demonstrating ganglion cells.

carbol-fuchsin s., a stain for microorganisms, containing basic fuchsin and dilute phenol as a mordant.

carbol-gentian violet s., a solution containing gentian violet and carbolic acid.

Castaneda's s., a method of demonstrating rickettsias.

centric heterochromatin method, the DNA of chromosomes is denatured by alkali treatment, renatured, and then treated with Giemsa stain; bands of heavily stained regions (C bands) appear near the centromere of most chromosomes. Called also *constitutive or C method*.

Ciacchio's s., a stain for demonstrating lipoids.

constitutive heterochromatin method, centric heterochromatin method.

Cox's modification of Golgi's corrosive sublimate method, a method for staining ganglion cells.

Davenport's s., a stain for demonstrating various elements of nerve tissue, dependent upon the special affinity of nerve cells and their processes for silver.

Delafield's hematoxylin [USP], a preparation of hematoxylin, alcohol, ammonia alum, water, glycerin, and methanol, used as a nuclear stain.

Ehrlich's acid hematoxylin, a preparation of hematoxylin, used as a nuclear stain.

Ehrlich's neutral s., a mixture of methylene blue and acid fuchsin, used to stain blood corpuscles.

Ehrlich's triacid s., a stain containing acid fuchsin, orange G,

and methyl green; used for demonstrating various formed elements in the blood.

F method, F-staining method, chromosomes are treated with phosphate buffer, rinsed and stored for 60–72 hours in saline citrate solution, then fixed in methanol-acetic acid, and stained by the Feulgen method; chromosomes display light and dark bands (F bands) at characteristic loci.

Feulgen method, a method of demonstrating chromatin and deoxyribonucleic acid (DNA).

Fontana's s., a method of staining spirochetes by silver impregnation, using ammoniacal silver nitrate solution.

G method, G-staining method, Giemsa method (for chromosomes).

Giemsa s., a solution containing azure II-eosin, azure II, glycerin, and methanol; used for staining protozoan parasites such as trypanosomes, *Leishmania*, etc., and *Leptospira*, *Borrelia*, viral inclusion bodies, and *Rickettsia*.

Giemsa method (for chromosomes), chromosomes stained with Giemsa stain at pH 9.0 show deeply stained bands (G bands) that are characteristic for each chromosome; called also *G method*.

Golgi's mixed method, a method of staining nerve cells and all of their processes; historically of very great importance.

Gomori's s's, stains used for histological demonstration of enzymes, especially phosphatases and lipases in sections; also methods for demonstration of connective tissue fibers and secretion granules. Called also *Gomori-Takamatsu s's*.

Gomori-Takamatsu s's, Gomori's s's.

Gomori-Wheatley s., trichrome s.

Goodpasture's s., a method for demonstrating the peroxidase reaction.

Gram's method, Gram's s., an empirical staining procedure devised by Gram in which microorganisms are stained with crystal violet, treated with 1:15 dilution of Lugol's iodine, decolorized with ethanol or ethanol-acetone, and counterstained with a contrasting dye, usually safranin. Those microorganisms that retain the crystal violet stain are said to be gram-positive, and those that lose the crystal violet stain by decolorization but stain with the counterstain are said to be gram-negative.

Hale's iron s., a stain used on substances with a high acid polysaccharide content because of the ability of polyanionic polysaccharides to bind polyvalent cations. Its main component is colloidal iron (Fe⁺⁺⁺).

Harris' hematoxylin, a nuclear stain.

Harris' method, a method for demonstrating Negri bodies.

Heidenhain's iron hematoxylin s., an important cytological method for the demonstration of most cellular structures: nuclei, chromosomes, centrioles, fibrils, mitochondria, cilia, etc.

hemalum s., a nuclear stain containing hematoxylin and alum, widely used, especially in combination with eosin.

hematoxylin-eosin s., a mixture of hematoxylin in distilled water and aqueous eosin solution, employed also universally for routine examination of tissues; numerous variations are employed in execution of the stain.

hematoxylin-eosin-azure II, Maximow's method for the staining of blood-forming organs.

Hiss capsule s., a method of demonstrating bacterial capsules by mixing the bacterial suspension with India ink, drying and fixing, and staining with crystal violet or basic fuchsin. The bacterial cells are stained violet or red, and the capsules appear as unstained halos against the black background.

Hortega method, a method of demonstrating microglia, employing ammoniacal silver carbonate.

iron hematoxylin method, a staining procedure in which the sections are treated with an iron salt, stained with hematoxylin, and differentiated with the same iron salt.

Janus green B, a stain used supravitaly for the demonstration of mitochondria.

Jenner's method, a method for demonstrating blood corpuscles.

Leishman's s., a mixture of methylene blue and eosin for staining blood cells and certain parasites.

TABLE OF STAINS AND STAINING METHODS (Concluded)

Levaditi's method, a method for demonstrating *Treponema pallidum* in sections, employing reduced silver.

lithium-carmin s., a diffuse stain used intravitaly for the demonstration of macrophages.

Löffler's alkaline methylene blue, methylene blue solution made slightly alkaline with potassium hydroxide.

Löffler's flagella s., a staining procedure for the demonstration of bacterial flagella; the smear is fixed in ferric chloride-tannic acid solution, and stained with methylene blue-aniline (or carbol-) fuchsin.

Lorrain Smith s., Nile blue sulfate staining fatty acids blue and neutral fat pink.

Macchiavello's s., a rickettsial stain in which the heat-fixed smear is stained with basic fuchsin, decolorized in citric acid, and counterstained with methylene blue. Rickettsiae are stained red, and tissue components blue. The stain may also be used for the elementary bodies of organisms of the psittacosis-lymphogranuloma venereum group (*Chlamydia*).

Mallory's acid fuchsin, orange G, and aniline blue s., a stain for demonstrating connective tissue and secretion granules. Called also *Mallory's triple stain*.

Mallory's phosphotungstic acid-hematoxylin s., a stain used for demonstrating nuclear and cytoplasmic detail and connective tissue fibers.

Mallory's triple s., Mallory's acid fuchsin, orange G, and aniline blue s.

Marchi's method, a method of demonstrating degenerated nerve fibers, the tissue first being fixed in a solution containing potassium bichromate, which prevents the normal myelinated fibers from staining with osmic acid.

Masson s., a trichrome stain for connective tissue.

Maximow's method, hematoxylin-eosin-azure II.

May's spore s., a method of staining the spores of bacteria in which they are treated with 5 per cent chromic acid, then with ammonia, stained with hot carbol-fuchsin, decolorized with dilute sulfuric acid, and counterstained with methylene blue. The spores appear red, the vegetative cells blue.

May-Grünwald s., an alcoholic neutral mixture of methylene blue and eosin.

Mayer's hemalum, an aqueous solution of hematein, alum, thymol, and 90 per cent alcohol.

Mayer's muchematein, a specific stain for mucus.

methyl green-pyronine s., Unna-Pappenheim s.

methyl violet s., an aniline dye used as a bacteriological stain.

methylene blue, an aniline dye much used as a staining agent; prepared in a saturated solution (7 per cent) in absolute alcohol, which is diluted for use.

Michaelis' s., a mixture of alcoholic solution of methylene blue and a solution of eosin in acetone; used for demonstrating blood corpuscles.

Milligan's trichrome s., a differential stain for connective tissue and smooth muscle. Nuclei and muscle appear magenta; collagen appears green or blue, depending on whether fast green or aniline blue is used as a counterstain; and red blood cells appear orange to orange red.

N method, N-staining method, a method for staining exclusively the satellite regions of acrocentric autosomes by means of Giemsa stain; distinct purplish red spots (N bands) are restricted to the satellite region.

neutral red, an important supravital stain for the demonstration of vacuoles in cells, and especially of the vacuome.

Nissl's method, a method employed in the study of nerve cell bodies.

Pal's modification of Weigert's myelin sheath s., a method for the study of myelinated nerves, the specimen being treated for several weeks in a solution containing potassium bichromate.

Papanicolaou's s., a method of staining smears of various body secretions, from the respiratory, digestive or genitourinary tract, for the examination of exfoliated cells, to detect the presence of a malignant process.

Pappenheim's s., a method for differentiating basophilic granules of erythrocytes and nuclear fragments.

PAS s., periodic acid-Schiff s.

Perdrau's method, a modification of Bielschowsky's method for staining collagen and reticulin.

periodic acid-Schiff (PAS) s., see under *reaction*.

Perls' s., see under *tests*.

peroxidase s., see Goodpasture's s.

phosphotungstic acid-hematoxylin s., see *Mallory's*

phosphotungstic acid-hematoxylin s.

polychrome methylene blue, a stain for demonstrating plasma cells and mast cells, employing potassium carbonate and methylene blue.

Q method, Q-staining method, quinacrine fluorescent method.

quinacrine fluorescent method, chromosomes are exposed

to quinacrine derivatives, after which they fluoresce, the degree of fluorescence varying from one chromosome segment to another; the resultant fluorescent patterns (Q bands) are characteristic for each chromosome. Called also *Q method*.

R method, R-staining method, reverse Giemsa method.

Ranson's pyridine silver s., a stain used for demonstrating nerve cells and their processes.

reverse Giemsa method, a method in which the reciprocal (R-bands) of the banding pattern seen in the Giemsa method for chromosomes is obtained; called also *R method*.

Romanovsky's (Romanowsky's) s., the prototype of the many eosin-methylene blue stains for blood smears and malarial parasites, including Giemsa stain, Leishman's stain, and Wright's stain.

Seller's s., a combination of alcoholic solutions of methylene blue and basic fuchsin which stains Negri bodies a bright red against a purplish-pink background; used in rapid diagnosis of rabies.

Shaeffer's spore s., a method of staining spores with hot malachite green, rinsing the stain out of the vegetative cells with water, and counterstaining with safranin. The spores appear bright green, and the vegetative cells pink.

spore s., a method of staining the spores of bacteria, usually with carbol-fuchsin or malachite green, heat being used to drive the stain into the spores, which later resist decolorization with ethanol or dilute acid. The preparation is usually counterstained with a dye of a contrasting color.

Sternheimer-Malbin s., a stain used in urinalysis which has ready affinity for hyaline casts, epithelial casts, red cells, bladder epithelial nuclei, nuclei of vaginal epithelium, and trichomonads, staining each a different color.

T method, T-staining method, a method for staining only the terminal ends of chromosomes by means of either Giemsa stain or acridine orange; it results in bands (T bands) of dark violet (Giemsa) or fiery orange (acridine orange).

tetrachrome s., a stain combining eosin Y, methylene blue, azur A, and methylene violet, in methyl alcohol.

trichrome s., a rapid staining method which adequately demonstrates structural details of the various intestinal protozoa. The solution is as follows: chromotrope 2R 0.6 gm., light green SF 0.3 gm., phosphotungstic acid 0.7 gm., acetic acid 1.00 ml., and distilled water 100.00 ml. Called also *Gomori-Wheatley s.*

Unna's alkaline methylene blue, a strongly alkaline solution of methylene blue which is valuable for staining plasma cells.

Unna-Pappenheim s., a stain for plasma cells, employing methyl green and pyronine; also widely used for demonstrating nucleoproteins.

van Gieson's solution of trinitrophenol and acid fuchsin, a stain for connective tissue, consisting of acid fuchsin and aqueous solution of trinitrophenol.

Verhoeff's s., a stain for demonstrating elastic tissue.

von Kossa's s., a silver nitrate stain for bone mineral.

Wade's method, a method of demonstrating *Mycobacterium leprae*, in which a drop of tissue pulp and lymph is obtained from a lepromatous lesion by inserting a scalpel or razor blade into a pinched-up fold of skin and then rotating the instrument so as to scrape the sides of the incision. The specimen is then dried and stained with carbolfuchsin.

Wade-Fite method, a method of demonstrating acid-fast bacilli, in which paraffin tissue sections are dewaxed by dipping in a mixture of rectified turpentine and heavy paraffin oil, stained in carbolfuchsin, decolorized in sulfuric acid, and stained in picric acid and acid fuchsin in water. Acid-fast bacilli stain deep blue or blue-black.

Wade-Fite-Faraco method, a method of demonstrating acid-fast bacilli, including *Mycobacterium leprae*, in which paraffin tissue sections are dewaxed by dipping in a mixture of paraffin oil and aviation gasoline or of paraffin oil and rectified turpentine, stained with carbolfuchsin, decolorized in hydrochloride and ethanol until the sections are pink, and counterstained with methylene blue. Acid-fast bacilli are stained red on a light blue background.

Weigert's fibrin s., a method, many variations of which have been used in both fixation and staining; stains gram-positive bacteria as well as fibrin.

Weigert's iron hematoxylin s., a simple method for staining most nuclear and cytoplasmic constituents.

Weigert's myelin sheath m., a method of demonstrating the myelin sheath of nerve cell processes.

Weigert's neuroglia fiber s., a complicated method for demonstrating fibrous glia, which works best on human material.

Weigert's resorcin-fuchsin s., a method for the demonstration of elastic fibers.

Weil's s., a method for staining myelin sheaths.

Wright's s., a mixture of eosin and methylene blue, used for demonstrating blood corpuscles and malarial parasites.

Ziehl's carbol-fuchsin s., see *carbolfuchsin s.*

Ziehl-Neelsen s., see *acid-fast s.*

Ziehl-Neelsen carbolfuchsin, a mixture of basic fuchsin, alcohol, liquefied phenol, and purified water.

stalactite (stah-lak'tit) a long filamentous formation which hangs down from the surface of a broth culture of *Pasteurella pestis* into the liquid below.

stalagmometer (stal'ag-mom'ē-ter) [Gr. *stalagmos* dropping + *metron* measure] an instrument for measuring surface tension by determining the exact number of drops in a given quantity of a liquid. See *miostagmin reaction*, under *reaction*.

stalagmon (stah-lag'mon) a colloidal substance that changes the surface tension of a liquid containing it.

staling (stäl'ing) urination in cattle and horses.

stalk (stawk) an elongated, more or less slender anatomical structure resembling the stalk of a plant. **abdominal s.**, the umbilical cord. **allantoic s.**, the more slender tube interposed in most mammals between the urogenital sinus and the allantoic sac. It is the precursor of the umbilical cord. Called also *connecting s.* **belly s.**, the umbilical cord. **body s.**, a bridge of mesoderm connecting the caudal end of the young embryo with the chorion and eventually giving passage to the allantois with its important accompanying blood vessels; it is the precursor of the allantoic stalk. **cerebellar s.**, any of the cerebellar peduncles. **connecting s.**, allantoic s. **hypophyseal s.**, 1. pars infundibularis lobi anterioris hypophyseos. 2. infundibulum hypothalami. **infundibular s.**, infundibulum hypothalami. **neural s.**, infundibulum hypothalami. **optic s.**, a slender structure attaching the optic vesicle to the brain wall in the early embryo. **pituitary s.**, 1. pars infundibularis lobi anterioris hypophyseos. 2. infundibulum hypothalami. **yolk s.**, the narrow tube connecting the yolk sac (umbilical vesicle) with the midgut of the early embryo, which becomes incorporated into the embryo and usually undergoes complete obliteration, but occasionally persists in the embryo, and, rarely, is found in the adult as a diverticulum from the small intestine (*Meckel's diverticulum*). Called also *omphalomesenteric duct*, *umbilical duct*, and *vitelline duct*.

stallimycin hydrochloride (stal'i-mi'sin) chemical name: N-[5-[[[3-amino-3-iminopropyl]amino]carbonyl]-1-methyl-1H-pyrrol-3-yl]-4-[[[4-(formylamino)-1-methyl-1H-pyrrol-2-yl]carbonyl]amino]-1-methyl-1H-pyrrole-2-carboxamide monohydrochloride; an antibacterial, $C_{22}H_{27}N_9O_4 \cdot HCl$.

stamen (sta'men) the structure of a flower which bears the male gamete, or pollen.

stamina (stam'i-nah) [L.] vigor or endurance.

stammering (stam'er-ing) a disorder of speech behavior marked by involuntary pauses in speech; sometimes used synonymously with stuttering, especially in Great Britain.

Stammler's reaction (stam'lerz) [D. *Stammler*, German surgeon] see under *reaction*.

Stamnosoma (stam'no-so'mah) [Gr. *stamnos* jar + *sōma* body] a genus of flukes. *S. arma'tum* and *S. formosa* are parasites of birds, but experimental human infections have been reported.

standard (stan'dard) something established as a measure or model to which other similar things should conform. **Pignet's s.**, see *Pignet's formula*, under *formula*.

standardization (stan'dard-i-za'shun) 1. the bringing of any preparation to a specified standard as to quality or ingredients. 2. the formulation of standards for a substance or for a procedure.

standardize (stan'dard-iz) to compare with or conform to a standard; to establish standards.

standstill (stand'stil) a quiet state resulting from the suspension of activity or movement, as cardiac standstill. **atrial s.**, cardiac arrhythmia in which there is a pause in atrial contraction secondary to sinus arrest or sinoatrial block, the ventricle continuing to respond to its own pacemaker. **auricular s.**, atrial s. **cardiac s.**, cessation of contraction of the myocardium; see also *cardioplegia*. **respiratory s.**, suspension of the movements of respiration; termed *expiratory s.* when it occurs at the end of an expiration, and *inspiratory s.* when it occurs at the end of an inspiration. **sinus s.**, see under *arrest*. **ventricular s.**, cardiac arrhythmia in which there is an absence of ventricular contraction.

Stanley (stan'le), Wendell Meredith. An American biochemist (born 1904), co-winner, with J. B. Sumner and J. H. Northrop, of the Nobel prize in chemistry for 1946 for pioneering work in crystallizing protein.

Stanley bacillus (stan'le) [*Stanley*, England] see under *bacillus*.

Stanley Kent see *Kent*.

stannate (stan'ät) any salt of stannic acid.

stannic (stan'ik) containing tin as a quadrivalent element. **s. chloride**, an irritant war smoke, $SnCl_4$.

stanniferous (stan-nif'er-us) [L. *stannum* tin + *ferre* to bear] containing tin.

stannosis (stan-o'sis) benign pneumoconiosis due to the inhalation of tin oxide; it is symptomless unless accompanied by silicosis.

stannous (stan'us) containing tin as a bivalent element. For stannous compounds, see under the salt, e.g., *chloride* and *fluoride*.

stannum (stan'um) [L.] tin (symbol Sn).

stanolone (stan'o-lōn) chemical name: 17 β -hydroxy-5 α -androst-3-one. A semisynthetic androgen (dihydrotestosterone), $C_{19}H_{30}O_2$, occurring as a white crystalline powder, and having the same actions and uses as testosterone. It is used for its anabolic and antineoplastic actions in inoperable breast cancer and in postoperative metastatic breast cancer.

stanozolol (stan'o-zo-lol') [USP] chemical name: 17-methyl-2'H-5 α -androst-2-en-3-one[3,2-d-pyrazol-17 β -ol. An androgenic anabolic steroid, $C_{21}H_{32}N_2O$, occurring as a white, crystalline powder; used orally, especially to increase hemoglobin levels in some patients with aplastic (congenital and idiopathic) anemia.

stapedectomy (sta'pē-dek'to-me) [L. *stapes* stirrup + Gr. *ektomē* excision] excision of the stapes.

stapedial (stah-pe'de-al) pertaining to the stapes.

stapediolysis (stah-pe'de-ol'i-sis) mobilization of the stapes in the surgical treatment of otosclerosis.

stapedioplasty (stah-pe'de-o-plas'te) replacement of the stapes with other material (wire, bone, plastic) in correction of defective hearing resulting from otosclerosis, the prosthesis serving to conduct the sound waves from the incus to the oval window (fenestra vestibuli).

stapediotenotomy (stah-pe'de-o-tē-not'o-me) the cutting of the tendon of the stapedius muscle.

stapediovestibular (stah-pe'de-o-ves-tib'u-lar) pertaining to the stapes and vestibule.

stapes (sta'pēz) [L. "stirrup"] [NA] the innermost of the auditory ossicles, shaped somewhat like a stirrup; it articulates by its head with the incus, and its base is inserted into the fenestra vestibuli. Called also *stirrup*.

Staphcillin (staf-sil'in) trademark for preparations of sodium methicillin.

staphisagria (staf'i-sa'gre-ah) [Gr. *staphis* raisin + *agrios* wild] the poisonous seeds of *Delphinium staphisagria*, stavesacre, or lousewort. The plant and its seeds are poisonous and narcotic. The ripe seeds were formerly used externally as a parasiticide.

staphisagrine (staf'i-sa'grin) a poisonous alkaloid, $C_{22}H_{33}NO_8$, from staphisagria.

staphyl- see *staphylo-*.

staphylagra (staf'i-la'grah) [*staphyl-* + Gr. *agra* a way of catching] a forceps for holding the uvula.

staphylectomy (staf'i-lek'to-me) [*staphyl-* + Gr. *ektomē* excision] uvulectomy; excision of the uvula.

staphyledema (staf'i-ē-de'mah) [*staphyl-* + Gr. *oidēma* swelling] an enlargement or swollen state of the uvula.

staphylematoma (staf'il-em'ah-to'mah) hemorrhage from the uvula (Pauli).

staphyline (staf'i-lin) 1. shaped like a bunch of grapes. 2. pertaining to the uvula; uvular.

staphylinid (staf-i-lin'id) 1. pertaining to or due to beetles of the family Staphylinidae. 2. a beetle of the family Staphylinidae.

Staphylinidae (staf'i-lin'i-de) a family of beetles (order Coleoptera), some members of which produce an irritating substance that causes blistering one or two days after contact.

staphylinus (staf'i-li'nus) [L.] pertaining to the uvula.

staphylion (stah-fil'e-on) [Gr. "little grape"] 1. an encephalometric landmark on the posterior edge of the hard palate at the median line. 2. the uvula. 3. a nipple or teat.

staphylitis (staf'i-li'tis) inflammation of the uvula; uvulitis.

staphylo-, **staphyl-** (staf'i-lo, staf'il) [Gr. *staphylē* a bunch of grapes] combining form denoting resemblance to a bunch of grapes, used especially to denote relationship to the uvula or to staphylococci.

staphyloangina (staf'i-lo-an'ji-nah) a mild form of sore throat, marked by a pseudomembranous deposit in the throat due to a staphylococcus.

staphylobacterin (staf'i-lo-bak'ter-in) a bacterial vaccine prepared from staphylococci.

staphylocide (staf'i-lo-sid') staphylococcide.

staphylocoagulase (staf'i-lo-ko-ag'u-lās) a coagulase produced by staphylococci which may be important in the virulence of staphylococcal infections.

staphylococcal (staf'i-lo-kok'al) pertaining to or caused by staphylococci.

staphylococcemia (staf'i-lo-kok-se'me-ah) [*staphylococcus* + Gr. *haima* blood + *-ia*] a condition in which staphylococci are present in the blood; septicemia caused by staphylococci.

staphylococci (staf'i-lo-kok'si) [L.; Gr.] plural of *staphylococcus*.

staphylococcic (staf'i-lo-kok'sik) pertaining to or caused by staphylococci.

staphylococcide (staf'i-lo-kok'sid) an agent that is destructive to staphylococci.

staphylococcosis (staf'i-lo-kok-o'sis) infection caused by staphylococci.

Staphylococcus (staf'i-lo-kok'us) [Gr. *staphyl* bunch of grapes + *kokkus* berry] a genus of microorganisms of the family Micro-

coccaceae, order Eubacteriales, that are the commonest cause of localized suppurative infections. Slightly less than 1μ in diameter and spherical in shape, they tend to form masses of cells. **S. al'bus**, the white form of staphylococci, an occasional agent of staphylococcal pneumonia. Although not very pathogenic and rarely invasive, these bacteria are numerous in the sputum and readily obtained in pure culture. **S. au'reus**, a species comprising the pigmented, coagulase-positive, mannitol-fermenting pathogenic form. **S. epider'midis**, a species made up of non-pigmented, coagulase-negative, mannitol-negative nonpathogenic microorganisms commonly found on the skin. **S. pyog'enes** var. **al'bus**, the white staphylococci occasionally found in infectious processes.

staphylococcus (staf'i-lo-kok'us), pl. *staphylococ'ci*. 1. a spherical bacterium occurring predominantly in irregular masses of cells as a consequence of failure of the daughter cells to separate following cell division in more than one plane. 2. an organism of the genus *Staphylococcus*.

staphylo'derma (staf'i-lo-der'ma) cutaneous pyogenic infection by staphylococci.

staphylo'dialysis (staf'i-lo-di-al'i-sis) [*staphylo-* + Gr. *dialysis* loosening] relaxation of the uvula.

staphylo'dema (staf'i-lo-ðe'mah) staphylo'dema.

staphylokinase (staf'i-lo-ki'nās) a bacterial kinase produced by certain strains of staphylococci, which is capable of activating plasminogen in the blood of various species of animals; see also *kinase* (def. 2).

staphyloleukocidin (staf'i-lo-lu'ko-si'din) a toxin from staphylococcus cultures that is destructive to leukocytes.

staphylolysin (staf'i-lo-li'sin) a principle with hemolytic activity produced by staphylococci. **α s., alpha s.**, a hemolysin produced by pathogenic staphylococci which lyses both sheep and rabbit erythrocytes at 37° C. and has leukocidin activity. **β s., beta s.**, a hot-cold hemolysin produced by staphylococci which lyses sheep but not rabbit erythrocytes in the cold following preliminary incubation at 37° C. **δ s., delta s.**, a hemolysin produced by pyogenic staphylococci which lyses red cells from man and several other species; it differs immunologically from the **α** and **β** staphylolysin, and is both dermonecrotic and lethal. **ε s., epsilon s.**, a hemolysin formed almost exclusively by non-pathogenic, coagulase-negative strains of staphylococci. **γ s., gamma s.**, a hemolysin produced by staphylococci which is similar to, but serologically distinguishable from, the **α** staphylolysin.

staphyloma (staf'i-lo'mah) [Gr. *staphylōma* a defect in the eye inside the cornea] protrusion of the cornea or sclera lined with uveal tissue, resulting from inflammation. **annular s.**, staphyloma of the sclera in the ciliary region, extending around the margin of the cornea. **anterior s.**, scleral or corneal staphyloma in the anterior part of the eye. **ciliary s.**, scleral staphyloma in the part covered by the ciliary body. **s. cor'neae, corneal s.**, 1. ectasia of the cornea with adherent uveal tissue; called also *prolapsus corneae* and *projecting staphyloma*. 2. staphyloma formed by an iris which has protruded through a wound in the cornea. **s. cor'neae racemo'sum**, staphyloma corneae (def. 2) in which there are a number of perforations from which small portions of iris protrude. **equatorial s.**, scleral staphyloma occurring in the equatorial region of the eye. **intercalary s.**, that which occurs in the rim of sclera anterior to the insertion of the ciliary body. **posterior s., s. pos'ti'cum**, backward bulging of the sclera at the posterior pole of the eye; called also *Scarpa's s.* **projecting s., s. corneae. retinal s.**, a forward bulging of the retina. **Scarpa's s., posterior s. scleral s.**, protrusion of the contents of the eyeball at a point where the sclera has become too thin. **uveal s.**, protrusion of the uvea through a ruptured sclera.

staphylo'matous (staf'i-lom'ah-tus) pertaining to or resembling staphyloma.

staphyloncus (staf'i-long'kus) [*staphylo-* + Gr. *onkos* mass] a tumor or swelling of the uvula.

staphylopharyngorrhaphy (staf'i-lo-far'in-gor'ah-fe) [*staphylo-* + Gr. *pharynx* the throat + *rhaphē* suture] the stitching of the halves of the velum palatini to the posterior wall of the pharynx.

staphyloplasty (staf'i-lo-plas'te) [*staphylo-* + Gr. *plassein* to mold] plastic repair of the soft palate and uvula.

staphyloptosis (staf'i-lo-p-to'se-ah) [*staphylo-* + Gr. *ptōsis* falling + *-ia*] elongation of the uvula.

staphyloptosis (staf'i-lo-p-to'sis) staphyloptosis; uvuloptosis.

staphylorrhaphy (staf'i-lo-r'ah-fe) [*staphylo-* + Gr. *rhaphē* suture] surgical correction of a midline cleft in the uvula and soft palate; cf. *palatorrhaphy*.

staphyloschisis (staf'i-lo-s'ki-sis) [*staphylo-* + Gr. *schisis* splitting] fissure of the uvula and soft palate.

staphylo'tome (staf'i-lo-tōm) [Gr. *staphylo'tomon*] a knife for cutting the uvula; uvulotome.

staphylo'tomy (staf'i-lo'tō-me) [*staphylo-* + Gr. *tomē* a cutting] 1. incision of the uvula. 2. the removal of a staphyloma by cutting.

staphylo'toxin (staf'i-lo-tok'sin) a toxin occurring in cultures of staphylococci.

staphylo'tropic (staf'i-lo-trop'ik) having a selective affinity for staphylococci.

star (star) any structure with an appearance like that of a star. **daughter s., amphiaster.** **dental s.**, a marking on the incisor teeth of horses, first appearing in the lower central incisors at about the age of eight years; used in judging a horse's age. **lens s's**, starlike lines formed within the lens of the eye by fibers which pass from the anterior to the posterior surface. **mother s., monaster.** **polar s's**, the starlike figures of the amphiaster. **s's of Verheyen**, venulae stellatae renis. **Winslow's s's**, whorls of capillary vessels from which arise the vorticos veins of the choroid coat of the eye.

starch (starch) [*L. amyllum*] 1. any of a group of polysaccharides of the general formula $(C_6H_{10}O_5)_n$ composed of a long-chain polymer of glucose in the form of amylose and amylopectin; it is the chief storage form of energy reserve (carbohydrates) in plants. 2. [NF] a preparation consisting of the granules separated from the mature grain of corn or wheat, or from potato tubers, occurring as irregular, angular, white masses or fine powder; used as a dusting powder and as a filler, binder, and disintegrant in pharmaceutical preparations. **animal s.**, glycogen. **cassava s.**, the starch from the roots of cassava (*Manihot utilisima* and *M. aipi*) which is the source of tapioca. **corn s.**, a starch from maize. **s. glycerite** [NF], a preparation of starch, benzoic acid, purified water, and glycerin; used as an emollient in pharmaceutical preparations intended for external use. **hydroxyethyl s.**, a starch product which has been suggested as a plasma substitute in man. **lichen s., moss s., lichenin.** **pregelatinized s.**, [NF], starch chemically or mechanically processed to rupture all or part of the granules in the presence of water, and subsequently dried; it occurs as a moderately coarse to fine, white to off-white powder and is used as a tablet excipient in pharmaceutical preparations. **sago s.**, starch from the sago palm. **soluble s.**, amidulin.

stare (stār) a fixed, unblinking gaze. **postbasic s.**, a peculiar expression of the eyes in posterior basic meningitis due to downward rolling of the eyeball and retraction of the upper lid.

Starling's hypothesis, law (star'lingz) [Ernest Henry Starling, English physiologist, 1866–1927] see under *hypothesis* and *law*.

starter (star'ter) a culture of microorganisms used to initiate fermentation, as in dairy products.

starvation (star-va'shun) long-continued deprival of food.

stasimorphia (stas'i-mor'fe-ah) stasimorphy.

stasimorphy (stas'i-mor'fe) [Gr. *stasis* standing + *morphe* form] deformity or abnormality of shape in any organ, due to arrest of development.

stasis (sta'sis) [Gr. *stasis* a standing still] 1. a stoppage or diminution of the flow of blood or other body fluid in any part. 2. a state of equilibrium among opposing forces. **ileal s.**, abnormal delay in the passage of the intestinal contents through the ileum; it is usually associated with dilatation of the ileum. **intestinal s.**, any condition in which normal passage of intestinal content is impaired; it may be due to mechanical obstruction or impaired intestinal motility. **papillary s., papilledema.** **pressure s.**, stoppage of the circulation caused by undue pressure on a part. **urinary s.**, stoppage of the flow or discharge of urine, which may occur at any level of the urinary tract. **venous s.**, cessation or impairment of venous flow.

-stasis (sta'sis) [Gr. "a standing still"] a word termination indicating the maintenance of (or maintaining) a constant level; preventing increase or multiplication.

Stas-Otto method (stahs-ot'o) [Jean Servais Stas, a Belgian chemist, 1813–1891] see under *method*.

stat. abbreviation for *L. sta'tim*, immediately.

state (stāt) [*L. status*] 1. condition or situation; status. 2. the crisis, or the turning point of an attack of disease. **alpha s.**, the state of relaxation and peaceful wakefulness, associated with prominent alpha brain wave activity. **anelectrotonic s.**, the condition which obtains in a nerve near the anode during the passage of a continuous current. **anxiety tension s. (A.T.S.)**, neuromuscular hypertension. **anxious s.**, a state of fear with no particular object, as in panophobia. **borderline s.**, a diagnostic term used when it is difficult to determine whether symptoms are predominantly neurotic or psychotic. Symptoms often include acting out and behavior which is suggestive of schizophrenia. **carrier s.**, see carrier, def. 1. **catelectrotonic s.**, the condition of a nerve near the cathode during the passage of an electric current. **central excitatory s.**, a condition in which there is stored up in a reflex center of the spinal cord a number of stimuli which do not reveal themselves in reflex response. **constitutional psychopathic s.**, antisocial personality. **correlated s.**, dynamic equilibrium. **dream s.**, a state of defective consciousness in which the environment is imperfectly perceived. **epileptic s.**, status epilepticus. **excited s.**, the condition of a nucleus, atom, or molecule produced by the addition of energy to the system as the result of absorption of photons or of inelastic collisions with other particles or systems. **ground s.**, the condition of lowest energy of a nucleus, atom, or

molecule, as opposed to the excited state. **hypnagogic s.**, that state of semiconsciousness which immediately precedes falling asleep. **hypnoidal s.**, a condition in which portions of unrecognized past experience come up into consciousness from the subconscious life. **hypnoidic s.**, a state in which more or less connected experiences of the past come up into consciousness from the subconscious state. **hypnoleptic s.**, a state occurring between two experiences of double personality. **hypnopompic s.**, that state of semiconsciousness which immediately precedes complete awakening from sleep. **local excitatory s.**, the condition of a nerve produced by an ineffectual stimulus. **marble s.**, status marmoratus. **metastable s.**, the condition of a system (nucleus, atom, or molecule) capable of undergoing quantum transition to a state of lower energy. **paranoid s.**, an emotional condition marked by paranoid trends or paranoid character defenses; it may be of short or long duration. **persistent vegetative s.**, a condition of profound nonresponsiveness in the wakeful state caused by brain damage at whatever level and characterized by a nonfunctioning cerebral cortex, the absence of any discernible adaptive response to the external environment, akinesia, mutism, and inability to signal; the electroencephalogram may be isoelectric or show abnormal activity. **plastic s.**, pluripotent s., the state of parts of the zygote or early embryo in which they may develop into any adult tissue or part. **refractory s.**, a condition of subnormal excitability of muscle and nerve following excitation. **resting s.**, the physiological condition achieved by complete bed rest for a period of at least one hour, a condition required in a number of different tests of various body functions. **steady s.**, dynamic equilibrium. **twilight s.**, a temporary absence of consciousness in which the patient may perform certain acts involuntarily and without remembrance of them afterward. **typhoid s.**, a condition of great muscular weakness and stupor, with dry, brown tongue, sordes on the teeth, muttering delirium, feeble pulse, and involuntary discharge of feces and urine; seen in certain wasting diseases, as typhoid and other fevers.

stathmokinesis (stath/'mo-ki-ne'sis) a state of arrested mitosis, or pseudometaphase, as that induced by subjecting cells to the action of an agent such as colchicine, which destroys the fibrillar structure of cell spindles and thus permits the calculation of mitosis time.

static (stat/'ik) [L. *staticus*; Gr. *statikos*] 1. at rest; in equilibrium; not in motion. 2. not dynamic.

statics (stat/'iks) that phase of mechanics which deals with the action of forces and systems of forces on bodies at rest.

statim (sta/'tim) [L.] immediately, at once. Abbreviated *stat*.

station (sta/'shun) [L. *statio*, from *stare* to stand still] 1. the position assumed in standing; the manner of standing; in ataxic conditions it is sometimes pathognomonic. See *attitude*. 2. the location of the presenting part of the fetus in the birth canal, designated as -5 to -1 according to the number of centimeters the part is above a imaginary plane passing through the ischial spines, 0 when at the plane, and +1 to +5 according to the number of centimeters the part is below the plane. 3. a specified site to which the sick and wounded are brought. **Romberg s.**, the position assumed by the patient when the Romberg sign is being sought, i.e., standing upright with the feet close together.

stationary (sta/'shun-er'e) [L. *stationarius*] not subject to variations or to changes of place.

statistics (stah-'tis/tiks) numerical facts pertaining to a body of things; also the science which deals with the collection and tabulation of such facts. **vital s.**, that branch of biometry which deals with the data and laws of human mortality, morbidity, natality, and demography; called also *biostatistics*.

statoacoustic (stat/'o-ah-koo-'stik) pertaining to balance and hearing.

statoconia (stat/'o-ko-'ne-ah), pl. of *statoconium* [Gr. *statos* standing + *konos* dust] [NA] minute calciferous granules within the gelatinous statoconic membrane surmounting the acoustic maculae; called also *otoconia*.

statoconium (stat/'o-ko-'ne-um) singular of *statoconia*; called also *otoconium* and *otoconite*.

statocyst (stat/'o-sist) [Gr. *statos* standing + *kystis* sac, bladder] one of the sacs of the labyrinth of the ear to which is attributed an influence in the maintenance of static equilibrium.

statolith (stat/'o-lith) 1. one of the granules constituting the statoconia; called also *ear crystal*, *otolith*, *otolite*, and *otosteon*. 2. a solid or semisolid body occurring in the statocyst of animals.

statolon (stat/'o-lon) an antiviral agent derived from *Penicillium stoloniferum*, which inhibits the multiplication of certain picornaviruses and arboviruses.

statometer (stah-'tom-'ē-ter) [Gr. *statos* standing + *metron* measure] an apparatus for measuring the degree of exophthalmos.

statosphere (stat/'o-sfēr) centrosome.

statural (stat/'u-ral) pertaining to stature.

stature (stat/'ūr) [L. *statura*] the height or tallness of a person standing.

status (sta/'tus) [L.] state or condition. **s. angino'sus**, angina which occurs at rest and is refractory to treatment; called also

preinfarction-angina. **s. arthrit'icus**, the gouty diathesis; predisposition to gout. **s. asthmat'icus**, asthmatic crisis; asthmatic shock; a sudden intense and continuous aggravation of a state of asthma, marked by dyspnea to the point of exhaustion and collapse and not responding to the usual therapeutic efforts. **s. calcit'ames**, calcium hunger. **s. cholera'icus**, a state occurring in the algid stage of cholera, characterized by a dull countenance, weak pulse, and cold skin. **s. chore'icus**, a severe and persistent form of chorea. **s. convulsi'vus**, s. epilepticus. **s. criba'lis**, **s. cribro'sus**, a sieve-like condition of the brain due to dilatation of the perivascular lymph spaces. **s. crit'icus**, a severe and persistent form of tabetic crises. **s. degenerati'vus**, a condition characterized by the presence of an unusual number of degenerative stigmata (developmental anomalies) in a single individual. **s. dysgraph'icus**, dysgraphia. **s. dysmyelina'tus**, **s. dysmyelinisa'tus**, Hallervorden-Spatz syndrome. **s. dysraph'icus**, faulty closure of the embryonic neural tube resulting in faulty formation of midline adult structures, such as the spine, sternum, breasts, and palate. **s. epilep'ticus**, a series of rapidly repeated epileptic convulsions without any periods of consciousness between them. **s. hemicra'nicus**, a state marked by constantly recurring attacks of migraine. **s. lacuna'ris**, **s. lacuno'sus**, a condition of the brain marked by numerous small infarcts or losses of substance. **s. lymphat'icus**, lymphatism, def. 2. **s. marmora'tus**, a condition marked by excessive myelination of the nerve fibers of the corpus striatum, as in Vogt's syndrome; called also *état marbré* and *marble state*. **s. parathyreopri'vus**, a condition due to absence of parathyroid. **petit mal s.**, a state of mental confusion lasting for minutes or hours, and accompanied by nearly continuous 3-cps spike and wave discharges in the electroencephalogram. **s. prae'sens**, the condition of a patient at the time of observation. **s. rap'tus**, a condition of ecstasy. **s. spongio'sus**, extensive vacuolization of the cerebral cortex; called also *spongiform encephalopathy*. **s. thymico-lymphat'icus**, a condition resembling lymphatism, with enlargement of the lymphadenoid tissue generally and with enlargement of the thymus as the special influencing factor. **s. thym'icus**, lymphatism, def. 2. **s. typho'sus**, the typhoid state. **s. verruco'sus**, a wartlike appearance of the cerebral cortex, produced by disorderly arrangement of the neuroblasts so that the formation of fissures and sulci is irregular and unpredictable. **s. vertigino'sus**, prolonged vertigo.

statuvolence (stat-u'vo-lens) [L. *status* state + *volens* willing] a voluntary, self-induced state of hypnotism.

statuolent (stat-u'vo-lent) affected with or able to enter a condition of statuvolence.

statuolic (stat-'u-vol'ik) statuvolent.

statuolism (stat-u'vo-lizm) statuvolence.

Staub-Traugott effect (test) (stawb-'traw-'got) [Hans Staub, Swiss (Basel) internist, born 1890; Carl Traugott, Frankfurt internist, born 1885] see under *effect*.

staurion (staw-'re-on) [Gr., dim. of *tauros* cross] a point at the crossing of the median and transverse palatine sutures.

stauroplegia (staw-'ro-ple-'je-ah) [Gr. *tauros* cross + *plēgē* stroke] alternate hemiplegia.

stavesacre (stāvz-'a-ker) staphisagria.

staxis (stak/'sis) [Gr. "a dripping"] hemorrhage.

stay (sta) a narrow structure that gives support, such as the bar of a horse's hoof. **s. of white line**, adminiculum lineae albae.

STD skin test dose.

steal (stēl) the diversion, as of blood flow, from its normal course, as in occlusive arterial disease. **subclavian s.**, in occlusive disease of the subclavian artery, a reversal of blood flow in the ipsilateral vertebral artery (which may deprive the brain of blood) from the basilar artery to the subclavian artery beyond the point of occlusion.

steapsin (ste-ap/'sin) [Gr. *stear* fat + *pepsis* digestion] the lipase of the pancreatic juice.

steapsinogen (ste-'ap-sin-'o-jen) a pre-enzyme of steapsin.

stearaldehyde (ste-'ah-ral/'dē-hid) a long-chain, aliphatic aldehyde of the class of free aldehydes with the formula $\text{CH}_3(\text{CH}_2)_{16}\text{CHO}$; it is found in plasmalogens, which give the so-called plasmal reaction upon direct treatment of the tissue with Schiff's reagent.

stearate (ste-'ah-rāt) octadecanoate: the ionic form of stearic acid, a naturally occurring fatty acid. Also, any compound of stearic acid.

steariform (ste-ar/'i-form) fatlike.

stearin (ste-'ah-rin) tristearin.

Stearns' alcoholic amentia (sternz) [Albert Warren Stearns, American physician, 1885-1959] see under *amentia*.

stearo-, **steato-** (ste-'ah-ro; ste-'ah-to) [Gr. *stear*, *steatos* fat] combining forms denoting relationship to fat.

stearopten (ste-'ah-rop-'ten) [stearo- + Gr. *ptēnos* volatile] a camphor; the more solid substance which, combined with an eleopten, constitutes a typical volatile oil.

stearrhea (ste-'ah-re-'ah) [stearo- + Gr. *rhoia* flow] steatorrhea.

steatite (ste'ah-tīt) talc.

steatitis (ste'ah-ti'tis) [steato- + -itis] inflammation of adipose tissue.

steato- see *stearo-*.

steatocele (ste-at'o-sēl) [steato- + Gr. *kēlē* tumor] a fatty mass formed within the scrotum.

steatocystoma (ste'ah-to-sis-to'mah) an epithelial cyst. **s. mul'tiplex**, steatomatosis, a rare skin disorder with a high familial tendency, probably having an autosomal dominant mode of inheritance, affecting men more often than women, and characterized by the presence on the upper anterior trunk, proximal extremities, and scrotum of multiple cutaneous epithelial cysts containing an oily liquid, abortive hair follicles, and sebaceous glands.

steatogenous (ste'ah-toj'ē-nus) [steato- + Gr. *gennan* to produce] lipogenic.

steatolysis (ste'ah-to-lī-sis) [steato- + Gr. *lysis* dissolution] the emulsifying process fats undergo preparatory to absorption.

steatolytic (ste'ah-to-lit'ik) pertaining to, characterized by, or promoting steatolysis.

steatoma (ste'ah-to'mah), pl. *steato'mata* or *steatomas*: 1. a lipoma. 2. a fatty mass retained within a sebaceous gland.

steatomatosis (ste'ah-to-mah-to'sis) 1. the presence of numerous steatomas. 2. steatocystoma multiplex.

steatomery (ste'ah-to-m'er-e) [steato- + Gr. *mēros* thigh] a deposit of fat on the outer aspect of the thighs and buttocks.

steatonecrosis (ste'ah-to-nē-kro'sis) fat necrosis.

steatopygia (ste'ah-to-pij'e-ah) [steato- + Gr. *pygē* buttock + -ia] excessive fatness of the buttocks, usually seen in women. Sometimes called *Hottentot bustle* because it is commonly seen in the Hottentot people of southern Africa.

steatopygous (ste'ah-top'i-gus) pertaining to or characterized by steatopygia.

steatorrhea (ste'ah-to-re'ah) [steato- + Gr. *rhoia* a flow] excessive amounts of fats in the feces, as in malabsorption syndromes. **idiopathic s.**, nontropical sprue.

steatosis (ste'ah-to'sis) fatty degeneration. **s. cardi'aca**, cardiomyoliposis.

stechiology (stek'e-ol'o-je) stoichiology.

stechimetry (stek'e-om'ē-tre) stoichiometry.

Steclin (stek'lin) trademark for preparations of tetracycline.

Steell's murmur (stēlz) [Graham Steell, English physician, 1851-1942] Graham Steell's murmur; see under *murmur*.

Steenbock unit (stēn'bok) [Harry Steenbock, American biochemist, 1886-1967] see under *unit*.

steffimycin (stef-i-mi'sin) an antibacterial with antiviral properties, produced by *Streptomyces steffisburgensis* var. *steffisburgensis*.

stege (ste'je) [Gr. *stegos* roof] the internal layer of the rods of Corti.

stegnosis (steg-no'sis) [Gr. *stegnōsis* obstruction] constriction; stenosis.

stegnotic (steg-not'ik) pertaining to, characterized by, or promoting stegnosis; astringent.

Stegomyia (steg'o-mi'yah) [Gr. *stegos* roof + *myia* fly] a subgenus of mosquitoes. *S. argen'teus*, *S. cal'opus* and *S. fascia'tus* are old names for *Aedes aegypti*.

Stein's test (stinz) [Stanislav Aleksandr Fyodorovich von Stein, Russian otologist, born 1855] see under *tests*.

Stein-Leventhal syndrome (stin-lev'en-thal) [Irving F. Stein, Sr., American gynecologist, born 1887; Michael Leo Leventhal, American obstetrician and gynecologist, born 1901] see under *syndrome*.

Steinach's operation (method) (sti'nahks) [Eugen Steinach, Austrian physician, 1861-1944] see under *operation*.

Steiner's tumors (sti'nerz) [Gabriel Steiner, German neurologist, born 1883] Jeanselme's nodules.

Steinmann's pin (extension) (stin'manz) [Fritz Steinmann, Bern surgeon, 1872-1932] see *nail extension*, under *extension*.

Stelangium (ste-lan'je-um) a genus of Schizomycetes of the order Myxobacterales, family Archangiaceae.

Stelazine (stel'ah-zēn) trademark for preparations of trifluoperazine hydrochloride.

stèle (stēl) [Gr. *stechelō* stem] the cylindrical central core of vascular tissue of a plant, consisting of the pericycle and the tissues within it—xylem, phloem, and parenchyma.

stella (stel'ah), pl. *stel'ae* [L.] star. **s. len'tis hyaloi'dea**, the posterior pole of the crystalline lens. **s. len'tis irid'ica**, the anterior pole of the crystalline lens.

Stellaria (stel-la're-ah) a genus of caryophyllaceous plants, the chickweeds. *S. holos'tea* and *S. me'dia* were formerly used as demulcent medicines.

stellate (stel'āt) [L. *stellatus*] shaped like a star; arranged in a roset, or in rosetts.

stelleectomy (stel-lek'to-me) removal of the stellate ganglion; done for the relief of pain.

stellite (stel'it) a very hard, noncorrosive alloy of cobalt, chromium, and tungsten, used for surgical instruments.

stellreflexe (stel're-flek'sē) [Ger.] a postural reflex.

stellula (stel'u-lah), pl. *stel'lulae* [L., dim. of *stella*] little star. **stel'lulae vasculo'sae winslow'ii**, Winslow's stars. **stel'lulae of Verheyen**, venulae stellatae renis. **stel'lulae verhey'enii**, venulae stellatae renis.

stellulae (stel'u-le) [L.] plural of *stellula*.

Stellwag's sign (symptom) (stel'vagz) [Carl Stellwag von Carion, Austrian ophthalmologist, 1823-1904] see under *sign*.

stem (stem) a supporting structure comparable to the stalk or stem of a plant. **brain s.**, see under *B. infundibular s.*, infundibulum hypothalami.

Stender dish (sten'der) [Wilhelm P. Stender, manufacturer in Leipzig] see under *dish*.

Stenediol (sten'di-ol) trademark for preparations of methandriol.

stenion (sten'e-on), pl. *sten'ia* [Gr. *stenos* narrow + -on neuter ending] an encephalometric landmark, the craniometrical point situated at each end of the smallest transverse diameter of the head in the temporal region.

Steno (ste'no) see *Stensen*.

steno- (sten'o) [Gr. *stenos* narrow] a combining form meaning contracted or narrow.

stenobregmatic (sten'o-breg-mat'ik) [steno- + Gr. *bregma* the front part of the head] having the upper and anterior portion of the head narrowed.

stenocardia (sten'o-kar'de-ah) angina pectoris.

stenocephalia (sten'o-sē-fa'le-ah) stenocephaly.

stenocephalous (sten'o-sef'ah-lus) having a narrow head.

stenocephaly (sten'o-sef'ah-le) [steno- + Gr. *kephalē* head] excessive narrowness of the head.

stenochoria (sten'o-ko're-ah) [steno- + Gr. *chōros* space] stenosis, or narrowing.

stenocoriiasis (sten'o-ko-ri'ah-sis) [steno- + Gr. *korē* pupil] contraction of the pupil of the eye.

stenocrotaphia (sten'o-kro-ta'fe-ah) [steno- + Gr. *krotaphos* temple + -ia] narrowness of the temporal region.

stenocrotaphy (sten'o-krot'ah-fe) stenocrotaphia.

stenoopic (sten'o-pe'ik) [steno- + Gr. *opē* opening] having a narrow slit or opening, as stenoopic spectacles.

stenophotic (sten'o-fo'tik) [steno- + Gr. *phōs* light] able to see in a weak light.

stenosal (ste-no'sal) stenotic.

stenosed (stē-nōst', stē-nōzd') narrowed or constricted.

stenosis (stē-no'sis) [Gr. *stenōsis*] narrowing or stricture of a duct or canal. **aortic s.**, a narrowing of the aortic orifice of the heart or of the aorta itself. **buttonhole mitral s.**, mitral stenosis in which adhesion and shortening of the mitral cusps produces a diaphragmatic slit resembling a buttonhole; called also **buttonhole deformity** and **fishmouth mitral s.** **cardiac s.** (obs.), a narrowing or diminution of any heart passage or cavity. **caroticovertebral s.**, atherosclerotic stenosis of the cervical portions of the vertebral arteries, resulting in cerebral ischemia. **cicatricial s.**, stenosis caused by the contraction of a cicatrix. **fishmouth mitral s.**, buttonhole mitral s. **granulation s.**, stenosis or narrowing caused by the deposit of granulations or by their contraction. **idiopathic hypertrophic subaortic s.**, a cardiomyopathy of unknown cause, in which the left ventricle is hypertrophied (commonly with disproportionate involvement of the interventricular septum) and the cavity is small; it is marked by obstruction to left ventricular outflow. Called also **muscular subaortic s.** **infundibular s.**, stenosis below the pulmonary valve, within the infundibulum (conus arteriosus) of the right ventricle of the heart. **mitral s.**, a narrowing of the left atrioventricular orifice (mitral orifice). **muscular subaortic s.**, idiopathic hypertrophic subaortic s. **myocardial infundibular s.**, infundibular stenosis due to hypertrophy of the surrounding myocardium, resulting in a long narrow channel. **post-diphtheritic s.**, stenosis of the larynx or trachea following diphtheria. **pulmonary s.**, narrowing of the opening between the pulmonary artery and the right ventricle. **pyloric s.**, obstruction of the pyloric orifice of the stomach; it may be congenital as in hypertrophic pyloric stenosis, or acquired due to peptic ulceration or prepyloric carcinoma. **subaortic s.**, **subvalvular aortic s.**, aortic stenosis due to an obstructive lesion in the left ventricle below the aortic valve, causing a pressure gradient across the obstruction within the ventricle. **supravalvular s.**, a rare form of aortic stenosis occurring above the aortic valve, usually caused by a complete circumferential fibrous ring of constricting tissue at the level of the sinus of Valsalva. **tricuspid s.**, narrowing or stricture of the tricuspid orifice of the heart. **valvular s.**, stenosis affecting any of the valves of the heart; see *aortic s.*, *mitral s.*, *pulmonary s.*, and *tricuspid s.*

stenostomia (sten/'o-sto'me-ah) [*steno-* + Gr. *stoma* mouth + *-ia*] narrowing of the mouth.

stenotheimal (sten/'o-ther'mal) stenotheimic.

stenotheimic (sten/'o-ther'mik) [*steno-* + Gr. *thermē* heat] a term applied to bacteria which can develop only within a narrow range of temperature.

stenotheorax (sten/'o-tho'raks) [*steno-* + Gr. *thōrax* chest] abnormal narrowness of the chest.

stenotic (stē-not/'ik) [Gr. *stenotēs* narrowness] pertaining to or characterized by stenosis; abnormally narrowed.

Stensen's canal, duct, experiment, foramen, plexus (sten/'senz) [Niels Stensen, Danish priest-physician, anatomist, physiologist, and theologian, 1638-1686] see under *experiment* and *plexus*, and see *canalis incisivum*, *ductus parotideus*, and *foramen incisivum*.

stent (stent) a mold for keeping a skin graft in place, made of Stent's mass or some acrylic or dental compound. By extension used to designate a device or mold of a suitable material, used to hold a skin graft in place or to provide support for tubular structures that are being anastomosed.

step (step) one of a series of footrests on different levels, or a structure resembling it. **Rönne's nasal s.**, a steplike defect in the nasal side of the visual field; seen in glaucoma.

stephanial (ste-fa/'ne-al) pertaining to the stephanion.

stephanion (stē-fa/'ne-on) [Gr. *stephanos* crown + *-on* neuter ending] the point on the side of the cranium at which the coronal suture meets the superior temporal line.

Stephanofilaria (ste/'ah-no-fi-la're-ah) a genus of filarial nematodes. **S. stilesi**, a species causing dermatitis in cattle in the United States.

stephanofiliariasis (ste/'ah-no-fi-la'ri-ah-sis) a chronic skin disease of cattle in certain parts of the United States, due to infestation with the nematode *Stephanofilaria stilesi*; called also *verminous dermatitis*.

Stephanurus (ste/'ah-nu'rūs) a genus of nematode parasites of the family Syngamidae. **S. dentatus**, a species parasitic in the urinary tract and occasionally in other tissues of swine.

steradian (ste-ra/'de-an) [Gr. *ster-* solid + *radian*] the unit of measurement of solid angles, equivalent to the angle subtended at the center of a sphere by an area on its surface equal to the square of its radius.

Sterane (ster/'ān) trademark for preparations of prednisolone.

sterco- (ster/'ko) [L. *stercus* dung] a combining form denoting relation to feces.

stercobilin (ster/'ko-bi'lin) [*sterco-* + *bilin*] a bile pigment derivative, C₃₃H₄₆N₄O₆, formed by air oxidation of stercobilinogen, which is in turn derived by reduction of bilirubin; it is a brown-orange-red pigmentation contributing to the color of feces and urine.

stercobilinogen (ster/'ko-bi-lin'o-jen) a bilirubin metabolite and precursor of stercobilin, formed by reduction of urobilinogen.

stercolith (ster/'ko-lith) [*sterco-* + Gr. *lithos* stone] a fecal concretion.

stercoporphyry (ster/'ko-por'fi-rin) coproporphyrin.

stercoraceous (ster/'ko-ra'shus) [L. *stercoraceus*] consisting of or containing feces; fecal.

stercoral (ster/'ko-ral) stercoraceous.

stercorin (ster/'ko-rin) coprostanol.

stercorolith (ster/'ko-ro-lith) stercolith.

stercoroma (ster/'ko-ro'mah) a large accumulation of fecal matter forming a tumor-like mass in the rectum.

stercorous (ster/'ko-rūs) [L. *stercorosus*] of the nature of excrement.

Sterculia (ster-'ku'le-ah) a genus of trees and shrubs, including many species, mostly tropical; some have edible seeds and others are medicinal, while still others afford a gummy exudation with cathartic and adhesive properties (see *karaya gum*, under *gum*). The hairs of *S. apetala* of Panama may be very irritating.

stercus (ster/'kus), pl. *ster'cora* [L.] dung, or feces.

stere (stēr) [Gr. *stereos* solid] a cubic meter.

stereo- (ste're-o) [Gr. *stereos* solid] a combining form meaning solid, having three dimensions, or firmly established.

stereoagnosis (ste're-o-ag-no'sis) astereognosis.

stereoanesthesia (ste're-o-an'es-the'ze-ah) reduced tactile ability to identify the form, size, weight, and texture of objects.

stereoarthrolysis (ste're-o-ar-thro'l'i-sis) [*stereo-* + Gr. *arthron* joint + *lysis* dissolution] operative formation of a movable new joint in cases of bony ankylosis.

stereoauscultation (ste're-o-aws'kul-ta'shun) auscultation by means of two phonendoscopes each on different parts of the chest. One tube of each instrument is placed in the ears, the other tube of each being closed with the fingers.

stereoblastula (ste're-o-blas'tu-lah) a solid blastula, all of whose cells reach the external surface.

stereocampimeter (ste're-o-kam-pim'ē-ter) [*stereo-* + L. *campus*

field + *metrum* measure] an instrument for studying unilateral central scotomas and defects in the central retinal area.

stereochemical (ste're-o-kem'e-kal) pertaining to stereochemistry, or to the space relations of the atoms of a molecule.

stereochemistry (ste're-o-kem'is-tre) that chemical theory which supposes an arrangement of the atoms of certain molecules in three dimensional spaces; that branch of chemistry which treats of the space relations between atoms.

stereocilia (ste're-o-sil'e-ah) [L.] plural of *stereocilium*.

stereocilium (ste're-o-sil'e-um), pl. *stereocilia*. A nonmotile protoplasmic filament on the free surface of a cell. Cf. *kinocilium*.

stereocinefluorography (ste're-o-sin'ē-floo'or-og'rah-fe) photographic recording by motion picture camera of x-ray images produced by stereofluoroscopy, affording three-dimensional visualization.

stereocognosy (ste're-o-kog'no-se) stereognosis.

stereoencephalotome (ste're-o-en-sef'ah-lo-tōm") a guiding instrument used in stereoencephalotomy.

stereoencephalotomy (ste're-o-en-sef'ah-lot'o-me) [*stereo-* + Gr. *enkephalos* brain + *tomē* a cutting] stereotaxic surgery.

stereofluoroscopy (ste're-o-floo'o-ro-s'ko-pe) stereoscopic fluoroscopy.

stereognosis (ste're-o-g'no'sis) [*stereo-* + Gr. *gnōsis* knowledge] 1. the faculty of perceiving and understanding the form and nature of objects by the sense of touch. 2. perception by the senses of the solidity of objects.

stereognostic (ste're-o-g'no-s'tik) pertaining to stereognosis.

stereogram (ste're-o-gram) 1. a stereoscopic roentgenogram. 2. a stereoscopic drawing.

stereograph (ste're-o-graf) stereogram.

stereoisomer (ste're-o-i'so-mer) a compound exhibiting, or capable of exhibiting, stereoisomerism.

stereoisomeric (ste're-o-i'so-mer'ik) pertaining to or exhibiting stereoisomerism.

stereoisomerism (ste're-o-i-som'er-izm) [*stereo-* + *isomerism*] a type of isomerism in which two or more compounds possess the same molecular and structural formulas but different spatial or configurational formulas, the spatial relationships of the atoms being different, but not the linkages. Stereoisomerism is divided into two branches, *optical isomerism* (which includes enantiomerism and diastereoisomerism), and *geometric isomerism*. See *structural isomerism* under *isomerism*, and see *mutarotation*, *racemization*, and *tautomerism*.

stereology (ste're-o-l'o-je) the study of the three-dimensional properties of objects usually seen in two dimensions.

stereometer (ste're-o-m'ē-ter) [*stereo-* + Gr. *metron* measure] an instrument for performing stereometry.

stereometry (ste're-o-m'ē-tre) the measurement of the cubic or solid contents of a solid body, or of the capacity of a hollow space.

stereo-ophthalmoscope (ste're-o-of-thal'mo-skōp) an ophthalmoscope by which the fundus of the eye is viewed with both eyes through two eyepieces.

Stereo-orthopter (ste're-o-thop'ter) trademark for a mirror-reflecting instrument used to correct strabismus.

stereophorometer (ste're-o-fom'ē-ter) a prism-refracting instrument for use in orthoptic training.

stereophoroscope (ste're-o-for'o-skōp) [*stereo-* + Gr. *phoros* bearing + *skopein* to examine] a form of zoetrope, employed in the study of visual perception.

stereophotography (ste're-o-fo-tog'rah-fe) stereoscopic photography.

stereophotomicrograph (ste're-o-fo-to-mi'kro-graf) a stereoscopic photograph of a microscopical subject.

stereoplasm (ste're-o-plazm") [*stereo-* + Gr. *plasma* anything formed or molded] the more solid portions of protoplasm.

stereopsis (ste're-o-p'sis) [*stereo-* + Gr. *opsis* vision] stereoscopic vision.

stereoradiography (ste're-o-ra'de-og'rah-fe) stereoroentgenography.

stereoroentgenography (ste're-o-rent'gen-og'rah-fe) the making of a roentgenogram giving an impression of depth as well as of width and height.

stereoroentgenometry (ste're-o-rent'gen-om'ē-tre) measurement of the solid dimensions of a radiopaque object from its stereoscopic roentgenograms.

stereosalpingography (ste're-o-sal'ping-gog'rah-fe) salpingography in which an impression of depth is achieved.

stereoscope (ste're-o-skōp") [*stereo-* + Gr. *skopein* to examine] an instrument for producing the appearance of solidity and relief by combining the images of two similar pictures of an object.

stereoscopic (ste're-o-skop'ik) having the effect of a stereoscope; giving to objects seen a solid or three-dimensional appearance.

stereoskiagraphy (ste're-o-ski-ag'rah-fe) stereoroentgenography.

stereospecific (ste're-o-spē-sif'ik) exhibiting marked structural specificity in interacting with a substrate or a limited class of substrates; said of enzymes or of synthetic organic reactions.

stereotactic (ste're-o-tak'tik) stereotaxic.

stereotaxic (ste're-o-tak'sik) 1. pertaining to or characterized by precise positioning in space; said especially of discrete areas of the brain that control specific functions. See also under *surgery*. 2. pertaining to or exhibiting stereotaxis.

stereotaxis (ste're-o-tak'sis) taxis in response to contact with a solid or rigid surface.

stereotaxy (ste're-o-tak'se) stereotaxic surgery.

stereotropic (ste're-o-trop'ik) pertaining to or characterized by stereotropism.

stereotropism (ste're-o-t'ro-pizm) [*stereo-* + Gr. *tropos* a turning] the movement of an organism in response to contact with a solid or with a rigid surface.

stereotypy (ste're-o-ti'pe) [*stereo-* + Gr. *typos* type] the persistent repetition of senseless acts or words. It may be a persistent maintaining of a bodily attitude (*s. of attitude*), repetition of senseless movements (*s. of movement*, echopraxia), or constant repetition of certain words or phrases (*s. of speech*, echolalia, verbigeration).

Stereum (ste're-um) a genus of basidiomycetous fungi of the order Polyporales, series Hymenomycetes, composed of the bracket fungi, and including some species causing tree and wood rot. *S. hirsutum* is the source of hirsutic acid.

steric (ste'rik) - pertaining to the arrangement of atoms in space; pertaining to stereochemistry.

sterid (ster'id) steroid.

sterigma (ste-rig'mah, pl. *sterig'mata* [Gr. *stērigma* support] any of the flask-shaped structures projecting radially from the vesicle of fungi of the genus *Aspergillus*, from the tips of which conidia bud off consecutively; also any of the similar structures in *Penicillium* and other conidia-producing fungi.

Sterigmatocystis (ste-rig'mah-to-sis'tis) *Aspergillus*.

Sterigmocystis (ste-rig'mo-sis'tis) *Aspergillus*.

sterilant (ster'i-lant) a sterilizing agent, i.e., an agent that destroys microorganisms.

sterile (ster'il) [L. *sterilis*] 1. unable to produce offspring; barren. 2. aseptic; not producing microorganisms; free from living microorganisms.

sterility (stē-ril'i-te) [L. *sterilitas*] 1. the inability to produce offspring, i.e., the inability to conceive (*female s.*) or to induce conception (*male s.*). Cf. *infertility*. 2. the state of being aseptic, or free from microorganisms. **absolute s.**, complete and irremediable inability to produce offspring. **female s.**, inability of the female to conceive as a result of a structural or functional defect in the reproductive organs. **male s.**, inability of the male to fertilize the ovum as a result of failure to produce living spermatozoa (*aspermatogetic s.*), an abnormality in spermatozoa production (*dysspermatogetic s.*), or some cause other than inability to produce live, normal spermatozoa (*normospermatogetic s.*). **one-child s.**, inability to produce further offspring after having produced one. **primary s.**, 1. inability to produce offspring because of the absence of some factor essential for reproduction. 2. sterility in which no offspring has ever been produced. **relative s.**, infertility. **secondary s.**, 1. inability to produce further offspring after having conceived or induced conception. See *one-child s.* and *two-child s.* 2. inability to produce offspring resulting from a noncongenital defect. **two-child s.**, inability to produce further offspring after having produced two.

sterilization (ster'i-li-zā'shun) 1. the complete elimination of microbial viability. 2. any procedure by which an individual is made incapable of reproduction, as by castration, vasectomy, or salpingectomy. **chemical s.**, destruction of microbial viability by means of a chemical substance. **eugenic s.**, the process of rendering a person incapable of reproduction because the offspring would probably be undesirable types. **fractional s.**, **intermittent s.**, destruction of microbial viability by successive application of the procedure at intervals, to allow spores to develop into vegetative forms, which are more easily destroyed. **mechanical s.**, the elimination of microorganisms by passing the fluid through a bacteria-proof filter.

sterilize (ster'i-liz) 1. to render sterile; to free from microorganisms. 2. to render incapable of reproduction.

sterilizer (ster'i-liz'er) an apparatus used for the destruction of microorganisms; see *sterilization*. **Arnold s.**, an apparatus for sterilizing objects by means of live steam at atmospheric pressure.

Sterisil (ster'i-sil) trademark for a preparation of hexetidine.

Stern's position (sternz) [Heinrich Stern, American physician, 1868-1918] see under *position*.

Stern's test (sternz) [Margarete Stern, German scientist] see under *tests*.

sternad (ster'nad) toward the sternum, or sternal aspect.

sternal (ster'nal) [L. *sternalis*] pertaining to the sternum.

sternalgia (ster-nal'je-ah) [Gr. *sternon* sternum + *algos* pain + *-ia*] 1. pain in the sternum. 2. angina pectoris.

Sternberg's disease, giant cells (stern'bergz) [Carl Sternberg, Austrian pathologist, 1872-1935] see *Hodgkin's disease*, under *disease*, and *Sternberg-Reed cells*, under *cell*.

Sternberg-Reed cells (stern'berg-rēd) [Carl Sternberg; Dorothy Reed, American pathologist] see under *cell*.

sternebra (ster'ne-brah, pl. *ster'nebrae* [sternum + *vertebrae*] any of the segments of the sternum in early life, which later fuse to form the corpus sterni.

Sterneedle (stern'ne-d'l) trademark for a controlled depth, multiple puncture apparatus used in the diagnosis of tuberculosis. See *tuberculin test*, *Sterneedle*, under *tests*.

sternen (ster'nen) pertaining to the sternum alone.

sterno- (ster'no) [Gr. *sternon* breast] a combining form denoting relationship to the sternum.

sternoclavicular (ster'no-klah-vik'u-lar) pertaining to the sternum and clavicle.

sternoclavicularis (ster'no-klah-vik'u-la'ris) [L.] sternoclavicular.

sternocleidal (ster'no-kli'dal) [sterno- + Gr. *kleis* key] sternoclavicular.

sternocleidomastoid (ster'no-kli'do-mas'toid) pertaining to the sternum, clavicle, and mastoid process.

sternocostal (ster'no-kos'tal) [sterno- + L. *costa* rib] pertaining to the sternum and ribs.

sternodymia (ster'no-dim'e-ah) the union of two fetuses by the anterior wall of the chest.

sternodymus (ster-nod'i-mus) [sterno- + Gr. *didymos* twin] a pair of twin fetuses united by the anterior wall of the chest.

sternodynia (ster'no-din'e-ah) sternalgia.

sternogoniometer (ster'no-go'ne-om'ē-ter) an instrument for measuring the sternal angle.

sternohyoid (ster'no-hi'oid) pertaining to the sternum and to the hyoid bone.

sternoid (ster'noid) resembling the sternum.

sternomastoid (ster'no-mas'toid) pertaining to the sternum and the mastoid process of the temporal bone.

sternopagia (ster'no-pa'je-ah) sternodymia.

sternopagus (ster-nop'ah-gus) [Gr. *sternon* sternum + *pagos* thing fixed] sternodymus.

sternopericardial (ster'no-per'i-kar'de-al) pertaining to the sternum and the pericardium.

sternoscapular (ster'no-skap'u-lar) pertaining to the sternum and the scapula.

sternoschisis (ster-nos'ki-sis) [sterno- + Gr. *schisis* cleft] a developmental anomaly characterized by a fissure of the sternum.

sternothyreoideus (ster'no-thi're-oi'de-us) [L.] sternothyroid.

sternothyroid (ster'no-thi'roid) pertaining to the sternum and to the thyroid cartilage or gland.

sternotomy (ster-not'o-me) [sterno- + Gr. *tomē* a cutting] the operation of cutting through the sternum.

sternotracheal (ster'no-tra'ke-al) [sterno- + *trachea*] pertaining to the sternum and to the trachea.

sternotrypsis (ster'no-tri-pe'sis) [sterno- + Gr. *trypsis* trephination] surgical perforation of the sternum.

sternovertebral (ster'no-ver'te-bral) pertaining to the sternum and vertebrae.

sternoxiphopagus (ster'no-zi-fop'ah-gus) [sterno- + *xiphoid* process + Gr. *pagus* thing fixed] a double fetus consisting of two similar components united in the frontal plane, in the region of the sternum and xiphoid process.

sternum (ster'num) [L.; Gr. *sternon*] [NA] a longitudinal unpaired plate of bone forming the middle of the anterior wall of the thorax, and articulating above with the clavicles and along the sides with the cartilages of the first seven ribs. It consists of three portions, the manubrium, the body, and the xiphoid process. **cleft s.**, a sternum which is longitudinally fissured.

sternutatio (ster'nu-ta'she-o) [L.] sternutation. **s. convulsiva**, paroxysmal and convulsive sneezing.

sternutation (ster'nu-ta'shun) [L. *sternutatio*] the act of sneezing; a sneeze.

sternutator (ster'nu-ta'tor) a gas or other substance that causes sneezing.

sternutatory (ster-nu'tah-tor'e) [L. *sternutatorius*] 1. producing or causing sneezing. 2. an agent that causes sneezing.

sternzellen (stern'tsel-en) [Ger. "star cells"] Kupffer's cells.

steroid (ste'roid) a group name for lipids that contain a hydrogenated cyclopentanophenanthrene-ring system. Some of the substances included in this group are progesterone, adrenocortical hormones, the gonadal hormones, cardiac aglycones, bile acids, sterols (such as cholesterol), toad poisons, saponins, and some of the carcinogenic hydrocarbons. **anabolic s.**, any of a group of synthetic derivatives of testosterone, having pronounced anabolic properties and relatively weak androgenic properties, which are used clinically mainly to promote growth and repair of body tissues in senility, debilitating illness, and convalescence.

steroidogenesis (ste-roï''do-jen''ë-sis) the production of steroids, as by the adrenal glands.

steroidogenic (ste-roï''do-jen''ik) producing steroids; giving rise to steroids.

sterol (ste'rol) [Gr. *stereos* solid + *-ol* (L. *oleum* oil)] steroids with long (8–10 carbons) aliphatic side-chains at position 17 and at least one alcoholic hydroxyl group, usually at position 3. They have lipid-like solubility. Examples are cholesterol and ergosterol.

stertor (ster'tor) [L.] an act of snoring; stertorous or sonorous breathing. **hen-cluck s.**, a respiration sound like a hen's cluck in cases of postpharyngeal abscess.

stertorous (ster'to-rus) characterized by stertor.

steth- see *stetho-*.

stethacoustic (steth''ah-koo'stik) heard with the stethoscope.

stethalgia (steth-al'je-ah) pain in the chest or chest wall.

stethemia (steth-e'me-ah) [*steth-* + Gr. *haima* blood + *-ia*] congestion of the lungs.

stethendoscope (steth-en'do-sköp) [*steth-* + Gr. *endon* within + *skopein* to examine] a fluoroscope used in examination of the chest.

stetho-, steth- (steth'o, steth) [Gr. *stēthos* chest] combining form denoting relationship to the chest.

stethocyrto-graph (steth''o-ser'to-graf) stethocyrto-graph.

stethogoniometer (steth''o-go'ne-om'ë-ter) [*stetho-* + Gr. *gōnia* angle + *metron* measure] an apparatus for measuring the curvature of the chest.

stethograph (steth'o-graf) [*stetho-* + Gr. *graphein* to write] an instrument for recording movements of the chest.

stethography (steth-og'rah-fe) 1. use of the stethograph to record movements of the chest. 2. phonocardiography.

stethokyrto-graph (steth''o-kir'to-graf) [*stetho-* + Gr. *kyrtos* bent + *graphein* to write] an instrument for recording and measuring the curves of the chest.

stethometer (steth-om'ë-ter) [*stetho-* + Gr. *metron* measure] an instrument for measuring the circular dimension or expansion of the chest.

Stethomyia (steth''o-mi'yah) a subgenus of anopheline mosquitoes.

stethomyitis (steth''o-mi-i'tis) stethomyositis.

stethomyositis (steth''o-mi''o-si'tis) [*stetho* + Gr. *myos* of muscle + *-itis*] inflammation of the muscles of the chest.

stethoparalysis (steth''o-pah-ral'i-sis) paralysis of the chest muscles.

stethophone (steth'o-fōn) [*stetho-* + Gr. *phōnē* voice] 1. an instrument designed to transmit stethoscopic sounds so that many persons can hear them simultaneously. 2. a term proposed as a more accurate name for stethoscope.

stethophonometer (steth''o-fo-nom'ë-ter) [*stetho-* + Gr. *phōnē* voice + *metron* measure] an instrument for measuring the intensity of auscultatory sounds.

stethopolyscope (steth''o-pol'i-sköp) [*stetho-* + Gr. *polys* many + *skopein* to examine] a stethoscope for the simultaneous use of several persons.

stethoscope (steth'o-sköp) [*stetho-* + Gr. *skopein* to examine] an instrument of various form, size, and material for performing mediate auscultation. By means of this instrument the respiratory, cardiac, pleural, arterial, venous, uterine, fetal, intestinal, and other sounds are conveyed to the ear of the observer. **bin-aural s.**, one with two adjustable branches, designed for use with both ears. **Cammann's s.**, a binaural stethoscope. **DeLee-Hillis obstetric s.**, a stethoscope worn on the head of the examiner, used for listening to the fetal heart. **differential s.**, one by means of which sounds at two different portions of the body may be compared. **electronic s.**, an electronic amplifier of sounds within the body; selective controls permit tuning for low or high frequency tones. An auxiliary output permits the recording or viewing of audio patterns. **esophageal s.**, one which is positioned within the esophagus to transmit heart and respiratory sounds. **Leff s.**, one for listening to the fetal heart.

stethoscopic (steth''o-skop'ik) pertaining to or performed by means of the stethoscope.

stethoscopy (steth-os'ko-pe) examination by means of the stethoscope.

stethospasm (steth'o-spazm) spasm of the chest muscles.

Stevens-Johnson syndrome (ste'venz-jon'son) [Albert Mason Stevens, 1884–1945, and Frank Chambliss Johnson, 1894–1934, American pediatricians] see under *syndrome*.

Stewart's purple (stu'artz) [Douglas Hunt Stewart, New York surgeon, 1860–1933] see under *purple*.

Stewart's test (stu'artz) [George Neil Stewart, Canadian-American scientist, 1860–1930] see under *tests*.

Stewart-Holmes sign (stu'art-hōmz) [Purves Stewart, London physician, 1869–1949; Gordon Holmes, British neurologist] rebound phenomenon.

STH somatotropic (growth) hormone.

sthenia (sthe'ne-ah) [Gr. *sthenos* + *-ia*] a condition of strength and activity.

sthenic (sthen'ik) active; strong.

stheno- (sthen'o) [Gr. *sthenos* strength] a combining form denoting relationship to strength.

sthenometer (sthen-om'ë-ter) an instrument for measuring the muscular strength of a part.

sthenometry (sthen-om'ë-tre) [*stheno-* + Gr. *metron* measure] the measurement of bodily strength.

sthenophotic (sthen''o-fo'tik) [*stheno-* + Gr. *phōs* light] able to see in a strong light.

sthenoplastic (sthen''o-plas'tik) [*stheno-* + Gr. *plastikos* formed] a term applied to the body form which resembles the long or dolichomorphic form.

stibamine (stib'ah-min) chemical name: sodium 4-aminobenzenesulfonic acid. A brown, amorphous powder, $\text{NH}_2\text{C}_6\text{H}_4\text{SbO}(\text{OH})_2$, formerly used in the treatment of leishmaniasis.

stibialism (stib'e-al-izm) [L. *stibium* antimony] poisoning with antimony.

stibiated (stib'e-ät'ed) containing antimony.

stibiation (stib'e-a'shun) [L. *stibium* antimony] administration of antimonials in large quantities; treatment by bringing the patient under the full influence of antimony.

stibium (stib'e-um) [L.] antimony.

stibocaptate (stib'o-kap'tāt) chemical name: 2,2'-(1,2-dicarboxy-1,2-ethanediyl)bis-1,3,2-dithiastibolane-4,5-dicarboxylic acid hexosodium salt. A trivalent antimony compound, $\text{C}_{12}\text{H}_4\text{Na}_6\text{O}_{12}\text{S}_4\text{Sb}_2$, used as an antischistosomal, administered intramuscularly. Called also *antimony dimercaptosuccinate* and *antimony sodium dimercaptosuccinate*.

stibogluconate sodium (stib''o-glu'ko-nāt) antimony sodium gluconate.

stibonium (stib-bo'ne-um) the radical SbH_4 .

stibophen (stib'o-fen) chemical name: bis[4,5-dihydroxy-1,3-benzenedisulfonato(4-)-O',O']antimonato(5-)pentasodium heptahydrate. A trivalent antimony compound, $\text{C}_{12}\text{H}_4\text{Na}_5\text{O}_{16}\text{S}_4\text{Sb} \cdot 7\text{H}_2\text{O}$, occurring as a white or slightly yellow or pink, crystalline powder; used as an anthelmintic, chiefly in the treatment of schistosomiasis due to *Schistosoma mansoni*, *S. haematobium*, and *S. japonicum*. It is also effective in the treatment of granuloma inguinale, administered intramuscularly and intravenously. Called also *neocantimosan*.

stichochrome (stik'o-krōm) [Gr. *stichos* row + *chrōma* color] any nerve cell having the stainable substance (chromophilic bodies) arranged in more or less regular striae or layers. Cf. *arkyochrome*, *gyrochrome*, and *perichrome*.

Sticker's disease (stik'erz) [Georg Sticker, German physician, 1860–1960] erythema infectiosum.

Sticta (stik'tah) [Gr. *stiktos* punctured] a genus of lichens; lungwort.

Stieda's disease, fracture (ste'dahz) [Alfred Stieda, German surgeon, 1869–1945] see *Pellegrini's disease*, under *disease*, and see under *fracture*.

Stieda's process (ste'dahz) [L. *Stieda*, German anatomist, 1837–1918] processus posterior tali.

Stierlin's symptom (sign) (stēr'linz) [Eduard Stierlin, Munich surgeon, 1878–1919] see under *symptom*.

stifle (sti'fl) the part of a horse's limb corresponding to the human knee.

stigma (stig'mah), pl. *stigmata* or *stig'mata* [Gr. "mark"] 1. any mental or physical mark or peculiarity which aids in the identification or in the diagnosis of a condition. 2. follicular stigma. 3. purpuric or hemorrhagic lesions of the hands and/or feet, which resemble crucifixion wounds. 4. in botany the uppermost part of a pistil, which secretes a moist, sticky substance to trap and hold the pollen that reach it. 5. a reddish or brownish red dot or short rod located in the anterior region of chromatophore-bearing protozoa and rarely in colorless forms; its exact nature is unknown. Called also *eyespot*. **costal s.**, Stiller's sign. **s. of degeneracy**, any of the developmental anomalies which are found in considerable number in status degenerativus. **follicular s.**, a spot on the surface of an ovary where the vesicular follicle will rupture and permit passage of the ovum during ovulation. Called also *macula folliculi*. **Giuffrida-Ruggieri s.**, abnormal shallowness of the glenoid fossa. **hysteric s.**, a bodily mark or sign characteristic of hysteria. **malpighian s's**, the points where the smaller veins enter into the larger veins of the spleen. **psychic s.**, mental conditions marked by susceptibility to suggestion. **somatic s.**, the bodily signs of certain nervous diseases.

stigmatal (stig'mal) stigmatic.

stigmasterol (stig-mas'tër-rol) an unsaturated plant sterol, $\text{C}_{29}\text{H}_{48}\text{O}$, occurring in physostigma, cacao butter, rape oil, soybean oil, and elsewhere. An important starting material for industrial synthesis of steroid hormones.

stigmata (stig'mah-tah) [Gr.] plural of *stigma*.

stigmatic (stig-mat'ik) pertaining to a stigma.

stigmatism (stig'mah-tizm) 1. the condition due to or marked by stigmata. 2. the accurate rendition of points by a lens system.

stigmatization (stig'mah-ti-za'shun) 1. the formation of impressions on the skin. 2. the formation of bleeding points or of red lines upon the skin by hypnotic suggestion.

stigmatometer (stig'mah-tom'ē-ter) an instrument for testing the refraction of the eye by the objective method and for direct ophthalmoscopy.

stigmatoscope (stig-mat'o-skōp) the viewing instrument used in stigmatoscopy.

stigmatoscopy (stig'mah-tos'ko-pe) measurement of errors of refraction by having the patient observe a point of light (stigma) and describe the appearance under controlled conditions with different lenses.

stijfziekte (stāf-zēk'te) [Dutch] a phosphorus-deficiency disease of the joints of young cattle in South Africa, marked by retardation of growth, skeletal abnormalities, stiffness, and lameness.

stillalgin (stil-al'jin) mephenesin.

Stilbaceae (stil-ba'se-e) a family of imperfect fungi of the order Moniliales, including the genus *Dendrochium*.

stilbazium iodide (stil-baz'i-um) chemical name: 1-ethyl-2,6-bis-(p-1-pyrrolidinylstyryl)pyridinium iodide; an anthelmintic, C₃₁H₃₈N₃.

stilbene (stil'bēn) toluylene.

stilbestrol (stil-bes'trol) diethylstilbestrol.

stilet (sti-let') [Fr. *stilette*] stylet.

stilette (sti-let') [Fr.] stylet.

stili (sti'li) [L.] plural of *stilus*.

Still's disease (stilz) [Sir George Frederick Still, English physician, 1868-1941] see under *disease*.

Still-Chauffard syndrome (stil-sho-far') [Sir G. F. Still; Anatole Marie Emile *Chauffard*, French physician, 1855-1932] Chauffard's syndrome.

stillbirth (stil'berth) the delivery of a dead child; see *fetal death*, under *death*.

stillborn (stil'born) born dead.

Stiller's rib, sign (stil'erz) [Berthold Stiller, physician in Budapest, 1837-1922] see under *rib* and *sign*.

stillicidium (stil'i-sid'e-um) [L. *stilla* drop + *cadere* to fall] a dribbling or flowing by drops, as in epiphora. **s. lacrimarum**, epiphora. **s. na'rium**, coryza. **s. uri'nae**, strangury.

Stilling's canal, column, fibers, fleece, nucleus (stil'ingz) [Benedict Stilling, German anatomist 1810-1879] see under the nouns.

Stillingia (stil-lin'je-ah) [Benjamin Stillingfleet, English botanist, 1702-1771] a genus of euphorbiaceous trees, shrubs, and herbs. The root of *S. sylvatica* L., a plant of North America, is sialagogue, diuretic, and laxative.

Stilphostrol (stil-fos'trōl) trademark for a preparation of diethylstilbestrol diphosphate.

stilus (sti'lus), pl. *sti'li* [L.] stylus.

stimulant (stim'u-lant) [L. *stimulans*] 1. producing stimulation; especially producing stimulation by causing tension on muscle fiber through the nervous tissue. 2. an agent or remedy that produces stimulation. **alcoholic s.**, one of which ethylic alcohol is the basis, such as wine, brandy, whisky, and malt liquors. **cardiac s.**, one which increases the heart's action. **central s.**, a stimulant of the central nervous system. **cerebral s.**, one which exalts the functional activities of the brain. **diffusible s.**, one which acts promptly and strongly, but transiently. **general s.**, one which acts upon the whole body. **genital s.**, an aphrodisiac. **hepatic s.**, one which stimulates the functions of the liver. **intestinal s.**, a cathartic agent. **local s.**, one which affects only, or mainly, that part to which it is applied. **nervous s.**, one which acts mainly upon the nerve centers; a cerebral or a spinal stimulant. **respiratory s.**, one which increases respiratory movements. **spinal s.**, one which acts upon and through the spinal cord. **stomachic s.**, one that promotes the digestion of food in the stomach. **topical s.**, local s. **uterine s.**, an agent which stimulates uterine contraction or menstruation. **vascular s.**, **vasomotor s.**, one which affects the vasomotor centers.

stimulate (stim'u-lät) to excite to functional activity.

stimulation (stim'u-la'shun) [L. *stimulatio*, from *stimulare* to goad] the act or process of stimulating; the condition of being stimulated. **areal s.**, stimulation of an extended portion of a sense organ. **audio-visual-tactile s.**, the simultaneous rhythmic excitation of the receptors for the senses of hearing, sight, and touch. **nonspecific s.**, stimulation of a sense organ by other than the specific exciting agent. **paradoxical s.**, application of a warm object to one of the cold spots of the body produces a sensation of cold. **paraspecific s.**, nonspecific s. **punctual s.**, excitation of a sense organ by stimulation at a single point.

stimulator (stim'u-la'tor) any agent that excites functional activity. **electronic s.**, a device for applying electronic pulses or signals to activate muscles, to identify nerves, to treat muscular

disorders, etc. **long-acting thyroid s.**, a substance found in the blood in Graves' disease which exerts a stimulating effect on the thyroid of longer duration than does thyrotropin; it also differs chemically and antigenically from thyrotropin and is not elaborated in the pituitary; rather it is associated with IgG immunoglobulin, and may function as an autoantibody. Abbreviated LATS.

stimuli (stim'u-li) plural of *stimulus*.

stimulin (stim'u-lin) a name given by Metchnikoff to an element in the blood serum that stimulates the action of phagocytes.

stimulon (stim'u-lon) a viral antigen postulated to have anti-interferon activity and which therefore promotes the multiplication of other viruses.

stimulus (stim'u-lus), pl. *stim'uli* [L. "goad"] any agent, act, or influence that produces functional or trophic reaction in a receptor or in an irritable tissue. **adequate s.**, a stimulus of the specific form of energy to which the receptor is most sensitive; called also *homologous s.* **aversive s.**, one which, when applied following the occurrence of a response, decreases the strength of that response on later occurrences. **chemical s.**, a chemical substance capable of exciting a response in an organism mediated through specialized nerve endings. **conditioned s.**, a neutral object or event which is psychologically related to a naturally stimulating object or event (unconditioned stimulus) and which induces a conditioned response. Abbreviated CS. **discriminative s.**, a stimulus associated with reinforcement, which exerts control over a particular form of behavior; the subject discriminates between closely related stimuli and responds positively only in the presence of that stimulus. **electric s.**, a galvanic, induced, or other electric current or shock as applied to a responsive tissue. **eliciting s.**, any stimulus, conditioned or unconditioned, which elicits a response. **heterologous s.**, one which produces an effect or sensation when applied to any part whatever of a nerve tract. **heterotopic s.**, a stimulus to heart contraction arising elsewhere than in the sinoatrial node, the normal pacemaker of the heart. **homologous s.**, adequate s. **liminal s.**, one near the threshold. **mechanical s.**, a stimulant application of mechanical force, as in friction or pinching. **nomotopic s.**, a stimulus to heart contraction arising in the sinoatrial node. **reinforcing s.**, any stimulus that follows a response and that increases the probability of eliciting that response. **structured s.**, a well-organized and unambiguous stimulus, the perception of which is influenced to a greater extent by the characteristics of the stimulus than by those of the perceiver. Called also *unambiguous s.* **subliminal s.**, one well below the threshold. **supraliminal s.**, one well above the threshold. **thermal s.**, application of heat. **threshold s.**, a stimulus that is just strong enough to elicit a response; see also *threshold* (def. 1 and 2). **unconditioned s.**, any stimulus capable of eliciting an unconditioned response. **unstructured s.**, an unclear or ambiguous stimulus, the perception of which is influenced to a greater extent by the characteristics of the perceiver than by those of the stimulus. Called also *ambiguous s.*

sting (sting) 1. an injury caused by the venom of a plant or animal (biotoxin) introduced into the individual or with which he has come in contact, together with the mechanical trauma caused by the organ responsible for its introduction. 2. the organ used to inflict such injury. **Irukandji s.**, a clinical syndrome observed in the vicinity of Cairns in Queensland, Australia, attributed to stinging by the carybdeid jellyfish *Carukia barnesi*.

Stintzing's tables (stint'zingz) [Roderich Stintzing, Jena internist, 1854-1933] see under *table*.

Stipa viridula (sti'pah vi-rid'u-lah) a grass of the southwestern United States, called *sleepygrass*; poisonous to cattle and horses; said to be a powerful narcotic, diuretic, sudorific, and cardiac poison.

stippling (stip'pling) a spotted condition or appearance, such as an appearance of the retina as if dotted with light and dark points, or the spotted appearance of red blood cells in basophilia. See *basophilia*. It may also be the result of irregular indentations or undulations in a surface, such as the adaptive specialization of normal gingivae which sometimes disappears in disease. **malarial s.**, the finely granular appearance often seen in stained red blood cells which harbor tertian malarial parasites; the granules are called *Schüffner's dots*. **Maurer's s.**, Maurer's dots. **Schüffner's s.**, malarial s.

stirofos (sti'ro-fos) chemical name: (Z)-2-chloro-1-(2,4,5-trichlorophenyl)ethenyl dimethyl ester phosphoric acid; a veterinary insecticide, C₁₆H₈Cl₄O₄P.

stirpicultural (ster'pi-kul'tu-ral) pertaining to stirpiculture.

stirpiculture (ster'pi-kul'tür) [L. *stirps* stock + *cultura* culture] the systematic attempt at improving a stock or race by attention to the laws of breeding.

stirrup (stir'up) 1. a structure or device resembling the stirrup of a saddle, or the portion of an apparatus on which to rest the feet. 2. the stapes. **Finochietto's s.**, an apparatus for exerting skeletal traction in leg fractures, with a U-shaped steel band, passed over the posterior process of the calcaneus and fixed by a cross bar, from which traction is applied.

stitch (stich) 1. to pass lengths of material (thread, catgut, wire,

etc.) through tissue by means of a needle, usually to approximate wound edges but also to fix or mobilize an organ or other structure. 2. a single suture. 3. a popular term for a severe pain, generally at the costal margin on one side.

stithe (stith) incus.

stizolobin (sti'zo-lo'bin) the globulin of the Chinese velvet bean.

stochastic (sto-kas'tik) [Gr. *stochastikos* skillful in aiming at, able to guess] able to conjecture skillfully; arrived at by skillful conjecturing; random.

stoichiology (stek'e-ol'o-je) stoichiology.

Stoerk's blennorrhea (sterks) [Carl *Stoerk*, Austrian laryngologist, 1832-1899] see under *blennorrhea*.

stoichiology (stoi'ke-ol'o-je) [Gr. *stoicheion* element + *-logia*] the science of elements, especially the physiology of the cellular elements of tissues.

stoichiometry (stoi'ke-om'e-tre) [Gr. *stoicheion* element + *metron* measure] the study of the numerical relationships of chemical elements and compounds and the mathematical laws of chemical changes; the mathematics of chemistry.

stoke (stök) a unit of kinematic viscosity, being that of fluid with a viscosity of 1 poise and a density of 1 gram per cubic centimeter.

Stokes' amputation (operation) [Sir William *Stokes*, Irish surgeon, 1839-1900] Gritti-Stokes amputation.

Stokes' disease, etc. (stöks) [William *Stokes*, Irish physician, 1804-1878] see under *collar, disease, expectorant, law, sign, and syndrome*.

Stokes' reagent (test) (stöks) [William Royal *Stokes*, American pathologist, born 1870] see under *reagent*.

Stokes-Adams disease (syndrome) [William *Stokes*, Irish physician, 1804-1878; Robert *Adams*, Irish physician, 1791-1875] see *Adams-Stokes disease*, under *disease*.

Stokvis' disease, test (stok'vis) [Barend Joseph E. *Stokvis*, Dutch physician, 1834-1902] see *enterogenous cyanosis*, under *cyano-*, and see under *tests*.

Stokvis-Talma syndrome (stok'vis-tal'mah) [B.J.E. *Stokvis*; Sape *Talma*, Dutch physician, 1847-1918] enterogenous cyanosis.

stoma (sto'mah), pl. *sto'mas* or *sto'mata* [Gr. "mouth"] 1. any minute pore, orifice, or opening on a free surface. 2. the opening established in the abdominal wall by colostomy, ileostomy, etc.; also the opening between two portions of the intestine in an anastomosis.

stomacace (sto-mak'ah-se) [Gr. *stoma* mouth + *kakē* badness] ulcerative stomatitis.

stomach (stum'ak) [L. *stomachus*; Gr. *stomachos*] the musculo-membranous expansion of the alimentary canal between the esophagus and the duodenum. Called also *ventriculus* [NA]. The proximal portion is the cardiac part; the portion above the entrance of the esophagus is the fundus; the distal portion is the pyloric part; and the body is between the fundus and the pyloric part. The upper concave surface or edge is the *lesser curvature*; the lower convex edge is the *greater curvature*. The coats of the stomach are four: an outer, peritoneal, or *serous* coat; a *muscular coat*, made up of longitudinal, oblique, and circular fibers; a *submucous* coat; and the *mucous* coat or membrane forming the inner lining. Gastric glands, which are in the mucous coat, secrete gastric juice containing hydrochloric acid, pepsin, and various other digestive enzymes into the cavity of the stomach. Food mixed with this secretion forms a semifluid substance (chyme) suitable for further digestion by the intestine. **aberrant umbilical s.**, an umbilical structure containing gastric mucosa. **aviator's s.**, aeroneurosis. **bilocular s.**, hourglass s. **cardiac s.**, the portion of the stomach close to the esophagus. **cascade s.**, an atypical form of hourglass stomach, characterized roentgenologically by a drawing up of the posterior wall; an opaque medium first fills the upper sac and then cascades into the lower sac. **cup-and-spill s.**, a roentgenographic finding in which the barium remains for a time in the gastric fundus, before spilling over into the main cavity of the stomach, as a result of pressure by a distended colon. **dumping s.**, a complication that sometimes follows gastroenterostomy, in which food is emptied rapidly from the stomach into the jejunum through the new opening, producing weakness, sweating, palpitation, and varying degrees of syncope. See *dumping syndrome*, under *syndrome*. **Holzkecht s.**, a stomach the roentgen picture of which shows it placed diagonally with the pylorus at the lower end of the diagonal. **hourglass s.**, a stomach more or less completely and permanently divided into two parts, so that it resembles an hour-glass in shape; the deformity is due to scarring which complicates chronic gastric ulcer. **leather bottle s.**, linitis plastica. **miniature s.**, Pavlov's s. **Pavlov's s.**, a portion of the stomach of a dog isolated from communication with the rest of the stomach and opening on to the abdominal wall through a fistula: used in studying gastric secretion. **powdered s.**, the dried and powdered defatted wall of the stomach of the hog, *Sus scrofa*, formerly used in the treatment of anemia. **sclerotic s.**, linitis plastica. **thoracic s.**, a stomach which is situated or drawn up above the

level of the diaphragm; i.e., that part of the stomach which has herniated through the diaphragmatic hiatus. **trifid s.**, a stomach with two constrictions, producing three pouches. **upside-down s.**, thoracic s. **waterfall s.**, cascade s. **water-trap s.**, a stomach with an extremely high pylorus, so that it does not readily empty itself.

stomachal (stum'ah-kal) pertaining to the stomach.

stomachalgia (stum'ah-kal'je-ah) pain in the stomach.

stomachic (sto-mak'ik) [L. *stomachicus*; Gr. *stomachikos*] 1. pertaining to the stomach. 2. a medicine which promotes the functional activity of the stomach; a stomachic tonic.

stomachodynia (stum'ah-ko-din'e-ah) [*stomach* + Gr. *odynē* pain + *-ia*] pain in the stomach.

stomachoscopy (sto'mah-kos'ko-pe) [*stomach* + Gr. *skopein* to examine] gastroscopy.

stomadeum (sto'mah-de'um) stomodeum.

stomal (sto'mal) pertaining to a stoma or stomata.

stomalgia (sto-mal'je-ah) stomatalgia.

stomata (sto'mah-tah) [Gr.] plural of *stoma*.

stomatal (sto'mah-tal) pertaining to stomata.

stomatagia (sto'mah-tal'je-ah) pain in the mouth.

stomatic (sto-mat'ik) pertaining to the mouth.

stomatitides (sto'mah-tit'i-déz) plural of *stomatitis*. A general term applied collectively to inflammatory conditions of the oral mucosa.

stomatitis (sto-mah-ti'tis), pl. *stomatitides* [*stomato-* + *-itis*] inflammation of the oral mucosa, due to local or systemic factors, which may involve the buccal and labial mucosa, palate, tongue, floor of the mouth, and the gingivae. **allergic s.**, stomatitis venenata caused by exposure to allergens. **angular s.**, perleche. **aphthobullous s.**, foot-and-mouth disease. **s. aphtho'sa, aphthous s.**, a disease of the oral mucosa characterized by small whitish ulcerative lesions surrounded by a red border (aphthae); its onset has been chiefly associated with mild local traumatic injury, allergic conditions, endocrine-associated conditions (such as menstruation), and emotional stress. The exact cause is unknown, but appears to be related to infection by a pleomorphic transitional L-form of α -hemolytic streptococcus, and an immunologic hypersensitivity reaction to the organism has been implicated. Herpes simplex viral infection, (*herpetic s.*, *s. herpetic, vesicular s.*) has been eliminated as a possible factor. In the more severe form, it is known as *peridontitis mucosa necrotica recurrens* (q.v.). Called also *canker sore*. **s. arsenica/lis** stomatitis due to arsenical poisoning. **catarrhal s.**, a clinically and histologically nonspecific stomatitis that develops as a complication of a wide variety of conditions. **contact s.**, *s. venenata*. **epidemic s.**, **epizootic s.**, foot-and-mouth disease. **erythematopustulaceous s.**, stomatitis characterized by a reddened mucous membrane, covered with a layer of thick, sticky matter; seen in uremia. **s. exanthemat'ica**, stomatitis secondary to an exanthematous disease. **fusospirochetal s.**, necrotizing ulcerative gingivostomatitis. **s. gangreno'sa, gangrenous s.**, a form of noma; a severe fusospirochetal infection of grave prognosis, occurring in debilitated patients, with gangrene of the oral and facial tissues. Called also *cancerum oris*. **gonococcal s.**, a rare infection of the oral mucosa caused by *Neisseria gonorrhoeae*, occurring in newborn infants (infected from the birth canal) and in adults. **herpetic s.**, *s. herpetic'ica*, an acute infection of the oral mucosa with vesicle formation, caused by the virus of herpes simplex; called also *vesicular s.* **s. hyphomycet'ica**, thrush, def. 1. **infectious s.**, a general term for a usually mild infection of the oral mucosa, beginning with a circumscribed red, itchy area. **s. intertrop'ica**, stomatitis associated with tropical sprue. **lead s.**, the oral manifestations of lead poisoning, including a bluish line along the free gingival margin, pigmentation of the mucosa in contact with the teeth, metallic taste, excessive salivation, and swelling of the salivary glands. **s. medicamento'sa**, eruptive involvement of the oral mucosa resulting from an allergic reaction to some medication, such as antibiotics, arsenic, barbiturates, or salicylates. **membranous s.**, infection of the oral mucosa, accompanied by the formation of false membrane. **mercurial s.**, stomatitis due to mercurial poisoning. **s. mycogenet'ica**, stomatitis resulting from a fungus infection. **mycotic s.**, thrush, def. 1. **necrotizing ulcerative s.**, necrotizing ulcerative gingivostomatitis. **s. nicoti'na**, irritation of the palate resulting from the coal tar products of tobacco, sometimes contributing to neoplasia. **nonspecific s.**, inflammation of the oral mucosa occurring in association with other conditions, such as menstruation, diabetes, or uremia. **s. scarlati'na**, the oral manifestations of scarlet fever (scarlatina), the most typical being strawberry tongue followed by raspberry tongue. **s. scorbu'tica**, stomatitis associated with vitamin C deficiency. **syphilitic s.**, stomatitis due to systemic syphilis. **s. traumatic'ica**, stomatitis produced by some mechanical, thermal, or chemical cause. **tropical s.**, see under *sprue*. **ulcerative s.**, stomatitis characterized by the appearance of shallow ulcers on the cheeks, tongue, and lips. **ulcerative s. of sheep**, orf, def. 1. **uremic s.**, the oral manifestations of uremia, including varying degrees of erythema, exudation, ulceration,

pseudomembrane formation, foul breath, and burning sensations. **s. venena'ta**, lesions of the oral mucosa resulting from contact with ordinarily innocuous substances such as denture bases, dentifrices, lipstick, food items, or flavoring in gum and candy. **vesicular s.**, 1. herpetic s. 2. a vesicular eruption on the oral mucosa of viral etiology, which affects swine, cattle, and horses. In swine, it is accompanied by vesicles on the snout and interdental spaces, in cattle on the udder and teats, and in horses on the coronary band. It must be distinguished from foot-and-mouth disease. **Vincent's s.**, necrotizing ulcerative gingivostomatitis.

stomato- (sto'mah-to) [Gr. *stoma*, *stomatos* mouth] a combining form denoting relationship to the mouth or to the ostium uteri.

stomatocace (sto'mah-tok'ah-se) [*stomato-* + Gr. *kakē* badness] ulcerative stomatitis.

stomatocyte (sto'mah-to-sit) a form of red blood cell in which a slit or mouthlike area replaces the normal circle of pallor, as seen in a rare form of hemolytic anemia and in liver disease.

stomatocytosis (sto'mah-to-si-to'sis) a rare congenital hemolytic anemia characterized by the presence of stomatocytes in the peripheral blood.

stomatodynia (sto'mah-to-din'e-ah) [*stomato-* + Gr. *odynē* pain + *-ia*] pain in the mouth.

stomatodysodia (sto'mah-to-dis-o'de-ah) [*stomato-* + Gr. *dysōdia* stench] a bad odor coming from the mouth.

stomatogastric (sto'mah-to-gas'trik) pertaining to the stomach and the mouth.

stomatoglossitis (sto'mah-to-glos-si'tis) inflammation involving the oral mucous membranes and the tongue, occurring in nutritional disorders such as pellagra, beriberi, vitamin B complex deficiency, and in infections, etc.

stomatognathic (sto'mah-tog-nath'ik) [*stomato-* + Gr. *gnathos* jaw] denoting the mouth and jaws collectively; see under *system*.

stomatography (sto'mah-tog'rah-fe) [*stomato-* + Gr. *graphein* to write] a description of the mouth.

stomatolalia (sto'mah-to-la'le-ah) speaking through the mouth with the nares closed.

stomatological (sto'mah-to-loj'e-kal) pertaining to stomatology.

stomatologist (sto'mah-tol'o-jist) an expert in stomatology.

stomatology (sto'mah-tol'o-je) that branch of medicine which treats of the mouth and its diseases. **forensic s.**, the application of the sum of knowledge regarding the mouth and its structures to questions of law.

stomatomalacia (sto'mah-to-mah-la'she-ah) [*stomato-* + Gr. *malakia* softness] softening of the structures of the mouth.

stomatomenia (sto'mah-to-me'ne-ah) [*stomato-* + Gr. *mēniaia* menses] bleeding from the mucous membrane of the mouth at the time of menstruation.

stomatomy (sto-mat'o-me) [*stoma-* + Gr. *tomē* a cutting] surgical incision of the ostium uteri.

stomatomycosis (sto'mah-to-mi-ko'sis) [*stomato-* + Gr. *mykēs* fungus] any oral disease due to a fungus.

stomatonecrosis (sto'mah-to-nē-kro'sis) stomatitis gangrenosa.

stomatonomia (sto'mah-to-no'mah) stomatitis gangrenosa.

stomatopathy (sto'mah-top'ah-the) [*stomato-* + Gr. *pathos* suffering] any disorder of the mouth.

stomatoplastic (sto'mah-to-plas'tik) pertaining to stomatoplasty.

stomatoplasty (sto'mah-to-plas'te) [*stomato-* + Gr. *plassein* to mold] plastic surgery of, or operative repair of, defects of the mouth or of the ostium uteri.

stomatorrhagia (sto'mah-to-ra'je-ah) [*stomato-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the mouth. **s. gingiva'rum**, hemorrhage from the gingivae.

stomatoschisis (sto'mah-tos'ki-sis) [*stomato-* + Gr. *schisis* split] harelip.

stomatoscope (sto-mat'o-skōp) [*stomato-* + Gr. *skopein* to examine] an instrument used in inspecting the mouth.

stomatosis (sto'mah-to'sis) stomatopathy.

stomatotomy (sto'mah-tot'o-me) stomatotomy.

stomatotyphus (sto'mah-to-ti'fus) typhus fever with severe lesions of the mouth.

stomencephalus (sto'men-sef'ah-lus) stomocephalus.

stomion (sto'me-on) [Gr. *stomion*, dim. of *stoma* mouth] an anthropometric landmark, being the central point in the oral fissure when the lips are closed.

stomoccephalus (sto'mo-sef'ah-lus) [*stomo-* + Gr. *kephalē* head] a fetus with a rudimentary head and jaws, so that the skin hangs in folds about the mouth.

stomodeal (sto'mo-de'al) pertaining to the stomodeum.

stomodeum (sto'mo-de'um) [*stomo-* + Gr. *hodaio* pertaining to a way] an invagination of the ectoderm of the embryo at the point where later the mouth is formed.

stomoschisis (sto-mos'ki-sis) [*stomo-* + Gr. *schisis* a splitting] fissure of the mouth.

Stomoxys (sto-mok'sis) a genus of flies of the family Muscidae. **S. bouffar'di**, a species transmitting *Trypanosoma cazalboui*, a parasite of goats in French Guiana. **S. cal'citrans**, the common stable fly; it is annoying to man and beast, and is capable of transmitting anthrax, tetanus, *Trypanosoma evansi*, which causes surra in horses, and infectious anemia of horses. Called also *legsticker*.

Stomoxys calcitrans.

-stomy (sto'me) [Gr. *stomoun* to provide with an opening, or mouth] a word termination denoting the surgical creation of an artificial opening into a hollow organ (colostomy, tracheostomy) or a new opening between two such structures (gastroenterostomy, pyeloureterostomy); also denoting the opening so created.

stone (stōn) 1. a mass of extremely hard and unyielding material, as a gallstone; a calculus. 2. a unit of weight recognized in Great Britain, being the equivalent of 14 pounds (avoirdupois), or about 6.34 kg. (metric). **artificial s.**, a specially calcined gypsum derivative used for making models or casts of oral structures; similar to plaster of Paris but with less porous grains, so that the product is stronger than one made of plaster of Paris. **bladder s.**, vesical calculus. **blue s.**, cupric sulfate. **chalk s.**, articular calculus. **dental s.**, 1. denticle (def. 2). 2. artificial stone. **eye s.**, the operculum of a small shell or other small calcareous object; used for removing foreign bodies from the eye. **kidney s.**, renal calculus. **lung s.**, lung calculus. **metabolic s.**, cholesterol calculus. **pulp s.**, denticle, def. 2. **rotten s.**, a siliceous mineral used as a polishing material. **salivary s.**, see under *calculus*. **s-searcher**, a sound for exploring the bladder wherein a calculus is suspected. **skin s's**, calcareous nodules in the skin. **staghorn s.**, see under *calculus*. **struvite s.**, see under *calculus*. **tear s.**, dacryolith. **vein s.**, phlebolith. **womb s.**, uterine calculus.

Stookey's reflex (stook'ēz) [Byron Polk Stookey, New York neurologic surgeon, born 1887] see under *reflex*.

stool the fecal discharge from the bowels. **bilious s.**, the yellowish or brownish stools, turning darker on exposure, that are characteristic of bilious diarrhea. **caddy s.**, the stools seen in yellow fever; they look like dark, sandy mud. **fatty s.**, stools containing fat; seen in diseases of the pancreas and in malabsorption syndromes. **lienteric s.**, stool that contains much undigested food. **mucous s.**, stool containing a large amount of mucus; seen in intestinal inflammation or mucous colitis. **pea soup s.**, the characteristic liquid evacuation of typhoid fever. **pipe-stem s.**, stool resembling the shape of a pipe stem, seen in stricture of the lower rectum. **ribbon s.**, a long flattened stool seen in lower rectal stricture. **rice water s.**, the characteristic watery evacuations of cholera. **sago-grain s.**, stools of amebiasis in which the liquid feces contain small flecks of blood-stained mucus. **silver s.**, stools having the color of aluminum or silver paint, due to a mixture of melena and white fatty stools; it occurs in tropical sprue and in children with diarrhea who are given sulfonamides, and is indicative of carcinoma of the ampulla of Vater. **spinach s.**, dark-green stool resembling cooked spinach, resulting from the use of calomel in infants.

storax (sto'raks) [L. *storax*, *styrax*; Gr. *styrax*] [USP] a balsam from the trunk of *Liquidambar orientalis* Mill (Levant s.), a tree of western Asia, or of *L. styraciflua* L. (American s.) of North America, occurring as a semiliquid, grayish brown, sticky, opaque mass which deposits on standing a heavy brown layer, or as a semisolid, sometimes solid mass, softened by warming; used as an ingredient of compound benzoin tincture (see under *tincture*). It has been used as an expectorant and topical parasiticide. Called also *styrax*.

storiform (stor'i-form) [L. *storea*, *storia* a rush mat + *form*] denoting a matted, irregularly whorled pattern, somewhat resembling that of a straw mat; said of the microscopic appearance of fibrous histiocytomas.

storm (stōrm) an outburst; a temporary and sudden increase in symptoms. **thyroid s.**, **thyrotoxic s.**, a sudden and dangerous increase of the symptoms of thyrotoxicosis (Graves' disease), especially after thyroidectomy.

Storm van Leeuwen chamber [William Storm van Leeuwen, a pharmacist in Leyden, 1882-1933] see under *chamber*.

stoss (stos) [Ger.] see *stosstherapy*.

stosstherapy (stos'ther-ah-pe) [Ger. *stoss* shock, stroke + *therapy*] treatment of a disease by a single massive dose of a therapeutic agent, or by short-term administration of unphysiologically large doses.

Stoxil (stok'sil) trademark for a preparation of idoxuridine.

STP popular designation for 2,5-dimethoxy-4-methylamphetamine.

strabismic (strah-biz'mal) strabismic.

strabismic (strah-biz'mik) pertaining to or of the nature of strabismus.

strabismology (strah'bis-mol'o-je) the study of strabismus.

strabismometer (strah-biz-mom'ē-ter) [*strabismus* + Gr. *metron* measure] an apparatus for measuring strabismus.

strabismus (strah-biz'mus) [Gr. *strabismos* a squinting] deviation of the eye which the patient cannot overcome. The visual axes assume a position relative to each other different from that required by the physiological conditions. The various forms of strabismus are spoken of as tropias, their direction being indicated by the appropriate prefix, as *cycloptropia*, *esotropia*, *exotropia*, *hypertropia*, and *hypotropia*. Called also *cast*, *heterotropia*, *manifest deviation*, and *squint*. **absolute s.**, that which occurs at all distances of the fixation point. **accommodative s.**, that which is due to excessive or deficient accommodative effort. **alternating s.**, **bilateral s.**, **binocular s.**, that which affects each eye alternately. **Braid's s.** (*obs.*), the turning of the eyes simultaneously upward and inward; a means sometimes adopted of inducing the hypnotic state. **comitant s.**, **concomitant s.**, **concomitant s.**, that which is due to faulty insertion of the eye muscles, resulting in the same amount of deviation in whatever direction the eyes are looking, because the squinting eye follows the movements of the other eye; called also *comitant s.* and *concomitant squint*. **constant s.**, strabismus that is constantly present. **convergent s.**, *esotropia*. **cyclic s.**, intermittent strabismus that recurs at regular intervals. **s. deor'sum ver'gens**, that in which the visual axis of the squinting eye falls below the fixation point. **divergent s.**, *exotropia*. **dynamic s.**, the tendency to strabismus due to insufficiency of the ocular muscles, but which may be overcome by the effort of binocular vision. **external s.**, *exotropia*. **horizontal s.**, strabismus in which the deviation of the visual axis is in the horizontal plane; see *esotropia* and *exotropia*. **incomitant s.**, **noncomitant s.**, **intermittent s.**, that which occurs only at intervals. **internal s.**, *esotropia*. **kinetic s.**, strabismus due to overactivity of the muscles controlling ocular movements. **latent s.**, that which occurs only when one eye is occluded. **manifest s.**, strabismus which occurs when vision by both eyes is possible. **mechanical s.**, that due to pressure or traction on the eye, as by a tumor, producing deflection. **monocular s.**, **monolateral s.**, **unilateral s.**, **muscular s.**, **concomitant s.**, **noncomitant s.**, **noncomitant s.**, that in which the amount of deviation of the squinting eye varies according to the direction in which the eyes are turned; called also *incomitant* or *noncomitant s.* **non-paralytic s.**, **concomitant strabismus** that is not due to paralysis of the extraocular muscles. **paralytic s.**, that which is due to paralysis of an eye muscle. **paralytic s.**, **acute**, strabismus attended by dizziness and double vision. **periodic s.**, that occurring only during efforts at accommodation. **relative s.**, that which occurs for some and not for other distances of the fixation point. **spasmodic s.**, that which is due to spasm of the muscles of the eye. **suppressed s.**, *heterophoria*. **s. sur'sum ver'gens**, that in which the visual axis of the squinting eye lies above the fixation point. **unilateral s.**, **unioocular s.**, strabismus affecting only one eye. **vertical s.**, strabismus in which the deviation of the visual axis is in the vertical plane; see *hypertropia* and *hypotropia*.

strabometer (strah-bom'ē-ter) strabismometer.

strabometry (strah-bom'ē-tre) measurement of the amount of strabismus.

strabotome (strah'o-tōm) a knife for performing strabotomy.

strabotomy (strah-bot'o-me) [Gr. *strabos* squinting + *tomē* a cutting] the cutting of the tendon of a muscle of the eye in treatment of strabismus.

strain (strān) 1. to overexercise; to use to an extreme and harmful degree. 2. to filter or subject to colation. 3. an overstretching or overexertion of some part of the musculature. 4. excessive effort or undue exercise. 5. a group of organisms within a species or variety, characterized by some particular quality, as rough or smooth strains of bacteria. **cell s.**, cells derived from a primary culture or cell line by the selection and cloning of cells having specific properties. **heterologous s.**, a strain of microorganisms different from the strain originally isolated, tested, etc. **high-jumper's s.**, strain of the rotator muscles of the thigh occurring in high jumpers. **homologous s.**, a strain of microorganisms similar to the strain originally isolated, tested, etc. **resistant s.**, a strain of organisms that is resistant to the effects of the agents, such as antibiotics or insecticides, used to control them. **R s.**, **rough s.**, the rough strain that results from bacterial dissociation; R colonies have a dull, uneven surface and irregular border, the growth in fluid media tends to flake out, no capsules are seen, and the culture tends to be less virulent. **S s.**, **smooth s.**, the smooth strain that results from bacterial dissociation. The S colonies have a smooth surface and an unbroken border, growth in fluid media tends to be diffuse,

capsules, if present at all, are found in this strain, and the culture tends to be more virulent. **Vi s.**, a strain of *Salmonella typhosa* which contains the Vi (virulence) antigen of Felix.

strainer (strān'er) an apparatus for straining.

strait (strāt) a narrow passageway. **pelvic s.**, **inferior**, the pelvic outlet. **pelvic s.**, **superior**, the pelvic inlet.

straitjacket (strāt'jak'et) a contrivance for restraining the limbs, especially the arms, of a violently disturbed person; called also *camisole*.

stramonium (strah-mo'ne-um) the dried leaf and flowering or fruiting tops of *Datura stramonium*; used like belladonna and in the treatment of asthma. Called also *thorn apple*.

strand (strand) a thread or fiber. **Billroth's s's**, *trabeculae lienis*. **lateral enamel s.**, a structure in a developing tooth connecting the enamel organ with the dental lamina.

strangesthesia (strang'g'l-es-the'ze-ah) [Gr. *strangalizein* to choke + *aisthēsis* perception + *-ia*] *zonesthesia*.

strangle (strang'g'l) [L. *strangulare*] to choke, or to be choked by compression or other obstruction of the windpipe.

strangles (strang'g'lz) 1. an infectious disease of horses, characterized by a mucopurulent inflammation of the respiratory mucous membrane, with lymph node abscesses, and caused by the *Streptococcus equi*. Called also *colt distemper*. 2. a condition in swine, characterized by infection of the lymph nodes, producing heavily encapsulated abscesses in the region of the pharynx.

strangulated (strang'gu-lāt'ed) [L. *strangulatus*] congested by reason of constriction or hernial stricture; see *hernia*.

strangulation (strang'gu-la'shun) [L. *strangulatio*] 1. choking or throttling arrest of respiration, due to occlusion of the air passage. 2. arrest of the circulation in a part, due to compression.

stranguria (strang-gu're-ah) *strangury*.

strangury (strang'gu-re) [Gr. *stranx* drop + *ouron* urine] slow and painful discharge of the urine, due to spasm of the urethra and bladder.

strap (strap) 1. a band or slip, as of adhesive plaster, used in attaching parts to each other. 2. to bind down tightly. **crib s.**, a strap to be placed around the neck of a horse to prevent cribbing by compressing the windpipe. **Montgomery s's**, straps made of lengths of adhesive tape, used to secure dressings that must be changed frequently. Called also *Montgomery's tapes*. **Wyman's s's** (*obs.*), a set of straps for keeping a violently disturbed person in bed.

strapping (strap'ing) the application of strips of adhesive plaster, one overlapping the other, to cover and exert pressure upon an extremity or other area of the body; see Plate XLVI and see also *bandaging*. **Gibney's s.**, see under *bandage*.

Strasburger's cell plate (strahs-bur'gerz) [Eduard Adolf Strasburger, German botanist, 1844–1912] midbody.

Strassburg's test (strahs'boorgz) [Gustav Adolf Strassburg, German physiologist, born 1848] see under *tests*.

strata (stra'tah) [L.] plural of *stratum*.

stratification (strat'i-fi-ka'shun) [L. *stratum* layer + *facere* to make] disposal in layers.

stratified (strat'i-fid) disposed in layers.

stratiform (strat'i-form) [L. *stratum* layer + *forma* form] having the form of strata.

stratigram (strat'i-gram) a roentgenogram of a selected layer of the body made by body section roentgenography.

stratigraphy (strah-tig'rah-fe) [L. *stratum* layer + Gr. *graphein* to write] see *body section roentgenography*, under *roentgenography*.

stratum (stra'tum), pl. *stra'ta* [L.] a layer; [NA] a general term for a sheetlike mass of substance of nearly uniform thickness, particularly when the layer is one of several associated layers. **s. adamantin'um**, the enamel of a tooth (enamelum [NA]). **s. al'bum profun'dum cor'poris quadrigemini**, a layer of white matter between the corpora quadrigemina and the central gray layer of the cerebral aqueduct. **s. bacillo'rum**, *s. neuroepitheliale retinae*. **s. basa'le**, basal layer: the deepest layer of the endometrium, which contains the blind ends of the uterine glands; the cells of this layer undergo minimal change during the sexual cycle. **s. basa'le epider'midis** [NA], basal layer of epidermis: the deepest stratum of the epidermis, composed of a single layer of deeply basophilic cells; called also *s. cylindricum epidermidis* [NA alternative]. **cerebral s. of retina**, **s. cerebra'le ret'inae** [NA], the internal, transparent, light-sensitive layer of the optic part of the retina. **circular s. of muscular tunic of colon**, *s. circulare tunicae muscularis coli*. **circular s. of muscular tunic of rectum**, *s. circulare tunicae muscularis recti*. **circular s. of muscular tunic of small intestine**, *s. circulare tunicae muscularis intestini tenuis*. **circular s. of muscular tunic of stomach**, *s. circulare tunicae muscularis ventriculi*. **s. circula're membra'nae tym'pani** [NA], circular layer of tympanic membrane: the layer of circularly coursing fibers deep to the mucous layer of the tympanic membrane; it is best developed near the periphery. **s. circula're tu'nicae muscula'ris co'li**

Strapping for dislocated intervertebral disk

Front view

Back view

Knee strapping

Rib strapping

Strapping for acromioclavicular dislocation

Basket weave for ankle

Metatarsal strapping

[NA], circular layer of muscular tunic of colon: the inner layer of circularly coursing fibers in the muscular coat of the colon. **s. circula're tu'nicae muscula'ris intesti'ni ten'uis** [NA], circular layer of muscular tunic of small intestine: the inner layer of circularly coursing fibers in the muscular coat of the small intestine. **s. circula're tu'nicae muscula'ris rec'ti** [NA], circular layer of muscular tunic of rectum: the inner layer of circularly coursing fibers in the muscular coat of the rectum. **s. circula're tu'nicae muscula'ris tu'bae uteri'nae**, the layer of circularly coursing fibers in the muscular coat of the uterus. **s. circula're tu'nicae muscula'ris ure'thrae mulie'bris**, the layer of circularly coursing fibers in the muscular coat of the female urethra. **s. circula're tu'nicae muscula'ris ventric'uli** [NA], circular layer of muscular tunic of stomach: the layer of circularly coursing fibers in the muscular coat of the stomach. **s. compac'tum**, compact layer: the layer of the endometrium nearest the surface, which contains the necks of the uterine glands; together with the stratum spongiosum, it forms the *stratum functionale* (q.v.). **connective tissue s. of mesentery**, lamina mesenterii propria. **s. cor'neum epider'midis** [NA], horny layer of epidermis: the outermost layer of the epidermis, consisting of cells that are dead and desquamating; the term once embraced also the layers now called *s. lucidum epidermidis* and *s. granulosum epidermidis*. **s. cor'neum un'guis** [NA], horny layer of nail: the outer, compact layer of the nail; called also *nail plate*. **s. cuta'neum membra'nae tym'pani** [NA], cutaneous layer of tympanic membrane: a very thin form of skin that constitutes the lateral layer of the tympanic membrane. **s. cylin'dricum epider'midis**, NA alternative for *s. basale epidermidis*. **s. den'tatum epider'midis**, *s. germinativum epidermidis* (Malpighii). **s. ebo'ris**, the dentin of a tooth (dentinum [NA]). **s. exter'num tu'nicae muscula'ris duc'tus deferen'tis**, the outer layer of fibers in the muscular coat of the ductus deferens. **s. exter'num tu'nicae muscula'ris ure'teris**, the outer layer of fibers in the muscular coat of the ureter. **s. exter'num tu'nicae muscula'ris ves'icae urina'riae**, the outer layer of fibers in the muscular coat of the urinary bladder. **s. fibro'sum cap'sulae articula'ris**, membrana fibrosa capsulae articularis. **s. functiona'le**, functional layer: the stratum compactum and stratum spongiosum considered together (i.e., all of the endometrium except for the stratum basale), the cells of which are cast off at menstruation and at parturition. It is known as the *decidua* during pregnancy. Called also *pars functionalis*. **s. ganglion'a're ner'vi op'tici** [NA], ganglionic layer of optic nerve: the layer of the cerebral stratum of the retina that contains the multipolar neurons, the axons of which form the fibers of the optic nerve. **s. ganglion'a're ret'inae** [NA], ganglionic layer of retina: the layer of the cerebral stratum of the retina that contains the bipolar cells. **ganglionic s. of optic nerve**, *s. ganglionare nervi optici*. **ganglionic s. of retina**, *s. ganglionare retinae*. **s. ganglio'sum cerebel'li**, ganglionic layer of cerebellum: the thin middle gray layer of the cortex cerebelli, consisting of a single layer of Purkinje cells; called also *s. Purkinje*. **s. germinativum**, *s. germinativum epider'midis* [Malpighii], germinative layer of epidermis: the innermost layer of the epidermis. Called also *malpighian layer* and *s. malpighii*. Sometimes used to designate only the *stratum basale epidermidis*. **s. germinati'vum un'guis** [NA], germinative layer of nail: the lower layer of the nail, from which the nail grows; it is continuous with the stratum basale and stratum spinosum of the epidermis. **s. granulo'sum cerebel'li** [NA], granular layer of cerebellum: the deep layer of the cortex of the cerebellum; it contains many small neurons (granule cells) and is separated from the molecular layer by the Purkinje cells. **s. granulo'sum epider'midis** [NA], granular layer of epidermis: the layer of the epidermis between the stratum lucidum epidermidis and the stratum spinosum epidermidis. **s. granulo'sum follic'uli ooph'ori vesiculo'si**, *s. granulosum folliculi ovarici vesiculosi*. **s. granulo'sum follic'uli ova'rici vesiculo'si** [NA], **s. granulo'sum ova'rii**, granular layer of follicle of ovary: the layer of follicle cells lining the theca of a vesicular ovarian follicle. **s. gris'eum centra'le cer'ebri**, *substantia grisea centralis cerebri*. **s. gris'eum collic'uli superio'ris** [NA], gray layer of superior colliculus: a thick layer, containing few myelinated fibers, near the outer surface of the superior colliculus. **s. interme'dium**, the layer of cells of the enamel organ of a tooth just peripheral to the ameloblastic layer. **s. inter'num tu'nicae muscula'ris duc'tus deferen'tis**, the inner layer of fibers in the muscular coat of the ductus deferens. **s. inter'num tu'nicae muscula'ris ure'teris**, the inner layer of fibers in the muscular coat of the ureter. **s. inter'num tu'nicae muscula'ris ves'icae urina'riae**, the inner layer of fibers in the muscular coat of the urinary bladder. **s. interoliva're lemnis'ci**, fibers from the nucleus gracilis and cuneatus that ascend between the olives to form the medial lemnisci. **s. lacuno'sum**, a subdivision of the superficial layer of cells of the hippocampus, lying deep to the stratum moleculare. **s. lemnis'ci**, *s. interolivare lemnisci*. **longitudinal s. of muscular tunic of colon**, *s. longitudinale tunicae muscularis coli*. **longitudinal s. of muscular tunic of**

rectum, *s. longitudinale tunicae muscularis recti*. **longitudinal s. of muscular tunic of small intestine**, *s. longitudinale tunicae muscularis intestini tenuis*. **longitudinal s. of muscular tunic of stomach**, *s. longitudinale tunicae muscularis ventriculi*. **s. longitudina'le tu'nicae muscula'ris co'li** [NA], longitudinal layer of muscular tunic of colon: the outer layer of the muscular coat of the colon, consisting of longitudinally coursing fibers; it is thick in the regions of the three teniae coli and very thin between them. **s. longitudina'le tu'nicae muscula'ris intesti'ni ten'uis** [NA], longitudinal layer of muscular tunic of small intestine: the outer layer of the muscular coat of the small intestine, consisting of longitudinally coursing fibers. **s. longitudina'le tu'nicae muscula'ris rec'ti** [NA], longitudinal layer of muscular tunic of rectum: the outer layer of the muscular coat of the rectum, consisting of longitudinally coursing fibers. **s. longitudina'le tu'nicae muscula'ris tu'bae uteri'nae**, the layer of longitudinally coursing fibers in the muscular coat of the uterus. **s. longitudina'le tu'nicae muscula'ris ure'thrae mulie'bris**, the layer of longitudinally coursing fibers in the muscular coat of the female urethra. **s. longitudina'le tu'nicae muscula'ris ventric'uli** [NA], longitudinal layer of muscular tunic of stomach: the layer of longitudinally coursing fibers in the muscular coat of the stomach. **s. lu'cidum epider'midis** [NA], clear layer of epidermis: the clear translucent layer of the epidermis, just beneath the stratum corneum epidermidis. **s. lu'cidum hippocam'pi**, the cellular (as opposed to dendritic) segment of the pyramidal cell layer of the hippocampus; cf. *s. radiatum*. **s. malpigh'ii**, *s. germinativum epidermidis* (Malpighii). **s. me'dium tu'nicae muscula'ris duc'tus deferen'tis**, the middle layer of the muscular coat of the ductus deferens. **s. me'dium tu'nicae muscula'ris ure'teris**, the middle layer of the muscular coat of the ureter. **s. me'dium tu'nicae muscula'ris ves'icae urina'riae**, the middle layer of the muscular coat of the urinary bladder. **s. molecula're cerebel'li** [NA], molecular layer of cerebellum: the superficial layer of the cortex of the cerebellum, containing a relatively small number of stellate neurons. **s. molecula're hippocam'pi**, a subdivision of the superficial layer of cells of the hippocampus. **s. muco'sum membra'nae tym'pani** [NA], mucous layer of tympanic membrane: the inner layer of the tympanic membrane, continuous with the mucosa lining the tympanic cavity. **s. neuroepithelia'le ret'inae** [NA], neuroepithelial layer of retina: the outer layer of the cerebral stratum of the retina, which contains the rods and cones. **s. nuclea're medul'lae oblonga'tae**, the column of gray substance in the medulla oblongata containing the nuclei of the lower cranial nerves. **s. op'ticum**, a layer of white fibers in the superior colliculus, just below the stratum griseum. **s. o'riens**, a layer of polymorphic cells of the hippocampus. **s. papilla're cor'ii** [NA], **s. papilla're cu'tis**, papillary layer of corium: the outer layer of the corium, characterized by ridges or papillae which protrude into the epidermis; called also *corpus papillare corii*. **s. perichorio'deum**, lamina suprachorioidea. **s. pigmen'ti bul'bi oc'uli** [NA], pigmented layer of eyeball: a layer of pigmented epithelium, the outer of the two parts of the retina, extending from the entrance of the optic nerve to the pupillary margin of the iris, and comprising the stratum pigmenti retinae, stratum pigmenti corporis ciliaris, and stratum pigmenti iridis. **s. pigmen'ti cor'poris cilia'ris** [NA], pigmented layer of ciliary body: the part of the pigmented layer of the eyeball that rests on the ciliary body. **s. pigmen'ti i'ridis** [NA], pigmented layer of iris: the part of the pigmented layer of the eyeball that rests on the posterior surface of the iris. **s. pigmen'ti ret'inae** [NA], pigmented layer of retina: the part of the pigmented layer of the eyeball that forms the outer layer of the pars optica of the retina. **s. Purkin'je**, *s. gangliosum cerebelli*. **s. pyramida'le**, either of two layers of human cerebral cortex: the external pyramidal layer (layer III), or the internal pyramidal or ganglionic layer (layer V). **s. radia'tum**, the superficial part of the pyramidal cell layer of the hippocampus, containing numerous apical dendrites. **s. radia'tum membra'nae tym'pani** [NA], radiate layer of tympanic membrane: the layer of fibers beneath the cutaneous layer of the tympanic membrane, radiating outward from the manubrium of the malleus to pass into the fibrocartilaginous ring. **s. reticula're co'rii** [NA], **s. reticula're cu'tis**, reticular layer of corium: the inner layer of the corium, consisting chiefly of dense fibrous tissue; called also *tunica propria corii* and *proper coat of corium*. **s. spino'sum epider'midis** [NA], spinous layer of epidermis: the layer of the skin between the stratum granulosum epidermidis and the stratum basale epidermidis characterized by the presence of prickles cells. Called also *prickle-cell layer* and *spinous layer of epidermis*. **s. spongio'sum**, spongy layer: the middle layer of the endometrium, which contains the tortuous portions of the uterine glands; together with the stratum compactum, it forms the *stratum functionale* (q.v.). **s. submuco'sum**, the inner layer of the myometrium, which is in contact with the endometrium; called also *s. subvascularis*. **submucous s. of bladder**, *tela submucosa vesicae urinariae*. **submucous s. of colon**, *tela submucosa coli*. **submucous s. of rectum**, *tela submucosa recti*. **submucous s. of small intestine**, *tela submucosa intestini tenuis*. **submu-**

cous s. of stomach, tela submucosa ventriculi. **s. subsero'sum**, the outer layer of the myometrium, which is in contact with the serous coat of the uterus. **s. subvascula're**, s. submucosum. **s. supravascula're**, the layer of the myometrium that lies between the stratum vasculare and the stratum subserosum. **s. synovia'le cap'sulae articula'ris**, membrana synovialis capsulae articularis. **s. vascula're**, the middle layer of the myometrium, forming most of its bulk, and composed of circular and spiral fibers. **white s. of quadrigeminal body**, deep, s. album profundum corporis quadrigemini. **s. zona'le cor'poris quadrigem'ini** zonal layer of quadrigeminal body: a superficial layer of white fibers of the corpora quadrigemina. **s. zona'le thal'ami** [NA], zonal layer of thalamus: a layer of myelinated fibers covering the dorsal surface of the thalamus.

Straus' reaction (phenomenon, test) (strows') [Isidore Straus, French physician, 1854-1896] see under *reaction*.

Strauss' sign (strows') [Hermann Strauss, physician in Berlin, 1868-1944] see under *sign*.

streak (strēk) a line, stria, striation, or stripe. **angioid s's**, red to black irregular bands observed in the ocular fundus running outward from the region of the optic disk, which are seen in certain conditions, including pseudoxanthoma elasticum, osteitis deformans, and sickle-cell anemia. The lesions are thought to represent ruptures in Bruch's membrane. **germinal s.**, primitive s. **Knapp's s's**, lines resembling blood vessels seen occasionally in the retina after hemorrhage. **medullary s.**, the neural groove. **meningeal s.**, tache cérébrale. **primitive s.**, a faint white trace at the caudal end of the embryonic disc, formed by the movement of cells at the beginning of mesoderm formation; it provides the earliest evidence of the embryonic axis.

stream (strēm) a current or flow of water or other fluid. **axial s.**, the core of rapid flow in the center of a channel, as in the lumen of a blood vessel, bordered or surrounded by a zone in which the elements move less rapidly, or are motionless. **electron s.**, a stream of negatively charged particles (electrons) moving from cathode to anode across a potential difference in a low-pressure gas tube or a vacuum tube.

streblomicrodactyly (streb'/lo-mi'kro-dak'ti-le) [Gr. *streblos* twisted + *mikros* small + *daktylos* finger] streptomicrodactyly.

stemma (strem'ah) [Gr. "a twist"] a sprain.

strep- see *strep-*.

strephenopodia (stref'ē-no-po'de-ah) [*strep-* + Gr. *ēn* in + *pous* foot] talipes varus.

strephepodia (stref'ek-so-po'de-ah) [*strep-* + Gr. *exō* out + *pous* foot] talipes valgus.

strep-, **strep-** (stref'o; stref) [Gr. *strephein* to twist] combining form meaning twisted.

strephepodia (stref'o-po'de-ah) talipes equinus.

strephepodylia (stref'o-sim-bo'le-ah) [*strep-* + Gr. *symbolon* symbol + *-ia*] 1. a disorder of perception in which objects seem reversed as in a mirror. 2. a reading difficulty inconsistent with a child's general intelligence, beginning with confusion between similar but oppositely oriented letters (b-d, q-p) and a tendency to reverse direction in reading.

streptitus (strep'i-tus) [L.] a noise; a sound heard on auscultation.

streptogenin (strep'o-gen'in) a factor present in casein and certain other proteins which is essential to optimal growth of animals; called also *chick growth factor*.

strepsinema (strep'si-ne'mah) [Gr. *strepsis* a twist + *nēma* thread] the threads of chromatin in the strepsitene stage.

strepsitene (strep'si-tēn) a stage of meiosis, after the diplotene stage, in which the threads become twisted about each other.

streptamine (strep-tam'in) chemical name: 1,3-diamino-2,4,5,6-tetrahydroxycyclohexane. One of the fractions derived from the degradation of streptomycin.

strepticemia (strep'ti-se'me-ah) streptococcemia.

streptidine (strep'ti-din) one of the fractions derived from degradation of streptomycin, the other fraction being streptobiosamine; it is 1,3-diguanido-2,4,5,6-tetrahydroxycyclohexane.

strepto- (strep'to) [Gr. *streptos* twisted] a combining form meaning twisted.

streptoangina (strep'to-an'ji-nah) a pseudomembranous deposit in the throat due to a streptococcal infection.

streptobacilli (strep'to-bah-sil'i) [L.] plural of *streptobacillus*.

Streptobacillus (strep'to-bah-sil'us) a name given a genus of microorganisms of family Bacteroidaceae, order Eubacteriales, said to be made up of pleomorphic bacteria which vary from short rods to long interwoven filaments. **S. monilifor'mis**, the etiological agent of the bacillary form of rat-bite fever; formerly called *Haverhillia multiformis*.

streptobacillus (strep'to-bah-sil'us), pl. *streptobacilli*. 1. a rod-shaped bacterium remaining loosely attached end-to-end in long chains as a consequence of failure of daughter cells to separate following cell division. 2. an organism of the genus *Streptobacillus*.

streptobacteria (strep'to-bak-te're-ah) (pl.) a group including those bacteria (*Actinomyces*, *Streptomyces*, *Nocardia*, etc.) which are linked together into twisted chains.

streptobacterin (strep'to-bak'ter-in) the vaccine prepared from streptococci.

streptobiosamine (strep'to-bi-o'sah-mēn) one of the fractions, C₁₃H₂₃NO₈, derived from the degradation of streptomycin, the other fraction being streptidine.

streptocerciasis (strep'to-ser-ki'ah-sis) infection with *Dipetalonema streptocerca*, whose microfilariae produce a pruritic rash resembling that in onchocerciasis; transmitted by midges of the genus *Culicoides*, it occurs in Central Africa.

Streptococcaceae (strep'to-kok-ka'se-e) a family of gram-positive, facultative anaerobic cocci, which are usually nonmotile, and occur in pairs, chains, or tetrads. It includes the genera *Aerococcus*, *Gemella*, *Leuconostoc*, *Pediococcus*, and *Streptococcus*.

streptococcal (strep'to-kok'al) pertaining to or caused by a streptococcus.

streptococcemia (strep'to-kok-se'me-ah) [*streptococcus* + Gr. *haima* blood + *-ia*] the presence of streptococci in the blood; streptococcal infection.

streptococci (strep'to-kok'si) [L.; Gr.] plural of *streptococcus*.

streptococcic (strep'to-kok'sik) streptococcal.

streptococcicide (strep'to-kok'si-sid) an agent that is destructive to streptococci.

streptococcolysin (strep'to-kok-kol'i-sin) streptolysin.

Streptococcus (strep'to-kok'us) [*strepto-* + Gr. *kokkos* berry] a genus of gram-positive, facultatively anaerobic cocci occurring in pairs or chains, assigned to the family Streptococcaceae. The genus is separable into the pyogenic group, the viridans group, the enterococcus group, and the lactic group. The first group includes the β -hemolytic human and animal pathogens, the second and third include α -hemolytic parasitic forms occurring as normal flora in the upper respiratory tract and the intestinal tract, respectively, and the fourth is made up of saprophytic forms associated with the souring of milk. See also *hemolytic streptococcus* under *streptococcus*. **S. agalac'tiae**, β -hemolytic streptococci of group B, causing mastitis in cattle and seldom infecting man. **S. anaero'bius**, a microaerophilic or obligate anaerobe found in war wounds, gangrene, and puerperal infections. **S. anhemoly'ticus**, a former species name for anhemolytic streptococci. **S. bo'vis**, a serologically heterogeneous species of the enterococcus group, found in the bovine alimentary tract and sometimes in human feces; also sometimes associated with the subacute form of bacterial endocarditis. **S. bre'vis**, a former species name for a shorter-chained streptococcus thought to be less virulent than those occurring in longer chains. **S. cremo'ris**, an anhemolytic, nonpathogenic streptococcus of the lactic group, occurring in dairy products; its action on milk results in the production of buttermilk. **S. du'rans**, a β -hemolytic streptococcus of the enterococcus group, found in the human intestine. **S. epidem'icus**, former name for *S. pyogenes*, thought to be disease-specific for epidemic infection of the upper respiratory tract. **S. e'qui**, β -hemolytic streptococci of group C, the specific etiologic agent of strangles in horses; it is nonpathogenic for man. **S. equi'nus**, a species of the viridans group, found in the intestines of horses and in the feces in humans and cows. **S. equisim'ilis**, β -hemolytic streptococci of group C, producing about 5 per cent of human streptococcal disease, and known as "human C." **S. erysipel'atis**, former name for *S. pyogenes*, some strains of which were formerly thought to be disease-specific for erysipelas. **S. evolu'tus**, a microaerophilic or obligate anaerobe found in the mouth, respiratory tract, and vagina. **S. faeca'lis**, α -hemolytic streptococci of the enterococcus group, found as a normal inhabitant of the intestinal tract and a cause of subacute bacterial endocarditis. **S. foe'tidus**, a microaerophilic or obligate anaerobe found in gangrene and fetid suppurations. **S. hemoly'ticus**, former name for *S. pyogenes*. **S. interme'dius**, a microaerophilic or obligate anaerobe found in the vagina and in the respiratory and intestinal tracts. **S. lac'ticus**, **S. lac'tis**, an α -hemolytic or anhemolytic, nonpathogenic streptococcus of the lactic group, found in dairy products and commonly responsible for the souring of milk. **S. lan-ceola'tus**, *Diplococcus pneumoniae*. **S. liquefa'ciens**, an α -hemolytic streptococcus of the enterococcus group which hydrolyzes gelatin. **S. lon'gus**, former species name for a longer-chained streptococcus, thought to be more virulent than those occurring in shorter chains. **S. mastit'idis**, *S. agalactiae*. **S. mi'cros**, a microaerophilic or obligate anaerobe found in pulmonary gangrene and in puerperal infections. **S. mi'tis**, α -hemolytic streptococci of the viridans group, found in the normal upper respiratory tract and etiologically related to regional focal abscesses and the subacute form of bacterial endocarditis. **S. mu'tans**, a species implicated in the formation of dental caries. **S. pneumo'niae**, a facultative anaerobe that is the most common cause of lobar pneumonia; it also causes numerous other serious, acute pyogenic disorders, e.g., meningitis, septicemia, empyema, and peritonitis. These lanceolate bacteria occur in pairs, are heavily encapsulated in exudates, and are gram-positive. There are more than 80 serotypes (fewer if some are

condensed as subtypes) on the basis of the specificity of the polysaccharide hapten making up the capsular substance. Called also *Diplococcus pneumoniae*, *pneumococcus*, and *S. lanceolatus*. See also Plate accompanying bacterium. **S. pyogenes**, β -hemolytic, toxigenic pyogenic streptococci of group A, separable into numbered serotypes on the basis of the specificity and combination of the M and T antigens, and causing septic sore throat, scarlet fever, rheumatic fever, puerperal sepsis, acute glomerulonephritis, and other conditions in man. **S. saliva'rius**, α -hemolytic streptococci of the viridans group, making up a part of the normal flora of the upper respiratory tract, and occasionally associated with apical abscesses of the teeth and the subacute form of bacterial endocarditis. **S. scarlati'nae**, former species name for *S. pyogenes*, some strains of which were formerly thought to be disease-specific for scarlet fever. **S. thermoph'ilus**, a streptococcus of the viridans group, found in milk and milk products. **S. vir'idans**, a former species name for α -hemolytic streptococci, especially those strains found in human disease; see *hemolytic streptococcus*, under *streptococcus*. **S. zooepidem'icus**, β -hemolytic streptococci of group C, commonly causing pyogenic disease in lower animals and known as "animal pyogenes"; it is rarely found in man. **S. zymog'enes**, a β -hemolytic of the enterococcus group.

streptococcus (strep-to-kok'us), pl. *streptococ'ci*. 1. a spherical bacterium occurring predominantly in chains of cells often surrounded by continuous capsular material as a consequence of failure of daughter cells to separate following cell division in one plane. 2. an organism of the genus *Streptococcus*. **alpha s.**, see under *hemolytic s.* **anhemolytic s.**, a streptococcus which does not cause any change in the medium when cultured on blood-agar. **Bargen's s.**, *Streptococcus bovis*. **beta s.**, see under *hemolytic s.* **Fehleisen's s.**, *Streptococcus pyogenes*. **gamma s.**, anhemolytic s. **group A, B, C (etc.) streptococci**, a classification of β -hemolytic streptococci based on cell-wall carbohydrate antigens; see *Lancefield classification*, under *classification*. **hemolytic s.**, any streptococcus that is capable of hemolyzing red blood cells, or of producing a zone of hemolysis about the colonies on blood-agar. The great majority of streptococci found in pathologic processes belong to this type. The hemolytic streptococci have been classified as the *alpha* (α -hemolytic) or *viridans type*, which produces about the colony on blood-agar a zone of greenish discoloration considerably smaller than the clear zone produced by the beta type; and the *beta* (β -hemolytic) type, which produces a clear zone of hemolysis immediately surrounding the colony on blood-agar. On immunological grounds, the β -hemolytic streptococci may be divided into Group A (primarily pathogens of man), Group B (almost exclusively found in bovine mastitis), Group C (primarily pathogens of lower animals), Group D (found in cheese), Group E (found in milk), Group F, and so on. A further classification groups the hemolytic streptococci according to the presence of antigenic carbohydrates in the cell wall, and includes Groups A through O; see *Lancefield classification*, under *classification*. **indifferent s.**, anhemolytic s. **s. MG**, any of a strain of biochemically and antigenically homogeneous, anhemolytic streptococci isolated from the sputum in primary atypical pneumonia. **s. of Oster-tag**, a species causing vaginitis verrucosa in cattle. **viridans s.**, α -hemolytic s.; see *hemolytic s.*

streptodornase (strep'-to-dor'nās) [*streptococci* + *deoxyribonuclease*] a deoxyribonuclease produced by hemolytic streptococci. **streptokinase-s.**, see under *streptokinase*.

streptoduocin (strep'-to-du'o-sin) an antibiotic compound consisting of approximately equal parts of dihydrostreptomycin sulfate and streptomycin sulfate.

streptogenin (strep'-to-jen'in) a hypothetical substance in the proteins of milk and other foods, which are thought to be required for optimal growth in bacteria and laboratory animals.

streptohemolysin (strep'-to-he-mol'i-sin) streptolysin.

streptokinase (strep'-to-ki'nās) [*streptococcus* + *kinase*] a proteolytic enzyme elaborated by hemolytic streptococci, which produces fibrinolysis by activating plasminogen to plasmin; it is used as a thrombolytic agent. See also *kinase*, def. 2. **s.-streptodornase**, a mixture of the proteolytic enzymes (streptokinase and streptodornase) produced by hemolytic streptococci; used topically on surface lesions and by instillation in closed body cavities to remove clotted blood or fibrinous or purulent accumulations.

streptoleukocidin (strep'-to-lu'ko-si'din) a toxin from streptococcus cultures which is destructive to leukocytes.

streptolysin (strep-tol'i-sin) [*streptococcus* + *hemolysin*] a filterable hemolysin produced by various streptococci. **s. O**, a hemolysin which is inactive in the oxidized state but is readily activated by treatment with mild reducing agents, such as sulfite. **s. S**, a hemolysin which is sensitive to treatment with heat or acid, but is not inactivated by oxygen.

streptomicrodactyly (strep'-to-mi'kro-dak'tī-le) [*strepto* + Gr. *mikros* small + *daktylos* finger] camptodactyly in which the little fingers only are involved.

Streptomyces (strep'-to-mi'sēz) [*strepto* + Gr. *mykēs* fungus] a genus of microorganisms of the family Streptomycetaceae, order

Actinomycetales, separable into 150 different species, usually soil forms but occasionally parasitic on plants and animals, and notable as the source of various antibiotics, such as the tetracyclines; called also *Streptothrix*.

Streptomycetaceae (strep'-to-mi'se-ta'se-e) a family of Schizomycetes, order Actinomycetales, made up of primarily soil forms, sometimes thermophilic in rotting manure, and some parasitic species. It includes three genera: *Micromonospora*, *Streptomyces*, and *Thermoactinomyces*.

streptomycin (strep'-to-mi'sin) a bactericidal antibiotic of the aminoglycoside class, which is produced by the soil actinomycete, *Streptomyces griseus*, and is effective against most gram-negative and acid-fast bacteria and some gram-positive forms, but is used chiefly in the treatment of tuberculosis. It causes both inhibition and decreased fidelity in protein synthesis. **s. hydrochloride**, the trihydrochloride salt of streptomycin, $C_{21}H_{39}N_7O_{12} \cdot 3HCl$, having the same actions as the base; it has been used for the same purposes as the sulfate salt. **s. sulfate**, the sesquisulfate salt of streptomycin, $(C_{21}H_{39}N_7O_{12})_2 \cdot 3H_2SO_4$, occurring as a white or practically white powder, used primarily as a tuberculostatic, usually concomitantly with another tuberculostatic; it also may be used in certain cases in the treatment of nontuberculous infections due to susceptible organisms, such as plague, tularemia, brucellosis, klebsiella pneumonia, meningitis, and bacterial endocarditis. It is administered intramuscularly.

streptomycosis (strep'-to-mi-ko'sis) infection with fungi of the genus *Streptomyces*.

streptonivcin (strep'-to-ni'vi-sin) former name for novobiocin.

streptosepticemia (strep'-to-sep'ti-se'me-ah) septicemia due to a streptococcus.

Streptosporangium (strep'-to-spo-ran'je-um) [*strepto* + Gr. *sporos* seed + *angeion* vessel] a genus of microorganisms of the family Actinoplanaceae, order Actinomycetales, made up of mycelium-forming saprophytic microorganisms found in soil and water.

streptothricin (strep'-to-thri'sin) an antibiotic substance active against both gram-negative and gram-positive bacteria; it was the first antibiotic isolated, but was found to be too toxic for systemic use.

streptothricosis (strep'-to-thri-ko'sis) streptotrichosis.

Streptothrix (strep'-to-thriks) [*strepto* + Gr. *thrix* hair] 1. a name formerly given a genus of microorganisms, species of which are now classified under *Actinomyces*, *Streptomyces*, *Nocardia*, and other genera. 2. a former name for *Dermatophilus*.

streptotrichal (strep-tot'ri-kal) pertaining to or caused by streptothrix.

streptotrichosis (strep'-to-tri-ko'sis) 1. infection with organisms of the former genus *Streptothrix*; see *actinomycosis*, *nocardiosis* and *streptomycosis*. 2. a former name for dermatophilosis.

streptozocin (strep'-to-zo'sin) chemical name: 2-deoxy-2-[(methylnitrosoamino)carbonylamino]-D-glucopyranose. An antineoplastic antibiotic, $C_8H_{15}N_3O_7$, derived from *Streptomyces achromogenes* or produced by synthesis; used principally in the treatment of islet-cell tumors of the pancreas.

stress (stres) 1. forcibly exerted influence; pressure. In dentistry, the pressure of the upper teeth against the lower in mastication. 2. the sum of the biological reactions to any adverse stimulus, physical, mental, or emotional, internal or external, that tends to disturb the organism's homeostasis; should these compensating reactions be inadequate or inappropriate, they may lead to disorders. The term is also used to refer to the stimuli that elicit the reactions.

stress-breaker (stres'brāk-er) a device which abolishes or lessens the occlusal forces acting on abutment teeth.

stretcher (strech'er) a litter for carrying the sick or injured.

stria (stri'ah), pl. *stri'ae* [L. "a furrow, groove"] 1. a streak, or line. 2. a narrow bandlike structure; [NA] a general term for such longitudinal collections of nerve fibers in the brain. **acoustic striae**, striae medullares ventriculi quarti. **stri'ae albican'tes**, see *striae atrophicae*. **striae of Amici**, Z band; see under *band*. **stri'ae atro'phicae**, linear, depressed, atrophic, pinkish or purplish, scarlike lesions that later become white (*striae albican'tes*, *lineae albican'tes*), occurring on the abdomen, breasts, buttocks, and thighs. They are due to weakening of the elastic tissues, and are associated with pregnancy (*striae gravidarum*), excessive obesity, rapid growth during puberty and adolescence, Cushing's syndrome, or topical or prolonged treatment with corticosteroids. Called also *striae distensae* and *lineae atrophicae*. **auditory striae**, striae medullares ventriculi quarti. **striae of Baillarger**, Baillarger's lines. **stri'ae cilia'res**, slight dark ridges running parallel with each other from the teeth of the ora serrata of the retina to the valleys between the ciliary processes. **stri'ae disten'sae**, striae atrophicae. **s. for'nici's** (obs.), s. medullaris thalami. **s. of Gennari**, see *Baillarger's lines*, under *line*. **stri'ae grava'da'rum**, see *striae atrophicae*. **habenular s.** (obs.), s. medullaris thalami. **s. interme'dia trigo'ni olfacto'rii**, intermediate s. of olfactory trigone, a more or less distinct branch of the posterior end of the olfactory tract, which spreads

out in the olfactory trigone and the anterior perforated substance of the brain. **s. kaesbekhtere'vi**, Bekhterev's layer. **Knapp's striae**, see under *streak*. **s. lancis'ii**, s. longitudinalis medialis corporis callosi. **Langhans' s.**, cytophoblast. **Liesgang's striae**, see under *phenomenon*. **longitudinal s. of corpus callosum, lateral**, s. longitudinalis lateralis corporis callosi. **longitudinal s. of corpus callosum, medial**, s. longitudinalis medialis corporis callosi. **s. longitudinalis lateralis corporis callosi** [NA], lateral longitudinal stria of corpus callosum: one of two slender bands of myelinated fibers which form longitudinal ridges in the indusium griseum on the superior aspect of each half of the corpus callosum. **s. longitudinalis medialis corporis callosi** [NA], medial longitudinal stria of corpus callosum: one of two slender bands of myelinated fibers which form longitudinal ridges in the indusium griseum on the superior aspect of each half of the corpus callosum. **malleal s. of tympanic membrane, s. malleolaris membranae tympani** [NA], s. malleolaris membranae tympani, a nearly vertical radial band seen on the outer surface of the tympanic membrane; it extends from the umbo upward to the prominentia mallearis and is caused by the manubrium mallei. **s. media'lis trigo'ni olfacto'rii**, the portion of the posterior end of the olfactory tract that turns medialward to the area parolfactoria. **striae medullares acus'ticae, striae medullares fos'sae rhomboideae, striae medullares ventriculi quarti**. **s. medullaris thal'ami** [NA], medullary stria of thalamus: a fiber bundle that arises from the subcallosal and paraterminal gyri, the preoptic area, and amygdaloid area, and runs backward along the junction of the dorsal and medial surfaces of the thalamus to reach the habenular nucleus. **striae medullares ventriculi quarti** [NA], medullary striae of fourth ventricle: bundles of white fibers coursing transversely across the floor of the fourth ventricle; they arise from the arcuate nuclei, pass dorsally close to the midline, and after having reached the fourth ventricle finally enter the inferior cerebellar peduncle. Called also *striae medullares fossae rhomboideae*. **medullary striae of fourth ventricle, medullary striae of rhomboid fossa, striae medullares ventriculi quarti**. **medullary s. of thalamus**, 1. stria medullaris thalami. 2. see *laminae medullares thalami*. **meningitic s.**, tache cérébrale. **Nitabuch's s.**, see under *layer*. **striae olfacto'riae** [NA], olfactory striae, three bands of fibers diverging from the olfactory trigone: the medial olfactory stria becomes the medial olfactory gyrus, the lateral olfactory stria runs toward the insula, and the intermediate olfactory stria (only occasionally present) attaches to the anterior perforated substance. **s. pinea'lis** (*obs.*), s. medullaris thalami. **Retzius' parallel striae**, incremental lines. **Rohr's s.**, a layer of canalized fibrin in the developing placenta, within the intervillous space at the fetal-maternal junction. **Schreger's striae**, bands of Hunter-Schreger. **s. semicircularis, s. terminalis**. **s. termina'lis** [NA], a band of fibers along the lateral margin of the ventricular surface of the thalamus, covering the thalamostriate vein and, following the course of the vein, marking the line of separation between the thalamus and the caudate nucleus; it extends from the region of the interventricular foramen to the inferior horn of the lateral ventricle, carrying fibers from the amygdaloid nuclei to the septal, hypothalamic, and thalamic areas. **striae transversae corporis callosi**, transverse bands of fibers on the upper surface of the corpus callosum. **s. vascula'ris duc'tus cochlea'ris** [NA], a layer of fibrous vascular tissue covering the outer wall of the cochlear duct, which is thought to secrete the endolymph. **s. ventriculi tertii** (*obs.*), s. medullaris thalami. **Wickham's striae**, pale grayish dots or lines forming a network on the surface of the papules, characteristic of lichen planus.

striae (stri'e) [L.] plural of *stria*.

striascope (stri'ah-skōp) an instrument for use in ophthalmologic refraction.

striatal (stri-a'tal) pertaining to the corpus striatum.

striate (stri'ät) striated.

striated (stri'ät-ed) [L. *striatus*] striped; marked by striae.

striation (stri-a'shun) 1. the quality of being marked by stripes or striae. 2. a streak or scratch. **Baillarger's s's**, see under *line*. **tabby cat s.**, **tigroid s.**, a striation or marking on muscle tissue that has undergone marked fatty degeneration; seen especially in degenerated heart muscle.

striatignigral, strionigral (stri'ah-to-ni'gral; stri'o-ni'gral) projecting from the corpus striatum to the substantia nigra.

Striatran (stri'ah-tran) trademark for a preparation of emylcamate.

striatum (stri-a'tum) [L.] 1. striped, or grooved. 2. corpus striatum. 3. neostriatum.

stricture (strik'chur) [L. *strictura*] decrease in the caliber of a canal, duct, or other passage, as a result of cicatricial contraction or the deposition of abnormal tissue. **annular s.**, a stricture which encircles the lumen of a tubular structure. **bridle s.**, a fold of membrane stretched across a canal, and partially closing it. **cicatricial s.**, one which follows an operative or traumatic wound, particularly a wound which has been infected. **con-**

tractile s., one which may be mechanically dilated, but which soon returns to its contracted condition; called also *recurrent s.* **false s., functional s., spasmodic s.** **Hunner's s.**, stricture of the ureter due to local inflammation of the wall of the ureter. **hysterical s.**, spasmodic stricture of the esophagus seen in hysterical subjects. **impassable s., impermeable s.**, one that does not permit the passage of an instrument. **irritable s.**, one through which the passage or attempted passage of an instrument produces pain. **organic s.**, a stricture due to a structural change in or about a canal. **permanent s.**, one which persists despite treatment. **recurrent s.**, contractile s. **spasmodic s., spastic s.**, one that is due to muscular spasm; called also *false s., functional s., and temporary s.* **temporary s.**, spasmodic s.

stricturization (strik'chur-i-za'shun) the process of decreasing in caliber or of becoming constricted.

stricturotome (strik'chur-o-tōm') a knife for cutting strictures.

stricturotomy (strik'chur-ot'o-me) incision of a stricture.

strident (stri'dent) stridulous.

stridor (stri'dor) [L.] a harsh, high-pitched respiratory sound such as the inspiratory sound often heard in acute laryngeal obstruction. Cf. *laryngismus stridulus*. **congenital laryngeal s.**, stridor and dyspnea of the newborn due to an indrawing or infolding of a congenitally flabby epiglottis and aryepiglottic folds (laryngomalacia) during inspiration; the condition is usually outgrown in two years. **s. den'tium** (*obs.*), bruxism. **laryngeal s.**, stridor due to laryngeal obstruction; see also *congenital laryngeal s.* **s. serrat'icus**, a sound like that made by filing a saw, caused by respiration through a tracheostomy tube.

stridulous (strid'u-lus) [L. *stridulus*] attended with stridor; shrill and harsh in sound.

string-halt (string'halt) myoclonus of the hind leg of a horse, causing a gait in which the leg is suddenly raised and then stamped on the ground.

striocellular (stri'o-sel'u-lar) [L. *stria* streak + *cellular*] composed of striated muscle fibers and cells.

striocerebellar (stri'o-ser'e-bel'ar) pertaining to or affecting both the corpus striatum and the cerebellum, as striocerebellar tremor.

striomotor (stri'o-mo'tor) pertaining to or affecting neurons supplying skeletal muscle.

striomuscular (stri'o-mus'ku-lar) pertaining to or composed of striated muscle.

strip (strip) 1. to press the contents from a canal, such as the urethra or a blood vessel, by running the finger along it. 2. to excise lengths of large veins and incompetent tributaries by subcutaneous dissection and the use of a stripper. 3. to remove tooth structure or restorative material from the mesial or distal surfaces of teeth utilizing abrasive strips; usually done to alleviate crowding.

stripe (strip) a streak or stria. **Baillarger's s's, Gennari's s.**, see under *line*. **Hensen's s.**, a band near the middle of the under surface of the membrana tectoria of the ear. **Mees's s's**, diagonal white stripes on the fingernails in arsenic poisoning. **s's of Retzius**, incremental lines. **Vicq d'Azyr's s.**, the line of Kaes in the cerebral cortex.

stripper (strip'er) a surgical instrument for excision of veins, consisting of a flexible stainless steel cable with a stripping cup or disk at one end and a guide tip at the other; a rigid type of external stripper is also utilized.

strobila (stro-bi'lah), pl. *strobilae* [L.; Gr. *strobilos* anything twisted up] 1. the chain of proglottids constituting the bulk of the body of adult tapeworms; considered by some to include the entire body, including the head, neck, and proglottids. 2. The chain of individuals produced by strobilation, such as the series of buds produced at the oral end of the body of certain jellyfish, which during the process of formation somewhat resemble a pile of plates; each bud is released to form an immature, free-swimming jellyfish.

strobile (stro'bil) strobila.

strobiloid (stro'bī-loid) resembling a row of tapeworm segments.

strobilus (stro-bi'lus) [L.; Gr. *strobilos* anything twisted up] strobila.

stroboscope (stro'bo-skōp) [Gr. *strobos* whirl + *skopein* to examine] an instrument by which the successive phases of animal movements may be studied; motion may appear to come to rest.

stroboscopic (stro'bo-skop'ik) pertaining to the stroboscope.

Stroganoff's (Stroganov's) treatment (stro-gan'ofs) [Vasilii Vasilovich Stroganov, Russian obstetrician, 1857-1938] see under *treatment*.

stroke (strōk) a sudden and severe attack; see *stroke syndrome*, under *syndrome*. **apoplectic s.**, apoplexy (def. 1). **back s.**, 1. the recoil of the ventricles at the time the blood is forced into the aorta. 2. the influence which a peripheral organ of response exerts back upon the nerve center from which the response was generated. **effective s.**, see *cilium* (def. 3). **heat s.**, a condi-

tion caused by exposure to excessive heat, natural or artificial, and marked by dry skin, vertigo, headache, thirst, nausea, and muscular cramps; body temperature may be dangerously elevated, contrasting with heat exhaustion in which the body temperature may be subnormal. Called also *heat apoplexy* and *thermoplegia*. Cf. *sunstroke*. **light s.**, a fatal narcosis produced in sensitized mice by exposure to light. **lightning s.**, loss of consciousness and shock with burns, frequently fatal, caused by lightning. **paralytic s.**, a sudden attack of paralysis from injury to the brain or spinal cord. **recovery s.**, see *cilium* (def. 3). **sun s.**, see *sunstroke*.

stroma (stro'mah), pl. *stro'mata* [Gr. *strōma* anything laid out for lying or sitting upon] the supporting tissue or matrix of an organ, as distinguished from its functional element, or parenchyma. **s. of cornea**, substantia propria corneae. **s. glan'dulae thyreoideae**, **s. glan'dulae thyroideae** [NA], stroma of thyroid gland: the tissue that forms the framework of the thyroid gland. **s. i'ridis** [NA], **s. of iris**, the soft mass of connective tissue fibers that make up the major portion of the iris. **s. ova'rii** [NA], **s. of ovary**, the fibrous tissue and smooth muscle composing the framework of the ovary. **Rollet's s.**, that part of a red blood cell which remains after the hemoglobin has been removed. **s. of thyroid gland**, **s. glandulae thyroideae**. **vitreous s.**, **s. vit'reum** [NA], the framework of firmer material making up the vitreous body of the eye, and enclosing within its meshes the more fluid portion (humor vitreus).

stromal (stro'mal) pertaining to or resembling stroma.

stromatic (stro-mat'ik) stromal.

stromatin (stro'mah-tin) a protein constituent of the stroma of erythrocytes.

stromatogenous (stro'mah-toj'ē-nus) [*stroma* + Gr. *gennan* to produce] originating in the stroma or connective tissue of an organ.

stromatolysis (stro'mah-toi'i-sis) [*stroma* + Gr. *lysis* dissolution] destruction of the stroma of a cell, especially that of a red blood cell.

stromatosis (stro'mah-to'sis) adenomyosis in which the invading endometrial substance is stromal and not glandular; stromal adenomyosis.

Stromeyer's cephalhematocele, splint (stro'mi-erz) [Georg Friedrich Ludwig Stromeyer, German surgeon, 1804-1876] see under *cephalhematocele* and *splint*.

stromuhr (ström'oor) [Ger. "stream clock"] Ludwig's instrument for measuring the velocity of the blood flow (1867).

Strong's bacillus (strongz) [Richard Pearson Strong, American physician, 1872-1948] *Shigella flexneri*.

strongyli (stron'jī-li) plural of *strongylus*.

strongyliasis (stron'jī-li'ah-sis) strongylosis.

strongylid (stron'jī-lid) 1. of or pertaining to the superfamily Strongyloidea. 2. strongylus.

Strongylidae (stron-jil'i-de) a family of nematodes of the superfamily Strongyloidea, including the genera *Strongylus* and *Esophagostomum*.

Strongyloidea (stron'jī-loi'de-ah) a superfamily of phasmids, including the hookworms and related bursate nematodes. It comprises the families Ancylostomidae, Strongylidae, Trichostrongylidae, Metastrongylidae, and Syngamidae.

Strongyloides (stron'jī-loi'dēz) a genus of phasmids belonging to the superfamily Rhabditoidea, widely distributed as intestinal parasites of mammals. In some systems of classification, included in the superfamily Rhabdioidea. **S. intestinalis**, **S. stercoralis**. **S. papillo'sus**, a species found in cows, pigs, sheep, goats, rabbits, and rats. **S. ranso'mi**, a species found in pigs. **S. rat'ti**, a species found in rats. **S. stercora'lis**, a roundworm occurring widely in tropical and subtropical countries. The female worm and her larvae inhabit the mucosa and submucosa of the small intestine, where they cause diarrhea and ulceration (intestinal strongyloidiasis or Cochin-China diarrhea). The larvae expelled from an infected person with his feces develop in the soil and penetrate the human skin on contact. They eventually are carried in the bloodstream to the lungs, where they cause hemorrhage (pulmonary strongyloidiasis) when they rupture into the alveoli; from the lungs they reach the intestine via the trachea and esophagus. Massive infections may be seen in patients treated with corticosteroids, immunosuppressive drugs, etc. An endogenous cycle of development may occur, allowing infections to persist for many years. Called also *Anguilla intestinalis*, *Anguilla stercoralis*, and *Strongyloides intestinalis*.

strongyloidiasis (stron'jī-loi-di'ah-sis) infection with *Strongyloides stercoralis* (see under *Strongyloides*).

strongyloidosis (stron'jī-loi-do'sis) strongyloidiasis.

strongylosis (stron'jī-lo'sis) infection with worms of the genus *Strongylus*.

Strongylus (stron'jī-lus) [Gr. *strongylos* round] a genus of parasitic nematode worms of the family Strongylidae. **S. edenta'tus**, a species found in horses. **S. equi'nus**, a worm parasitic in the intestines of horses; called also *palisade worm*. **S. fila'ria**, *Dictyocaulus filaria*. **S. gibso'ni**, *Mecistocirrus*

digitatus. **S. gi'gas**, *Dictyophyma renale*. **S. longeva-gina'tus**, *Metastrongylus elongatus*. **S. micru'rus**, *Dictyocaulus viviparus*. **S. paradox'us**, *Metastrongylus elongatus*. **S. rena'lis**, *Dictyophyma renale*. **S. sub'tilis**, *Trichostrongylus colubriformis*. **S. vulga'ris**, a species found in horses.

strongylus (stron'jī-lus), pl. *stron'gyli*. An individual organism of the genus *Strongylus*.

strontia (stron'she-ah) strontium oxide.

strontium (stron'she-um) [*Strontian* in Scotland] a dark yellowish metal: symbol, Sr; atomic number, 38; atomic weight, 87.62. See also *radiostrontium*. **s. bromide**, a clear, colorless, crystalline substance, $\text{SrBr}_2 + 6\text{H}_2\text{O}$, used like other bromides. **s. hydroxide**, colorless crystals or white powder, $\text{Sr}(\text{OH})_2 \cdot 8\text{H}_2\text{O}$, soluble in 50 parts water and in acids. **s. oxide**, a white, strongly basic substance, SrO , which reacts vigorously with water to give strontium hydroxide; called also *strontia*. **radioactive s.**, radiostrontium. **s. salicylate**, a salt, $(\text{OH} \cdot \text{C}_6\text{H}_4 \cdot \text{CO} \cdot \text{O})_2\text{Sr}$, in white crystals, soluble in 40 parts of water and freely in alcohol.

strontiuressis (stron'she-u-re'sis) the elimination of strontium from the body by way of the urine.

strontiuoretic (stron'she-u-ret'ik) pertaining to, characterized by, or promoting strontiuressis.

strophanthidin (stro-fan'thi-din) chemical name: 3β,5,14-trihydroxy-19-oxo-5β-card-20(22)-enolide. An aglycone, $\text{C}_{23}\text{H}_{32}\text{O}_6$, obtained by hydrolysis of glycosides from *Strophanthus kombé*.

strophanthin (stro-fan'thin) a glycoside or a mixture of steroidal glycosides obtained from *Strophanthus kombé*, occurring as a white or yellowish white powder. It is a cardioactive drug with actions similar to those of ouabain, and is used intravenously when a cardiotonic of rapid onset and short duration is desired. Called also *K-s* or *s.-K*. **G-s.**, **s.-G.**, ouabain.

Strophanthus (stro-fan'thus) [Gr. *strophos* a twisted band + *anthos* flower] a genus of shrubs, trees, and woody vines growing especially in tropical Africa, and including several poisonous species. *S. gratus* yields ouabain; *S. hispidus* yields pseudostrophanthin; *S. kombé* yields strophanthidin and strophanthin; and *S. sarmentosus* yields sarmentocymarin, sarmentogenin, and sarmentose.

strophocephalus (stroff'o-sef'ah-lus) a fetus exhibiting strophocephaly.

strophocephaly (stroff'o-sef'ah-le) [Gr. *strophos* a twisted band + *kephale* head] a developmental anomaly characterized by distortion of the head and face.

strophosomus (stroff'o-so'mus) [Gr. *strophos* a twisted band + *sōma* body] a celosomus, especially in chicks, in which the extremities are reflexed onto the back with the distal ends resting on the head.

strophulus (stroff'u-lus) [L.] papular urticaria.

struck (struk) a usually fatal enterotoxemia of young calves, lambs, and piglets, caused by *Clostridium perfringens* type C, occurring chiefly in the winter and spring, apparently throughout the world; it is characterized by hemorrhagic enteritis and peritonitis. It was first reported as a disease of mature sheep in the Romney Marsh district of England. Called also *hemorrhagic enterotoxemia*.

structural (struk'tūr-al) pertaining to or affecting the structure.

structure (struk'chur) [L. *struere* to build] the components and their manner of arrangement in constituting a whole. **antigenic s.** (of microorganisms), the mosaic of individual antigens present in cells of a microorganism. **denture-supporting s's**, the tissues, either the teeth or residual ridges, or both, which serve as the foundation for removable partial or complete dentures. **fine s.**, ultrastructure.

struma (stroo'mah) [L.] goiter. **s. aberran'ta**, goiter affecting an accessory thyroid gland. **adrenal s.**, suprarenal hyperplasia. **s. aneurysmat'ica**, vascular goiter in which the vessels are dilated. **s. basedowifica'ta**, Graves' disease. **s. ba'seos lin'guae**, an accessory and ectopic portion of thyroid tissue at the base of the tongue. **s. calculo'sa**, a goiter that has undergone calcification. **cast iron s.**, Riedel's s. **s. colloides**, distention of the follicles of the thyroid gland with colloid secretion. **s. colloides cys'tica**, a colloid goiter in which the walls of the follicles have broken down, forming cysts or cystlike cavities. **s. cys'tica os'sea**, a goiter in which bone has formed. **s. endothora'cica**, intrathoracic goiter. **s. fibro'sa**, thyroid enlargement caused by hyperplasia of the connective tissue. **s. follicula'ris**, parenchymatous goiter. **s. gelatino'sa**, colloid goiter. **Hashimoto's s.**, s. lymphomatosa. **s. hyperplas'tica**, s. fibrosa. **ligneous s.**, Riedel's s. **s. lipomato's des aberran'ta re'nis**, hypernephroma. **s. lymphat'ica**, lymphatism, def. 2. **s. lymphomato'sa**, a progressive disease of the thyroid gland, with extensive acidophilic degeneration of its epithelial elements and replacement by lymphoid and fibrous tissue; called also *Hashimoto's disease* or *thyroiditis*. **s. malig'na**, cancer of the thyroid body. **s. mol'lis**, thyroid enlargement due to hyperplasia of the cellular and colloid elements. **s. nodo'sa**, adenoma of the thyroid gland. **s. ova'rii**, a rare teratoid tumor of the

ovary composed almost entirely of thyroid tissue, with large follicles containing abundant colloid; occasionally there are symptoms of hyperthyroidism. **s. parenchymato'sa**, enlargement of the thyroid gland due to follicular hyperplasia. **s. pituita'ria**, permanent enlargement of the pituitary gland. **s. postbranchia'lis** (*obs.*), Hürthle cell tumor; see under *tumor*. **retrosternal s.**, substernal s. **Riedel's s.**, a chronic proliferating, fibrosing, inflammatory process involving usually one but sometimes both lobes of the thyroid gland, as well as the trachea and the muscles, fascia, nerves, and vessels in the vicinity of the gland. Called also *Riedel's disease* and *ligneous thyroiditis*. **substernal s.**, a goiter that extends down back of the sternum. **s. suprarena'lis**, a peculiar tumor of the suprarenal gland, consisting mainly of fatty tissue. **thymus s.**, persistence of the thymus gland beyond the time when it usually atrophies. **s. vasculo'sa**, vascular goiter.

strumectomy (stroo-mek'to-me) [*L. struma* goiter + *Gr. ektomē* excision] surgical removal of a goiter. **median s.**, excision of a median goiter or an enlarged isthmus of the thyroid.

strumiprival (stroo-mip'ri-val) strumiprивous.

strumiprivic (stroo'mi-priv'ik) strumiprивous.

strumiprивous (stroo'mi-priv'us) [*L. strumiprivus*; *struma* goiter + *privus* deprived] caused by the removal of the thyroid gland.

strumitis (stroo-mi'tis) inflammation of the thyroid gland; thyroiditis. **eberthian s.**, thyroiditis due to infection with the typhoid bacillus.

Strümpell's disease, sign, type (strim'pelz) [Adolf von Strümpell, physician in Leipzig, 1853-1925] see under *disease, sign, and type*.

Strümpell-Leichtenstern disease (strim'pel-lik'ten-stern) [A. von Strümpell; Otto Leichtenstern, German physician, 1845-1900] hemorrhagic encephalitis.

Strümpell-Marie disease (strim'pel-mah-re') [A. von Strümpell; Pierre Marie, French physician, 1853-1940] rheumatoid spondylitis.

Strümpell-Westphal pseudosclerosis (strim'pel-vest'fawl) [A. von Strümpell; Carl Friedrich Otto Westphal, German neurologist, 1833-1890] hepatolenticular degeneration.

Strunsky's sign (strun'skēz) [Max Strunsky, New York orthopedic surgeon, born 1873] see under *sign*.

Struve's test (stroo'vez) [Heinrich Struve, physician in Petrograd] see under *tests*.

struvite (stroo'vit) see under *calculus*.

strychnine (stri'k'nin) an extremely poisonous alkaloid, $C_{21}H_{22}N_2O_2$, obtained chiefly from *Strychnos nux-vomica* and other species of *Strychnos*, which causes excitation of all portions of the central nervous system by blocking postsynaptic inhibition of neural impulses; it has been used as a central nervous system stimulant and was formerly used as a bitter tonic, circulatory stimulant, and with cathartic drugs. In veterinary medicine it is occasionally used as a tonic and stimulant. See also *strychninism*. **s. hydrochloride**, a crystalline salt, $C_{21}H_{22}N_2O_2 \cdot HCl + 2H_2O$. **s. nitrate**, a salt, $C_{21}H_{22}N_2O_2 \cdot HNO_3$, occurring as colorless odorless needles or as a white crystalline powder; its medical use is the same as that of strychnine, and its veterinary use is the same as that of strychnine sulfate. **s. phosphate**, a salt, $C_{21}H_{22}N_2O_2 \cdot H_3PO_4 \cdot 2H_2O$, occurring as colorless or white crystals or as a white powder; its medical use is the same as that of strychnine, and its veterinary use is the same as that of strychnine sulfate. It was formerly used in compounding iron, quinine, and strychnine phosphates elixir. **s. sulfate**, a salt, $(C_{21}H_{22}N_2O_2)_2 \cdot H_2SO_4 \cdot 5H_2O$, occurring as colorless or white crystals or as a white crystalline powder; used the same as strychnine. In veterinary medicine it is used in tonics, and in noninflammatory paraplegia, rumen, and intestinal impactions.

strychninism (stri'k'nin-izm) a toxic condition due to the misuse of strychnine; chronic strychnine poisoning. Symptoms include increased acuity of hearing, vision, touch, taste, and smell, followed by tonic convulsions and vomiting; in severe cases, it may culminate in respiratory paralysis and death.

strychninization (stri'k'nin-iz-a'shun) the act of bringing under the influence of strychnine.

strychninomania (stri'k'nin-o-ma'ne-ah) [*strychnine* + *Gr. mania* madness] mental aberration due to strychnine poisoning.

strychnism (stri'k'nizm) poisoning by strychnine.

strychnize (stri'k'niz) to put under the influence of strychnine.

Strychnos (stri'nos) [*Gr. "nightshade"*] a genus of loganiaceous tropical trees. *S. nux-vomica* affords strychnine, curare, brucine, and nux-vomica; *S. ignatii* affords ignatia and brucine.

S.T.S. serologic test for syphilis.

S.T.U. skin test unit; see under *unit*.

stump (stump) the distal end of the part of the limb left in amputation. **conical s.**, a cone-shaped amputation stump produced as a result of undue retraction of the muscles.

stun (stun) to knock senseless; to render unconscious by a blow or other force; to daze.

stunt (stunt) to retard the growth of. **bushy s.**, a viral disease of tomatoes marked by stunting and discoloration of the leaves.

stupe (stüp) [*L. stupa* tow] a cloth, sponge, or the like, for external application, charged with hot water, wrung out nearly dry, and then made irritant or otherwise medicated.

stupefacient (stu'pě-fa'shent) [*L. stupefacere* to make senseless] 1. inducing stupor. 2. an agent that induces stupor.

stupefactive (stu'pě-fak'tiv) producing narcosis or stupor.

stupor (stu'por) [*L.*] partial or nearly complete unconsciousness, manifested by responding only to vigorous stimulation. Also, in psychiatry, a disorder marked by reduced responsiveness. **anergic s.**, a form of dementia in which the patient is quiet, listless, and nonresistant. **benign s.**, a condition of stupor sometimes observed in the depressive phase of manic-depressive psychosis. **delusion s.**, stuporous psychosis or acute dementia. **epileptic s.**, stupor following an epileptic convulsion; called also *postconvulsive s.* **lethargic s.**, trance. **postconvulsive s.**, epileptic s.

stuporose (stu'por-ōs) stuporous.

stuporous (stu'por-us) affected with or characterized by stupor.

stupp (stup) a poisonous kind of soot which accumulates in the condensers of mercury smelters; it contains metallic mercury in a finely divided condition.

sturdy (stur'de) gid.

Sturge's disease, syndrome (ster'jez) [William Allen Sturge, British physician, 1850-1919] Sturge-Weber syndrome.

Sturge-Weber syndrome (sterj-web-er) [W. A. Sturge; Frederick Parkes Weber, British physician, 1863-1962] see under *syndrome*.

Sturm's conoid, interval (sturmz) [Johann Christoph Sturm, 1635-1703] see under *conoid*, and see *focal interval*, under *interval*.

stuttering (stut'er-ing) a problem of speech behavior involving three definitive factors: (1) speech disfluency, most significantly repetitions of parts of words and whole words, prolongations of sounds, interjections of sounds or words, and unduly prolonged pauses; (2) reactions of the listeners to the speaker's disfluency as evaluated by them as undesirable, abnormal, or unacceptable; and (3) the reactions of the speaker to the listeners' reactions, as well as to his own speech disfluency and to his conception of himself as a stutterer. Stuttering is usually distinguished from *stammering*, which is characterized by blocking or involuntary pauses in speech, sometimes with repetition of sounds. **labiochoreic s.**, labiochorea. **urinary s.**, interruption of the flow during urination.

sty (sti), pl. *sties* [*L. hordeolum*] styé.

stycosis (sti-ko'sis) the presence of calcium sulfate in the organs of the body, especially in the lymph nodes.

stye (sti), pl. *styes* [*L. hordeolum*] hordeolum. **meibomian s.**, one involving a meibomian gland, usually draining through the conjunctival surface of the lid. **zeisian s.**, one involving a zeisian gland, occurring on the surface of the skin at the edge of the lid.

style (stil) stylet.

stylet (sti'let) [*L. stilus*; *Gr. stylos* pillar] 1. a wire run through a catheter or cannula to render it stiff or to remove debris from its lumen. 2. a slender probe.

styliform (sti'li-form) [*L. stilus* stake, pole + *forma* shape] long and pointed; styloid.

styliscus (sti-lis'kus) [*L.*; *Gr. styliskos* pillar] a slender cylindrical tent.

stylo- (sti'lo) [*L. stilus* a stake, pole; *Gr. stylos* pillar] a combining form denoting resemblance to a stake or pole, used especially to denote relationship to the styloid process of the temporal bone.

stylohyal (sti'lo-hi'al) stylohyoid.

stylohyoid (sti'lo-hi'oid) pertaining to the styloid process and to the hyoid bone.

styloid (sti'loid) [*Gr. stylos* pillar + *eidos* form] resembling a pillar; long and pointed; styliform.

styloiditis (sti'loi-di'tis) inflammation of tissues about the styloid process.

stylomandibular (sti'lo-man-dib'u-lar) pertaining to the styloid process and the mandible.

stylomastoid (sti'lo-mas'toid) pertaining to the styloid and mastoid processes.

stylomaxillary (sti'lo-mak'si-ler'e) pertaining to the styloid process and to the maxilla.

stylomyloid (sti'lo-mi'loid) [*stylo-* + *Gr. mylē* mill + *eidos* form] pertaining to the styloid process and to the region of the lower molar teeth.

stylopodium (sti'lo-po'de-um) see *limb*.

Stylosanthes (sti'lo-san'thēz) [*stylo-* + *Gr. anthos* flower] a genus of leguminous herbs, chiefly South American. *S. elatior*, the pencil-flower of North America, is a uterine sedative.

stylostaphyline (sti'lo-staf'i-lin) pertaining to the styloid process of the temporal bone and the velum palatinum.

stylosteophyte (sti-los'te-o-fit) a pillar-shaped exostosis.

stylostixis (sti'lo-stik'sis) [stylo- + Gr. *stixis* pricking] acupuncture.

stylus (sti'lus) [L. *stilus*] 1. a stylet. 2. a pencil-shaped medicinal preparation, as a stick of caustic.

stymatosis (sti'mah-to'sis) [Gr. *styma* priapism] priapism with a bloody discharge.

stypage (sti'pij, ste-pahzh') [Fr.] the application of a stype to produce local anesthesia.

stype (stip) [Gr. *styppeion* tow] a tampon or pledget.

stypsis (stip'sis) [Gr. *stypsis* contraction] 1. astringency; astringent action. 2. treatment by astringents.

styptic (stip'tik) [Gr. *styptikos*] 1. astringent; arresting hemorrhage by means of an astringent quality. 2. an astringent and hemostatic remedy. **Binelli's s.**, a solution of creosote, formerly used for arresting hemorrhage. **chemical s.**, one which arrests hemorrhage by causing coagulation through chemical action. **mechanical s.**, one which acts by causing coagulation mechanically, as a pledget of cotton. **vascular s.**, one which acts by producing contraction of injured or divided blood vessels of small caliber.

Stypven (stip'ven) trademark for a preparation of Russell's viper venom; used as a hemostatic agent. See also under *tests*.

styramate (stir'ah-māt) chemical name: carbamic acid β -hydroxyphenethyl ester. A crystalline substance, $C_8H_{11}NO_3$, used as a skeletal muscle relaxant.

Styrax (sti'raks) a genus of shrubs and trees of worldwide distribution but growing mainly in Java, Sumatra, and Thailand, various species of which are the source of benzoin (def. 1).

styrax (sti'raks) storax.

styrene (sti'rēn) a fragrant liquid or oil hydrocarbon, vinyl benzene, $C_6H_5CH:CH_2$, from storax; called also *cinnamene*, *cinnamol*, and *styrol*.

styrol (sti'rol) styrene.

styrolene (sti'ro-lēn) styrene.

styrone (sti'ron) cinnamyl alcohol.

su. abbreviation for L. *su'mat*, let him take.

sub- [L. *sub* under] a prefix signifying *under*, *near*, *almost*, or *moderately*.

subabdominal (sub'ab-dom'i-nal) situated below the abdomen.

subabdominoperitoneal (sub'ab-dom'ī-no-per'ī-to-ne'al) subperitoneal.

subacetabular (sub'as-ē-tab'u-lar) situated below the acetabulum.

subacetate (sub-as'ē-tāt) any basic acetate.

subacid (sub-as'id) somewhat acid.

subacidity (sub'ah-sid'i-te) deficient acidity.

subacromial (sub'ah-kro'me-al) situated below or beneath the acromion.

subacute (sub'ah-kūt') somewhat acute; between acute and chronic.

subalimentation (sub'al-ī-men-ta'shun) insufficient nourishment.

subanal (sub-a'nal) situated below the anus.

subapical (sub-ap'ē-kal) situated below an apex.

subaponeurotic (sub'ap-o-nu-rot'ik) situated beneath an aponeurosis.

subarachnoid (sub'ah-rak'no'id) situated or occurring between the arachnoid and the pia mater.

subarcuate (sub-ar'ku-āt) [*sub-* + L. *arcuatus* arched] somewhat arched or bent.

subareolar (sub'ah-re'o-lar) beneath the areola.

subastragalar (sub'as-trag'ah-lar) situated or occurring under the astragalus (talus).

subastringent (sub'ah-strin'jent) moderately astringent.

subatloidean (sub'at-loi'de-an) situated beneath the atlas.

subatomic (sub'ah-tom'ik) of or pertaining to the constituent parts of an atom as considered under the theory of the nuclear atom; occurring within an atom; smaller than an atom.

subaural (sub-aw'ral) situated beneath the ear.

subaurale (sub'aw-ra'le) an anthropometric landmark, the lowest point on the inferior border of the ear lobule when the subject is looking straight ahead.

subauricular (sub'aw-rik'u-lar) below the pinna (auricle) of the ear.

subaxial (sub-ak'se-al) below an axis.

subaxillary (sub-ak'sī-ler'e) below the axilla, or armpit.

subbasal (sub-ba'sal) below a base.

subbrachial (sub-bra'ke-al) relating to the brachium colliculi inferioris.

subbrachycephalic (sub'bra-ke-sē-fal'ik) somewhat brachycephalic; having a cephalic index of 78 to 79.

subcalcareous (sub'kal-ka're-us) slightly calcareous.

subcalcarine (sub-kal'kar-in) beneath the calcarine fissure.

subcalorism (sub-ka'lor-izm) frigorism.

subcapsular (sub-kap'su-lar) situated below a capsule.

subcapsuloperiosteal (sub-kap'su-lo-per'e-os'te-al) beneath the capsule and the periosteum of a joint.

subcarbonate (sub-kar'bo-nāt) any basic carbonate.

subcartilaginous (sub'kar-tī-laj'i-nus) 1. situated beneath a cartilage. 2. partly cartilaginous.

subcentral (sub-sen'tral) located deep to the center.

subception (sub-sep'shun) perception below the level of awareness.

subchloride (sub-klo'rid) that chloride of any series which contains the smallest proportion of chlorine.

subchondral (sub-kon'dral) beneath a cartilage.

subchordal (sub-kor'dal) situated below the notochord or below the vocal cords.

subchorionic (sub'ko-re-on'ik) situated beneath the chorion.

subchoroidal (sub'ko-ro'i'dal) beneath the choroid.

subchronic (sub-kron'ik) between chronic and subacute.

subclass (sub'klas) a taxonomic category sometimes established, subordinate to a class and superior to an order.

subclavian (sub-kla've-an) situated under the clavicle, as the subclavian artery.

subclavicular (sub'kla-vik'u-lar) situated under the clavicle.

subclinical (sub-klin'i-kal) without clinical manifestations; said of the early stages, or a slight degree, of a disease.

subclone (sub'klōn) the progeny of a mutant cell arising in a clone.

subconjunctival (sub'kon-junk-ti'val) situated or occurring beneath the conjunctiva.

subconscious (sub-kon'shus) 1. imperfectly or partially conscious. 2. preconscious.

subconsciousness (sub-kon'shus-nes) the state of being partially conscious.

subcontinuous (sub'kon-tin'u-us) nearly continuous; remittent.

subcoracoid (sub-kor'ah-koid) situated beneath the coracoid process.

subcortex (sub-kor'teks) that part of the brain substance which underlies the cortex.

subcortical (sub-kor'tī-kal) situated beneath the cortex.

subcostal (sub-kos'tal) situated beneath a rib.

subcostalis (sub'kos-ta'lis), pl. *subcostales* [L.] subcostal.

subcranial (sub-kra'ne-al) beneath the cranium.

subcrepitant (sub-krep'i-tant) pertaining to a rale that is slightly more coarse than a crepitant rale; see under *rale*.

subcrepitation (sub'krep-ī-ta'shun) the sound of subcrepitant rales; see under *rale*.

subculture (sub'kul-tūr) a culture of bacteria derived from another culture.

subcutaneous (sub'ku-ta'ne-us) beneath the skin.

subcuticular (sub'ku-tik'u-lar) situated beneath the epidermis; subepidermal.

subcutis (sub'ku'tis) [*sub-* + L. *cutis* skin] 1. panniculus adiposus. 2. subcutaneous tissue (tela subcutanea [NA]).

subdelirium (sub'de-lir'e-um) partial or mild delirium.

subdeltoid (sub-del'toid) beneath the deltoid muscle.

subdental (sub-den'tal) [*sub-* + L. *dens* tooth] beneath the teeth.

subdiaphragmatic (sub'di-ah-frag-mat'ik) situated under the diaphragm; subphrenic.

subdorsal (sub-dor'sal) situated below the dorsal region.

subduct (sub-duk't') to depress or draw down; see *subduction*.

subduction (sub-duk'shun) a drawing downward; specifically the duction of the eyeball exerted by the inferior rectus muscle.

subdural (sub-du'ral) situated between the dura mater and the arachnoid.

subendocardial (sub'en-do-kar'de-al) beneath the endocardium.

subendothelial (sub'en-do-the'le-al) situated beneath an endothelium.

subendothelium (sub'en-do-the'le-um) Debove's membrane.

subendymal (sub-en'dī-mal) situated beneath the endyma (ependyma).

subependymal (sub'ep-en'dī-mal) situated beneath the ependyma.

subependymoma (sub'ep-en'dī-mo'mah) an ependymoma in which there is a diffuse proliferation of subependymal fibrillary astrocytes among the ependymal tumor cells.

- subepidermal, subepidermic** (sub'ep-i-der'mal; sub'ep-i-der'-mik) beneath the epidermis.
- subepiglottic** (sub'ep-i-glot'ik) below the epiglottis.
- subepithelial** (sub'ep-i-the'le-al) situated beneath an epithelium.
- suberin** (soo'ber-in) an insoluble variety of cellulose derived from cork.
- suberitin** (soo-ber'i-tin) [*Suberites*, a marine sponge (from L. *suber* cork) + chemical suffix -in] a toxic substance derived from the marine sponge, *Suberites domunculus*, which, when injected into dogs, produces intestinal hemorrhages and respiratory distress.
- suberosis** (su'ber-o'sis) [L. *suber* cork + -osis] a form of allergic alveolitis due to inhalation of and tissue reaction to moldy cork dust; the offending antigen is from species of *Penicillium*.
- subexcite** (sub'ek-sit') to excite in a partial manner.
- subextensibility** (sub'eks-ten'si-bil'i-te) decreased extensibility.
- subfamily** (sub-fam'i-le) a taxonomic category sometimes established, subordinate to a family and superior to a tribe.
- subfascial** (sub-fash'al) situated beneath a fascia.
- subfertile** (sub-fer'til) characterized by less than normal fertility.
- subfertility** (sub'fer-til'i-te) the state of being less than normally fertile; relative sterility.
- Sub fin. coct.** abbreviation for L. *sub finem coctio'nis*, toward the end of boiling.
- subflavous** (sub-fla'vus) [sub- + L. *flavus* yellow] yellowish.
- subfoliar** (sub-fo'le-ar) pertaining to a subfolium.
- subfolium** (sub-fo'le-um) [sub- + L. *folium* leaf] any of the elementary divisions of a cerebellar folium.
- subgaleal** (sub-ga'le-al) situated beneath the galea aponeurotica.
- subgallate** (sub-gal'at) a basic gallate.
- subgemmal** (sub-jem'al) [sub- + L. *gemma* bud] situated under a taste bud or other bud.
- subgenus** (sub-je'nus) a taxonomic category between a genus and a species.
- subgerminal** (sub-je'r-mi-nal) below or under the germ.
- subgingival** (sub-jin'ji-val) beneath the gingiva.
- subglenoid** (sub-gle'noid) situated under the glenoid fossa.
- subglossal** (sub-glos'al) sublingual.
- subglossitis** (sub'glos-si'tis) [sub- + L. *glossa* tongue + -itis] inflammation of the lower surface of the tongue.
- subglottic** (sub-glot'ik) beneath the glottis.
- subgranular** (sub-gran'u-lar) somewhat granular.
- subgrondation** (sub'gron-da'shun) [Fr.] the depression of one fragment of bone beneath another.
- subgyrus** (sub-ji'rus) any gyrus that is partly concealed or covered by another or by others.
- subhepatic** (sub'hē-pat'ik) situated beneath the liver.
- subhumeral** (sub-hu'mer-al) below or beneath the humerus.
- subhyaloid** (sub-hi'ah-loid) situated or occurring beneath the hyaloid membrane.
- subhyoid** (sub-hi'oid) situated below the hyoid.
- subhyoidian** (sub'hi-oi'de-an) subhyoid.
- subicteric** (sub'ik-ter'ik) somewhat jaundiced.
- subicular** (sū-bik'u-lar) of or pertaining to the uncinate gyrus.
- subiculum** (sū-bik'u-lum) [L., from *subicere* to raise, lift] an underlying or supporting structure. **s. cor'nu ammo'nis**, **s. hippocam'pi**, gyrus parahippocampalis. **s. promonto'rii ca'vi tym'pani** [NA], **s. of promontory of tympanic cavity**, a ridge of bone bounding the tympanic sinus posteriorly.
- subiliac** (sub-il'e-ak) below the ilium.
- subilium** (sub-il'e-um) the lowest portion of the ilium.
- subimbibitional** (sub'im-bi-bish'on-al) due to deficient intake of liquid.
- subinflammation** (sub'in-flah-ma'shun) a slight or mild inflammation.
- subinflammatory** (sub'in-flam'ah-tor'e) pertaining to or causing only mild inflammation.
- subintimal** (sub-in'ti-mal) beneath the intima (of a vessel).
- subintrans** (sub-in'trans) recurrence of a paroxysm after a shorter period than usual.
- subintrans** (sub-in'trant) [L. *subintrare* entering by stealth] 1. beginning before the completion of a previous cycle or paroxysm; anticipating. 2. characterized by recurrence at lessening intervals.
- subinvolution** (sub'in-vo-lu'shun) incomplete involution; failure of a part to return to its normal size and condition after enlargement due to functional activity, as subinvolution of the uterus after delivery of a baby. **chronic s. of uterus**, a diffuse, symmetrical uterine enlargement commonly associated with painless menorrhagia.
- subiodide** (sub-i'o-did) that iodide of any series which contains the smallest proportion of iodine.
- subjacent** (sub-ja'sent) [sub- + L. *jacere* to lie] lying just beneath or underneath.
- subject¹** (sub-jekt') [L. *subjectare* to throw under] to cause to undergo, or submit to; to render subservient.
- subject²** (sub'jekt) [L. *subjectus* cast under] 1. a person or animal which has been the object of treatment, observation, or experiment. 2. a body for dissection.
- subjective** (sub-jek'tiv) [L. *subjectivus*] pertaining to or perceived only by the affected individual; not perceptible to the senses of another person.
- subjectoscope** (sub-jek'to-skōp) [*subjective sensation* + Gr. *skopein* to examine] an instrument used in the study of subjective visual sensations.
- subjee** (sub'je) [Hind. *sabzi*, literally, "greenness"] the capsules and larger leaves of *Cannabis indica*.
- subjugal** (sub-ju'gal) situated below the zygomatic bone.
- sublatio** (sub-la'she-o) [L.] sublation. **s. ret'inae**, detachment of the retina.
- sublation** (sub-la'shun) [L. *sublatio*] a lifting up, or elevation.
- sublesional** (sub-le'shun-al) performed or occurring beneath a lesion.
- sublethal** (sub-le'thal) not quite fatal; insufficient to cause death.
- sublimate** (sub'li-māt) [L. *sublimatum*] 1. a substance obtained or prepared by sublimation. 2. to divert consciously unacceptable instinctual drives into personally and socially acceptable channels through a mechanism operating outside of and beyond conscious awareness. **corrosive s.**, mercury bichloride.
- sublimation** (sub'li-ma'shun) [L. *sublimatio*] 1. the direct change of state from solid to vapor. 2. Freud's term for the process of deviating sexual motive powers from sexual aims or objects to new aims or objects other than sexual.
- Sublimaze** (sub'li-māz) trademark for a preparation of fentanyl citrate.
- sublime** (sub-lim') [L. *sublimare*] to volatilize a solid body by heat and then to collect it in a purified form as a solid or powder.
- subliminal** (sub-lim'i-nal) [sub- + L. *limen* threshold] below the limen, or threshold, of sensation.
- sublimis** (sub-li'mis) [L.] superficial.
- sublingual** (sub-ling'gwal) located beneath the tongue.
- sublinguitis** (sub'ling-gwi'tis) inflammation of the sublingual gland.
- sublobe** (sub'lōb) a division of a lobe; a lobule.
- sublobular** (sub-lob'u-lar) situated beneath a lobule.
- subluxate** (sub-luks'at) to partially dislocate.
- subluxation** (sub'luk-sa'shun) [sub- + L. *luxatio* dislocation] an incomplete or partial dislocation. **s. of lens**, partial dislocation of lens of the eye. **Volkman's s.**, a type of tuberculosis arthritis marked by flexion contracture of the knee, external rotation of the leg, valgus position of the knee, and bending of the upper third of the tibia.
- sublymphemia** (sub'lim-fe'me-ah) hypolymphemia.
- submammary** (sub-mam'ar-e) situated or occurring beneath a mammary gland.
- submandibular** (sub'man-dib'u-lar) below the mandible.
- submania** (sub-ma'ne-ah) hypomania.
- submarginal** (sub-mar'ji-nal) situated beneath a margin.
- submaxilla** (sub'mak-sil'ah) [sub- + L. *maxilla* jaw] the mandible.
- submaxillaritis** (sub-mak'si-ler-i'tis) inflammation of the submaxillary gland.
- submaxillary** (sub-mak'si-ler'e) situated beneath the maxilla.
- submedial, submedian** (sub-me'de-al; sub-me'de-an) beneath or near the middle.
- submembranous** (sub-mem'brah-nus) partly membranous.
- submental** (sub-men'tal) [sub- + L. *mentum* chin] situated below the chin.
- submersion** (sub-mer'shun) [sub- + L. *mergere* to dip] the act of placing or the condition of being under the surface of a liquid.
- submetacentric** (sub'met-ah-sen'trik) having the centromere more or less equidistant from the center of the chromosome and one end, so that one arm is shorter than the other. Cf. *acrocentric* and *metacentric*.
- submicroscopic** (sub-mi'kro-skop'ik) too small to be visible under the microscope.
- submicroscopical** (sub'mi-kro-skop'i-kal) too small to be visible with the light microscope.
- submorphous** (sub-mor'fus) neither amorphous nor perfectly crystalline.
- submucosa** (sub'mu-ko'sah) the layer of areolar tissue situated beneath the mucous membrane; see under *tela* the terms beginning *t. submucosa*.

submucosal (sub/'mu-ko'sal) pertaining to the submucosa, or situated beneath the mucous membrane.

submucous (sub-mu/'kus) situated or performed beneath the mucous membrane.

subnarcotic (sub/'nar-kot'ik) moderately narcotic.

subnasal (sub-na/'zal) situated below the nose.

subnasale (sub/'na-sa'le) an anthropometric landmark, the point at which the nasal septum merges, in the midsagittal plane, with the upper lip.

subnasion (sub-na/'ze-on) subnasale.

subnatant (sub-na/'tant) 1. situated below or at the bottom of something. 2. the liquid phase situated below a solid phase; it arises when a solid has a lower density than the liquid with which it is in contact.

subneural (sub-nu/'ral) situated beneath a nerve, as a subneural apparatus.

subnitrate (sub-ni/'trāt) a basic nitrate.

subnormal (sub-nor/'mal) below or less than normal; characterized by qualities, such as intelligence, lower than the level usually observed.

subnormality (sub/'nor-mal'i-te) the state of being subnormal.

subnotochordal (sub/'no-to-kor'dal) situated beneath the notochord.

subnucleus (sub-nu/'kle-us) a partial or secondary nucleus into which a large nerve nucleus may be split up.

subnutrition (sub/'nu-trish'un) defective nutrition.

suboccipital (sub/'ok-sip'i-tal) situated below the occiput.

suboptimal (sub-op/'ti-mal) less than the optimum.

suboptimum (sub-op/'ti-mum) a condition lower than that which is optimal or best.

suborbital (sub-or/'bi-tal) situated beneath the orbit.

suborder (sub-or/'der) a taxonomic category sometimes established, subordinate to an order and superior to a family.

suboxide (sub-ok/'sid) that oxide in any series which contains the smallest proportion of oxygen.

subpapillary (sub-pap/'i-lar-e) underlying the stratum papillare of the skin, as the subpapillary layer.

subpapular (sub-pap/'u-lar) indistinctly papular.

subparalytic (sub/'par-ah-lit'ik) partially paralytic.

subparietal (sub/'pah-ri-'ē-tal) situated below a parietal bone, lobe, etc.

subpatellar (sub/'pah-tel'ar) situated below the patella.

subpectoral (sub-pek/'tor-al) situated beneath or below the pectoral region or muscles.

subpelviperitoneal (sub-pel/'ve-per'i-to-ne'al) situated beneath the pelvic peritoneum.

subpericardial (sub/'per-i-kar'de-al) beneath the pericardium.

subperiosteal (sub/'per-e-os'te-al) situated beneath the periosteum.

subperiosteocapsular (sub/'per-e-os'te-o-kap'su-lar) subcapsuloperiosteal.

subperitoneal (sub/'per-i-to-ne'al) situated beneath or deep to the peritoneum, as a subperitoneal abscess.

subperitoneoabdominal (sub/'per-i-to-ne'o-ab-dom'i-nal) subperitoneal.

subperitoneopelvic (sub/'per-i-to-ne'o-pel'vik) occurring beneath the peritoneum of the pelvis.

subpharyngeal (sub/'fah-rin'je-al) situated below the pharynx.

subphrenic (sub-fren/'ik) situated under the diaphragm; subdiaphragmatic.

subphyla (sub-fi/'lah) plural of *subphylum*.

subphylum (sub-fi/'lum), pl. *subphyla*. A taxonomic category sometimes established, subordinate to a phylum and superior to a class.

subpial (sub-pi/'al) situated beneath the pia mater.

subpituitarism (sub/'pi-tu'i-tar-izm) hypopituitarism.

subplacenta (sub/'plah-sen'tah) the decidua basalis.

subpleural (sub-ploor/'al) situated beneath the pleura.

subpreputial (sub/'pre-pu'shal) situated beneath the prepuce.

subpubic (sub-pu/'bik) situated or performed below the pubic arch.

subpulmonary (sub-pul/'mo-ner'e) situated or occurring below the lung, between the lung and the diaphragm.

subpulpal (sub-pul/'pal) below the dental pulp.

subpyramidal (sub/'pi-ram'i-dal) below a pyramid, as the subpyramidal fossa.

subrectal (sub-rek/'tal) below the rectum.

subretinal (sub-ret/'i-nal) below the retina.

subscaphocephaly (sub/'skaf-o-sef'ah-le) the condition of being moderately scaphocephalic.

subscapular (sub-skap/'u-lar) situated below or under the scapula.

subscleral (sub-skle/'ral) located or occurring beneath the sclera.

subsclerotic (sub-skle/'rot-ik) 1. subscleral. 2. partly sclerosed.

subscription (sub-skip/'shun) that part of a prescription which gives the directions for compounding the ingredients; see *prescription*.

subserosa (sub/'sē-ro'sah) a layer of tissue situated beneath a serous membrane.

subserous (sub-se/'rus) situated beneath a serous membrane.

subsibilant (sub-sib/'i-lant) having a muffled, whistling sound.

subsonic (sub-son/'ik) infrasonic.

subspecialty (sub-spesh/'al-te) a branch of medicine subordinate to a specialty, as gastroenterology is a subspecialty of internal medicine.

subspecies (sub/'spe-sēz) a taxonomic category subordinate to a species, whose members differ morphologically from other members of the species but remain capable of interbreeding with them; a variety or race.

subspinale (sub/'spi-na'le) point A; see under *point*.

subspinous (sub-spi/'nus) situated below a spinous process.

subsplenic (sub-sple/'ne-al) beneath the splenium of the corpus callosum.

substage (sub'stāj) that part of the microscope which is situated beneath the stage.

substance (sub'stans) [L. *substantia*] the material constituting an organ or body; called also *substantia* [NA]. **accessory food s.**, vitamin. **ad s.**, a name given to the substance which effects transmission of a nerve impulse across a synapse. **adamantine s. of tooth**, enamel (enamelum [NA]). **agglutinable s.**, a substance existing in erythrocytes and bacteria, with which an agglutinin unites to produce specific agglutination. **agglutinating s.**, agglutinin. **α-s.**, **alpha s.**, reticular s. **antidiuretic s.**, see under *hormone*. **anti-immune s.**, anti-antibody. **arborescent white s. of cerebellum**, arbor vitae cerebelli. **autacoid s.**, autacoid. **β-s.**, **beta s.**, see *Heinz-Ehrlich bodies*. **black s.**, **substantia nigra**. **blood group s's**, secreted soluble mucopolysaccharides in the body fluids having structures characteristic of red cells and some other body tissues and having the same blood group specificity as red cell isoantigens (e.g., the A, B, and H substances of the ABO blood group). **blood grouping specific s's** [USP], a sterile, isotonic solution of the polysaccharide-containing complexes that are capable of reducing the titer of the anti-A and the anti-B isoagglutinins of group O blood. Specific substance A is usually isolated from hog gastric mucin, and specific substance B usually from the glandular portion of horse gastric mucosa. **Blum s.**, catechin. **bony s. of tooth**, cementum. **cement s.**, **cementing s.**, material which serves to hold together the different components of a tissue, as the intercellular substance in endothelium or the interprismatic substance in tooth enamel. **chromidial s.**, granular endoplasmic reticulum. **chromophil s.**, Nissl bodies. **colloid s.**, a jelly-like material formed in colloid degeneration. **compact s. of bones**, **substantia compacta ossium**. **contact s.**, catalyst. **controlled s.**, any of the drugs regulated under the Controlled Substances Act (see under C). **cortical s. of bone**, **substantia corticalis ossium**. **cortical s. of kidney**, cortex renalis. **cortical s. of lens**, cortex lentis. **cortical s. of lymph nodes**, cortex nodi lymphatici. **cortical s. of suprarenal gland**, the adrenal cortex (cortex glandulae suprarenalis [NA]). **cytotoxin s.**, cytolsin. **depressor s.**, a substance that tends to decrease activity or blood pressure. **exophthalmos-producing s.**, a substance isolated from crude anterior pituitary extracts which produces exophthalmos in experimental animals. **external s. of suprarenal gland**, cortex glandulae suprarenalis. **fundamental s. of tooth**, dentin (dentinum [NA]). **gelatinous s. of gray substance**, **substantia gelatinosa**. **gelatinous s. of spinal cord**, **substantia gelatinosa**. **glandular s. of prostate**, **substantia glandularis prostatae**. **gray s.**, **substantia grisea**. **gray s. of cerebrum**, **central**, **substantia grisea centrale cerebri**. **gray s. of spinal cord**, **substantia grisea medullae spinalis**. **ground s.**, the amorphous gel-like material in which connective tissue cells and fibers are embedded. **H s.**, 1. a red cell isoantigen in individuals having blood group O of the ABO system; it also appears to be the precursor which, under the influence of A and B genes, is converted into antigens of the A and B blood groups. 2. released s. **hemolytic s.**, a substance that lyses erythrocytes. **I s.**, an inhibitory substance which appears in the synapses of the vertebrate central nervous system, which seems generally to act as a hypopolarizer of the postsynaptic junction. **interfibrillar s. of Flemming**, **interfilar s.**, hyaloplasm, def. 1. **intermediate s. of spinal cord**, **central**, **substantia intermedia centralis medullae spinalis**. **intermediate s. of spinal cord**, **lateral**, **substantia intermedia lateralis**. **intermediate s. of suprarenal gland**, **internal s. of suprarenal gland**, **medulla glandulae suprarenalis**. **interprismatic s.**, the ground substance in which the enamel rods are embedded. **interspongioplastic s.**, hyaloplasm, def. 1. **interstitial s.**, **ground s.** **intertubular s. of tooth**, **ivory s. of tooth**, dentin (dentinum [NA]).

s. of lens, substantia lentis. **medullary s.**, 1. the white matter of the central nervous system, consisting of axons and their myelin sheaths. 2. the soft, marrow-like substance of the interior of an organ; see under *medulla*. **medullary s. of bones**, medulla ossium. **medullary s. of bones, red**, medulla ossium rubra. **medullary s. of bones, yellow**, medulla ossium flava. **medullary s. of kidney**, medulla renis. **medullary s. of suprarenal gland**, medulla glandulae suprarenalis. **metachromatic s.**, fine particles seen in erythrocytes, especially after supravital staining. **molecular s.**, neuropil. **muscular s. of prostate**, substantia muscularis prostatae. **neurosecretory s.**, neurosecretion, def. 2. **s. of Nissl**, see *Nissl bodies*. **no-threshold s's**, those substances in the blood which are excreted into the urine in proportion to their absolute amount in the blood. Cf. *threshold s's*. **onycho-genic s.**, the nail-forming substance which occurs in parallel fibrils in the nail matrix. **organ-forming s's**, specialized materials that become segregated in definite blastomeres, thus bringing about a mosaic type of development. **s. P.**, a peptide composed of 11 amino acids, present in the intestine, where it serves to contract the intestine and dilate blood vessels; it is also present in a number of neuronal pathways in the brain and in primary sensory fibers of peripheral nerves and has been suggested to be a neurotransmitter associated with transmission of pain impulses. **P.-P. s.**, pellagra-preventing s., a dietary substance which will prevent or abolish pellagra. **perforated s.**, anterior, substantia perforata anterior. **perforated s.**, posterior, substantia perforata posterior. **periventricular gray s.**, diffuse collections of small cells immediately surrounding the ependymal lining of the third ventricle of the brain, around the cerebral aqueduct, and in the floor of the fourth ventricle. **prelipid s.**, degenerated nerve tissue which has not yet been converted into fat. **pressor s.**, any substance that tends to increase blood pressure. **preventive s.**, antibody. **proper s. of cornea**, substantia propria corneae. **proper s. of sclera**, substantia propria sclerae. **proper s. of tooth**, dentin (dentinum [NA]). **receptive s.**, a hypothetical substance supposed to exist in muscle tissue, especially near the motor end-plates of the nerves, and to conduct excitation. **red s. of spleen**, pulpa lienis. **Reichert's s.**, the posterior portion of the anterior perforated substance. **Reichstein's s. Fa**, cortisone. **Reichstein's s. M**, hydrocortisone, or cortisol. **released s.**, a histamine-like substance liberated at the site of inflammation and responsible for increased vascular permeability; called also *H s.* **reticular s.**, the netlike mass of threads seen in erythrocytes after vital staining; called also *alpha s.* and *filar mass*. **reticular s., white**, of Arnold, formatio reticularis pontis. **Rolando's gelatinous s.**, substantia gelatinosa. **Rollett's secondary s.**, the transparent material lying in narrow zones on each side of Krause's membranes. **sarcous s.**, the substance composing the sarcous element of muscle. **s. sensibilis/atrice**, sensibilizing s., sensitizing s., antibody. **slow-reacting s.**, slow-reactive s., a substance released in the anaphylactic reaction that induces slow, prolonged contraction of certain smooth muscles; symbol SRS-A. **Soemmering's gray s. (obs.)**, substantia nigra. **specific capsular s.**, specific soluble s., a polysaccharide from bacterial capsules having haptenic properties. **spongy s. of bones**, substantia spongiosa ossium. **threshold s's**, those substances in the blood, such as glucose, which are excreted into the urine only when their concentration in plasma exceeds a certain value. **thromboplastic s.**, a general term for any material with procoagulant activity. **tigroid s.**, see *Nissl bodies*. **transmitter s.**, neurotransmitter. **vitreous s. of tooth**, enamel (enamelum [NA]). **white s.**, substantia alba. **white s. of Schwann**, myelin, def. 1. **white s. of spinal cord**, substantia alba medullae spinalis. **zymoplastic s.**, thromboplastic s.

substandard (sub-stan'dard) falling short of the accepted or usual standard.

substantia (sub-stan'she-ah), pl. *substantiae* [L.] material of which a tissue, organ, or body is composed; used as a general term in nomenclature. Called also *substance*. **s. adamantina den'tis**, enamel (enamelum [NA]). **s. al'ba** [NA], white substance: the white nervous tissue, constituting the conducting portion of the brain and spinal cord, and composed mostly of myelinated nerve fibers. **s. al'ba medul'lae spina'lis** [NA], the white substance of the spinal cord, consisting of long myelinated nerve fibers arranged in parallel longitudinal bundles. **s. cine'rea**, s. grisea. **s. compac'ta os'sium** [NA], compact substance of bone: bone substance which is dense and hard; called also *compact bone*. **s. cortica'lis cerebel'li**, cortex cerebelli. **s. cortica'lis cer'ebri**, old term for cortex cerebri. **s. cortica'lis glan'dulae suprarena'lis**, the adrenal cortex (c. glandulae suprarenalis [NA]). **s. cortica'lis len'tis**, cortex lentis. **s. cortica'lis lymphoglan'dulae**, cortex nodi lymphatici. **s. cortica'lis os'sium** [NA], cortical substance of bone: the substance comprising the hard outer layer of a bone. **s. cortica'lis re'nis**, cortex renis. **s. denta'lis pro'pria**, dentin (dentinum [NA]). **s. ebur'nea den'tis**, dentin (dentinum [NA]). **s. ferrugin'ea**, locus ceruleus. **s. fundamen-ta'lis den'tis**, dentin (dentinum [NA]). **s. gelatino'sa cen-**

tra'lis, intermedia centralis. **s. gelatino'sa colum'nae postero'ris**, s. gelatinosa. **s. gelatino'sa** [NA], **s. gelan-tio'sa** (Rolan'di), gelatinous substance of spinal cord: the gelatinous-appearing cap that forms the dorsal part of the posterior horn of the spinal cord. **s. glandula'ris pro'statae** [NA], glandular substance of prostate: tissue composed of branched tubuloalveolar glands, outgrowths of the tunica mucosa of the urethra, which terminate in excretory ducts opening into the male urethra; it is enclosed in muscular substance and permeated by muscular strands. Called also *corpus glandulae prostatae*. **s. gris'ea** [NA], gray substance: the gray nervous tissue composed of nerve cell bodies, unmyelinated nerve fibers, and supportive tissue. **s. gris'ea centra'lis cer'ebri** [NA], central gray substance of cerebrum: the gray substance in the brain surrounding the cerebral aqueduct; called also *stratum griseum centrale cerebri*. **s. gris'ea centra'lis medul'lae spina'lis**, see *s. intermedia centralis medullae spinalis* and *s. intermedia lateralis medullae spinalis*. **s. gris'ea medul'lae spina'lis** [NA], gray substance of the spinal cord: it contains fewer myelinated fibers but more nerve cell bodies, unmyelinated nerve fibers, and blood vessels than the white substance. **s. hyali'na**, the more fluid interstitial part of the protoplasm of a cell. Cf. *s. opaca*. **s. innomina'ta**, nerve tissue immediately caudad to the anterior perforated substance, and ventral to the globus pallidus and ansa lenticularis. Also known as the *s. innominata* of Reichert or of Reil. **s. innomina'ta** of Reichert, *s. innomina'ta* of Reil, *s. innominata*. **s. interme'dia centra'lis** [NA], central intermediate substance of spinal cord: the gray substance surrounding the central canal of the spinal cord. **s. inter-me'dia latera'lis** [NA], lateral intermediate substance of spinal cord: the gray substance of the spinal cord that intervenes between the central intermediate substance, the lateral column, and the anterior and posterior columns. **s. intertubula'ris den'tis**, dentin (dentinum [NA]). **s. len'tis** [NA], the fibrous material making up the bulk of the lens of the eye. **s. medulla'ris glan'dulae**, medulla glandulae suprarenalis. **s. medul-la'ris lymphoglan'dulae**, medulla nodi lymphatici. **s. medulla'ris re'nis**, medulla renis. **s. metachromatoco-granula'ris**, see *Heinz-Ehrlich bodies*. **s. muscula'ris pro'statae** [NA], muscular substance of prostate: the muscular stroma of the prostate, which is intimately blended with the fibrous capsule and permeates the glandular substance; called also *musculus prostaticus*. **s. ni'gra** [NA], black substance: the layer of gray substance that separates the tegmentum of the midbrain from the crus cerebri and which consists of two zones, a dorsal compact zone with melanin-containing cells and a ventral reticular zone whose cells lack melanin; called also *body of Vicq d'Azyr*, *ganglion of Soemmering*, and *locus niger*. **s. opa'ca**, the reticulum of the protoplasm of a cell. Cf. *s. hyalina*. **s. os'-sea den'tis**, cementum. **s. perfora'ta ante'rior** [NA], anterior perforated substance: an area on the ventral surface of the brain bounded by the olfactory trigone and the optic tract; it is pierced by numerous small arteries. **s. perfora'ta poste'rior** [NA], posterior perforated substance: the floor of the interpeduncular fossa, between the cerebral peduncles; it is pierced by numerous branches of the posterior cerebral arteries. **s. pro'pria cor'neae** [NA], proper substance of cornea: the fibrous, tough, and transparent main part of the cornea, between the anterior and the posterior limiting lamina; called also *stroma of cornea*. **s. pro'pria den'tis**, dentin (dentinum [NA]). **s. pro'pria scle'rae** [NA], proper substance of sclera: the chief part of the sclera, lying between the lamina fusca and the episcleral lamina, composed of dense bands of fibrous tissue, mostly parallel with the surface, and crossing each other in all directions. It is structurally continuous with the substantia propria corneae. **s. reticula'ris al'ba** of Arnold, formatio reticularis pontis. **s. reticula'ris al'ba gy'ri fornica'ti** [Arnol'di], a name given to a reticular mixture of gray and white substance on the portion of the surface of the gyrus parahippocampalis that adjoins the gyrus dentatus. **s. reticula'ris al'ba medul'lae oblonga'tae**, white reticular formation: the white substance forming part of the formatio reticularis medullae oblongatae [NA]. **s. reticula'ris gris'-ea medul'lae oblonga'tae**, gray reticular formation: the gray substance forming part of the formatio reticularis medullae oblongatae [NA]. **s. reticulofilamento'sa**, reticular substance. **s. Rolan'di**, s. gelatinosa. **s. spongio'sa medul'lae spina'lis**, see *s. intermedia centralis medullae spinalis*, *s. intermedia lateralis medullae spinalis*, and *columnae griseae*. **s. spongio'sa os'sium** [NA], spongy substance of bone: bone substance made up of thin intersecting lamellae, usually found internal to compact bone; called also *spongy*, or *cancelled bone*. **s. vit'rea den'tis**, enamel (enamelum [NA]).

substantiae (sub-stan'she-e) plural of *substantia*.

substernal (sub-ster'nal) situated beneath the sternum.

substernomastoid (sub'ster-no-mas'toid) beneath the sternomastoid muscle.

substituent (sub-stich'u-ent) 1. a substitute; especially an atom, radical, or group substituted for another in a compound. 2. of or pertaining to such an atom, radical, or group.

substitute (sub'sti'tüt) a material which may be used in place

of another. **blood s., plasma s.,** a fluid which may be used instead of whole blood or plasma for replacement of circulating fluid in the body.

substitution (sub'stī-tu'shun) [L. *substitutio*, from *sub* under + *statuere* to place] 1. the act of putting one thing in the place of another, especially the chemical replacement of one element or radical by some other. 2. a defense mechanism, operating unconsciously, in which an unattainable or unacceptable goal, emotion, or object is replaced by one that is attainable or acceptable. **creeping s. of bone,** the formation of new bone on the surfaces of necrotic trabeculae by osteoblasts, occurring after the revascularization of an area that has been disrupted by fracture, as at the head of the femur after fracture of the neck has disrupted the blood supply to the head of the bone.

substitutive (sub'stī-tu'tive) effecting a change or substitution.

substrate (sub'strāt) [L. *sub* under + *stratum* layer] a substance upon which an enzyme acts.

substratum (sub-strā'tum) [L.] 1. a substrate. 2. a lower layer or stratum.

substructure (sub'struk-chur) the underlying or supporting portion of an organ or appliance; in dentistry, that portion of an implant denture which is embedded in the tissues of the jaw.

subsulcus (sub-sul'kus) a sulcus concealed by another.

subsulfate (sub-sul'fāt) a basic sulfate. **ferric s.,** reddish brown scales or powder, $\text{Fe}_4(\text{OH})_2(\text{SO}_4)_5$, used in solution as a styptic; called also *iron subsulfate*.

subsultus (sub-sul'tus) [L. *subsilire* to spring up] a spasmodic movement. **s. ten'dinum,** a twisting movement of the muscles and tendons such as is observed in a typhoid state.

subsylvian (sub-sil've-an) situated deep in the lateral sulcus (fissure of Sylvius).

subtalar (sub-ta'lar) [sub- + L. *talus* ankle] beneath the talus, as the subtalar joint.

subtarsal (sub-tar'sal) situated below the tarsus.

subtelocentric (sub-tel'o-sen'trik) having the centromere almost, but not quite, at the telocentric position.

subtemporal (sub-tem'por-al) beneath the temple or any temporal structure or part; see also under *decompression*.

subtenial (sub-te'ne-al) situated beneath a tenia.

subtentorial (sub-ten'to-re-al) situated beneath the tentorium of the cerebellum.

subterminal (sub-ter'mī-nal) situated near an end or extremity.

subtetanic (sub'te-tan'ik) mildly tetanic.

subthalamie (sub'thah-lam'ik) situated below the thalamus; pertaining to the subthalamus.

subthalamus (sub-thal'ah-mus) the ventral thalamus or subthalamie tegmental region: a transitional region of the diencephalon interposed between the (dorsal) thalamus, the hypothalamus, and the tegmentum of the mesencephalon (midbrain); it includes the subthalamie nucleus, Forel's fields, and the zona incerta.

subthyroidism (sub-thi'roid-izm) hypothyroidism.

subtile (sut'l) [L. *subtilis*] keen and acute.

subtilin (sub'til-in) an antibiotic substance isolated from strains of the soil bacteria *Bacillus subtilis*, which is chiefly effective against gram-positive bacteria and certain acid-fast bacilli.

subtilisin (sub-til'i-sin) a proteolytic enzyme isolated from strains of the soil bacteria *Bacillus subtilis*, which catalyzes the hydrolysis of certain peptide bonds; analysis has shown it to be composed of 274 amino acid residues.

subtle (sut'l) [L. *subtilis*] 1. very fine. 2. subtile.

subtotal (sub-to'tal) nearly but not quite total.

subtrapezial (sub'trah-pe'ze-al) situated beneath the trapezius muscle.

subtribe (sub'trib) a taxonomic category sometimes established, subordinate to a tribe and superior to a genus.

subtrochanteric (sub'tro-kan-ter'ik) situated below a trochanter.

subtrochlear (sub-trok'le-ar) situated beneath the trochlea.

subtuberal (sub-tu'ber-al) situated under a tuber.

subtympanic (sub'tim-pan'ik) 1. below the tympanum. 2. having a somewhat tympanic quality.

subtypical (sub-tip'i-kal) falling short of being typical.

subumbilical (sub'um-bil'e-kal) situated beneath the umbilicus.

subungual (sub-ung'gwal) [sub- + L. *unguis* nail] situated beneath a nail; hyponychial.

suburethral (sub'u-re'thral) situated or occurring beneath the urethra.

subvaginal (sub-vaj'i-nal) situated under a sheath, or below the vagina.

subvertebral (sub-ver'te-bral) situated on the ventral side of the vertebral column.

subvirile (sub-vir'il) characterized by deficient virility.

subvitaminosis (sub-vi'tah-min-o'sis) a condition due to vitamin deficiency.

subvitreal (sub-vit'ri-nal) situated beneath the vitreous.

subvolution (sub'vo-lu'shun) [sub- + L. *volvere* to turn] the operation of reversing a flap; especially the operation of dissecting and turning up a pterygium, so that the outer or cutaneous surface comes in contact with the raw surface of the dissection. It is done to prevent readhesion.

subwaking (sub-wāk'ing) intermediate between waking and sleeping.

subzonal (sub-zo'nal) situated beneath a zone, as below the zona pellucida.

subzygomatic (sub'zi-go-mat'ik) situated below the zygoma.

Sucaryl (suk'kah-ril) trademark for a noncaloric sweetening agent (cyclamate calcium or cyclamate sodium) for use in restricted diets.

succagogue (suk'ah-gog) [L. *succus* juice + Gr. *agōgos* leading] 1. inducing glandular secretion. 2. an agent that stimulates glandular secretion.

succedaneous (suk'sē-da'ne-us) ensuing; in place of; of the nature of a succedaneum.

succedaneum (suk'sē-da'ne-um) [L. *succedaneus* taking another's place] a medicine or material that may be substituted for another of like properties.

succenturiate (suk'sen-tu're-āt) [L. *succenturiare* to substitute] accessory; serving as a substitute.

succinate (suk'si-nāt) any salt of succinic acid; in biochemistry, the term is used interchangeably with succinic acid (see under *acid*).

succinodehydrogenase (suk'si-no-de-hi'dro-jen-ās) an enzyme that splits off hydrogen from succinic acid; it occurs in most tissues.

succinoresinol (suk'si-no-rez'i-nol) a resinol from amber, $\text{C}_{12}\text{H}_{20}\text{O}$.

succinous (suk'si-nus) pertaining to amber.

succinum (suk'si-num) [L.] amber.

succinyl (suk'si-nil) a radical of succinic acid.

succinylcholine chloride (suk'si-nil-ko'lēn) [USP] chemical name: 2,2'-[(1,4-dioxo-1,4-butanediyl)bis(oxy)]bis-[N,N,N-trimethylethanaminium]dichloride. A neuromuscular blocking agent, $\text{C}_{21}\text{H}_{22}\text{H}_2\text{O}_2$, occurring as a white, crystalline powder, which produces skeletal muscle relaxation by blocking transmission at the myoneural junction; used for its muscle relaxant action during shock therapy and such procedures as endotracheal intubation and endoscopy, and as an adjunct to surgical anesthesia, administered intravenously and intramuscularly.

succinyl-CoA (suk'si-nil) a high-energy intermediate formed in the tricarboxylic acid (Krebs) cycle by the oxidation of α -ketoglutaric acid; it then undergoes deacylation to form succinic acid, a step which also involves formation of guanosine triphosphate.

succinylsulfathiazole (suk'si-nil-sul'fah-thi'ah-zōl) chemical name: 4-oxo-4-[[4-[(2-thiazolylamino)sulfonyl]phenyl]amino]butanoic acid. A sulfonamide, $\text{C}_{15}\text{H}_{13}\text{N}_3\text{O}_6\text{S}_2 \cdot \text{H}_2\text{O}$, occurring as a white or yellowish, crystalline powder; used as an antibacterial in patients undergoing gastrointestinal surgery and in the treatment of gastrointestinal infections due to susceptible organisms, administered orally.

succorrrhea (suk'o-re'ah) [L. *succus* juice + Gr. *rhoia* flow] an excessive flow of a juice or secretion, as in ptialism.

succuba (suk'u-bah) [L.; from *succumbere* to lie under] an imaginary female monster, or demon.

succubus (suk'u-bus) [L.; from *succumbere* to lie under] an imaginary monster, or demon, formerly regarded as a cause of nightmare.

succus (suk'us), pl. *suc'ci* [L.] any fluid derived from living tissue; used in anatomical nomenclature as a general term for a bodily secretion or a fluid derived from body tissue; called also *juice*. **s. cera'si,** cherry juice. **s. enter'icus,** intestinal juice: the liquid secreted by the glands in the wall of the small intestine. **s. gas'tricus,** gastric juice: the liquid secretion of the glands of the stomach. **s. pancreat'icus,** pancreatic juice: the liquid secretion of the pancreas, which is discharged into the duodenum. **s. prostat'icus,** the secretion of the prostate gland, which contributes to formation of the semen. **s. ru'bi idae'i,** raspberry juice.

succussion (sū-kush'un) [L. *succussio* a shaking from beneath, earthquake] a procedure in which the body is shaken, a splashing sound being indicative of the presence of fluid and air in a body cavity. **hippocratic s.,** succussion to elicit a splashing sound in the chest, usually pathognomonic of pneumohydrothorax.

sucholoalbumin (su'ko-lo-al-bu'min) [L. *sus* pig + Gr. *cholē* bile + *albumin*] a poisonous protein characteristic of hog cholera, and obtained from cultures of the bacillus; it is injected for the purpose of giving immunity to the disease.

suckle (suk'l) to derive or to provide nourishment by feeding at the breast.

Sucostrin (su-kos'trin) trademark for a preparation of suc-cinylcholine.

Sucquet-Hoyer anastomosis (canal) (sik-a'oy-är) [Sucquet; Henryk Hoyer, Polish anatomist, 1864-1947] see under *anastomosis*.

sucralfate (soo-kral'fät) chemical name: β -D-fructofuranosyl-glucopyranoside octakis (hydrogen sulfate) aluminum complex; a gastrointestinal antilucerative, $C_{12}H_{22}O_{11}O_8S_8$.

sucrase (su'kräs) β -fructofuranosidase.

sucrate (su'krät) a compound of a substance with sucrose.

sucré (su'k'r) [Fr.] sugar. **s. actuelle'**, actual sugar. **s. virtuelle'**, virtual sugar.

sucroclastic (su'kro-klas'tik) [Fr. *sucré* sugar + Gr. *klastos* broken] splitting of sugar.

sucrose (su'krös) [L. *sucrosus*] a disaccharide $C_{12}H_{22}O_{11}$, obtained from sugar cane, sugar beet, or other sources, crystallizing in prisms, soluble in water, and turning the plane of polarization to the right. By boiling with acids and by the action of certain enzymes it is hydrolyzed and converted into dextrose and fructose. The official preparation conforms to NF specifications. It is extensively used as a food and as a sweetening agent, and is much employed in pharmacy, forming the basis of many pharmaceutical preparations. **s. octaacetate** [NF], a white, almost odorless, hygroscopic powder, having an intensely bitter taste; used as an alcohol denaturant.

sucrosemia (su'kro-se'me-ah) [*sucrose* + Gr. *haima* blood + *-ia*] the presence of sucrose in the blood.

sucrosum (su-kro'sum) [L.] sucrose.

sucrosuria (su'kro-su're-ah) [*sucrose* + Gr. *ouron* urine + *-ia*] the presence of sucrose in the urine.

suction (suk'shun) [L. *sugere* to suck] aspiration of gas or fluid by mechanical means. **post-tussive s.**, a sucking sound heard over a lung cavity just after a cough. **Wangensteen s.**, see under *tube*.

Suctoria (suk-to're-ah) a class of protozoa of the subphylum Ciliophora, characterized by the presence of cilia only during the larval stage, the mature organism having suctorial tentacles that serve as locomotor and food-acquiring mechanisms. Most are free-living, but some are parasitic on ciliates, while others are parasitic in other protozoa and in mammals.

suctorial (suk-to're-al) fitted for performing suction.

suctorian (suk-to're-an) 1. any individual of the class Suctoria. 2. of or pertaining to the class Suctoria.

sucuuba (soo'koo-oo'bah) the *Plumeria phagedenica*, a medicinal plant of South America.

Sudafed (soo'dah-fed) trademark for preparations of pseudoephedrine hydrochloride.

sudamen (su-da'men), pl. *sudam'ina* [L., from *sudare* to sweat] a whitish vesicle caused by the retention of sweat in the sudorific ducts or the layers of the epidermis. In the plural (*sudamina*), an eruption of such vesicles, known as *miliaria crystallina*.

sudamina (su-dam'i-nah) [L.] plural of *sudamen*.

sudaminal (su-dam'i-nal) pertaining to or resembling *sudamina*.

Sudan (su-dan') a group of azo compounds used as stains for fats. **S. G.**, **S. III.** **S. I.**, $C_6H_5 \cdot N \cdot N \cdot C_{10}H_6 \cdot OH$. **S. II.**, $(CH_3)_2 \cdot C_6H_3 \cdot N \cdot N \cdot C_{10}H_6 \cdot OH$. **S. III.**, chemical name: 1-(*p*-phenylazo-phenylazo)-2-naphthol. A red fat-soluble azo dye, $C_{18}H_{15} \cdot N \cdot N \cdot C_6H_4 \cdot N \cdot N \cdot C_{10}H_6 \cdot OH$, an important stain for the demonstration of neutral fats. **S. IV.**, scarlet red. **S. yellow G.**, a brown powder, $C_{12}H_{10}N_2O_2$, used as a stain for fats.

sudanophil (su-dan'o-fil) an element that stains readily with Sudan.

sudanophilia (su-dan'o-fil'e-ah) [*sudan* + Gr. *philein* to love] affinity for Sudan stain.

sudanophilic (su-dan'o-fil'ik) staining readily with Sudan.

sudanophilous (su'dan-of'i-lus) sudanophilic.

sudarium (su-da're-um) [L.] a sweat bath.

sudarshan shurna (soo-dar'shan shoor'nah) a Hindu febrifuge containing fifty drugs.

sudation (su-da'shun) [L. *sudatio*] the excretion of sweat.

sudatoria (su'dah-to're-ah) [L.] plural of *sudatorium*.

sudatorium (su-dah-to're-um), pl. *sudato'ria* [L.] 1. a hot air bath. 2. a room for the administration of hot air baths.

Sudeck's atrophy (disease), point (soo'deks) [Paul Hermann Martin Sudeck, Hamburg surgeon, 1866-1938] see *post-traumatic osteoporosis*, under *osteoporosis*, and see under *point*.

Sudeck-Leriche syndrome (soo'dek-lë-rësh') [P. H. M. Sudeck; René Leriche, French surgeon, 1879-1955] see under *syndrome*.

sudogram (su'do-gram) [L. *sudor* sweat + Gr. *gramma* a writing] a graphic representation of the areas of the body on which sweating is present.

sudomotor (su'do-mo'tor) [L. *sudor* sweat + *motor* move] stimulating the sweat glands.

sudor (su'dor) [L.] (*obs.*) sweat, or perspiration. **s. cruen'tus**, **s. sanguin'eus**, hematidrosis.

sudoresis (su'do-re'sis) diaphoresis.

sudoriferous (su'do-rif'er-us) [L. *sudor* sweat + *ferre* to bear] 1. conveying sweat. 2. sudoriparous.

sudorific (su'do-rif'ik) [L. *sudorificus*] 1. promoting the flow of sweat; diaphoretic. 2. an agent that causes sweating.

sudoriparous (su'do-rif'ah-rus) [L. *sudor* sweat + *parere* to produce] secreting or producing sweat.

sudoxicam (soo-dok'si-kam) chemical name: 4-hydroxy-2-methyl-N-2-thiazolyl-1,2-benzothiazine-3-carboxamide; and anti-inflammatory, $C_{13}H_{11}N_3O_4S_2$.

suet (su'et) [L. *sebum*] the fat from the abdominal cavity of a ruminant animal, especially the sheep or ox; used in the preparation of cerates and ointments and as an emollient. The preparation employed in pharmacy is the internal fat of the abdomen of the sheep. **benzoinated s.**, prepared suet 1000, benzoin 30. **prepared s.**, the internal fat of the abdomen of the sheep purified by melting and straining.

sufentanil (su-fen'tah-nil) chemical name: *N*-[4-(methoxymethyl)-1-[2-(2-thienyl)ethyl]-4-piperidinyl]-*N*-phenylpropanamide; an analgesic, $C_{22}H_{30}N_2O_2S$.

suffocant (suf'o-kant) an agent that causes suffocation.

suffocation (suf'o-ka'shun) [L. *suffocatio*] asphyxiation; the stoppage of respiration, or the asphyxia that results from it.

suffraginis (suf-fraj'i-nis) [L.] the large pastern bone or first phalanx of the horse.

suffusion (sü-fu'zhun) [L. *suffusio*] 1. the process of overspreading, or diffusion. 2. the condition of being moistened or of being permeated through, as by blood.

sugar (shoog'ar) [L. *saccharum*; Gr. *sakcharon*] a sweet carbohydrate of various kinds, and of both animal and vegetable origin. It is an aldehyde or ketone derivative of polyhydric alcohols. The two principal groups of sugars are the disaccharides, having the formula $C_{12}H_{22}O_{11}$, and the monosaccharides, $C_6H_{12}O_6$; all are white, crystallizable solids, soluble in water and dilute alcohol. The disaccharides are sucrose or saccharose, *beet s.*, *cane s.*, *maple s.*, *palm s.*, *malt s.* (maltose), *milk s.* (lactose), and others. The monosaccharides include ordinary dextrose (δ -glucose) (*diabetic s.*, *grape s.*, *liver s.*, *potato s.*, *starch s.*), fructose (*fruit s.*), inositol (*heart s.*, *muscle s.*). Besides these, a very considerable number of artificial and other sugars are known to chemistry. **actual s.**, (*sucré* *actuelle* of Lépine), the free glucose in the blood. **anhydrous s.**, anhydrosugar. **barley s.**, a clear hard form of sugar formed by heating ordinary granulated sugar (sucrose) to 160° F. **beechwood s.**, xylose. **beet s.**, sucrose derived from the root of the beet. **blood s.**, glucose, the form in which carbohydrate is carried in the blood, usually in a concentration of 70-100 mg. per 100 ml. **brain s.**, cerebrose. **burnt s.**, caramel. **cane s.**, sucrose obtained from sugar cane. **collagen s.**, aminoacetic acid. **compressible s.** [NF], a preparation which contains 95-98 per cent sucrose and which may contain starch, dextrin, and invert sugar; used as a sweetening agent and tablet excipient in pharmaceutical preparations. **confectioner's s.** [NF], sucrose ground together with corn starch to a fine powder, containing 95-97 per cent sucrose; used as a sweetening agent and tablet excipient in pharmaceutical preparations. **diabetic s.**, the dextrose found in the urine in diabetes mellitus. **fruit s.**, fructose. **gelatin s.**, aminoacetic acid. **grape s.**, dextrose. **heart s.**, inositol. **invert s.**, the mixture of dextrose and fructose obtained by hydrolysing sucrose; used in solution as a parenteral nutrient. Called also *invertose*. **larch s.**, melezitose. **s. of lead**, lead acetate. **Leo's s.**, laiose. **liver s.**, dextrose from the liver. **malt s.**, maltose. **maple s.**, sucrose from maple sap. **milk s.**, lactose. **muscle s.**, inositol. **oil s.**, eleosaccharum. **palm s.**, sucrose from palm sap. **potato s.**, dextrose from potatoes. **reducing s.**, a sugar which will reduce an alkaline copper tartrate solution. **simple s.**, a monosaccharide. **starch s.**, dextrin. **sulfur s.**, thioglucose. **threshold s.**, the lower limit of hyperglycemia at which dextrose appears in the urine. **virtual s.** (*sucré* *virtuelle* of Lépine), sugar in the blood in a colloidal state. **wood s.**, xylose.

sugarin (shoog'ar-in) chemical name: methylbenzoylsulfimide. A crystalline substance said to be 500 times as sweet as sugar.

suggestibility (sug-jes'ti-bil'i-te) a condition of abnormal susceptibility to suggestion.

suggestible (sug-jes'ti-b'l) abnormally susceptible to suggestion.

suggestion (sug-jes'chun) [L. *suggestio*] 1. the impartation of an idea to a subject from without. 2. an idea introduced from without. **hypnotic s.**, a suggestion imparted to a person in the hypnotic state, by which he is led to believe certain things contrary to fact or is induced to perform certain actions. **post-hypnotic s.**, implantation in the mind of a subject during hypnosis of a suggestion to be acted upon after recovery from the hypnotic state.

suggillation (sug'ji-la'shun) [L. *suggillatio*] 1. a bruise or ecchymosis. 2. a mark of postmortem lividity.

suicide (soo'i-sid) [L. *sui* of himself + *caedere* to kill] the taking

of one's own life. **psychic s.**, the termination of one's own life without employment of physical agents.

suint (swint) a fat-like substance derivable from sheep's wool, from which anhydrous lanolin is prepared. Called also *suint de laine*.

suit (sūt) an outer garment covering the entire body. **anti-blackout s.**, **anti-g s.**, **g s.**, a garment worn by pilots, designed to increase their ability to withstand without ill effects the acceleratory forces experienced in certain aerial maneuvers.

sukkla pakla (sook'lah pak'lah) [Hind. "dry suppuration"] ainhum.

Sulamyd (sul'am-id) trademark for a preparation of sulfacetamide.

sulazepam (sul-ah'zē-pam) chemical name: 7-chloro-1,3-dihydro-1-methyl-5-phenyl-2H-1,4-benzodiazepine-2-thione; a minor tranquilizer, C₁₆H₁₃ClN₂S.

sulbenox (sul-ben'oks) chemical name: (4,5,6,7-tetrahydro-7-oxobenzox[*b*]thien-4-yl)urea; a veterinary growth stimulant, C₉H₁₀N₂O₂S.

sulcate (sul'kāt) [L. *sulcatus*] furrowed or marked with sulci.

sulcation (sul-ka'shun) the formation of sulci; the state of being marked by sulci.

sulci (sul'si) [L.] plural of *sulcus*.

sulciform (sul'si-form) formed like a groove.

sulconazole nitrate (sul-kon'ah-zōl) chemical name: (+)-1-[2-[(4-chlorophenyl)methyl]thio]-2-(2,4-dichlorophenyl)ethyl]-1H-imidazole mononitrate; an antifungal, C₁₈H₁₆Cl₃N₂S·HNO₃.

sulculi (sul'ku-li) plural of *sulculus*.

sulculus (sul'ku-lus), pl. *sul'culi* [L.] a small or minute sulcus.

sulcus (sul'kus), pl. *sul'ci* [L.] 1. a groove, trench, or furrow; [NA] a general term for such a depression, especially one of those on the surface of the brain, separating the gyri. Cf. *fissure*. 2. a linear depression or valley in the occlusal surface of a tooth, the sloping sides of which meet at an angle. **alveolabial s.**, the furrow between the dental arch and the lips. **alveolingual s.**, the depression between the dental arch and the tongue. **s. ampulla'ris** [NA], **ampullary s.**, a transverse groove on the membranous ampulla of each semicircular duct, for the ampullary branch of the pars vestibularis nervi octavi. **angular s.**, incisura angularis ventriculi. **s. anthel'icis transver'sus** [NA], transverse sulcus of anthelix: the depression on the medial surface of the pinna corresponding to the lower crus of the anthelix. **aortic s.**, **s. aor'ticus**, a longitudinal groove on the median surface of the left lung corresponding to the thoracic aorta. **s. arte'ria occipita'lis** [NA], sulcus of occipital artery: the groove just medial to the mastoid notch on the temporal bone, lodging the occipital artery. **s. arte'riae subcla'viae** [NA], sulcus of subclavian artery: a transverse groove on the cranial surface of the first rib, just posterior to the anterior scalene tubercle; it lodges the subclavian artery; called also *s. subclavius*. **s. arte'riae tempora'lis me'diae** [NA], sulcus of middle temporal artery: a nearly vertical groove running just superior to the external acoustic meatus on the external surface of the squamous part of the temporal bone; it lodges the middle temporal artery. **s. arte'riae vertebra'lis atan'tis** [NA], sulcus of vertebral artery of atlas: the groove on the cranial surface of the posterior arch of the atlas; it lodges the vertebral artery and the first spinal nerve. **arterial sulci**, **sul'ci arterio'si** [NA], grooves on the internal surfaces of the cranial bones for the meningeal arteries; called also *arterial grooves*. **atrioventricular s.**, *s. coronarius cordis*. **s. of auditory tube**, *s. tubae auditivae*. **s. of auricle, posterior**, **s. auric'ulae poste'rior** [NA], the slight depression on the pinna that separates the anthelix from the antitragus. **s. of auricular branch of vagus nerve**, *s. canaliculi mastoidei*. **basilar s. of occipital bone**, *s. sinus petrosi inferioris ossis occipitalis*. **basilar s. of pons**, **s. basila'ris pon'tis** [NA], the anteromedian groove in the pons, lodging the basilar artery. **bicipital s.**, **lateral**, *s. bicipitalis lateralis*. **bicipital s.**, **medial**, *s. bicipitalis medialis*. **s. bicipita'lis latera'lis** [NA], lateral bicipital sulcus: a longitudinal groove on the lateral side of the arm which marks the limit between the lateral border of the biceps muscle and the brachialis; called also *lateral bicipital groove*. **s. bicipita'lis media'lis** [NA], medial bicipital sulcus: a longitudinal groove on the medial side of the arm which marks the limit between the medial border of the biceps muscle and the brachialis; called also *medial bicipital groove*. **calcaneal s.**, **s. calca'nei** [NA], a rough, deep groove on the upper surface of the calcaneus, between the medial and the posterior articular surfaces and giving attachment to the interosseous talocalcaneal ligament. **calcarine s.**, **s. calcar'i'nus** [NA], a sulcus on the medial surface of the occipital lobe, separating the cuneus from the lingual gyrus; called also *fissura calcarina*. **callosal s.**, *s. corporis callosi*. **callosomarginal s.**, *s. cinguli*. **s. callo'sus**, *s. corporis callosi*. **s. canalic'uli mastoi'dei**, a small groove in the petrous portion of the temporal bone leading to the mastoid canaliculus. **s. cana'lis innomina'tus**, *s. nervi petrosi minoris*. **s. carot'icus os'sis sphenoida'lis** [NA], **carotid s.**, the groove on the side of the body of the sphenoid bone that lodges the internal carotid artery and the cavernous sinus. **carpal s.**, *s.*

car'pi [NA], a broad deep groove on the volar surface of the carpal bones, which transmits the flexor tendons and the median nerve into the palm of the hand. **central s. of cerebrum**, *s. centralis cerebri*. **s. centra'lis cer'e'bri** [NA], **s. centra'lis cere'bri** [Roland'i], central sulcus of cerebrum: a relatively deep, nearly vertical sulcus on the cerebral hemisphere, which separates the frontal from the parietal lobe. **s. centra'lis in'sulae** [NA], a deep, oblique furrow which divides the insula into a larger anterior and a smaller posterior part. **sul'ci cerebel'li**, **sulci of cerebellum**, *fissurae cerebelli*. **cerebral s.**, **lateral**, *s. lateralis cerebri*. **sul'ci cer'e'bri** [NA], **sulci of cerebrum**, the furrows between the gyri of the cerebrum. **s. of chiasm**, **s. chias'matis** [NA], a furrow on the superior surface of the sphenoid bone located just anterior to the tuberculum sellae, and lodging the optic chiasm; called also *optic groove* or *sulcus*. **cingulate s.**, **s. cin'guli** [NA], **s. of cingulum**, a long, irregularly shaped sulcus on the medial surface of a hemisphere, which separates the cingulate gyrus below from the medial frontal gyrus and the paracentral lobule above. It may be divided into frontal and marginal portions. **circular s. of insula**, **s. circula'ris in'sulae** [NA], **s. circula'ris** [Rei'li], a groove that separates the floor of the insula from the opercula. **collateral s.**, **s. collatera'lis** [NA], a longitudinal sulcus on the inferior surface of the cerebral hemisphere between the fusiform gyrus and the parahippocampal gyrus; called also *fissura collateralis*. **s. col'li mandib'ulae**, the shallow groove between the ridge of the mandibular neck and the line of attachment of the sphenomandibular ligament. **s. corona'rius cor'dis** [NA], **coronary s. of heart**, a groove on the external surface of the heart, separating the atria from the ventricles; portions of it are occupied by the major arteries and veins of the heart; called also *atrioventricular groove*. **s. cor'poris callo'si** [NA], **s. of corpus callosum**, a sulcus encircling the convex aspect of the corpus callosum at the bottom of the longitudinal cerebral fissure. **s. cos'tae** [NA], **costal s.**, a sulcus that follows the inferior and internal surface of a rib anteriorly from the tubercle, gradually becoming less distinct; it lodges the intercostal vessels and nerves. **costal s.**, **inferior**, *s. costae*. **s. cru'ris hel'icis** [NA], **s. of crus of helix**, a transverse sulcus on the medial surface of the pinna, corresponding to the crus helix on the lateral surface. **cuboid s.**, *s. tendinum musculorum peroneorum calcanei*. **sul'ci cu'tis** [NA], sulci of skin: the fine depressions on the surface of the skin between the ridges of the skin. **ethmoidal s. of Gegenbaur**, *foramen ethmoidale anterius*. **ethmoidal s. of nasal bone**, **s. ethmoida'lis os'sis nasa'lis** [NA], a groove that extends the entire length of the posteromedial surface of the nasal bone and lodges the external nasal branch of the anterior ethmoid nerve. **s. of eustachian tube**, *s. tubae auditivae*. **frontal s.**, 1. see *s. frontalis inferior* and *s. frontalis superior*. 2. sulcus sinus sagittalis superioris ossis frontalis. **frontal s.**, **inferior**, *s. frontalis inferior*. **frontal s.**, **superior**, *s. frontalis superior*. **s. fronta'lis infe'rior** [NA], inferior frontal sulcus: a short longitudinal sulcus that separates the inferior and middle frontal gyri. **s. fronta'lis supe'rior** [NA], superior frontal sulcus: a longitudinal sulcus that separates the middle and superior frontal gyri. **gingival s.**, a furrow surrounding a tooth, bounded internally by the surface of the tooth and externally by the epithelium lining the free gingiva. **gluteal s.**, **s. glute'us** [NA], a curved transverse groove or fold on the back of the upper thigh, separating the upper part of the thigh from the nates. **greater palatine s. of maxilla**, *s. palatinus major maxillae*. **greater palatine s. of palatine bone**, *s. palatinus major ossis palatini*. **s. of greater petrosal nerve**, *s. nervi petrosi majoris*. **s. ham'uli pterygoi'dei** [NA], sulcus of pterygoid hamulus: a smooth groove on the lateral surface of the medial pterygoid plate of the sphenoid bone, in the angle at the base of the pterygoid hamulus; it lodges the tendon of the tensor veli palatini muscle. **Harrison's s.**, see under *groove*. **hippocampal s.**, **s. hippocam'pi** [NA], the sulcus that extends from the splenium of the corpus callosum almost to the tip of the temporal lobe, and forms the medial boundary of the parahippocampal gyrus; called also *fissura hippocampi* or *hippocampal fissure*. **s. horizonta'lis cerebel'li**, *fissura horizontalis cerebelli*. **hypothalamic s.**, **s. hypothalam'icus** [NA], **s. hypothalam'icus** [Monro'i], a shallow curved sulcus on the wall of the third ventricle, extending from the interventricular foramen to the cerebral aqueduct. **s. of inferior petrosal sinus of occipital bone**, *s. sinus petrosi inferioris ossis occipitalis*. **s. of inferior petrosal sinus of temporal bone**, *s. sinus petrosi inferioris ossis temporalis*. **infraorbital s. of maxilla**, **s. infraorbita'lis maxil'lae** [NA], a groove in the orbital surface of the maxilla, commencing near the middle of the posterior edge of the surface and running anteriorly for a short distance to become continuous with the infraorbital canal. **infrapalpebral s.**, **s. infrapalpebra'lis** [NA], the furrow below the lower eyelid. **s. of innominate canal**, *s. nervi petrosi minoris*. **interarticular s. of calcaneus**, *s. calcanei*. **interarticular s. of talus**, *s. tali*. **intermediate s. of spinal cord, anterior**, *s. intermedius anterior medullae spinalis*. **intermediate s. of spinal cord, posterior**, *s. intermedius posterior medullae spinalis*. **s. interme'dius gastri'cus**, a slight groove in the

stomach about 2.5 cm. from the duodenopyloric junction. **s. intermedius anterior medullae spinae**, anterior intermediate sulcus of spinal cord: an occasional furrow between the anterior median fissure and the anterior lateral sulcus of the spinal cord. **s. intermedius posterior medullae spinae** [NA], posterior intermediate sulcus of spinal cord: a groove in the cervical and upper thoracic part of part of the spinal cord between the fasciculus gracilis and the fasciculus cuneatus. **interparietal s.**, **s. interparietalis**, **s. intraparietalis**. **intertubercular s. of humerus**, **s. intertubercularis humeri** [NA], a longitudinal groove on the anterior surface of the humerus, lying between the tubercula above and between the cristae tuberculi farther down, and lodging the tendon of the long head of the biceps muscle. **interventricular s., anterior**, **s. interventricularis anterior**. **interventricular s., posterior**, **s. interventricularis posterior**. **interventricular s. of heart**, **s. coronarius cordis**. **s. interventricularis anterior** [NA], anterior interventricular sulcus: a groove on the sternocostal surface of the heart marking the position of the interventricular septum and the line of separation between the ventricles; called also **s. longitudinalis anterior cordis**. **s. interventricularis posterior** [NA], posterior interventricular sulcus: a groove on the diaphragmatic surface of the heart marking the position of the interventricular septum and the line of separation between the ventricles; called also **s. longitudinalis posterior cordis**. **intraparietal s.**, **s. intraparietalis** [NA], an irregular sulcus on the convex surface of the parietal lobe of the cerebrum and between the inferior and superior parietal lobuli; called also **s. interparietalis** and **Pansch's fissure**. **Jacobson's s.**, 1. sulcus promontorii cavi tympani. 2. sulcus tympanicus ossis temporalis. **labiodental s.**, the arched groove in the embryo which separates off the anterior part of the mandibular process, thus helping to form the lower lip. **lacrimal s. of lacrimal bone**, **s. lacrimalis ossis lacrimalis**. **lacrimal s. of maxilla**, **s. lacrimalis maxillae**. **s. lacrima/lis maxillae** [NA], lacrimal sulcus of maxilla: a groove directed inferiorly and somewhat posteriorly on the nasal surface of the body of the maxilla, just anterior to the large opening into the maxillary sinus; it is converted into the nasolacrimal canal by the lacrimal bone and inferior nasal concha. **s. lacrima/lis ossis lacrimalis** [NA], lacrimal sulcus of lacrimal bone: a deep vertical groove on the anterior part of the lateral surface of the lacrimal bone, which with the maxilla forms the fossa for the lacrimal sac. **lateral s. for lateral sinus of occipital bone**, **s. sinus transversus**. **lateral s. for lateral sinus of parietal bone**, **s. sinus sigmoidei ossis parietalis**. **lateral s. of medulla oblongata, anterior**, **s. lateralis anterior medullae oblongatae**. **lateral s. of medulla oblongata, posterior**, **s. lateralis posterior medullae oblongatae**. **lateral s. for sigmoidal part of lateral sinus**, **s. sinus sigmoidei ossis temporalis**. **lateral s. of spinal cord, posterior**, **s. lateralis posterior medullae spinalis**. **s. lateralis anterior medullae oblongatae** [NA], anterior lateral sulcus of medulla oblongata: a longitudinal sulcus on the surface of the medulla oblongata, lateral to the pyramid, from which emerge the fibers of the hypoglossal nerve. **s. lateralis anterior medullae spinae**, the longitudinal groove on the anterolateral surface of the spinal cord from which the ventral nerve roots emerge; it separates the anterior and lateral funiculi. **s. lateralis cerebri** [NA], lateral cerebral sulcus: a deep cleft beginning at the anterior perforated substance, extending laterally between the temporal and frontal lobes, and turning posteriorly between the temporal and parietal lobes. It divides into posterior, ascending, and anterior branches. Called also **fissura cerebri lateralis** [Sylvii], **fissure** or **fossa of Sylvius**, and **sylvian fissure** or **fossa**. **s. lateralis mesencephali**, a longitudinal groove on the side of the mesencephalon, separating the crus cerebri from the tegmentum. **s. lateralis pedunculi cerebri**, **s. lateralis mesencephali**. **s. lateralis posterior medullae oblongatae** [NA], posterior lateral sulcus of medulla oblongata: an upward extension of the posterolateral sulcus of the spinal cord; it gives attachment to the fibers of the glossopharyngeal, vagus, and accessory nerves. **s. lateralis posterior medullae spinae** [NA], posterior lateral sulcus of spinal cord: a longitudinal sulcus on the posterolateral surface of the spinal cord; it gives entrance to the dorsal nerve roots and separates the lateral and posterior funiculi. **s. of lesser petrosal nerve**, **s. nervi petrosi minoris**. **s. limitans** [NA], a groove midway on the inner surface of each lateral wall of the neural tube, which separates it into a dorsal, alar plate and a ventral, basal plate; called also **s. limitans ventriculorum cerebri**. **s. limitans fossae rhomboideae** [NA], a longitudinal groove on the lateral side of the medial eminence, extending the entire length of the floor of the fourth ventricle. **s. limitans insulae**, **s. circularis insulae**. **s. limitans ventriculorum cerebri**, **s. limitans**. **longitudinal s. of frontal bone**, **s. sinus sagittalis superioris ossis frontalis**. **longitudinal s. of heart, anterior**, **s. interventricularis anterior**. **longitudinal s. of heart, posterior**, **s. interventricularis posterior**. **longitudinal s. of occipital bone**, **s. sinus sagittalis superioris ossis occipitalis**. **longitudinal s. of parietal bone**, **s. sagittalis ossis parietalis**. **s. lon-**

gitudina/lis anterior cordis, **s. interventricularis anterior**. **s. longitudina/lis ossis occipitalis**, **s. sinus sagittalis superioris ossis occipitalis**. **s. longitudina/lis posterior cordis**, **s. interventricularis posterior**. **lunate s.**, **s. luna/tus** [NA], a small semilunar furrow sometimes seen on the lateral surface of the occipital lobe of the cerebrum; this sulcus is conspicuous in the brain of certain apes and was called by Reidinger **Affenspalte** [Ger. "ape fissure"]. **malleolar s.**, **s. malleolaris tibiae** [NA], a short longitudinal groove on the posterior surface of the medial malleolus of the tibia, which lodges the tendons of the posterior tibial muscle and the long flexor muscle of the toes. **mandibular s.**, **s. colli mandibulae**. **s. of mastoid canaliculus**, **s. canaliculi mastoidei**. **s. malleolaris unguis** [NA], **s. of matrix of nail**, the cutaneous fold in which the proximal part of the nail is embedded; called also **proximal nail fold**. **medial s. of crus cerebri**, **s. media/lis cru/ris cerebri** [NA], a longitudinal furrow on the medial surface of a cerebral peduncle, marking the separation of the crus cerebri from the tegmentum and lodging the root of the oculomotor nerve. Called also **s. nervi oculomotorii**. **s. media/lis mesencephali**, **s. medialis cruris cerebri**. **median s. of fourth ventricle**, **s. medianus ventriculi quarti**. **median s. of medulla oblongata, posterior**, **s. medianus posterior medullae oblongatae**. **median s. of spinal cord, posterior**, **s. medianus posterior medullae spinalis**. **median s. of tongue**, **s. media/nus linguae** [NA], a shallow groove on the dorsal surface of the tongue in the midline. **s. media/nus posterior medullae oblongatae** [NA], posterior median sulcus of medulla oblongata: a narrow groove, existing only in the closed part of the medulla oblongata, which is the continuation of the posterior median sulcus of the spinal cord; it separates the two fasciculi gracili. Called also **fissura mediana posterior medullae oblongatae**. **s. media/nus posterior medullae spinae** [NA], posterior median sulcus of spinal cord: a shallow vertical groove on the posterior surface of the spinal cord in the median plane; it separates the two posterior funiculi. **s. media/nus ventriculi quarti** [NA], median sulcus of fourth ventricle: a median groove in the floor of the fourth ventricle. **meningeal sulci**, **sulci arteriosi**. **mentolabial s.**, **s. mentolabialis** [NA], the depression between the lower lip and the chin. **s. mesencephali media/lis**, **s. medialis cruris cerebri**. **s. of middle temporal artery**, **s. arteriae temporalis mediae**. **s. of Monro**, **s. hypothalamicus**. **muscular s. of tympanic cavity**, **semicanalis musculi tensoris tympani**. **s. musculi flexoris hallucis longi calcanei**, **s. tendinis musculi flexoris hallucis longi calcanei**. **s. musculi flexoris hallucis longi tali**, **s. tendinis musculi flexoris hallucis longi tali**. **s. musculi peronei calcanei**, **s. tendinum musculorum peroneorum calcanei**. **s. musculi peronei ossis cuboi/dei**, **s. tendinis musculi peronei longi**. **mylohyoid s. of mandible**, **s. mylohyoidaeus mandibulae** [NA], a groove on the medial surface of the ramus of the mandible, passing downward and forward from the foramen mandibulae and lodging the mylohyoid artery and nerve. **nasal s., posterior**, **meatus nasopharyngeus**. **s. of nasal process of maxilla**, **s. lacrimalis maxillae**. **nasolabial s.**, **s. nasolabialis** [NA], the depression between the nose and the upper lip. **s. nervi oculomotorii**, **s. medialis cruris cerebri**. **s. nervi petrosi majoris** [NA], sulcus of greater petrosal nerve: a small groove in the floor of the middle cranial fossa, running anteromedially from the hiatus of the facial canal to the foramen lacerum, and lodging the greater petrosal nerve; called also **s. nervi petrosi superficialis majoris**. **s. nervi petrosi minoris** [NA], sulcus of lesser petrosal nerve: a small groove in the floor of the middle cranial fossa, running anteromedially just lateral to the sulcus of the greater petrosal nerve, and lodging the lesser petrosal nerve. Called also **s. nervi petrosi superficialis minoris**. **s. nervi petrosi superficialis majoris**, **s. nervi petrosi majoris**. **s. nervi petrosi superficialis minoris**, **s. nervi petrosi minoris**. **s. nervi radialis** [NA], sulcus of radial nerve: a broad oblique groove on the posterior surface of the humerus for the radial nerve and the deep brachial artery; called also **radial groove**. **s. nervi spinae** [NA], sulcus of spinal nerve: the groove on the upper surface of each transverse process of a cervical vertebra, extending from the foramen transversarium lateralward and separating the anterior and posterior tubercles. It lodges the ventral branch of a cervical nerve. **s. nervi ulnae** [NA], sulcus of ulnar nerve: a shallow vertical groove on the posterior surface of the medial epicondyle of the humerus for the ulnar nerve; called also **groove of ulnar nerve** or **ulnar groove**. **nymphocaruncular s.**, **nymphohymeneal s.**, a groove between either labium minus and the carunculae hymenales. **oburator s. of pubis**, **s. obturatorius ossis pubis** [NA], a groove that obliquely crosses the inferior surface of the superior ramus of the pubis, giving passage to the obturator vessels and nerve. **occipital sulci**, **lateral**, **sulci occipitales laterales**. **occipital sulci**, **superior**, **sulci occipitales superiores**. **occipital s., transverse**, **s. occipitalis transversus**. **s. of occipital artery**, **s. arteriae occipitalis**. **s. occipitalis anterior**, anterior occipital sulcus: a variable, vertically disposed furrow on the convex surface of the cerebrum, which by some is taken as the line of

division between the parietal and the occipital lobes. **sul'ci occipita'les latera'les**, lateral occipital sulci: horizontal furrows that divide the lateral occipital gyri into upper and lower portions. **sul'ci occipita'les superio'res**, superior occipital sulci: irregular sulci associated with the superior occipital gyri. **s. occipita'lis transver'sus** [NA], transverse occipital sulcus: a vertical sulcus back of the gyrus angularis, which may help to form the anterior boundary of the occipital lobe or may lie within it. **s. occip'itis**, s. sinus sagittalis superioris ossis occipitalis. **occipitotemporal s., s. occipitotempora'lis** [NA], a longitudinal sulcus on the inferior surface of the temporal lobe that separates the inferior temporal gyrus from the lateral occipitotemporal gyrus; called also *s. temporalis inferior*. **s. olulomoto'rius**, s. medialis cruris cerebri. **s. olfacto'rius lo'bi fronta'lis** [NA], olfactory sulcus of frontal lobe: a straight parasagittal sulcus on the inferior surface of the frontal lobe, lodging the olfactory bulb and tract, and separating the gyrus rectus from the gyri orbitales. **s. olfacto'rius na'si** [NA], olfactory sulcus of nose: a shallow sulcus on the wall of the nasal cavity, passing upward from the level of the anterior end of the middle concha just above the agger nasi to the lamina cribrosa. **olfactory s. of frontal lobe**, s. olfactorius lobi frontalis. **olfactory s. of nose**, s. olfactorius nasi. **optic s., s. chiasmatis**. **orbital sulci of frontal lobe**, **sul'ci orbita'les lo'bi fronta'lis** [NA], irregular sulci between the orbital gyri of the frontal lobe. **palatine sulci of maxilla**, **sul'ci palati'ni maxil'lae** [NA], the laterally placed furrows, between the palatine spines on the inferior surface of the hard palate, that lodge the palatine vessels and nerves. **palatino-vaginal s., s. palatinovagina'lis** [NA], the groove on the vaginal process of the pterygoid process of the sphenoid bone that participates in formation of the palatinovaginal canal. **s. palati'ni'us ma'jor maxil'lae** [NA], greater palatine sulcus of maxilla: the sulcus on the nasal surface of the maxilla which, along with the corresponding one on the perpendicular plate of the palatine bone, forms the canal for the greater palatine nerve. **s. palati'ni'us ma'jor os'sis palati'ni** [NA], greater palatine sulcus of palatine bone: a vertical groove on the maxillary surface of the perpendicular plate of the palatine bone; it articulates with the maxilla to form the canal for the greater palatine nerve; called also *s. pterygopalatinus ossis palatini*. **paracolic sulci**, **sul'ci paracol'ici** [NA], small shallow and variable peritoneal pockets situated lateral to the descending colon; called also *recessus paracolici*. **paraglenoid sulci of hip bone**, **sul'ci paraglenoida'les os'sis cox'ae**, slight grooves, anterior and inferior to the auricular surface of the ilium, that serve for attachment of the ventral and interosseous sacroiliac ligaments. **parietooccipital s., 1.** sulcus parietooccipitalis. **2.** sulcus intraparietalis. **s. parietooccipita'lis** [NA], parietooccipital sulcus: a sulcus in the medial surface of each cerebral hemisphere, running upward from the calcarine sulcus and marking the boundary between the cuneus and precuneus, and also between the parietal and occipital lobes. Called also *fissura parietooccipitalis*. **s. parolfacto'rius ante'rior**, a sulcus on the medial surface of the cerebral hemisphere, between the area parolfactoria behind and the inferior frontal gyrus in front. **s. parolfacto'rius poste'rior**, a curved sulcus on the medial surface of the cerebral hemisphere, below the splenium of the corpus callosum and between the gyrus paraterminalis and the area parolfactoria. **petrobasilar s., s. sinus petrosi inferioris ossis temporalis**. **petrosal s. of occipital bone, inferior**, s. sinus petrosi inferioris ossis occipitalis. **petrosal s. of temporal bone, inferior**, s. sinus petrosi inferioris ossis temporalis. **petrosal s. of temporal bone, posterior**, s. sinus petrosi inferioris ossis temporalis. **petrosal s. of temporal bone, superior**, s. sinus petrosi superioris. **s. petro'sus infe'rior os'sis occipita'lis**, s. sinus petrosi inferioris ossis occipitalis. **s. petro'sus infe'rior os'sis tempora'lis**, s. sinus petrosi inferioris ossis temporalis. **s. petro'sus supe'rior os'sis tempora'lis**, s. sinus petrosi superioris. **polar s.,** any of the small fissures which surround the posterior end of the calcarine sulcus. **pontobulbar s.,** the sulcus that separates the pons from the medulla oblongata. **pontopeduncular s.,** the sulcus that separates the pons from the mesencephalon (as represented by the cerebral peduncles). **postcentral s., s. postcentra'lis** [NA], a sulcus on the suprolateral surface of the cerebrum, separating the postcentral gyrus from the remainder of the parietal lobe. **postclival s.,** a fissure of the cerebellum between the declive and the folium vermis. **postnodular s.,** a sulcus on the underside of the cerebellum between the nodule and the uvula. **postpyramidal s.,** a sulcus on the underside of the cerebellum between the pyramid and the tuber vermis. **s. praecentra'lis**, s. precentralis. **precentral s., s. precentra'lis** [NA], a vertical sulcus on the convex surface of a cerebral hemisphere, separating the precentral gyrus from the remainder of the frontal lobe. **preclival s.,** a fissure of the cerebellum between the culmen and the declive. **prepyramidal s.,** a sulcus on the inferior surface of the cerebellum between the uvula and the pyramid. **prerolandic s., s. precentralis**. **s. promonto'rii ca'vi tym'pani** [NA], a groove in the surface of the promontory of the tympanic cavity, lodging the tympanic nerve. **s. of pterygoid hamulus**, s.

hamuli pterygoidei. **pterygoid s. of pterygoid process**, s. pterygopalatinus processus pterygoidei. **pterygopalatine s. of palatine bone**, s. palatinus major ossis palatini. **pterygopalatine s. of pterygoid process**, s. pterygopalatinus processus pterygoidei. **s. pterygopalati'ni'us os'sis palati'ni**, s. palatinus major ossis palatini. **s. pterygopalati'ni'us proces'sus pterygoi'dei** [NA], pterygopalatine sulcus of pterygoid process: a small groove on the inferior surface of the vaginal process of the medial pterygoid plate of the sphenoid bone, forming part of the wall of the vomerovaginal canal. **s. pulmona'lis thora'cis** [NA], **pulmonary s. of thorax**, a large vertical groove in the posterior part of the chest cavity, one on either side of the bodies of the vertebrae posterior to the level of their ventral surface, lodging the posterior, bulky portion of the lung. **radial s. of humerus**, s. of radial nerve, s. nervi radialis. **Reil's s., s. circularis insulae**. **retrocentral s., s. postcentralis**. **rhinal s., s. rhina'lis** [NA], a fissure on the inferior surface of the hemisphere, separating the anterior part of the parahippocampal gyrus from the rest of the temporal lobe. **sagittal s. of frontal bone**, s. sinus sagittalis superioris ossis frontalis. **sagittal s. of occipital bone**, s. sinus sagittalis superioris ossis occipitalis. **sagittal s. of parietal bone**, s. sagittalis ossis parietalis. **s. sagitta'lis os'sis fronta'lis**, s. sinus sagittalis superioris ossis frontalis. **s. sagitta'lis os'sis occipita'lis**, s. sinus sagittalis superioris ossis occipitalis. **s. sagitta'lis os'sis parietala'lis** [NA], sagittal sulcus of parietal bone: a shallow sulcus along the sagittal margin on the internal surface of the parietal bone; with its fellow of the opposite side it forms a groove for the middle portion of the superior sagittal sinus. **s. scle'rae** [NA], **sclearal s., sclerocorneal s.,** the groove at the junction of the sclera and cornea. **s. of semicanal of humerus**, s. intertubercularis humeri. **s. of semicanal of vidian nerve**, s. nervi petrosi majoris. **semilunar s. of radius**, *incisura ulnaris radii*. **sigmoid s., s. of sigmoid sinus**, s. sinus sigmoidei. **s. of sigmoid sinus of occipital bone**, s. sinus sigmoidei ossis occipitalis. **s. of sigmoid sinus of parietal bone**, s. sinus sigmoidei ossis parietalis. **s. of sigmoid sinus of temporal bone**, s. sinus sigmoidei ossis temporalis. **s. sigmoi'deus os'sis tempora'lis**, s. sinus sigmoidei ossis temporalis. **s. si'nus petro'si infe'rior os'sis occipita'lis** [NA], sulcus of inferior petrosal sinus of occipital bone: the groove in the floor of the posterior cranial fossa at the line of junction between the basilar part of the occipital and the petrous portion of the temporal bone; it lodges the inferior petrosal sinus. Called also *s. petrosus inferior ossis occipitalis*. **s. si'nus petro'si infe'rior os'sis tempora'lis** [NA], sulcus of inferior petrosal sinus of temporal bone: a groove on the posteromedial edge of the internal surface of the petrous portion of the temporal bone, which, with a corresponding groove on the adjacent basilar part of the occipital bone, lodges the inferior petrosal sinus. Called also *s. petrosus inferior ossis temporalis*. **s. si'nus petro'si superio'ris** [NA], sulcus of superior petrosal sinus: a small posterolaterally directed sulcus that runs along the internal surface of the petrous part of the temporal bone on the angle separating the posterior and middle cranial fossae; it lodges the superior petrosal sinus. Called also *s. petrosus superior ossis temporalis*. **s. si'nus sagitta'lis superio'ris os'sis fronta'lis** [NA], sulcus of superior sagittal sinus of frontal bone: a median groove on the cerebral surface of the squama of the frontal bone; in the upper part only, it is continuous with the sagittal sulcus of the parietal bone and lodges the anterior portion of the superior sagittal sinus. Called also *s. sagittalis ossis frontalis*. **s. si'nus sagitta'lis superio'ris os'sis occipita'lis** [NA], sulcus of superior sagittal sinus of occipital bone: a broad sulcus on the internal surface of the squama of the occipital bone, generally to the right of the superior division of the cruciform eminence; it lodges the posterior part of the superior sagittal sinus. Called also *s. sagittalis ossis occipitalis*. **s. si'nus sigmoi'dei** [NA], sulcus of sigmoid sinus: an S-shaped sulcus beginning on the internal surface of the posteroinferior edge of the parietal bone and continuous with the lateral end of the sulcus of the transverse sinus; it passes onto the internal surface of the mastoid part of the temporal bone, where it bends inferiorly and medially to continue onto the lateral portion of the occipital bone, ending at the jugular foramen. It lodges the sigmoid sinus. **s. si'nus sigmoi'dei os'sis occipita'lis** [NA], sulcus of sigmoid sinus of occipital bone: the portion of the sulcus of the sigmoid sinus found on the occipital bone. **s. si'nus sigmoi'dei os'sis parietala'lis** [NA], sulcus of sigmoid sinus of parietal bone: a short groove on the internal surface of the posteroinferior angle of the parietal bone, continuous with both the sulcus for the sigmoid sinus on the temporal bone and the sulcus for the transverse sinus on the occipital bone; it lodges the superior part of the sigmoid sinus. Called also *s. transversus ossis parietalis*. **s. si'nus sigmoi'dei os'sis tempora'lis** [NA], sulcus of sigmoid sinus of temporal bone: the portion of the sulcus of the sigmoid sinus found on the temporal bone; called also *s. sigmoideus ossis temporalis*. **s. si'nus transver'si** [NA], sulcus of transverse sinus: a wide groove that passes horizontally, lateralward and forward from the internal occipital protuberance to the parietal bone, where it becomes continuous with the sulcus of the sigmoid sinus; it lodges

the transverse sinus. Called also *s. transversus ossis occipitalis*. **sulci of skin**, *sulci cutis*. **s. of spinal nerve**, *s. nervi spinalis*. **spiral s.**, *external*, *s. spiralis externus*. **spiral s.**, *internal*, *s. spiralis internus*. **spiral s. of humerus**, *s. nervi radialis*. **s. spira'/lis**, see *s. spiralis externus* and *s. spiralis internus*. **s. spira'/lis exter'nus** [NA], external spiral sulcus: a concavity within the cochlear duct immediately above the basilar crest. **s. spira'/lis inter'nus** [NA], internal spiral sulcus: the C-shaped concavity within the cochlear duct formed by the limbus laminae spiralis and its tympanic and vestibular labia along the edge of the osseous spiral lamina. **s. subclav'iae**, *s. arteriae subclaviae*. **subclavian s.**, *s. arteriae subclaviae*. **subclavian s. of lung**, *s. subclavius pulmonis*. **s. of subclavian artery**, *s. arteriae subclaviae*. **s. of subclavian vein**, *s. venae subclaviae*. **s. subcla'vius**, *s. arteriae subclaviae*. **s. subcla'vius pulmo'nis**, subclavian sulcus of lung: a broad, shallow, transverse groove across the top of the lung, lodging the subclavian artery. **subparietal s.**, *s. subparietal'is* [NA], a sulcus on the medial surface of a cerebral hemisphere, above the splenium of the corpus callosum, separating the precuneus from the cingulate gyrus. **s. of superior petrosal sinus**, *s. sinus petrosi superioris*. **s. of superior sagittal sinus of frontal bone**, *s. sinus sagittalis superioris ossis frontalis*. **s. of superior sagittal sinus of occipital bone**, *s. sinus sagittalis superioris ossis occipitalis*. **supraorbital s.**, *foramen supraorbitalis*. **suprasplenial s.**, *s. subparietalis*. **s. Syl'vii**, *fossa lateralis cerebri*. **s. ta'li** [NA], *s. of talus*, a transverse groove on the inferior surface of the talus, between the medial and the posterior articular surface, which helps to form the sinus tarsi. **temporal s.**, *inferior*, *temporal s.*, *middle*, *s. temporalis inferior* [NA]. **temporal s.**, *superior*, *s. temporalis superior*. **temporal sulci**, *transverse*, *sulci temporales transversi*. **temporal s. of temporal bone**, *s. arteriae temporalis mediae*. **s. tempora'lis infe'rior**, 1. [NA] inferior temporal sulcus: a longitudinal sulcus on the lateral surface of the temporal lobe, separating the middle and the inferior temporal gyri. Formerly called *s. temporalis medius*. 2. sulcus occipitotemporalis. **s. tempora'lis me'dius**, *s. temporalis inferior*. **s. tempora'lis supe'rior** [NA], superior temporal sulcus: a longitudinal sulcus on the lateral surface of a cerebral hemisphere, passing downward and forward from the gyrus angularis to the temporal pole and separating the superior and the middle temporal gyri. **sul'ci tempora'les transver'si** [NA], transverse temporal sulci: irregularly vertical sulci in the part of the temporal lobe that lies within the lateral sulcus. **s. ten'dinis mus'culi flexo'ris hal'lucis lon'gi calca'nei** [NA], sulcus of tendon of flexor hallucis longus of calcaneus: a groove on the inferior surface of the sustentaculum tali of the calcaneus, lodging the tendon of the flexor hallucis longus muscle; called also *s. musculi flexoris hallucis longi calcanei*. **s. ten'dinis mus'culi flexo'ris hal'lucis lon'gi ta'li** [NA], sulcus of tendon of flexor hallucis longus of talus: the sagittal groove on the posterior surface of the body of the talus that transmits the tendon of the flexor hallucis longus muscle; called also *s. musculi flexoris hallucis longi tali*. **s. ten'dinis mus'culi perone'i lon'gi** [NA], sulcus of tendon of peroneus longus muscle: a deep groove on the inferior surface of the cuboid bone, which in certain foot positions lodges the tendon of the peroneus longus muscle; called also *s. musculi peronei ossis cuboidei*. **s. ten'dinum musculo'rum fibula'rium calca'nei**, NA alternative for *s. tendinum musculorum peroneorum calcanei*. **s. ten'dinum musculo'rum peroneo'rum calca'nei** [NA], sulcus of tendons of peroneus muscles: a slight groove on the inferior part of the lateral surface of the calcaneus, lodging the tendons of the peroneus longus and brevis muscles; called also *s. musculi peronei calcanei*. **s. of tendon of flexor hallucis longus muscle of calcaneus**, *s. tendinis musculi flexoris hallucis longi calcanei*. **s. of tendon of flexor hallucis longus muscle of talus**, *s. tendinis musculi flexoris hallucis longi tali*. **s. of tendons of peroneus muscles**, *s. tendinum musculorum peroneorum calcanei*. **s. of tendon of peroneus longus muscle**, *s. tendinis musculi peronei longi*. **terminal s. of right atrium**, *s. terminalis atrii dextri*. **terminal s. of tongue**, *s. terminalis linguae*. **s. termina'lis a'trii dex'tri** [NA], terminal sulcus of right atrium: a shallow groove on the external surface of the right atrium of the heart between the superior and inferior venae cavae; it represents the junction of the sinus venosus with the primitive atrium in the embryo, and corresponds to a ridge on the internal surface, the crista terminalis. **s. termina'lis lin'guae** [NA], terminal sulcus of tongue: a more or less distinct groove on the tongue, extending from the foramen cecum forward and lateralward to the margin of the tongue on either side, and dividing the dorsum of the tongue from the root. It is marked by a row of vallate papillae. **s. of tongue**, see *s. medianus linguae* and *s. terminalis linguae*. **transverse s. of anthelix**, *s. anthelicis transversus*. **transverse s. of heart**, *s. coronarius cordis*. **transverse s. of occipital bone**, *s. sinus transversi*. **transverse s. of parietal bone**, *s. sinus sigmoidei ossis parietalis*. **s. of transverse sinus**, *s. sinus transversi*. **transverse s. of temporal bone**, *s. sinus sigmoidei ossis temporalis*. **s. transver'sus os'sis occipita'lis**, *s. sinus transversi*.

s. transver'sus os'sis parietal'is, *s. sinus sigmoidei ossis parietalis*. **s. tu'bae auditi'vae** [NA], *s. tu'bae eusta'chii*, sulcus of auditory tube: a groove on the medial part of the base of the spine of the sphenoid bone; it lodges a portion of the cartilaginous part of the auditory tube. **Turner's s.**, *s. intraparietalis*. **tympanic s. of temporal bone**, *s. tympan'icus os'sis tempora'lis* [NA], a narrow groove in the medial part of the external acoustic meatus of the temporal bone, into which the tympanic membrane fits; it is deficient above. **s. of ulnar nerve**, *s. nervi ulnaris*. **s. of umbilical vein**, *s. venae umbilicalis*. **sulci for veins**, *sulci venosi*. **s. of vena cava**, *s. ve'nae ca'vae* [NA], a groove on the upper part of the posteroinferior surface of the liver, separating the right lobe from the caudate lobe and lodging the inferior vena cava; called also *fossa venae cavae*. **s. ve'nae subcla'viae** [NA], sulcus of subclavian vein: a transverse groove on the cranial surface of the first rib, just anterior to the anterior scalene tubercle; it lodges the subclavian vein. **s. ve'nae umbilica'lis** [NA], sulcus of umbilical vein: the impression on the visceral surface of the liver in the fetus, which lodges the umbilical vein. **sul'ci veno'si** [NA], *venous sulci*, grooves on the internal surfaces of the cranial bones for the meningeal veins; called also *venous grooves*. **s. ventra'lis medul'lae spina'lis**, *fissura mediana anterior medullae spinalis*. **vermicular s.**, a fissure between the vermis and the hemisphere of the cerebellum. **s. of vertebral artery of atlas**, *s. arteriae vertebralis atlantis*. **vertical s.**, *s. precentralis*. **vomerovaginal s.**, *s. vomerovagina'lis* [NA], the groove on the vaginal process of the pterygoid process of the sphenoid bone that helps form the vomerovaginal canal. **Waldeyer's s.**, see *s. spiralis externus* and *s. spiralis internus*. **s. of wrist**, *s. carpi*.

sulfabenzamide (sul'fah-benz'ah-mid) chemical name: *N*-sulfanilylbenzamide; an antibacterial, $C_{13}H_{12}N_2O_3S$.

sulfacetamide (sul'fah-set'ah-mid) chemical name: *N*-sulfanilylacetamide. A sulfonamide $C_8H_{10}N_2O_3S$, occurring as a white crystalline powder, which has been used in the treatment of urinary tract infections. **sodium s.** [USP], the sodium salt of sulfacetamide, used topically in ointment or solution as an antibacterial in the management of various ophthalmic infections.

sulfacid (sulf-as'id) sulfonic acid.

sulfacytine (sul'fah-si'ten) chemical name: 4-amino-*N*-(1-ethyl-1,2-dihydro-2-oxo-4-pyrimidinyl)benzenesulfonamide. A short-acting sulfonamide, $C_{12}H_{14}N_4O_3S$, used orally in the treatment of acute urinary tract infections when due to susceptible strains of *Escherichia coli*; *Klebsiella-Enterobacter* group, *Staphylococcus aureus*, *Proteus mirabilis*, and *P. vulgaris*.

sulfadiazine (sul'fah-di'ah-zen) [USP] chemical name: 4-amino-*N*-(2-pyrimidinyl)benzenesulfonamide. A sulfonamide, $C_{10}H_{10}N_4O_3S$, occurring as a white or slightly yellow powder; frequently used in combination with other sulfonamides in the treatment of infections due to susceptible organisms, including meningitis caused by *Hemophilus influenzae*, chancroid, acute urinary tract infections, early manifestations of lymphogranuloma venereum, and falciparum malaria caused by chloroquine-resistant plasmodia. It is administered orally. **s. silver**, the silver derivative of sulfadiazine, $C_{10}H_8AgN_4O_3S$, used as a topical antibacterial to prevent wound sepsis in the treatment of second and third degree burns. **s. sodium** [USP], the monosodium salt of sulfadiazine, $C_{10}H_9NaO_3S$, occurring as a white powder, having the same actions and uses as the base; administered subcutaneously and intravenously.

sulfadimethoxine (sul'fah-di'mē-thoks'en) chemical name: 4-amino-*N*-(2,6-dimethoxy-4-pyrimidinyl)benzenesulfonamide. A long-acting sulfonamide, $C_{12}H_{14}N_4O_4S$, occurring as an almost white, crystalline powder; used as an antibacterial in a variety of infections, administered orally.

sulfadimetine (sul'fah-di'mē-tēn) sulfisomidine.

sulfadimidine (sul'fah-di'mī-dēn) sulfamethazine.

sulfadoxine (sul'fah-doks'en) chemical name: 4-amino-*N*-(5,6-dimethoxy-4-pyrimidinyl)benzenesulfonamide. A long-acting sulfonamide, $C_{12}H_{14}N_4O_4S$, which has been used in the treatment of leprosy and falciparum malaria.

sulfaethidole (sul'fah-eth'i-dōl) chemical name: 4-amino-*N*-(5-ethyl-1,3,4-thiadiazol-2-yl)benzenesulfonamide. A short-acting sulfonamide, $C_{10}H_{12}N_4O_2S_2$, occurring as a white to yellowish white, crystalline powder; used principally as a urinary antiseptic, administered orally.

sulfafurazole (sul'fah-fu'rah-zōl) sulfisoxazole.

sulfaguanidine (sul'fah-gwan'i-dēn) chemical name: *N*-amidinosulfanilamide. A sulfonamide, $C_7H_{10}N_4O_2S$, which is not well absorbed and occurs as a white needle-like crystalline powder, used as an antibacterial agent in infections of the gastrointestinal tract.

sulfalene (sul'fah-lēn) chemical name: 4-amino-*N*-(3-methoxy-pyrazinyl)benzenesulfonamide. A long-acting sulfonamide, $C_{11}H_{12}N_4O_3S$, used as an antibacterial, especially in the treatment of urinary tract infections.

sulfamerazine (sul'fah-mer'ah-zēn) [USP] chemical name: *N*-(4-methyl-2-pyrimidinyl)sulfanilamide. A readily absorbed antibacterial substance, $C_{11}H_{12}N_4O_2S$, occurring as white or faintly

- yellowish white crystals or powder, usually used in combination with other sulfonamides. See *trisulfapyrimidines oral suspension*, under *suspension*. Called also *sulfamethyldiazine*.
- sulfameter** (sul'fah-me'ter) chemical name: 4-amino-*N*-(5-methoxy-2-pyrimidinyl)benzenesulfonamide. A long-acting sulfonamide, $C_{11}H_{12}N_4O_3S$, occurring as a fine, white to yellowish-white, powder; used as an antibacterial, especially in the treatment of acute and chronic urinary tract infections, administered orally.
- sulfamethazine** (sul'fah-meth'ah-zēn) [USP] chemical name: 4-amino-*N*-(4,6-dimethyl-2-pyrimidinyl)benzenesulfonamide. A sulfonamide, $C_{12}H_{14}N_4O_3S$, occurring as a white to yellowish white powder; used as an antibacterial in a variety of infections, usually, in the United States, in combination with other sulfonamides. It is administered orally. Called also *sulfadimidine*.
- sulfamethizole** (sul'fah-meth'i-zōl) [USP] chemical name: *N*-(5-methyl-1,3,4-thiadiazol-2-yl)sulfanilamide. A compound, $C_9H_{10}N_4O_3S_2$, occurring as white crystals or powder, used as an antibacterial agent mainly in the treatment of infections of the urinary tract. Called also *sulfamethylthiadiazole*.
- sulfamethoxazole** (sul'fah-meth-oks'ah-zōl) [USP] chemical name: 4-amino-*N*-(5-methyl-3-isoxazolyl)benzenesulfonamide. A sulfonamide, $C_{10}H_{11}N_3O_3S$, occurring as a white to off-white, crystalline powder; used as an antibacterial, especially for the prophylaxis and treatment of acute urinary tract infections and of pyoderma and infections of wounds and soft tissues, administered orally.
- sulfamethoxypyridazine** (sul'fah-meth-ok'se-pi-rid'ah-zēn) chemical name: *N*-(6-methoxy-3-pyridazinyl)sulfanilamide. A compound, $C_{11}H_{12}N_4O_3S$, occurring as a white or yellowish white, crystalline powder, used as an antibacterial agent in the treatment of infections of the urinary tract and other infections.
- sulfamethyldiazine** (sul'fah-meth'il-di'ah-zēn) sulfamerazine.
- sulfamethylthiadiazole** (sul'fah-meth'il-thi'ah-di'ah-zōl) sulfamethizole.
- Sulfamezathine** (sul'fah-mez'ah-thēn) trademark for a preparation of sulfamethazine.
- sulfamido** (sul-fam'i-do) one of a group of compounds containing an aminosulfone group $SO_2 \cdot NH_2$.
- sulfamine** (sul-fam'in) the univalent radical, $-SO_2NH_2$.
- sulfamonomethoxine** (sul'fah-mon'o-mē-thoks'en) chemical name: *N*-(6-methoxy-4-pyrimidinyl)sulfanilamide; an antibacterial, $C_{11}H_{12}N_4O_3S$.
- sulfamoxole** (sul'fah-moks'ōl) chemical name: *N*-(4,5-dimethyl-2-oxazolyl)sulfanilamide; an antibacterial, $C_{11}H_{13}N_3O_3S$.
- Sulfamylon** (sul'fah-mi'lon) trademark for preparations of mafenide.
- sulfanilamide** (sul'fah-ni'ah-mid) chemical name: *p*-aminobenzenesulfonamide. A potent antibacterial compound, $NH_2 \cdot C_6H_4 \cdot SO_2NH_2$, the first of the sulfonamides discovered. Formerly used in the treatment of various infections, it has been replaced by more effective and less toxic derivatives, and by antibiotics. Called also *prontosil album*.
- sulfanilate** (sul-fan'i-lāt) a salt of sulfanilic acid.
- sulfanitran** (sul'fah-ni'tran) chemical name: 4'-[*p*-nitrophenyl]sulfamoyl]acetanilide. A substance, $C_{14}H_{13}N_3O_5S$, used as an antibacterial and as a coccidiostat agent in poultry.
- sulfanuria** (sul'fah-nu're-ah) anuria resulting from the use of sulfonamide drugs.
- sulfapyridine** (sul'fah-pir'i-dēn) [USP] chemical name: *N*-(2-pyridyl)sulfanilamide. An antibacterial compound, $C_{11}H_{11}N_3O_2S$, occurring as white or faintly yellowish white granules, crystals, or powder; used as an oral suppressant for dermatitis herpetiformis. It was formerly used in the treatment of pneumonia and streptococcal infections.
- sulfaquinoxaline** (sul'fah-kwin-ok'sah-lēn) chemical name: *N*-(2-quinoxalyl)sulfanilamide. An antibacterial, $C_{14}H_{12}N_4O_4S$, used in veterinary medicine as a coccidiostat, and in the treatment of fowl cholera, fowl typhoid, infectious enteritis of swine, shipping dysentery of lambs, and foot rot of cattle.
- sulfarsphenamine** (sul'fah-sfen'ah-min) the disodium salt of dihydroxy-diaminoarsenobenzenemonomethylene sulfonate, $NH_2(OH)C_6H_3 \cdot As \cdot AsC_6H_3(OH)NH \cdot CH_2 \cdot SO_2 \cdot ONa$. It contains 18-20 per cent of arsenic and was formerly used in the treatment of syphilis. It differs from nearsphenamine in having two side chains instead of one and in that the sulfur has a valence of four instead of two.
- sulfasalazine** (sul'fah-sal'ah-zēn) [USP] chemical name: 2-hydroxy-5-[4-(2-pyridinylamino)sulfonyl]phenyl]azo]benzoic acid. An antibacterial sulfonamide derivative, $C_{18}H_{14}N_4O_5S$, occurring as a bright yellow to brownish yellow powder; used orally in the treatment of mild to moderate ulcerative colitis and as adjunctive therapy in severe ulcerative colitis due to susceptible organisms, administered orally. Called also *salazosulfapyridine* and *salicylazosulfapyridine*.
- Sulfasuxidine** (sul'fah-suk'si-dēn) trademark for preparations of succinylsulfathiazole.
- sulfatase** (sul'fah-tās) an enzyme that catalyzes the hydrolysis of various sulfuric acid esters into sulfuric acid and alcohol.
- sulfate** (sul'fāt) [L. *sulphas*] any salt of sulfuric acid. **acid s.**, one in which only one half of the hydrogen of the sulfuric acid is replaced; a bisulfate. **basic s.**, one in which the normal sulfate of the base is combined with a hydroxide of the same base; a subsulfate. **chondroitin s.**, see *chondroitin*. **conjugated s's**, aromatic substances, such as phenol, scatoxyl, and indoxyl, which occur in the urine along with mineral sulfates. **cupric s.** [USP], the pentahydrate sulfate salt of copper, $CuSO_4 \cdot 5H_2O$, occurring as deep blue, triclinic crystals or as blue crystalline granules or powder, which is a powerful emetic; used orally as an antidote to phosphorus poisoning. Topical application of a 1 per cent solution is used in the treatment of phosphorus burns of the skin. It is also used as a catalyst with iron in the treatment of iron deficiency anemia. In 1:1,000,000 concentration it is used to prevent growth of algae in ponds, reservoirs, and swimming pools. Called also *blue vitriol*, *copper sulfate*, and *bluestone*. **dermatan s.**, chondroitin sulfate B; see *chondroitin*. **etheral s's**, conjugated s's. **ferrous s.** [USP], pale bluish green odorless crystals or granules, $FeSO_4 \cdot 7H_2O$, used orally in treatment of iron deficiency anemia. Called also *cupperas*, *green vitriol*, *iron protosulfate*, and *iron sulfate*. **ferrous s. dried** [USP], a grayish white powder, $FeSO_4 \cdot H_2O$, used as a hematinic. **mineral s's**, sulfates in the urine which are combinations of sulfuric acid with mineral substances such as sodium, potassium, calcium, and magnesium. **neutral s.**, **normal s.**, one in which all the hydrogen of the sulfuric acid is replaced. **preformed s's**, mineral s's.
- sulfatemia** (sul'fāt-e'me-ah) the presence of sulfates in the blood.
- Sulfathalidine** (sul'fah-thal'i-dēn) trademark for phthalylsulfathiazole.
- sulfathiazole** (sul'fah-thi'ah-zōl) chemical name: *N*-(2-thiazolyl)sulfanilamide. A compound, $C_9H_9N_3O_2S_2$, once widely used as an antibacterial agent but replaced by less toxic sulfonamides and antibiotics. Called also *M & B 760*, *norsulfazole*.
- sulfatide** (sul'fah-tid) one of a class of cerebroside sulfuric esters; they are found largely in the medullated nerve fibers, and may accumulate in the white matter of the brain in metachromatic leukodystrophy.
- sulfazamet** (sul-fah'zah-met) chemical name: *N*-(3-methyl-1-phenylpyrazol-5-yl)sulfanilamide; an antibacterial, $C_{16}H_{16}N_4O_2S$.
- sulfhemoglobin** (sul'fhe-mo-glo'bin) sulfmethemoglobin.
- sulfhemoglobinemia** (sul'fhe-mo-glo'bin-e'me-ah) the presence of sulfmethemoglobin in the blood.
- sulphydrate** (sulfi-hi'drāt) any compound of a base with sulphydric acid or, more correctly, with the radical sulphydryl, SH, or hydrogen sulfide.
- sulphydryl** (sulfi-hi'dril) the univalent radical, $-SH$.
- sulfide** (sul'fid) any binary compound of sulfur; a compound of sulfur with another element or radical or base. **mercuric s.**, a brilliant scarlet powder, HgS , formerly used in the treatment of syphilis.
- sulfindigotate** (sul-fin'di-go-tāt) any salt of sulfindigotic acid.
- sulfipyrazone** (sul'fin-pi'rah-zōn) [USP] chemical name: 1,2-diphenyl-4-[2-(phenylsulfinyl)ethyl] 3,5-pyrazolidinedione. A sulfoxide analogue of phenylbutazone, $C_{23}H_{20}N_2O_3S$, used as a uricosuric agent in treatment of gout.
- sulfinyl** (sul'fi-nil) the bivalent radical, $-SO-$.
- sulfisomidine** (sul-fi-som'i-dēn) chemical name: *N*-(2,6-dimethyl-4-pyrimidinyl)sulfanilamide. A compound, $C_{12}H_{14}N_4O_2S$, closely related to sulfamethazine, occurring as a white or creamy-white powder, used as an antibacterial agent in the treatment of systemic and urinary tract infections. Called also *sulfadimetidine*.
- sulfisoxazole** (sul'fi-sok'sah-zōl) [USP] chemical name: 4-amino-*N*-(3,4-dimethyl-5-isoxazolyl)benzenesulfonamide. A short-acting sulfonamide, $C_{11}H_{13}N_3O_3S$, occurring as a white to slightly yellowish, crystalline powder; used as an antibacterial in the treatment of a wide variety of infections, administered orally. Called also *sulfafurazole*. **acetyl s.** [USP], a tasteless derivative of sulfisoxazole, having the same actions as the base. **s. diethanolamine**, **s. diolamine** [USP], a soluble salt of sulfisoxazole, administered parenterally.
- sulfite** (sul'fit) [L. *sulfis*] any salt of sulfurous acid. **s. oxidase**, an oxidoreductase that catalyzes the oxidation of sulfite (with O_2) to sulfate with release of H_2O_2 ; it is a hemoprotein containing molybdenum, occurring in the intermembrane space of mitochondria.
- sulfmethemoglobin** (sul'fmet-he'mo-glo'bin) a greenish substance formed by treating blood with hydrogen sulfide or by the absorption of this gas from the intestinal tract; it is the cause of the greenish color seen in the abdominal walls and along the vessels of cadavers. Called also *sulfhemoglobin*.
- sulfo-** a prefix used in naming chemical compounds, indicating the presence of divalent sulfur or of the group SO_2OH .
- sulfoacid** (sul'fo-as'id) sulfonic acid.

sulfobromophthalein (sul/'fo-bro/'mo-thal'e-in) chemical name: 3,3'-(tetrabromophthalidylidene) bis[6-hydroxybenzenesulfonate]. Its disodium salt [USP], a white odorless crystalline powder, $C_{20}H_8Br_4Na_2O_{10}S_2$, is soluble in water and is used as a hepatic function determinant.

sulfoconjugation (sul/'fo-kon/'ju-ga'shun) the formation of conjugated sulfates.

sulfocyanate (sul/'fo-si/'ah-nāt) thiocyanate.

sulfojel (sul/'fo-jel) a gel in which sulfuric acid is the medium instead of water.

sulfohydrate (sul/'fo-hi/'drāt) sulphydrate.

sulfoichthyolate (sul/'fo-ik/'the-o-lāt) a salt of sulfoichthyolic acid; see *ichthammol*.

sulfolipid (sul/'fo-lip/'id) a lipid which on hydrolysis yields sulfuric acid.

sulfolysis (sul-fol/'i-sis) [*sulfo* + Gr. *lysis* dissolution] a double decomposition, similar to hydrolysis, but in which sulfuric acid takes the place of water.

sulfomucin (sul/'fo-mu/'sin) a glucoprotein found in cartilage, cornea, and gastrointestinal mucosa, which contains sulfuric acid, uronic acid, and chondrosamine or glucosamine.

sulfonamide (sul-fon/'ah-mid) the chemical group SO_2NH_2 . The sulfonamides, or sulfa drugs, are derivatives of sulfanilamide, which competitively inhibit folic acid synthesis in microorganisms, and are bacteriostatic against gram-positive cocci (streptococci and pneumococci), gram-negative cocci (meningococci and gonococci), gram-negative bacilli (*Escherichia coli* and shigellae), and a wide variety of other bacteria. Sulfonamides have been largely supplanted by more effective and less toxic antibiotics.

sulfonamidesmia (sul/'fōn-am/'i-de'me-ah) the presence of a sulfonamide compound in the blood.

sulfonamidocholelia (sul/'fōn-am/'i-do-ko/'le-ah) the presence of a sulfonamide compound in the bile.

sulfonamidotherapy (sul/'fōn-am/'i-do-ther/'ah-pe) treatment with sulfonamide compounds.

sulfonamiduria (sul/'fōn-am/'i-du're-ah) the presence of a sulfonamide compound in the urine.

sulfone (sul/'fōn) 1. the radical SO_2 . 2. any compound containing two hydrocarbon radicals attached to the radical SO_2 , especially dapsone (4,4'-sulfonylbisbenzenamine) and its derivatives, which are potent antibacterials effective against many gram-positive and gram-negative organisms, and are widely used as leprostatics. **Angeli's s.**, glucosulfone sodium.

sulfonethylmethane (sul/'fōn-eth/'il-meth/'ān) chemical name: 2,2-bis(ethylsulfonyl)butane; a hypnotic, $C_8H_{18}O_4S_2$.

sulfonic (sul-fon/'ik) indicating chemical compounds containing the monovalent $-SO_2OH$ or $-SO_3H$ radical.

sulfonmethane (sul/'fōn-meth/'ān) chemical name: 2,2-bis(ethylsulfonyl)propane. A white, crystalline compound, $(CH_3)_2C(SO_2C_2H_5)_2$, readily soluble in alcohol and slowly in 100 parts of water. It has moderate hypnotic properties, and was formerly used in insomnia of functional origin.

Sulfonol (sul-fon/'sol) trademark for trisulfapyrimidines oral suspension; see under *suspension*.

sulfonoterol hydrochloride (sul-fon/'ter-ōl) chemical name: α -[(1,1-dimethylethyl)amino]methyl-4-hydroxy-3-[(methylsulfonyl)methyl]benzenemethanol hydrochloride; a bronchodilator, $C_{14}H_{23}NO_4S \cdot HCl$.

sulfonyl (sul/'fo-nil) the bivalent radical, $-SO_2-$.

sulfoprotein (sul/'fo-pro/'te-in) any of a series of albumins containing loosely combined sulfur.

sulfosalt (sul/'fo-sawlt) a salt of sulfonic acid.

Sulfose (sul/'fōs) trademark for preparations of trisulfapyrimidines.

sulfosol (sul/'fo-sol) a sol in which sulfuric acid is the dispersion medium.

sulfotransferase (sul/'fo-trans/'fer-ās) an enzyme that catalyzes the transfer of sulfo groups, as from the phosphoadenylsulfates to form adenosine diphosphates.

sulfoxide (sul-fok/'sīd) 1. the bivalent radical, $=SO$. 2. any member of a group of compounds intermediate between the sulfides and the sulfones.

sulfoxism (sul-fok/'sizm) sulfuric acid poisoning.

sulfoxone sodium (sul-fok/'on) [USP] chemical name: [sulfonylbis(1,4-phenyleneimino)]bismethanesulfonic acid disodium salt. An antibacterial derivative of dapsone, $C_{14}H_{14}N_2Na_2O_6S_3$, having actions similar to those of the parent compound, occurring as a white to pale yellow powder; used primarily as a leprostatic in the treatment of lepromatous and tuberculous leprosy, administered orally.

sulfur (sul/'fur), gen. *sul'furis* [L.] a nonmetallic element existing in many allotropic forms; symbol, S; atomic number, 16; atomic weight, 32.064. It occurs in protein, being a constituent of the amino acids cysteine and methionine. Sulfur is a laxative and diaphoretic and is used in diseases of the skin and formerly in the treatment of a wide variety of diseases. **colloidal s.**, sulfur in a state of extremely fine division; milk of sulfur. **s. dioxide**

[NF], a colorless, nonflammable gas, SO_2 , having a strong, suffocating odor; used as an antioxidant in pharmaceutical preparations. Dry sulfur dioxide is often used to kill fleas, mosquitoes, flies, rats, and other vermin. Called also *sulfurous anhydride*. **flower of s.**, sublimed s. **hepar-s.**, sulfated potash. **s. hydride**, H_2S , a poisonous gas having the smell of rotten eggs. **s. iodide**, a binary compound, S_2I_2 , which has been used externally in the treatment of various diseases of the skin, and, internally, in the treatment of human glanders. **lac s.**, precipitated s. **liver of s.**, sulfated potash. **s. lo'tum**, washed s. **milk of s.**, sulfur in a state of extremely fine division; colloidal sulfur. **s. monochloride**, a lacrimating war gas, S_2Cl_2 . **precipitated s.** [USP], a very fine, pale yellow, amorphous or microcrystalline powder, containing not less than 99.5 per cent sulfur, obtained by adding acid to a solution containing a polysulfide and a thiosulfate; used topically as a scabicide, and also used in various dermatologic formulations for its antiparasitic, antifungal, and keratolytic effects. Called also *lac sulfuris* and *milk of sulfur*. **radioactive s.**, radiosulfur. **roll s.**, sulfur melted and cast in the form of rods or cylinders. **sublimed s.** [USP], a fine yellow powder, containing not less than 99.5 per cent sulfur, obtained by subliming elemental sulfur and condensing the vapor. It is used topically as a scabicide and parasiticide. Called also *flores sulfuris* and *flowers of sulfur*. **s. vasogen**, an ointment containing sulfur and vasogen, either semisolid or fluid. **vegetable s.**, lycopodium. **washed s.**, sublimed sulfur purified by washing with water.

sulfuraria (sul/'fu-ra/'re-ah) a yellow powder, the sediment from certain springs in Italy, said to contain sulfur, calcium sulfide, strontium sulfate, silica, etc.; used in skin diseases.

sulfurated, sulfured (sul/'fu-rāt/'ed; sul/'fu-ret/'ed) combined or charged with sulfur.

sulfurator (sul/'fu-ra/'tor) an apparatus for applying sulfur fumes, as in disinfecting.

sulfuret (sul/'fu-ret) sulfide.

sulfurize (sul/'fu-riz) to cause to combine with sulfur.

sulfurtransferase (sul/'fur-trans/'fer-ās) an enzyme that catalyzes the transfer of a sulfur group, as from thiosulfate to cyanide to form thiocyanate.

sulfuryl (sul/'fu-ri) the radical SO_2 .

sulfydryl (sul-fi/'dril) sulphydryl.

sulindac (sul-in/'dak) chemical name: (Z)-5-fluoro-2-methyl-1-[4-(methylsulfinyl)phenyl]methylene-1H-indene-3-acetic acid; a nonsteroidal anti-inflammatory, analgesic, and antipyretic, $C_{20}H_{17}FO_3S$, used in the treatment of rheumatic disorders.

ulisobenzene (sul/'i-so-ben/'zōn) chemical name: 5-benzoyl-4-hydroxy-2-methoxybenzenesulfonic acid; an ultraviolet screen, $C_{14}H_{12}O_6S$.

Sulkowitch's test (sul/'ko-wich/'ez) [Hirsh Wolf Sulkowitch, American physician, born 1906] see under *tests*.

Sulla (sul/'ah) trademark for a preparation of sulfameter.

sullage (sul/'ij) sewage.

sulnidazole (sul-nīd/'ah-zōl) chemical name: [2-(2-ethyl-5-nitro-1H-imidazol-1-yl)ethyl]carbamothioic acid O-methyl ester; an antiprotozoal, $C_8H_{14}N_4O_3S$, effective against *Trichomonas*.

sulocitidil (sul-ok/'ti-dil) chemical name: (R^*, S^*) -4-[(1-methyl-ethyl)thio]- α -[1-(octylamino)ethyl]benzenemethanol; a peripheral vasodilator, $C_{20}H_{35}NOS$.

suloxifen oxalate (sul-ok/'si-fen) chemical name: N-[2-(diethylamino)ethyl]-S,S-diphenylsulfoximine ethanedioate (1:1); a bronchodilator, $C_{18}H_{24}N_2OS \cdot C_2H_2O_4$.

sulph- for words beginning thus, see those beginning *sulf*.

Sulphetrone (sul/'fē-trōn) trademark for a preparation of solapone.

sulpiride (sul/'pi-riid) chemical name: N-[(1-ethyl-2-pyrrolidinyl)methyl]-5-sulfamoyl-o-anisamide; an antidepressant, $C_{15}H_{23}N_3O_4S$.

sulprostone (sul-pros/'tōn) chemical name: [1R-[1 α (Z),2 β (1E,3R)-3 α]-7-[3-hydroxy-2-(3-hydroxy-4-phenoxy-1-butenyl)-5-oxocyclopentyl]-N-(methylsulfonyl)-5-heptenamide; a prostaglandin, $C_{23}H_{31}NO_7S$.

Sul-Spansion (sul-span/'shun) trademark for a preparation of sulfaethidole.

sulthiame (sul-thi/'ām) chemical name: 4-(tetrahydro-2H-1,2-thiazin-2-yl)benzenesulfonamide S,S-dioxide. A carbonic anhydrase inhibitor, $C_{10}H_{14}N_2O_4S_2$, used as an anticonvulsant in the treatment of all forms of epilepsy except petit mal.

sum. abbreviation for L. *su'mat*, let him take; or *sumen'dum*, to be taken.

sumac (soo/'mak) a name of various species of *Rhus*, applied principally to the nonpoisonous species. **poison s.**, **swamp s.**, a species, *R. vernix*, usually found in swamps, which causes an itching rash on contact with the skin.

summation (sum-ma/'shun) [L. *summa* total] the accumulative effects of a number of stimuli applied to a muscle, nerve, or reflex arc. **central s.**, the condition in which successive subliminal

stimuli accumulate in a reflex center until they finally produce a reflex discharge.

summit (sum'it) [L. *summus*, superlative of *superus*] the highest point. **s. of bladder**, apex vesicae urinariae. **s. of nose**, radix nasi.

Sumner's method, reagent (sum'nerz) [James Batcheller Sumner, American biochemist, 1887-1955; co-winner, with W. M. Stanley and J. H. Northrop, of the Nobel prize in chemistry for 1946 for pioneering work in crystallizing proteins] see under *method* and *reagent*.

Sumner's sign (sum'nerz) [F.W. Sumner, British surgeon] see under *sign*.

Sumycin (soo-mi'sin) trademark for preparations of tetracycline hydrochloride.

sunburn (sun'bern) injury to the skin, with erythema, tenderness, and sometimes blistering, following excessive exposure to sunlight, and produced by ultraviolet rays, which are not filtered out by clouds or water.

suncillin sodium (sun-sil'in) chemical name: 3,3-dimethyl-7-oxo-6-[2-phenyl-D-2-(sulfoamino)acetamido]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid disodium salt; an antibacterial, $C_{16}H_{17}N_3Na_2O_7S_2$.

SunDare (sun'dār) trademark for preparations of cinoxate.

sunstroke (sun'strōk) insolation, or thermic fever; a condition produced by exposure to the sun, and marked by convulsions, coma, and a high temperature of the skin. Cf. *heat exhaustion* and *heat stroke*.

super- [L. *super* above] a prefix signifying above, or implying excess.

superabduction (soo'per-ab-duk'shun) extreme or excessive abduction.

superacid (soo'per-as'id) excessively acid.

superacidity (soo'per-ah-sid'i-te) excessive acidity.

superacromial (soo'per-ah-kro'me-al) supra-acromial.

superactivity (soo'per-ak-tiv'i-te) activity greater than normal; hyperactivity.

superacute (soo'per-ah-kūt') extremely acute.

superalimentation (soo'per-al'i-men-ta'shun) therapeutic treatment by excessive feeding beyond the requirements of the appetite: employed in wasting diseases; called also *gavage*.

superalkalinity (soo'per-al'kah-lin'i-te) excessive alkalinity.

superaurale (soo'per-aw-ra'le) an anthropometric landmark, the highest point on the superior border of the helix of the ear.

supercarbonate (soo'per-kar'bon-āt) bicarbonate.

supercentral (soo'per-sen'tral) above a center.

supercilia (soo'per-sil'e-ah) [L., pl. of *supercilium*] [NA] the hairs growing on the transverse elevation at the junction of the forehead and the upper lid of either eye; called also *eyebrow*.

superciliary (soo'per-sil'e-a-re) [L. *superciliaris*] pertaining to the eyebrow.

supercilium (soo'per-sil'e-um), pl. *supercilia* [L.] [NA] the transverse elevation at the junction of the forehead and the upper eyelid; see *eyebrow* (def. 1), and see also *supercilia*.

superclass (su'per-klas) a taxonomic category sometimes established, subordinate to a phylum and superior to a class.

supercoil (su'per-koil) a shape assumed by chromosomes when they have attained their maximum length during interphase, resembling a "zig-zag" pattern with broad turns.

superdistention (soo'per-dis-ten'shun) excessive distention.

superduct (soo'per-duk't) [*super-* + L. *ducere* to draw] to carry up or elevate.

superego (soo'per-e'go) a part of the psyche with components derived from both the id and the ego, functioning largely in the unconscious zone, and acting as a monitor over the ego; the conscience.

superexcitation (soo'per-ek'si-ta'shun) [*super-* + L. *excitatio* excitement] extreme or excessive excitement.

superextended (soo'per-eks-tend'ed) extended beyond the normal.

superextension (soo'per-eks-ten'shun) excessive extension.

superfamily (soo'per-fam'i-le) a taxonomic category sometimes established, subordinate to an order and superior to a family.

superfecundation (soo'per-fe'kun-da'shun) [*super-* + L. *fecundare* to fertilize] fertilization of two or more ova during the same ovulatory cycle by separate coital acts.

superfemale (soo'per-fe'māl) a female organism whose cells contain more than the ordinary number of sex-determining (X) chromosomes.

superfetation (soo'per-fe-ta'shun) [*super-* + *fetus*] the fertilization and subsequent development of an ovum when a fetus is already present in the uterus, a result of fertilization of ova during different ovulatory cycles and yielding fetuses of different ages.

superficial (soo'per-fish'al) [L. *superficialis*] pertaining to or situated near the surface.

superficialis (soo'per-fish'e-a'lis) superficial; [NA] a term used to designate a structure situated closer than another to the surface of the body.

superficies (soo'per-fish'e-ēz) [L.] an outer surface.

superflexion (soo'per-flek'shun) extreme or excessive flexion.

superfunction (soo'per-funk'shun) excessive activity of an organ or structure; hyperfunction.

supergenua (soo'per-jen'u-al) above the knee.

superimpregnation (soo'per-im'preg-na'shun) [*super-* + *impregnation*] superfetation.

superinduce (soo'per-in-dūs') to induce or bring on in addition to some already existing condition.

superinfection (soo'per-in-fek'shun) a new infection complicating the course of antimicrobial therapy of an existing infectious process, and resulting from invasion by bacteria or fungi resistant to the drug(s) in use. It may occur at the site of the original infection or at a remote site.

superinvolution (soo'per-in'vo-lu'shun) prolonged involution of the uterus after delivery, to a size much smaller than the normal, occurring in nursing mothers. Called also *hyperinvolution*.

superior (soo-pe're-or) [L. "upper"; neut. *superius*] situated above, or directed upward; [NA] a term used in reference to a structure occupying a position nearer the vertex.

superjacent (soo'per-ja'sent) located immediately above; overlying.

superlactation (soo'per-lak-ta'shun) hyperlactation.

superlethal (soo'per-le'thal) more than sufficient to cause death.

supermaxilla (soo'per-mak-sil'ah) the maxilla.

supermedial (soo'per-me'de-al) situated above the middle.

supermoron (soo'per-mo'ron) a person who is only slightly deficient mentally.

supermotility (soo'per-mo-til'i-te) excessive motility.

supernatant (soo'per-na'tant) [*super-* + L. *natare* to swim] 1. situated above or on top of something. 2. the overlying liquid after precipitation of a solid component of a system.

supernate (soo'per-nāt) supernatant, def. 2.

supernormal (soo'per-nor'mal) more than normal.

supernumerary (soo'per-nu'mer-ar'e) [L. *supernumerarius*] in excess of the regular or normal number.

supernutrition (soo'per-nu-trish'un) excessive nutrition.

superoccipital (soo'per-ok-sip'i-tal) supraoccipital.

superolateral (soo'per-o-lat'er-al) above and at the side.

superovulation (soo'per-ov'u-la'shun) extraordinary acceleration of ovulation.

superoxide (soo'per-oks'id) any compound containing the highly reactive oxygen ion O_2^- , produced when molecular oxygen is reduced by (gains) a single electron; it is a common intermediate in numerous biological oxidations.

superparasite (soo'per-par'ah-sīt) 1. a parasite involved in superparasitism. 2. hyperparasite.

superparasitism (soo'per-par'ah-si'tizm) 1. infestation with more parasites of one species than the host can support or bring to maturity. 2. hyperparasitic.

superphosphate (soo'per-fos'fāt) any acid phosphate, especially calcium superphosphate (see *calcium phosphate*, *monobasic*).

super-regeneration (soo'per-re-jen'ē-ra'shun) the development of superfluous tissue, organs, or parts as a result of regeneration.

supersalt (soo'per-sawlt) any salt obtained by reaction with an excess of acid; a persalt or acid salt.

supersaturate (soo'per-sat'u-rāt) to add more of an ingredient than can be held in solution permanently.

superscription (soo'per-skip'shun) [L. *superscriptio*] the sign $\mathbb{R}$ before a prescription; see *prescription*.

supersecretion (soo'per-se-kre'shun) excessive secretion.

supersedent (soo'per-se'dent) a remedy which cures or prevents a disease in a part.

supersensitization (soo'per-sen'si-ti-ta'shun) hypersensitization.

supersoft (soo'per-soft') extremely soft; applied to roentgen rays of extremely long wavelengths, large absorption coefficients, and low penetrating power.

supersonic (soo'per-son'ik) [*super-* + L. *sonus* sound] 1. having a speed greater than the velocity of sound, that is, faster than approximately one-fifth mile per second (or 720 miles an hour) in air. 2. ultrasonic.

supersonics (soo'per-son'iks) the general science relating to phenomena associated with speed greater than the velocity of sound (as in case of aircraft and projectiles traveling faster than sound).

supersphenoid (soo'per-sfe'noid) above the sphenoid bone.

superstructure (soo'per-struk'chur) the overlying or visible portion of an appliance. In dentistry, that portion of an implant denture which is outside the tissues of the mouth.

supertension (soo'per-ten'shun) extreme or excessive tension.

supervascularization (soo'per-vas'ku-lar-i-za'shun) in radiotherapy, the relative increase in vascularity that occurs when tumor cells are destroyed so that the remaining tumor cells are better supplied by the (uninjured) capillary stroma.

supervenosity (soo'per-ve-nos'i-te) an abnormally diminished level of oxygen in venous blood.

supervention (soo'per-ven'shun) the development of some condition in addition to an already existing one.

supervirulent (soo'per-vir'u-lent) excessively virulent.

supervisor (soo'per-viz'er) an individual who oversees the activities of others, such as a nurse who oversees the nursing activities in a specific ward or department of a hospital.

supervitaminosis (soo'per-vi'tah-min-o'sis) hypervitaminosis.

supervoltage (soo'per-vol'tij) very high voltage. In x-ray therapy, it is generally considered to be voltage in the range of 500 kilovolts, as contrasted with orthovoltage (140 to 400 kilovolts) and with megavoltage (greater than 1 megavolt).

supinate (soo'pi-nāt) to assume or place in a supine position.

supination (soo'pi-na'shun) [L. *supinatio*] the act of assuming the supine position, or the state of being supine. Applied to the hand, the act of turning the palm forward (anteriorly) or upward, performed by lateral rotation of the forearm. Applied to the foot, it generally implies movements resulting in raising of the medial margin of the foot, hence of the longitudinal arch. Cf. *pronation*.

Supinators contracted; forearm, hand supinated.
(King and Showers.)

supine (soo'pīn) [L. *supinus* lying on the back, face upward] lying with the face upward; see also *supination*.

suppedania (sup'ē-da'ne-ah) [L. *sub* under + *pes* foot] local applications to the soles of the feet.

supplemental (sup'lē-men'tal) serving as a supplement or addition.

support (sup-port') 1. an appliance which helps maintain a part in position. 2. in dentistry, that location or point at which is placed one of the induced equilibrants to the applied loads.

suppositoria (sup-poz'i-to're-ah) [L.] plural of *suppositorium*.

suppositorium (sup-poz'i-to're-um), pl. *suppositoria* [L.] suppository.

suppository (sup-poz'i-to-re) [L. *suppositorium*] a medicated mass adapted for introduction into the rectal, vaginal, or urethral orifice of the body; suppository bases are solid at room temperature but melt or dissolve at body temperature. Commonly used bases are cocoa butter, glycerinated gelatin, hydrogenated vegetable oils, polyethylene glycols of various molecular weights, and fatty acid esters of polyethylene glycol. **glycerin s.** [NF], a suppository made up of a mixture of glycerin and sodium stearate; used as a rectal evacuant.

suppressant (sū-pres'sant) 1. inducing suppression. 2. an agent that stops secretion, excretion, or normal discharge.

suppression (sū-pres'h'un) [L. *suppressio*] 1. the sudden stoppage of a secretion, excretion, or normal discharge. 2. in psychoanalysis, conscious inhibition as contrasted with repression, which is unconscious. 3. in genetics, the restoration of a lost function by a second mutation either in a gene other than that involved in the primary mutation (*intergenic s.*), or within the same gene (*intragenic s.*).

suppurant (sup'u-rant) [L. *suppurans*] 1. characterized by suppuration. 2. an agent that causes suppuration.

suppurantia (sup'u-ran'she-ah) substances that cause suppuration.

suppuration (sup'u-ra'shun) [L. *sub* under + *puris* pus] the formation of pus; the act of becoming converted into and discharging pus. **alveodental s.**, periodontitis with the formation of pus.

suppurative (sup'u-ra'tiv) producing pus, or associated with suppuration.

supra- [L. "above"] a prefix signifying above or over.

supra-acromial (soo'prah-ah-kro'me-al) situated above or over the acromion.

supra-anal (soo'prah-a'nal) situated above the anus.

supra-auricular (soo'prah-aw-rik'u-lar) situated above the ear.

supra-axillary (soo'prah-ak'si-ler'e) situated above the axilla.

suprabuccal (soo'prah-buk'al) above the buccal region.

suprabulge (soo'prah-bulj) the surfaces of a tooth occlusal to the height of contour, or sloping occlusally. Cf. *infrabulge*.

suprachoroid (soo'prah-ko'roid) situated above or upon the choroid.

suprachoroidea (soo'prah-ko-roi'de-ah) lamina suprachoroidea.

supraciliary (soo'prah-sil'e-er'e) superciliary.

supraclavicular (soo'prah-klah-vik'u-lar) situated above the clavicle.

supraclavicularis (soo'prah-klah-vik'u-la'ris) [L.] supraclavicular.

supraclusion (soo'prah-kloo'zhun) the condition in which the occluding surface of a tooth extends beyond the normal occlusal plane.

supracondylar (soo'prah-kon'dī-lar) situated above a condyle or condyles.

supracondyloid (soo'prah-kon'dī-loid) supracondylar.

supracostal (soo'prah-kos'tal) situated above or upon a rib or ribs.

supracotyloid (soo'prah-kot'i-loid) situated above the acetabulum.

supracranial (soo'prah-kra'ne-al) on the upper surface of the cranium.

supradiaphragmatic (soo'prah-di'ah-frag-mat'ik) situated above the diaphragm.

supraduction (soo'prah-duk'shun) [supra- + L. *ducere* to lead] sursumduction.

supraepicondylar (soo'prah-ep'i-kon'dī-lar) situated above an epicondyle.

supraepitrochlear (soo'prah-ep'i-trok'le-ar) situated above the medial epicondyle of the humerus.

supraglenoid (soo'prah-gle'noid) situated above the glenoid cavity.

supraglottic (soo'prah-glōt'ik) situated above the glottis.

suprahepatic (soo'prah-he-pat'ik) situated above the liver.

suprahyoid (soo'prah-hi'oid) situated above the hyoid bone.

suprainguinal (soo'prah-in'gwī-nal) situated above the groin.

supraintestinal (soo'prah-in-tes'tī-nal) situated above the intestine.

supraliminal (soo'prah-lim'i-nal) above the limen of sensation; more than just perceptible.

supralumbar (soo'prah-lum'bar) situated above the loin.

supramalleolar (soo'prah-mah-le'o-lar) situated above a malleolus.

supramammary (soo'prah-mam'ah-re) situated above a mammary gland.

supramandibular (soo'prah-man-dib'u-lar) situated above the mandible.

supramarginal (soo'prah-mar'ji-nal) situated above a margin.

supramastoid (soo'prah-mas'toid) situated above the mastoid portion of the temporal bone.

supramaxilla (soo'prah-mak-sil'ah) the maxilla.

supramaxillary (soo'prah-mak'si-ler'e) 1. pertaining to the upper jaw. 2. situated above the maxilla.

supramaximal (soo'prah-mak'si-mal) above the maximum.

suprameatal (soo'prah-me-a'tal) situated above a meatus.

supramental (soo'prah-men'tal) [supra- + L. *mentum* chin] situated above the chin.

supramentale (soo/'prah-men-ta'le) point B; see under *point*.
supranasal (soo/'prah-na'zal) above the nose.
supranormal (soo/'prah-nor'mal) greater than normal; present or occurring in excess of normal amounts or values.
supranuclear (soo/'prah-nu'kle-ar) situated or occurring above or on the cortical side or surface of a nucleus; see also under *paralysis*.
supraoccipital (soo/'prah-ok-sip'i-tal) situated above or in the upper portion of the occiput.
supraocclusion (soo/'prah-δ-kloo'zhun) supraclulsion.
supraocular (soo/'prah-ok'u-lar) above the eye.
supraoptimal (soo/'prah-op'ti-mal) greater than optimal.
supraoptimum (soo/'prah-op'ti-mum) a condition or quantity exceeding the optimum.
supraorbital (soo/'prah-or'bi-tal) situated above the orbit.
suprapatellar (soo/'prah-pah-tel'ar) situated above the patella.
suprapelvic (soo/'prah-pel'vik) situated above the pelvis.
suprapharmacologic (soo/'prah-fahr'mah-ko-loj'ik) much greater than the usual therapeutic dose or pharmacologic concentration of a drug.
suprapontine (soo/'prah-pon'tin) situated above or in the upper part of the pons.
suprapubic (soo/'prah-pu'bik) situated or performed above the pubic arch.
suprarenal (soo/'prah-re'nal) [*supra-* + *L. ren* kidney] situated above a kidney; pertaining to the suprarenal (adrenal) gland.
suprarenalectomy (soo/'prah-re'nal-ek'to-me) [*suprarenal* + *Gr. ektomē* excision] adrenalectomy; excision of the adrenal gland.
suprarenalemia (soo/'prah-re'nal-e'me-ah) [*suprarenal* + *Gr. haima* blood + *-ia*] increase of adrenal secretion (epinephrine) in the blood.
suprarenalism (soo/'prah-re'nal-izm) the condition produced by abnormal adrenal activity.
suprarenalopathy (soo/'prah-re'nal-op'ah-the) [*suprarenal* + *Gr. pathos* disease] a disorder due to derangement of the adrenal gland.
suprarenine (soo/'prah-rēn') [*supra* + *L. ren* kidney] an adrenal gland.
Suprarenin (soo/'prah-ren'in) trademark for a preparation of epinephrine.
suprarenogenic (soo/'prah-re'no-jen'ik) originating in the adrenal gland; due to abnormal adrenal activity.
suprarenoma (soo/'prah-re-no'mah) a tumor derived from the adrenal tissue.
suprarenopathy (soo/'prah-re-nop'ah-the) suprarenalopathy.
suprarenotropic (soo/'prah-re'no-trop'ik) having an influence on the adrenal gland; adrenotropic.
suprarenotropism (soo/'prah-re-not'ro-pizm) an endocrine make-up in which the adrenal hormone is dominant.
suprascapular (soo/'prah-skap'u-lar) situated on the upper part of the scapula.
suprascleral (soo/'prah-skle'ral) on the outer surface of the sclera.
suprasellar (soo/'prah-sel'ar) above the sella turcica.
supraseptal (soo/'prah-sep'tal) situated above a septum.
suprasonics (soo/'prah-son'iks) ultrasonics.
supraspinal (soo/'prah-spi'nal) situated upon or above a spine.
supraspinous (soo/'prah-spi'nus) situated above a spine or a spinous process.
suprastapedial (soo/'prah-stah-pe'de-al) situated above the stapes.
suprasternal (soo/'prah-ster'nal) situated above the sternum.
suprasterol (soo/'prah-ster'ol) an isomer of ergosterol.
suprasyllian (soo/'prah-sil've-an) situated above the sylvian fissure.
supratemporal (soo/'prah-tem'po-ral) situated above the temporal bone, fossa, or region.
supratentorial (soo/'prah-ten-to're-al) above the tentorium of the cerebellum.
suprathoracic (soo/'prah-tho-ras'ik) situated above, or cephalad, of the thorax.
supratip (soo/'prah-tip'') above the tip of the nose.
supratonsillar (soo/'prah-ton'si-lar) situated above a tonsil.
supratrochlear (soo/'prah-trok'le-ar) situated above the trochlea.
supratympanic (soo/'prah-tim-pan'ik) above the tympanum.
supraumbilical (soo/'prah-um-bil'i-kal) situated above the umbilicus.
supravaginal (soo/'prah-vaj'i-nal) situated above or outside of a sheath, specifically above the vagina.
supraventricular (soo/'prah-ven-trik'u-lar) situated or occur-

ring above the ventricles, especially in an atrium or atrioventricular node.

supravergence (soo/'prah-ver'jens) [*supra-* + *L. vergere* to turn] sursumvergence.

supraverion (soo/'prah-ver'zhun) 1. the condition of a tooth when it is abnormally elongated from its socket. 2. sursumversion.

supravital (soo/'prah-vi'tal) denoting a staining method in which the dye is added to a medium of cells already removed from the living organism.

supraxiphoid (soo/'prah-zi'foid) above the xiphoid process.

suprofen (soo-pro/'fen) chemical name: α -methyl-4-(2-thienyl-carbonyl)-benzeneacetic acid; a prostaglandin inhibitor, $C_{14}H_{12}O_3S$, having anti-inflammatory activity.

sura (su/'rah) [L.] [NA] the muscular posterior portion of the leg; called also *calf*.

Suragina (su-rah-ji/'nah) a genus of flies of the family Rha-gionidae. *S. longipes* of Mexico is a vicious biter.

sural (su/'ral) pertaining to the calf of the leg.

suralimentation (sur/'al-i-men-ta'shun) superalimentation.

suramin sodium (soo/'rah-min) chemical name: 8,8'-(carbonyl-bis[imino-3,1-phenylenecarbonylimino(4-methyl-3,1-phenylene)-carbonylimino])bis-1,3,5-naphthalenesulfonic acid hexasodium salt. An antitrypanosomal and antifilarial agent, $C_{54}H_{34}N_6Na_6O_{23}S_6$, occurring as a white or slightly pink powder; used in the treatment of African trypanosomiasis, especially that due to *Trypanosoma gambiense*, and of onchocerciasis, administered intravenously.

surdmute (sur/'di-mūt) [L. *surdus* deaf + *mutus* mute] 1. both deaf and mute. 2. a deaf-mute.

surdmutism (sur/'di-mu'tizm) deaf-mutism.

surdmutitas (sur/'di-mu'ti-tas) [L. *surdus* deaf + *mutus* unable to speak + *-tas* state] deaf-mutism.

surditas (sur/'di-tas) [L.] deafness. **s. congen'ita**, congenital deafness.

surdity (sur/'di-te) [L. *surditas*] deafness.

surexcitation (sur/'ek-si-ta'shun) [L. *super* over + *excitation*] excessive excitation.

Surfacaine (sur/'fah-kān) trademark for preparations of cyclo-methycaine.

surface (sur/'fis) the outer part or an external aspect of an object. For names included in official anatomical nomenclature, see under *facies*. **alveolar s. of maxilla**, arcus alveolaris maxillae. **anterior s.**, that surface which is toward the front of the body (on or nearest the ventral aspect) in man (*facies anterior* [NA]), or toward the head in quadrupeds; in dentistry, the proximal surface of any tooth that is closest to the midline of the dental arch. **anterior s. of manubrium and gladiolus**, planum sternale. **anterior s. of sacrum**, facies pelvina ossis sacri. **anterior s. of scapula**, facies costalis scapulae. **anterior s. of stomach**, paries anterior ventriculi. **ap-proximal s.**, proximal s. **articular s.**, that surface of a bone or cartilage which forms a joint with another (*facies articularis* [NA]). **articular s. of acetabulum**, facies lunata acetabuli. **articular s. of sacral bone**, lateral, facies articularis ossis sacri. **axial s.**, any surface parallel with an axis; in dentistry, any surface of a tooth which is parallel with its long axis, including the buccal, distal, labial, lingual, and medial surfaces. **basal s.**, that surface of a denture the detail of which is determined by the impression and which rests upon the supporting tissues of the mouth. **buccal s.**, the surface of a posterior tooth (or of a denture) which faces the cheek (*facies buccalis dentis*). **condyloid s. of tibia**, facies articularis superior tibiae. **contact s.**, the portion of the surface of a tooth which lies in contact with the next tooth in the same row; see also *proximal s.* **diaphragmatic s.**, the surface of an organ of the thoracic or abdominal cavity that is directed toward the diaphragm (*facies diaphragmatica* [NA]). **distal s.**, that surface of a structure which is farther from a point of reference; in dentistry, the proximal or contact surface of a tooth farthest from the midline of the dental arch (*lateral s. or posterior s.*). **dorsal s.**, the aspect of a structure that is toward the back of the body. In man, synonymous with posterior surface (*facies dorsalis*, *facies posterior* [NA]). **extensor s.**, the aspect of a joint of a limb (such as the knee or the elbow) on the side toward which the movement of extension is directed. **facial s.**, vestibular s. **flexor s.**, the aspect of a joint of a limb (such as the knee or the elbow) on the side toward which the movement of flexion is directed. **foundation s.**, basal s. **impression s.**, the surface of a denture that is determined by the impression made of the structures in the mouth. **incisal s.**, the surface of an anterior tooth which functions by incising food during the process of mastication. **inferior s.**, that surface which is lower (directed away from the head, in man) (*facies inferior* [NA]). **infratem-poral s. of maxilla**, facies infratemporalis maxillae. **labial s.**, the surface of an anterior tooth (or of a denture) which faces the lip (*facies labialis dentis*). **lateral s.**, a surface nearer to or directed toward the side of the body (*facies lateralis* [NA]); in dentistry, the proximal surface of an incisor or canine tooth that

is farthest from the midline of the dental arch. **lingual s.**, the surface of a tooth (or of a denture) which faces the tongue (*facies lingualis dentis* [NA]). **masticatory s.**, 1. *facies occlusalis dentis*. 2. *facies masticatoria dentis*. **medial s.**, a surface nearer to or directed toward the midline of the body (*facies medialis* [NA]); mesial s. **mesial s.**, in dentistry, the proximal or contact surface of the incisor or canine teeth that is closest to the midline of the dental arch; medial s. **morsal s's**, the occlusal surfaces of the mandibular and maxillary teeth which make contact in centric occlusion. **occlusal s.**, *facies occlusalis dentis*. **occlusal s., working**, *facies masticatoria dentis*. **polished s.**, one that is smoothed to a fine finish; in dentistry, that portion of the surface of a denture that is usually polished, including the palatal surface, and the buccal and lingual surfaces of the teeth. **posterior s.**, that surface which is toward the back of the body (on or nearest the dorsal aspect) in man (*facies posterior*, *facies dorsalis* [NA]), or toward the tail in quadrupeds; in dentistry, the surface of any tooth that is farthest from the midline of the dental arch. **posterior s. of sacrum**, *facies dorsalis ossis sacri*. **posterior s. of scapula**, *facies dorsalis scapulae*. **posterior s. of stomach**, *paries posterior ventriculi*. **proximal s.**, a surface that is nearer to a point of reference; used in dentistry to designate that surface of a tooth which faces an adjoining tooth in the same dental arch (*facies contactus dentis* [NA]). **proximate s.**, proximal s. **sacropelvic s. of the ilium**, *facies sacropelvina ossis ilii*. **subocclusal s.**, a portion of the surface of a tooth which is directed toward but does not make contact with the occlusal surface of its opposite number in the other jaw. **superior s.**, that surface which is upper or higher (toward the head, in man) (*facies superior* [NA]). **superior articular s. of atlas**, *fovea articularis superior atlantis*. **tentorial s.**, the portion of the cerebral surface that is in contact with the tentorium cerebelli. **ventral s.**, 1. the anterior surface, in man. 2. that surface which is lower, or on or nearest the abdominal aspect in quadrupeds. **vestibular s.**, the surface of a tooth that is directed outward toward the vestibule of the mouth, including the buccal and labial surfaces (*facies vestibularis dentis* [NA]); called also *facial s.*

surfactant (sur-fak'tant) a surface-active agent, such as soap or a synthetic detergent. In pulmonary physiology, a mixture of phospholipids (chiefly lecithin and sphingomyelin) secreted by the alveolar type II cells into the alveoli and respiratory air passages, which reduces the surface tension of pulmonary fluids and thus contributes to the elastic properties of pulmonary tissue.

Surfak (sur'fak) trademark for a preparation of docusate calcium.

surgeon (sur'jun) [L. *chirurgia*; Fr. *chirurgien*] 1. a physician who specializes in surgery. 2. the senior medical officer of a military unit. **acting assistant s.**, contract s. **barber s.**, formerly a barber who was authorized to practice surgery. **contract s.**, in the U.S. Army a physician or dentist engaged for temporary service in the medical department; called also *acting assistant surgeon*. **s. general**, 1. the chief of medical services in one of the armed forces. 2. the chief medical officer of the United States Bureau of Public Health, or of a state public health agency. 3. a member of the medical staff of the British Army. **house s.**, a surgeon resident in a hospital. **post s.**, the surgeon of an established army post.

surgery (sur'jer-e) [L. *chirurgia*, from Gr. *cheir* hand + *ergon* work] 1. that branch of medicine which treats diseases, injuries, and deformities by manual or operative methods. 2. the place in a hospital or doctor's or dentist's office where surgery is performed. 3. in Great Britain, a room or office where a doctor sees and treats patients. 4. the work performed by a surgeon. **abdominal s.**, surgery of the abdominal viscera. **antiseptic s.**, surgery conducted in accordance with antiseptic principles. **aseptic s.**, surgery performed in an environment so free from microorganisms that significant infection or suppuration does not supervene. **aural s.**, the surgical treatment of diseases of the ear. **bench s.**, surgery performed on an organ that has been removed from the body, after which it is reimplanted. **cardiac s.**, surgery of the heart. **cerebral s.**, that which deals with operations upon the brain. **cineplastic s.**, creation of a skin-lined tunnel through a muscle adjacent to the stump of an amputated limb, to permit use of the muscle in operating a prosthesis. **clinical s.**, the study of surgical disease by symptomatic analysis, examination, and observation. **conservative s.**, surgery designed to preserve, or to remove with minimal risk, diseased or injured organs, tissues, or extremities. Cf. *radical s.* **cosmetic s.**, that department of plastic surgery which deals with procedures designed to improve the patient's appearance by plastic restoration, correction, removal of blemishes, etc. **dental s.**, operative dentistry. **dentofacial s.**, that branch of the healing arts which deals with the surgical and adjunctive treatment of diseases, injuries, and defects involving the face and structures of the mouth. **general s.**, that which deals with surgical problems of all kinds. **ionic s.**, surgical ionization and electrolysis. **major s.**, surgery which involves the more important, difficult, and hazardous operations. **minor s.**, surgery restricted to the management of minor problems and injuries. **open heart s.**, surgery that involves incision into one or more chambers of the heart. **operative s.**, the operative or me-

chanical aspect of surgery; that which deals with manual and manipulative methods or procedures. **oral s.**, that branch of the healing arts which deals with the diagnosis and the surgical and adjunctive treatment of diseases, injuries, and defects of the mouth, the jaws, and associated structures. **orthopedic s.**, that branch of surgery which deals with the correction of deformities; orthopedics. **pelvic s.**, the surgery of the pelvis; chiefly in gynecological and obstetrical cases. **physiologic s.**, the indirect treatment of certain disorders by surgically altering normal physiologic functions. **plastic s.**, surgery concerned with the restoration, reconstruction, correction, or improvement in the shape and appearance of body structures that are defective, damaged or misshapened by injury, disease, or growth and development. **radical s.**, surgery designed to extirpate all areas of locally extensive disease and adjacent zones of lymphatic drainage; cf. *conservative s.* **reconstructive s.**, plastic s. **rectal s.**, the surgical treatment of diseases of the rectum. **sonic s.**, the use of focused ultrasonic waves to produce precisely circumscribed alterations within tissues at predetermined sites. **stereotactic s.**, **stereotaxic s.**, a technique for the production of sharply circumscribed lesions in specific groups of cells in deep-seated brain structures after locating the discrete structure by means of three-dimensional coordinates; the lesions are made by such agents as heat, cold, x-ray or ultrasonic radiation, etc. Called also *stereencephalotomy*. **structural s.**, surgery devoted to the correction of morphologic abnormalities. **veterinary s.**, the surgery of domestic animals.

surgibone (sur'ji-bōn) bone and cartilage obtained from bovine embryos and young calves, subjected to special processing to reduce antigenicity; it has been used as an internal bone splint in orthopedic and reconstructive surgery, but is used rarely now because of foreign body reaction.

surgical (sur'je-kal) of, pertaining to, or correctable by surgery.

Surgical (sur'ji-sel) trademark for an absorbable knitted fabric prepared by controlled oxidation of cellulose, used as a hemostatic covering for surgical wounds to control hemorrhage when other conventional methods are impractical or ineffective.

surinamine (su-rin'ah-min) chemical name: paraoxyphenyl-alphamethylamino-propionic acid. A methyl tyrosine, $\text{OH} \cdot \text{C}_6\text{H}_4 \cdot \text{CH}_2 \cdot \text{CH}(\text{COOH}) \cdot \text{NH} \cdot \text{CH}_3$, found in many plants.

Surital (sur'i-tal) trademark for preparations of sodium thiamylal.

surma (sur'mah) a lead sulfide (originally antimony sulfide) traditionally applied to the eyelids in India for cosmetic and medical purposes; it can be a source of lead poisoning.

surra (soor'ah) a disease of horses, camels, and other domestic animals in India, China, northern Africa, and the Philippine Islands, caused by an animal microparasite, the *Trypanosoma evansi*. It is marked by fever, petechia of mucous surfaces, edema, progressive anemia, and emaciation, ending in death. It is transmitted by the bite of gadflies or horseflies (Tabanidae) and probably also by fleas.

surrogate (sur'o-gāt) [L. *surrogatus* substituted] something used as a substitute for another. In psychoanalysis, an imagined person who conceals from conscious recognition the identity of that person, e.g., in dreams a king may represent the dreamer's father (*father s.*).

sursanure (sur-sān'ūr) an old name for a sore healed outwardly, but not inwardly.

sursumduction (sur'sum-duk'shun) [L. *sursum* upward + *ducere* to lead] the turning upward of a part, as of the eyes. Called also *supraduction*.

sursumvergence (sur'sum-ver'jens) [L. *sursum* upward + *vergere* to turn] an upward movement, especially of the eyes. Called also *supravergence*.

sursumversion (sur'sum-ver'zhun) [L. *sursum* upward + *vertere* to turn] an act of turning or directing upward; especially the simultaneous and equal upward turning of both eyes. Called also *supraversion*.

suruçucu (soo'roo-soo'koo) the bushmaster, *Lachesis muta*, a venomous snake of South America.

surveillance (sur-vāl'ans) in immunological theory, the constant monitoring of the body tissues by the immune (T-lymphocyte) system for abnormal cells.

susceptibility (sus-sep'ti-bil'i-te) the state of being readily affected or acted upon. In immunology, the condition may be acquired, familial, individual, inherited, racial, specific, etc., the same as is immunity. **differential s.**, nonhomogeneity in response by the various regions of an embryo when subjected to a diffusely applied injurious agent.

susceptible (sus-sep'ti-b'l) 1. capable of impression; readily acted on. 2. an individual who is not known to have become immune to an infectious disease by either natural or artificial means.

suscitate (sus'i-tāt) to arouse to greater activity.

suscitation (sus'i-ta'shun) [L. *suscitatio*] an arousal or excitation.

suspensopia (sus'pen-op'se-ah) [L. *suspendere* to cause to waver + Gr. *opsis* vision + *-ia*] a condition of frequently occurring

momentary suppression of attention in the visual cortex to impulses arising in the central retinal areas.

suspensiometer (sus-pen/'se-om/'s-ter) nephelometer.

suspension (sus-pen/'shun) [L. *suspensio*] 1. a condition of temporary cessation, as of animation, of pain, or of any vital process. 2. treatment, chiefly of spinal disorders, by suspending the patient by the chin and the shoulders. 3. a preparation of a finely divided drug intended to be incorporated (suspended) in some suitable liquid vehicle before it is used, or already incorporated in such a vehicle. **alumina and magnesia oral s.** [USP], a mixture of variable amounts of aluminum oxide, in the form of aluminum hydroxide and hydrated aluminum oxide, and magnesium hydroxide, which contains, on a weight/weight basis, the equivalent of 3.6 to 4 per cent aluminum oxide, 1.7 to 2.2 per cent magnesium hydroxide, and 5.3 to 6.2 per cent combined aluminum oxide and magnesium hydroxide; used as an antacid. **ampicillin for oral s.** [USP], a suspension containing 90 to 120 per cent of the labeled amount of ampicillin (anhydrous or as the trihydrate); used as an antibacterial against gram-negative bacteria. **betamethasone sodium phosphate and betamethasone acetate s., sterile** [USP], a sterile preparation of betamethasone sodium phosphate in solution and betamethasone acetate in suspension in water for injection, containing betamethasone sodium phosphate equivalent to 90 to 115 per cent of the labeled amount of betamethasone and 90 to 115 per cent of the labeled amount of betamethasone acetate; used as an anti-inflammatory glucocorticoid. **cephalic s.**, suspension of a patient by the head in order to make extension of the vertebral column. **chloramphenicol palmitate oral s.** [USP], a suspension containing 90 to 120 per cent of the labeled amount of chloramphenicol palmitate; used as an antibacterial and antirickettsial. **chlorothiazide oral s.** [USP], a suspension containing 90 to 110 per cent of the labeled amount of chlorothiazide; used as a diuretic and antihypertensive. **cholestyramine for oral s.** [USP], a mixture of cholestyramine resin, containing 85–115 per cent of the labeled amount of dried cholestyramine resin; used as an ion-exchange resin for bile salts for the relief of pruritus associated with cholestasis occurring in partial biliary obstruction and as adjunctive therapy to diet in the management of elevated cholesterol due to primary type II hyperlipoproteinemia (patients with pure hypercholesterolemia). **colistin sulfate for oral s.** [USP], a preparation containing colistin sulfate equivalent to 90–120 per cent of the labeled amount of colistin activity; used in the treatment of *Shigella* and intestinal *Pseudomonas* infections, and infant diarrhea due to *Escherichia coli* and susceptible gram-negative organisms. **colloid s.**, a suspension in which the suspended particles are very small. **corticotropin zinc hydroxide s., sterile** [USP], a sterile suspension of corticotropin with prolonged action, adsorbed on zinc hydroxide; administered intramuscularly for diagnostic testing of adrenocortical function and to stimulate adrenal cortex activity. **cortisone acetate s., sterile** [USP], a sterile suspension of cortisone acetate in a suitable aqueous medium, containing 90 to 110 per cent of the labeled amount of total steroids, calculated as cortisone acetate; administered intramuscularly as an anti-inflammatory adrenocortical steroid. **cortisone acetate ophthalmic s.** [USP], a sterile suspension of cortisone acetate in an aqueous medium containing a suitable antimicrobial agent and 90 to 110 per cent of the labeled amount of total steroids, calculated as cortisone acetate; applied topically to the conjunctiva as an anti-inflammatory adrenocortical steroid. **demeclocycline oral s.** [USP], a suspension containing demeclocycline equivalent to not less than 85 per cent of the labeled amount of demeclocycline hydrochloride; used as an antibacterial. **desoxycorticosterone pivalate s., sterile** [USP], a sterile suspension containing 90 to 110 per cent of the labeled amount of desoxycorticosterone pivalate in an aqueous medium; used as a mineralocorticoid for replacement therapy in adrenocortical insufficiency in Addison's disease and in the treatment of salt-losing adrenogenital syndrome, administered intramuscularly. **dicloxacillin sodium for oral s.** [USP], a dry mixture containing the equivalent of 90–120 per cent of the labeled amount of dicloxacillin; used as an antibacterial, primarily in the treatment of penicillinase-resistant staphylococci. **diphenylhydantoin oral s.**, phenytoin oral s. **epinephrine oil s., sterile** [USP], a sterile suspension of epinephrine in a suitable vegetable oil, containing, in each milliliter, 1.8 to 2.4 mg. of epinephrine; an adrenergic as a bronchodilator. **estradiol s., sterile** [USP], a sterile suspension containing 90 to 110 per cent of the labeled amount of estradiol in water for injection; used as an estrogen. **hydrocortisone acetate s., sterile** [USP], a sterile suspension containing 90–100 per cent of total steroids, calculated as hydrocortisone acetate, in a suitable aqueous medium; used in various conditions responsive to the anti-inflammatory action of glucocorticoids, administered by intra-articular injection or soft-tissue infiltration. **hydrocortisone acetate ophthalmic s.** [USP], a sterile suspension of hydrocortisone acetate in an aqueous medium containing a suitable antimicrobial agent and 90 to 110 per cent of the labeled amount of total steroids, calculated as hydrocortisone acetate; applied topically to the conjunctiva as an anti-inflammatory adrenocortical hormone. **hydrocortisone cypionate oral s.** [NF], a preparation containing hydrocorti-

sone cypionate equivalent to 90–110 per cent of the labeled amount of hydrocortisone; used in the treatment of various conditions responsive to the anti-inflammatory action of glucocorticoids. **hydroxyzine pamoate oral s.** [USP], a suspension containing hydroxyzine pamoate equivalent to 90 to 110 per cent of the labeled amount of hydroxyzine hydrochloride; used as a minor tranquilizer. **insulin zinc s.** [USP], a sterile suspension of insulin modified by the addition of zinc chloride, so that the solid phase consists of approximately 7 parts of crystalline insulin and 3 parts of amorphous insulin, containing 40, 80, or 100 USP insulin units per ml., and having an intermediate action; administered subcutaneously in the treatment of diabetes mellitus. Called also *insulin lente*. **insulin zinc s., extended** [USP], a sterile suspension of insulin modified by the addition of zinc chloride, so that the solid phase is predominantly crystalline insulin, containing 40, 80, or 100 USP insulin units per ml., and having a prolonged action; administered subcutaneously in the treatment of diabetes mellitus. Called also *ultralente insulin*. **insulin zinc s., prompt** [USP], a sterile suspension of insulin modified by the addition of zinc chloride, so that the solid phase is amorphous, containing 40, 80, or 100 USP insulin units per ml., and having a rapid action; administered subcutaneously in the treatment of diabetes mellitus. Called also *semilente insulin*. **ipodate calcium for oral s.** [USP], a dry mixture of calcium ipodate and one or more suitable suspending, dispersing, or flavoring agents; used as a radiopaque medium in cholecystography. **isophane insulin s.** [USP], a sterile suspension made from zinc-insulin crystals modified by the addition of protamine in buffered water for injection, containing 40, 80, or 100 USP insulin units per ml., and having an intermediate action; administered subcutaneously in the treatment of diabetes mellitus. Called also *NPH insulin*. **levopropoxyphene napsylate oral s.** [USP], a preparation containing an amount of levopropoxyphene napsylate equivalent to 90–110 per cent of the labeled amount of levopropoxyphene; used as an antitussive. **magaldrate oral s.** [USP], a suspension containing the equivalent of 2.5 to 3.0 per cent (w/w) of magnesium oxide and the equivalent of 1.5 to 2.0 per cent (w/w) of aluminum oxide; used as an antacid. **magnesia and alumina oral s.** [USP], a mixture containing magnesium hydroxide, and variable amounts of aluminum oxide in the form of aluminum hydroxide and hydrated aluminum oxide; used as an antacid. **medroxyprogesterone acetate s., sterile** [USP], a sterile suspension in a suitable aqueous medium containing 90 to 110 per cent of the labeled amount of medroxyprogesterone acetate; used as a progestin in the treatment of endometriosis, uterine cancer, habitual and threatened abortion, and menstrual disorders, administered intramuscularly. **medrysone ophthalmic s.** [USP], a sterile suspension containing 90–115 per cent of the labeled amount of medrysone in a buffered aqueous medium; used as a topical anti-inflammatory in allergic and inflammatory eye conditions, such as episcleritis, allergic and vernal conjunctivitis, and epinephrine sensitivity. **meprobamate oral s.** [USP], a suspension containing 95 to 110 per cent of the labeled amount of meprobamate; used as a sedative. **methacycline hydrochloride oral s.** [USP], a suspension containing 90 to 125 per cent of the labeled amount of methacycline base and one or more suitable and harmless buffers, dispersants, colorings, flavorings, and preservatives; used as an antibacterial. **methenamine mandelate oral s.** [USP], a suspension of methenamine mandelate in vegetable oil, containing 90 to 110 per cent of the labeled amount of methenamine mandelate; used as a urinary antibacterial. **methylprednisolone acetate s., sterile** [USP], a sterile solution containing 90 to 110 per cent of the labeled amount of methylprednisolone acetate in a suitable aqueous medium; used as an anti-inflammatory glucocorticoid. **nitrofurantoin oral s.** [USP], a suspension of nitrofurantoin in a suitable aqueous vehicle, containing, in each 100 ml., 460 to 540 mg. of nitrofurantoin; used as a urinary antibacterial. **novobiocin calcium oral s.**, a suspension of novobiocin calcium in an aqueous vehicle, containing, in each 100 ml., novobiocin calcium equivalent to 2.25–3 gm. of novobiocin (as the free acid), one or more suitable suspending agents, colors, flavors, and preservatives; used as an antibacterial, chiefly in the treatment of infections in children due to staphylococci and other gram-positive organisms resistant to other antibiotics. **oxytetracycline calcium oral s.** [NF], a suspension containing 90–120 per cent of the labeled amount of oxytetracycline calcium in an aqueous vehicle containing one or more suitable suspending agents, flavors, colors, and preservatives; used as an antibacterial in various tetracycline-responsive conditions. **penicillin G benzathine s., sterile** [USP], a sterile suspension of penicillin G benzathine in water for injection with one or more suitable dispersing agents, buffers, and antimicrobial agents; used as an antibacterial in the treatment of infections due to penicillin G-susceptible organisms, administered intramuscularly. **penicillin G procaine s., sterile** [USP], a sterile suspension of procaine penicillin G in water for injection and one or more suitable suspending or dispersing agents and buffers; administered intramuscularly as an antibacterial in the treatment of infections due to penicillin G-susceptible organisms. **penicillin G procaine with aluminum stearate s., sterile** [USP], a sterile suspension of procaine penicillin G in refined peanut oil

or sesame oil that has been gelled with 2 per cent of aluminum monostearate; used as an antibacterial in penicillin G-susceptible organisms, administered intramuscularly. **penicillin V benzathine oral s.** [USP], a preparation containing penicillin V benzathine equivalent to not less than 85 per cent of the labeled amount of penicillin V; used as an antibacterial in infections due to penicillin-susceptible organisms. **penicillin V hydrabamine oral s.** [USP], a preparation containing penicillin V hydrabamine equivalent to 90–125 per cent of the labeled amount of penicillin V; used as an antibacterial in the treatment of infections due to penicillin-susceptible organisms. **phensuximide oral s.** [USP], a suspension containing 90 to 110 per cent of the labeled amount of phensuximide; used as an anticonvulsant. **phenytoin oral s.** [USP], a suspension containing 90–110 per cent of the labeled amount of phenytoin in a suitable medium; used as an anticonvulsant in the treatment of all forms of epilepsy except petit mal. Called also *diphenylhydantoin oral s.* **prednisolone acetate s., sterile** [USP], a sterile suspension of prednisolone acetate in a suitable aqueous medium, containing 90 to 110 per cent of the labeled amount of prednisolone acetate; used as an anti-inflammatory in the treatment of various glucocorticoid-responsive conditions, administered intra-articularly or intramuscularly. **primidone oral s.** [USP], a suspension of primidone in a suitable aqueous vehicle, containing, in each 100 ml., 4.5 to 5.5 gm. of primidone; used as an anticonvulsant. **progesterone s., sterile** [USP], a sterile suspension containing 93 to 107 per cent of the labeled amount of progesterone in water for injection; used as a progestin in the treatment of functional uterine bleeding, menstrual disorders, and threatened abortion, administered intramuscularly. **propoxyphene napsylate oral s.** [USP], a preparation containing 90–110 per cent of the labeled amount of propoxyphene napsylate; used as an analgesic. **propylidone s., sterile** [USP], a sterile suspension of propylidone in water for injection, containing 47.5 to 52.5 per cent of propylidone and a suitable suspending or dispersing agent; used as a radiopaque medium in bronchography. **propylidone oil s., sterile**, a sterile suspension of propylidone in peanut oil, containing 57 to 63 per cent of propylidone; used as a radiopaque medium in bronchography. **protamine zinc insulin s.** [USP], a sterile suspension of insulin modified by the addition of zinc chloride and protamine, having a prolonged action; used as a hypoglycemic. Abbreviated PZI. **pyrantel pamoate oral s.** [USP], a suspension containing 90–110 per cent of the labeled amount of pyrantel in a suitable aqueous vehicle; used as an anthelmintic in the treatment of ascariasis and enterobiasis. **pyrvinium pamoate oral s.** [USP], a suspension containing, in each 100 ml., an amount of pyrvinium pamoate equivalent to 0.90 to 1.10 gm. of pyrvinium; used as an anthelmintic in the treatment of enterobiasis. **salicylamide oral s.**, a suspension containing 93 to 107 per cent of the labeled amount of salicylamide; used as an analgesic. **selenium sulfide detergent s.**, an aqueous, stabilized suspension of selenium sulfide containing a suitable dispersing agent, buffer, and detergent, and containing between 90 and 110 per cent selenium sulfide; used as an antiseborrheic shampoo to control seborrheic dermatitis and dandruff. **simethicone oral s.** [USP], a suspension containing 90–110 per cent of the labeled amount of dimethicone; used as an antifatulent. **sitosterols s.**, a suspension containing 90 to 110 per cent of the labeled amount of sitosterols; used as an anticholesterolemic. **sulfacetamide, sulfadiazine, and sulfamerazine oral s.**, a suspension containing 90 to 110 per cent of the labeled amounts of sulfacetamide, sulfadiazine, and sulfamerazine; used as an antibacterial. **sulfadimethoxine oral s.** [USP], a suspension containing 93 to 107 per cent of the labeled amount of sulfadimethoxine; used as an antibacterial. **sulfamethizole oral s.** [USP], a buffered aqueous suspension containing 90 to 110 per cent of the labeled amount of sulfamethizole; used as an antibacterial. **sulfamethoxazole oral s.** [USP], a suspension containing 95 to 110 per cent of the labeled amount of sulfamethoxazole; used as an antibacterial. **sulfisoxazole acetyl oral s.** [USP], a suspension containing sulfisoxazole acetyl equivalent to 93 to 107 per cent of the labeled amount of sulfisoxazole; used as an antibacterial in a wide variety of infections due to sulfonamide-susceptible organisms, usually given to infants and children. **testolactone s., sterile** [USP], a suspension containing 90–110 per cent of the labeled amount of testolactone in a suitable aqueous medium; used as an antineoplastic agent for adjunctive therapy in the palliative treatment of advanced or disseminated breast cancer in postmenopausal women; administered orally or by intramuscular injection. **testosterone s., sterile** [USP], a sterile suspension containing 90 to 110 per cent of the labeled amount of testosterone in an aqueous medium; used as an androgen chiefly in the treatment of male hypogonadism, cryptorchidism, and the symptoms of the male climacteric; administered intramuscularly. **tetracycline oral s.** [USP], tetracycline suspended in one or more suitable suspending and dispersing agents, containing 90 to 120 per cent of the labeled amount of tetracycline hydrochloride; used as an antiamebic, antibacterial, and antirickettsial. **thiabendazole oral s.** [USP], a suspension containing 90 to 110 per cent of the labeled amount of thiabendazole; used as an anthelmintic in the treatment of pinworm, threadworm, whipworm, roundworm,

and hookworm infections, and in cutaneous larva migrans. **triamcinolone acetate s., sterile** [USP], a sterile suspension of triamcinolone acetate in a suitable aqueous medium, containing 90 to 115 per cent of the labeled amount of triamcinolone acetate; administered intra-articularly or intramuscularly as an anti-inflammatory adrenocortical steroid. **triamcinolone diacetate s., sterile** [USP], a sterile suspension containing 90 to 115 per cent of the labeled amount of triamcinolone diacetate in a suitable aqueous medium; used as an anti-inflammatory glucocorticoid. **triamcinolone hexacetonide s., sterile** [USP], a sterile suspension of triamcinolone hexacetonide in a suitable aqueous medium, containing 90–115 per cent of the labeled amount of triamcinolone hexacetonide; administered by intra-articular, intralesional, and sublesional injection in conditions responsive to the anti-inflammatory action of glucocorticoids. **trisulfapyrimidines oral s.** [USP], a suspension of sulfadiazine, sulfamerazine, and sulfamethazine, used as an antibacterial agent. **troleandomycin oral s.**, a suspension containing 90 to 120 per cent of the labeled amount of troleandomycin and one or more suitable suspending and dispersing agents, colors, flavors, buffers, and preservatives in an aqueous vehicle; used as an antibacterial, chiefly in the treatment of infections due to staphylococci and other gram-positive bacteria resistant to other systemic antibiotics.

suspensoid (sus-pen'soid) suspension colloid.

suspensorius (sus'pen-so're-us) [L.] suspensory.

suspensory (sus-pen'so-re) [L. *suspensorius*] 1. serving to hold up a part. 2. a ligament, bone, muscle, sling, or bandage which serves to hold up a part.

Sus-Phrine (sus'frin) trademark for a preparation of epinephrine.

suspirious (sus-pi're-us) breathing heavily; sighing.

sustentacular (sus'ten-tak'u-lar) [L. *sustentare* to support] pertaining to a sustentaculum; serving to support; see *supporting cells*, under *cell*, and see under *tissue*.

sustentaculum (sus'ten-tak'u-lum), pl. *sustentacula* [L.] a support. **s. lie'nis**, ligamentum phrenicolenale. **s. ta'li** [NA], **s. of talus**, a process of the calcaneus which supports the talus.

susto (soos'to) a mental disturbance seen chiefly in South America, consisting of panic reactions due to fear of the evil eye, black magic, and spirit possession.

susurrus (su-sur'us) [L.] murmur.

sutika (su'tik-ah) a disease of pregnant women of Bengal, marked by digestive troubles and fever during pregnancy, with progressive pernicious anemia occurring after delivery.

sutilains (soo'ti-lāns) [USP] a substance containing proteolytic enzymes derived from *Bacillus subtilis*, occurring as a cream-colored powder; used as a proteolytic agent for débridement of wounds.

Sutton's disease (sut'onz) [Richard L. Sutton, Jr., American dermatologist, born 1908] periadenitis mucosa necrotica recurrens.

Sutton's nevus (disease) (sut'onz) [Richard Lightburn Sutton, American dermatologist, 1878–1952] halo nevus.

sutura (su-tu'rah), pl. *suturæ* [L. "a seam"] [NA] a type of fibrous joint in which the apposed bony surfaces are so closely united by a very thin layer of fibrous connective tissue that no movement can occur; found only in the skull. Called also *suture*, *sutura vera*, and *true suture*. **s. corona'lis** [NA], coronal suture: the line of junction of the frontal bone with the two parietal bones. **suturæ cra'nii** [NA], cranial sutures: the sutures between the various bones of the skull, named generally for the specific components participating in their formation. **s. den-ta'ta**, **s. serrata**. **s. ethmoidomaxilla'ris** [NA], ethmoidomaxillary suture: the line of junction between the orbital lamina of the ethmoid bone and the orbital surface of the maxilla. **s. fronta'lis** [NA], frontal suture: the usually transient line of junction between the right and left halves of the frontal bone. The inferior part often persists in the adult; if the entire suture persists, it is called the metopic suture. **s. frontoethmoida'lis** [NA], frontoethmoidal suture: the line of junction in the anterior cranial fossa between the frontal bone and the cribriform plate of the ethmoid bone. **s. frontolacrima'lis** [NA], frontolacrimal suture: the line of junction between the upper edge of the lacrimal bone and the orbital part of the frontal bone. **s. frontomaxilla'ris** [NA], frontomaxillary suture: the line of junction between the frontal bone and the frontal process of the maxilla. **s. frontonasa'lis** [NA], frontonasal suture: the line of junction between the frontal and the two nasal bones; called also *s. nasofrontalis* or *nasofrontal suture*. **s. frontozygomat'ica** [NA], frontozygomatic suture: the line of junction between the zygomatic bone and the zygomatic process of the frontal bone; called also *s. zygomaticofrontalis*, or *zygomaticofrontal suture*. **s. harmo'nia**, **s. plana**. **s. incisi'va** [NA], incisive suture: an indistinct suture sometimes seen extending laterally from the incisive fossa to the space between the canine tooth and the lateral incisor, indicating the line of fusion between the premaxilla and the maxilla. **s. infraorbital'lis** [NA], infraorbital suture: a suture sometimes seen extending from the infraorbital foramen to

the infraorbital groove. **s. intermaxilla'ris** [NA], intermaxillary suture: the line of junction between the maxillary bones of either side, just below the anterior nasal spine. **s. internasa'lis** [NA], internasal suture: the line of junction between the two nasal bones. **s. lacrimoconcha'lis** [NA], lacrimoconchal suture: the line of junction between the lacrimal bone and the inferior nasal concha. **s. lacrimomaxilla'ris** [NA], lacrimomaxillary suture: a suture on the inner wall of the orbit, between the lacrimal bone and the maxilla. **s. lambdoi'dea** [NA], lambdoid suture: the line of junction between the occipital and parietal bones, shaped like the Greek letter lambda. **s. limbo'sa**, a type of suture in which there is interlocking of the beveled surfaces the bones. **s. nasofronta'lis**, s. frontonasalis. **s. nasomaxilla'ris** [NA], nasomaxillary suture: the line of junction between the lateral edge of the nasal bone and the frontal process of the maxilla. **s. no'tha**, a type of suture formed by apposition of the roughened surfaces of the two participating bones. **s. occipitomastoi'dea** [NA], occipitomastoid suture: an extension of the lambdoid suture between the occipital bone and the posterior edge of the mastoid portion of the temporal bone. **s. palati'na media'na** [NA], median palatine suture: the line of junction between the horizontal part of the palatine bones of either side. **s. palati'na transversa** [NA], transverse palatine suture, the line of junction between the palatine processes of the maxillae and the horizontal parts of the palatine bones. **s. palatoethmoida'lis** [NA], palatoethmoidal suture: the line of junction between the orbital process of the palatine bone and the orbital lamina of the ethmoid bone. **s. palatomaxilla'ris** [NA], palatomaxillary suture: the suture in the floor of the orbit, between the orbital processes of the palatine bone and the orbital portion of the maxilla. **s. parietomastoi'dea** [NA], parietomastoid suture: the line of junction between the posterior inferior angle of the parietal bone and the mastoid process of the temporal bone. **s. pla'na** [NA], flat suture: a type of suture in which there is simple apposition of the contiguous surfaces, with no interlocking of the edges of the participating bones. **s. sag'ittalis** [NA], sagittal suture: the line of junction between the two parietal bones. **s. serra'ta** [NA], serrated suture: a type of suture in which the participating bones are united by interlocking processes resembling the teeth of a saw. **s. sphenoethmoida'lis** [NA], sphenoethmoidal suture: the line of junction between the body of the sphenoid bone and the orbital lamina of the ethmoid bone. **s. sphenofronta'lis** [NA], sphenofrontal suture: a long suture joining the orbital part of the frontal bone to the greater and lesser wings of the sphenoid bone on either side of the skull. **s. sphenomaxilla'ris** [NA], sphenomaxillary suture: a suture occasionally seen between the pterygoid process of the sphenoid bone and the maxilla. **s. sphenoorbi'talis**, sphenoorbital suture: the line of junction between the orbital process of the palatine bone and the body of the sphenoid bone. **s. sphenoparieta'lis** [NA], sphenoparietal suture: the line of junction between the great wing of the sphenoid bone and the parietal bone. **s. sphenosquamo'sa** [NA], sphenosquamous suture: the line of junction between the great wing of the sphenoid bone and the squamous part of the temporal bone. **s. sphenozygomat'ica** [NA], sphenozygomatic suture: the line of junction between the great wing of the sphenoid bone and the zygomatic bone. **s. squamo'sa** [NA], squamous suture: a type of suture formed by overlapping of the broad beveled edges of the participating bones. **s. squamo'sa cra'nii** [NA], squamous suture of cranium: the suture between the squamous part of the temporal bone and the parietal bone. **s. squamosomastoi'dea** [NA], squamosomastoid suture: a suture existing early in life between the squamous and mastoid portions of the temporal bone. **s. temporozygomat'ica** [NA], temporozygomatic suture: the line of junction between the zygomatic process of the temporal bone and the temporal process of the zygomatic bone; called also *s. zygomaticotemporalis*. **s. ve'ra**, a true suture, in which no movement of the participating bones can occur. See *sutura*. **s. zygomaticofronta'lis**, s. frontozygomatica. **s. zygomaticomaxilla'ris** [NA], zygomaticomaxillary suture: the line of junction between the zygomatic bone and the zygomatic process of the maxilla. **s. zygomaticotempora'lis**, s. temporozygomatica.

suturae (su-tu're) plural of *sutura*.

sutural (su'tu-ral) of or pertaining to a suture.

suturation (su'tu-ra'shun) the act or process of suturing.

suture (su'chur) [L. *sutura* a seam] 1. a type of fibrous joint in which the opposed surfaces are closely united, as in the skull; see *sutura*. 2. material used in closing a surgical or traumatic wound with stitches. 3. a stitch or series of stitches made to secure apposition of the edges of a surgical or accidental wound; used also as a verb to indicate the application of such stitches. 4. the act or process of uniting a wound by stitches. **absorbable s.**, a strand of material used for closing wounds which is subsequently dissolved by the tissue fluids. **absorbable surgical s.** [USP], a sterile strand prepared from collagen derived from healthy animals, which is available in various diameters and tensile strengths. It is capable of being absorbed by living mammalian tissue, but may be treated to modify its resistance to absorption. It may be impregnated with a suitable antimicrobial

agent, and may be colored by a color additive approved by the federal Food and Drug Administration. **Albert's s.**, a form of Czerny suture in which the first row of stitches is passed through the entire thickness of the intestine. **Appolito's s.**, Gély's s. **apposition s.**, a superficial suture used for the exact approximation of the cutaneous edges of a wound. **approximation s.**, a deep suture for securing apposition of the deep tissues of a wound. **arcuate s.**, sutura coronalis. **atraumatic s.**, a suture fused into the end of a small eyeless needle. **basilar s.**, fissura sphenoccipitalis. **bastard s.**, false s. **Bell's s.**, a form of lock-stitch in which the needle is passed from within outward alternately on the two edges of the wound. **biparietal s.**, sutura sagittalis. **bolster s.**, a suture the ends of which are tied over a tiny roll of gauze or a piece of rubber tubing, in order to lessen the pressure on the skin. **bony s.**, sutura. **bregmatomastoid s.**, sutura parietomastoidea. **buried s.**, one that is placed deep in the tissues and concealed by the skin. **button s.**, one in which the stitch is passed through a button-like disk to prevent the suture material from cutting through the skin. **catgut s.**, see *catgut*. **chain s.**, a continuous suture in which each loop of thread is caught by the next adjacent loop. **circular s.**, one that is applied to the entire circumference of a hollow viscus to secure closure, or to a portion of a visceral wall to achieve inversion of the enclosed circular area. **coaptation s.**, apposition s. **cobblers' s.**, one made with suture material threaded through a needle at each end. **Connell s.**, a U-shaped continuous suture used in intestinal anastomosis, the stitches being placed parallel to and about 4 mm. from the edge of the wound, and passing through all the layers of the bowel. **continuous s.**, one in which a continuous, uninterrupted length of material is used to approximate the cut edges of one or more layers of tissues. **continuous running s.**, a suture with a knot at only the beginning and end of a sutured incision. **coronal s.**, sutura coronalis. **cranial s's**, the lines of junction between the bones of the skull; see *suturae cranii* [NA]. **Cushing s.**, a continuous inverting suture used for closing the seromuscular layers in surgery of the gastrointestinal tract. **cutaneous s. of palate**, raphe palati. **Czerny's s.**, 1. an intestinal suture in which the thread is passed through the mucous membrane alone. 2. a method of uniting a ruptured tendon by splitting one of the ends and suturing the other end into the slit. **Czerny-Lembert s.**, a combination of Czerny and Lembert sutures in circular enterorrhaphy. **dentate s.**, sutura serrata. **double-button s.**, a form of stitch in which the suture material is passed deep across the edges of the wound, between two buttons placed on the surface of the skin, one on either side of the suture line. **Dupuytren's s.**, a continuous Lembert suture. **ethmoidomaxillary s.**, sutura ethmoidomaxillaris. **everting s.**, a method by which the approximated edges of a wound are everted; used in early blood vessel surgery to achieve apposition of the tunica intima of the divided segments. **everting interrupted s.**, an interrupted suture done by inserting the needle into the skin close to the incision line and diverging from the edge of the wound in order to encircle a larger amount of tissue in the lower depths of the skin than at the periphery. **false s.**, a line of junction between apposed surfaces, without fibrous union of the bones. **figure-of-eight s.**, one in which the thread follows the contours of the figure 8. **flat s.**, sutura plana. **frontal s.**, sutura frontalis. **frontoethmoidal s.**, sutura frontoethmoidalis. **frontolacrimal s.**, sutura frontolacrimalis. **frontomalar s.**, sutura frontozygomatica. **frontomaxillary s.**, sutura frontomaxillaris. **frontonasal s.**, sutura frontonasalis. **frontoparietal s.**, sutura coronalis. **frontosphenoid s.**, sutura sphenofrontalis. **frontozygomatic s.**, sutura frontozygomatica. **furrier's s.**, a method of stitching intestinal wounds by piercing first one margin of the incision and then the other from within outward; overlying sutures are placed through the seromuscular layers to reinforce the closure and prevent leakage. **Gaillard-Arlt s.**, a suture used in correction of entropion. **Gély's s.**, a continuous suture for repair of intestinal wounds, made by a thread with a needle at each end, and consisting of a series of cross-stitches closing the wound. **glovers' s.**, lock-stitch s. **s. of Goethe**, sutura incisiva. **Gussenbauer's s.**, a figure-of-eight suture used in repairing a rent of the intestine. **Halsted s.**, a modification of the Lembert suture, consisting of a stitch parallel to the wound on one side, with the two free ends of the material emerging on the other side, where they are tied. **harelip s.**, a figure-of-eight suture used in the correction of harelip. **hemostatic s's**, sutures used to control oozing of blood from raw areas. **incisive s.**, sutura incisiva. **infraorbital s.**, sutura infraorbitalis. **interdermal buried s.**, a suture with the knot placed downward in the lower layers of dermis. **interendognathic s.**, sutura palatina mediana. **intermaxillary s.**, sutura intermaxillaris. **internasal s.**, sutura internasalis. **interparietal s.**, sutura sagittalis. **interrupted s.**, a type of suture in which each stitch is made with a separate piece of material. **intradermal mattress s.**, a mattress suture below the level of the skin. **intradermic s.**, a suture applied parallel with the edges of the wound, but within the layers of the skin, usually a continuous stitch. **inverting s.**, a seromuscular stitch used in intestinal anastomosis to appose and invert the serosal surfaces of

the two segments, as in the Cushing or Lambert suture. **jugal s.**, sutura sagittalis. **lacrinoconchal s.**, sutura lacrinoconchalis. **lacrinoethmoidal s.**, the vertical line of junction, on the medial wall of the orbit, between the lacrimal bone and the orbital plate of the ethmoid bone. **lacrino-maxillary s.**, sutura lacrino-maxillaris. **lacrino-turbinal s.**, sutura lacrinoconchalis. **lambdoid s.**, sutura lambdoidea. **Le Dentu's s.**, for a divided tendon: two stitches are passed on each side, right and left, and are tied in front; a third is taken from right to left above and below the cut, and is tied on one side. **Le Fort's s.**, for a divided tendon: a single loop is passed above the cut, entering at one side, coming out and going in in front; it is then passed below the cut at each side, coming out in front, and is there tied. **Lembert s.**, an inverting suture commonly used in gastrointestinal surgery: the needle is inserted about 2.5 mm. lateral to the incision, through the serous and muscular tunics but not the submucosa, and brought out near the edge of the incision, then inserted near the edge on the opposite side and brought out at the more distant point, without having entered the lumen of the gut. It may be either interrupted or continuous. **lock-stitch s.**, a continuous hemostatic suture used in intestinal surgery: the needle is passed through all layers of the bowel and the loop of suture material is made to fall over the point of emergence of the needle, which comes up through the loop, forming a self-locking stitch when the strand is pulled taut. **longitudinal s.**, sutura sagittalis. **longitudinal s. of palate**, sutura palatina mediana. **loop s.**, interrupted s. **malomaxillary s.**, sutura zygomaticomaxillaris. **mamillary s.**, mastoid s., sutura occipitomastoidea. **mattress s.**, horizontal, a method in which the stitches are made parallel with the edges of the wound, the suture material crossing deeply from one side to the other. **mattress s.**, right-angle, mattress s., vertical. **mattress s.**, vertical, a method in which the stitches are made at right angles to the edges of the wound, taking both deep and superficial bites of tissue, the latter achieving more exact apposition of the cutaneous margins. **metopic s.**, a name given the frontal suture when it persists in the adult skull. **nasal s.**, sutura internasalis. **nasofrontal s.**, sutura frontonasalis. **nasomaxillary s.**, sutura nasomaxillaris. **nerve s.**, uniting a divided nerve by suturing; neurorrhaphy. **nonabsorbable s.**, material for closing wounds which is not absorbed in the body, e.g., silk, cotton, and stainless steel, or synthetic material such as nylon. **nonabsorbable surgical s.** [USP], a strand of material, either sterile or unsterilized, suitably resistant to the action of living mammalian tissue, which is available in various diameters and tensile strengths. It may be modified with respect to body or texture, or to reduce capillarity, impregnated or coated with a suitable antimicrobial agent, suitably bleached, and colored with a color additive approved by the federal Food and Drug Administration. **occipital s.**, sutura lambdoidea. **occipitomastoid s.**, sutura occipitomastoidea. **occipitoparietal s.**, sutura lambdoidea. **occipitophenoidal s.**, fissura sphenoccipitalis. **over-and-over s.**, a method in which equal bites of tissue are taken on each side of the wound; it may be either interrupted or continuous. **overlapping s.**, a squamous suture (sutura squamosa), such as the sutura squamosa cranii. **palatine s.**, anterior, sutura incisiva. **palatine s.**, median, palatine s., middle, sutura palatina mediana. **palatine s.**, posterior, palatine s., transverse, sutura palatina transversa. **palatoethmoidal s.**, sutura palatoethmoidalis. **palatomaxillary s.**, sutura palatomaxillaris. **Pancoast's s.**, a form of tongue-in-groove suture; see *plastic s.* **Paré's s.**, the use of strips of cloth applied along the edges of a wound, and then stitched together to bring the margins of the wound into apposition. **parietal s.**, sutura sagittalis. **parietomastoid s.**, sutura parietomastoidea. **parietoccipital s.**, sutura lambdoidea. **petrobasilar s.**, petrosphenobasilar s., synchondrosis petrooccipitalis. **petrosphenoccipital s.**, of Gruber, fissura petrooccipitalis. **petrosquamous s.**, fissura petrosquamosa. **plastic s.**, a method in which a tongue is cut in one lip of the wound and a groove in the other, the tongue and groove then being stitched together, and the ends of the thread tied over a roll of adhesive plaster. **premaxillary s.**, sutura incisiva. **presection s.**, a stitch or series of stitches placed in the tissues before an incision is made. **primary s.**, prompt surgical closure of a wound. **pursestring s.**, a continuous, circular inverting suture commonly used to bury the stump of the appendix. **quilt s.**, quilted s., a continuous mattress suture. **relaxation s.**, any suture placed to close a wound but so formed that it may be loosened in order to relieve the tension should it become too great. **retention s.**, a reinforcing suture for abdominal wounds, utilizing exceptionally strong material like braided silk, stainless steel, or silkworm gut, and including a large amount of tissue in each stitch; intended to relieve pressure on the primary suture line and prevent postoperative disruption. **rhabdoid s.**, sutura sagittalis. **sagittal s.**, sutura sagittalis. **scaly s.**, sutura squamosa. **secondary s.**, 1. delayed closure of an operative or accidental wound, usually because of the presence or expectation of infection. 2. resuture of an operative wound following disruption. **seroserosus s.**, a suture which apposes two serous surfaces. **serrated s.**, sutura serrata. **shotted s.**, one in which the two ends of the suture wire are

passed through a split or perforated shot, which is then compressed. **silkworm gut s.**, material prepared from the entails of the silkworm, for use in the closure of wounds, usually as nonabsorbable supporting sutures in large abdominal wounds. **Sims's s.**, a shotted suture. **s's of skull**, suturae cranii. **sphenoeethmoidal s.**, sutura sphenoeethmoidalis. **sphenofrontal s.**, sutura sphenofrontalis. **sphenomalar s.**, sutura sphenozygomata. **sphenomaxillary s.**, sutura sphenomaxillaris. **sphenoccipital s.**, fissura sphenoccipitalis. **sphenoorbital s.**, sutura sphenoorbitalis. **sphenoparietal s.**, sutura sphenoparietalis. **sphenopetrosal s.**, synchondrosis petrooccipitalis. **sphenosquamous s.**, sphenotemporal s., sutura sphenosquamosa. **sphenozygomatic s.**, sutura sphenozygomata. **squamosomastoid s.**, sutura squamosomastoidea. **squamosoparietal s.**, sutura squamosa cranii. **squamososphenoid s.**, sutura sphenosquamosa. **squamous s.**, sutura squamosa. **squamous s. of cranium**, sutura squamosa cranii. **subcuticular s.**, a method of skin closure involving placement of stitches in the subcuticular tissues parallel with the line of the wound; continuous or interrupted sutures may be used. **superficial s.**, one that is placed through the superficial fascia only. **temporal s.**, sutura squamosa cranii. **temporomalar s.**, temporozygomatic s., sutura temporozygomata. **tongue-and-groove s.**, plastic s. **transverse s. of Krause**, sutura infraorbitalis. **true s.**, sutura vera. **uninterrupted s.**, continuous s. **uteroparietal s.**, stitching of the uterus to the inner surface of the abdominal wall at the incision line after cesarean section. **zygomaticofrontal s.**, sutura frontozygomatica. **zygomaticomaxillary s.**, sutura zygomaticomaxillaris. **zygomaticotemporal s.**, sutura temporozygomata. **suxamethonium chloride** (suk'sah-mě-tho'ne-um) succinylcholine chloride. **Sux-Cert** (suk'sert) trademark for preparations of succinylcholine chloride. **suxemerid sulfate** (suk-sem'ě-rid) chemical name: bis(1,2,2,6,6-pentamethyl-4-piperidyl)succinate sulfate (1:2); an antitussive, $C_{24}H_{44}N_2O_4 \cdot 2H_2SO_4$. **Suzanne's gland** (soo-zanz') [Jean Georges Suzanne, French physician, born 1859] see under *gland*. **SV** stroke volume; sinus venosus; simian virus. **SV40** simian virus 40; see *vacuolating virus*, under *virus*. **s.v.** abbreviation for *L. spir'itus vi'ni*, alcoholic spirit. **s.v.r.** abbreviation for *L. spir'itus vi'ni rectificatus*, rectified spirit of wine. **s.v.t.** abbreviation for *L. spir'itus vi'ni tenuis*, proof spirit. **swab** (swahb) a wad of cotton or other absorbent material firmly attached to the end of a wire or stick, used for applying medication, removing material, collecting bacteriological material, etc. **swaddler** (swahd'ler) a swaddling-suit for infants. **silver s.**, swaddling composed of polyester laminated on the inside surface with a thin layer of aluminum, used to prevent hypothermia in the newborn. **swage** (swāj) 1. to shape metal by hammering or by adapting it to a die. 2. to fuse suture material to a needle, especially an eyeless needle. 3. a tool or form, often one of a pair, for shaping metal by pressure. **swager** (swāj'er) an apparatus fitted with dies and counterdies for shaping wax patterns used in construction of crowns, inlays, etc., in dental work. **swallowing** (swahl'o-ing) the taking in of a substance through the mouth and pharynx, past the cricopharyngeal constriction through the esophagus and into the stomach. The oral phase is a voluntary act, whereas the remainder is a reflex act mediated by an integrating swallowing center in the medulla oblongata. **swarming** (sworm'ing) spreading in a swarm; a term applied to bacteria, especially *Proteus* species, which spread over the surface of the colony. **swayback** (swa'bak) 1. abnormal downward curvature of the spinal column in the dorsal region in horses. 2. see *lordosis*. 3. enzootic ataxia. **sweat** (swet) the perspiration; the liquid secreted by the sweat glands (glandulae sudoriferae), having a salty taste and a pH that varies from 4.5 to 7.5. Sweat produced by the eccrine sweat glands is clear with a faint characteristic odor, and contains water, sodium chloride, and traces of albumin, urea, and other compounds; its composition varies with many factors, e.g., fluid intake, external temperature and humidity, and some hormonal activity. Sweat produced by the larger, deeper, apocrine sweat glands of the axillae contains, in addition, organic material which on bacterial decomposition produces an offensive odor. **bloody s.**, hemati-drosis. **blue s.**, chromhidrosis in which the sweat has a blue color; it may occur in copper workers. **fetid s.**, bromhidrosis. **green s.**, a greenish sweating seen among workers in copper. **night s.**, sweating during sleep, a symptom frequently occurring in tuberculosis. **phosphorescent s.**, phosphorescent perspiration, sometimes observed in miliaria and after the eating of phosphorescent fish.

Over-and-over suture

Vertical mattress suture

Horizontal mattress suture

Lembert suture

Lock-stitch suture

Connell suture

Purse-string suture

Halsted suture

Everting sutures

Subcuticular suture

Cushing suture

Swediaur's disease (swa'de-aw'erz) [François Xavier Swediaur, Austrian physician, 1748-1824] see under *disease*.

sweeny (swe'ne) shoulder slip.

swellhead (swel'hed) 1. lechuguilla fever. 2. swelled head.

swelling (swel'ing) 1. a transient abnormal enlargement or increase in volume of a body part or area not caused by proliferation of cells. 2. an eminence, or elevation. **albuminous s.**, cloudy s. **arytenoid s.**, an eminence on each side of the embryonic laryngeal orifice that presages the future larynx. **blennorrhagic s.**, swelling of the knee in gonorrheal synovitis. **Calabar s's**, edematous areas, up to several centimeters in diameter, appearing suddenly on various portions of the body, and lasting only 2 or 3 days; fever, pruritus, and urticaria may occur. It is caused by infection with *Loa loa*. Called also *ambulant edema* and *Calabar edema*. **capsular s.**, the development of a swollen appearance of capsulated pneumococci on exposure to type-specific antibody, due to the binding of antibody with capsular polysaccharide; called also *Neufeld's reaction*. **cloudy s.**, an early stage of toxic degenerative changes, especially in the protein constituents of organs in infectious diseases. The tissues appear swollen, parboiled and opaque but revert to normal when the cause is removed. At the cellular level, it is characterized by slight swelling of the cell and granularity and cloudiness of the cytoplasm. Called also *albuminous degeneration*. **fugitive s.**, an extremely short-lived swelling. **genital s.**, an elevation on each side of the embryonic phallus that becomes either a labial (labia majora) or a scrotal swelling. **giant s.**, angioneurotic edema. **glassy s.**, amyloid degeneration. **hunger s.**, edematous swellings in wet beriberi. **Kamerun s's**, Calabar s's. **labial s.**, the primordium of a labium majus. **labio-scrotal s.**, genital s. **scrotal s.**, the primordium of one-half of the scrotum. **Soemmerring's crystalline s.**, annular edema of the lower portion of the lens capsule after the removal of a cataractous lens. **tropical s's**, Calabar s's. **tympanic s.**, intumescencia tympanica. **white s.**, former name for the swelling produced by tuberculous arthritis. Called also *tumor albus*.

Swift's disease (swifts) [H. Swift, Australian physician] acrodynia.

swinepox (swin-poks) an acute infectious, eruptive disease of piglets, marked by lesions of the skin of the abdomen, flanks, head, and behind the ears, caused by a poxvirus; it usually runs a mild course but on occasion may be fatal.

swing (swing) a kind of suspensory cradle or sling.

swoon (swōon) syncope.

sycephalus (si-sef'ah-lus) syncephalus.

sychnuria (sik-nu're-ah) [Gr. *sychnos* frequent + *ouron* urine + *-ia*] pollakiuria.

sycosiform (si-ko'si-form) resembling sycosis.

sycosis (si-ko'sis) [Gr. *sykōsis*, from *sykon* fig] 1. a disease marked by inflammation of the hair follicles, especially of the beard. 2. a kind of ulcer on the eyelids. **s. bar'bae**, 1. s. vulgaris. 2. pseudofolliculitis. **coccogenic s.**, s. vulgaris. **lupoid s.**, a chronic, scarring form of deep sycosis vulgaris, characterized by a persistent, slowly enlarging circinate patch with follicular papulopustules in the active, advancing border, and healing with scarring occurring in the central area. **parasitic s.**, tinea barbae. **s. staphylog'enes**, s. vulgaris. **s. tar'si**, blepharitis. **s. vulga'ris**, an inflammatory, papulopustular staphylococcal infection of the bearded region in which the primary lesion is a follicular, pin-head sized pustule pierced by a hair, which, if neglected, may become chronic. Called also *barber's itch* and *s. barbae*. See also *pseudofolliculitis*.

Sydenham's chorea, cough (sid'en-hams) [Thomas Sydenham, a celebrated English physician, sometimes called the "English Hippocrates," 1624-1689] see under *chorea* and *cough*.

syllabize (sil'ah-biz) to divide speech sounds into syllables.

syllabus (sil'ah-bus) [L., a collection] an outline of a course of lectures.

syllleptology (sil'lep'se-ol'o-je) [Gr. *syllēpsis* conception + *-logy*] the sum of knowledge regarding conception or pregnancy.

syllleptis (sil'lep'sis) conception, or pregnancy.

sylvan (sil'van) 1. a liquid obtained along with tetrol from distillation of pine wood. 2. sylvatic.

sylvatic (sil-vat'ik) sylvan; pertaining to, located in, or living in the woods. See under *plague*.

Sylvest's disease (sil-vest's) [Ejnar Sylvest, Norwegian physician, 1880-1931] epidemic pleurodynia.

sylvian (sil've-an) described by or named for Franciscus Sylvius de la Bœ, 1614-1672, a Dutch anatomist, as the *sylvian artery* (arteria cerebri media), *fissure* (sulcus lateralis cerebri), *fossa* (fossa lateralis cerebri and sulcus lateralis cerebri), *line*, *point*, and *vein* (vena cerebri media superficialis); see also *angle of Sylvius* and *valve of Sylvius* (valvula venae cavae inferioris). The name has also been ascribed to Jacobus Sylvius (Jacques Dubois), 1478-1555, a French anatomist who was a teacher of Vesalius, (*sylvian aqueduct* or *aqueduct of Sylvius* [aqueductus cerebri]).

symbollophone (sim-bal'o-fōn) [Gr. *syn* together + *ballein* to

throw + *phōnē* sound] a special type of double stethoscope making possible the comparison of sounds and detection of their direction.

symbiology (sim'bi-ol'o-je) the scientific study of symbiosis and symbiotic organisms.

symbion (sim'bi-on) symbiont.

symbiotic (sim-bi-on'ik) pertaining to or characterized by symbiosis.

symbiont (sim'bi-ont, sim'be-ont) [Gr. *syn* together + *bioun* to live] an organism which lives in a state of symbiosis.

symbiosis (sim'bi-o'sis) [Gr. *symbiōsis*] 1. in parasitology, the living together or close association of two dissimilar organisms, each of the organisms being known as a *symbiont*. The association may be beneficial to both (mutualism), beneficial to one without effect on the other (commensalism), beneficial to one and detrimental to the other (parasitism), detrimental to one without effect on the other (amensalism), or detrimental to both (synergism). 2. in psychiatry, a mutually reinforcing relationship between two persons who are dependent on each other; a normal characteristic of the relationship between the mother and infant child. 3. see *symbiotic psychosis*, under *psychosis*. **antagonistic s.**, **antipathetic s.**, an association between two organisms which is to the disadvantage of one of them; parasitism. **conjunctive s.**, association between two different organisms, with bodily union between them. **constructive s.**, an association between two organisms which is of benefit to the physiologic processes of one of them. **disjunctive s.**, symbiosis without actual union of the organisms.

symbiote (sim'bi-ōt) symbiont.

Symbiotes (sim'be-o'tēs) [Gr. *symbiōtēs* one who lives with] a genus of the tribe Wolbachieae, family Rickettsiaceae, order Rickettsiales, occurring as a single species, *S. lectula'rius*, which is parasitic on the bedbug.

symbiotic (sim'bi-ot'ik) associated in symbiosis; living together.

symblypharon (sim-blef'ah-ron) [Gr. *syn* together + *blepharon* eyelid] an adhesion between the tarsal conjunctiva and the bulbar conjunctiva. **anterior s.**, attachment of the lid to the eyeball by fibrous bands. **posterior s.**, adhesion between the lid and the eyeball extending into the fornix. **total s.**, adhesion of the entire conjunctival surfaces between the lid and the eyeball.

symblypharopterygium (sim-blef'ah-ro-ter-ij'e-um) a combination of symblypharon and pterygium; a form of symblypharon in which the lid is joined to the eyeball by a cicatricial band resembling a pterygium.

symbol (sim'bul) [Gr. *symbolon*, from *symballein* to interpret] a mark or character representing some quality or relation. In chemistry, a symbol is a letter or combination of letters representing an atom or a group of atoms. In psychiatry, an unconscious substitute which allows the libido to turn to an object not consciously concerned with sexuality. **phallic s.**, in psychoanalysis, any pointed or upright object which may represent the phallus or penis.

symbolia (sim-bo'le-ah) ability to recognize the nature of objects by the sense of touch.

symbolism (sim'bol-izm) 1. an abnormal mental condition in which every occurrence is conceived of as a symbol of the patient's own thoughts. 2. in psychoanalysis, a mechanism of unconscious thinking, usually of a sexual nature, whereby the real meaning becomes transformed so as not to be recognized as sexual by the super-ego.

symbolization (sim'bol-i-za'shun) a mental mechanism of the subconscious which consists in the representation of one object, idea, or quality by another.

sybrachydactylia (sim-brak'e-dak-til'e-ah) sybrachydactyly.

sybrachydactylism (sim-brak'e-dak'til-izm) sybrachydactyly.

sybrachydactyly (sim-brak'e-dak'ti-le) [Gr. *syn* together + *brachys* short + *daktylos* finger] a condition in which the fingers or toes are short and adherent; webbed fingers or toes.

symclosene (sim'klo-sēn) chemical name: 1,3,5-trichloro-s-triazine-2,4,6(1H,3H,5H)trione; a topical anti-infective, $C_3Cl_3O_3$.

Syme's amputation, operation (simz) [James Syme, Scottish surgeon, 1799-1870] see under *amputation* and *operation* (def. 2).

symelus (sim'ē-lus) symmelus.

Symington's body (si'ming-tonz) [Johnson Symington, Scottish anatomist, 1851-1924] the anococcygeal body; see under *body*.

symmelia (sim-me'le-ah) [Gr. *syn* together + *melos* limb + *-ia*] a developmental anomaly characterized by an apparent fusion of the lower limbs. There may be three feet (*tripodial s.*), two feet (*dipodial s.*), one foot (*monopodial s.*), or no feet (*apodial s.*).

symmelus (sim'e-lus) a fetus exhibiting symmelia.

Symmers' disease (sim'merz) [Douglas Symmers, American physician, 1879-1952] giant follicular lymphoma.

Symmetrel (sim'ē-trel) trademark for a preparation of amantadine hydrochloride.

symmetrical (sī-met're-kal) [Gr. *symmetrikos*] pertaining to or exhibiting symmetry; in chemistry, denoting compounds which contain atoms or groups at equal intervals in the molecule.

symmetry (sim'ē-tre) [Gr. *symmetria*; syn with + *metron* measure] the similar arrangement in form and relationships of parts around a common axis, or on each side of a plane of the body. **bilateral s.**, the configuration of an irregularly shaped body (as the human body or that of higher animals) which can be divided by a longitudinal plane into halves that are mirror images of each other. **inverse s.**, correspondence as between an object and its mirror image, in which one side of one object corresponds with the opposite side of another. **radial s.**, symmetry in which the body parts are arranged regularly around a central axis.

sympathectomize (sim'pah-thek'to-miz) to subject to sympathectomy.

sympathectomy (sim'pah-thek'to-me) [*sympathetic* + Gr. *ektomē* excision] the transection, resection, or other interruption of some portion of the sympathetic nervous pathways. Operations may be named according to the topographic location of the nerve, ganglion, or plexus operation on, as *cervical*, *dorsal*, *lumbar*, or *thoracolumbar s.*, or in reference to the diaphragm, as *subdiaphragmatic*, *supradiaphragmatic*, or *transdiaphragmatic s.* **chemical s.**, suppression of the activity of the sympathetic nervous system by appropriate drugs. **periarterial s.**, surgical removal of the sheath of an artery containing the sympathetic nerve fibers; it produces temporary vasodilatation.

sympathetecomy (sim'pah-thē-tek'to-me) sympathectomy.

sympathetic (sim'pah-thet'ik) [Gr. *sympathētikos*] 1. pertaining to, caused by, or exhibiting sympathy. 2. a sympathetic nerve or the sympathetic nervous system; see under *system*.

sympatheticomimetic (sim'pah-thet'ī-ko-mi-met'ik) [*sympathetic* + Gr. *mimētikos* imitative] sympathomimetic.

sympatheticoparalytic (sim'pah-thet'ī-ko-par'ah-lit'ik) due to or affected with paralysis of the sympathetic nervous system.

sympatheticotonia (sim'pah-thet'ī-ko-to'ne-ah) a condition in which the sympathetic nervous system dominates the general functioning of the body organs, characterized by vascular spasm, heightened blood pressure, dermographic formation of goose flesh, and activity of the ciliospinal reflex.

sympatheticotonic (sim'pah-thet'ī-ko-ton'ik) [*sympathetic* + Gr. *tonos* tension] pertaining to or characterized by sympathetico-tonia.

sympathetoblast (sim'pah-thet'o-blast) one of the embryonic nerve cells from the sympathetic system which develops into a sympathetic cell.

sympathic (sim-path'ik) sympathetic.

sympathicectomy (sim-path'ī-sek'to-me) sympathectomy.

sympathicoblast (sim-path'ī-ko-blast') the primitive pluripotential undifferentiated cell which develops into a sympathetic nerve cell.

sympathicoblastoma (sim-path'ī-ko-blas-to'mah) a malignant tumor containing sympathicoblasts; see *neuroblastoma*.

sympathicodiatheresis (sim-path'ī-ko-di'af-the-re'sis) Doppler's operation.

sympathicogonioma (sim-path'ī-ko-go'ne-o'mah) sympathicoblastoma.

sympathicolytic (sim-path'ī-ko-lit'ik) sympatholytic.

sympathicomimetic (sim-path'ī-ko-mi-met'ik) sympathomimetic.

sympathicopathy (sim-path'ī-kop'ah-the) any disease due to disorder of the sympathetic nervous system.

sympathicotherapy (sim-path'ī-ko-ther'ah-pe) treatment of certain diseases by stimulation or irritation of the turbinate bones and nasal septum, on the theory that such stimulation influences the sympathetic nerve.

sympathicotonia (sim-path'ī-ko-to'ne-ah) sympathetico-tonia.

sympathicotonic (sim-path'ī-ko-ton'ik) sympathetico-tonic.

sympathicotripsy (sim-path'ī-ko-trip'se) [*sympathetic* ganglion + Gr. *tribein* to crush] the surgical crushing of a nerve, ganglion, or plexus of the sympathetic nervous system.

sympathicotrope (sim-path'ī-ko-trōp) sympathicotropic.

sympathicotropic (sim-path'ī-ko-trop'ik) [*sympathetic* + Gr. *tropikos* turning] 1. having an affinity for the sympathetic nervous system. 2. an agent that has an affinity for or exerts its principal effect upon the sympathetic nervous system.

sympathicus (sim-path'ī-kus) the sympathetic nervous system.

sympathin (sim'pah-thin) a neurohormonal mediator of nerve impulses at sympathetic nerve synapses. The two most important mediators are epinephrine and norepinephrine, the term sympathin being used only when the nature of the mediator is unknown.

sympathism (sim'pah-thizm) susceptibility to hypnotic influence; suggestibility; the alleged transfer of feelings from one person to another.

sympathist (sim'pah-thist) one susceptible to sympathism.

sympathoadrenal (sim'path-o-ah-drē'nal) 1. pertaining to the sympathetic nervous system and the adrenal medulla. 2. involving the sympathetic nervous system and the adrenal glands, especially increased sympathetic activity that causes increased secretion of epinephrine by the adrenal medulla and of norepinephrine by the postganglionic sympathetic nerve endings.

sympathoblast (sim-path'o-blast) [*sympathetic* + Gr. *blastos* germ] sympathicoblast.

sympathoblastoma (sim'pah-tho-blas-to'mah) sympathicoblastoma.

sympathogone (sim'pah-tho-gōn') sympathogonium.

sympathogonia (sim'pah-tho-go'ne-ah) [pl., *sympathetic* + Gr. *gonē* seed] undifferentiated embryonic cells which develop into sympathetic cells.

sympathogonioma (sim'pah-tho-go'ne-o'mah) sympathicoblastoma.

sympathogonium (sim'pah-tho-go'ne-um) singular of *sympathogonia*.

sympatholytic (sim'pah-tho-lit'ik) [*sympathetic* + Gr. *lytikos* dissolving] 1. opposing the effects of impulses conveyed by adrenergic postganglionic fibers of the sympathetic nervous system. 2. an agent that opposes the effects of impulses conveyed by adrenergic postganglionic fibers of the sympathetic nervous system; called also *antiadrenergic*.

sympathomimetic (sim'pah-tho-mi-met'ik) [*sympathetic* + Gr. *mimētikos* imitative] 1. mimicking the effects of impulses conveyed by adrenergic postganglionic fibers of the sympathetic nervous system. 2. an agent that produces effects similar to those of impulses conveyed by adrenergic postganglionic fibers of the sympathetic nervous system. Called also *adrenergic*.

sympathy (sim'pah-the) [Gr. *sympatheia*] 1. an influence produced in any organ by disease or disorder in another part. 2. a relation which exists between the mind and the body, causing the one to be affected by the other. 3. the influence exerted by one individual upon another, or received by one from another, and the effects thus produced, as seen in hypnotism, in yawning, and in the transfer of hysterical symptoms.

sympetothiene (sim-pek'to-thi'en) ergothioneine.

sympetothion (sim-pek'to-thi'on) [Gr. *syn* together + *pexis* fixation + *theion* sulfur] ergothioneine.

sympexion (sim-pek'se-on), pl. *sympex'ia* [Gr. *sympēxis* condensation, coagulation + *on* neuter ending] a concretion.

symphalangia (sim'fah-lan'je-ah) [Gr. *syn* together + *phalanges* + *-ia*] congenital end-to-end fusion of contiguous phalanges of a digit, usually associated with other deformity of the hand or foot.

symphalangism (sim-fal'an-jizm) symphalangia.

sympHORICARPUS (sim'fōr-i-kar'pus) [Gr. *sympHorein* to bear together + *karpos* fruit] a homeopathic preparation of the fruit of *Symphoricarpos racemosus*, or snowberry, a shrub of North America.

Symphoromyia (sim'fōr-o-mi'yah) a genus of flies (snipe flies) of the family Rhagionidae, some of which are severe biters of man and animals.

symphycephalus (sim'fe-o-sef'ah-lus) [Gr. *syn* together + *phyein* to grow + *kephalē* head] a twin fetus joined at the head.

symphyogenetic (sim'fe-o-jē-net'ik) [Gr. *syn* together + *phyein* to grow + *gennan* to produce] concerning the combined effects of hereditary determiners and environmental factors in producing the organism's structure and behavior.

symphyseal (sim-fiz'e-al) pertaining to a symphysis.

symphyseorrhaphy (sim-fiz'e-or'ah-fe) symphysiorrhaphy.

symphyses (sim'fī-sēz) [Gr.] plural of *symphysis*.

symphysial (sim-fiz'e-al) symphyseal.

symphysic (sim-fiz'ik) characterized by abnormal fusion of adjacent parts.

symphysiectomy (sim-fiz'e-ek'to-me) [*symphysis* + Gr. *ektomē* excision] resection of the symphysis pubis in order to facilitate impending and possible future deliveries.

symphysiolysis (sim-fiz'e-ol'ī-sis) [*symphysis* + Gr. *lysis* dissolution] separation or slipping of symphyses, especially the symphysis pubis.

symphysion (sim-fiz'e-on) [*symphysis* + Gr. *on* neuter ending] the middle point of the outer border of the alveolar process of the lower jaw.

symphysiorrhaphy (sim-fiz'e-or'ah-fe) [*symphysis* + Gr. *rhaphe* suture] suture of a divided symphysis.

symphysiotome (sim-fiz'e-o-tōm) a knife used in performing symphysiotomy.

symphysiotomy (sim-fiz'e-ot'o-me) [*symphysis* + Gr. *tomē* a cutting] the division of the fibrocartilage of the symphysis pubis, in order to facilitate delivery, by increasing the diameter of the pelvis.

symphysis (sim'fī-sis), pl. *sym'physes* [Gr. "a growing together, natural junction"] a site or line of union; used in official anatomical nomenclature to designate a type of cartilaginous joint in

which the apposed bony surfaces are firmly united by a plate of fibrocartilage; called also *fibrocartilaginous joint*. **s. mandib'ulae**, **s. men'ti**, the line of union, in the median plane, of the two halves of the fetal lower jaw. **s. os'sium pu'bis**, **pubic s.**, **s. pubica**. **s. pu'bica** [NA], **s. pu'bis**, the joint formed by union of the bodies of the pubic bones in the median plane by a thick mass of fibrocartilage; called also *s. ossium pubis* and *pubic s.* **s. sacrococcyg'ea**, **sacroccocygeal s.**, *junctura sacrococcygea*. **sacroiliac s.**, *articulatio sacroiliaca*.

sympphysodactyly (sim'fi-so-dak'ti-le) [Gr. *symphysis* a growing together + *daktylos* finger] fusion of the fingers or toes.

Symphytum (sim'fi-tum) [L.; Gr. *symphyton*] a genus of boraginaceous plants; *S. officinale* L., common comfrey, is the comfrey of Europe and North America; its roots and leaves are demulcent and astringent.

symphytum (sim'fi-tum) a demulcent and astringent homeopathic preparation of *Symphytum officinale*.

sympiasm (sim'plazm) tissue in which there is no cellular structure.

sympasmatic (sim'plaz-mat'ik) marked by union of protoplasm.

symplast (sim'plast) symplasm.

symplex (sim'pleks) a chemical compound in which a high molecular substance is bound by residual valencies; included are activators, adsorbents, hemoglobin, and toxin-antitoxin.

sympodia (sim-po'de-ah) [Gr. *syn* together + *pous* foot + *-ia*] fusion of the lower extremities. Cf. *sirenornelus* and *sympus*.

symport (sim'port) a mechanism of transporting two compounds simultaneously across a cell membrane in the same direction, one compound being transported down a concentration gradient, the other against a gradient.

symptom (simp'tum) [L. *symptoma*; Gr. *symptōma* anything that has befallen one] any subjective evidence of disease or of a patient's condition, i.e., such evidence as perceived by the patient; a change in a patient's condition indicative of some bodily or mental state. See also *sign*. **abstinence s's**, withdrawal s's. **accessory s.**, any symptom not pathognomonic. **Anton's s.**, denial of, and usually unawareness of, one's own blindness, with resort to confabulation, as seen in cortical blindness due to bilateral infarction of the occipital lobes; called also *Anton's syndrome*. **assident s.**, accessory s. **Bárány's s.**, 1. in disturbances of equilibrium of the vestibular apparatus, the direction of the fall is influenced by changing the position of the patient's head. 2. if the normal ear is irrigated with hot water (110°-120° F.), a rotatory nystagmus is developed toward the side of the irrigated ear; if the ear is irrigated with cold water, a rotatory nystagmus is developed away from the irrigated side. There is no nystagmus if the labyrinth is diseased. Called also *caloric test*. **Baumés's s.**, see under *sign*. **Béhier-Hardy s.**, see under *sign*. **Bekhterev's s.**, paralysis of the facial muscles for automatic movements. **Berger's s.**, see under *sign*. **Bonhoefer's s.**, loss of normal muscle tonus in chorea. **Brauch-Romberg s.**, see *Romberg's sign*, under *sign*. **Buerger's s.**, in thromboangiitis obliterans, the pain in the affected leg when the patient is lying down is relieved only by lying with the leg hung over the side of the bed. **Burghart's s.**, fine rales over the anterior inferior edge of the lung; an early sign of pulmonary tuberculosis. **Capgras s.**, the mental impression, but not an actual hallucination, of a person that the individual confronting him, though known to him, is a "double" or substitute for the real individual. **Cardarelli's s.**, see under *sign*. **cardinal s.**, 1. a symptom of greatest significance to the physician, establishing the identity of the illness. 2. [pl.] the symptoms shown in the pulse, temperature, and respiration. **Castellani-Low s.**, a fine tremor of the tongue seen in sleeping sickness. **characteristic s.**, a symptom that is almost universally associated with a particular disease or condition. **Chvostek's s.**, see under *sign*. **Colliver's s.**, a peculiar twitching, tremulous, or convulsive movement of the limbs, face, jaw, and sometimes of the entire body, seen in the preparalytic stage of poliomyelitis. **concomitant s.**, a symptom not essential to a disease, but which may have an accessory value in its diagnosis. **consecutive s.**, a symptom appearing during convalescence from a disease, but having no connection with the disease. **constitutional s.**, a symptom which is indicative of or due to disorder of the whole body. **crossbar s. of Fraenkel**, blocking of the peristaltic wave on the lesser curvature of the stomach at the site of an ulcer, on fluoroscopy of the stomach. **deficiency s.**, a symptom which is due to a deficiency of the secretion of some endocrine gland. **delayed s.**, one which does not appear for some time after the occurrence of the causes which produce it. **direct s.**, one which is directly caused by the disease. **dissociation s.**, anesthesia to pain and to heat and cold without loss of tactile sensibility; seen in syringomyelia. **endothelial s.**, see *Rumpel-Leede phenomenon*, under *phenomenon*. **Epstein's s.**, a symptom seen in nervous infants, consisting of failure of the upper lid to move downward, giving the child a frightened expression. **equivocal s.**, a symptom which may be produced by several different diseases. **esophagosaliary s.**, excessive flow of saliva in patients with cancer of the esophagus. **Fröschel's s.**

(*obs.*), if a child does not react to tickling at the opening of the auditory canal, yet is ticklish throughout the rest of his body, disease of the auditory apparatus is indicated. **Ganser's s.**, the giving of wrong or absurd answers to questions; seen in certain psychiatric conditions. See also *Ganser's syndrome*, under *syndrome*. **general s.**, constitutional s. **Goldthwait's s.**, see under *sign*. **Griesinger's s.**, see under *sign*. **guiding s.**, characteristic s. **Haenel s.**, in tabes there is a lack of sensation on pressure over the eyeballs. **halo s.**, the seeing of colored rings around an individual light source; indicative of glaucoma. **Huchard's s.**, see under *sign*. **incarceration s.**, periodically recurring symptoms of displaced kidney, such as nephralgia, gastralgia, and severe collapse; called also *Dietl's crisis*. **indirect s.**, a symptom which points to a condition that may or may not be due to a particular disease or lesion. **induced s.**, one produced intentionally. **Jellinek's s.**, see under *sign*. **Jonas' s.**, spasm of the pylorus in rabies. **Kerandel's s.**, see under *sign*. **Kocher's s.**, see under *sign*. **Kussmaul's s.**, see under *sign* (def. 2). **labyrinthine s's**, a group of symptoms indicating disease of the internal ear. **Lade s.**, a peculiar diarrhea or very soft stool occurring fourteen days prior to the eruption of chickenpox. **Liebreich's s.**, a symptom of red-green color blindness in which light effects appear red and shadows green. **local s.**, one due to local disease or to a particular lesion. **localizing s's**, symptoms that indicate the location of a lesion. **Loewi's s.**, see under *tests*. **Magendie's s.**, skew deviation. **Magnan's s.**, a sensation as of a round body beneath the skin, sometimes experienced in chronic cocaineism. **Mannkopf's s.**, see under *sign*. **neighborhood s.**, a symptom produced in an organ by disease in a neighboring organ, as by pressure of a tumor in one organ on an organ adjacent to it. **nostril s.**, dilatation of the nostrils during expiration and dropping during inspiration. **objective s.**, one that is obvious to the senses of the observer; see *sign*. **Oehler's s.**, coldness and pallor of the feet in intermittent claudication. **passive s.**, static s. **pathognomonic s.**, one that establishes with certainty the diagnosis of the disease. **Pel-Ebstein s.**, see under *fever*. **precursory s.**, premonitory s., signal s. **presenting s.**, the symptom or group of symptoms of which the patient complains the most or from which he seeks relief. **rainbow s.**, halo s. **rational s.**, subjective s. **reflex s.**, a symptom occurring in a part remote from that which is affected by the disease. **Remak's s.**, polyesthesia; also a prolongation of the lapse of time before a painful impression is perceived; both are noted in tabes dorsalis. **Roger's s.**, a temperature below the normal in the third stage of tuberculous meningitis. **Romberg-Howship s.**, see under *sign*. **Rumpf's s.**, see under *sign*. **Séguin's signal s.**, the involuntary contraction of the muscles just before an epileptic attack. **signal s.**, a sensation, aura, or other subjective experience that gives warning of the approach of an epileptic or other seizure. **Simon's s.**, polyuria seen in cancer of the breast, caused by metastasis of cancer to the pituitary gland. **Skeer's s.**, see under *sign*. **Sklowsky's s.**, when light pressure with the index finger is made upon the healthy skin near, and then over, a vesicle in varicella, the wall of the vesicle easily collapses and the contents are discharged. **static s.**, a condition indicative of the state of some particular organ independent of the rest of the body; called also *passive s.* **Stellwag's s.**, see under *sign*. **Stierlin's s.**, indurating and ulcerative processes, especially tuberculosis of the cecum and ascending colon, are shown in the roentgen plate by absence of the normal shadow following a contrast meal. **subjective s.**, one that is perceptible to the patient only. **sympathetic s.**, one due to sympathy, as when pain or other disorder affects a part when some other part is the seat of the disease proper. **Tar's s.**, in health the lower borders of the lungs are situated as deeply in the lying down position with moderate exhalation as in the upright position with deep inhalation; in infiltrating process of the lungs this is not the case. **Trendelenburg's s.**, a waddling gait due to paralysis of the gluteal muscles; see also *Trendelenburg's test*, def. 2, under *tests*. **Wanner's s. (obs.)**, decrease of sound conduction through the bones of the head, without pain in the labyrinth, points to organic change in the skull. **Wartenberg's s.**, 1. itching of the nostrils and tip of the nose indicative of cerebral tumor. 2. flexion of the thumb occurring on flexion of the other fingers against resistance; seen in pyramidal lesions. **Weber's s.**, see under *sign*. **Wernicke's s.**, hemiplegic pupillary reaction. **Westphal's s.**, see under *sign*. **Winterbottom's s.**, see under *sign*. **withdrawal s's**, symptoms which follow sudden abstinence from a drug to which a person has become addicted.

sympomatic (simp'to-mat'ik) [Gr. *symptōmatikos*] 1. pertaining to or of the nature of a symptom. 2. indicative (of a particular disease or disorder). 3. exhibiting the symptoms of a particular disease but having a different cause. 4. directed at the allaying of symptoms, as symptomatic treatment.

symptomatology (simp'tom-ah-to'lo-je) 1. that branch of medicine which treats of symptoms; the systematic discussion of symptoms. 2. the combined symptoms of a disease.

symptomatology (simp'to-mah-to-lit'ik) [*symptom* + Gr. *lytikos* dissolving] causing the disappearance of symptoms.

syndrome (sāmp-tōm') [Fr.] symptom. **s's complice'** [Fr. "syndrome complex"], a group of symptoms characteristic of a certain condition.

syndromolytic (sīmp-'to-mo-lit'ik) syndromatolytic.

syndrosis (sīmp-to-'sis) [Gr. *syn* together + *ptōsis* fall] the gradual wasting of the whole body or of any organ.

sympus (sīmp-'pus) [Gr. *syn* together + *pous* foot] a fetus exhibiting fusion of the lower limbs. Cf. *sirenomelus*. **s. a'pus**, *sirenomelus*. **s. di'pus**, a form in which both feet are present. **s. mo'nopus**, a form in which one foot is present.

Syms's tractor (sīmz'ez) [Parker Syms, American surgeon, 1860-1933] see under *tractor*.

syn- [Gr. *syn* with, together] a prefix signifying union or association.

synadelphus (sīn-'ah-del'fus) [*syn-* + Gr. *adelphos* brother] a monster with a single body and eight limbs.

synaetion (sīn-e'te-on) [Gr. *synaitios* being a joint cause] the secondary or cooperative cause of a disease.

Synalar (sīn-'ah-lar) trademark for a preparation of fluocinolone acetate.

synalbumin (sīn-'al-bu'min) a postulated competitive inhibitor of insulin, an insulin B chain bound to albumin.

synalgia (sīn-al'je-ah) pain experienced in one place as the result of a lesion in another.

synalgic (sīn-al'jik) affected with or of the nature of synalgia.

synanche (sīn-an'ke) cynanche.

Synangium (sīn-an'je-um) a genus of Schizomycetes of the order Myxobacteriales, family Polyangiaceae.

synanthrin (sīn-an'thrin) inulin.

synanthrose (sīn-an'thrōs) levulin.

synaphymenitis (sīn-af'i-men-i'tis) conjunctivitis.

synapse (sīn-'aps) [Gr. *synapsis* a conjunction, connection] the site of functional apposition between neurons, at which an impulse is transmitted from one neuron to another by either electrical (see *ephapse*) or chemical means. In the typical synapse, the impulse is transmitted by a neurotransmitter (e.g., acetylcholine, norepinephrine, etc.) released by the axon terminal of the excited (presynaptic) cell, which diffuses across the synaptic cleft to bind with receptors on the postsynaptic cell membrane; and thereby effects electrical changes in the postsynaptic cell which result in depolarization (excitation) or hyperpolarization (inhibition). Synapses also occur at sites of apposition between nerve endings and effector organs (e.g., the neuromuscular junction). **axoaxonic s.**, one between the axon of one neuron and the axon of another neuron. **axodendritic s.**, one between the axon of one neuron and dendrites of another. **axodendrosomatic s.**, one between the axon of one neuron and the dendrites and body (soma) of another, as in motoneurons. **axosomatic s.**, one between the axon of one neuron and the body (soma) of another. **dendrodendritic s.**, one from a dendrite of one cell to a dendrite of another. **electrotonic s.**, see *gap junction*, under *junction*. **en passant s.**, synaptic contact characterized by a crossing of cells with similar fiber membranes lying alongside one another, as in coelenterates. **loop s.**, one having a relatively long area of contact of fiber membranes, as in many invertebrates.

Diagram of three synapses. Nerve impulse is indicated by arrows, showing that the direction of passage is from terminal arborization (TA) or nerve endings of the axon of one neuron to the dendrites (D) of another neuron. (Williams.)

synapsis (sī-nāp'sis) [Gr. "conjunction"] the pairing off in point-for-point association of homologous chromosomes from the male and female pronuclei during the early prophase of meiosis.

synaptase (sī-nāp'tās) [Gr. *synaptos* joined] emulsin.

synaptene (sī-nāp'tēn) amphitene.

synaptic (sī-nāp'tik) pertaining to or affecting a synapse; pertaining to synopsis.

synaptology (sīn-'ap-tol'o-je) that branch of neurology which deals with the synaptic correlations of the nervous system.

synaptosome (sīn-ap'to-sōm') any of the membrane-bound sacs that break away from axon terminals at a synapse after brain

tissue has been homogenized in sugar solution; it contains synaptic vesicles and mitochondria.

synarthrodia (sīn-'ar-thro'de-ah) [*syn-* + Gr. *arthrōdia* joint] synarthrosis.

synarthrodial (sīn-'ar-thro'de-al) pertaining to a synarthrosis.

synarthrophysis (sīn-'ar-thro-fi'sis) [*syn-* + Gr. *arthron* joint + *physis* growth] any ankylosing process; progressive ankylosis of joints.

synarthroses (sīn-'ar-thro'sēz) [Gr.] plural of *synarthrosis*.

synarthrosis (sīn-'ar-thro'sis), pl. *synarthroses* [*syn-* + Gr. *arthrōsis* joint] a form of articulation in which the bony elements are united by continuous intervening fibrous tissue. See *junctura fibrosa*.

synathresis (sīn-'ath-re'sis) synathrosis.

synathroisis (sīn-'ath-roi'sis) [*syn-* + Gr. *athroisis* collection] local hyperemia or congestion.

syncaine (sīn-ka'in) procaine hydrochloride.

syncanthus (sīn-kan'thus) [*syn-* + Gr. *kanthos* canthus] adhesion of the eyeball to the orbital structures.

syncaryon (sīn-kar'e-on) [*syn-* + Gr. *karyon* nucleus] the nucleus formed by fusion of two pronuclei.

syncelom (sīn-se'lom) the perivisceral cavities of the body considered as one structure, including the pleural, cardiac, and peritoneal cavities, and tunica vaginalis.

syncephalus (sīn-sef'ah-lus) [*syn-* + Gr. *kephalē* head] a double monster with one head, there being a single face with four ears, two on the back of the head.

synchesis (sīn-'ke-sis) synchysis.

synchilia (sīn-ki'le-ah) [*syn-* + Gr. *cheilos* lip + *-ia*] congenital adhesion of the lips.

synchiria (sīn-ki're-ah) [*syn-* + Gr. *cheir* hand + *-ia*] a condition in which the sensation produced by a stimulus applied to one side of the body is referred to both sides.

syncholia (sīn-ko'le-ah) [*syn-* + Gr. *cholē* bile + *-ia*] the secretion of substances of exogenous origin in the bile.

synchondrectomy (sīn-'kon-drek'to-me) [*synchondrosis* + Gr. *ektomē* excision] surgical excision of a synchondrosis, especially of the symphysis of the pubic bone.

synchondrosectomy (sīn-'kon-dro'se-ot'o-me) [*synchondrosis* + Gr. *tomē* a cutting] an operation for exstrophy of the bladder done by cutting through the sacroiliac ligaments and forcibly drawing together the pelvic bones; called also *Trendelenburg's operation*.

synchondroses (sīn-'kon-dro'sēz) [Gr.] plural of *synchondrosis*.

synchondrosis (sīn-'kon-dro'sis), pl. *synchondroses* [Gr. *synchondrosis* a growing into one cartilage] a type of cartilaginous joint that is usually temporary, the intervening hyaline cartilage ordinarily being converted into bone before adult life. **s. ary-cornicula'ta**, the cartilaginous union between the upper end of the arytenoid cartilage and the base of the corniculate cartilage.

costoclavicular s., ligamentum costoclaviculare. **syn-**

chondro'ses cra'nii [NA], **synchondroses of cranium**, the cartilaginous junctions between certain bones of the cranium.

epiphyseal s., **s. epiphy'seos**, cartilago epiphysialis. **in-**

tersphenoidal s., **s. intersphenoida'lis**, the cartilaginous union of the two halves of the body of the sphenoid bone in the fetus.

intraoccipital s., **anterior**, **s. intraoccipitalis anterior**. **s. intraoccipital s.**, **posterior**, **s. intraoccipitalis poste-**

rior. **s. intraoccipita'lis ante'rior** [NA], anterior intraoccipital synchondrosis: the cartilaginous union of the pars basilaris with the partes laterales of the occipital bone in the newborn.

s. intraoccipita'lis poste'rior [NA], posterior intraoccipital synchondrosis: the cartilaginous union of the squama with the partes laterales of the occipital bone in the newborn. **petro-**

occipital s., **s. petrooccipita'lis** [NA], the plate of cartilage in the petrooccipital fissure which helps to unite the basilar portion of the occipital bone and the petrous portion of the temporal bone. **pubic s.**, **s. pu'bis**, symphysis pubica. **sa-**

crococcygeal s., **junctura sacrococcygea**. **synchondroses of skull**, synchondroses cranii. **sphenobasilar s.**, **spheno-**

occipital s., **s. sphenoccipitalis**. **s. sphenoccipita'lis** [NA], the cartilaginous union of the anterior end of the basilar portion of the occipital bone with the posterior surface of the body of the sphenoid bone. **s. sphenopetro'sa**, [NA], **sphenope-**

tro'sal s., the cartilaginous union of the lower border of the great wing of the sphenoid bone with the petrous portion of the temporal bone in the sphenopetrosal fissure. **sternal s.**, **s. sterna'lis** [NA], the cartilaginous union between the manubrium and the body of the sternum.

synchondrotomy (sīn-'kon-drot'o-me) [*synchondrosis* + Gr. *tomē* a cutting] the division of the symphysis pubis or of any other synchondrosis.

synchorial (sīn-ko're-al) sharing a common placenta; said of multiple fetuses.

synchronia (sīn-kro'ne-ah) 1. synchronism. 2. the formation of parts or tissues at the usual time. Cf. *heterochronia* (def. 1).

synchronism (sīn-'kro-nizm) occurrence at the same time; the quality of being synchronous.

synchronous (sin/'kro-nus) [*syn-* + Gr. *chronos* time] occurring at the same time.

synchrotron (sin/'kro-tron) a machine for generating high-speed electrons or protons. It combines features of the cyclotron and betatron and will produce 70 million volts.

synchysis (sin/'kī-sis) [Gr. "a mixing together"] a softening or fluid condition of the vitreous body of the eye; synchysis corporis vitrei. **s. scintil'lans**, cholesterol crystals in the vitreous that develop as a degenerative change following inflammation or other ocular diseases.

syncinesis (sin/'si-ne'sis) synkinesis.

synciput (sin/'sī-put) sinciput.

synclinal (sin-'kli-'nal) [Gr. *synklinein* to lean together] bent or inclined together.

synclitic (sin-'klit/'ik) pertaining to or marked by synclitism.

synclitism, syncliticism (sin/'klit-izm; sin-'klit/'i-sizm) [Gr. *synklinein* to lean together] 1. parallelism between the planes of the fetal head and those of the pelvis. 2. normal, synchronous maturation of the nucleus and cytoplasm of blood cells. Cf. *asynclitism*.

synclonus (sin/'klo-nus) [*syn-* + Gr. *klonos* turmoil] 1. muscular tremor, or the successive clonic contraction of various muscles together. 2. any disease characterized by muscular tremors. **s. beriber'ica**, muscular tremors associated with beriberi.

syncopal (sin/'ko-pal) pertaining to or characterized by syncope.

syncope (sin/'ko-pe) [Gr. *synkopē*] a temporary suspension of consciousness due to generalized cerebral ischemia; a faint or swoon. **Adams-Stokes s.**, see under *disease*. **s. angino'sa**, fainting with an episode of coronary insufficiency. **cardiac s.**, sudden loss of consciousness, with momentary or no premonitory symptoms, due to cerebral anemia caused by ventricular asystole, extreme bradycardia, or ventricular fibrillation. **carotid sinus s.**, carotid sinus syndrome. **cough s.**, tussive s. **digital s.**, a sudden temporary loss of strength in the fingers. **laryngeal s.**, tussive s. **micturition s.**, brief loss of consciousness during or immediately after micturition in certain men who arise from bed at night to urinate; it may be a form of orthostatic hypotension. **postural s.**, that resulting from orthostatic hypotension. **stretching s.**, syncope associated with stretching the arms upward with the spine extended. **swallow s.**, syncope associated with swallowing, a disorder of atrio-ventricular conduction mediated by the vagus nerve. **tussive s.**, brief loss of consciousness associated with vigorous and explosive paroxysms of coughing, usually seen in men; called also *cough s.*, *laryngeal s.*, and *laryngeal vertigo*. **vasodepressor s.**, vasovagal attack. **vasovagal s.**, see under *attack*.

syncopic (sin-'kop/'ik) syncopal.

syncretio (sin-'kre/'she-o) [L.] a growing together or adhesion, as between inflamed serous surfaces in contact.

Syncryptidae (sin-'krip/'ti-de) a family of free-swimming flagellate protozoa of the order Chrysomonadina, class Phytomastigophora, including the genus *Synura*.

Syncurine (sin/'ku-rēn) trademark for a preparation of decamethonium bromide.

syncytial (sin-'sish/'al) of, pertaining to, or producing a syncytium.

syncytiolysin (sin/'sit-e-ol/'i-sin) a lysin destructive to the syncytium; formed in the blood of an animal into which matter from the placenta of another animal has been injected.

syncytioma (sin-'sit/'e-o/'mah) syncytial endometritis. **s. malignum**, choriocarcinoma.

syncytiotoxin (sin-'sit/'e-o-tok/'sin) a toxin that has a specific action on the placenta.

syncytiotrophoblast (sin-'sit/'e-o-trof/'o-blast) the outer syncytial layer of the trophoblast; called also *syntrophoblast*.

syncytium (sin-'sish/'e-um) a multinucleate mass of protoplasm produced by the merging of cells.

syncytoid (sin/'si-'toid) resembling a syncytium.

syncytotoxin (sin/'si-to-tok/'sin) a cytolytic serum produced by immunizing animals with placental cells.

syndactylia (sin/'dak-'til/'e-ah) syndactyly.

syndactylism (sin-'dak/'ti-'lizm) syndactyly.

syndactylous (sin-'dak/'ti-'lus) pertaining to or characterized by syndactyly.

syndactylus (sin-'dak/'ti-'lus) an individual exhibiting syndactyly.

syndactyly (sin-'dak/'ti-'le) [Gr. *syn* with + *daktylos* finger] the most common congenital anomaly of the hand, marked by persistence of the webbing between adjacent digits, so they are more or less completely attached; generally considered an inherited condition, the anomaly may also occur in the foot. **complete s.**, syndactyly in which the connection extends from the base of the involved digits to the tip. **complicated s.**, syndactyly in which the bones or nails of the involved digits are fused. **double s.**, syndactyly involving three digits (two webs). **partial s.**, syndactyly in which the connecting web extends only part way up from the base of the involved digits. **simple s.**, syn-

dactyly in which the connecting web consists only of skin. **single s.**, syndactyly involving two digits (a single web). **triple s.**, syndactyly involving four digits (three webs).

syndectomy (sin-'dek/'to-me) [Gr. *syndesmos* band + *ektomē* excision] peritomy.

syndelphus (sin-'del/'fus) synadelphus.

syndesis (sin/'dē-sis, sin-'de/'sis) [*syn-* + Gr. *desis* binding] 1. arthrodesis. 2. synapsis.

syndesmectomy (sin/'des-mek/'to-me) [*syndesmo-* + Gr. *ektomē* excision] excision of a ligament or a portion of a ligament.

syndesmectopia (sin/'des-mek-'to-'pe-ah) [*syndesmo-* + Gr. *ektopos* out of place + *-ia*] unusual situation of a ligament.

syndesmitis (sin/'des-mi/'tis) [*syndesmo-* + *-itis*] 1. inflammation of a ligament or ligaments. 2. conjunctivitis. **s. metatar'sea**, inflammation of the metatarsal ligaments occurring during strenuous marches; called also *march tumor*.

syndesmo- (sin-'des/'mo) [Gr. *syndesmos* band or ligament] a combining form denoting relationship to connective tissue or particularly the ligaments.

syndesmochorial (sin/'des-mo-'ko-'re-al) a type of placentation, occurring in ruminants, characterized by limited destruction of the endometrial epithelium.

syndesmography (sin/'des-mog/'rah-fe) [*syndesmo-* + Gr. *graphein* to write] a description of the ligaments.

syndesmologia (sin/'des-mo-'lo-'je-ah) syndesmology; in NA terminology *syndesmologia* encompasses the nomenclature relating to the articulations (joints) and ligaments.

syndesmology (sin/'des-mol/'o-'je) [*syndesmo-* + Gr. *logos* treatise] the scientific study of ligaments, by extension including also study of the articulations and joints; applied also to the body of knowledge relating thereto.

syndesmoma (sin/'des-mo/'mah) a connective tissue tumor.

syndesmo-odontoid (sin-'des-'mo-'o-'don/'toid) the posterior of the two atloaxoid articulations formed between the anterior surface of the transverse ligaments and the back of the odontoid process.

syndesmopexy (sin-'des-'mo-'pek/'se) [*syndesmo-* + Gr. *pēxis* fixation] the operative fixation of a dislocation by using the ligaments of the joint.

syndesmophyte (sin-'des-'mo-'fit) [*syndesmo-* + Gr. *phyton* plant] an osseous excrescence, or bony outgrowth, from a ligament.

syndesmoplasty (sin-'des-'mo-'plas/'te) [*syndesmo-* + Gr. *plassein* to form] plastic operation on a ligament.

syndesmorrhaphy (sin/'des-mor/'ah-fe) [*syndesmo-* + Gr. *rhaphe* suture] suture or repair of ligaments.

syndesmosis (sin/'des-mo/'sis), pl. *syndesmo'ses* [Gr. *syndesmos* band] [NA] a type of fibrous joint in which the intervening fibrous connective tissue forms an interosseous membrane or ligament. **tibiofibular s.**, **s. tibiofibularis** [NA], a firm fibrous union formed at the distal end of the tibia and fibula between the fibular notch of the tibia and a roughened triangular surface on the fibula. **s. tympanostape'dia** [NA], **tympanostapedial s.**, the connection of the base of the stapes with the secondary membrane in the fenestra vestibuli.

syndesmotomy (sin/'des-mot/'o-me) [*syndesmo-* + Gr. *tomē* a cutting] the dissection or cutting of a ligament.

syndrome (sin/'drōm) [Gr. *syndromē* concurrence] a set of symptoms which occur together; the sum of signs of any morbid state; a symptom complex. In genetics, a combination of phenotypic manifestations. **Aarskog's s.**, a hereditary syndrome, transmitted as an X-linked trait, characterized by ocular hypertelorism, anteverted nostrils, broad upper lip, peculiar scrotal "shawl" above the penis, and small hands. Called also *faciogenital dysplasia*. **Abercrombie's s.**, amyloid degeneration. **abstinence s.**, withdrawal symptoms. **abused-child s.**, battered-child s. **Achard-Thiers s.**, an association of diabetes and hirsutism in postmenopausal women; sometimes alleged to involve an increased incidence of uterine cancer. **acute organic brain s.**, severe mental symptoms arising suddenly in a person previously psychologically normal, caused by head injury, infections, endogenous and exogenous intoxications, nutritional deficiency, etc. It is characterized by a host of symptoms, including delirium, confusional states, disorientation for time and place, distractibility, restlessness, and excitement. Such disorders are reversible. **Adair-Dighton s.**, van der Hoeve's s. **Adams-Stokes s.**, see under *disease*. **addisonian s.**, the complex of symptoms resulting from adrenal insufficiency; see *Addison's disease*, under *disease*. **Adie's s.**, a syndrome consisting of a pathological pupil reaction (tonic pupil), the most important element of which is a myotonic condition on accommodation; the pupil on the affected side contracts on near vision more slowly than does the pupil on the opposite side, and it also dilates more slowly. The affected pupil does not usually react to direct or indirect light, but it may do so in an abnormal fashion. Certain tendon reflexes are absent or diminished, but there are no motor or sensory disturbances, nor demonstrable changes indicative of disease of the nervous system. **adiposogenital s.**, adiposogenital dystrophy. **adrenogenital s.**, hyperfunction of the

adrenal cortex, with pseudohermaphroditism and virilism in the female, usually evident at birth, and precocious sexual development (macrogenitosomia precoc) in the male, usually not appearing until three or four years after birth; the clinical findings are due to deficient production of cortisol and excessive production of androgen. Called also *congenital adrenal hyperplasia*. **adult respiratory distress s. (ARDS)**, fulminant pulmonary interstitial and alveolar edema, which usually develops a few days after the initiating trauma, thought to result from a massive sympathetic discharge due to brain injury or hypoxia and from increased capillary permeability. Called also *shock lung*. **afferent loop s.**, chronic partial obstruction of the proximal loop (duodenum and jejunum) after gastrojejunostomy, resulting in duodenal distention, pain, and nausea following ingestion of food. **Ahumada-del Castillo s.**, a nonpuerperal triad consisting of galactorrhea, amenorrhea, and low gonadotropin secretion. **Albright's s.**, **Albright-McCune-Sternberg s.**, fibrous dysplasia of bone, melanotic pigmentation of the skin, and sexual precocity in the female; called also *osteitis fibrosa disseminata*. **alcohol withdrawal s.**, the neurological effects in alcoholics of withdrawing from alcohol, characterized by agitation, disorientation, and hallucinations, which may progress to convulsions and on to delirium tremens. **Aldrich's s.**, **Wiskott-Aldrich s.** **Alezandrini's s.**, unilateral degenerative retinitis followed shortly by ipsilateral vitiligo and poliosis; deafness may occur. **Alport's s.**, a hereditary disorder characterized by progressive sensorineural hearing loss, progressive pyelonephritis or glomerulonephritis, and occasionally ocular defects. It is transmitted as an autosomal dominant trait. **Alstrom's s.**, a hereditary syndrome of retinitis pigmentosa with nystagmus and early loss of central vision, deafness, obesity, and diabetes mellitus. **amniotic s.**, **Korsakoff's psychosis**. **amniotic infection s. of Blane**, a syndrome in which fetal sepsis follows swallowing and at times aspiration of contaminated amniotic fluid. **amyotatic s.**, hepatolenticular degeneration. **Andersen's s.**, bronchiectasis, cystic fibrosis of the pancreas, and vitamin A deficiency. **Angelucci's s.**, excitable temperament, palpitation, and vasomotor disturbance in patients with vernal conjunctivitis. **anginal s.**, **anginose s.**, the pain or other symptoms of coronary insufficiency. **anterior cord s.**, localized injury to the anterior portion of the spinal cord, characterized by complete paralysis and hypalgesia and hypesthesia to the level of the lesion, but with relative preservation of posterior column sensations of touch, position, and vibration. **anterior cornual s.**, muscular atrophy due to lesions of the anterior horns of the spinal cord. **anterior tibial compartment s.**, rapid swelling, increased tension, pain, and ischemic necrosis of the muscles of the anterior tibial compartment of the leg; the skin becomes glossy, erythematous, and edematous as the necrosis occurs. The cause is unknown, but usually there is a history of excessive exertion. **Anton's s.**, see under *symptom*. **anxiety s.**, the physical symptoms accompanying anxiety, such as palpitation of the heart, rapid and shallow respiration, sweating, pallor, and a feeling of panic. **aortic arch s.**, any of a group of disorders leading to occlusion of the arteries arising from the aortic arch; such occlusion may be caused by atherosclerosis, arterial embolism, syphilitic or tuberculous arteritis, etc. See also *pulseless disease*, under *disease*. **Apert's s.**, acrocephalosyndactyly. **argentaffinoma s.**, carcinoid s. **Arnold's nerve reflex cough s.**, a reflex cough due to irritation of the area supplied by Arnold's nerve (the auricular branch of the vagus nerve); this area is the posterior and inferior portion of the external auditory canal and the posterior half of the tympanic membrane. **Arnold-Chiari s.**, see under *deformity*. **Ascher's s.**, blepharochalasis occurring in association with goiter (adenoma of the thyroid) and redundancy of the mucous membrane and submucous tissue of the upper lip. **Asherman's s.**, persistent amenorrhea and secondary sterility due to intrauterine adhesions and synechiae, usually occurring as a result of uterine curettage. **asplenia s.**, **Ivemark's s.** **ataxia-telangiectasia s.**, see under *ataxia*. **auriculotemporal s.**, the appearance of a red area and of sweating on the cheek in connection with eating; seen in lesions of the parotid gland and due to some involvement of the auriculotemporal nerve. **autoerythrocyte sensitization s.**, a purpuric reaction occurring chiefly in young women, in which spontaneous, painful, recurrent single or multiple ecchymoses occur on any part of the body without trauma or after insufficient trauma. Sensitivity to a component of the erythrocytes' structural framework is responsible in many cases, but in some cases the leukocytes seem to be responsible. Emotional upsets are believed to be a precipitating factor. Called also *erythrocyte autosensitization syndrome*, *Gardner-Diamond syndrome*, and *painful bruising syndrome*. **Avellis's s.**, ipsilateral paralysis of vocal cord and soft palate, loss of pain and temperature sensibility in contralateral leg, trunk, arm, neck, and in the skin over the scalp; called also *ambiguospinothalamic paralysis*. **Axenfeld's s.**, a dominantly inherited syndrome consisting of posterior embryotoxon associated with adhesion of the base of the iris to Schwalbe's ring, defective development of the angular structures and trabecular region, and, frequently, glaucoma. Called also *Axenfeld's anomaly*. **Ayerza's s.**, pulmonary hypertension with dilatation of the pulmonary arteries,

related to disease of the lungs; formerly attributed to syphilis. **Baastrop's s.**, kissing spine. **Babinski's s.**, the association of cardiac and arterial disorders with chronic syphilitic meningitis, tabes dorsalis, paralytic dementia, and other late syphilitic manifestations. **Babinski-Fröhlich s.**, adiposogenital dystrophy. **s. of Babinski-Nageotte**, a syndrome due to multiple lesions affecting the pyramid and sensory tracts, the cerebellar peduncle, and the reticular formation, and marked by contralateral hemiplegia and hemianesthesia (usually only of the pain and temperature senses), ipsilateral hemiasynergia, hemiataxia, and Horner's syndrome. **Babinski-Vaquez s.**, Babinski's s. **Bäifverstedt's s.**, lymphadenosis benigna cutis. **Balint's s.**, cortical paralysis of visual fixation, optic ataxia, and disturbance of visual attention, with preservation of spontaneous and reflex eye movements. The parieto-occipital lesions are bilateral. **Banti's s.**, congestive splenomegaly. **Bardet-Biedl s.**, **Laurence-Biedl s.** **Barré-Guillain s.**, acute febrile polyneuritis. **Barrett's s.**, peptic ulcer of the lower esophagus, often with stricture, due to the presence of columnar-lined epithelium, which may contain functional mucous cells, parietal cells, or chief cells, in the esophagus instead of normal squamous cell epithelium. Called also *Barrett's esophagus*. **Bartter's s.**, hypokalemia and hyperplasia of the juxtaglomerular cells, producing hypokalemic alkalosis and hyperaldosteronism, characterized by absence of hypertension in the presence of markedly increased plasma renin concentrations, and by insensitivity to the pressor effects of angiotensin. It usually affects children and is perhaps hereditary, and may be associated with other anomalies, such as mental retardation and short stature. Called also *juxtaglomerular cell hyperplasia*. **basal cell nevus s.**, a hereditary disorder consisting of multiple basal cell carcinomas, jaw cysts, characteristic shallow pits of the skin of the hands and feet, multiple bony anomalies, and other defects; called also *nevus basal cell carcinoma s.*, *nevus basalioma s.*, *Gorlin's s.*, and *Gorlin-Goltz s.* **Bassen-Kornzweig s.**, abetalipoproteinemia. **battered-child s.**, multiple traumatic lesions of the bones and soft tissues of young children, often accompanied by subdural hematomas; such lesions are usually willfully inflicted by an adult. Called also *abused child s.* **Beau's s.**, asystole. **Beckwith's s.**, a hereditary disorder marked by extreme cytomegaly of the fetal adrenal cortex, omphalocele, macroglossia, hyperplasia of the kidney and pancreas, Leydig-cell hyperplasia, and postnatal gigantism. **Beckwith-Wiedemann s.**, **EMG s.** **Behçet's s.**, severe uveitis and retinal vasculitis, optic atrophy, and aphtha-like lesions of the mouth and genitalia, often with other signs and symptoms suggesting a diffuse vasculitis; a rare disorder of unknown etiology, it most often affects young males. **s. of Benedikt**, a syndrome consisting of ipsilateral oculomotor paralysis, contralateral hyperkinesia, contralateral tremor and paresis of the arm and leg, and ipsilateral ataxia; caused by lesions that damage the third nerve and involve the nucleus ruber and corticospinal tract. **Bernard's s.**, **Bernard-Horner s.**, **Horner's s.** **Bernard-Sergent s.**, diarrhea, vomiting, and collapse characteristic of Addison's disease. **Bernard-Soulier s.**, a hereditary coagulation disorder marked by mild thrombocytopenia, giant and morphologically abnormal platelets, hemorrhagic tendency, prolonged bleeding time, and abnormal prothrombin consumption. **Bernhardt-Rot s.**, meralgia paraesthetica. **Bernheim's s.**, right heart failure with absence of dyspnea or pulmonary congestion, in the presence of gross left ventricular hypertrophy, sometimes attributed to impairment of right ventricular capacity and filling. **Bertolotti's s.**, sacralization of the fifth lumbar vertebra together with sciatica and scoliosis. **Bianchi's s.**, a sensory aphasic syndrome with apraxia and alexia, seen in lesions of the left parietal lobe. **Biedl's s.**, **Biernond's s.**, **Laurence-Biedl s.** **Björnstad's s.**, congenital cochlear deafness with pili torti. **Blatin's s.**, hydatid thrill. **blind loop s.**, a syndrome resulting from alterations in the anatomy of the small intestine, as by strictures or after surgery, in which a loop is disconnected from the main stream or when intestinal contents may gain access to it but not readily egress from it; it is associated with bacterial overgrowth, particularly anaerobic organisms, with resultant malabsorption of vitamin B₁₂, steatorrhea, and anemia. **Bloch-Sulzberger s.**, **incontinentia pigmenti**. **Bloom's s.**, dwarfism, photosensitivity, and butterfly telangiectatic erythema of the face, with numerous defects of skin pigmentation, keratinization, dentition, and development; it is transmitted as an autosomal recessive trait. **blue diaper s.**, a defect of tryptophan absorption in which, because of intestinal bacterial action on the tryptophan, the urine contains abnormal indoles, giving it a blue color. It is similar to Hartnup's disease. **Blum's s.**, hypochloremic azotemia. **body of Luys s.**, hemiballismus. **Boerhaave's s.**, spontaneous rupture of the esophagus. **Bonnevie-Ullrich s.**, a condition characterized by pterygium colli, lymphangiectatic edema of hands and feet, ocular hypertelorism, short stature, and other developmental anomalies. **Bonnier's s.**, a series of symptoms due to lesion of Deiters' nucleus or of the vestibular tracts related thereto; it consists of vertigo, pallor, and various aural and ocular disturbances. **Böök's s.**, **PHC s.** **Börjeson's s.**, **Börjeson-Forssman-Lehmann s.**, a hereditary syndrome, transmitted as an X-linked recessive trait, character-

ized by severe mental retardation, epilepsy, hypogonadism, hypometabolism, marked obesity, swelling of the subcutaneous tissues of the face, and large ears. **Bouillaud's s.**, the coincidence of pericarditis and endocarditis in acute articular rheumatism. **Bouveret's s.**, paroxysmal tachycardia. **brachial s.**, a morbid condition resulting from compression or irritation of nerves of the brachial plexus. **Brachmann-de Lange s.**, de Lange's s. **bradycardia-tachycardia s.**, episodic or repetitive tachycardia of short duration followed by transient or protracted heart standstill, sometimes accentuated by quinidine. **brain s.**, see *acute brain s.*, *chronic brain s.*, and *organic brain s.* **Brennemann's s.**, mesenteric and retroperitoneal lymphadenitis as a sequel of throat infections. **Briquet's s.**, shortness of breath and aphonia dependent on hysterical paralysis of the diaphragm. **Brissaud-Marie s.**, hysterical glossolabial hemispasm. **Brissaud-Sicard s.**, spasmodic hemiplegia caused by lesions of the pons. **Bristowe's s.**, a series of ingravescent symptoms characteristic of tumor of the corpus callosum: (1) gradual onset of hemiplegia; (2) association of hemiplegia on one side, vague hemiplegic symptoms on the other; (3) stupor and drowsiness, difficulty of swallowing, and speechlessness; (4) absence of direct implication of the cranial nerves; (5) death from coma. **brittle cornea s.**, an X-linked, recessively inherited syndrome, characterized by brittle cornea, blue sclerae, and red hair. **Brock s.**, middle lobe s. **Brown's vertical retraction s.**, adhesion of the muscles of the eye in the fetus. **Brown-Séquard s.**, a syndrome due to damage of one half of the spinal cord, resulting in ipsilateral paralysis and loss of discriminatory and joint sensation, and contralateral loss of pain and temperature sensation. Called also *Brown-Séquard's disease*, *paralysis*, or *sign*. **Brun's s.**, intermittent headache, vertigo, vomiting, and visual disturbances on sudden movement of the head, characteristic of cysticercus infection of the fourth ventricle, lesion of the fourth ventricle, or tumors of the midline of the cerebellum and third or lateral ventricles; called also *Brun's sign*. **Brunsting's s.**, a recurrent eruptive syndrome usually affecting middle-aged men, in which grouped, vesicular lesions occur about the head and neck, and result in scarring. **Brushfield-Wyatt s.**, a congenital syndrome consisting of extensive unilateral nevus flammeus, hemianopia affecting the right or left halves of the visual fields of both eyes, contralateral hemiplegia, cerebral angioma, and mental retardation; it is probably related to the Sturge-Weber syndrome. **Budd-Chiari s.**, symptomatic obstruction or occlusion of the hepatic veins, usually of unknown origin, but probably caused by a variety of circumstances, including neoplasms, strictures, liver disease, trauma, systemic infections, and hematologic disorders. It occurs in two forms: The *acute* form is characterized by abdominal and epigastric pain accompanied by rapid progressive enlargement and tenderness of the liver, massive ascites, and mild jaundice; the onset may be sudden and dramatic, with death occurring within a few hours or days, or it may be less dramatic with death occurring within 30 days. The *chronic* form is characterized by insidious onset, gradual enlargement of the liver, ascites, abdominal tenderness and pain of variable degree, vomiting, nausea, and edema of the lower extremities; death occurs after months or even years. Called also *Budd-Chiari disease*, *Chiari's disease or syndrome*, and *endophlebitis hepatica obliterans*. **bulbar s.**, Dejerine's syndrome, def. 2. **Bürger-Grütz s.**, hyperlipoproteinemia, type I. **Burnett's s.**, milk-alkali s. **burning feet s.**, Gopalan's s. **Buschke-Ollendorff s.**, dermatofibrosis lenticularis disseminata. **Bywaters' s.**, crush s. **Caffey's s.**, Caffey-Silverman s., infantile cortical hyperostosis. **callosal s.**, an association of symptoms thought to result from a lesion of the corpus callosum. **camptomelic s.**, osteochondrodysplasia associated with flat facies, bowed tibiae with skin dimpling, hypoplastic scapulae, and short vertebrae. **Canada-Cronkwhite s.**, familial gastrointestinal polyposis with ectodermal defects, e.g., nail atrophy, alopecia, and excessive skin pigmentation, and sometimes with protein-losing enteropathy, malabsorption, and deficiency of blood calcium, potassium, and magnesium. **Capgras' s.**, a mental condition in which the patient cannot identify the person appearing before him. **Caplan's s.**, pneumoconiosis associated with rheumatoid arthritis. Radiographically, multiple spherical nodular lesions with clearly demarcated borders are found throughout both lungs. Called also *rheumatoid pneumoconiosis*. **capsular thrombosis s.**, hemiplegia due to thrombosis of a blood vessel supplying the internal capsule. **capsulothalamic s.**, hemiplegia, hemianopia, and perverted pain perception due to lesions of the thalamus and internal capsule. **carcinoid s.**, a symptom complex associated with carcinoid tumors (argentaffinoma) and characterized by attacks of severe cyanotic flushing of the skin lasting from minutes to days and by diarrheal watery stools, bronchoconstrictive attacks, sudden drops in blood pressure, edema, and ascites. Symptoms are caused by secretion by the tumor of serotonin, prostaglandins, and other biologically active substances. Called also *argentaffinoma s.* **cardiofacial s.**, a syndrome of congenital heart disease associated with unilateral partial lower facial paresis, the latter being transient or persistent. **carotid sinus s.**, syncope sometimes associated with convulsive seizures due to overactivity of the carotid sinus reflex when pressure is applied to one or both carotid

sinuses. **carpal tunnel s.**, a complex of symptoms resulting from compression of the median nerve in the carpal tunnel, with pain and burning or tingling paresthesias in the fingers and hand, sometimes extending to the elbow. **Carpenter's s.**, a hereditary disorder, transmitted as an autosomal recessive trait, characterized by acrocephalopolysyndactyly, brachydactyly, peculiar facies, obesity, mental retardation, hypogonadism, and other anomalies. Called also *acrocephalopolysyndactyly type II*. **cartilage-hair hypoplasia s.**, a hereditary syndrome transmitted as an autosomal recessive trait, consisting of short-limbed dwarfism with fine, sparse hair and deficient cellular immunity. **cat's cry s.**, cri du chat s. **cat-eye s.**, **cat's eye s.**, an association of coloboma of the iris and anal atresia; there may also be many other anomalies, including preauricular skin tags or fistulas, hypertelorism, congenital heart disease, skeletal abnormalities, and renal malformations. It is associated with aneuploidy (an extra, acrocentric chromosome slightly smaller than the G-group chromosomes). **cauda equina s.**, dull aching pain of the perineum, bladder, and sacrum, generally radiating in a sciatic fashion, with associated paresthesias and areflexic paralysis, due to compression of the spinal nerve roots. **cavernous sinus s.**, edema of the conjunctiva, proptosis, edema of upper lid and root of the nose, together with paralysis of the third, fourth, and sixth nerves, due to thrombosis of the cavernous sinus. **celiac s.**, see under *disease*. **central cord s.**, injury to the central portion of the cervical spinal cord resulting in disproportionately more weakness or paralysis in the upper extremities than in the lower; pathological change is caused by hemorrhage or edema. **centroposterior s.**, syringomyelic dissociation of sensibility and vasomotor disorders, due to lesions of the centroposterior portion of the gray matter of the spinal cord. **cerebellar s.**, hereditary cerebellar ataxia. **cerebrocardiac s.**, Krishnabher's disease. **cerebrohepato renal s.**, a hereditary disorder, transmitted as an autosomal recessive trait, characterized by craniofacial abnormalities, hypotonia, hepatomegaly, polycystic kidneys, jaundice, and death in early infancy. **cervical s.**, a condition caused by irritation or compression of the cervical nerve roots, marked by pain in the neck radiating into the shoulder, arm, or forearm, depending on which nerve root is affected. **cervical rib s.**, **cervicobrachial s.**, scalenus s. **Cestan's s.**, s. of Cestan-Chenais, an association of contralateral hemiplegia, contralateral hemianesthesia, ipsilateral lateropulsion and hemiasynergia, Horner's syndrome, and ipsilateral laryngoplegia, due to scattered lesions of the pyramid, sensory tract, inferior cerebellar peduncle, nucleus ambiguus, and oculopupillary center. **Cestan-Raymond s.**, Raymond-Cestan s. **chanciform s.**, primary extrapulmonary coccidioidomycosis. **Charcot's s.**, 1. amyotrophic lateral sclerosis. 2. intermittent claudication. 3. intermittent hepatic fever, due to cholangitis. **Charcot-Weiss-Barker s.**, carotid sinus s. **Charlin's s.**, pain, iritis, corneitis, rhinorrhea, and tenderness along the nose in eye disturbance of nasal origin. **Chauffard's s.**, **Chauffard-Still s.**, polyarthritis with fever and enlargement of the spleen and lymph nodes in persons infected with nonhuman tuberculosis. **Chédiak-Higashi s.**, a lethal, progressive, autosomal recessive, systemic disorder associated with oculocutaneous albinism, massive leukocyte inclusions (giant lysosomes), histiocytic infiltration of multiple body organs, development of pancytopenia, hepatosplenomegaly, recurrent or persistent bacterial infections, and a possible predisposition to development of malignant lymphoma. Called also *Béguez César disease* and *Chédiak-Higashi anomaly*. **Chiari's s.**, Budd-Chiari s. **Chiari-Arnold s.**, Arnold-Chiari deformity. **Chiari-Frommel s.**, a postparturient condition characterized by persistent lactation, amenorrhea, and atrophy of the uterus, ovaries, and vaginal tract, and low urinary levels of estrogen and gonadotropins; it may be due to pituitary or hypothalamic dysfunction. Called also *Frommel-Chiari s.*, *Chiari-Frommel disease*, and *Frommel's disease*. **chiasma s.**, **chiasmatic s.**, a syndrome indicative of lesion affecting the optic chiasma: impairment of vision, limitations of the field of vision, central scotoma, headache, vertigo, and syncope. **Chinese restaurant s. (CRS)**, a transient syndrome associated with arterial dilatation, due to ingestion of monosodium glutamate, which is used liberally in seasoning Chinese food; it is characterized by throbbing of the head, lightheadedness, tightness of the jaw, neck, and shoulders, and backache. **Chotzen's s.**, a hereditary disorder, transmitted as an autosomal dominant trait, characterized by acrocephalopolysyndactyly in which the syndactyly is mild and by hypertelorism, ptosis, and sometimes mental retardation. Called also *acrocephalopolysyndactyly type III* and *Saethre-Chotzen s.* **Christian's s.**, Hand-Schüller-Christian disease. **Christ-Siemens s.**, **Christ-Siemens-Touraine s.**, congenital ectodermal defect. **chronic brain s.**, a syndrome resulting from or associated with relatively permanent and more or less irreversible diffuse organic impairment of cerebral tissue function; disturbances of memory, orientation, comprehension, and affect of greater or lesser degree are characteristically present. It may occur in dementia paralytica, cerebral arteriosclerosis, brain trauma, Huntington's chorea, Pick's disease, brain tumor, etc. Abbreviated CBS. **Churg-Strauss s.**, allergic granulomatosis. **Citelli's s.**, mental backwardness, loss of power of concentration, drowsiness or insomnia; seen in persons

with adenoids or sinus infection. **Clarke-Hadfield s.**, congenital pancreatic disease with infantilism; with enlarged liver, bulky fatty stools, and extensive atrophy of pancreas in undersized and underweight child. **Claude's s.**, paralysis of the third (oculomotor) nerve on one side and asynergia on the other side, together with dysarthria; called also *inferior s. of red nucleus* and *rubrospinal cerebellar peduncle s.* **Claude Bernard-Horner s.**, Horner's s. **Clérambault-Kandinsky s.**, see under *complex*. **click s.**, a left ventricular abnormality marked by apical midsystolic click and late murmur, with inversion of T waves. **closed head s.**, the complex of symptoms characteristic of cerebral injury without cranial penetration. **Clough and Richter's s.**, anemia in which the red corpuscles exhibit a severe degree of autoagglutination. **Clouston's s.**, hidrotic ectodermal dysplasia. **Cockayne's s.**, a hereditary syndrome transmitted as an autosomal recessive trait, consisting of dwarfism with retinal atrophy and deafness, associated with progeria, prognathism, mental retardation, and photosensitivity. **Cogan's s.**, nonsyphilitic keratitis with vestibuloauditory symptoms. **Collet's s.**, **Collet-Sicard s.**, glossaryngoscapulopharyngeal hemiplegia due to complete lesion of the ninth, tenth, eleventh and twelfth cranial nerves. **compression s.**, shock with hematuria and oliguria following long continued pressure on a limb, as in bombed buildings. **concussion s.**, encephalopathy due to trauma; see *postconcussional s.* **Conn's s.**, primary aldosteronism. **Conradi's s.**, chondrodystrophia calcificans congenita. **Cornelia de Lange's s.**, *de Lange's s.* **s. of corpus striatum**, **Vogt's s.** **Costen's s.**, temporomandibular joint s. **costoclavicular s.**, pain or other difficulties in the arm and/or hand, apparently due to pressure, stretching, or friction on the nerves or vessels at the cervicobrachial outlet. **Cotard's s.**, paranoia with delusions of negation, a suicidal tendency, and sensory disturbances. **Courvoisier-Terrier s.**, dilatation of the gallbladder, retention jaundice, and discoloration of the feces, indicating obstruction due to a tumor of the ampulla of Vater. **Creutzfeldt-Jakob s.**, a rare, usually fatal, transmissible spongiform viral encephalopathy, occurring in middle life in which there is partial degeneration of the pyramidal and extrapyramidal systems accompanied by progressive dementia and sometimes wasting of the muscles, tremor, athetosis, and spastic dysarthria. Called also *Creutzfeldt-Jakob disease*, *Jakob's disease*, *Jakob-Creutzfeldt disease*, and *spastic pseudoparalysis*. **cri du chat s.**, a hereditary congenital syndrome characterized by hypertelorism, microcephaly, severe mental deficiency, and a plaintive catlike cry, due to deletion of the short arm of chromosome 5. Called also *cat's cry s.* **Crigler-Najjar s.**, a congenital familial form of nonhemolytic jaundice, due to the absence of the hepatic enzyme glucuronide transferase, transmitted as an autosomal recessive trait. It is characterized by the presence in the blood of excessive amounts of unconjugated bilirubin and by kernicterus and severe disorders of the central nervous system. Called also *congenital hyperbilirubinemia* and *congenital non-hemolytic jaundice*. **s. of crocodile tears**, spontaneous lacrimation occurring parallel with the normal salivation of eating. It follows facial paralysis and seems to be due to straying of the regenerating nerve fibers, some of those destined for the salivary glands going to the lacrimal glands. **Cronkhite's s.**, **Cronkhite-Canada s.**, *Canada-Cronkhite s.* **CRST s.**, diffuse progressive scleroderma in which calcinosis, Raynaud's phenomenon, sclerodactyly, and telangiectasia are prominent. **crush s.**, the edema, oliguria, and other symptoms of renal failure which follow the crushing of a part, especially a large muscle mass; see *lower nephron nephrosis*, under *nephrosis*. **Cruveilhier-Baumgarten s.**, cirrhosis of the liver with portal hypertension, associated with congenital patency of the umbilical or paraumbilical veins. It is characterized by hematemesis, ascites, splenomegaly, hypersplenism, esophageal varices, caput medusae, large tortuous veins in the abdominal wall, and a venous hum, often accompanied by a thrill, usually heard over the region of the xiphoid process. Called also *Cruveilhier-Baumgarten cirrhosis*. **cryptophthalmos s.**, an autosomal recessive abnormality, characterized by absence of the palpebral apertures, disorganization of one or both ocular globes, malformed ears, cleft palate, laryngeal stenosis, syndactyly, meningoencephalocele, imperforate anus, cardiac defects, and maldeveloped kidneys. **cubital tunnel s.**, a complex of symptoms resulting from injury or compression of the ulnar nerve at the elbow, with pain and numbness along the ulnar aspect of the hand and forearm, and weakness of the hand. **culture specific s.**, a form of disturbed behavior highly specific to certain cultural systems and that does not conform to Western nosologic entities; see also *hysterical psychosis*, under *psychosis*. **Curtius' s.**, hypertrophy of one side of the entire body or a portion of one side of the body, as of the face; called also *hemihypertrophy*. **Cushing's s.**, 1. a condition, more commonly seen in females, due to hyperadrenocorticism resulting from neoplasms of the adrenal cortex or the anterior lobe of the pituitary, or to prolonged excessive intake of glucocorticoids for therapeutic purposes (*Cushing's s. medicamentosus* or *iatrogenic Cushing's s.*). The symptoms and signs may include rapidly developing adiposity of the face, neck, and trunk, kyphosis caused by osteoporosis of the spine, hypertension, diabetes mellitus, amenorrhea, hypertrichosis (in females), impotence (in males),

dusky complexion with purple markings (striae), polycythemia, pain in the abdomen and back, and muscular wasting and weakness. When secondary to excessive pituitary secretion of adrenocorticotropin, it is known as Cushing's disease. Called also *Cushing's basophilism*, and *pituitary basophilism*. 2. in tumors of the cerebellopontine angle and acoustic tumors: subjective noises, impairment of hearing, ipsilateral cerebellar ataxia, and eventually ipsilateral impairment of the sixth and seventh nerve function together with elevated intracranial pressure. **Cushing's s. medicamentosus**, see *Cushing's s.*, def. 1. **Cyriax's s.**, a syndrome due to slipped rib cartilages pressing on the nerves at the interchondral joint, resulting in pain in the region of the cartilage, radiation of pain to the shoulder and arm, or pain similar to that of angina pectoris. **Da Costa's s.**, neurocirculatory asthenia. **Danbolt-Closs s.**, acrodermatitis enteropathica. **Dandy-Walker s.**, congenital hydrocephalus due to obstruction of the foramina of Magendie and Luschka; called also *Dandy-Walker deformity*. **Danlos' s.**, Ehlers-Danlos s. **Debré-Sémélaigne s.**, hereditary athyrotic cretinism associated with myotonia and muscular pseudohypertrophy, inherited as an autosomal recessive trait. Called also *Kocher-Debré-Sémélaigne s.* **defibrination s.**, diffuse intravascular coagulation; see under *coagulation*. **Degos' s.**, malignant papulosis. **Dejerine's s.**, 1. a syndrome in cortical sensory disturbances characterized by impairment of sensory discrimination (astereognosis), judgment of intensity and recognition of differences. 2. of bulbar lesions, those in the upper part of the bulb produce paralysis of the twelfth nerve of the side of the lesion and hemiplegia on the opposite side; lesions in the lower part of the bulb cause paralysis of the larynx and soft palate. 3. symptoms of radiculitis; namely, distribution of the pain, motor and sensory defects in the region of the radicular or segmental disturbance of the nerve roots rather than along the course of the peripheral nerve. 4. a syndrome resembling tabes dorsalis, with deep sensibility depressed but tactile sense normal. It is due to lesion of the long root fibers of the posterior column. **Dejerine-Klumpke s.**, Klumpke's paralysis. **s. of Dejerine-Roussy**, thalamic s. **Dejerine-Sottas s.**, progressive hypertrophic interstitial neuropathy. **de Lange's s.**, a congenital syndrome in which severe mental retardation is associated with many abnormalities, including short stature (Amsterdam dwarf), brachycephaly, low-set ears, webbed neck, carp mouth, depressed bridge of the nose with the end tilted up and forward-directed nostrils, bushy eyebrows meeting at the midline, unruly coarse hair growing low on the forehead and neck, and flat spadelike hands with short tapering fingers. Called also *Brachmann-de Lange s.*, *Cornelia de Lange's s.*, and *typhus degenerativus amstelodamensis*. **Dennie-Marfan s.**, spastic paralysis and mental retardation in association with congenital syphilis. **depersonalization s.**, see under *neurosis*. **De Sanctis-Cacchione s.**, a hereditary syndrome, transmitted as an autosomal recessive trait, consisting of xeroderma pigmentosum associated with mental retardation, retarded growth, gonadal hypoplasia, and sometimes with neurologic complications and photosensitivity; called also *xerodermic idiocy*. **de Toni-Fanconi s.**, see *Fanconi's s.*, def. 2. **diencephalic s.**, failure to thrive, emaciation, and sometimes nevus unius lateralis. **DiGeorge's s.**, a congenital syndrome in which absence of the thymus and parathyroids due to defective development of the third and fourth embryonic pharyngeal pouches is associated with impairment of cell-mediated immunity and normal levels of immunoglobulins; it is characterized clinically by neonatal tetany, hypocalcemia, frequent viral and fungal infections, and, often, deformities of the ears, nose, mouth, and great vessels. Called also *thymic-parathyroid aplasia*. Cf. *Nezelof's s.* **Dighton-Adair s.**, van der Hoeve's s. **Di Guglielmo s.**, erythroleukemia. **Donohue's s.**, leprechaunism. **Down's s.**, a condition characterized by a small, anteroposteriorly flattened skull, short, flat-bridged nose, epicanthal fold, short phalanges, and widened space between the first and second digits of hands and feet, with moderate to severe mental retardation, and associated with a chromosomal abnormality, usually trisomy of chromosome 21 (Denver classification). Called also *mongolism* and *trisomy 21 s.* **Dresbach's s.**, elliptocytosis. **Dressler's s.**, postmyocardial infarction s. **Duane's s.**, a hereditary congenital syndrome in which the affected eye shows limitation or absence of abduction, restriction of adduction, retraction of the globe on adduction, narrowing of the palpebral fissure on adduction and widening on abduction, and deficient convergence. It is transmitted as an autosomal dominant trait. Called also *retraction s.* and *Stillington-Turk-Duane s.* **Dubin-Johnson s.**, a familial chronic form of nonhemolytic jaundice thought to be due to a defect in the excretion of conjugated bilirubin and certain other organic anions (e.g., sulfobromophthalein) by the liver. It is characterized by the presence of a brown, coarsely granular pigment in the hepatic cells, which is pathognomonic of the condition. **Dubin-Sprinz s.**, **Dubin-Johnson s.** **Dubreuil-Chambardel s.**, caries of the upper incisor teeth in persons between the ages of fourteen and seventeen followed after an interval by caries in the other teeth. **Duchenne's s.**, the collective signs of bulbar paralysis. **Duchenne-Erb s.**, see under *paralysis*. **dumping s.**, a complex reaction probably due to excessively rapid emptying of the gastric contents, manifested by nausea, weakness, sweating,

palpitation, varying degrees of syncope, often a sensation of warmth, and sometimes diarrhea, occurring after ingestion of food by patients who have had partial gastrectomy and gastrojejunostomy. Called also *jejunal s.* and *postgastrectomy s.* **Duplay's s.**, (obs.), subacromial or subdeltoid bursitis; see *calcific tendinitis*, under *tendinitis*. **Dupré's s.**, meningism, def. 1. **Dyke-Davidoff s.**, a syndrome possibly due to injury to or severe disease affecting one side of the brain during the neonatal period, characterized by mental retardation, asymmetry of the face, and varying degrees of hemiplegia, neurological impairment, and atrophy of the side of the body contralateral to the lesion. **dysglandular s.**, the series of symptoms caused by an abnormality of the internal secretions (hormones). **dysplasia oculodentodigitalis s.**, oculodentodigital dysplasia. **Eaton-Lambert s.**, a myasthenia-like syndrome in which the weakness usually affects the limbs, and ocular and bulbar muscles are spared; there is reduced muscle action potential on stimulation of its nerve but with repetitive stimulation it becomes augmented. It is often associated with oat-cell carcinoma of the lung. Called also *myasthenic s.* **ectopic ACTH s.**, a condition in which tumors arising from nonendocrine tissue produce ACTH. Depending on its duration, the syndrome may resemble true Cushing's disease, but hypokalemic alkalosis and weakness are often the dominant manifestations. **Eddowes' s.**, blue sclera associated with osteogenesis imperfecta (q.v.). **Edwards' s.**, trisomy 18 s. **effort s.**, neurocirculatory asthenia. **egg-white s.**, biotin deficiency; see *biotin*. **Ehlers-Danlos s.**, a congenital hereditary syndrome characterized by hyperextensibility of the joints and hyperelasticity and fragility of the skin with poor healing of wounds, leaving scars resembling parchment, by capillary fragility, and by subcutaneous mucinous or fatty nodules following trauma. It occurs in many types with wide variability of expression, the classic type being inherited as an autosomal dominant trait. Called also *Danlos's s.*, *cutis elastica*, *cutis hyperelastica*, *elastic skin*, and *India rubber skin*. **Eisenmenger's s.**, ventricular septal defect with pulmonary hypertension and cyanosis due to right-to-left (reversed) shunt of blood. Sometimes defined as pulmonary hypertension (pulmonary vascular disease) and cyanosis with the shunt being at the atrial, ventricular, or great vessel area. **Ekbom s.**, restless legs; see under *leg*. **Ellis-van Creveld s.**, chondroectodermal dysplasia. **EMG s.**, a congenital syndrome inherited as an autosomal recessive trait, characterized by exophthalmos, macroglossia, and gigantism, often associated with visceromegaly, adrenocortical cytomegaly, and dysplasia of the renal medulla. Called also *Beckwith-Wiedemann s.* and *exophthalmos-macroglossia-gigantism s.* **empty-sella s.**, a clinical syndrome in which the diaphragma sellae is vestigial, the sella turcica forms an extension of the subarachnoid space and is filled with cerebrospinal fluid, and the pituitary fossa appears to be empty, although the pituitary gland is present in a flattened form. **encephalotrigeminal vascular s.**, the combination of multiple angiomas of the brain and vascular nevi in the trigeminal region. **epiphyseal s.**, precocious development of external genitalia and sexual function, precocious abnormal growth of long bones, appearance of signs of internal hydrocephalus, absence of all other motor and sensory symptoms indicating lesion of the pineal body. Called also *Pellizzi's s.*, *pineal s.*, and *macrogenitosomia precoc.* **Epstein's s.**, nephrotic s. **Erb's s.**, the totality of signs of myasthenia gravis. **erythrocyte autosenesitization s.**, autoerythrocyte sensitization s. **euthyroid sick s.**, the simulation of hypothyroidism as assessed by thyroid-function tests in a euthyroid patient suffering from systemic illness. **exophthalmos-macroglossia-gigantism s.**, EMG s. **extrapyramidal s.**, any of a group of clinical disorders characterized by abnormal involuntary movements, including parkinsonism, athetosis, and chorea. **Faber's s.**, hypochromic anemia. **Fabry's s.**, see under *disease*. **Fallot's s.**, tetralogy of Fallot. **Fanconi's s.**, 1. a rare hereditary disorder, transmitted in a recessive manner and having a poor prognosis, characterized by pancytopenia, hypoplasia of the bone marrow, and patchy brown discoloration of the skin due to the deposition of melanin, and associated with multiple congenital anomalies of the musculoskeletal and genitourinary systems. Called also *Fanconi's pancytopenia*, *pancytopenia-dysmelia s.*, *congenital hypoplastic anemia*, *constitutional infantile pancytopenia*, *Fanconi's anemia*, and *congenital pancytopenia*. 2. a general term for a group of diseases marked by dysfunction of the proximal renal tubules, with generalized hyperaminoaciduria, renal glycosuria, hyperphosphaturia, and bicarbonate and water loss; the most common cause is cystinosis (q.v.) but it is also associated with other genetic diseases and occurs in idiopathic and acquired forms. When unassociated with cystinosis, the disorder is also called *de Toni-Fanconi syndrome*. **Farber's s.**, **Farber-Uzman s.**, a progressive form of lipodosis manifest at birth or within the first few months of life, transmitted as an autosomal recessive trait, and characterized by irritability, hoarse cry, nodular erythematous swellings with a predisposition for the extremities, cardiopulmonary and central nervous system involvement, and death occurring by two years of age. Called also *Farber's lipogranulomatosis*. **Favre-Racouchot s.**, nodular elastoidosis. **Felty's s.**, a combination of chronic (rheumatoid) arthritis, splenomegaly, leukopenia, pigmented spots on the skin

of the lower extremities, and other inconsistent evidence of hypersplenism, namely, anemia and thrombocytopenia. **feminizing testes s.**, testicular feminization s. **fertile eunuch s.**, a syndrome of eunuchoidism, with variable secondary sexual development, associated with normal spermatogenesis, normal levels of follicle-stimulating hormone, and variably low levels of luteinizing hormone. **fetal alcohol s.**, a syndrome of altered prenatal growth and morphogenesis occurring in infants born of women who were chronically alcoholic during pregnancy; it includes maxillary hypoplasia, prominence of the forehead and mandible, short palpebral fissures, microphthalmia, epicanthal folds, severe growth retardation, mental retardation, and microcephaly. **fetal face s.**, Robinow's s. **Fiessinger's s.**, Stevens-Johnson s. **Fiessinger-Leroy-Reiter s.**, Reiter's disease. **first arch s.**, malformations including macrostomia, hemignathia, and deformities of the external ear, resulting from an inhibitory process occurring toward the seventh week of embryonic life and affecting the facial bones derived from the first branchial arch. **Fitz's s.**, a series of symptoms indicative of acute pancreatitis, consisting of epigastric pain, vomiting, collapse, followed within twenty-four hours by a circumscribed swelling in the epigastrium or by tympanites. **Fitz-Hugh-Curtis s.**, perihepatitis occurring as a complication of gonorrhea in women, marked by fever, upper quadrant pain, tenderness and spasm of the abdominal wall, and occasionally by friction rub over the liver. **floppy infant s.**, a congenital myopathy of infants, characterized clinically by hypotonia and muscle weakness. The pathologic changes in skeletal muscle include numerous eosinophilic intranuclear crystals, characteristic crystal morphology, myofibrillar fragmentation, sarcoplasmic crystals, and expansion of the Z bands. **floppy valve s.**, mitral regurgitation due to myxomatous transformation of the leaflets of the mitral valve. **focal dermal hypoplasia s.**, a hereditary congenital syndrome of extensive ectodermal and mesodermal dysplasia, chiefly of skin and bones, with linear or serpiginous patches (especially on the buttocks and thighs), telangiectases, pigmentation, and orificial papillomas, often with syndactyly, oligodactyly, or adactyly. An X-linked dominant trait, lethal in the male, is believed responsible. Called also *Goltz's s.* and *Goltz-Gorlin s.* **Forbes-Albright s.**, spontaneous persistent nonpuerperal lactation, most often associated with a pituitary tumor. **Forssman's carotid s.**, neurologic disturbances following injection of a small dose of serum containing Forssman's antibodies into the carotid artery of a guinea pig, including disequilibrium, rotatory movement along the vertical and the longitudinal axes, forced deviation of the eyeballs, and nystagmus. **Foster Kennedy s.**, Kennedy's s. **four-day s.**, respiratory distress syndrome of newborn; so called because the infant usually recovers or dies within four days. **Foville's s.**, a syndrome similar to the Millard-Gubler syndrome (q.v.) except that, in addition to paralysis of the outward movement of the eye, there is paralysis of conjugate movement. **Franceschetti s.**, mandibulofacial dysostosis. **Franceschetti-Jadassohn s.**, Naegeli's s. **François's s.**, oculomandibulofacial s. **Freeman-Sheldon s.**, craniocarpotarsal dystrophy. **Frey's s.**, auriculotemporal s. **Friderichsen-Waterhouse s.**, Waterhouse-Friderichsen s. **Friedmann's vasomotor s.**, a train or cycle of symptoms due to a progressive subacute encephalitis of traumatic origin, including a sense of fullness in the head, headache, vertigo, irritability, insomnia, easy fatigability, and defect of memory. **Fröhlich's s.**, adiposogenital dystrophy. **Froin's s.**, a condition of the lumbar spinal fluid consisting of a transparent clear yellow color (xanthochromia), with the finding of large amounts of protein, rapid coagulation, and the absence of an increased number of cells. It is seen in certain organic nervous diseases in which the lumbar fluid is cut off from communication with the fluid in the ventricles. Called also *loculation s.* **Frommel-Chiari s.**, Chiari-Frommel s. **Fuchs's s.**, unilateral heterochromia, fine keratic precipitates, and secondary cataract. **G s.**, hypertelorism-hypospadias s. **Gailliard's s.**, dextrocardia from retraction of lungs and pleura to the right. **Gaisböck's s.**, stress polycythemia. **Ganser's s.**, amnesia, disturbance of consciousness, and hallucinations, generally of hysterical origin; the condition is marked by senseless answers to questions and by absurd acts. Called also *acute hallucinatory mania* and *nonsense s.* **Gardner's s.**, familial polyposis of the large bowel (with malignant potential), supernumerary teeth, fibrous dysplasia of the skull, osteomas, fibromas, and epithelial cysts. **Gardner-Diamond s.**, autoerythrocyte sensitization s. **Gasser's s.**, hemolytic-uremic s. **gastrocardiac s.**, a concept wherein disturbances of the circulatory system, particularly of the heart, are attributed to faulty function of the stomach. **Gee-Hertler-Heubner s.**, the infantile form of nontropical sprue. **Gélineau's s.**, narcolepsy. **gender dysphoria s.**, a group of psychological problems associated with discrepancy between the physical sex assignment and the psychological gender identity. **general adaptation s.**, the total of all nonspecific systemic reactions of the body to long-continued exposure to systemic stress. **Gerhardt's s.**, bilateral abductor paralysis of the vocal cords causing inspiratory dyspnea. **Gerlier's s.**, Gerlier's disease. **Gerstmann's s.**, a combination of finger agnosia, right-left disorientation, agraphia, acalculia, and often constrictional apraxia,

due to a lesion in the angular gyrus of the dominant hemisphere. **Gianotti-Crosti s.**, an acute transient dermatitis usually occurring in girls under the age of six, marked by the sudden appearance of nonpruritic asymmetrically distributed, red to purple, flat, dome-shaped, or pointed papules, which later assume a natural skin color, on the lower arms and thighs, the trunk, and sometimes the area around the front of the axillae; often accompanied by malaise, fever, respiratory or gastrointestinal symptoms, and lymphadenopathy. Called also *acrodermatitis papulosa infantum*. **Gilbert's s.**, see under *disease*. **Gilles de la Tourette's s.**, a syndrome of facial and vocal tics with onset in childhood, progressing to generalized jerking movements in any part of the body, with echolalia and coprolalia; once thought to have an unfavorable prognosis but recently shown to be responsive to treatment with butyrophrenones. **glioma-polypsis s.**, Turcot s. **global s.**, a syndrome affecting infants between three and seven months of age who have been placed in a strange milieu; they are intensely preoccupied with scanning the new environment but are blankly unresponsive to the persons in it. Other symptoms include disturbances in eating and excessive sleepiness. **glomangiomas-osteous malformation s.**, a congenital disorder, transmitted as an autosomal dominant trait, characterized by multiple glomus tumors with hypoplasia and osteoporosis of the bones of the affected extremity. **Goldenhar's s.**, oculoauriculovertebral dysplasia. **Goltz's s.**, **Goltz-Gorlin s.**, focal dermal hypoplasia s. **Goodpasture's s.**, glomerulonephritis associated with hemoptysis, an uncommon, rapidly progressive, usually fatal condition affecting chiefly young men; it regularly begins with respiratory infection, variable pulmonary infiltrations, hemoptysis, and anemia, followed by a rapidly progressive renal disease in which hematuria, proteinuria, hypertension, and progressive azotemia are features. An antibody directed against the alveolar basement membrane of the lungs and the glomerular basement membrane of the kidneys has been implicated. **Gopalan's s.**, a symptom complex resulting from malnutrition, with signs suggestive of riboflavin deficiency, a burning sensation in the extremities, a feeling of "pins and needles" in the distal parts, and hyperhidrosis. **Gorlin's s.**, 1. basal cell nevus s. 2. Gorlin-Chaudhry-Moss s. **Gorlin-Chaudhry-Moss s.**, a syndrome consisting of craniofacial dysostosis, hypertrichosis, hypoplasia of labia majora, dental and eye abnormalities, and patent ductus arteriosus. Called also *Gorlin's s.* **Gorlin-Goltz s.**, basal cell nevus s. **Gorlin-Psaume s.**, orofaciocutaneous s. **Gougerot-Carteaud s.**, confluent and reticulated papillomatosis. **Gougerot-Nulock-Houwer s.**, Sjögren's s. **Gowers' s.**, vasovagal attack. **Gradenigo's s.**, palsy of the sixth nerve and unilateral headache in suppurative disease of the middle ear, caused by involvement of the abducens and trigeminal nerves by direct spread of the infection. **Graham Little s.**, lichen planus associated with acuminate follicular papules and alopecia. **gray s.**, a potentially fatal condition seen in neonates, particularly premature infants, due to a reaction to chloramphenicol, characterized by an ashen gray cyanosis, listlessness, weakness, and hypotension. **gray spinal s.**, muscular atrophy, syringomyelic disturbances of sensation, and vasomotor troubles, due to lesions of the gray matter of the spinal cord. **Greig's s.**, ocular hypertelorism. **Grönblad-Strandberg s.**, angioid streaks in the retina together with pseudoxanthoma elasticum of the skin. **Gruber's s.**, Meckel's s. **Guillain-Barré s.**, acute febrile polyneuritis. **Gunn's s.**, unilateral ptosis of the eyelid, with the association of movements of the affected upper eyelid with those of the jaw; called also *jaw-winking s.* **gustatory sweating s.**, auriculo-temporal s. **Hadfield-Clark s.**, **Clarke-Hadfield s.** **Hakim's s.**, normal-pressure hydrocephalus. **Hallermann-Streiff s.**, **Hallermann-Streiff-François s.**, oculomandibulofacial s. **Hallervorden-Spatz s.**, a hereditary disorder characterized by marked reduction in the number of the myelin sheaths of the globus pallidus and substantia nigra, with accumulations of iron pigment, progressive rigidity beginning in the legs, choreoathetoid movements, dysarthria, and progressive mental deterioration. Transmitted as an autosomal recessive trait, it usually begins in the first or second decade, with death usually occurring before the thirtieth year. Called also *Hallervorden-Spatz disease*, *status dysmyelinatus*, and *status dysmyelinisatus*. **Hallopeau-Siemens s.**, polydysplastic epidermolysis bullosa. **Hamman's s.**, see under *disease*. **Hamman-Rich s.**, see *idiopathic pulmonary fibrosis*, under *fibrosis*. **hand-foot-uterus s.**, a congenital syndrome consisting of small feet with unusually short great toes, abnormal thumbs, and, in females, duplication of the genital tract. **Hand's s.**, **Hand-Schüller-Christian s.**, **Hand-Schüller-Christian disease**. **hand-shoulder s.**, reflex sympathetic dystrophy of the upper extremity; see under *dystrophy*. **Hanhart's s.**, a congenital syndrome characterized chiefly by severe micrognathia, high nose root, small eyelid fissures, low-set ears, and variable absence of digits or limbs, usually below the elbow or knee. **Hanot's s.**, 1. primary biliary cirrhosis. 2. secondary biliary cirrhosis. **Hanot-Chauffard s.**, hypertrophic cirrhosis with pigmentation and diabetes mellitus. **Harada's s.**, a syndrome, possibly caused by a virus, consisting of uveomeningitis associated with retinohoroidal detachment, temporary or permanent deafness

and blindness, and sometimes, though often transiently, alopecia, vitiligo, and poliosis; called also *Harada's disease*. **Hare's s.**, **Pancoast's s.**, def. 1. **Harris' s.**, hyperinsulinism due to endogenous factors, such as functional disorders of the pancreas or insulinoma, manifested by hypoglycemia, weakness, perspiration, jitteriness, tachycardia, mental confusion, and disturbances of vision. **Hartnup s.**, a hereditary disease characterized by progressive mental deterioration, cerebellar ataxia, a pellagra-like condition of the skin, and aminoaciduria; it is due to a defect of intestinal and renal transport of certain alpha-amino acids and is transmitted as an autosomal recessive trait. **Hassins's s.**, protrusion of the ear on the side of the lesion combined with Horner's syndrome, in disease of the sympathetic nerve in the cervical region. **Hayem-Widal s.**, hemolytic anemia. **heart-hand s.**, **Holt-Oram s.** **Heerfordt's s.**, a rare manifestation of sarcoidosis, consisting of parotitis, uveitis, and cranial nerve paresis. **Heidenhain's s.**, a rapidly progressive degenerative disease manifested by cortical blindness, presenile dementia, dysarthria, ataxia, athetoid movements, and generalized rigidity. **hemangioma-thrombocytopenia s.**, **Kasabach-Merritt s.** **hemohistioblastic s.**, reticuloendotheliosis. **hemolytic-uremic s.**, a rare syndrome of unknown etiology occurring mainly in children under one year of age, characterized by renal failure, microangiopathic hemolytic anemia, and severe thrombocytopenia and purpura. Called also *Gasser's s.* **hemo-pleuropneumonic s.**, dyspnea, hemoptysis, tachycardia, and fever, with dullness at the base of the chest and tubular respiration over the middle zone of the chest; indicative of pneumonia and hydrothorax in puncture wounds of the chest. **hemorrhagic fever s.**, an acute, sometimes fatal syndrome of diverse viral etiologies, marked by severe hemorrhage and shock. In the Philippines and Southeast Asia, it is caused by dengue viruses, in Central and South America by Junin and Machupo viruses, in the U.S.S.R. by Omsk and Crimean hemorrhagic fever viruses, and in Korea by an unidentified virus. **Hench-Rosenberg s.**, palindromic rheumatism. **Henoch-Schönlein s.**, Schönlein-Henoch purpura. **hepatorenal s.**, functional renal failure, oliguria, and low urinary sodium concentration, without pathological renal changes, associated with cirrhosis and ascites or with obstructive jaundice. **hereditary benign intraepithelial dyskeratosis s.**, a syndrome characterized by plaques of the bulbar conjunctiva and by oral mucosal thickenings clinically similar to white-folded hypertrophy (white sponge nevus of Cannon); it is inherited as an autosomal dominant trait with a high degree of penetrance. **Hines-Bannick s.**, intermittent attacks of low temperature and disabling sweating. **Hoffmann-Werdnig s.**, **Werdnig-Hoffmann paralysis**. **Holmes-Adie s.**, **Adie's s.** **Holt-Oram s.**, hereditary heart disease, usually an atrial or ventricular septal defect, associated with skeletal malformation (hypoplastic thumb and short forearm); transmitted as an autosomal dominant trait. Called also *heart-hand s.* **Homén's s.**, a genetically determined disease of the nervous system with prominent abnormalities in the lenticular nucleus, marked by vertigo, ataxia, dysarthria, gradually increasing dementia, with rigidity of the body, especially the legs. **Horner's s.**, **Horner-Bernard s.**, sinking in of the eyeball, ptosis of the upper eyelid, slight elevation of the lower lid, constriction of the pupil, narrowing of the palpebral fissure, anhidrosis and flushing of the affected side of the face; caused by paralysis of the cervical sympathetic nerves. Called also *Bernard's s.*, *Bernard-Horner s.*, and *Horner's ptosis*. **Horton's s.**, 1. migrainous neuralgia. 2. temporal arteritis. **Hunt's s.**, **Ramsay Hunt s.** **Hunter's s.**, **Hunter-Hurley s.**, a form of mucopolysaccharidosis clinically resembling Hurler's syndrome, but without gibbus and corneal clouding and with generally milder symptoms, although corneal opacities may develop later in life; other symptoms may include retinitis pigmentosa, nodular skin lesions, hypertrichosis, papilledema, optic atrophy, progressive deafness, and pulmonary hypertension. It is transmitted as an X-linked recessive trait. Called also *mucopolysaccharidosis II*. **Hurler's s.**, a hereditary disorder considered to be the prototypical form of the mucopolysaccharidoses, characterized by gargoylike facies with hypertelorism, depressed bridge of the nose, large prominent tongue, and widely spaced teeth; dwarf stature; severe somatic and skeletal changes, including short neck and trunk, scaphocephaly, and kyphosis with gibbus; short broad hands with short fingers; severe mental retardation after the first year of life; progressive opacities of the cornea; deafness; cardiovascular defects; hepatosplenomegaly; and joint contractures. It is due to deficiency of the enzyme α -L-iduronidase and is transmitted as an autosomal recessive trait. Called also *Hurler's disease*, *gargoylism*, *lipochondrodystrophy*, and *mucopolysaccharidosis I*. and *I-H*. See also *mucopolysaccharidosis*. **Hurler-Pfaundler s.**, **Hurler's s.** **Hutchinson's s.**, see under *triad*. **Hutchinson-Boeck s.**, sarcoidosis. **Hutchinson-Gilford s.**, progeria. **Hutchison s.**, see under *type*. **hyaline membrane s.**, see *respiratory distress s. of newborn*. **hydralazine lupus s.**, a drug-induced syndrome clinically and pathologically identical to systemic lupus erythematosus, occurring after therapy of long duration and high dosage of hydralazine; called also *hydralazine lupus* and *SLE-like s.* **17-hydroxylase deficiency s.**, congenital adrenal hyperplasia re-

sulting from a deficiency of the enzyme 17- α -hydroxylase, leading to a deficiency of estrogen and androgen and consequent sexual infantilism; the compensatory increase in secretion of deoxycorticosterone and corticosterone results in hypokalemic alkalosis and hypertension. **hyperabduction s.**, thoracic outlet syndrome due to compression of the brachial plexus trunk roots and axillary vessels by the pectoralis minor muscle and the coracoid process when the arms are stretched above the head, as during sleep. **hypercalcemia s.**, milk-alkali s. **hyper eosinophilic s.**, a massive increase in the number of eosinophils in the blood, mimicking leukemia, and characterized by eosinophilic infiltration of the heart, brain, liver, and lungs and by a progressively fatal course. **hyperkinetic s.**, a childhood disorder that usually abates during adolescence, characterized by hyperactivity, fidgetiness, excitability, impulsiveness, distractibility, short attention span, low tolerance for frustration, and difficulties in learning and perceptual motor function. Some cases are believed to be associated with brain damage and psychoses, but the specific causes of most cases has not been determined. Called also *hyperactivity* and *hyperkinesia*. **hyperkinetic heart s.**, increased cardiac output of unknown cause associated with slightly elevated systolic and pulse pressures, normal mean arterial pressure, and low systemic vascular resistance. **hyperlucent lung s.**, a syndrome simulating localized emphysema, but due to congenital absence or hypoplasia of pulmonary arteries; there may be lobar or segmental agenesis, and accessory lungs, lobes, or segments are not unusual. **hyperophthalmopathic s.**, proptosis, paresis of the external ocular muscles, swelling of the lids, edema of the conjunctiva, and retrobulbar pain. **hypersomnia-bulimia s.**, Kleine-Levin s. **hypertelorism-hypopspadias s.**, a congenital condition consisting of hypertelorism associated with hypopspadias and a neuromuscular abnormality of the esophagus and swallowing mechanism. Called also *G s.* **hyperventilation s.**, an emotional disorder in which rapid deep breathing caused by emotional tension, anxiety, or acute fear produces giddiness and clouding of consciousness, and sometimes apprehension, confusion, numbness of the hands and face, muscular cramps of the hands and feet, and a sense of air hunger. **hyperviscosity s.**, any syndrome associated with increased viscosity of the blood. In the *syndrome of serum hyperviscosity*, there is spontaneous bleeding and neurologic and ocular disorders. The *syndrome of polycythemic hyperviscosity*, in which increased viscosity is due to large numbers of red cells, is marked by retarded blood flow, organ congestion, reduced capillary perfusion, and increased cardiac effort. *Syndromes of sclerocythemic hyperviscosity* comprise those in which the deformability of erythrocytes is impaired, as in sickle cell anemia. **hypophyseal s.**, adiposogenital dystrophy. **hypoplastic left-heart s.**, a congenital malformation consisting of hypoplasia or atresia of the left ventricle and of the aorta or mitral valve or both, and characterized by respiratory distress and extreme cyanosis, with cardiac failure and death in early infancy. **inferior s. of red nucleus**, Claude's s. **inspissated bile s.**, biliary obstruction caused by plugging of the outflow tract. **intrauterine parabiotic s.**, placental transfusion s. **irritable bowel s.**, irritable colon s., see *mucous colitis*, under *colitis*. **Ivemark's s.**, congenital splenic agenesis, cardiac defects, and partial situs inversus viscerum; called also *asplenia s.* and *Polhemus-Schafer-Ivemark s.* **Jaccoud's s.**, chronic arthritis occurring after rheumatic fever, usually after repeated attacks, and characterized by fibrous changes in the joint capsules and tendons, leading to deformities that may resemble rheumatoid arthritis (especially ulnar deviation of fingers); the joints may be painful and rheumatic nodules are often present. **Jackson's s.**, paralysis of the tenth, eleventh, and twelfth cranial nerves, with paralysis of the soft palate, larynx, and one half of the tongue, associated with paralysis of the sternomastoid and trapezius muscles. **Jadassohn-Lewandowsky s.**, pachyonychia congenita. **Jaffe-Lichtenstein s.**, fibrous dysplasia. **Jahnke's s.**, a variant of the Sturge-Weber syndrome in which glaucoma is absent. **jaw-winking s.**, Gunn's s. **jejunal s.**, dumping syndrome. **Jervell and Lange-Nielsen s.**, a syndrome characterized by attacks of syncope and by sudden death in patients with congenital deafness and electrocardiographic anomalies, especially a prolonged Q-T interval. **Jeune's s.**, asphyxiating thoracic dystrophy. **Job's s.**, a variant of chronic granulomatous disease affecting girls with red hair and fair skin and marked by recurrent staphylococcal abscesses and eczema; it is associated with high levels of IgE in the serum. **jugular foramen s.**, Vernet's s. **Kallmann's s.**, the association of anosmia due to agenesis of the olfactory lobes, and secondary hypogonadism due to lack of gonadotropins. **Kanner's s.**, infantile autism. **Karoo s.**, a condition observed in youth among Afrikaners in the Karoo region, consisting of high fever, alimentary tract disturbance, and tenderness in the lymph glands of the neck. **Kartagener's s.**, a hereditary disorder involving a combination of dextrocardia (situs inversus), bronchiectasis, and sinusitis, transmitted as an autosomal recessive trait. **Kasabach-Merritt s.**, a syndrome occurring in infants, marked by giant hemangioma of the skin and spleen associated with thrombocytopenic purpura and afibrinogenemia. Called also *hemangioma-thrombocytopenia s.* **Kast's s.**, Maffucci's s. **Ken-**

nedy's s., retrobulbar optic neuritis, central scotoma, optic atrophy on the side of the lesion and papilledema on the opposite side, occurring in tumors of the frontal lobe of the brain which press downward. **Kiloh-Nevin s.**, ocular myopathy in patients with ptosis and progressive external ophthalmoplegia. **Kimmelstiel-Wilson s.**, intercapillary glomerulosclerosis. **kinky-hair s.**, Menkes' s. **Kinsbourne s.**, myoclonic encephalopathy of childhood; see under *encephalopathy*. **Klauder's s.**, ectodermosis erosiva pluriorificialis. **kleebblattschädel (cloverleaf skull) s.**, a congenital disorder, characterized by synostosis of multiple or all cranial sutures, hydrocephalus, and in some cases facial dysostosis and long bone anomalies. **Kleine-Levin s.**, the syndrome of periodic somnolence, morbid hunger, and motor unrest; it is sometimes associated with psychosis. **Klinefelter's s.**, a condition characterized by infertility, variable degrees of masculinization, the presence of small testes with fibrosis and hyalinization of seminiferous tubules, variable impairment of function and clumping of Leydig cells, and by an increase in urinary gonadotropins; patients tend to be of eunuchoid habitus, and about half have gynecomastia. It is associated typically with an XXY chromosome complement, although variants include XYY, XXY, XXXY, and several mosaic patterns (XY/XXY, XXY, XXXY, etc.) **Klippel-Feil s.**, a condition characterized by shortness of the neck resulting from reduction in the number of cervical vertebrae or the fusion of multiple hemivertebrae into one osseous mass; the hairline is low and motion of the neck is limited. **Klippel-Trenaunay s.**, **Klippel-Trenaunay-Weber s.**, a rare condition usually affecting one extremity, characterized by hypertrophy of the bone and related soft tissues, large cutaneous hemangiomas, nevus flammeus, and skin varices. **Clumpke-Dejerine s.**, Clumpke's paralysis. **Klüver-Bucy s.**, bizarre behavior disturbances following bilateral temporal lobectomy which destroys important limbic structures; it is characterized by a tendency to examine objects orally, depression of drive and emotional reactions, hypermetamorphosis, and lack of sexual inhibitions. **Kocher's s. (obs.)**, leukopenia due to granulocytopenia with relative and absolute lymphocytosis and moderate eosinophilia occasionally accompanying thyrotoxicosis. **Kocher-Debré-Sémélaigne s.**, Debré-Sémélaigne s. **König's s.**, constipation alternating with diarrhea and attended with abdominal pain, meteorism, and gurgling sounds in the right iliac fossa. **Korsakoff's s.**, see under *psychosis*. **Kunkel's s.**, lupoid hepatitis. **Ladd's s.**, congenital obstruction of the duodenum due to peritoneal bands resulting from a malrotated cecum. **Landry's s.**, acute febrile polyneuritis. **Larsen's s.**, cleft palate, flattened facies, multiple congenital dislocations, and foot deformities. **Laubry-Soulle s.**, abnormal localized collections of gas in the colon (splenic flexure) and stomach following acute myocardial infarction. **Launois' s.**, gigantism due to excessive pituitary secretion, occurring before puberty and before the epiphyses close; it is most often caused by an eosinophilic adenoma, but sometimes results from a chromophobe adenoma. Called also *hyperpituitary* or *pituitary gigantism*. **Launois-Cléret's s.**, adiposogenital dystrophy. **Laurence-Biedl s.**, **Laurence-Moon-Bardet-Biedl s.**, **Laurence-Moon-Biedl s.**, a hereditary syndrome transmitted as an autosomal recessive trait, characterized by mental retardation, obesity, retinitis pigmentosa, hypogonadism, and polydactyly. **Läwen-Roth s.**, dwarfism with stippled epiphyses and thyroid deficiency; congenital hypothyroidism or cretinism. **Lawford's s.**, a variant of the Sturge-Weber syndrome in which there is glaucoma but without an increase in the size of the eye. **lazy leukocyte s.**, a syndrome occurring in children, marked by recurrent low-grade infections, associated with a defect in neutrophil chemotaxis and deficient random mobility of neutrophils. **Legg-Calvé-Perthes s.**, osteochondrosis of the caputular epiphysis. **Lennox s.**, a childhood epileptic encephalopathy characterized electroencephalographically by diffuse slow spike waves. **Lenz's s.**, a hereditary syndrome, transmitted as an X-linked trait, consisting of microphthalmia or anophthalmos, unilateral or bilateral, and digital anomalies; narrow shoulders, double thumbs, and other skeletal abnormalities; dental, urogenital, and cardiovascular defects may also occur. **leopard s.**, a hereditary syndrome transmitted as an autosomal dominant trait, consisting of multiple lentigines, asymptomatic cardiac defects, and typical coarse facies; it may also be associated with pulmonary stenosis, sensorineural deafness, skeletal changes, ocular hypertelorism, and abnormalities of the genitalia. Called also *multiple lentigines s.* **Leredde's s.**, severe dyspnea on exertion dating from early life, combined with advanced emphysema, recurrent attacks of acute febrile bronchitis; it is a remote sequel of syphilis, usually congenital. **Leriche's s.**, a syndrome caused by obstruction of the terminal aorta, usually occurring in males and characterized by fatigue in the hips, thighs, or calves on exercising, absence of pulsation in the femoral arteries and impotence, and often pallor and coldness of the lower extremities. **Lermoyez's s.**, tinnitus and hearing loss preceding an attack of vertigo and then subsiding after the vertigo has become established. **Lesch-Nyhan s.**, a rare disorder of purine metabolism due to deficiency of the enzyme hypoxanthine-guanine phosphoribosyltransferase, characterized by physical and mental retardation,

compulsive self-mutilation of the fingers and lips by biting, choreoathetosis, spastic cerebral palsy, and impaired renal function, and by extremely excessive purine synthesis and consequently hyperuricemia and excessive urinary secretion of uric acid. It is transmitted as a sex-linked recessive trait. **levator s.**, episodic pain and a sensation of fullness and pressure in the rectum and sacrococcygeal area; attributed to spasm of the levator ani muscle. **Lévi's s.**, paroxysmal hyperthyroidism. **Lévy-Roussy s.**, Roussy-Lévy s. **Leyden-Moebius s.**, limb-girdle muscular dystrophy; see under *dystrophy*. **Lhermitte and McAlpine s.**, combined pyramidal and extrapyramidal system disease. **Libman-Sacks s.**, atypical verrucous endocarditis. **Lichtheim's s.**, subacute combined degeneration of the spinal cord; see under *degeneration*. **Lightwood's s.**, renal tubular acidosis. **Lignac's s.**, **Lignac-Fanconi s.**, cystinosis. **liver-kidney s.**, hepatorenal s. **Lobstein's s.**, see *osteogenesis imperfecta*. **"locked-in" s.**, a condition of complete paralysis, except for some form of voluntary eye movement, due to bilateral lesions of motor pathways of the lower cranial nerves and limbs. **loculation s.**, Froin's s. **Löffler's s.**, a condition characterized by transient infiltrations of the lungs associated with an increase of the eosinophilic leukocytes in the blood; called also *Löffler's eosinophilia*. **Looser-Milkman s.**, Milkman s. **Louis-Bar s.**, ataxia-telangiectasia. **Lowe's s.**, oculocerebrorenal s. **Lowe-Terry-Machlachan s.**, oculocerebrorenal s. **lower radicular s.**, Klumpke's paralysis. **Lucey-Driscoll s.**, a syndrome of retention jaundice due to defective bilirubin conjugation, occurring in infants; apparently the result of an unidentified factor, presumably a steroid in maternal blood, transmitted to the infant. **Lutembacher's s.**, atrial septal defect associated with mitral stenosis. Called also *Lutembacher's disease or complex*. **Lyell's s.**, toxic epidermal necrolysis. **lymphoproliferative s.**, a general term applied to a group of diseases characterized by proliferation of lymphoid tissue, such as lymphocytic leukemia and malignant lymphoma. **McArdle s.**, see under *disease*. **McCune-Albright s.**, a syndrome of sexual precocity, polyostotic fibrous dysplasia, and patchy pigmentation of the skin. **Mackenzie's s.**, associated paralysis of the tongue, soft palate, and vocal cord on the same side. **Maffucci's s.**, enchondromatosis associated with multiple cutaneous or visceral hemangiomas. Called also *Kast's s.* **malabsorption s.**, a group of disorders in which there is subnormal absorption of dietary constituents, and thus excessive loss of nonabsorbed substances in the stool; the malabsorption may be due to an intraluminal (digestive) defect (e.g., pancreatic insufficiency), a mucosal abnormality (celiac disease or disaccharidase deficiency), or a lymphatic obstruction (intestinal lymphangiectasia). Unless there is a specific enzyme or transport defect, steatorrhea is usually present. Deficiency syndromes may result from excessive loss of vitamins, electrolytes, iron, calcium, etc. **Malin's s.**, anemia in which the red cells are ingested by the leukocytes; called also *autoerythrophagocytosis*. **Mallory-Weiss s.**, hematemesis or melena that follows typically upon many hours or days of severe vomiting and retching, traceable to one or several slitlike lacerations of the gastric mucosa, longitudinally placed at or slightly below the esophagogastric junction. **Marañón's s.**, a syndrome consisting of scoliosis and flatfoot, with ovarian insufficiency. **Marchesani's s.**, Weill-Marchesani s. **Marchiafava-Bignami s.**, see under *disease*. **Marchiafava-Micheli s.**, paroxysmal nocturnal hemoglobinuria; see under *hemoglobinuria*. **Marcus Gunn's s.**, Gunn's s. **Marfan's s.**, a congenital disorder of connective tissue characterized by abnormal length of the extremities, especially of fingers and toes, subluxation of the lens, cardiovascular abnormalities (commonly dilatation of the ascending aorta), and other deformities. It is inherited in an autosomal dominant manner with variable degree of expression. **Margolis s.**, sex-linked deaf-mutism with albinism. **Marie's s.**, 1. a complex of symptoms due to excessive secretion of the anterior pituitary, with acromegaly a prominent feature. 2. hypertrophic pulmonary osteoarthropathy. **Marie-Bamberger s.**, hypertrophic pulmonary osteoarthropathy. **Marie-Robinson s.**, melancholia, insomnia, and impotence in a form of levulosis. **Marinesco-Sjögren's s.**, a hereditary syndrome transmitted as an autosomal recessive trait, consisting of cerebellar ataxia, mental and somatic growth retardation, congenital cataracts, inability to chew, thin brittle fingernails, and sparse, incompletely keratinized hair. **Maroteaux-Lamy s.**, a form of mucopolysaccharidosis transmitted as an autosomal recessive trait, closely resembling Hurler's syndrome (q.v.), except that the facial deformity is less marked, stiffness of the joints is minimal, and the intellect is not impaired; called also *mucopolysaccharidosis VI*. **Martorell's s.**, pulseless disease. **mast s.**, an inherited, early form of presenile dementia, transmitted as an autosomal recessive trait, having an onset in the late teens or twenties and a slow, progressive course with development of spastic paraparesis and basal ganglion disturbances; observed in an inbred Amish population. **maternal deprivation s.**, deprivation dwarfism. **Mauriac s.**, dwarfism, hepatomegaly, obesity, and retarded sexual maturation, in association with diabetes mellitus. **Mayer-Rokitansky-Kuster s.**, lack of müllerian development, congenital absence of the vagina and a rudimentary

uterus (typically bicornuate remnants), with normal uterine tubes, ovaries, and secondary female sex characteristics and normal growth. **Meckel's s.**, **Meckel-Gruber s.**, a hereditary syndrome, transmitted as an autosomal recessive trait, most frequently characterized by sloping forehead, posterior meningoencephalocele, polydactyly, and polycystic kidneys, with death occurring in the perinatal period. Called also *Gruber's s.* and *dysencephalia splanchnocystica*. **meconium plug s.**, a syndrome of intestinal obstruction caused by unusually thick or hard meconium in which neither enzymatic nor ganglion cell deficiency can be demonstrated. **megacystis-megaureter s.**, chronic ureteral dilatation (megaureter) associated with hypotonia and dilatation of the bladder (megacystis) and gaping of ureteral orifices, permitting vesicoureteral reflux of urine, and resulting in chronic pyelonephritis. **Meigs' s.**, ascites and hydrothorax associated with ovarian fibroma or other pelvic tumor. **Melker-sson's s.**, **Melker-sson-Rosenthal s.**, a hereditary syndrome transmitted as an autosomal dominant trait, most often beginning in childhood or adolescence, and characterized chiefly by chronic noninflammatory facial swelling (usually confined to the lips), recurrent peripheral facial palsy, and sometimes fissured tongue. Associated ophthalmic symptoms may include lagophthalmos, burning sensation of the eyes, blepharochalasis, swelling of the eyelids, corneal opacities, retrobulbar neuritis, and bilateral recurrent exophthalmos. **Mengert's shock s.**, a condition resembling shock that sometimes occurs when pregnant women in the late antepartum period lie in the supine position; it is due to the pressure of the uterus on the vena cava. **Meniere's s.**, see under *disease*. **Menkes' s.**, a hereditary abnormality in copper absorption marked by severe cerebral degeneration and arterial changes resulting in death in infancy and by sparse, brittle scalp hair with a twisted appearance microscopically. It is transmitted as an X-linked recessive trait. Called also *Menkes' disease* and *kinky- or steely-hair s.* **metameric s.**, segmentary s. **methionine malabsorption s.**, Smith-Strang disease. **Meyer-Schwickerath and Weyers s.**, oculodentodigital dysplasia. **middle lobe s.**, atelectasis of the right middle pulmonary lobe, with chronic pneumonitis; called also *Brock's s.* **Mikulicz's s.**, a general term referring to bilateral enlargement of the salivary and lacrimal glands due to a variety of diseases, including leukemia, tuberculosis, and sarcoidosis. See also *Mikulicz's disease*, under *disease*. **milk-alkali s.**, a syndrome characterized by hypercalcemia without hypercalciuria or hypophosphatemia, with only mild alkalosis, normal serum phosphatase, severe renal insufficiency with hyperazotemia and calcinosis, attributed to ingestion of milk and absorbable alkali for long periods of time; called also *Burnett's s.* and *hypercalcemia s.* **Milkman's s.**, a generalized bone disease marked by multiple transparent stripes of absorption in the long and flat bones; called also *Looser-Milkman s.* **Millard-Gubler s.**, crossed paralysis, affecting the limbs on one side of the body and the face on the opposite side, together with paralysis of outward movement of the eye; it is due to infarction of the pons involving the sixth and seventh cranial nerves and the fibers of the corticospinal tract. Called also *Millard-Gubler paralysis*. Cf. *Foville's s.* **Minkowski-Chauffard s.**, hereditary spherocytosis. **Minot-von Willebrand s.**, von Willebrand's disease. **Möbius' s.**, agenesis or aplasia of the motor nuclei of the cranial nerves characterized by congenital bilateral facial palsy in various combinations, with unilateral or bilateral paralysis of the abductors of the eye, sometimes associated with involvement of the cranial nerves, particularly the oculomotor, trigeminal, and hypoglossal, and anomalies of the extremities. Called also *akinesia algera*, *congenital facial diplegia*, *nuclear agenesis or aplasia*, *congenital abducens-facial paralysis*, and *congenital oculo-facial paralysis*. **Monakow's s.**, hemiplegia on the side opposite the lesion in occlusion of the anterior choroidal artery, sometimes with hemianesthesia and hemianopia. **Moore's s.**, abdominal epilepsy. **Morel's s.**, hyperostosis frontalis interna. **Morgagni's s.**, hyperostosis frontalis interna. **Morgagni-Adams-Stokes s.**, Adams-Stokes disease. **Morgagni-Stewart-Morel s.**, hyperostosis frontalis interna. **Morquio's s.**, a rare form of mucopolysaccharidosis which becomes evident when the affected infant starts to walk. The condition is marked by severe dwarfism, especially of the torso, short neck, prominent sternum, dorsolumbar kyphosis, genu valgum, flatfeet, and waddling gait. In contrast to Hurler's syndrome, the mental retardation is absent or slight, the facial deformities are less striking although marked by protruding mandible and short nose, the clouding of the cornea and deafness are mild, the muscles and ligaments are usually flaccid, and the cardiovascular changes are absent, except perhaps aortic valve disease. It is transmitted as an autosomal recessive trait. Called also *mucopolysaccharidosis IV*, *eccentro-osteochondrodysplasia*, *chondro-osteodystrophy*, *familial osteochondrodys-trophy*, and *osteochondrodysplasia deformans*. **Morquio-Ullrich s.**, Morquio's s. **Morton's s.**, a congenital insufficiency of the first metatarsal segment of the foot, characterized by metatarsalgia due to shortening or relaxation of the part. **Morvan's s.**, edema and cyanosis, and sometimes recurring painless whitlows, usually symmetrically placed on the hands, though sometimes on the lower extremities, seen in cases of syringomyelia and occasionally in leprosy. **Mosse's s.**, polycy-

themia vera with cirrhosis of the liver. **Mucha-Habermann s.**, parapsoriasis lichenoides et varioliformis. **Muckle-Wells s.**, recurrent urticaria, deafness, and nephritis. **mucocutaneous lymph node s. (MLNS)**, a syndrome of unknown etiology affecting most commonly infants and young children, and marked by fever, conjunctival injection, reddening of the lips and oral cavity, ulcerative gingivitis, enlarged cervical lymph nodes, and maculoerythematous skin eruption that becomes confluent and bright red in a glove-and-sock distribution, the skin becoming indurated and edematous and desquamating from the fingers and toes. It has been observed in Japan since 1967, but has recently been reported in the U.S. with some frequency. Called also *Kawasaki disease*. **multiple hamartoma s.**, Cowden's disease. **multiple lentiginos s.**, leopard s. **Munchausen's s.**, a condition characterized by habitual presentation for hospital treatment of an apparent acute illness, the patient giving a plausible and dramatic history, all of which is false. Cf. *laparotomophilia*. **Murchison-Sanderson s.**, Hodgkin's disease. **myasthenia gravis s.**, Erb's s. **myasthenic s.**, Eaton-Lambert s. **myelofibrosis-osteosclerosis s.**, a form of myeloproliferative disease characterized by fibrosis of the bone marrow, splenomegaly, extramedullary hematopoiesis, and leukoerythroblastosis. **myeloproliferative s.**, a general term applied to a group of diseases which may be related histogenetically and are characterized, at varying times and in varying degrees, by medullary and extramedullary proliferation of one or more lines of bone marrow constituents, including the myelocytic, erythroblastic, and megakaryocytic forms, in addition to the various cells derived from the reticulum and mesenchymal elements; the group includes acute and chronic myelocytic leukemia, polycythemia vera, agnogenic myeloid metaplasia with or without myelofibrosis, essential hemorrhagic thrombocythemia, and erythremic myelosis (Di Guglielmo syndrome). **Naegeli's s.**, a hereditary disorder similar to incontinentia pigmenti, but differing in that it affects males and females with equal frequency (autosomal dominant inheritance) and involves plantar and palmar hypohidrosis and hypertrichosis; called also *Franceschetti-Jadassohn s.* **Naffziger's s.**, scalenus s. **nail-patella s.**, arthro-onychodysplasia. **Nelson's s.**, the development of an ACTH-producing pituitary tumor after bilateral adrenalectomy in Cushing's syndrome; it is characterized by aggressive growth of the tumor and hyperpigmentation of the skin. **neostriatal s.**, Hunt's striatal s., def. 2. **nephrotic s.**, a condition characterized by massive edema, heavy proteinuria, hypoalbuminemia, and peculiar susceptibility to intercurrent infections; called also *Epstein's s.* **Netherton's s.**, a hereditary syndrome transmitted as an autosomal recessive trait, consisting of congenital ichthyosiform erythroderma and atopic dermatitis in association with trichorrhexis nodosa (bamboo hair). **neurocutaneous s.**, the formation of nevi and of deformities of the skeleton with symptoms of degeneration in the central nervous system. **nevoid basal cell carcinoma s.**, nevoid basalioma s., basal cell nevus s. **Nezelof's s.**, a hereditary syndrome transmitted as an autosomal recessive trait, in which thymic dysplasia is associated with normal levels of serum immunoglobulins and impaired cell-mediated immunity; it is characterized clinically by the early onset of severe recurrent infections, such as local and systemic candidiasis, disseminated varicella, plasma cell and bacterial pneumonia, and sepsis. Cf. *DiGeorge's s.* **nitritoid s.**, nitritoid crisis. **Noack's s.**, acrocephalopolysyndactyly (type I). **Nonne's s.**, hereditary cerebellar ataxia. **Nonne-Milroy-Meige s.**, Milroy's disease. **nonsense s.**, Ganser's s. **Noonan's s.**, the male phenotype of Turner's syndrome, with short stature, webbed neck, low nuchal hairline, low-set ears, and cubitus valgus; valvular pulmonary stenosis, rather than coarctation of the aorta, is often present. Called also *male Turner's s.* and *Ullrich-Turner s.* **Nothnagel's s.**, unilateral oculomotor paralysis combined with cerebellar ataxia, in lesions of the cerebral peduncles. **oculocerebrorenal s.**, a hereditary disorder characterized by vitamin D-refractory rickets, hydrophthalmia, congenital glaucoma and cataracts, mental retardation, and tubule reabsorption dysfunction as evidenced by hypophosphatemia, acidosis, and aminoaciduria. Seen only in males, it is transmitted as an X-linked recessive trait. Called also *Lowe's disease or syndrome*. **oculodonto-osseous s.**, oculodentodigital dysplasia. **oculomandibulofacial s.**, a syndrome principally characterized by dyscephaly (usually brachycephaly), parrot nose, mandibular hypoplasia, proportionate nanism, hypotrichosis, bilateral congenital cataracts, and microphthalmia; called also *Hallermann-Streiff s.*, *Hallermann-Streiff-François s.*, *François' s.*, and *mandibulo-oculofacial dyscephaly*. **Ogilvie's s.**, a condition simulating colonic obstruction, with persistent contraction of intestinal musculature, but without evidence of organic disease of the colon, occurring as a result of a defect in the sympathetic nerve supply. Called also *false colonic obstruction*. **Oppenheim's s.**, see under *disease*. **organic brain s.**, any of the mental disorders caused by or associated with impairment of brain tissue function; they may be psychotic (e.g., senile dementia, alcoholic psychoses) or nonpsychotic, acute (reversible) or chronic (irreversible). Called also *organic psychosis*. See *acute and chronic organic brain s.* **orodigitofacial s.**, orofaciadigital syndrome. **orofaciadigital s.**, a condition occurring only

in females, characterized by mental retardation and by anomalies of the mouth and tongue, the fingers, and frequently the face; called also *OFD s.*, *orofacial-digital s.*, and *orodigitofacial dysostosis*. **Ostrum-Furst s.**, congenital synostosis of the neck, platybasia, and Sprengel's deformity. **outlet s.**, brachial s. **ovarian-remnant s.**, pelvic pain, sometimes cyclic, typically occurring several weeks or months after oophorectomy, usually associated with a pelvic mass, most frequently a corpus-luteum cyst, which sometimes leads to unilateral ureteral obstruction. It is due to survival of an ovarian fragment after the operation. **ovarian vein s.**, obstruction of the ureter due to compression by an enlarged or varicose ovarian vein; typically the vein becomes enlarged during pregnancy, the symptoms being those of obstruction or infection of the upper urinary tract. The right side is usually affected. **painful arc s.**, shoulder pain occurring at a particular portion of the arc described when the arm is abducted from the side to the fully raised position, as in inflammation of the tendons of the supraspinatus muscle. **painful bruising s.**, autoerythrocyte sensitization s. **paleostriatal s.**, juvenile paralysis agitans (of Hunt). **pallidal s.**, juvenile paralysis agitans (of Hunt). **pallidomesencephalic s.**, a syndrome made up of rigidity, poverty of movement, and bradykinesia, amounting to a parkinsonian state. **Pancoast's s.**, 1. roentgenographic shadow at apex of lung, neuritic pain in the arm, atrophy of the muscles of the arm and hand, and Horner's syndrome, observed in tumor near the apex of the lung and due to involvement of the brachial plexus. 2. osteolysis in the posterior part of one or more ribs and sometimes also involving the corresponding vertebra. **pancreaticohepatic s.**, extensive destruction of pancreatic tissue and fatty metamorphosis of the liver. **pancytopenia-dysmelia s.**, Fanconi's s., def. 1. **Papillon-Lefèvre s.**, a hereditary disorder transmitted as an autosomal recessive trait, characterized by hyperkeratosis palmaris et plantaris and periodontitis occurring in association with premature exfoliation of both the deciduous and the permanent teeth. **paraneoplastic s's**, a collective term for disorders arising from metabolic effects of cancer on tissues remote from the tumor; such disorders may, for example, appear as primary endocrine, hematologic, or neuromuscular disorders. **paratrigeminal s.**, paroxysmal neuralgic pain in the face associated with sympathetic palsy (Horner's syndrome). **Parinaud's s.**, 1. Parinaud's oculoglandular s. 2. see under *ophthalmoplegia*. **Parinaud's oculoglandular s.**, a general term applied to conjunctivitis, most often unilateral, usually of the follicular type, followed by tenderness and enlargement of the preauricular lymph nodes; it is often caused by infection with a leptothrix, or may be associated with other infections, such as cat-scratch fever, lymphogranuloma venereum, and tularemia. **parkinsonian s.**, a form of parkinsonism due to idiopathic degeneration of the corpus striatum or substantia nigra, frequently occurring as a sequel of lethargic encephalitis, although cerebral arteriosclerosis, toxins, neurosyphilis, and trauma have also been implicated. It is characterized by muscular rigidity, immobile facies (Parkinson's facies), slow involuntary tremor (present at rest but tending to disappear during sleep and on volitional movement), abolition of associated automatic movements, festinating gait, stooped posture, and salivation. Called also *postencephalitic parkinsonism*. See also *paralysis agitans*. **Parry-Romberg s.**, facial hemiatrophy. **Patau's s.**, trisomy 13 s. **Paterson's s.**, Plummer-Vinson s. **Paterson-Brown-Kelly s.**, **Paterson-Kelly s.**, Plummer-Vinson s. **Pellegrini-Stieda s.**, calcification of the medial collateral ligament of the knee. **Pellizzzi's s.**, epiphyseal s. **Pendred's s.**, a hereditary syndrome of congenital bilateral nerve deafness associated with development of goiter without hypothyroidism in middle childhood; the main biochemical feature is a partial inability to form organic iodine compounds. **pericolonic-membrane s.**, symptoms resembling those of chronic appendicitis due to the pressure of pericolonic membranes. **persistent müllerian duct s.**, the persistence, in otherwise normal males, of müllerian structures as well as male genital ducts, with undescended testes and bilateral uterine tubes, a uterus, and an upper vagina. There may be unilateral cryptorchidism with contralateral inguinal hernia containing a testis, uterus, and uterine tube (*hernia uteri inguinale*). The disorder is heritable; fertility has been described. **Peutz s.**, hereditary intestinal polyposis. **Peutz-Jeghers s.**, a hereditary syndrome characterized by gastrointestinal polyposis (usually hamartomas of the small bowel) associated with excessive melanin pigmentation of the skin and mucous membranes; gastrointestinal bleeding and intussusception are common complications. It is transmitted as an autosomal dominant trait. **Pfeiffer's s.**, a hereditary disorder, transmitted as an autosomal dominant trait, characterized by acrocephalosyndactyly associated with broad short thumbs and big toes. Called also *acrocephalosyndactyly type V*. **PHC s.**, a rare familial syndrome, marked by premolar aplasia, hyperhidrosis, and premature canities; it is transmitted as an autosomal dominant trait. Called also *Böök's s.* **Picchini's s.**, inflammation of the three serous membranes connected with the diaphragm, sometimes involving the meninges, synovial sheaths, and tunica vaginalis of the testicle; caused by a trypanosome. **Pick's s.**, 1. Pick's disease (def. 2). 2. (*obs.*) palpitation of the heart: a feeling of oppression

on the chest, dyspnea, cyanosis, and dropsical phenomena; seen in certain heart diseases. **pickwickian s.**, the complex of obesity, somnolence, hypoventilation, and erythrocytosis. **Pierre Robin s.**, micrognathia in association with cleft palate and glossoptosis, and with absent gag reflex. **pineal s.**, epiphyseal s. **pituitary s.**, Marie's s., def. 1. **placental dysfunction s.**, malnutrition and hypoxia of the fetus due to degenerative changes in the placenta; in the full-blown condition the nails, skin, and vernix are stained a bright yellow and the umbilical cord a yellow-green. Called also *yellow vernix s.* **placental transfusion s.**, the birth of one anemic and one plethoric twin due to the forcing of blood of one fetal twin into the circulation of the other via interconnections between their blood vessels; called also *intrauterine parabioc s.* **Plummer-Vinson s.**, dysphagia with glossitis, hypochromic anemia, splenomegaly, and atrophy in the mouth, pharynx, and upper end of the esophagus; called also *sideropenic dysphagia.* **pluriglandular s.**, polyglandular s. **Poland's s.**, unilateral absence of the sternocostal head of the pectoralis major muscle and ipsilateral syndactyly; called also *Poland's anomaly.* **Polhemus-Schafer-Ivemark s.**, Ivemark's s. **polycystic ovary s.**, Stein-Leventhal s. **polyglandular s.**, a series of symptoms believed to be due to pathologic action of several endocrine glands. **pontine s.**, Raymond-Cestan s. **popliteal pterygium s.**, a combination of popliteal pterygium, cleft lip and palate, lower lip pits, ankyloblepharon filiforme adnatum, and genital and digital anomalies; possibly transmitted as an autosomal dominant trait. **postcardiotomy s.**, see *postcommisurotomy s.* and *postpericardiotomy s.* **postcholecystectomy s.**, the persistence or recurrence of abdominal pain or jaundice following cholecystectomy; it may be due to an incorrect preoperative diagnosis, a retained stone in the common bile duct, or to other physical or psychic abnormalities which are not apparent. **postcommisurotomy s.**, fever, chest pain, pleuritis, pericarditis, and pneumonitis, occurring frequently in patients who have undergone mitral commissurotomy, and sometimes related to cytomegalic inclusion disease. **postconcussional s.**, amnesia, headache, dizziness, tinnitus, irritability, fatigability, sweating, palpitations of the heart, insomnia, and difficulty in concentrating, occurring after concussion of the brain. **posterior cord s.**, sensory and ataxic phenomena derived from a lesion of the posterior columns of the spinal cord, as in locomotor ataxia. **posterolateral s.**, an ataxic and spasmodic condition due to lesion of the posterolateral elements of the spinal cord. **postgastrectomy s.**, dumping s. **postirradiation s.**, a symptom complex caused by massive irradiation, with hemorrhage, anemia, and malnutrition. **postmaturity s.**, placental dysfunction syndrome occurring in postmature fetuses. **postmyocardial infarction s.**, pericarditis with fever, leukocytosis, pleurisy, and pneumonia occurring after myocardial infarction; called also *Dressler's s.* **postperfusion s.**, an association of fever, hepatosplenomegaly, and atypical lymphocytes in the blood, often with abnormal liver-function tests. First found as a complication of open cardiac surgery with extracorporeal perfusion, it is now known to occur after simple transfusion. It is caused by a cytomegalovirus. Called also *post-transfusion s.* and *post-transfusion mononucleosis.* **postpericardiotomy s.**, delayed pericardial or pleural reaction following opening of the pericardium, characterized by fever, chest pain, and signs of pleural and/or pericardial inflammation. **postphlebotic s.**, post-thrombotic complications, including destruction of the valves of the deep veins and communicating veins of the leg, and obliteration of the thrombosed veins rather than recanalization, resulting in chronic venous insufficiency, marked by edema, stasis dermatitis, and ulceration of the leg. **post-transfusion s.**, postperfusion s. **post-traumatic brain s.**, a general term denoting all the symptoms occurring after a head injury; see *concussion of the brain*, *contusion of the brain*, and *postconcussional s.* **Potter's s.**, a rare condition combining a characteristic facial appearance with renal agenesis or hypoplasia and other defects. The face is flattened and features may include widely spaced eyes, epicanthal folds, a crease below the lower lids, large, low-set, floppy ears, micrognathia, and skin crease on the lower chin; skeletal abnormalities, such as clubbed feet and contracted joints, are frequent. Infants die shortly after birth. **Prader-Willi s.**, a congenital disorder characterized by rounded face, almond-shaped eyes, strabismus, low forehead, hypogonadism, and mental retardation. **preexcitation s.**, Wolff-Parkinson-White s. **premenstrual s.**, see under *tension.* **premotor s.**, the association of spastic hemiplegia with increased reflexes, disturbances of skilled movements, forced grasping and transient vasomotor disturbance; occurring in lesions of the premotor cortex. **Profichet's s.**, a gradual growth of calcareous nodules in the subcutaneous tissues (skin stones) especially about the larger joints, with a tendency to ulceration or cicatrization and attended by atrophic and nervous symptoms. **prune-belly s.**, a syndrome in which the lower part of the rectus abdominis muscle and the lower and medial parts of the oblique muscles are absent, the bladder and ureters are usually greatly dilated, the kidneys are small and dysplastic, with hydronephrosis, and the testes are undescended. The abdomen is protruding and thin-walled, with wrinkled skin, giving the syndrome its name. **pseudoclaudication s.**, a condition in which symptoms simi-

lar to those of intermittent claudication result from compression of the cauda equina owing to hypertrophic ridging or a herniated lumbar disk. **pulmonary dysmaturity s.**, Wilson-Mikity s. **Putnam-Dana s.**, subacute combined degeneration of spinal cord (see under *degeneration*). **radicular s.**, a syndrome due to lesion of the roots of the spinal nerves, consisting of restricted mobility of the spine and root pain. **Ramsay Hunt s.**, 1. facial paralysis accompanied by otalgia and a vesicular eruption involving the external canal of the ear, sometimes extending to the auricle caused by herpes zoster virus infection of the geniculate ganglion. Called also *geniculate neuralgia*, *herpes zoster oticus*, and *Hunt's disease or neuralgia*. 2. juvenile paralysis agitata (of Hunt). 3. dyssynergia cerebellaris progressiva. **Raymond-Cestan s.**, a syndrome due to obstruction of twigs of the basilar artery causing lesions of the pontine region; it is characterized by quadriplegia, anesthesia, and nystagmus. **Refsum's s.**, see under *disease*. **Reichmann's s.**, gastrosuccorhea. **Reifenstein's s.**, a syndrome of familial male pseudohermaphroditism associated with hypospadias, primary hypogonadism, postpubertal testicular atrophy and azoospermia, signs of testosterone deficiency, and often gynecomastia. **Reiter's s.**, the triad of nongonococcal urethritis, conjunctivitis, and arthritis, frequently with mucocutaneous lesions; it is most commonly seen in males between the ages of 20 and 40 and rarely in women or children. Called also *Fiessinger-Leroy-Reiter s.* **Rendu-Osler-Weber s.**, hereditary hemorrhagic telangiectasia. **respiratory distress s. of newborn**, a condition of the newborn marked by dyspnea with cyanosis, heralded by such prodromal signs as dilatation of the alae nasi, expiratory grunt, and retraction of the suprasternal notch or costal margins, most frequently occurring in premature infants, children of diabetic mothers, and infants delivered by cesarean section, and sometimes with no apparent predisposing cause. The syndrome includes two patterns: (a) *hyaline membrane disease or syndrome*, in which affected infants frequently die of respiratory distress in the first few days of life and at autopsy have eosinophilic hyaline material lining the alveoli, alveolar ducts, and bronchioles, and (b) *idiopathic respiratory distress of newborn* in which the affected infants may live, but in those that die, only resorption atelectasis is seen and there is no formation of a hyaline membrane. Called also *congenital alveolar dysplasia and congenital aspiration pneumonia*. **restless legs s.**, see under *leg*. **retraction s.**, Duane's s. **s. of retroparotid space**, Villaret's s. **Reye's s.**, a rare, acute, and often fatal encephalopathy of childhood, marked by acute brain swelling associated with hypoglycemia, fatty infiltration of the liver, hepatomegaly, and disturbed consciousness and seizures. It most often occurs as a sequel of influenza and other viral infections of the upper respiratory tract. **Rh-null s.**, chronic hemolytic anemia affecting individuals who lack all Rh factors (Rh_{null}); it is marked by spherocytosis, stomatocytosis, and increased osmotic fragility. **Richards-Rundle s.**, a congenital syndrome consisting of ketoaciduria, mental retardation, underdevelopment of secondary sex characteristics, deafness, ataxia, and peripheral muscular wasting which progresses during childhood but eventually becomes static. **Rieger's s.**, a dominantly inherited syndrome consisting of posterior embryotoxon associated with mesodermal dysgenesis of the anterior segment of the eye, hypoplasia of the anterior stromal layer of the iris, adhesions between the iris and the trabecular network, and, frequently, glaucoma. It may be associated with various other abnormalities, such as dental defects, anal stenosis, hypertelorism, and agenesis of the facial bones. Called also *Rieger's anomaly*. **Riley-Day s.**, dysautonomia. **Riley-Smith s.**, macrocephaly without hydrocephalus, multiple hemangiomas, and pseudopapilledema. **Robert's s.**, a hereditary syndrome, transmitted as an autosomal recessive trait, consisting of imperfect development of the long bones of the limbs associated with cleft palate and lip and other anomalies. **Robin's s.**, Pierre Robin s. **Robinow's s.**, dwarfism associated with increased interorbital distance, malaligned teeth, bulging forehead, depressed nasal bridge, and short limbs. Called also *Robinow's dwarfism and fetal face s.* **Roger's s.**, a continuous excessive secretion of saliva as the result of cancer in the esophagus, or other esophageal irritation. **Rokitansky-Küster-Hauser s.**, Mayer-Rokitansky-Küster s. **rolandic vein s.**, hemiplegia resulting from interference with the cerebral venous circulation. **Romano-Ward s.**, an autosomal dominant disorder distinguished from the Jervell and Lange-Nielsen syndrome in that deafness does not occur in the Romano-Ward syndrome. **Rosenbach's s.**, paroxysmal tachycardia with gastric and respiratory complications. **Rosenthal s.**, a hereditary hemorrhagic diathesis clinically similar to hemophilia but due to deficiency of coagulation Factor XI. **Rosenthal-Kloepfer s.**, corneal leukomata, acromegaly appearance, and cutis verticis gyrata. **Rosewater's s.**, a mild form of familial primary hypogonadism in the male of unknown pathogenesis, marked only by sterility and gynecomastia. **Rot's s.**, **Rot-Bernhardt s.**, meralgia paresthetica. **Roth's s.**, **Roth-Bernhardt s.**, meralgia paresthetica. **Rothmann-Makai s.**, idiopathic circumscribed panniculitis with fat cell necrosis, lipophagic granuloma, and cyst formation; it usually subsides spontaneously. **Rothmund-Thomson s.**, a hereditary syndrome transmitted as an autosomal recessive trait, characterized

by poikiloderma and telangiectasia, and frequently associated with juvenile cataracts, saddle nose, congenital defects of the bones, and hypogonadism. Called also *poikiloderma congenita*. Cf. *Thomson's disease*. **Rotor's s.**, chronic familial nonhemolytic jaundice differing from Dubin-Johnson syndrome in the lack of liver pigmentation. **Roussy-Dejerine s.**, thalamic s. **Roussy-Lévy s.**, progressive neuropathic (peroneal) muscular atrophy with scoliosis and cerebellar ataxia. **Rovsing s.**, horseshoe kidney with nausea, abdominal discomfort, and pain on hyperextension. **rubella s.**, a congenital syndrome due to intrauterine rubella infection (German measles), characterized most commonly by cataracts, cardiac anomalies (especially patent ductus arteriosus), deafness, microcephaly, and mental retardation. **Rubinstein's s.**, **Rubinstein-Taybi s.**, a congenital condition characterized by mental and motor retardation, broad thumbs and great toes, short stature, characteristic facies, including high-arched palate and straight or beaked nose, various eye abnormalities, pulmonary stenosis, keloid formation in surgical scars, large foramen magnum, and abnormalities of the vertebra and sternum. **rubrospinal cerebellar peduncle s.**, **Claude's s.** **Rud's s.**, congenital syndrome consisting of ichthyosis simplex, mental deficiency, epilepsy, and infantilism. **running s.**, graft-vs.-host reaction characterized by diarrhea, dermatitis, hepatosplenomegaly, hemolytic anemia, and pancytopenia. **Russell's s.**, a congenital syndrome consisting of low birth weight, short stature, a triangular face that appears small compared to the skull, disproportionately short arms, which may be associated with lateral asymmetry of the body, incurved fifth fingers, cryptorchidism, and various other abnormalities. Cf. *Silver's s.* **Rust's s.**, stiff neck, stiff carriage of the head, with the necessity of grasping the head with both hands in lying down or rising up from a horizontal posture, occurring in tuberculosis, cancer, fracture of the spine, rheumatic or arthritic processes, or syphilitic periostitis. **Sabin-Feldman s.**, chorioretinitis and cerebral calcifications, similar to the manifestations of toxoplasmosis, but having all tests for toxoplasmosis negative. **Saethre-Chotzen s.**, **Chotzen's s.** **salt-depletion s.**, salt-losing s. **salt-losing s.**, vomiting, dehydration, hypotension, and sudden death due to very large sodium losses from the body. It may be seen in abnormal losses of sodium into the urine (as in congenital adrenal hyperplasia, adrenocortical insufficiency, or one of the forms of salt-losing nephritis) or in large extrarenal sodium losses, usually from the gastrointestinal tract. Called also *salt-depletion crisis*, *salt-depletion syndrome*, *salt-losing crisis*, and *salt-losing defect*. **Sanfilippo's s.**, a form of mucopolysaccharidosis resembling Hurler's syndrome (q.v.), except that most of the somatic and skeletal changes are less severe, and corneal clouding and cardiovascular defects are absent; it is transmitted as an autosomal recessive trait. The syndrome occurs in two clinically indistinguishable types: type A, due to deficiency of heparan sulfate sulfamidase, and type B, due to deficiency of *N*-acetyl- α -D-glucosaminidase. Called also *mucopolysaccharidosis III* and *polydystrophic oligophrenia*. **scalded skin s.**, toxic epidermal necrolysis. **scalenus s.**, **scalenus anticus s.**, pain over the shoulder, often extending down the arm (cervicobrachial s.) or radiating up the back of the neck due to compression of the nerves and vessels between a cervical rib and the scalenus anticus muscle; called also *Naffziger's s.* and *cervical rib s.* **scapulo-costal s.**, pain in the superior or posterior aspect of the shoulder girdle, radiating to contiguous regions, as a result of long-standing alteration of the relationship of the scapula and the posterior thoracic wall. **Schafer's s.**, pachonychia congenita associated with retardation of physical and mental development. **Schanz's s.**, a series of symptoms indicating spinal weakness, consisting of a sense of fatigue, pain on pressure over the spinous processes, pain on lying prone, and indications of spinal curvature. **Schaumann's s.**, sarcoidosis. **Scheie's s.**, a very rare type of mucopolysaccharidosis considered to be an atypical form of Hurler's syndrome (q.v.), in which the principal sign is marked progressive corneal clouding. Hirsutism, joint stiffness, mild deformities of the bones that may only affect the hands, disease of the aorta, and wide-mouthed facies occur, but there is no mental retardation. It is due to deficiency of α -L-iduronidase and is transmitted as an autosomal recessive trait. Called also *mucopolysaccharidosis I-S* and, formerly, *mucopolysaccharidosis V*. **Schirmer's s.**, a variant of the Sturge-Weber syndrome in which glaucoma occurs early in the course of the disease. **Schmidt's s.**, paralysis on one side, affecting the vocal cord, the velum palati, the trapezius muscle, and the sternocleidomastoid muscle, due to a lesion of the nucleus ambiguus and nucleus accessorius. **Schönlein-Henoch s.**, see under *purpura*. **Schroeder's s.**, high blood pressure with abnormal diminution of the salt content of the sweat, due to overactivity of the adrenal glands, and with notable gain in weight. **Schüller's s.**, **Schüller-Christian s.**, Hand-Schüller-Christian disease. **Schultz s.**, agranulocytosis. **Schwachman s.**, **Schwachman-Diamond s.**, primary pancreatic insufficiency and bone marrow failure, characterized by normal sweat chloride values, pancreatic insufficiency, and neutropenia; it may be associated with dwarfism and metaphyseal dysostosis of the hips. **scimitar s.**, complete or partial venous drainage of the right lung into the inferior vena cava, usually with hypoplasia of the right lung;

the name is derived from the convex shadow of the anomalous vein to the right of the lower border of the heart in the chest roentgenogram. **s. of sea-blue histiocyte**, a rare disorder characterized by the presence of a morphologically distinct, sea-blue, granulated histiocyte and by splenomegaly. Clinically, the disorder may range from a relatively benign course with mild purpura secondary to thrombocytopenia, to progressive hepatic cirrhosis, hepatic failure, and death. **Seabright bantam s.**, pseudohypoparathyroidism. **Seckel's s.**, see *bird-headed dwarf*, under *dwarf*. **segmentary s.**, a syndrome produced by a lesion of the gray matter of the spinal cord, and marked by weakness and wasting in the affected segment; called also *metameric s.* **Selye s.**, general adaptation s. **Senebar-Usher s.**, pemphigus erythematosus. **Sertoli-cell-only s.**, congenital absence of the germinal epithelium of the testes, the seminiferous tubules containing only Sertoli cells, characterized by testes which are slightly smaller than normal, azoospermia, and elevated titers of follicle-stimulating hormone or of general gonadotropins. **serum sickness s.**, a serum sickness-like hypersensitivity reaction occurring after the administration of certain drugs. It is marked clinically by low-grade fever, urticaria, facial edema, pain and swelling of the joints, and lymphadenopathy, and occasionally may be associated with neuritis of the brachial plexus, Guillain-Barré syndrome, periarteritis nodosa, and nephritis. **Sézary s.**, **Sézary reticulosis s.**, generalized exfoliative erythroderma produced by cutaneous infiltration of reticular lymphocytes and associated with intense pruritis, alopecia, edema, hyperkeratosis, and pigment and nail changes; although bone marrow and lymph nodes are normal, reticulemia may occur. Called also *Sézary erythroderma*. **Sheehan's s.**, postpartum pituitary necrosis. **short-bowel s.**, **short-gut s.**, any of the malabsorption conditions resulting from massive resection of the small bowel, the degree and kind of malabsorption depending on the site and extent of the resection; it is characterized by diarrhea, steatorrhea, and malnutrition. **shoulder-hand s.**, a clinical disorder of the upper extremity, characterized by pain and stiffness in the shoulder, with puffy swelling and pain in the ipsilateral hand, sometimes occurring after myocardial infarction but also produced by other known or unknown causes. **Shy-Drager s.**, a progressive disorder of unknown cause that results in severe disability or death, beginning with symptoms of autonomic insufficiency including impotence (in males), constipation, urinary urgency or retention, anhidrosis, and most importantly, orthostatic hypotension, followed by signs of generalized neurologic dysfunction, such as parkinsonian-like disturbances, cerebellar incoordination, muscle wasting and fasciculations, and coarse tremors of the legs. **Sicard's s.**, **Collet's s.** **sicca s.**, **Sjögren's s.** **sick sinus s.**, a complex cardiac arrhythmia manifested as severe sinus bradycardia alone, sinus bradycardia alternating with tachycardia, or sinus bradycardia with atrioventricular block. **Silver's s.**, a congenital syndrome consisting of low birth weight despite normal duration of gestation, short stature, lateral asymmetry, slight to moderate increase in excretion of gonadotropins, which may be associated with incurved fifth fingers, café-au-lait spots, syndactyly, triangular-shaped face, turned down corners of the mouth, and precocious puberty. Cf. *Russell's s.* **Silverskiöld's s.**, a form of eccentro-osteochondrodysplasia in which the skeletal changes are chiefly in the extremities and which is inherited as a dominant character. **Silvestrini-Corda s.**, eunuchoid body type, absence of body hair, defective libido, atrophy of the testes, sterility, and gynecomastia: a syndrome indicative of abnormally high estrogenic activity, due to failure of the liver to inactivate the estrogens. **Simmonds' s.**, see *panhypopituitarism*. **Sipple's s.**, a hereditary association of pheochromocytoma, characteristically bilateral and multiple, medullary carcinoma of the thyroid, and a tendency to hyperparathyroidism due to hyperplasia or multiple parathyroid adenomas; associated abnormalities include mucosal neuromas, Marfan's syndrome, etc. It is transmitted as an autosomal dominant trait. **Sjögren's s.**, a symptom complex of unknown etiology, usually occurring in middle-aged or older women, marked by keratoconjunctivitis sicca, xerostomia, and enlargement of the parotid glands; it is often associated with rheumatoid arthritis and sometimes with systemic lupus erythematosus, scleroderma, or polymyositis. An abnormal immune response has been implicated. Called also *Gougerot-Nuloch-Houwer s.*, *sicca s.*, and *Sjogren's disease*. **Sjögren-Larsson s.**, congenital oligophrenia, ichthyosis, and spastic pyramidal symptoms. **SLE-like s.**, hydralazine lupus s. **Sluder's s.**, see under *neuralgia*. **Smith-Lemli-Opitz s.**, a hereditary syndrome, transmitted as an autosomal recessive trait, characterized by multiple congenital anomalies, including microcephaly, mental retardation, hypotonia, incomplete development of male genitalia, short nose with anteverted nostrils, syndactyly of second and third toes, etc. **social breakdown s.**, a term used to express the concept that some of the mental patient's symptomatology, especially in large, understaffed institutions, is a result of treatment conditions and facilities and not part of the primary illness. **Sohval-Soffer s.**, a congenital syndrome consisting of male hypogonadism associated with multiple skeletal abnormalities of the cervical spine and ribs and mental retardation. **somnolence s.**, a transient condition of drowsiness, lethargy, anorexia,

and irritability with electroencephalographic changes, occurring in children after irradiation of the head in acute leukemia or non-Hodgkin's lymphoma. **Sorsby's s.**, a congenital condition consisting of bilateral macular coloboma associated with apical dystrophy of the hands and feet, usually brachydactyly confined to the distal two phalanges. **Sotos' s.**, **Sotos' s. of cerebral gigantism**, cerebral gigantism. **Spens's s.**, Adams-Stokes disease. **Speransky-Richen-Siegmund s.**, necrotizing perforation of the hard palate into the maxillary sinus, with detachment of the alveolar process. **spherophakia-brachymorphia s.**, Weill-Marchesani s. **splenic flexure s.**, discomfort in the left upper abdominal quadrant, which may give rise to pain in the precordium and left shoulder and arm, simulating angina. **split-brain s.**, an association of symptoms produced by disruption of or interference with the connection between the hemispheres of the brain. **Sprinz-Dubin s.**, **Sprinz Nelson s.**, Dubin-Johnson s. **Spurway s.**, osteogenesis imperfecta associated with blue sclerae. **Steele-Richardson-Olszewski s.**, a progressive neurological disorder, having onset during the sixth decade, characterized by supranuclear ophthalmoplegia, especially paralysis of the downward gaze, pseudobulbar palsy, dysarthria, dystonic rigidity of the neck and trunk, and dementia. **steely-hair s.**, Menkes' s. **Stein-Leventhal s.**, a clinical symptom complex characterized by oligomenorrhea or amenorrhea, anovulation (hence infertility), and regularly associated with bilateral polycystic ovaries; excretion of follicle-stimulating hormone and 17-ketosteroids is essentially normal. Called also *polycystic ovary disease* or *syndrome*. **Steinbrocker's s.**, shoulder-hand s. **Steiner's s.**, Curtius' s. **Stevens-Johnson s.**, the severe form of erythema multiforme in which, in addition to other symptoms (see *erythema multiforme*), there is involvement of the oronasal and anogenital mucosa, the eyes, and viscera; constitutional symptoms include malaise, prostration, headache, fever, and arthralgia. It may be fatal. Called also *ectodermosis erosiva pluriorificialis*, *erythema multiforme exudativum*, and *Johnson-Stevens disease*. **Stewart-Morel s.**, hyperostosis frontalis interna. **Stewart-Treves s.**, lymphangiosarcoma which occurs as a late complication of severe lymphedema of the arm following excision of lymph nodes, usually associated with radical mastectomy. **"stiff heart" s.**, any cardiac disease characterized by restrictive hemodynamics; it may result from any pathologic process that renders the myocardial fibers abnormally rigid or that externally applies a constricting pressure and as a consequence impedes flow of blood into the ventricular cavities. **stiff-man s.**, a condition of unknown etiology characterized by progressive fluctuating rigidity of axial and limb muscles in the absence of signs of cerebral and spinal cord disease but with continuous electromyographic activity. **Still-Chauffard s.**, Chauffard's s. **Stilling s.**, Duane s. **Stilling-Turk-Duane s.**, Duane s. **Stokes's s.**, **Stokes-Adams s.**, Adams-Stokes disease. **Stokvis-Talma s.**, enterogenous cyanosis. **straight back s.**, a skeletal deformity characterized by loss of the anterior concavity of the vertebral column in the upper thoracic region, with consequent reduction in the anteroposterior diameter of the thorax and compression of the heart between the dorsal spine and the sternum. **stroke s.**, a condition with sudden onset caused by acute vascular lesions of the brain, such as hemorrhage, embolism, thrombosis, or rupturing aneurysm, which may be marked by hemiplegia or hemiparesis, vertigo, numbness, aphasia, and dysarthria; it is often followed by permanent neurologic damage. Called also *cerebrovascular accident* and *stroke*. **Sturge's s.**, **Sturge-Kalischer-Weber s.**, Sturge-Weber s. **Sturge-Weber s.**, a congenital syndrome consisting of nevus flammeus of the face, angiomas of the leptomeninges and choroid, and late glaucoma, frequently associated with intracranial calcification, mental retardation, contralateral hemiplegia, and epilepsy; called also *Sturge's s.*, *Sturge-Kalischer-Weber s.*, *Dimitri disease*, and various combinations of these names. **subclavian steal s.**, cerebral or brain stem ischemia resulting from diversion of blood flow from the basilar artery to the subclavian artery, in the presence of occlusive disease of the proximal portion of the subclavian artery. **sudden infant death s.**, the sudden and unexpected death of an apparently healthy infant, typically occurring between the ages of three weeks and five months, and not explained by careful postmortem studies; called also *cribor cot death*. Abbreviated *SIDS*. **Sudeck-Leriche s.**, post-traumatic osteoporosis associated with vasospasm. **Sulzberger-Garbe s.**, chronic exudative discoid and lichenoid dermatitis accompanied by severe nocturnal pruritus, occurring chiefly in middle-aged men of Jewish extraction; called also *oid-oid disease*. **superior caval s.**, venous engorgement, hepatic enlargement, and edema resembling that of right heart failure or constrictive pericarditis, resulting from lymphomatous, metastatic, or primary malignant neoplasms of the pericardium. **superior mesenteric artery s.**, compression of the third, or transverse, portion of the duodenum against the aorta by the superior mesenteric artery, resulting in chronic, intermittent, or acute, complete or partial obstruction; symptoms range from mild to nausea and vomiting, pain, and extreme distention of the stomach and duodenum. **superior sulcus tumor s.**, Pancoast's s., def. 1. **superior vena cava s.**, suffusion and brawny edema of the

face, neck, or upper arms due to increased venous pressure incident to compression of the superior vena cava, most commonly caused by metastatic mediastinal lymph node tumor in lung cancer. **suprarenogenic s.**, adrenal disorder characterized by adiposity, pigmentation, and hairiness. **supraspinatus s.**, tenderness over the supraspinatus tendon, a painful arc on movement of the arm, and a reversal of scapulohumeral rhythm. **sweat retention s.**, tropical anhidrotic asthenia. **Sweet's s.**, acute febrile neutrophilic dermatosis. **Takayasu's s.**, pulseless disease. **Tapia's s.**, unilateral paralysis of the tongue and larynx, the velum palati being unaffected. **tarsal tunnel s.**, a complex of symptoms resulting from compression of the posterior tibial nerve or of the plantar nerves in the tarsal tunnel, with pain, numbness, and tingling paresthesia of the sole of the foot. **Taussig-Bing s.**, a rare congenital malformation of the heart characterized by transposition of the great vessels and a ventricular septal defect straddled by a large pulmonary artery; hemodynamically it is characterized by pulmonary hypertension, pulmonary plethora, cyanosis, and greater O₂ saturation of blood in the pulmonary artery than in the aorta. **tegmental s.**, hemiplegia, alternating with disordered eye movements, indicative of lesions of the tegmentum. **temporomandibular joint s.**, dysfunction of the temporomandibular joint marked by a clicking or grinding sensation in the joint and often by pain in or about the ears, muscle tiredness and slight soreness upon waking, and stiffness of the jaw or actual trismus; it results from mandibular overclosure, condylar displacement, or stress, with deforming arthritis an occasional factor. **Terry's s.**, retrolental fibroplasia. **testicular feminization s.**, an extreme form of male pseudohermaphroditism, with female external development, including secondary sex characteristics, but with presence of testes and absence of uterus and tubes; it is due to end-organ resistance to the action of testosterone. **thalamic s.**, a combination of the following symptoms: (1) superficial persistent hemianesthesia; (2) mild hemiplegia; (3) mild hemiataxia and more or less complete astereognosis; (4) severe and persistent pains in the hemiplegic side; (5) choreoathetoid movements in the members of the paralyzed side. Called also *Dejerine-Roussy s.* and *thalamic hyperesthetic anesthesia*. **Thibierge-Weissenbach s.**, calcinosis. **Thiele s.**, tenderness and pain in the region of the lower portion of the sacrum and coccyx, or in contiguous soft tissues and muscles. **Thiemann's s.**, see under *disease*. **thoracic outlet s.**, compression of the brachial plexus nerve trunks, characterized by pain in arms, paresthesia of fingers, vasomotor symptoms (pallor, acrocyanosis, secondary Raynaud's phenomenon, etc.), and weakness and wasting of small muscles of the hand; it may be caused by drooping shoulder girdle, a cervical rib or fibrous band, an abnormal first rib, continual hyperabduction of the arm (see *hyperabduction s.*), or (rarely) compression of the edge of scalenus anterior muscle. **Thorn's s.**, see *salt-losing s.* **thrombocytopenia-absent radius (TAR) s.**, a hereditary syndrome, transmitted as an autosomal recessive trait, consisting of thrombocytopenia associated with absence of the radius and sometimes congenital heart disease and renal anomalies. **thromboembolic s.**, the association between the formation of thrombi in the deep veins of the leg and pulmonary embolism. **Tietze's s.**, 1. [Alexander Tietze] idiopathic painful nonsuppurative swellings of one or more costal cartilages, especially of the second rib; the anterior chest pain may mimic that of coronary artery disease. Called also *costal chondritis* and *Tietze's disease*. 2. albinism, except for normal eye pigment, deaf-mutism, and hypoplasia of the eyebrows. **Timme's s.**, ovarian and adrenal insufficiency with compensatory hypopituitarism. **tired housewife s.**, a form of mild hypothyroidism manifested in symptoms such as mild lassitude, fatigue, slight anemia, constipation, apathy, slight cold intolerance, menstrual irregularities, inability to conceive, dry skin, some loss of hair, and slight to moderate weight gain. **Tolosa-Hunt s.**, unilateral ophthalmoplegia associated with pain behind the orbit and in the area supplied by the first division of the trigeminal nerve; it is thought to be due to nonspecific inflammation and granulation tissue in the superior orbital fissure or cavernous sinus. **Tommaselli's s.**, see under *disease*. **Touraine-Solente-Golé s.**, pachydermoperiostosis. **toxic fat s.**, a condition occurring in 3- to 10-week old chickens that have been fed fat-supplemented diets, marked by edema of the pericardium and abdomen, waddling gait, and sudden death; called also *water belly*. **toxic shock s.**, a severe illness characterized by high fever of sudden onset, vomiting, diarrhea, and myalgia, followed by hypotension and, in severe cases, shock; a sunburn-like rash with peeling of the skin, especially of the palms and soles, occurs during the acute phase. The syndrome affects almost exclusively menstruating women using tampons, although a few women who do not use tampons and a few males have been affected. It is thought to be caused by infection with *Staphylococcus aureus*. **transfusion s.**, placental transfusion s. **Treacher Collins s.**, mandibulofacial dysostosis. **trichorhinophalangeal s.**, a hereditary syndrome, transmitted as an autosomal recessive trait, consisting of sparse, slowly growing hair, pear-shaped nose with high philtrum, and brachyphalangia with deformity of the fingers and wedge-shaped epiphyses. **triparanol s.**, alopecia, poliosis, ichthyosis, irreversible cataracts, and impotence, due to the use of

triparanol, a drug formerly used to depress the synthesis of cholesterol. **trisomy C s.**, trisomy 8 s. **trisomy D s.**, trisomy 13 s. **trisomy E s.**, trisomy 18 s. **trisomy 8 s.**, a syndrome associated with an extra chromosome 8, usually mosaic (trisomy 8/normal, or trisomy C/normal), characterized by mild to severe mental retardation, prominent forehead, deep-set eyes, thick lips, prominent ears, and camptodactyly. Called also *trisomy C s.* **trisomy 13 s.**, holoprosencephaly due to an extra chromosome 13, in which central nervous system defects are associated with mental retardation, along with cleft lip and palate, polydactyly, dermal pattern anomalies, and abnormalities of the heart, viscera, and genitalia. Called also *Patau's s.*, *trisomy D s.*, and *trisomy 13-15 s.* **trisomy 13-15 s.**, trisomy 13 s. **trisomy 16-18 s.**, trisomy 18 s. **trisomy 18 s.**, a condition characterized by mental retardation, scaphocephaly or other skull abnormality, micrognathia, blepharoptosis, low-set ears, corneal opacities, deafness, webbed neck, short digits, ventricular septal defects, Meckel's diverticulum, and other deformities. It is due to the presence of an extra chromosome 18. Called also *Edwards' s.*, *trisomy E s.*, and *trisomy 16-18 s.* **trisomy 21 s.**, Down's s. **trisomy 22 s.**, a syndrome due to an extra chromosome 22, characterized typically by mental and growth retardation, microcephaly, low-set or malformed ears, micrognathia, long philtrum, preauricular skin tag or sinus, and congenital heart disease. In males, there is small penis and/or undescended testes. **Trousseau's s.**, bronzed cachexia occurring in diabetes. **Trousseau's s.**, spontaneous venous thrombosis of upper and lower extremities occurring in association with visceral carcinoma. **Turcot s.**, familial polyposis of the colon associated with malignant tumors (gliomas) of the central nervous system. **Turner's s.**, a form of gonadal dysgenesis, marked by short stature, undifferentiated (streak) gonads, and variable abnormalities that may include webbing of the neck, low posterior hair line, increased carrying angle of the elbow, cubitus valgus, and cardiac defects; it is typically associated with absence of the second X chromosome (XO, or H5, X), although a defect of one X chromosome and mosaicism (X/XX or X/XXX) also occur. The phenotype is female; patients are invariably sterile. **Turner's s., male**, Noonan's s. **Ullrich-Feichtiger s.**, a condition of micrognathia, hexadactyly, and genital abnormalities, with depressed nose, small eyes, hypertelorism, and protuberant ears, along with other defects. **Ullrich-Turner s.**, Noonan's s. **Unverricht's s.**, myoclonus epilepsy. **urethral s.**, suprapubic aching and cramping, urinary frequency, and such bladder complaints as dysuria, urinary tenesmus, and low back pain, without evidence of urinary infection. **vagoaccessory s.**, Schmidt's s. **van Buchem's s.**, hyperostosis corticalis generalisata. **van der Hoeve's s.**, a hereditary syndrome consisting of blue scleras, osteogenesis imperfecta, and otosclerotic deafness, usually transmitted as an autosomal dominant trait. Called also *Adair-Dighton s.* and *Dighton-Adair s.* See *osteogenesis imperfecta*. **Van der Woude's s.**, a hereditary syndrome, transmitted as an autosomal dominant trait, consisting of cleft lip and/or cleft palate occurring in association with cysts of the lower lip. **vanishing testes s.**, a disorder characterized by the absence of gonadal tissue, a small penis, and no adolescent virilization; the chromosome pattern is XY (male). **vascular s.**, any syndrome due to occlusion or stenosis of vessels supplying the nervous system. **Vernet's s.**, paralysis of the ninth, tenth, and eleventh cranial nerves due to a lesion in the region of the jugular foramen, and marked by paralysis of the superior constriction of the pharynx and difficulty in swallowing solids; paralysis of the soft palate and fauces with anesthesia of these parts and of the pharynx, and loss of taste in the posterior third of the tongue; paralysis of the vocal cords and anesthesia of the larynx; paralysis of the sternocleidomastoid and trapezius muscles. Called also *jugular foramen s.* **Villaret's s.**, unilateral paralysis of the ninth, tenth, eleventh, and twelfth cranial nerves and sometimes the seventh, due to a lesion in the retroparotid space, and characterized by paralysis of the superior constriction of the pharynx and difficulty in swallowing solids; paralysis of soft palate and fauces with anesthesia of these parts and of the pharynx; loss of taste in the posterior third of the tongue; paralysis of the vocal cords and anesthesia of the larynx; paralysis of the sternocleidomastoid and trapezius; and paralysis of the cervical sympathetic nerves (*Horner's syndrome*). Called also *s. of retroparotid space*. **Vinson's s.**, Plummer-Vinson s. **Vogt's s.**, a syndrome frequently associated with birth trauma, characterized by bilateral athetosis, walking difficulties, spasmodic outbursts of laughing or crying, speech disorders, excessive myelination of the nerve fibers of the corpus striatum, giving it a marbled appearance (*status marmoratus*), and sometimes mental deficiency. Called also *Vogt's disease* and *s. of corpus striatum*. **Vogt-Koyanagi s.**, uveomeningitis characterized by exudative iridocyclitis and choroiditis associated with patchy depigmentation of the skin and hair; the lashes and eyebrows also become whitened, and there may also be retinal detachment and associated deafness and tinnitus. **Volkmann's s.**, post-traumatic muscular hypertonia and degenerative neuritis; Volkmann's contracture. **Waardenburg's s.**, 1. a hereditary disorder, transmitted as an autosomal dominant trait, characterized by wide bridge of the nose due to lateral displacement of the inner canthi and puncta, pigmentary distur-

bances, including white forelock, heterochromia iridis, white eyelashes, leukoderma, and sometimes cochlear deafness. 2. a hereditary disorder, transmitted as an autosomal dominant trait, characterized by acrocephaly, orbital and facial deformities, and brachydactyly with mild soft tissue syndactyly; cleft palate, hydrophthalmos, cardiac malformation, and contractures of the elbows and knees may also be present. Called also *acrocephalosyndactyly type IV*. **Wallenberg's s.**, a syndrome due to occlusion of the posterior inferior cerebellar artery, marked by ipsilateral loss of temperature and pain sensations of the face and contralateral loss of these sensations of the extremities and trunk, ipsilateral ataxia, dysphagia, dysarthria, and nystagmus. **Waterhouse-Friderichsen s.**, the malignant or fulminating form of epidemic cerebrospinal meningitis, marked by sudden onset and short course, fever, coma, and collapse, cyanosis, petechial hemorrhages of the skin and mucous membranes, and bilateral adrenal hemorrhage. **s. of Weber**, paralysis of the oculomotor nerve on the same side as the lesion, producing ptosis, strabismus, and loss of light reflex and of accommodation; also spastic hemiplegia on the side opposite the lesion with increased reflexes and loss of superficial reflexes. Called also *alternating oculomotor hemiplegia* and *Weber's paralysis*. **Weber-Christian s.**, nodular non-suppurative panniculitis. **Weber-Dubler s.**, s. of Weber. **Wegener's s.**, see under *granulomatosis*. **Weill-Marchesani s.**, a congenital disorder of connective tissue transmitted as an autosomal dominant or recessive trait, characterized by brachycephaly, brachydactyly, short stature with a broad chest and heavy musculature, reduced joint mobility, spherophakia, ectopia lentis, myopia, and glaucoma; called also *dystrophia mesodermalis congenita hyperplastica*, *Marchesani's s.*, and *spherophakia-brachymorphia s.* **Werdnig-Hoffmann s.**, see under *paralysis*. **Wermer's s.**, polyendocrine adenomatosis. **Werner's s.**, premature senility of an adult, characterized by early graying and some loss of hair, cataracts, hyperkeratinization, and scleroderma-like changes in the skin of the lower extremities, followed by chronic ulceration. **Wernicke's s.**, presbyophrenia. **Weyers' oligodactyly s.**, a congenital syndrome consisting of deficiency of the ulna and ulnar rays, antecubital pterygia, reduced sternal segments, malformations of the kidney and spleen, and cleft lip and palate. **Weyers-Thier s.**, oculovertebral dysplasia. **whistling face s.**, **whistling face-windmill vane hand s.**, craniocarpotarsal dysostosis. **Widal s.**, icteronemia. **Willebrand's s.**, von Willebrand's disease. **Williams-Campbell s.**, congenital bronchomalacia due to absence of annular cartilage distal to the first division of the peripheral bronchi; it is marked by bronchiectasis. **Wilson's s.**, hepatolenticular degeneration. **Wilson-Mikity s.**, a rare form of pulmonary insufficiency in low-birth-weight infants, marked by hyperpnea and cyanosis of insidious onset during the first month of life and often resulting in death. Radiographically, there are multiple cystlike foci of hyperaeration throughout the lung with coarse thickening of the interstitial supporting structures. The disorder has been attributed to disparity of maturation of parenchymal elements, especially of alveoli proliferation, and hence has been called *pulmonary dysmaturity*. **Winter's s.**, a congenital syndrome consisting of renal hypoplasia or aplasia, anomalies of the internal genitalia, especially vaginal atresia, and anomaly of the ossicles of the middle ear. **Wiskott-Aldrich s.**, a condition characterized by chronic eczema, chronic suppurative otitis media, anemia, and thrombocytopenic purpura; it is an immunodeficiency syndrome transmitted as an X-linked recessive trait, in which there is poor antibody response to polysaccharide antigens and dysfunction of cell-mediated immunity. Called also *Aldrich's s.* **Wolf-Hirschhorn s.**, a syndrome associated with partial deletion of the short arm of chromosome 4, characterized by microcephaly, ocular hypertelorism, epicanthus, cleft palate, micrognathia, low-set ears simplified in form, cryptorchidism, and hypospadias. **Wolff-Parkinson-White s.**, the association of paroxysmal tachycardia (or atrial fibrillation) and preexcitation, in which the electrocardiogram displays a short P-R interval and a wide QRS complex which characteristically shows an early QRS vector (delta wave); called also *anomalous atrioventricular excitation*. **Wolfram s.**, a hereditary association of diabetes mellitus, diabetes insipidus, optic atrophy, and neural deafness. **Wright's s.**, 1. (Irving S. Wright) a neurovascular syndrome caused by hyperabduction of the arm. Such hyperabduction may cause occlusion of the subclavian artery, leading to gangrene, or may produce sensory symptoms due to stretching of the brachial plexus. 2. a condition marked by multifocal areas of osteitis fibrosa, patchy cutaneous pigmentation, and precocious puberty. **XXY s.**, Klinefelter's s. **yellow nail s.**, a yellow or greenish discoloration of the nails preceded and accompanied by retardation of their growth, associated with lymphedema that is usually confined to the ankles but may involve other areas. **yellow vernix s.**, placental dysfunction s. **Young's s.**, amyotrophic lateral sclerosis of bulbar type associated with platybasia. **Zieve s.**, hypercholesterolemia, hepatosplenomegaly, fatty infiltration of the liver, hemolytic anemia, and hypertriglyceridemia following the ingestion of large amounts of ethanol. **Zollinger-Ellison s.**, a triad comprising (1) intractable, sometimes fulminating, and in many ways atypical peptic ulcers; (2) extreme

gastric hyperacidity; and (3) gastrin-secreting, non-beta islet cell tumors of the pancreas, which may be single or multiple, small or large, benign or malignant. The gastrinoma sometimes occurs in sites (e.g., the duodenum) other than the pancreas. See also *polyendocrine adenomatosis*, under *adenomatosis*.

syndromic (sin-drom'ik) occurring as a syndrome.

syndromology (sin'drom-ol'o-je) the field concerned with the taxonomy, etiology, and patterns of congenital malformations.

Syndrox (sin'droks) trademark for preparations of methamphetamine hydrochloride.

synechia (si-nek'e-ah), pl. *synechia* [Gr. *synecheia* continuity] adhesion of parts, especially adhesion of the iris to the cornea or to the lens. **annular s.**, adhesion of the whole rim of the iris to the lens. **anterior s.**, adhesion of the base of the iris to the cornea, producing occlusion of the chamber angle; it may be caused by glaucoma, cataract, intraocular tumors, or after perforation resulting from keratitis, iridocyclitis, trauma, or surgery. **circular s.**, annular s. **s. pericardii**, concretio cordis. **posterior s.**, adhesion of the iris to the capsule of the lens or to the surface of the vitreous body, producing an irregularly shaped pupil. **total anterior s.**, adhesion of the entire surface of the iris to the cornea. **total posterior s.**, adhesion of the entire surface of the iris to the lens. **s. vulvae**, fused vulva: a congenital condition in which the labia minora are sealed in the midline, with only a small opening below the clitoris through which urination and menstruation may occur.

synechia (si-nek'e-e) plural of *synechia*.

synechotome (sin-ek'o-töm) a cutting instrument for use in synechotomy.

synechotomy (sin'ë-kot'o-me) [*synechia* + Gr. *tomē* a cutting] the operation of cutting a synechia.

synechtenterotomy (sin'ek-ten'ter-ot'o-me) [Gr. *synechēs* joined together + *enteron* bowel + *tomē* a cutting] division of an intestinal adhesion.

synecology (sin'ë-kol'o-je) the study of the environment of organisms in the mass, as distinguished from *autoecology*.

Synemol (sin'ë-mol) trademark for a preparation of fluocinolone acetonide.

synencephalocoele (sin'en-sef'ah-lo-sēl') [*syn-* + Gr. *enkephalos* brain + *kēlē* tumor] encephalocoele with adhesions to the adjoining parts.

synencephalus (sin'en-sef'ah-lus) a monster exhibiting synencephaly.

synencephaly (sin'en-sef'ah-le) [*syn-* + Gr. *enkephalos* brain] a developmental anomaly in which there are two bodies and one head.

syneresis (si-ner'ë-sis) [Gr. *synairesis* a taking or drawing together] a drawing together of the particles of the dispersed phase of a gel, with separation of some of the disperse medium and shrinkage of the gel, such as occurs in the clotting of blood.

synergenesis (sin'er-jen'ë-sis) the doctrine that every cell transmits its protoplasm to every generation of cells derived from it.

synergetic (sin'er-jet'ik) working together; said of muscles which cooperate in performing an action.

synergia (sin'er'je-ah) synergy.

synergic (sin'er'jik) acting together or in harmony.

synergism (sin'er-jizm) the joint action of agents so that their combined effect is greater than the algebraic sum of their individual effects.

synergist (sin'er-jist) 1. a medicine that aids or cooperates with another; an adjuvant. 2. an organ that acts in concert with another. **pituitary s.**, a substance occurring in extracts of the anterior pituitary which enhances the action of gonadotropic extracts of the urine of pregnant women or placenta.

synergistic (sin'er-jis'tik) acting together; enhancing the effect of another force or agent.

synergy (sin'er-je) [L. *synergia*; Gr. *syn* together + *ergon* work] correlated action or cooperation on the part of two or more structures or drugs. In neurology, the faculty by which movements are properly grouped for the performance of acts requiring special adjustments.

synesthesia (sin'es-the'ze-ah) [*syn-* + Gr. *aisthēsis* perception + *-ia*] a secondary sensation accompanying an actual perception; the experiencing of a sensation in one place, due to stimulation applied to another place; also the condition in which a stimulus of one sense is perceived as sensation of a different sense, as when a sound produces a sensation of color. **s. al'gica**, a painful synesthesia.

synesthesialgia (sin'es-the'ze-al'je-ah) a condition in which a stimulus produces pain on the affected side but no sensation or even a pleasant one on the normal side of the body.

synzesis (sin'e-ze'sis) synzesis.

Syngamidae (sin-gam'i-de) a family of nematodes of the superfamily Strongyloidea, which includes the genera *Syngamus* and *Stephanurus*.

syngamous (sin'gah-mus) [*syn-* + Gr. *gamos* marriage] 1. per-

taining to or characterized by syngamy. 2. having the sex of the individual determined at the time when the ovum is fertilized.

Syngamus (sin'gah-mus) a genus of nematode worms of the family Syngamidae that are parasitic in fowl and other birds. **S. tra'chea**, the gapeworm, a species of worms which are parasitic in chickens, pheasants, turkeys, and various wild birds, inhabiting the trachea and interfering with respiration when present in large numbers; it is the etiologic agent of gapes.

syngamy (sin'gah-me) [*syn-* + Gr. *gamos* marriage] 1. sexual reproduction. 2. the union of two gametes in fertilization to form a zygote.

syngeneic (sin'jē-ne'ik) in transplantation biology, denoting individuals or tissues that have identical genotypes, i.e., identical twins or animals of the same inbred strain, or their tissues. Called also *isogeneic*.

syngenesioplasmic (sin'jē-ne'ze-o-plas'tik) [*syn-* + Gr. *genesis* origin + *plassein* to form] denoting transplantation of tissue from one individual to a related individual of the same species, as from a mother to her child, or from a brother to a sister.

syngenesiotransplantation (sin'jē-ne'ze-o-trans'plan-ta'-shun) syngenesioplasmic transplantation.

syngensis (sin-jen'ë-sis) 1. the origin of an individual from a germ cell derived from both parents and not from either one alone, as occurs in mammals. 2. the state of having descended from a common ancestor.

syngnathia (sin-na'the-ah) [*syn-* + Gr. *gnathos* jaw + *-ia*] congenital bands or threads of mucous membrane extending between the jaws.

syngonic (sin-gon'ik) [*syn-* + Gr. *gonē* seed] having the sex of the individual determined at the time when the ovum is fertilized.

syngraft (sin'graft) isograft.

synzesis (sin'f-ze'sis) [Gr. *synzēsis*] 1. occlusion. 2. a stage in mitosis in which the nuclear chromatin is massed. **s. pupil'lae**, occlusion of the pupil.

synkainogenesis (sin'ki-no-jen'ë-sis) [*syn-* + Gr. *kainos* new + *genesis* production] the process of developing a new formation simultaneously with another formation.

synkaryon (sin-kar'e-on) [*syn-* + Gr. *karyon* nucleus] the nucleus produced by the fusion of two pronuclei in karyogamy; the fertilization nucleus.

Synkayvite (sin'ka-vit) trademark for preparations of menadiol sodium diphosphate.

synkinesia (sin'ki-ne'ze-ah) synkinesis.

synkinesis (sin'ki-ne'sis) [*syn-* + Gr. *kinēsis* movement] an associated movement; an unintentional movement accompanying a volitional movement. **imitative s.**, an involuntary movement on the healthy side accompanying an attempt at movement on the paralyzed side. **mouth-and-hand s.**, see *Saunders' sign*, under *sign*. **spasmodic s.**, a movement on the paralyzed side attending a voluntary movement on the healthy side.

synkinetic (sin'ki-net'ik) pertaining to or of the nature of synkinesis.

synnecrosis (sin'në-kro'sis) [*syn-* + Gr. *nekrōsis* a state of death] a relationship between populations (or individuals) resulting in mutual depression or death.

synneurosis (sin'nu-ro'sis) [Gr. *synneurosis* union by sinews] syndesmosis.

synocha (sin'o-kah) [L.; Gr. *synochos* jointed together] a continued fever.

synochal (sin'o-kal) of or pertaining to synocha.

synochus (sin'o-kus) synocha.

syncytotoxin (sin'o-si'to-tok'sin) syncytotoxin.

synonychia (sin'o-nik'e-ah) [*syn-* + Gr. *onyx* nail + *-ia*] fusion of the nails of two or more digits in complicated syndactyly.

synophridia (sin'of-rid'e-ah) synophrys.

synophrys (sin-of'ris) [Gr. "with meeting eyebrows"] the condition in which the eyebrows grow together.

synophthalmia (sin'of-thal'me-ah) [*syn-* + Gr. *ophthalmos* eye + *-ia*] the usual form of cyclopia, in which the two eyes are more or less completely fused into one.

synophthalmus (sin'of-thal'mus) cyclops.

Synophylate (sin'o-fi'lät) trademark for preparations of theophylline sodium glycinate.

synopsy (sin'op-se) [Gr. *syn* together + *opsis* vision] 1. a form of synesthesia in which certain colors are associated with certain tones. 2. the abnormal suggestion of types of the human face or figure by the various numerals.

synoptophore (sin-op'to-för) an instrument for diagnosing strabismus and for treating it by orthoptic methods.

synoptoscope (sin-op'to-sköp) [*syn-* + Gr. *optos* seen + *skopein* to examine] an instrument for examining the eye in strabismus.

synorchidism (sin-or'ki-dizm) synorchism.

synorchism (sin-or-kizm) [*syn-* + Gr. *orchis* testicle] fusion of the two testes into one mass, which may be located in the scrotum or in the abdomen.

synoscheos (sin-os/ke-os) [*syn-* + Gr. *oscheon* scrotum] adhesion between the penis and scrotum.

synosteology (sin''os-te-ol'o-je) [*syn-* + Gr. *osteon* bone + *-logy*] the sum of knowledge regarding the joints and articulations.

synosteosis (sin''os-te-o'sis) synostosis.

synosteotic (sin''os-te-ot'ik) pertaining to or marked by synosteosis.

synosteotomy (sin''os-te-ot'o-me) [*syn-* + Gr. *osteon* bone + *tomē* a cutting] the dissection of the joints.

synostosis (sin''os-to'sis), pl. *synosto'ses* [*syn-* + Gr. *osteon* bone] 1. [NA] a union between adjacent bones or parts of a single bone formed by osseous material, such as ossified connecting cartilage or fibrous tissue. 2. the osseous union of bones that are normally distinct. **radioulnar s.**, bony fusion of the proximal ends of the radius and ulna. **sagittal s.**, scaphocephaly. **tarsal s.**, fusion of various tarsal bones. **tribasilar s.**, fusion in infancy of the three bones at the base of the skull, producing mental retardation.

synostotic (sin''os-to't'ik) synosteotic.

synotia (si-no/she-ah) [*syn-* + Gr. *ous* ear] a developmental anomaly characterized by persistence of the ears in their horizontal position beneath the mandible.

synotus (si-no'tus) [*syn-* + Gr. *ous* ear] fetus exhibiting synotia.

synovectomy (sin''o-vek'to-me) [*synovia* + Gr. *ektomē* excision] excision of a synovial membrane, as of that lining the capsule of the knee joint, performed in treatment of rheumatoid arthritis of the knee, or of the synovial sheath of a tendon.

synovia (sī-no've-ah) [L.; Gr. *syn* with + *ōon* egg] [NA] a transparent alkaline viscid fluid, resembling the white of an egg, secreted by the synovial membrane, and contained in joint cavities, bursae, and tendon sheaths; called also *synovial fluid*.

synovial (sī-no've-al) [L. *synovialis*] of, pertaining to, or secreting synovia.

synovialis (sī-no've-a'lis) [L.] synovial.

synovialoma (sī-no've-ah-lo'mah) synovioma.

synovialanalysis (sī-no've-ah-nal'i-sis) the laboratory examination of joint fluid (synovia).

synovin (sin'o-vin) the mucin found in synovia.

synovioblast (sī-no've-o-blast) a fibroblast of synovial membrane.

synoviocyte (sī-no've-o-sīt) a cell of the synovial membrane.

synovioma (sī-no've-o'mah) a tumor of synovial membrane origin. **benign s.**, giant cell tumor of tendon sheath. **malignant s.**, synoviosarcoma.

synoviorthese (sin-o've-or-thēs') [Fr.] irradiation of the synovium by intra-articular injection of radiocolloids to destroy inflamed synovial tissue.

synoviosarcoma (sī-no've-o-sar-ko'mah) a malignant neoplasm arising in the synovial membrane of the joints and also in synovial cells of tendons and bursae; called also *malignant synovioma* and *synovial sarcoma*.

synoviparous (sin'o-vip'ah-rus) [*synovia* + L. *parere* to produce] producing synovia.

synovitis (sin''o-vi'tis) inflammation of a synovial membrane. It is usually painful, particularly on motion, and is characterized by a fluctuating swelling, due to effusion within a synovial sac. Synovitis is qualified as *fibrinous*, *gonorrheal*, *hyperplastic*, *lipomatous*, *metritic*, *puerperal*, *rheumatic*, *scarlatinal*, *syphilitic*, *tuberculous*, *urethral*, etc. **bursal s.**, bursitis. **dendritic s.**, that in which villous growths are developed within the synovial sac. **dry s.**, synovitis with but little effusion. **fungous s.**, arthritis fungosa. **localized nodular s.**, lesions of the tendon sheaths that give histological evidence of evolution from a number of smaller nodules, or from villous structures. **pigmented villonodular s.**, synovial proliferation forming brown nodular masses, probably caused by hemangiomas of synovial membrane that become traumatized, resulting in synovial hyperplasia and inflammation; it is characterized by episodic monoarticular pain and swelling, with joint locking and hemorrhagic effusions. **purulent s.**, that in which there is an effusion of pus in a synovial sac. **serous s.**, synovitis with copious non-purulent effusion. **s. sic'ca**, dry s. **simple s.**, that in which the effusion is clear or but slightly turbid. **tendinous s.**, inflammation of a tendon sheath. **vaginal s.**, tendinous s. **vibration s.**, synovitis produced by the passage of a missile through the tissues near a joint, but without actually wounding the joint. **villonodular s.**, proliferation of synovial tissue, especially of the knee joint, composed of synovial villi and fibrous nodules infiltrated by giant cells and by macrophages containing lipids and hemosiderin.

synovium (sī-no've-um) a synovial membrane.

synphalangism (sin-fal'an-jizm) symphalangia.

synpneumonic (sin''nu-mon'ik) occurring in association with pneumonia.

synprolan (sin'pro-lan) the name applied by Zondek to the synergistic principle in the anterior pituitary which enhances the

action of the gonadotropic substance ("prolan") in the urine of pregnant women. See *pituitary synergist*.

synreflexia (sin're-flek'se-ah) the association existing between various reflexes.

syntactic (sin-tak'tik) pertaining to or affecting syntax, or the proper arrangement of words in speech.

syntaxis (sin-tak'sis) [Gr. "a putting together in order"] articulation.

syntectic (sin-tek'tik) pertaining to or characterized by syntexis.

syntenic (sin-ten'ik) pertaining or relating to syntenry.

syntenosis (sin''tē-no'sis) [*syn-* + Gr. *tenōn* tendon] a hinge joint surrounded by tendons.

syntenry (sin'tē-ne) the presence together on the same chromosome of two or more gene loci whether or not in such proximity that they may be subject to linkage.

synteresis (sin''ter-e'sis) [*syn-* + Gr. *tērein* to watch over] preventive treatment; prophylaxis.

synteretic (sin''ter-et'ik) prophylactic.

syntexis (sin-tek'sis) [Gr. *syntēxis* colliquation] wasting or emaciation.

synthase (sin-thās) any enzyme, especially a lyase, which catalyzes a synthesis that does not involve the breakdown of a pyrophosphate bond, as opposed to *ligase*.

synthermal (sin-ther'mal) [*syn-* + Gr. *thermē* heat] having the same temperature.

synthescope (sin'thē-skōp) [Gr. *synthesis* placing together + *skopein* to examine] an instrument for observing the visible effect of placing two liquids in contact.

synthesis (sin'thē-sis) [Gr. "a putting together, composition"] 1. the artificial building up of a chemical compound, by the union of its elements or from other suitable starting materials. 2. the process of bringing back into consciousness activities or experiences that have become split off or dissociated. Cf. *dissociation* (3), and *subconscious*. **s. of continuity**, union of the edges of a wound or the ends of a fractured bone. **enzymatic s.**, synthesis brought about by enzymatic action. **inducible enzyme s.**, the formation of an enzyme within a cell only in the presence of its substrate or of a substance closely related to the substrate structurally. Called also *enzymatic adaptation*. **morphologic s.**, histogenesis.

synthesize (sin'thē-siz') to produce by means of synthesis.

synthetase (sin'thē-tās) *ligase*. **amide s.**, any ligase that catalyzes the linking together of an acid and an ammonia group, as in the formation of L-asparagine and L-glutamine. **glycogen s.**, an enzyme which acts during glycogen synthesis to catalyze the transfer of glucose residues in activated state from UDP-glucose to the nonreducing ends of a glycogen primer. **tryptophan s.**, the enzyme that catalyzes the union of indole and serine to form tryptophan.

synthetic (sin-thet'ik) [L. *syntheticus*; Gr. *synthetikos*] 1. pertaining to, of the nature of, or participating in synthesis. 2. produced by synthesis; artificial.

synthetism (sin'thē-tizm) [Gr. *synthetos* put together] the complete treatment of a fracture.

synthorax (sin-tho'raks) thoracopagus.

Synthroid (sin'throid) trademark for a preparation of levothyroxine sodium.

Syntocinon (sin-to'si-non) trademark for a solution of synthetic oxytocin.

syntone (sin'tōn) a person of syntonetic type.

syntonetic (sin-ton'ik) [*syn-* + Gr. *tonos* tension] a term applied by Bleuler to the stable integrated type of personality which responds normally to the environment, as contrasted with the schizoid type.

syntonin (sin'to-nin) an acid metaprotein which precipitates from a gastric digestion mixture at or near the neutral point.

syntopie, syntopy (sin'to-pe) [*syn-* + Gr. *topos* place] the position of an organ in relation to neighboring organs.

syntripsis (sin-trip'sis) [*syn-* + Gr. *tribein* to rub] the comminution or crushing of a bone; comminuted fracture.

Syntropan (sin'tro-pan) trademark for a preparation of amprotoprine phosphate.

syntrophism (sin'trōf-izm) [*syn-* + Gr. *trophē* nourishment] stimulation of the growth of a microorganism resulting from admixture with or nearness of another strain.

syntrophoblast (sin'trōf'o-blast) syncytiotrophoblast.

syntrophus (sin'tro-fus) [Gr. *syntrophos* congenital] any congenital or inherited disease.

syntropic (sin-trop'ik) [*syn-* + Gr. *trepein* to turn] 1. turning or pointing in the same direction, as the ribs or the vertebral spines. 2. denoting the correlation of several factors, as the relation of one disease to the development or incidence of another disease. 3. Meyer's term for a well-balanced personality with a normal social outlook.

syntropy (sin'tro-pe) [*syn-* + Gr. *tropos* a turning] the state of being syntropic.

synulosis (sin'u-lo'sis) [Gr. *synoulōsis*] complete cicatrization.

synulotic (sin'u-lo'tik) [Gr. *synoulōtikos*] 1. promoting cicatrization. 2. an agent that promotes cicatrization.

Synura (sin-u'rah) a genus of flagellate protozoa of the order Chrysomonadina, family Syncryptidae, which sometimes impart an unpleasant taste to drinking water.

synxenic (sin-zen'ik) [*syn-* + Gr. *xenos* a guest-friend, stranger] associated with a known number of microbic species; applied to laboratory animals whose microfauna and microflora are known (gnatobiotics).

Syphacia (si-fa'se-ah) a nematode parasite found in the intestines of rodents. **S. obvela'ta**, a common cecal parasite of laboratory rats that has been reported occasionally in infants.

syphilid (sif'i-lid) a general term for the skin lesions of secondary syphilis, appearing (usually between six weeks and two years after infection) in a series of crops lasting a few days to a few months, and becoming progressively more severe and conspicuous, more persistent, and less widely generalized, in successive outbreaks. The serologic test for syphilis (STS) is invariably positive. Mucous membrane lesions in this stage are typically teeming with *Treponema pallidum* and are clinically the most contagious lesions of the disease. Syphilids are variously qualified by their shape (annular s.), site (plantar s.), and so on. **macular s.**, syphilitic roseola.

syphilide (sif'i-lid), pl. *syphilides* [Fr.] syphilid.

syphilophobia (sif'i-li-fo-be-ah) syphilophobia.

syphilis (sif'i-lis) [*Syphilus*, the name of a shepherd infected with the disease in the poem of Fracastorius (1530), in which the term first appears. Derived perhaps from Gr. *syn* together + *philein* to love, or from Gr. *siphlos* crippled, maimed] a contagious venereal disease leading to many structural and cutaneous lesions, caused by the spirochete *Treponema pallidum* and transmitted by direct intimate contact or in utero. Its primary local seat is a hard or true chancre, whence it extends by means of the lymphatics to the skin, mucosa, and to nearly all the tissues of the body, even to the bones and periosteum. Syphilis is divided into primary, secondary, and tertiary stages or into early and late stages (see below). Called also *lues* and *venereal s.*, and formerly called *pox*. Cf. *nonvenereal s.* **cerebrospinal s.**, Erb's spastic paraplegia. **congenital s.**, syphilis acquired in utero, and manifested variously by any of several characteristic malformations of the teeth or bones known as stigmata and by active mucocutaneous syphilis at the time of birth or shortly afterward, ocular changes, such as interstitial keratitis, or by neurologic changes, such as deafness. **s. d'emblée** (dawm-bla'), syphilis which develops without the formation of a chancre, or primary sore, as from blood transfusion. **early s.**, the stage comprising primary, secondary, and early latent syphilis. **early latent s.**, the stage following the primary stage (or *primary s.*) encompassing the first two years after infection, during which no signs or symptoms are present but relapse of the mucocutaneous lesion may occur. **endemic s.**, nonvenereal s. **equine s.**, dourine. **s. hereditaria** *tar'da*, congenital syphilis that manifests itself some time after birth. **horse s.**, dourine. **late s.**, the stage comprising late latent and tertiary syphilis. **late latent s.**, the stage beginning two years after infection in the untreated patient, during which there is serologic or historical evidence of syphilis but no other signs or symptoms are detectable; it may last for many decades. **latent s.**, syphilis manifested solely by serologic or historical evidence; see *early latent s.* and *late latent s.* **meningovascular s.**, a form of neurosyphilis in which arteritis results in arterial thrombosis in the leptomeninges. It may involve the cranial nerves and nerve roots, and give rise to various neurological symptoms, as in Erb's spastic paraplegia (q.v.). **nonvenereal s.**, a chronic treponemal infection that mainly affects children and occurs in many parts of the world, especially arid areas, including the Near East, Southeast Asia, Bechuanaland, Southern Rhodesia, Gambia, and Eastern Europe, especially Bosnia in Yugoslavia. Caused by an organism indistinguishable morphologically from *Treponema pallidum*, it is transmitted by direct nonsexual body contact and indirectly by the common use of table and drinking utensils. The first lesions are usually oral mucous patches; subsequent lesions are concentrated in the axillae, inguinal region, and rectum. A latent period usually follows the first stages, with the development of destructive lesions of the skin and bones appearing as late manifestations. It is called also *bejel*, *dichuchwa*, *njovera*, *frega*, *siti*, and *endemic s.* **primary s.**, syphilis in its first stage: the primary lesion (*chancre*) usually appears ten to forty days after infection, and is infectious and painless; the nearby lymph nodes become hard and swollen (satellite bubo), are painless, do not ulcerate, and slowly return to their normal condition. The spirochete can invariably be demonstrated by darkfield microscopy. The chancre heals spontaneously without leaving a scar. **quaternary** (*obs.*), parasyphilis. **rabbit s.**, a naturally occurring disease in rabbits caused by *Treponema cuniculi*. **secondary s.**, syphilis in the second of its three stages: it begins after six weeks, usually within three months, and is attended with fever, copper-hued and multiform skin eruptions (see *syphilid*), iritis, alopecia, mucous patches, and severe pains in

the head, joints, and periosteum. **tertiary s.**, late generalized syphilis, characterized by involvement of numerous organs and tissues, including the skin, bones, joints, the cardiovascular system, and the central nervous system (neurosyphilis). See *tabes dorsalis*. **venereal s.**, syphilis.

syphilitic (sif'i-lit'ik) [L. *syphiliticus*] affected with, caused by, or pertaining to syphilis.

syphiloma (sif'i-lo'mah) a tumor of syphilitic origin; a gumma. **syphilomania** (sif'i-lo-ma'ne-ah) [*syphilis* + Gr. *mania* madness] syphilophobia.

syphilophobia (sif'i-lo-fo-be-ah) [*syphilis* + Gr. *phobein* to be affrighted by] 1. morbid fear of syphilis. 2. the delusion of being infected with syphilis.

syphilophobic (sif'i-lo-fo-bik) pertaining to or characterized by syphilophobia.

syphilophyma (sif'i-lo-fi'mah) [*syphilis* + Gr. *phyma* growth] any syphilitic growth or excrescence.

syphilopsychosis (sif'i-lo-si-ko'sis) any syphilitic mental disease.

syphilosis (sif'i-lo'sis) generalized syphilitic disease.

syphilous (sif'i-lus) syphilitic.

syphitoxin (sif'i-tok'sin) [*syphilitis* + *toxin*] an antisyphilitic serum.

Syr. abbreviation for L. *syrupus*, syrup.

syrimphonía (sir'ig-mo-fo'ne-ah) [Gr. *syrimnos* a shrill piping sound + *phōnē* voice + *-ia*] a high, whistling sound of the voice.

syrimmus (sir'ig'mus) [Gr. *syrimnos* a shrill piping sound] a ringing in the ears.

syringe (si-rinj', sir'inj) [L. *syrix*; Gr. *syrix*] an instrument for injecting liquids into or withdrawing them from any vessel or cavity. **air s.**, chip s. **Anel's s.**, a delicate syringe for the treatment of the lacrimal passages. **chip s.**, a small, fine-nozzled syringe used to direct a current of air into a tooth cavity being excavated, to remove the small fragments detached from the tooth or to dry the cavity; called also *air s.* **dental s.**, a small syringe into which is fitted a hermetically sealed cartridge which contains an anesthetic solution; used in operative dentistry. **fountain s.**, an apparatus which injects a liquid by the action of gravity. **hypodermic s.**, a syringe, usually of small caliber, by means of which drugs in solution or other liquids are injected through a hollow needle of small bore into the subcutaneous tissues. **Luer's s.**, **Luer-Lok s.**, a glass syringe for intravenous and hypodermic use, with a metallic tip and locking device to hold the needle firmly in place. **Neisser's s.**, a urethral syringe for use in gonorrhea. **probe s.**, a syringe whose point may be used also as a probe; used mostly in treating the lacrimal passages.

syringectomy (sir'in-jek'to-me) [*syringo-* + Gr. *ektomē* excision] excision of the walls of a fistula.

syringin (sir'in'jin) chemical name: 4-(3-hydroxypropenyl)-2,6-dimethoxyphenyl D-glucoside. A white, crystalline glycoside, C₁₇H₂₄O₈, soluble in hot water and in hot alcohol, from the bark of lilac, *Syringa vulgaris*; formerly used as an antiperiodic. Called also *ligustrin* and *lilacin*.

syringitis (sir'in-jit'is) inflammation of the auditory tube.

syringo- (sir-ring'go) [Gr. *syrix* pipe, tube, fistula] a combining form denoting relationship to a tube or a fistula.

syringoadenoma (sir-ring'go-ad'ē-no'mah) syringocystadenoma.

syringobulbia (sir-ring'go-bul'be-ah) [*syringo-* + Gr. *bolbos* bulb + *-ia*] the presence of cavities in the medulla oblongata; pontobulbia.

syringocarcinoma (sir-ring'go-kar'si-no'mah) carcinoma of a sweat gland.

syringocoele (sir-ring'go-sēl) a cavity-containing herniation of the spinal cord through the bony defect in spina bifida.

syringocoele (sir-ring'go-sēl) [*syringo-* + Gr. *kōilia* hollow] the central canal of the spinal cord (canalis centralis medullae spinalis [NA]).

syringocystadenoma (sir-ring'go-sis'tad-ē-no'mah) [*syringo-* + *cystadenoma*] adenoma of the sweat glands; a skin disease marked by an eruption of small, hard papules; called also *hidradenoma* and *adenoma hidradenoides*. **s. papilliferum**, hamartoma of an apocrine sweat gland, the lesion being a circumscribed, firm, rose-red papule usually on the shoulder, axilla, genitals, inguinal region, or scalp.

syringocystoma (sir-ring'go-sis-to'mah) [*syringo-* + Gr. *kystis* cyst + *-oma*] a cystic tumor of the sweat glands.

syringoencephalia (sir-ring'go-en'sē-fa'le-ah) [*syringo-* + Gr. *enkephalos* brain + *-ia*] the formation of abnormal cavities in the brain substance.

syringoencephalomyelia (sir-ring'go-en-sef'ah-lo-mi-e'le-ah) [*syringo-* + Gr. *enkephalos* brain + *myelos* marrow + *-ia*] the existence of cavities in the substance of the brain and spinal cord.

syringoid (sir-ring'goid) [L. *syringoides*, from Gr. *syrix* pipe + *eidos* form] resembling a pipe or tube; fistulous.

syringoma (sir'ing-go'mah) adenoma of sweat glands.

syringomeningocele (si-ring'go-mē-nin'go-sēl) [*syringo-* + Gr. *mēnix* membrane + *kēlē* tumor] a meningocele resembling a syringomyelocele.

syringomyelia (si-ring'go-mi-e'le-ah) [*syringo-* + Gr. *myelos* marrow + *-ia*] a condition marked by abnormal cavities filled with liquid in the substance of the spinal cord. **traumatic s.**, Kienböck's disease, def. 2.

syringomyelitis (si-ring'go-mi'ē-li'tis) inflammation of the spinal cord, with the formation of cavities in its substance.

syringomyelocele (si-ring'go-mi'ē-lo-sēl') [*syringo-* + Gr. *myelos* marrow + *kēlē* tumor] hernial protrusion of the spinal cord through the bony defect in spina bifida, the mass containing a cavity connected with the central canal of the spinal cord.

syringomyelus (si-ring'go-mi'ē-lus) dilatation of the central canal of the spinal cord, the gray matter being converted into connective tissue.

syringopontia (si-ring'go-pon'she-ah) a condition in which cavities exist in the pons.

Syringospora (si'ring-gos'po-rah) former name of a genus of fungi now called *Candida*.

syringotome (si-ring'go-tōm) a knife for cutting a fistula.

syringotomy (sir'in-got'o-me) [*syringo-* + Gr. *tomē* a cutting] incision of a fistula, particularly an anal fistula.

syrinx (sir'inks) [Gr. "a pipe"] 1. a tube or pipe; also a fistula. 2. the lower or posterior part of the trachea of birds in which vocal sounds are produced.

syrosingopine (si'ro-sing'go-pin) chemical name: methyl carbethoxysyringoyl reserpate. A crystalline substance, $C_{35}H_{42}N_2O_{11}$, used as an antihypertensive agent.

Syrphidae (sir'phi-de) a family of flies, the hover flies, of the order Diptera, including the genera *Eristalis* and *Helophilus*.

syrup (sir'up) [L. *syrupus*; Arabic *sharāb*] a concentrated solution of a sugar, such as sucrose, in water or other aqueous liquid, sometimes with some medicinal substance added. The official preparation [NF] is a solution of sucrose in purified water, and is used as a flavored vehicle in pharmaceutical preparations.

acacia s. [NF], a preparation of powdered acacia, sodium benzoate, vanilla tincture, sucrose, and water, used as a vehicle for drugs. **amantadine hydrochloride s.** [USP], a preparation containing 95 to 105 per cent of the labeled amount of amantadine hydrochloride; used as an antiviral agent for the prophylaxis of Asian (A_2) influenza. **aminocaproic acid s.** [USP], a preparation containing, in 5 ml., 1.25 gm. of aminocaproic acid; used as a hemostatic. **bromides s.**, a preparation containing potassium, sodium, ammonium, calcium, and lithium bromides, formerly used as a central nervous system depressant.

cacao s., **cocoa s.** **cherry s.**, a mixture of cherry juice, sucrose, alcohol, and purified water, used as a flavored vehicle for drugs. **chloral hydrate s.** [USP], a syrup containing 95 to 110 per cent chloral hydrate; used as a hypnotic and sedative.

chlorpheniramine maleate s. [USP], a preparation containing 36–44 mg. of chlorpheniramine maleate in each 100 ml., in a hydroalcoholic vehicle; used as an antihistaminic. Formerly called **chlorpheniramine maleate elixir**. **chlorpromazine hydrochloride s.** [USP], a liquid preparation containing between 190 and 210 mg. of chlorpromazine hydrochloride per 100 ml.; used as an antiemetic and tranquilizer.

citric acid s., a preparation of lemon tincture, hydrous citric acid, and purified water, in syrup, used as a flavored vehicle for drugs. **cocoa s.** [NF], a preparation of cocoa, sucrose, liquid glucose, glycerin, sodium chloride, vanillin, sodium benzoate, and purified water; used as a flavored vehicle for drugs. Called also **cacao s.**

cyclophorazine hydrochloride s. [USP], a preparation containing 90 to 110 per cent of the labeled amount of cyclophorazine hydrochloride; used as an antihistaminic for relief of symptoms associated with allergy and as an antipruritic for relief of itching associated with skin disorders. **demethylchlortetracycline s.**, demeclocycline oral suspension.

dexchlorpheniramine maleate s. [USP], a preparation containing 90 to 110 per cent of the labeled amount of dexchlorpheniramine maleate; used as an antihistaminic. **dextromethorphan hydrobromide s.** [USP], a preparation containing 95–105 per cent of the labeled amount of dextromethorphan hydrobromide; used as an antitussive.

dicyclomine hydrochloride s. [USP], a preparation containing 95 to 105 per cent of the labeled amount of dicyclomine hydrochloride; used as an antispasmodic anticholinergic. **dihydrocodeinone bitartrate s.**, hydrocodone bitartrate s. **dimenhydrinate s.** [USP], a liquid preparation of dimenhydrinate, containing between 295 and 330 mg. of dimenhydrinate in each 100 ml.; used as an antiemetic.

dimethindene maleate s., a preparation containing 95 to 105 per cent of the labeled amount of dimethindene maleate; used as an antihistaminic. **diethyl sodium sulfosuccinate s.**, docusate sodium s. **docusate sodium s.** [USP], a preparation containing 95 to 105 per cent of the labeled amount of diethyl sodium sulfosuccinate; used as a fecal matter softener. Called also **diethyl sodium sulfosuccinate s.**

doxylamine succinate s. [USP], a preparation containing 90–110 per cent of the labeled amount of doxylamine succinate; used as an antihistaminic. **ephedrine sulfate s.** [USP], a

preparation containing 360–440 mg. of ephedrine sulfate in each 100 ml.; used as a bronchodilator. **eriodictyon s.**, **aromatic** [NF], a solution of eriodictyon fluidextract, potassium hydroxide solution, compound cardamom tincture, sassafras oil, lemon oil, clove oil, alcohol, sucrose, and magnesium carbonate, in purified water; used as a vehicle for drugs. **ferrous iodide s.**, a solution of iron, iodine, hypophosphorous acid, and sucrose, in purified water, used as a hematinic. **ferrous sulfate s.** [USP], a mixture of ferrous sulfate, hydrous citric acid, peppermint spirit, sucrose, and purified water, each 100 ml. of which contains 3.75–4.25 gm. of ferrous sulfate; used as an iron supplement.

glyceryl guaiacolate s., quafenesin s. **glycyrrhiza s.**, a mixture of glycyrrhiza fluidextract, fennel and anise oil, and syrup, used as a flavored vehicle in compounding prescriptions. **guaifenesin s.** [USP], a preparation containing 95–105 per cent of the labeled amount of guaifenesin; used as an expectorant. Called also **glyceryl guaiacolate s.**

hydriodic acid s., a solution of diluted hydriodic acid and dextrose in purified water, each 100 ml. of which contains 1.3–1.5 gm. of HI; used as an expectorant. **hydrocodone bitartrate s.**, a preparation of hydrocodone bitartrate and cherry syrup in purified water, containing 90 to 110 per cent of hydrocodone bitartrate; used as an antitussive.

hydroxyzine hydrochloride s. [USP], a preparation containing 90 to 110 per cent of the labeled amount of hydroxyzine hydrochloride; used as a tranquilizer and antihistamine. **ipecac s.** [USP], a mixture of ipecac fluidextract, glycerin, and syrup, used as an emetic. **isoniazid s.** [USP], a preparation, each 100 ml. of which contains 0.93 to 1.10 gm. of isoniazid; used as a tuberculostatic.

licorice s., **glycyrrhiza s.** **medicated s.**, one with a medicinal substance has been added. **meperidine hydrochloride s.** [NF], a preparation containing 95 to 105 per cent of the labeled amount of meperidine hydrochloride; used as a narcotic analgesic. **methapyrilene fumarate s.** [USP], a preparation containing 90–110 per cent of the labeled amount of methapyrilene fumarate; used as an antihistaminic in the treatment of allergic manifestations, nausea and vomiting of pregnancy, and insomnia.

methdilazine hydrochloride s. [USP], a preparation containing 93 to 107 per cent of the labeled amount of methdilazine hydrochloride; used as an antipruritic. **orange s.** [NF], a preparation of sweet orange peel tincture, citric acid, talc, and sucrose, in purified water, used as a flavored vehicle for pharmaceuticals.

phenindamine tartrate s., a syrup containing between 190 and 220 mg. of phenindamine tartrate in each 100 ml.; used as an antihistaminic. **piperazine citrate s.** [USP], a syrup containing between 10 and 12 gm. of anhydrous piperazine citrate in each 100 ml.; used as an anthelmintic. **prochlorperazine edisylate s.**, [USP], a syrup containing in each 100 ml. an amount of prochlorperazine edisylate equivalent to 95 to 105 mg. of prochlorperazine; used as an antiemetic and tranquilizer.

promazine hydrochloride s. [USP], a preparation containing 95 to 110 per cent of the labeled amount of promazine hydrochloride; used mainly as an antipsychotic agent. **promethazine hydrochloride s.** [USP], a syrup containing in each 100 ml. between 112 and 138 mg. of promethazine hydrochloride; used as an antihistaminic.

pseudoephedrine hydrochloride s. [USP], a preparation containing 90 to 110 per cent of the labeled amount of $C_{10}H_{15}NO \cdot HCl$; used as a nasal decongestant and bronchodilator. **pyridostigmine bromide s.** [USP], a preparation, each 100 ml. of which contains 1.08 to 1.32 gm. of pyridostigmine bromide; used as an anticholinergic in the treatment of myasthenia gravis.

raspberry s., a syrup consisting of raspberry juice, sucrose, and alcohol, in purified water, used as a flavored vehicle for drugs. **sarsaparilla s.**, **compound**, a solution of sarsaparilla and glycyrrhiza fluidextracts, sassafras and anise oils, methyl salicylate, alcohol, and syrup; used as a vehicle for drugs. **senna s.** [USP], a solution of senna fluidextract, coriander oil, sucrose, and purified water, used as a cathartic.

simple s., one compounded from purified water and sucrose. **s. of tolu**, **tolu balsam s.** [NF], a mixture of tolu balsam tincture, magnesium carbonate, sucrose, and purified water, used as a flavored vehicle for drugs. **triamcinolone diacetate s.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of triamcinolone diacetate; used as an anti-inflammatory glucocorticoid.

trifluoperazine hydrochloride s. [USP], a preparation containing trifluoperazine hydrochloride equivalent to 93–107 per cent of the labeled amount of trifluoperazine; used as an antipsychotic agent. **trimeprazine tartrate s.** [NF], a preparation containing trimeprazine tartrate equivalent to 90 to 110 per cent of the labeled amount of trimeprazine; used as an antipruritic.

triprolidine hydrochloride s. [USP], a preparation containing 90–110 per cent of the labeled amount of triprolidine hydrochloride; used as an antihistaminic in the treatment of various allergic conditions and their manifestations. **white pine s.**, **compound**, a solution containing coarsely powdered white pine, wild cherry, aralia, poplar bud, sanguinaria, and sassafras, combined with amaranth solution, chloroform, sucrose, glycerin, alcohol, and water; used as an antitussive and as a vehicle for other drugs.

white pine s., compound, with codeine, compound white pine syrup combined with codeine phosphate dissolved in purified water, used as an antitussive. **wild cherry s.**, a mixture of a

percolate of wild cherry, glycerin, sucrose, alcohol, and water; used as a flavored vehicle. **Yerba santa s.**, aromatic, eriodictyon s., aromatic.

syrupus (sir'up-us) [L.] syrup. **s. auran'tii**, orange syrup. **s. cera'si**, cherry syrup. **s. cor'rigens**, aromatic eriodictyon syrup. **s. pi'ni al'bae compos'itus**, compound white pine syrup. **s. pi'ni al'bae compos'itus cum co'deina**, compound white pine syrup with codeine. **s. ru'bi ida'ei**, raspberry syrup. **s. sarsaparil'lae compos'itus**, compound sarsaparilla syrup.

syssarcotic (sis'sar-ko'sik) syssarcotic.

syssarcosis (sis'sar-ko'sis) [Gr. *syn* together + *sarkōsis* fleshy growth] the union or connection of bones by means of muscle, as the connection between the hyoid bone and the lower jaw, the scapula, and the breast bone.

syssarcotic (sis'sar-ko'tik) pertaining to or of the nature of a syssarcosis.

syssomus (sis-so'mus) [Gr. *syn* with + *sōma* body] a double monster with two heads and with the bodies united.

systaltic (sis-tal'tik) [Gr. *systaltikos* drawing together] alternately contracting and expanding; pulsating.

systatic (sis-tat'ik) affecting several of the sensory faculties at the same time.

system (sis'tem) [Gr. *syntēma* a complex or organized whole] 1. a set or series of interconnected or interdependent parts or entities (objects, organs, or organisms) that function together in a common purpose or produce results impossible of achievement by one of them acting or operating alone. 2. a school or method of practice based on a specific set of principles, as the eclectic or galenic school. **absorbent s.**, lymphatic s. **accessory portal s. of Sappey**, small compensatory blood vessels formed around the liver and gallbladder in cases of cirrhosis of the liver. **adipose s.**, the fatty tissue of the body, considered collectively. **alimentary s.**, the organs concerned with the ingestion, digestion, and absorption of food or nutritional elements; see *apparatus digestorius*. **association s.**, the tracts of fibers in the brain by means of which perceptions are associated and thought rendered possible. **autonomic nervous s.**, the portion of the nervous system concerned with regulation of the activity of cardiac muscle, smooth muscle, and glands. See *systema nervosum autonomicum* [NA], and see Plate XLVIII. **biologic amplification s.**, a system of elements that augment the immune response, including the complement components and the kallikrein system. **biological s.**, a system composed of living material; such systems range from a collection of separate molecules to an assemblage of separate organisms. **blood group s.**, see *blood group*. **blood-vascular s.**, the blood vessels of the body. **brain cooling s.**, thermoregulated equipment for sensing and controlling brain temperature in neurophysiological and neuropsychological applications. **brunonian s.**, brunonianism. **buffer s.**, see *buffer*. **bulbospiral s.**, muscle bundles in the heart which arise in and are attached to the conus arteriosus and the root of the aorta. **cardiovascular s.**, the heart and blood vessels, by which blood is pumped and circulated through the body. **case s.**, a method of teaching based on the logical analysis of, and deductions formed from, reported cases of disease. **centimeter-gram-second s.**, see C.G.S. **central nervous s.**, that portion of the nervous system consisting of the brain and spinal cord (*systema nervosum centrale* [NA]). Abbreviated CNS. **centrencephalic s.**, the system of neurons located in the central core of the upper brain stem from the thalamus down to the medulla oblongata, and connecting the two hemispheres of the brain. **cerebrospinal s.**, central nervous s. **chemoreceptor s.**, the system of body structures, principally the carotid body, the aortic pulmonary bodies, and the glomus jugulare, that respond to variations in oxygen tension and carbon dioxide tension of the blood and may play a role in the regulation of respiration. **chromaffin s.**, the chromaffin cells of the body, which characteristically stain strongly with chromium salts, considered collectively; they occur along the sympathetic nerves, in the adrenal, carotid, and coccygeal glands, and in various other organs. **circulatory s.**, the channels through which the nutrient fluids of the body circulate; often restricted to the vessels conveying blood. **complement s.**, see *complement*. **conduction s.**, **conductive s. (of the heart)**, the system comprising the sinoatrial node, the atrioventricular node, the atrioventricular bundle, and the Purkinje fibers. **Conolly's s.**, a system of nonrestraint for treating the mentally and emotionally disturbed. **dental s.**, all the tubules radiating from a single pulp cavity. **dermal s.**, **dermoid s.**, the skin and its appendages, including both the hair and the nails (*integumentum commune* [NA]). **digestive s.**, the organs associated with the ingestion, digestion, and absorption of food; see *apparatus digestorius* [NA]. **dioptric s.**, a system of lenses or of different media for refracting light. **disperse s.**, **dispersion s.**, a colloid solution. **dosimetric s.**, a regular and determinate system of administration of a therapeutic agent. **ecological s.**, see *ecosystem*. **electron transmitter s.**, a system of enzymes localized within the substance of the mitochondrion in the mitochondrial membranes, which transfers electrons from foodstuff molecules to oxygen. **endocrine s.**, the system of glands and other structures that

elaborate internal secretions (hormones) which are released directly into the circulatory system and which influence metabolism and other body processes. Organs having endocrine function include the pituitary, thyroid, parathyroid, and adrenal glands, the pineal body, the gonads, the pancreas, and the paraganglia. The thymus is no longer considered to perform an endocrine function. See Plate accompanying *gland*. **endothelial s.**, see *reticuloendothelial s.* **exteroceptive nervous s.**, that portion of the afferent elements of the somatic nervous system which is sensitive to stimuli originating outside the body. **exteroceptive s.**, a little used term referring to the central nervous system, exclusive of the autonomic portion, as viewed in its function of maintaining homeostasis. Cf. *interofective s.* **extracortical s.**, extrapyramidal tract. **extrapyramidal s.**, a functional, rather than anatomical, unit comprising the nuclei and fibers (excluding those of the pyramidal tract) involved in motor activities; they control and coordinate especially the postural, static, supporting, and locomotor mechanisms. It includes the corpus striatum, subthalamic nucleus, substantia nigra, and the red nucleus, along with their interconnections with the reticular formation, cerebellum, and cerebrum; some authorities include the cerebellum and the vestibular nuclei. Called also *extracortical s.* or *tract and extrapyramidal tract*. **genito-urinary s.**, the organs of reproduction, together with the organs concerned in the production and excretion of urine (*apparatus urogenitalis* or *systema urogenitale* [NA]). See Plate L. **glandular s.**, the glandular tissue of the body considered collectively. **Grancher s.**, the early removal of young children from contact with patients with tuberculosis, to save them from infection. **H-2 histocompatibility s.**, in the mouse, the major histocompatibility complex, where Ir (immune response) genes in addition to histocompatibility genes are located. Thus immune responsiveness as well as cell-surface antigens are determined by genes governed from this region. **haversian s.**, a haversian canal and its concentrically arranged lamellae, constituting the basic unit of structure of compact bone; see *osteon*. **hematopoietic s.**, the tissues concerned in production of the blood, including bone marrow and lymphatic tissue. **heterogeneous s.**, a system or structure made up of mechanically separable parts, as an emulsion. **homogeneous s.**, a system or structure made up of parts which cannot be mechanically separated, as a solution. **hormonopoietic s.**, endocrine s. **hypophyseal portal s.**, the venules connecting the capillaries (gomitoli) in the median eminence of the hypothalamus with the sinusoidal capillaries of the anterior lobe of the pituitary gland (hypophysis); called also *pituitary portal s.* **International S. of Units**, see *SI unit*, under *unit*. **interceptive nervous s.**, that system which transmits afferent impulses from viscera by fibers which run centrally either in autonomic or somatic nerves. **interofective s.**, a seldom used term referring to the autonomic nervous system viewed in its role in maintaining homeostasis from within. Cf. *exteroceptive s.* **interrenal s.**, cortex glandulae suprarenalis. **interstitial s.**, see under *lamella*. **involuntary nervous s.**, Gaskell's name for the autonomic nervous system (*systema nervosum autonomicum* [NA]). **keratinizing s.**, the cells composing the bulk of the epithelium of the epidermis, which are of ectodermal origin and undergo keratinization and form the dead superficial layers of the skin; called also *malpighian s.* **kinesiodic s.**, a rarely used term for the efferent elements of the spinal cord, concerned in the transmission of motor impulses. **labyrinthine s.**, those parts of the vestibulocochlear organ concerned with the maintenance of equilibrium. **limbic s.**, a term loosely applied to a group of brain structures common to all mammals (including the hippocampus and dentate gyrus with their archicortex, the cingulate gyrus and septal areas, and the amygdala), associated with olfaction but of greater importance in other activities, such as autonomic functions and certain aspects of emotion and behavior; see also *rhinencephalon*. **lymphatic s.**, the lymphatic vessels and the lymphoid tissue, considered collectively (*systema lymphaticum* [NA]). **lymphoid s.**, the lymphoid tissue of the body, collectively; it consists of (a) a central component, including the bone marrow, thymus, and an unidentified portion called bursal equivalent tissue (see under *tissue*), and (b) a peripheral component of lymph nodes, spleen, and gut-associated lymphoid tissue (tonsils, Peyer's patches). **lymphoreticular s.**, the system consisting of the lymphoid tissues and the tissues of the reticuloendothelial system. **macro-phage s.**, reticuloendothelial s. **malpighian s.**, keratinizing s. **masticatory s.**, the organs and structures which function primarily in mastication, including the jaws, the teeth with their supporting structures, the temporomandibular articulation, mandibular musculature, tongue, lips, cheeks, and oral mucosa. **melanocyte s.**, pigmentary s. **meter-kilogram-second s.**, see M.K.S. **metric s.**, a decimal system of weights and measures based on the meter. See also *SI unit*, under *unit*; see table accompanying *metric*, and see *Tables of Weights and Measures*, under *weight*. **mononuclear phagocyte s.**, the group of highly phagocytic cells considered to have a common origin from stem cells of the bone marrow and developing from promonocytes, to monocytes, to tissue macrophages, including those of connective tissue, the liver (Kupffer cells), lung, spleen, lymph nodes, etc. The term has been proposed to replace *reticulo-*

SYMPATHETIC
Thoracolumbar outflow

PARASYMPATHETIC
Craniosacral outflow

AUTONOMIC NERVOUS SYSTEM

ORGANS OF RESPIRATORY SYSTEM

ORGANS OF THE UROGENITAL SYSTEM

endothelial s. **muscular s.**, all the muscles of the body considered collectively. **nervous s.**, the organ system which along with the endocrine system, correlates the adjustments and reactions of an organism to internal and environmental conditions. Called also *systema nervosum* [NA]. It comprises the central and peripheral nervous systems: the former is composed of the brain and spinal cord, and the latter includes all the other neural elements. See also *autonomic nervous s.*, *parasympathetic nervous s.*, and *sympathetic nervous s.* **parasympathetic nervous s.**, the craniosacral portion of the autonomic nervous system (pars parasympathica systematis nervosi autonomici [NA]). See Plate XLVIII. **peripheral nervous s.**, that portion of the nervous system consisting of the nerves and ganglia outside the brain and spinal cord (*systema nervosum periphericum* [NA]). **periventricular s.**, collective name for the efferent pathways of the hypothalamus that arise mainly in the supraoptic, posterior, and tuberal nuclei and descend in the periventricular gray matter. **pigmentary s.**, the melanocytes, collectively. **Pinel's s.**, a method of management of the emotionally and mentally disturbed without the use of forcible restraint. **pituitary portal s.**, hypophyseal portal s. **plenum s.**, a system of ventilation based on the mechanical propulsion of air into the room. **portal s.**, an arrangement of vessels whereby blood collected from one set of capillaries passes through a large vessel or vessels and then through a second set of capillaries before it returns to the systemic circulation; such an arrangement occurs in the hypophysis and the liver. **proprioceptive nervous s.**, that portion of the afferent elements of the somatic nervous system which is sensitive to stimuli originating inside the body (from muscles, bones, joints, and ligaments). **Rademacher's s.**, the belief that there should be a specific remedy for every disease. **respiratory s.**, the tubular and cavernous organs and structures by means of which pulmonary ventilation and gas exchange between ambient air and the blood are brought about; called also *apparatus respiratorius* [NA]. See Plate XLIX. **reticular activating s.**, the system of cells of the reticular formation of the medulla oblongata that receive collaterals from the ascending sensory pathways and project to higher centers; they control the overall degree of central nervous system activity, including wakefulness, attentiveness, and sleep; abbreviated RAS. **reticuloendothelial s.**, a functional rather than anatomical system that serves as an important bodily defense mechanism, composed of highly phagocytic cells having both endothelial and reticular attributes and the ability to take up particles of colloidal dyes; these cells include macrophages lining the lymph sinuses and the blood sinuses of the liver (Kupffer's cells), spleen, and bone marrow, and the microglia, reticulum cells of lymphatic tissue, tissue macrophages, and circulating monocytes. Called also *macrophage s.* **SI s.**, see *SI unit*, under *unit*. **sinospiral s.**, muscle bundles in the heart which arise from and are inserted into the region of the sinus venosus. **somatic nervous s.**, the elements of the nervous system concerned with the transmission of impulses to and from the nonvisceral components of the body, such as the skeletal muscles, bones, joints, ligaments, skin, and eye and ear. **stomatognathic s.**, the structures of the mouth and jaws, considered collectively, as they subserve the functions of mastication, deglutition, respiration, and speech. **sympathetic nervous s.**, 1. the thoracolumbar portion of the autonomic nervous system (pars sympathica systematis nervosi autonomici [NA]). See Plate XLVIII. 2. the autonomic nervous system (formerly called *systema nervorum sympathica*). **T s.**, a system of transverse tubular invaginations (*T*, or *transverse, tubules*) of the sarcolemma, each of which penetrates deep into the muscle fiber. In mammalian skeletal muscle, they are located at the junction of the A band with the I band, and in mammalian cardiac muscle at the level of the Z band; the system plays a role in the excitation and relaxation of muscle and provides an important additional surface for the exchange of metabolites between muscle and the extracellular space. Called also *triad s.* See also *triad of skeletal muscle*; *terminal cisterns*, under *cistern*; and *T tubule*, and *tubule*. **triad s.**, *T s.* **urogenital s.**, the organs concerned in the production and excretion of urine, together with the organs of reproduction (*apparatus urogenitalis* or *systema urogenitale* [NA]). See Plate L. **uropoietic s.**, the organs concerned in secretion of urine (*organa uropoietica* [NA]). **vascular s.**, the vessels of the body, especially the blood vessels. **vasomotor s.**, the part of the nervous system that controls the caliber of the blood vessels. **vegetative nervous s.**, an old term for the autonomic nervous system (*systema nervosum autonomicum* [NA]). **vestibular s.**, labyrinthine s. **visceral nervous s.**, autonomic nervous s. **Waring's s.**, see under *method*.

systema (sis-te'mah) [Gr. *systema* a complex or organized whole] system: a series of interconnected or interdependent organs which together accomplish a specific function. **s. digestorium**, NA

alternative for *apparatus digestorius*. **s. lymphaticum** [NA], lymphatic system: the lymphatic vessels and the lymphoid tissue, considered collectively. **s. nervorum centrale**, *s. nervosum centrale*. **s. nervorum periphericum**, *s. nervosum periphericum*. **s. nervorum sympathicum**, *s. nervosum autonomicum*. **s. nervosum** [NA], the nervous system: the chief organ system that correlates the adjustments and reactions of the organism to internal and environmental conditions, composed of the central and the peripheral nervous system; the former comprises the brain and spinal cord, and the latter includes all other neural elements. **s. nervosum autonomicum** [NA], the autonomic nervous system: the portion of the nervous system concerned with regulation of activity of cardiac muscle, smooth muscle, and glands; usually restricted to the two visceral efferent peripheral components, the pars sympathica systematis nervosi autonomici (thoracolumbar part, or sympathetic nervous system) and the pars parasympathica systematis nervosi autonomici (craniosacral part, or parasympathetic nervous system). Called also *s. nervorum sympathicum*. See Plate XLVIII. **s. nervorum centrale** [NA], central nervous system: that portion of the nervous system consisting of the brain and spinal cord; called also *s. nervorum centrale*. **s. nervorum periphericum** [NA], peripheral nervous system: that portion of the nervous system consisting of the nerves and ganglia outside the brain and spinal cord; called also *s. nervorum periphericum*. **s. respiratorium**, NA alternative for *apparatus respiratorius*. **s. urogenitale**, NA alternative for *apparatus urogenitalis*. **s. vasorum**, the blood and lymph vessels of the body and all their ramifications, considered collectively.

systematic (sis'te-mat'ik) [Gr. *systematikos*] pertaining or according to a system.

systematization (sis-tem'ah-ti-za'shun) arrangement according to a system. In psychiatry, the arrangement of ideas into a logical sequence, or of delusions into a superficially coherent system.

systematized (sis'te-mah-tizd) made systematic or arranged according to a system.

systematology (sis'te-mah-to'l'o-je) [Gr. *systema* system + *-logy*] the doctrine or bibliography of systematic arrangements.

systemic (sis-tem'ik) pertaining to or affecting the body as a whole.

systemoid (sis'te-moid) [Gr. *systema* system + *eidos* form] 1. resembling a system. 2. denoting tumors made up of various kinds of tissue.

systogene (sis'to-jen) tyramine.

systole (sis'to-le) [Gr. *systolē* a drawing together, contraction] the contraction, or period of contraction, of the heart, especially that of the ventricles; sometimes divided into components, as pre-ejection and ejection periods, or isovolumic, ejection, and relaxation periods. **aborted s.**, a systole, usually premature, not associated with pulsation of a peripheral artery. **atrial s.**, the contraction of the atria by which blood is propelled from them into the ventricles. **extra s.**, extrasystole. **frustrate s.**, aborted s. **hemic s.** (*obs.*), an independently occurring systole of a ventricle. **ventricular s.**, the contraction of the ventricles of the heart by which the blood is forced into the aorta and the pulmonary trunk.

systolic (sis-tol'ik) pertaining to or produced by the systole; occurring along with the ventricular systole.

systolometer (sis'to-lom'et-ter) [Gr. *systolē* systole + *metron* measure] an instrument for determining the quality of the heart sounds.

systemema (sis-trem'ah) [Gr. "anything twisted up together"] a cramp in the muscles of the calf of the leg.

Sytobex (si'to-beks) trademark for preparations of cyanocobalamin.

syzygial (si-zij'e-al) pertaining to syzygy.

syzygiology (si-zij'e-ol'o-je) the study of the relationship of the whole as contrasted to that of isolated parts and functions.

Syzygium (si-zij'e-um) a genus of tropical myrtaceous trees. *S. jambolanum*, the jambul tree of India, is astringent.

syzygium (si-zij'e-um) syzygy.

syzygy (siz'i-je) [Gr. *syzygia* a union of branches with the trunk] 1. the conjunction and fusion of organs without loss of identity. 2. the temporary adherence of male and female gregarines prior to encystment and the production of gametes.

Szabo's test (sah'böz) [Dionys Szabo, Budapest physician, 1856-1918] see under *tests*.

Szent-Györgyi reaction (sent-jor'ji) [Albert Szent-Györgyi, Hungarian biochemist in America, born 1893, noted for his isolation of ascorbic acid and research in muscle contraction; winner of the Nobel prize for medicine and physiology in 1937] see under *reaction*.

T

T abbreviation for *temperature*, *tera*, *thoracic* (in vertebral formulas), and *intraocular tension*. Normal intraocular tension is indicated by the symbol Tn, while T + 1, T + 2, etc., indicate stages of increased tension, and T - 1, T - 2, etc., indicate stages of decreased tension.

T. tesla.

T_m tubular maximum (of the kidneys); a notation used in reporting kidney function studies, with inferior letters representing the substance used in the test, as T_{mPAH} (tubular maximum for para-aminohippuric acid).

T₃ symbol for *triiodothyronine*.

T₄ symbol for *thyroxine*.

t in genetics, symbol for translocation.

t. abbreviation for *temporal*.

τ symbol for *life (time)*.

τ_{1/2} symbol for *half-life (time)*.

T-1824 Evans blue.

TA. alkaline tuberculin.

T.A. toxin-antitoxin.

Ta chemical symbol for *tantalum*.

tabacin (tab'ah-sin) a glycoside occurring in tobacco.

tabacism (tab'ah-sizm) tabacosis.

tabacosis (tab'ah-ko'sis) poisoning by tobacco, and chiefly by the inhalation of tobacco dust; also a form of pneumoconiosis attributed to tobacco dust (*t. pulmo'num*).

tabacum (tab'ah-kum) [L.] tobacco.

tabagism (tab'ah-jizm) the condition produced by excessive use of tobacco; nicotinism.

tabanid (tab'ah-nid) any gadfly of the family Tabanidae, of which the genus *Tabanus* is the type. Other genera are *Chrysops*, *Goniops*, *Silvius*, *Chrysozona*, and *Diachlorus*. Many of the species inflict painful bites upon men and animals, and some species are mechanical vectors of diseases.

Tabanus (tah-ba'nus) [L. "gadfly"] a genus of bloodsucking biting flies; the horseflies or gadflies. They transmit trypanosomes and anthrax to various animals. **T. atra'tus**, the common black horsefly of North America. **T. bovi'nus**, the gadfly of cattle in Asia, Africa, and South America. **T. ditaenia'tus**,

Tabanus bovinus.

T. fascia'tus, **T. gra'tus**, the Seroot flies of the Sudan, which are very troublesome to man and beast.

tabardillo (tab'ar-del'yo) [Sp.] murine typhus.

tabatière anatomique (tah-bah'te-är' ah-nah-to-mëk') [Fr. "anatomical snuffbox"] the hollow on the back of the hand and at the base of the thumb, between the tendons of the extensor pollicis longus and extensor pollicis brevis muscles.

tabella (tah-bel'ah), pl. *tabellae* [L.] a medicated tablet or troche.

tabernanthine (tab'er-nan'thën) an alkaloid, C₂₀H₂₆N₂O, isolated from the root of *Tabernanthe iboga* Baill. (Apocynaceae), which has both analgesic and serotonin antagonist properties. It is isomeric with ibogaine.

tabes (ta'bëz) [L. "wasting away, decay, melting"] 1. any wasting of the body; progressive atrophy of the body or a part of it. 2. *tabes dorsalis*. **abortive t.**, rudimentary t. **cerebral t.**, dementia paralytica. **cervical t.**, *tabes dorsalis* in which the upper extremities are first affected; called also *t. superior*. **diabetic t.**, a peripheral neuropathy occurring in diabetic patients with symptoms of *tabes dorsalis*. **t. dorsa'lis**, a degeneration of the dorsal columns of the spinal cord and of the sensory nerve trunks, with wasting, due to infection of the central nervous system with *Treponema pallidum*. The disease, the tertiary (or late) form of syphilis, is marked by paroxysms or crises of intense pain, incoordination, disturbances of sensation, loss of reflexes, paroxysms of functional disturbance of various organs, as the stomach, larynx, etc.; also by various trophic disturbances, especially of the bones and joints, incontinence or retention of urine, failure of sexual power, etc. The course of the disease is usually slow but progressive, and, although it may often be arrested, complete cure is very rare. The disease occurs mostly after middle life, and is more frequent in males. Called also *Duchenne's disease*, *locomotor ataxia*, and *syphilitic posterior spinal sclerosis*. **t. ergot'ica**, a condition resembling *tabes dorsalis*, due to ergotism. **Friedreich's t.**, Friedreich's ataxia. **t. infan'tum**, *tabes as*

seen in infants with congenital syphilis. **t. infe'rior**, *tabes dorsalis* affecting the lower extremities. **marantic t.**, *tabes dorsalis* marked by extreme emaciation. **t. mesenter'ica**, *t. mesara'ica*, tuberculosis of the mesenteric glands in children, resulting in digestive derangement and wasting of the body; called also *pedatrophia*, *pedatroph*, and *atrophia mesenterica*. **monosymptomatic t.**, *tabes dorsalis* exhibiting a single symptom. **peripheral t.**, pseudotabes. **rudimentary t.**, *tabes dorsalis* with only a few symptoms, the condition remaining stationary for a long time; called also *abortive t.* **t. spina'lis**, *t. dorsalis*. **t. supe'rior**, cervical t. **vessel t.**, *tabes* due to an obliterative endarteritis occurring within a principal vessel supplying the posterior column of the spinal cord.

tabescent (tah-bes'ent) [L. *tabescere* to waste away] wasting away; shriveling.

tabetic (tah-bet'ik) pertaining to or affected with *tabes*.

tabetiform (tah-bet'i-form) resembling *tabes*.

tabic (tab'ik) tabetic.

tabid (tab'id) [L. *tabidus* melting, dissolving] tabetic; wasting away.

tabification (tab'i-fi-ka'shun) [L. *tabes* wasting away + *facere* to make] the process of wasting away.

tablature (tab'lah-chür) the separation of the chief cranial bones into inner and outer tables, which are separated by a diploë.

table (ta'b'l) [L. *tabula*] a flat layer or surface. **Aub-Dubois t.**, a table of normal basal metabolic rates for persons of various ages. **Gaffky t.**, see under *scale*. **inner t. of bones of skull**, lamina interna ossium cranii. **inner t. of frontal bone**, facies interna ossis frontalis. **Mendeleev's t.**, periodic t. **outer t. of bones of skull**, lamina externa ossium cranii. **outer t. of frontal bone**, facies externa ossis frontalis. **periodic t.**, an ordering of all the known chemical elements in the form of a chart according to the periodic law, in which corresponding elements from the several periods form groups with similar properties; called also *Mendeleev's t.* **Reuss' t's**, see under *chart*. **Stintzing's t's**, tables showing the average value of the normal electric excitability of the muscles and nerves. **vitreous t.**, lamina interna ossium cranii. **water t.**, the upper surface of the impervious strata on which the ground water lies deep to the surface of the earth.

tablespoon (ta'b'l-spōōn) a household unit of capacity, approximately equivalent to 4 fluid drams, or 15 milliliters.

tablet (tab'let) a solid dosage form of varying weight, size, and shape, which may be molded or compressed, and which contains a medicinal substance in pure or diluted form. Cf. *pill*. **buccal t.**, a small, flat, oval tablet to be held between the cheek and gum, permitting direct absorption through the oral mucosa of the medicinal substance contained therein. **dispensing t.**, a compressed or molded tablet containing a large quantity of a drug, used by dispensing pharmacists in compounding prescriptions. **enteric-coated t.**, one coated with material that delays release of the medication until after it leaves the stomach. **hypodermic t.**, one to be dissolved in water, containing a medicinal substance for hypodermic injection. **sublingual t.**, a small, flat, oval tablet to be held beneath the tongue, permitting direct absorption of the medicinal substance contained therein. **t. triturate**, a small, usually cylindrical, molded disk containing a medicinal substance diluted with a mixture of lactose and powdered sucrose, in varying proportions, with a moistening agent.

taboo (tah-boo') any of the negative traditions and behaviors that are generally regarded as harmful to social welfare. Cf. *mores*.

taboparalysis (ta'bo-pah-ral'i-sis) taboparesis.

taboparesis (ta'bo-pah-re'sis, ta'bo-par'e-sis) dementia paralytica occurring concomitantly with *tabes dorsalis*.

tabula (tab'u-lah), pl. *tabulae* [L.] table. **t. exter'na os'sis cra'nii**, lamina externa ossium cranii. **t. inter'na os'sis cra'nii**, *t. vit'rea*, lamina interna ossium cranii.

tabular (tab'u-lar) [L. *tabula* a board or table] resembling or shaped like a table.

tacahout (tak'ah-hōōt') [Arabic] a kind of gall from tamarisk trees; a source of gallic acid.

tacamahac (tak'ah-ma-hak') a resin or gum derived from various trees, e.g., *Bursera gummifer* L. (Burseraceae) of tropical America; it is medicinally considered to be diaphoretic, diuretic, and purgative.

Tacaryl (tak'ah-ril) trademark for preparations of methdiazine.

TACE (tās) trademark for preparations of chlorotrianisene.

tache (tahsh) [Fr.] a spot or blemish. **t. blanche** (blahnsh) [Fr. "white spot"], a white spot on the liver in certain infectious diseases. **t's bleuâtres** (bleu-ahtr') [Fr. "bluish spots"], maculae caeruleae. **t. cérébrale** (sa-ra-brahl') [Fr. "cerebral spot"],

a congested streak produced by drawing the nail across the skin: a concomitant of various nervous or cerebral diseases. Called also *t. ménigéale*. **t's laiteuses** (la-tēz') [Fr. "milky spots"], small spots, of a milky appearance in the omentum, made up of lymphoid cells and macrophages and especially prominent in the rabbit. **t. ménigéale** (ma-nin-zha-al') [Fr. "meningeal spot"], *t. cérébrale*. **t. motrice** (mo-trēs') [Fr. "motor spot"], a kind of motor nerve ending in which the nerve fibril passes to a muscle cell, where it ends in a slight enlargement. **t. noire** (nwahr) [Fr. "black spot"], an ulcer covered with a black adherent crust, a characteristic local reaction occurring at the presumed site of the infective bite in certain tickborne rickettsioses, such as scrub typhus or boutonniere fever. **t. spinale** (spe-nahl') [Fr. "spinal spot"], a bulla resembling a burn, and due to a spinal cord disease.

tachistoscope (tah-kis'to-skōp) [Gr. *tachistos* swiftest + *skopein* to examine] a kind of stereoscope in which vision is interrupted by a movable diaphragm.

tacho- [Gr. *tachos* speed] a combining form denoting relationship to speed.

tachogram (tak'o-gram) [*tacho-* + Gr. *gramma* mark] a graphic record of the movement and velocity of the blood current.

tachography (tah-kog'rah-fe) [*tacho-* + Gr. *graphein* to write] the recording of the speed of the blood current.

tachy- (tak'e) [Gr. *tachys* swift] a combining form meaning swift or rapid.

tachyalimentation (tak'e-al'i-men-ta'shun) [*tachy-* + *alimenta-tion*] hypoglycemia occurring postprandially after gastric resection or gastroenterostomy, due to the accelerated passage of glucose into the small intestine, from which it enters the blood-stream at an increased rate, stimulating the production of insulin by the β -cells of the pancreas. It is a manifestation of the dumping syndrome.

tachyarrhythmia (tak'e-ah-rith'me-ah) [*tachy-* + *a neg.* + Gr. *rhythmos* rhythm] tachycardia associated with an irregularity in the normal heart rhythm.

tachyauxesis (tak'e-awk-ze'sis) [*tachy-* + Gr. *auxesis* growth] heterauxesis in which the part grows more rapidly than the whole.

tachycardia (tak'e-kar'de-ah) [*tachy-* + Gr. *kardia* heart] excessive rapidity in the action of the heart; the term is usually applied to a heart rate above 100 per minute and may be qualified as atrial, junctional (nodal), or ventricular, and as paroxysmal.

atrial t., a rapid cardiac rate, usually between 160 and 190 per minute, originating from an atrial locus. **double t.**, the occurrence of two types of ectopic tachycardia, e.g., nodal and ventricular tachycardia, at the same time. **ectopic t.**, abnormally rapid heart action in response to impulses arising outside the sinoatrial node. **junctional t.**, that arising in response to impulses originating in the atrioventricular junction, i.e., in the atrioventricular node. **nodal t.**, tachycardia in response to impulses originating in or near the atrioventricular node; called also *atrioventricular nodal t.* **orthostatic t.**, disproportionate rapidity of the heart rate on rising from a reclining to a standing position. **paroxysmal t.**, a condition marked by attacks of rapid action of the heart having sudden onset and cessation; called also *Bouveret's disease* or *syndrome*. **reflex t.**, rapid action of the heart initiated through a relatively simple nerve pathway by an event occurring elsewhere in the body. **sinus t.**, simple tachycardia with origin in the sinus node. **t. strumo'sa exophthal'mica**, Graves' disease. **supraventricular t.**, a combination of junctional tachycardia and atrial tachycardia. **ventricular t.**, an abnormally rapid ventricular rhythm with aberrant ventricular excitation (wide QRS complexes), usually in excess of 150 per minute, which is generated within the ventricle and is most commonly associated with atrioventricular dissociation. Minor irregularities of rate may also occur. Evidence implicates a reentrant pathway as the usual cause.

tachycardiac (tak'e-kar'de-ak) 1. pertaining to, characterized by, or causing tachycardia. 2. an agent that acts to accelerate the pulse.

tachycardic (tak'e-kar'dik) tachycardiac.

tachygastric (tak'e-gas'tre-ah) the occurrence of a sequence of electric potentials at abnormally high frequencies in the gastric antrum.

tachygenesis (tak'e-jen'ē-sis) [*tachy-* + Gr. *genesis* production] the acceleration and compression of ancestral stages in embryonic development.

tachylalia (tak'e-la'le-ah) [*tachy-* + Gr. *lalein* to speak + *-ia*] rapidity of speech.

tachymeter (tah-kim'ē-ter) [*tachy-* + Gr. *metron* measure] any instrument for measuring rapidity of motion of any body.

tachyphagia (tak'e-fa'je-ah) [*tachy-* + Gr. *phagein* to eat + *-ia*] rapid or hasty eating.

tachyphasia (tak'e-fa'ze-ah) [*tachy-* + Gr. *phasis* speech + *-ia*] tachyphrasia.

tachyphemia (tak'e-fe'me-ah) [*tachy-* + Gr. *phēmē* speech + *-ia*] tachyphrasia.

tachyphrasia (tak'e-fra'ze-ah) [*tachy-* + Gr. *phasis* speech + *-ia*] extreme volubility of speech; sometimes a sign of mental disorder.

tachyphrenia (tak'e-fre'ne-ah) [*tachy-* + Gr. *phrēn* mind + *-ia*] mental hyperactivity.

tachyphylaxis (tak'e-fi-lak'sis) [*tachy-* + Gr. *phylaxis* protection] 1. rapid immunization against the effect of toxic doses of an extract by previous injection of small doses of the same (Gley, 1911). 2. rapidly decreasing response to a drug or physiologically active agent after administration of a few doses.

tachypnea (tak'ip-ne'ah) [*tachy-* + Gr. *pnoia* breath] excessive rapidity of respiration; a respiratory neurosis marked by quick, shallow breathing.

tachypragia (tak'e-prag'e-ah) [*tachy-* + Gr. *prassein* to act] rapidity of action.

tachyrrhythmia (tak'e-rith'me-ah) [*tachy-* + Gr. *rhythmos* rhythm + *-ia*] tachycardia, especially when the mechanism is obscure.

tachysterol (tak-is'te-rol) an isomer of ergosterol produced by irradiation.

tachysynthesis (tak'e-sin'thē-sis) tachyphylaxis.

tachytrophism (tak'e-tro'tizm) [*tachy-* + Gr. *trophē* nutrition] rapid metabolism.

taclamine hydrochloride (tah'klah-mēn) chemical name: 2,3,4,4a,8,9,13b,14-octahydro-1*H*-benzo[6,7]cyclohepta[1,2,3-*de*]pyrido[2,1- α]isquinoline; a minor tranquilizer, C₂₁H₂₃N·HCl.

tactic (tak'tik) 1. exhibiting tacticity. 2. pertaining to or characterized by taxis.

tacticity (tak-ti'si-te) the condition of having a regular chemical arrangement of the units making up the main chain of a polymer.

tactile (tak'til) [L. *tactilis*] pertaining to the touch.

tactilogical (tak'ti-loj'e-kal) pertaining to touch: tactual.

taction (tak'shun) [L. *tactio*] 1. a touch; an act of touching. 2. the sense of touch; perception by the touch.

tactometer (tak-tom'ē-ter) [L. *tactus* touch + *metrum* measure] an instrument for measuring the acuteness of the sense of touch; an esthesiometer.

tactor (tak'tor) a tactile end-organ.

tactual (tak'tu-al) [L. *tactus* touch] pertaining to or accomplished by the touch.

tactus (tak'tus) [L.] touch. **t. erudi'tus** [L. "trained touch"], delicacy of touch acquired by practice. **t. ex'pertus** [L. "experienced touch"], *t. eruditus*.

taedium (te'de-um) [L.] weariness; boredom. **t. vi'tae** [L. "weariness of life"], morbid disgust with life.

Taenia (te'ne-ah) [L. "a flat band," "bandage," "tape"] a genus of large tapeworms of the family Taeniidae. **T. africa'na**, *T. saginata*. **T. antarc'tica**, a species from dogs in Antarctic regions. **T. balan'iceps**, a species from dogs and bobcats in Nevada and New Mexico. **T. brachyso'ma**, a species infesting dogs in Italy. **T. brem'neri**, *T. confusa*. **T. cer'vi**, a species from dogs in Denmark. **T. confu'sa**, a species found in the Mississippi Valley and in East Africa, believed by some to be a variant of *T. saginata*. Called also *T. bremneri*. **T. cras'siceps**, a cestode parasite of foxes in Alaska and Canada, found in rodents as an intermediate host. **T. crassicol'lis**, *T. taeniaeformis*. **T. cucurbiti'na**, *T. saginata*. **T. demararien'sis**, *Railietina demarariensis*. **T. echinococ'cus**, *Echinococcus granulosus*. **T. ellip'tica**, *Dipylidium caninum*. **T. hydati'gena**, a tapeworm that is parasitic in dogs and wild carnivora; the larval stage (cysticercus) is found in the liver and abdominal cavity of various ruminants and rodents and occasionally in other animals, including man. Called also *T. marginata*. **T. krab'bei**, a cestode parasite found in the bobcat, dog, and wolf in the northern United States, Canada, Alaska, and Iceland. **T. madagascarien'sis**, *Railietina madagascariensis*. **T. margina'ta**, *T. hydatigena*. **T. mediocanel-la'ta**, *T. saginata*. **T. na'na**, *Hymenolepis nana*. **T. o'vis**, a species parasitic in dogs; found in the musculature of sheep and goats as intermediate hosts. **T. philippi'na**, *T. saginata*. **T. pisifer'mis**, a tapeworm commonly found in dogs; also parasitic in cats, foxes, wolves, and other animals; the cysticercus (larval stage) is found in the liver and peritoneal cavity of rabbits. **T. sagina'ta**, the commonest of the large tapeworms of man, a species 12 to 25 feet long, found in the adult form in the human intestine. The cysticerci (larval stage) develop in the muscles and other tissues of cattle and other ruminants. Human infection usually results from eating raw or rare beef. Called also *beef* or *unarmed tapeworm* and *T. africana*. **T. so'lium**, the pork tapeworm, a species 3 to 6 feet long found in the adult form in the human intestine; the cysticerci (larval stage) occur most often in the muscle and various tissues of the pig, but are also found in man, monkeys, camels, sheep, and dogs. It gains access to the human intestine through ingestion of inadequately cooked or meaty pork (see *cysticercosis*). It is rare in the United States. Called also *armed* or *meaty tapeworm*. **T. taeniaefor'mis**, a cestode parasite commonly found in cats, and more rarely in dogs,

foxes, and other animals, having rats, mice, and other rodents as intermediate hosts. Called also *T. crassicolis*.

taenia (te'ne-ah), pl. *tae'niae* [L.] 1. tenia (def. 1). 2. an individual organism of the genus *Taenia*. **tae'niae acus'ticae**, striae medullares ventriculi quarti. **t. chorioi'dea**, tenia chorioidea. **t. cine'rea**, a band of gray substance on the floor of the fourth ventricle outside the striae medullares ventriculi quarti. **tae'niae co'li**, teniae coli. **t. fim'briae**, the line of attachment of the choroid plexus of the lateral ventricle to the fimbria of the hippocampus; see *tenia fornicis* [NA]. **t. for'nicis**, tenia fornicis. **t. hippo'cam'pi**, fimbria hippocampi. **t. li'bera**, tenia libera. **t. medulla'ris thal'ami op'tici**, medullary t. of thalamus, tenia thalami. **t. mesocol'ica**, tenia mesocolica. **t. omenta'lis**, tenia omentalis. **t. pon'tis**, a bundle of fibers sometimes found on the cerebral peduncle along the rostral border of the pons, running an isolated course to the cerebellum between the superior and middle cerebellar peduncles. **tae'niae pylo'ri**, ligamenta pylori. **t. semicircula'ris cor'poris stria'ti**, stria terminalis. **t. tec'tae**, stria longitudinalis lateralis corporis callosi. **tae'niae tela'rum**, see *tenia telae* [NA]. **t. termina'lis**, 1. tenia fimbriae. 2. a slight ridge on the inner surface of the right atrium that marks the position of the sinoatrial node. **t. thal'ami**, tenia thalami. **t. tu'bae**, a thickened band of peritoneum along the upper border of the uterine tube. **taeniae of Valsalva**, teniae coli. **t. ventric'uli quar'ti**, tenia ventriculi quarti. **t. ventric'uli ter'tii**, tenia thalami.

taenia- for other words beginning thus, see also those beginning *tenia-*.

taeniicide (te'ne-ah-sid'') [L. *taenia* tapeworm + *caedere* to kill] 1. destructive to tapeworms. 2. an agent that destroys tapeworms.

taeniae (te'ne-e) plural of *taenia*.

taeniafugal (te'ne-ah-fu'gal) expelling tapeworms.

taeniafuge (te'ne-ah-fūj'') [*taenia* + L. *fugare* to put to flight] an agent that expels tapeworms.

taenial (te'ne-al) 1. of or pertaining to tapeworms of the genus *Taenia*. 2. tenial (def. 1).

Taeniarhynchus (te'ne-ah-ring'kus) a genus name formerly given to beef tapeworms; see *Taenia confusa* and *T. saginata*.

taeniasis (te-ni'ah-sis) infection with any of the tapeworms of the genus *Taenia*.

taeniform (ten'i-form) [*taenia* + L. *forma* shape] resembling the organism *Taenia*, or a tapeworm.

Taeniidae (te-ni'i-de) a family of medium-sized or large tapeworms of the order Cyclophyllidae, subclass Cestoda, which are parasitic in mammals, including man; three medically important genera are *Taenia*, *Multiceps*, and *Echinococcus*.

taeniola (te-ni'o-lah) [L., dim of *taenia*] a slender bandlike structure. **t. cine'rea**, tenia cinerea. **t. cor'poris callo'si of Reil**, lamina rostralis.

Taeniorhynchus (te'ne-o-ring'kus) a genus of mosquitoes now called *Mansonia*.

T.A.F. 1. Tuberculin Albumose Frei (Ger.); see *albumose-free tuberculin*, under *tuberculin*. 2. toxoid-antitoxin floccules; see under *floccule*.

tag (tag) 1. a small appendage, flap, or polyp. 2. label. **auricular t's**, rudimentary appendages of auricular tissue occurring on the face along the line of union of the first branchial arch. **cutaneous t.**, a small, flesh-colored or brown, pendulous outgrowth of the skin, such as an acrochordon, pendulous fibroma, or molluscum fibrosum; skin tags on the neck in middle life usually occur in pedunculated seborrheic keratosis. Called also *cutaneous papilloma* and *skin t.* **radioactive t.**, a radioisotope that has been incorporated within a biological chemical by metabolic or other processes. **skin t.**, cutaneous t.

Tagamet (tag'ah-met) trademark for preparations of cimetidine.

tagatose (tag'ah-tōs) a ketohexose, $\text{CH}_2\text{OH}(\text{CHOH})_3\cdot\text{CO}\cdot\text{CH}_2\text{OH}$, isomeric with fructose.

tagesrest (tah'gez-rest) [Ger.] day residue.

tagliacotian rhinoplasty or operation (tah'le-ah-ko'she-an) see under *rhinoplasty*.

tahaga (tah-hah'gah) a disease of camels in Algeria, similar to surra, caused by *Trypanosoma evansi*.

taiga (ti'ga) [Russian] the northern coniferous forest biome, found primarily in Canada, northern Europe, and Siberia.

tail (tāl) [L. *cauda*; Gr. *oura*] 1. any slender appendage; called also *cauda* [NA]. 2. the appendage that extends from the posterior trunk of animals. **t. of caudate nucleus**, cauda nuclei caudati. **t. of epididymis**, cauda epididymidis. **occult t.**, supernumerary segments of the coccyx, present in the buttock. **t. of pancreas**, cauda pancreatis. **t. of Spence**, the projection of mammary glandular tissue extending into the axillary region, sometimes forming a visible mass which may enlarge premenstrually or during lactation. **t. of spleen**, extremitas anterior lienis. **t. of spermatozoon**, the flagellum of a sper-

matozoon, which contains the axonema; it presents four regions: the neck, middle piece, principal piece, and end piece.

tailgut (tāl'gut) a prolongation of the hindgut into the tail of the early embryo.

Taillefer's valve (tah'u-fārs') [Louis Auguste Horace Sydney Timoléon Taillefer, French physician, 1802-1868] see under *valve*.

Taka-diastase (tah'kah di'as-tās) [Jokichi Takamine, Japanese chemist in New York, 1854-1922] trademark for an amylolytic enzyme formed by the action of the spores of the fungus *Aspergillus oryzae* on the bran of wheat; used as a digestant.

Takata's reagent (tak-ah'tahz') [Maki Takata, Japanese pathologist, born 1892] see under *reagent*.

Takata-Ara test (tak-ah'tah ah'rah) [Maki Takata, Kiyoshi Ara, Japanese pathologist] see under *tests*.

Tal. abbreviation for *L. tal'is*, such a one.

talalgia (tal-al'je-ah) pain in the heel or ankle.

talampicillin hydrochloride (tal-amp'i'i-sil'in) chemical name: [2S-[2α,5α,6β(S*)]]-6-[(aminophenylacetyl)amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 1,3-dihydro-3-oxo-1-isobenzofuran-yl ester monohydrochloride. The monohydrochloride salt of the phthalidyl ester of ampicillin, $\text{C}_{24}\text{H}_{23}\text{N}_3\text{O}_6\text{S}\cdot\text{HCl}$, having the actions and uses of ampicillin (q.v.).

talantropia (tal'an-tro'pe-ah) [Gr. *talanton* balance + *tropos* a turning + *-ia*] nystagmus.

talar (ta'lar) of or pertaining to the talus.

Talauma elegans (tal-aw'mah el'e-gans) a plant of Java, valued as a stomachic, antispasmodic, and antihysterical remedy.

talbutal (tal'bu-tal) [USP] chemical name: 5-(1-methylpropyl)-5-(2-propenyl)-2,4,6-(1*H*,3*H*,5*H*)-pyrimidinetrione. An intermediate-acting barbiturate, $\text{C}_{11}\text{H}_{16}\text{N}_2\text{O}_3$, occurring as a white, crystalline powder; used as a sedative and hypnotic, administered orally.

talc (talk) [USP] a native, hydrous magnesium silicate, sometimes containing a small proportion of aluminum silicate, used as a dusting powder; called also *purified talc*.

talcosis (tal-ko'sis) a morbid condition resulting from the inhalation or implantation in the body of talc. **pulmonary t.**, pneumoconiosis resulting from inhalation of particles of talc.

talcum (tal'kum) [L.] talc.

talernanol (tah-ler'ah-nōl) chemical name: [3*S*-(3*R**, 7*R**)]-3,4,5,6,7,8,9,10,11,12-decahydro-7,14,16-trihydroxy-3-methyl-1*H*-2-benzoxacyclopentadecin-1-one; an enzyme that inhibits gonadotropin, $\text{C}_{18}\text{H}_{26}\text{O}_5$.

tali (ta'li) plural of *talus*.

tagliacotian (tal'e-ah-ko'shan) tagliacotian.

taliped (tal'i-ped) 1. clubfooted. 2. a clubfooted person.

talipedic (tal'i-pe'dik) clubfooted.

talipes (tal'i-pēz) [L. "clubfoot"] a congenital deformity of the foot, which is twisted out of shape or position; called also *clubfoot*. See also under *pes*. **t. calcaneoval'gus**, a deformity of the

foot in which the heel is turned outward from the midline of the body and the anterior part of the foot is elevated. **t. calcaneov'arus**, a deformity of the foot in which the heel is turned toward the midline of the body and the anterior part is elevated. **t. calca'neus**, a deformity in which the foot is dorsiflexed. **t. cavoval'gus**, a deformity in which the longitudinal arch of the foot is abnormally high, and the heel is turned outward from the midline of the body. **t. ca'vus**, a deformity in which the longitudinal arch of the foot is abnormally high. **t.**

equinovalgus, a deformity of the foot in which the heel is elevated and turned outward from the midline of the body. **t. equinovarus**, a deformity of the foot in which the heel is turned inward from the midline of the leg and the foot is plantar flexed. This is associated with the raising of the inner border of the foot (supination) and displacement of the anterior part of the foot so that it lies medially to the vertical axis of the leg (adduction). With this type of foot the arch is higher (cavus) and the foot is in equinus (plantar flexion). This is a typical clubfoot. **t. equinus**, a deformity in which the foot is plantar flexed, causing the person to walk on the toes without touching the heel. **t. planovalgus**, a deformity of the foot in which the heel is turned outward from the midline of the leg and the outer border of the anterior part of the foot is higher than the inner border. This results in a lowering of the longitudinal arch. The condition may be congenital and permanent, or it may be spasmodic as a result of reflex spasm of the muscles controlling the foot. **t. valgus**, a deformity of the foot in which the heel is turned outward from the midline of the leg. **t. varus**, a deformity of the foot in which the heel is turned inward from the midline of the leg.

talipomanus (tal'pō-mah-nus) [L. *talipes* clubfoot + *manus* hand] a deformity of the hand analogous with clubfoot, or talipes; i.e., the hand is twisted out of shape or position, usually in strong flexion and adduction; called also *clubhand*.

tallow (tal'ō) suet.

Tallqvist's scale (tahl'kvists) [Theodor Waldemar Tallqvist, Finnish physician, 1871–1927] see under *scale*.

Talma's disease, operation (tal'mahz) [Sape Talma, physician in Utrecht, 1847–1918] see *myotonia acquisita*, and see under *operation*.

talocalcaneal (tal'lo-kal-ka'ne-al) pertaining to the talus and calcaneus.

talocalcaneal (tal'lo-kal-ka'ne-an) talocalcaneal.

talocrural (tal'lo-kroo'ral) [L. *talus* ankle + *crus* leg] pertaining to the talus and the bones of the leg.

talofibular (tal'lo-fib'u-lar) pertaining to the talus and the fibula.

talon (tal'on) [L. "bird's claw"] the posterior portion of an upper molar. **t. noir** (nwahr) [F. "black claw"], a punctate pigmented dermatitis occurring on the heels, toes, or hands; thought to be related to trauma. Called also *basketball heels*.

talonavicular (tal'lo-nah-vik'u-lar) pertaining to the talus and the navicular bone.

talonid (tal'o-nid) the posterior portion of a lower molar.

talopram hydrochloride (tal'o-pram) chemical name: 1,3-dihydro-*N*,3,3-trimethyl-1-phenyl-1-isobenzofuran propanamine hydrochloride; a catecholamine potentiator, $C_{20}H_{25}NO \cdot HCl$.

taloscaphoid (tal'lo-skaf'oid) talonavicular.

talose (tal'ōs) an aldehyde hexose, $CH_2OH(CHOH)_4CHO$, an isomer of glucose.

talotibial (tal'lo-tib'e-al) pertaining to the talus and the tibia.

talus (tal'us), pl. *ta'li* [L. "ankle"] 1. [NA] the highest of the tarsal bones and the one which articulates with the tibia and fibula to form the ankle joint; called also *ankle bone*, *astragalus*, *astragaloid bone*, and *os tarsi tibialis*. 2. the ankle (def. 1).

Talwin (tal'win) trademark for preparations of pentazocine.

T.A.M. toxoid-antitoxoid mixture.

tama (ta'mah) swelling of the feet and legs.

tambour (tam-boor') [Fr. "drum"] a drum-shaped appliance used in transmitting movements in a recording instrument. It consists of a cylinder having an elastic membrane stretched over it, from which passes a tube that transmits the changes in air pressure to a recording device.

tamoxifen citrate (tah-moks'i-fen) chemical name: (Z)-2-[4-(1,2-diphenyl-1-butenyl)phenoxy]-*N,N*-dimethyl-2-hydroxy-1,2,3-propanetricarboxylate (1:1). A nonsteroidal oral antiestrogen, $C_{26}H_{28}NO_6 \cdot C_6H_5O_7$, used in the palliative treatment of breast cancer in postmenopausal women and to stimulate ovulation in infertility.

tampan (tam'pan) see *Argas persicus* and *Ornithodoros moubata*.

tampicin (tam'pi-sin) a glycoside, $C_{34}H_{54}O_{14}$, from *Tampico jalap*, *Ipomoea simulans*.

tampon (tam'pon) [Fr. "stopper, plug"] a pack; a pad or plug made of cotton, sponge, or other material; variously used in surgery to plug the nose, vagina, etc., for the control of hemorrhage or the absorption of secretions. **Corner's t.**, a tampon composed of a segment of omentum for insertion into a gastric or intestinal wound. **tracheal t.**, an inflatable rubber bag surrounding a tracheotomy tube; used to prevent the entrance of blood into the trachea in operations on the mouth and nose. **Trendelenburg's t.**, see under *canula*.

tamponade (tam'pon-ād') [Fr. *tamponner* to stop up] surgical use of the tampon; also pathologic compression of a part, as compression of the heart by pericardial fluid (see *cardiac t.*). **balloon t.**, esophagogastric tamponade by means of a device with a triple-lumen tube and two inflatable balloons, the third lumen

providing for aspiration of blood clots. **cardiac t.**, acute compression of the heart which is due to effusion of the fluid into the pericardium or to the collection of blood in the pericardium from rupture of the heart or penetrating trauma. **chronic t.**, chronic compression of the heart caused by chronic pericardial effusion and pericardial thickening. **esophagogastric t.**, the exertion of pressure against bleeding esophageal varices by inflation of a sausage-shaped balloon introduced into the esophagus and a globular one into the stomach. **heart t.**, cardiac t.

tamponage (tam-po-nahzh') tamponade.

tamponing (tam'pon-ing) tamponade.

tamponment (tam-pon'ment) the act of plugging with a tampon.

Tamus (ta'mus) [L.] a genus of dioscoreaceous plants. *T. communis* L. is an old-world plant called black bryony, used homeopathically; the root is considered to be rubefacient and diuretic.

tan (tan) 1. to brown or become brown from exposure to sun or to ultraviolet light. 2. the brownish color of the skin acquired by such exposure, resulting from darkening of preformed melanin (Meirowsky phenomenon), accelerated formation of new melanin, and retention of melanin in the epidermis as a result of retardation of keratinization.

tandamine hydrochloride (tan'dah-mēn) chemical name: 9-ethyl-1,3,4,9-tetrahydro-*N,N*,1-trimethylthiopyrano[3,4-*b*]indole-1-ethanamine monohydrochloride; an antidepressant, $C_{18}H_{26}N_2S \cdot HCl$.

Tandearil (tan-de'ah-ril) trademark for a preparation of oxyphenbutazone.

tanghin (tan'gēn) the apocynaceous tree, *Cerbera tanghin*, of Madagascar, and its exceedingly poisonous seed; also an extract prepared from it, which is used as an arrow poison.

Tangier disease (tan-jēr') [Tangier Island, in Chesapeake Bay, where the disease was first discovered] see under *disease*.

tangoreceptor (tang'go-re-sep'tor) [L. *tangere* to touch + *receptor*] a sense organ that responds only to physical contact, such as touch.

tank (tank) an artificial receptacle for liquids. **activated sludge t.**, a tank through which sewage flows slowly or intermittently while compressed air is allowed to bubble up through it. **anaerobic t.**, septic t. **biological t.**, a modified septic tank. **digestion t.**, a deep septic tank in which sludge is separated and submitted to septic action without making the rest of the sewage offensive; called also *Emsher* or *Imhoff t.* **Dortmund t.**, a deep vertical flow settling tank for removing sludge from sewage. **Emsher t.**, digestion t. **Hubbard t.**, a tank in which a patient may be immersed for the purpose of permitting him to take underwater exercise. **hydrolytic t.**, septic t. **Imhoff t.**, digestion t. **septic t.**, a tank for the receipt of sewage, there to remain for a time in order that the solid matter may settle out and a certain amount of putrefaction occur from the action of the anaerobic bacteria present in the sewage; called also *anaerobic t.* and *hydrolytic t.* **settling t.**, a basin in which the rate of flow of the sewage is reduced and the sludge allowed to settle out.

tannal (tan'al) aluminum tannate. **insoluble t.**, basic aluminum tannate, a brown-yellow astringent powder, $Al_2(OH)_4(C_{14}H_5O_6)_2 \cdot 10H_2O$.

tannalinal (tan'al-in) a formaldehyde solution.

tannase (tan'ās) an esterase found in various tannin-bearing plants and produced in cultures by *Aspergillus niger* and *Penicillium glaucum*, which catalyzes the hydrolysis of various ester linkages in gallic acid compounds.

tannate (tan'āt) [L. *tannas*] any salt of tannic acid; all the tannates are astringent.

tannin (tan'in) tannic acid. **diacetyl t.**, **t. diacetylate**, acetyltannic acid. **pathologic t.**, any tannin derived from galls, or vegetable excrescences due to a local disease of the plant. **physiologic t.**, any tannin normally produced by a healthy plant.

tanning (tan'ing) the treatment of burns with tannin.

Tanret's reagent, test (reaction) (tahn-rāz') [Charles Tanret, French chemist 1847–1917] see under *reagent* and *tests*.

Tansini's sign (tan-se'nēz) [Igino Tansini, Italian surgeon, 1855–1943] see under *operation*.

tantalum (tan'tah-lum) a rare metallic element: symbol, Ta; atomic number, 73; atomic weight, 180.948. It is a noncorrosive and malleable metal which has been used for plates or disks to replace cranial defects, for wire sutures, and for making prosthetic appliances.

tantrum (tan'trum) a violent display of bad temper.

TAO (ta'ō) trademark for preparations of troleandomycin.

taon (tah-on') infantile beriberi occurring in the Philippine Islands.

tap (tap) 1. a quick, light blow. 2. to drain off fluid by paracentesis. **bloody t.**, a lumbar puncture in which the fluid obtained is bloody or pinkish. **front t.**, a tap on the muscles of the front of the leg, producing contraction of the muscles of the calf in spinal irritability. **heel t.**, reflex movement of the toes on

tapping the heel, occurring in pyramidal tract damage. **spinal t.**, lumbar puncture.

Tapazole (tap'ah-zol) trademark for a preparation of methimazole.

tape (tāp) a long, narrow strip of fabric or other flexible material. **adhesive t.** [USP], a strip of fabric and/or film evenly coated on one side with a pressure-sensitive, adhesive mixture, the whole having high tensile strength, used for the application of dressings and sometimes to produce immobilization; formerly called *adhesive plaster*. **adhesive t., sterile**, adhesive tape, the adhesive surface of which is covered by strips of a protective material of equal width, and which is sterilized after packaging; formerly called *sterile adhesive plaster*. **Montgomery's t's**, see under *strap*.

tapinocephalic (tap'i-no-sē-fal'ik) characterized by tapeinocephaly.

tapinocephaly (tap'i-no-sef'ah-le) [Gr. *tapeinos* low-lying + *kephalē* head] a low form of the skull, which is also flattened at front, having a vertical index below 72.

tapetal (tah-pe'tal) pertaining to a tapetum, especially to the tapetum lucidum.

tapetum (tah-pe'tum), pl. *tape'ta* [L.; Gr. *tapētion*, dim. of *tapēs* a carpet, rug] 1. a covering structure, or layer of cells. 2. a stratum in the human brain constituted by the fibers from the body and splenium of the corpus callosum sweeping outward over the lateral ventricle and forming the roof and lateral wall of its posterior horn, and the lateral wall of its inferior horn. **t. celulo-sum**, a type of tapetum lucidum, being the more complex, more cellular type found in all but two species of the order Carnivora and in the seals. **t. choroideae**, t. lucidum. **t. cor'poris callo'si**, tapetum, def. 2. **t. fibrosum**, a type of tapetum lucidum, being the simpler, fibrous type found almost exclusively in hoofed animals, in a few fish, and in marsupials, elephants, and whales. **t. lucidum**, the iridescent pigment epithelium of the choroid of animals which gives their eyes the properties of shining in the dark; called also *t. choroideae*. **t. ni'grum**, stratum pigmenti bulbi oculi. **t. oc'uli**, stratum pigmenti retinae. **t. ventric'uli**, fasciculus longitudinalis superior cerebri.

tapeworm (tāp'worm) a parasitic intestinal cestode worm having a flattened, bandlike form. Those infecting man are principally of the genera *Taenia*, *Diphyllobothrium*, *Hymenolepis*, *Echinococcus*, and *Dipylidium*. The eggs of tapeworms are ingested by the intermediate host, whence they make their way into the tissues, where the larval stages are produced (see *plerocercoid*; *cysticercus*; and *hydatid cyst*, under *cyst*). When the flesh of the intermediate host is eaten, the larvae develop within the alimentary canal of the definitive host into adult tapeworms, which consists of an attachment organ, or scolex, an undifferentiated neck, and a strobila made up of a variable number of separate segments, or proglottids, each of which is hermaphroditic and produces eggs. **African t.**, *Taenia saginata*. **armed t.**, *Taenia solium*. **beef t.**, *Taenia saginata*. **broad t.**, *Diphyllobothrium latum*. **dog t.**, 1. *Echinococcus granulosus*. 2. *Dipylidium caninum*. **double-pored dog t.**, *Dipylidium caninum*. **dwarf t.**, *Hymenolepis nana*. **fish t.**, *Diphyllobothrium latum*. **fringed t.**, *Thysanosoma actinioides*. **heart-headed t.**, *Diphyllobothrium cordatum*. **hydatid t.**, *Echinococcus granulosus*. **Madagascar t.**, *Railletina madagascariensis*. **Manson's larval t.**, *Diphyllobothrium mansonioides*. **measly t.**, *Taenia solium*. **pork t.**, *Taenia solium*. **rat t.**, *Hymenolepis diminuta*. **Swiss t.**, *Diphyllobothrium latum*. **unarmed t.**, *Taenia saginata*.

Tapia's syndrome (tap'e-ahz) [Antonio Garcia Tapia, Spanish otolaryngologist, 1875-1950] see under *syndrome*.

tapinocephalic (tap'i-no-se-fal'ik) tapeinocephalic.

tapinocephaly (tap'i-no-sef'ah-le) tapeinocephaly.

tapioca (tap'e-o'kah) a fecula, or starch, derived from the root of *Jatropha manihot*, or manioc; used as a food.

tapiroid (ta'pi-roid) resembling the snout of a tapir.

tapotage (tah-po-tahzh') coughing and expectoration following percussion in the supraclavicular region: a sign sometimes obtained in pulmonary tuberculosis.

tapotement (tah-pōt-maw') [Fr.] a tapping or percussing movement in massage; it includes clapping, beating, and punctuation.

tar (tahr) a dark-brown or black, viscid liquid, obtained by roasting the wood of various species of pine, or as a by-product of the destructive distillation of bituminous coal. It is a mixture of complex composition, and is the source of a number of substances, as cresol, creosol, guaiacol, naphthalene, paraffin, phenol, toluene, xylene, etc. Once used in chronic bronchitis, diarrhea, and diseases of the urinary organs, it now has only limited use in certain skin diseases, notably psoriasis and chronic eczematous disorders. **coal t.** [USP], tar obtained as a by-product of the destructive distillation of bituminous coal, used as a topical antieczematous and antipsoriatic. **gas t.**, a coal tar derived from the coal, rosin, petroleum, and other material used in gas works. **juniper t.** [USP], the volatile oil obtained from the woody portions of *Juniperus oxycedrus*, L. (Pinaceae), occurring as a thick brown

liquid with a bitter taste; used as a pharmaceutical necessity, and for the topical therapy of dermatoses. Called also *cade oil*, *Haarlem oil*, *silver balsam*, and *oleum juniperi empyreumaticum*. **pine t.** [USP], a viscid, blackish brown liquid obtained by destructive distillation of the wood of various pine trees; used as a local antieczematous and rubefacient, applied topically, and has been used as a stimulating expectorant incorporated in syrups.

Tar's symptom (tahrz) [Aloys Tar, Budapest physician, born 1886] see under *symptom*.

Taractan (tar-ak'tan) trademark for a preparation of chlorprothixene.

Taraktogenos kurzii King (tar'ak-toj'e-nos kur'ze-e) a tropical tree whose seeds are a source of chaulmoogra oil; called also *Hydnocarpus heterophyllus* Kurz.

tarantism (tar'an-tizm) a variety of dancing mania, popularly believed to be caused by the bite of a tarantula, and to be cured by dancing.

tarantula (tah-ran'tu-lah) a venomous spider whose bite causes local inflammation and pain, usually not to a severe extent. **American t.**, a large, dark, ferocious looking spider, *Eurypelma hentzi*, having a poisonous bite. **black t.**, a venomous spider of Panama, *Sericopelma communis*. **European t.**, the true tarantula, the large European wolf spider, *Lycosa tarentula*, the bite of which was believed to cause death.

Taraxacum (tah-rak'sah-kum) [L.] a genus of composite-flowered plants. The dried root of *T. officinale* Weber, the common dandelion or lion's tooth, contains taraxerol, choline, inulin, levulin, and pectin, and is a simple bitter.

taraxigen (tah-rak'si-jen) see *taraxy*.

taraxin (tah-rak'sin) see *taraxy*.

taraxis (tah-rak'sis) an obsolete name for conjunctivitis.

taraxy (tah-rak'se) [Gr. *taraxis* disturbance] Novy's name for anaphylaxis, on the theory that the condition is due to a poisonous substance (*taraxin*) which is formed in the blood on the injection of an alien substance, as the result of a reaction with a substance which already exists in the blood serum (*taraxigen*).

tarbadillo (tahr'bah-dēl'yo) [Sp.] tabardillo.

tarbagan (tar'bah-gan) marmot.

Tardieu's spots, test (tar-dyuz') [Auguste Ambroise Tardieu, French physician, 1818-1879] see under *spot* and *tests*.

tardive (tahr'div) [Fr. "tardy, late"] marked by lateness, late; said of a disease in which the characteristic lesion is late in appearing.

tare (tār) 1. the weight of the vessel in which a substance is weighed. 2. to take the weight of a vessel which is to contain a substance, in order to allow for it when the vessel and the substance are weighed together.

tarantism (tar'en-tizm) tarantism.

tarentula (tah-ren'tu-lah) tarantula.

target (tahr'get) 1. an object or area toward which something is directed, such as the metal or plate of a roentgen ray tube on which the electrons impinge and from which the roentgen rays are sent out. 2. denoting a cell or organ that is selectively affected by a particular agent, e.g., a hormone or drug. See also under *organ*.

tarichatoxin (tar'ik-ah-tok'sin) a neurotoxin from the newt (*Taricha*), identical with tetrodotoxin (q.v.).

Tarin, Tarini, Tarinus (tah-rā', tah-ri'ni, tah-ri'nus), Pierre. A French anatomist and encyclopedist (1700-1761) who wrote a history of anatomy and described many anatomical structures, including the fossa interpeduncularis, gyrus dentatus, hiatus canalis nervi, petrosi majoris, horny band, recessus anterior fossae interpeduncularis, and velum medullare inferius.

Tarnier's forceps (tar-ne-āz') [Etienne Stéphane Tarnier, French obstetrician, 1828-1897] see under *forceps*.

tarsadenitis (tahr'sad-ē-ni'tis) an inflammation of the tarsus of the eyelid and of the meibomian glands.

tarsal (tahr'sal) [L. *tarsalis*] 1. pertaining to the tarsus of an eyelid or to the instep. 2. any of the bones of the tarsus.

tarsalgia (tahr-sal'je-ah) pain in the ankle or foot.

tarsalia (tar-sa'le-ah) the bones of the tarsus.

tarsalis (tahr-sa'lis) [L.] tarsal.

tarsectomy (tahr-sek'to-me) [*tarso* + Gr. *ektomē* excision] 1. excision of the tarsus, or a part of it. 2. excision of a tarsal cartilage.

tarsectopia (tahr'sek-to'pe-ah) [*tarso* + Gr. *ektos* out of place + *-ia*] dislocation of the tarsus.

tarsitis (tahr-si'tis) inflammation of the tarsus, or margin of an eyelid; blepharitis.

tarso- (tahr'so) [Gr. *tarsos* a broad flat surface] a combining form denoting relationship to the edge of the eyelid, or to the instep of the foot.

tarsocheiloplasty (tahr'so-ki'lo-plas'te) [*tarso* + Gr. *cheilos* lip + *plassein* to mold] a plastic operation upon the edge of the eyelid, as in treatment of trichiasis.

tarsoclasia (tahr-sok'lah-sis) [*tarso* + Gr. *klasis* breaking] the operation of fracturing the tarsus of the foot.

tarsomalacia (tahr/'so-mah-la'she-ah) [*tarso-* + Gr. *malakias* softening] softening of the tarsus of an eyelid.

tarsomegaly (tahr/'so-meg'ah-le) enlargement of the os calcis.

tarsometatarsal (tahr/'so-met'ah-tahr'sal) pertaining to the tarsus and the metatarsus.

tarsor-orbital (tahr/'so-or'bi-tal) pertaining to the tarsus of the eyelid and to the orbit.

tarsophalangeal (tahr/'so-fah-lan'je-al) pertaining to the tarsus and the phalanges of the toes.

tarsophyma (tahr/'so-fi'mah) [*tarso-* + Gr. *phyma* growth] any tarsal tumor.

tarsoplasia (tahr/'so-pla'se-ah) tarsoplasty.

tarsoplasty (tahr/'so-plas'te) [*tarso-* + Gr. *plassein* to form] plastic surgery of the tarsus of an eyelid.

tarsoptosis (tahr/'sop-to'sis) [*tarso-* + Gr. *ptōsis* falling] falling of the tarsus; flatfoot.

tarsorrhaphy (tahr-'sor'ah-fe) [*tarso-* + Gr. *rhaphē* suture] the operation of suturing together a portion of (*partial t.*) or the entire (*total t.*) upper and lower eyelids for the purpose of shortening or closing entirely the palpebral fissure. The terms *external t.*, *median t.*, and *internal t.* are used to indicate the portion of the lids brought together in partial tarsorrhaphy. Called also *blepharorrhaphy*.

tarsotarsal (tahr/'so-tahr'sal) pertaining to the articulation between the two rows of tarsal bones.

tarsotibial (tahr/'so-tib'e-al) pertaining to the tarsus and the tibia.

tarsotomy (tahr-'sot'o-me) [*tarso-* + Gr. *tomē* a cutting] the operation of incising the tarsus, or an eyelid; blepharotomy.

tarsus (tahr'sus) [L.; Gr. *tarsos* a frame of wickerwork; any broad flat surface] 1. [NA] the region of the articulation between the foot and the leg; see also *tarsus osseus*. 2. one of the plates of connective tissue forming the framework of an eyelid; see *t. inferior palpebrae* and *t. superior palpebrae*. **bony t.**, *t. osseus*. **t. inferior palpebrae** [NA], the firm framework of connective tissue that gives shape to the inferior eyelid; called also *ciliary cartilage*, *palpebral cartilage*, and *tarsal cartilage*. **t. osseus** [NA], the seven bones constituting the articulation between the foot and the leg: the talus, calcaneus, and navicular, in the proximal row; and the cuboid and the lateral, intermediate, and medial cuneiform bones, in the distal row. Called also *bony t.* **t. superior palpebrae** [NA], the firm framework of connective tissue that gives shape to the upper eyelid; called also *ciliary cartilage*, *palpebral cartilage*, and *tarsal cartilage*.

tartar (tahr'tahr) [L. *tartarum*; Gr. *tartaron*] 1. the lees, or sediment, of a wine cask; crude potassium bitartrate. 2. dental calculus. **borated t.**, a white powder prepared by evaporating a solution of 2 parts of sodium borate and 5 parts of potassium bitartrate. **cream of t.**, potassium bitartrate. **t. emetic**, antimony potassium tartrate; see under *antimony*. **serumal t.**, subgingival calculus. **vitriolated t.**, potassium tartrate.

tartarated (tahr'tahr-āt'ed) charged with tartaric acid.

tartarized (tahr'tahr-īzd) tartarated.

tartrate (tahr'trāt) [L. *tartras*] any salt of tartaric acid. **acid t.**, a bitartrate; any salt of tartaric acid in which one atom only of hydrogen is replaced by a base. **normal t.**, one in which two hydrogen atoms are replaced; various tartrates are employed as remedial agents.

tartrated (tahr'trāt-ed) [L. *tartratus*] containing tartar of tartaric acid.

tartrobismuthate (tahr'tro-biz'mu-thāt) bismuthotartrate.

tasikinesia (tas'i-ki-ne'ze-ah) [Gr. *tasis* straining + *kinesis* motion + *-ia*] a morbid inclination to get up and walk; inability to remain seated.

tastant (tās'tant) any substance, e.g., salt, capable of eliciting gustatory excitation, i.e., stimulating the sense of taste.

taste (tāst) [L. *gustus*] the peculiar sensation caused by the contact of soluble substances with the tongue; the sense effected by the tongue, the gustatory and other nerves, and the gustation center. Four qualities are distinguished by taste: sweet, sour, salty, and bitter. **color t.**, pseudogeusesthesia. **franklinic t.**, a sour taste produced by stimulating the tongue with static electricity.

taste-blindness (tāst-blind'nes) inability to taste certain substances, such as phenylthiocarbamide.

taster (tās'ter) an individual capable of tasting a particular test substance, such as phenylthiocarbamide, used in certain genetic studies.

TAT thematic apperception test.

T.A.T. toxin-antitoxin.

tätte melk (tet'ē melk) a food article in Sweden, prepared by inoculating milk with leaves of *Pinguicula vulgaris*, the butterwort, or bog violet.

tattooing (tah-too'ing) the insertion of permanent colors in the skin by introducing them through punctures. **t. of the cornea**, the permanent coloring of the cornea chiefly to conceal leukomatous spots.

Tatum (ta'tum), Edward Lawrie. United States biochemist, born 1909; co-winner, with George Wells Beadle and Joshua Lederberg, of the Nobel prize in medicine and physiology for 1958, for work in genetics and heredity.

taurine (taw'rīn) a crystallizable acid, ethylamine sulfonic acid, $\text{NH}_2(\text{CH}_2)_2\text{SO}_3\text{OH}$, from the bile, produced by the hydrolysis of taurocholic acid. It is found also in small quantities in the tissues of the lungs and muscles. Its crystals are colorless and are readily soluble in water. It is a component of ox bile extract.

taurocholaneresis (taw'ro-ko'lan-er'ē-sis) [*taurocholic* acid + Gr. *hairesis* a taking] increase in the output or elimination of taurocholic acid in the bile. Cf. *cholaneresis*.

taurocholanopoiesis (taw'ro-ko-lan'o-poi-e'sis) synthesis of taurocholic acid by the liver.

taurocholate (taw'ro-ko'lāt) a salt of taurocholic acid; see *bile salts*, under *salt*.

taurocholema (taw'ro-ko-le'me-ah) the presence of taurocholic acid in the blood.

taurodontism (taw'ro-don'tizm) [L. *taurus* bull + Gr. *odous* tooth + *-ism*] a variation in tooth form involving all or some of the primary and secondary molars, marked by elongation of the body of the tooth so that the pulp chambers are large apico-occlusally and the roots are reduced in size.

Taussig-Bing syndrome (taw'sig-bing) [Helen Brooke Taussig, American pediatrician, born 1898; Richard J. Bing, American surgeon, born 1909] see under *syndrome*.

tauto- [Gr. *tautos* from *to auto* the same] a combining form meaning the same.

tautomerial (taw'to-me'ne-al) [*tauto-* + Gr. *mēniaia* menses] pertaining to the same menstrual period.

tautomer (taw'to-mer) a chemical compound exhibiting, or capable of exhibiting, tautomerism.

tautomer (taw-tom'er-al) [*tauto-* + Gr. *meros* part] pertaining to the same part, especially sending processes to help in the formation of the white matter in the same side of the spinal cord; said of certain neurons and neuroblasts. See *tautomer cells*, under *cell*.

tautomerase (taw-tom'er-ās) an enzyme of the isomerase class which catalyzes tautomeric reactions. **phenylpyruvate t.**, an isomerase that catalyzes the interconversion of keto-phenylpyruvate to enol-phenylpyruvate.

tautomeric (taw'to-mer'ik) exhibiting, or capable of exhibiting, tautomerism.

tautomerism (taw-tom'er-izm) [*tauto-* + Gr. *meros* part] a form of stereoisomerism in which the compounds are mutually interconvertible, under normal conditions, forming a mixture which is in dynamic equilibrium. See *prototropy*, *anionotropy*, and *mutarotation*.

Tawara's node (tah-wah'rah) [Sunao Tawara, Japanese pathologist, born 1873] nodus atrioventricularis.

taxa (tak'sah) plural of *taxon*.

taxine (tak'sēn) an alkaloidal mixture obtainable from the yew, *Taxus baccata* L. (Taxaceae) and responsible for its poisonous properties.

taxis (tak'sis) [Gr. "a drawing up in rank and file"] 1. an orientation movement of a motile organism in response to an external stimulus. Such a response may be either positive (toward) or negative (away from the stimulus). Used also as a word termination, affixed to a stem denoting the nature of the stimulus (stereotaxis). 2. exertion of force in the manual replacement of a displaced or injured organ or structure, as in the reduction of a fracture or dislocation, or the replacement of a protruded intestine in hernia.

Taxodium distichum (L.) Rich. (Taxodiaceae) (taks-o'de-um dis'tik-um) the cypress, a timber tree of North America. The resin was formerly used in rheumatism.

taxonomy (taks-ol'o-je) taxonomy.

taxon (tak'son), pl. *tax'a* [Gr. *taxis* a drawing up in rank and file + *on* neuter ending] a particular group (category) into which related organisms are classified; the main categories are (in ascending order): species, genus, family, order, class, phylum, and kingdom.

taxonomic (tak'so-nom'ik) pertaining to taxonomy.

taxonomist (taks-on'o-mist) a specialist in taxonomy.

taxonomy (tak-son'o-me) [L. *taxinomia*; Gr. *taxis* a drawing up in rank and file + *nomos* law] the orderly classification of organisms into appropriate categories (taxa) on the basis of relationships among them, with the application of suitable and correct names. **numerical t.**, an arithmetic method of classifying larger numbers of bacterial strains on the basis of their overall similarity to one another, according to the number of phenotypic characters they share, each character being given equal weight. Called also *adansonian*, or *numerical classification*.

Tay's choroiditis (disease), sign, spot (tāz) [Warren Tay, English physician, 1843-1927] see under *choroiditis*, and see *cherry-red spot*, under *spot*.

Tay-Sachs disease (ta saks') [Warren Tay; Bernard (Barney)

Sachs, New York neurologist, 1858–1944] amaurotic family idiocy; see under *idiocy*.

Taylor splint (apparatus) (ta'ler) [Charles Fayette Taylor, orthopedic surgeon in New York, 1827–1899] see under *apparatus*.

tazettine (tāz'ē-tin) a crystalline alkaloid, $C_{18}H_{21}O_5N$, from the bulbs of daffodils, including *Lycoris radiata* and *Narcissus tazetta*. Called also *seksianine*.

tazolol hydrochloride (ta'zo-lōl) chemical name: (+)-1-[1-methylethylamino]-3-(2-thiazolyloxy)-2-propanol monohydrochloride. An adrenergic, $C_9H_{18}N_2O_2S \cdot HCl$, having mainly β_1 -adrenergic activity; a cardiotonic.

TB see under *tuberculin*.

Tb chemical symbol for *terbium*.

T.b. abbreviation for *tubercle bacillus*, and, in speaking, for *tuberculosis*.

T.B.E. bacillen emulsion tuberculin; see under *tuberculin*.

TBN bacillus emulsions; see under *tuberculin*.

TBP bithionol.

T.C. tuberculin contagious; see under *tuberculin*.

Tc chemical symbol for *technetium*.

TCD₅₀ median tissue culture dose; see *TCID₅₀*.

TCID₅₀ abbreviation for *median tissue culture infective dose*: that quantity of a cytopathogenic agent (virus) that will produce a cytopathic effect in 50 per cent of the cultures inoculated.

TD₅₀ median toxic dose; a dose that produces a toxic effect in 50 per cent of a population.

t.d.s. abbreviation for *L. ter di'e sumen'dum*, to be taken three times a day.

Te 1. chemical symbol for *tellurium*. 2. tetanus.

TEA tetraethylammonium.

tea (te) [L. *thea*] 1. the dried leaves of *Camellia sinensis* (L.) Kuntze, containing caffeine, theophylline, tannic acid, and a pleasant volatile oil; also a decoction thereof, used as a stimulating beverage and soothing warm drink for various abdominal discomforts. 2. any decoction or infusion. **beef t.**, an infusion of lean beef. **pectoral t.**, an aqueous infusion of expectorant and demulcent herbs and aromatics.

TEAC tetraethylammonium chloride.

Teale's amputation (operation) (tēlz) [Thomas Pridgin Teale, Sr., English surgeon, 1801–1868] see under *amputation*.

tears (tērz) [L. *lacrimae*; Gr. *dakrya*] 1. the watery secretion of the lacrimal glands which serves to moisten the conjunctiva; the secretion is slightly alkaline and saline. 2. small, naturally formed, droplike masses of a gum or resin. **crocodile t.**, lacrimation on chewing and eating; see *syndrome of crocodile tears*.

teart (tert) 1. soil or plants that contain unusual amounts of molybdenum. 2. molybdenosis of farm animals caused by feeding on vegetation grown on soil that contains unusual amounts of molybdenum.

tease (tēz) to pull a tissue apart with needles for microscopical examination.

teaspoon (te'spōon) a household unit of capacity, containing about 1 fluid dram or 4 milliliters.

teat (tāt) the nipple of the mammary gland.

tebutate (teb'u-tāt) USAN contraction for tertiary butyl acetate.

technetium (tek-ne'she-um) the metallic, radioactive, synthetic chemical element of atomic number 43; its most stable isotope, technetium 99, has a half-life of 2×10^5 years; symbol, Tc. Formerly called *masurium*. **t. 99m**, a radioisotope of technetium having a half-life of 6.0 hours and emitting primarily gamma rays; used in preparations for scanning of the brain, lung, liver, kidney, etc. Symbol ^{99m}Tc . **t. Tc 99m aggregated albumin** [USP], a sterile, aqueous suspension of normal human serum that has been denatured to produce aggregates of controlled particle size that are labeled with ^{99m}Tc ; used for lung scanning, administered intravenously. Called also *technetated* (^{99m}Tc) *aggregated albumin* (human).

technic (tek'nik) technique.

technical (tek'nī-kal) pertaining to technique.

technician (tek-nish'an) a person trained in and expert in the performance of technical procedures.

technique (tek-nēk') [Fr.] the method of procedure and the details of any mechanical process or surgical operation. See also under *method*, *treatment*, *maneuver*, *Table of Stains*, etc. **Begg t.**, a technique of light wire orthodontic therapy. **Coffey t.**, a method of correcting exstrophy of the bladder in which the ureters are transplanted between the coats of the colonic wall to achieve a valve-like function. **Conway t.**, a method of correcting severe macromastia, consisting in partial breast amputation and free transplantation of the nipples and areolae. **dilution-filtration t.**, a blood culture technique in which any culture inhibitors present in the blood are diluted out and red blood cells are removed before the sample is filtered and cultured, thereby permitting the identification of organisms in about 24

hours. **fluorescent antibody t.**, an immunofluorescence technique in which antigen in tissue sections is located by homologous antibody labeled with fluorochrome (the single-layer technique) or by treating the antigen with unlabeled antibody followed by a second layer of labeled antglobulin which is reactive with the unlabeled antibody (double-layer technique). Variations include direct, indirect, inhibition, and complement staining techniques. **hanging drop t.**, a method of microscopic examination of organisms suspended in a drop on a special concave microscope slide. **Hartel's t.**, see under *treatment*. **Jerne plaque t.**, a hemolytic technique for detecting antibody-producing cells: a suspension of presensitized lymphocytes is mixed in an agar gel with erythrocytes; after a period of incubation, complement is added and a clear area of lysis of red cells can be seen around each of the antibody-producing cells. **Kleinschmidt t.**, rupture of the virion by osmotic shock so that viral DNA is exposed. **Krawitz's t.**, vaccination done by making multiple punctures at the same time. **Kristeller t.**, see under *method*. **Leboyer m.**, see under *method*. **Orr t.**, see under *treatment*. **Ouchterlony t.**, see under *test*. **Rebuck skin window t.**, a test of the inflammatory response: the skin is abraded and a cover slip or chamber is applied over the abraded area to permit direct observation of cell morphology. **scintillation counting t.**, a method of determining the amount of radioactivity by use of a scintillation crystal and appropriate electronic circuitry. **Seldinger t.**, a technique for percutaneous puncture of arteries or veins, used in angiography. **squash t.**, a method of preparing cells for chromosome study, suspending them in hypotonic solution, then incubating them and exposing them to colchicine for one hour; after fixing and staining, a drop of the stained material is placed on a glass slide and covered with a glass slip, which is then pressed against the slide with one thumb. **time diffusion t.**, a form of spinal anesthesia in which the anesthetic, of low specific gravity, is injected by lumbar puncture, with the patient in the sitting position. The anesthetic is allowed to flow upward for a measured number of seconds and then the patient is placed in the horizontal position. **Trueta t.**, see under *treatment*.

technocausis (tek'no-kaw'sis) [Gr. *technē* art + *kausis* burning] use of the actual cautery.

technologist (tek-nol'o-jist) technician.

technology (tek-nol'o-je) [Gr. *technē* art + *logos* treatise] scientific knowledge; the sum of the study of a technique.

technopsychology (tek'no-si-kol'o-je) [Gr. *technē* art + *psychology*] the psychology of the workman and his adaptation to his work.

teclozan (tek'lo-zan) chemical name: *N,N'*-(*p*-phenylenedimethylene)bis[2,2-dichloro-*N*-(2-ethoxyethyl)acetamide]; an antiamebic, $C_{26}H_{28}Cl_2N_2O_4$.

tectocephalic (tek'to-sē-fal'ik) characterized by tectocephaly.

tectocephaly (tek'to-sēf'ah-le) [L. *tectum* roof + Gr. *kephalē* head] scaphocephaly.

tectology (tek-tol'o-je) [Gr. *tektōn* builder + *-logy*] the science which treats of the building up of organisms from structured elements; the doctrine of structure, a division of morphology.

tectorial (tek-to're-al) [L. *tectum* roof] of the nature of a roof or covering, as the tectorial membrane.

tectorium (tek-to're-um), pl. *tecto'ria* [L. "roof"] membrana tectoria ductus cochlearis.

tectospinal (tek'to-spi'nal) extending from the tectum mesencephali to the spinal cord; see also under *tract*.

tectum (tek'tum) any rooflike structure. **t. mesencephali** [NA], **t. of mesencephalon**, the roof of the mesencephalon: that part of the mesencephalon dorsal to the cerebral aqueduct, comprising the quadrigeminal plate and the superior and inferior colliculi.

T.E.D. threshold erythema dose.

teeth (tēth) see *tooth*.

teething (tēth'ing) the entire process which results in the eruption of the teeth.

Teflon (tef'lōn) trademark for preparations of polytetrafluoroethylene. See also *polymer fume fever*, under *fever*.

teflurane (tef'loor-ān) chemical name: 2-bromo-1,1,1,2-tetrafluoroethane; an inhalation anesthetic, C_2HBrF_4 .

tegmen (teg'men), pl. *teg'mina* [L. "cover"] any covering, or shelter; used in anatomical nomenclature as a general term to designate a covering structure or roof. **t. an'tri**, t. tympani. **t. cel'lulae**, t. mastoideum. **t. cra'nii**, calvaria. **t. cru'ris**, tegmentum, def. 2. **t. mastoideotympanicum**, the tegmen mastoideum and tegmen tympani, which together roof over the mastoid cells. **t. mastoid'eum**, the bony roof of the mastoid cells. **t. tym'pani**, 1. [NA] the thin layer of translucent bone, on the petrous part of the temporal bone in the floor of the middle cranial fossa, separating the tympanic antrum from the cranial cavity; called also *roof of tympanum*. 2. paries tegmentalis cavi tympani. **t. ventric'uli quar'ti** [NA], the roof of the fourth ventricle, formed by the superior and inferior medullary vela.

tegmental (teg-men'tal) pertaining to or of the nature of a tegmen or tegmentum.

tegmentum (teg-men'tum), pl. *tegmen'ta* [L.] 1. a covering. 2. [NA] the part of the cerebral peduncle dorsal to the substantia nigra, consisting of an upward extension of the pontine tegmentum; it is made up of various nuclei, fiber tracts, and the reticular formation and is separated dorsally from the tectum by the cerebral aqueduct. **t. au'ris**, membrana tympani. **hypothalamic t.**, subthalamic t. **t. of pons**, **t. rhombenceph'ali** [NA], the dorsal half of the pons. **subthalamic t.**, the portion of the tegmentum of the cerebral peduncle extending beneath the thalamus.

Tegopen (teg'o-pen) trademark for preparations of cloxacillin sodium.

Tegretol (teg'rē-tol) trademark for preparations of carbamazepine.

Teichmann's crystals, test (tik'mahnz) [Ludwig Carl Teichmann-Stawiariski, German histologist, 1825–1895] see under *crystal* and *tests*.

teichopsia (ti-kop'se-ah) [Gr. *teichos* wall + *opsis* vision + *-ia*] the sensation of a luminous appearance before the eyes, with a zigzag, wall-like outline; called also *fortification spectrum*, *flittering scotoma*, and *scintillating scotoma*.

T-1224 Evans blue.

teinodinia (ti'no-din'e-ah) tenodinia.

teknocyte (tek'no-sit) [Gr. *tekon* that which is born + *kytos* cell] a young neutrophil leukocyte.

tektin (tek'tin) any of a group of insoluble structural protein having elastic properties.

tela (te'lah), pl. *te'lae* [L. "something woven," "web"] any weblike tissue; [NA] a general term for a thin membrane resembling a web. **t. ara'nea**, a spider web. **t. cellulo'sa**, **t. conjunctiva**. **t. chorioi'dea ventriculi latera'li**, the lateral extension of the tela chorioidea ventriculi tertii into the choroid fissure of the lateral ventricle of the brain; from it, vascular folds invaginate the ventricular ependyma to form the choroid plexus of the lateral ventricle. **t. chorioi'dea ventriculi quar'ti**, **t. chorioidea ventriculi quarti**. **t. chorioi'dea ventriculi ter'tii**, **t. chorioidea ventriculi tertii**. **t. chorioidea of fourth ventricle**, **t. chorioidea ventriculi quarti**. **t. chorioidea of third ventricle**, **t. chorioidea ventriculi tertii**. **t. chorioi'dea ventriculi quar'ti** [NA], a double layer or fold of pia mater between the cerebellum and the lower part of the roof of the fourth ventricle; the anterior layer of the fold, together with the ventricular ependyma, contains vascular fringes which comprise the choroid plexus. **t. chorioi'dea ventriculi ter'tii** [NA], a double layer or fold of pia mater which, together with the ventricular ependyma, forms the roof of the third ventricle; from the lower fold two vascular fringes invaginate the roof to form the choroid plexuses. **t. conjuncti'va** [NA], a general term used to designate connective tissue. **t. elas'tica** [NA], a general term used to designate elastic tissue. **t. subcuta'nea** [NA], the layer of loose connective tissue situated directly beneath the skin; called also *hypodermis*, *subcutaneous fascia*, and *superficial fascia*. **t. submuc'o'sa** [NA], the layer of loose connective tissue between the lamina muscularis mucosae and the tunica muscularis in most parts of the digestive, respiratory, urinary, and genital tracts. **t. submuc'o'sa bronchio'rum** [NA], the layer of tissue underlying the tunica mucosa of the bronchi. **t. submuc'o'sa co'li** [NA], the layer of tissue underlying the tunica mucosa of the colon. **t. submuc'o'sa esoph'agi** [NA], the layer of tissue underlying the tunica mucosa of the esophagus. **t. submuc'o'sa intesti'ni ten'uis** [NA], the submucous layer of the wall of the small intestine. **t. submuc'o'sa pharyn'gis** [NA], the tissue underlying the tunica mucosa of the pharynx. **t. submuc'o'sa rec'ti** [NA], the submucous layer of the wall of the rectum. **t. submuc'o'sa tra'cheae** [NA], the tissue underlying the tunica mucosa of the trachea. **t. submuc'o'sa tu'bae uteri'nae**, the submucous layer of the wall of the uterus. **t. submuc'o'sa ventriculi** [NA], the tissue underlying the tunica mucosa of the stomach. **t. submuc'o'sa vesi'cae urina'riae** [NA], the submucous layer of the wall of the urinary bladder. **t. subsero'sa** [NA], a layer of loose areolar tissue underlying the tunica serosa of various organs. **t. subsero'sa co'li** [NA], loose areolar tissue underlying the tunica serosa of the colon. **t. subsero'sa hep'atis** [NA], loose areolar tissue underlying the tunica serosa of the liver. **t. subsero'sa intesti'ni ten'uis** [NA], the subserous layer of the wall of the small intestine. **t. subsero'sa peritone'i** [NA], a web of loose areolar tissue underlying the tunica serosa of the peritoneum. **t. subsero'sa tu'bae uteri'nae** [NA], the subserous layer of the wall of the uterus; called also *tunica adventitia tubae uterinae*. **t. subsero'sa u'teri** [NA], the areolar tissue underlying the tunica serosa of the uterus. **t. subsero'sa ventriculi** [NA], the tissue underlying the tunica serosa of the stomach. **t. subsero'sa vesi'cae fel'leae** [NA], the tissue underlying the tunica serosa of the gallbladder. **t. subsero'sa vesi'cae urina'riae** [NA], the subserous layer of the wall of the urinary bladder.

telae (te'le) [L.] plural of *tela*.

telalgia (tel-al'je-ah) pain occurring in a part distant from the lesion; referred pain.

telangiectasia (tel-an'je-ek-ta'ze-ah) [*tele*-(1) + Gr. *angeion* vessel + *ektasis* dilatation + *-ia*] a vascular lesion formed by dilatation of a group of small blood vessels, the basis for a variety of angiomias. **essential t.**, dilatations of small blood vessels. **hereditary hemorrhagic t.**, a hereditary disorder characterized by multiple small angiomias of the skin and mucous membranes, often with epistaxis or gastrointestinal bleeding and sometimes with pulmonary or hepatic arteriovenous fistula; called also *Rendu-Osler-Weber disease*. **t. lymphat'ica**, lymphangioma formed by dilatation of the lymph vessels. **t. macula'ris erupti'va per'stans**, a mild, chronic, adult form of urticaria pigmentosa, marked by unremitting macular lesions accompanied by telangiectasia and very little if any itching and redness; it may very rarely progress to systemic involvement. **spider t.**, vascular spider.

telangiectasis (tel-an'je-ek'tah-sis), pl. *telangiec'tases*. The spot formed, most commonly on the skin, by a dilated capillary or terminal artery; see *telangiectasia*. **spider t.**, a focal network of dilated capillaries, radiating from a central arteriole, seen chiefly in pregnancy and in hepatic cirrhosis.

telangiectatic (tel-an'je-ek-tat'ik) pertaining to or characterized by telangiectasia.

telangiectodes (tel-an'je-ek-to'dēz) marked by telangiectasia.

telangiitis (tel-an'je-i'tis) [*tele*-(1) + Gr. *angeion* vessel + *-itis*] inflammation of the capillaries.

telangion (tel-an'je-on) [*tele*-(1) + Gr. *angeion* vessel] a terminal artery.

telangiosis (tel'an-je-o'sis) [*tele*-(1) + Gr. *angeion* vessel + *-osis*] any disease of the capillary vessels.

telar (te'lar) pertaining to, affecting or resembling tela.

Teldrin (tel'drin) trademark for a preparation of chlorpheniramine maleate.

tele- 1. [Gr. *telos* end] a combining form denoting relation to the end. 2. [Gr. *tele* far off, at a distance] a combining form meaning operating at a distance, or far away.

telebinocular (tel'ē-bi-nok'u-lar) a prism-refracting instrument for use in orthoptic training.

telecanthus (tel'e-kan'thus) [*tele*-(1) + L.; Gr. *kanthos* canthus] abnormally increased distance between the medial canthi of the eyelids.

telecardiogram (tel'ē-kar'de-o-gram) the tracing obtained by telecardiography.

telecardiography (tel'ē-kar'de-og'rah-fe) [*tele*-(2) + Gr. *kardia* heart + *graphein* to write] the recording of an electrocardiogram by transmission of impulses to a site at a distance from the patient.

telecardiophone (tel'ē-kar'de-o-fōn') [*tele*-(2) + Gr. *kardia* heart + *phōnē* voice] an apparatus for rendering heart sounds audible to listeners at a distance from the patient.

teleceptive (tel'ē-sep'tiv) pertaining to a teleceptor.

teleceptor (tel'ē-sep'tor) [*tele*-(2) + *receptor*] a sensory nerve terminal which is sensitive to stimuli originating at a distance; such nerve endings exist in the eyes, ears, and nose.

telecinesia (tel'ē-si-ne'ze-ah) telekinesis.

telecinesis (tel'ē-si-ne'sis) telekinesis.

telecord (tel'ē-kord) an apparatus for attachment to an x-ray machine; by means of it each cardiac phase can be photographed in series.

telecurietherapy (tel'ē-ku're-ther'ah-pe) [*tele*-(2) + *curietherapy*] treatment with a radioactive source, e.g., radium, located at a distance from the body.

teledactyl (tel'ē-dak'til) [*tele*-(2) + Gr. *daktylos* finger] an appliance for picking up objects from the ground without stooping; used in spinal diseases.

teledendrite, teledendron (tel'ē-den'drit', tel'ē-den'dron) telodendron.

telediagnosis (tel'ē-di'ag-no'sis) [*tele*-(1) + *diagnosis*] determination of the nature of a disease at a site remote from the patient on the basis of transmitted telemonitoring data or closed-circuit television consultation.

telefluoroscopy (tel'e-floo'or-os'ko-pe) [*tele*-(2) + *fluoroscopy*] television transmission of fluoroscopic images for observation and study at a distant location.

telegony (tē-leg'o-ne) [*tele*-(2) + Gr. *gonē* offspring] the alleged appearance in the offspring of one sire of characteristics derived from a previous sire to whom the dam has borne offspring.

telekinesis (tel'ē-ki-ne'sis) [*tele*-(2) + Gr. *kinesis* movement] the power claimed by certain persons of moving objects without contact with the object moved; also motion produced without contact with a moving body.

telekinetic (tel'ē-ki-net'ik) pertaining to telekinesis.

telecardiogram (tel'ē-lek'tro-kar'de-o-gram) telecardiogram.

telecardiograph (tel'e-lek'tro-kar'de-o-graf) [*tele*-(2) +

temefos (tem'ě-fos) chemical name: *O,O'*-(thiodi-4,1-phenylene

O,O,O',O'-trimethyl ester phosphorothioic acid; an organophosphorus insecticide, $C_{16}H_{20}O_6P_2S_3$, used as a veterinary ectoparasiticide.

Temin (tem'in) Howard. American biologist, born 1935; co-winner, with David Baltimore and Renato Dulbecco, of the Nobel prize in medicine and physiology for 1975, for discoveries concerning the interaction between tumor viruses and the genetic material of host cells and the role of reverse transcriptase.

temodex (tem'o-deks) chemical name: 2-hydroxyethyl ester 3-methyl-2-quinoxalinecarboxylic acid 1,4-dioxide; a veterinary growth stimulant, $C_{12}H_{12}N_2O_5$.

temp. dext. abbreviation for *L. tem'pori dex'tro*, to the right temple.

temperament (tem'per-ah-ment) [*L. temperamentum* mixture] the peculiar physical character and mental cast of an individual. **atrabilious t.**, melancholic t. **bilious t.**, that characterized by a dark or sallow complexion, black hair, and a slow or moderate circulation of the blood. **choleric t.**, bilious t. **lymphatic t.**, one characterized by a fair but not ruddy complexion, light hair, and a general softness or laxity of the tissues. It results, according to the old physiologists, from the predominance of lymph or phlegm in the system. **melancholic t.**, one characterized by a predominance of *black bile* (which was supposed to be secreted by the spleen), rendering the disposition melancholic and morose, and, when in great excess, producing hypochondriasis. **nervous t.**, one characterized by the predominance of the nervous element, and by great activity or susceptibility of the great nervous center, the brain. **phlegmatic t.**, lymphatic t. **sanguine t.**, **sanguineous t.**, one characterized by fair and ruddy complexion, yellow, red, or light auburn hair, a full, muscular development, large, full veins, and an active pulse, all indicating an abundant supply of blood.

temperantia (tem'per-an'she-ah) sedatives.

temperature (tem'per-ah-tür) [*L. temperatura*] the degree of sensible heat or cold; the property of a system that determines whether or not the system is in thermal equilibrium with other systems; a measure of the escaping tendency of heat from a system. **absolute t.**, temperature reckoned from absolute zero (-273.15° C. or -459.67° F.), expressed on an absolute scale (Kelvin or Rankine). **body t.**, the temperature of the body: in cold-blooded animals it varies with environmental temperature; in warm-blooded animals it is usually constant within a narrow range. See *normal t.* **body t.**, **basal**, the temperature of the body under conditions of absolute rest. Abbreviated B.B.T. **critical t.**, a temperature below which a gas may be liquefied by increased pressure. **maximum t.**, in bacteriology, the temperature above which growth does not take place. **mean t.**, the average temperature in a locality for a given period of time. **minimum t.**, in bacteriology, temperature below which growth does not take place. **normal t.**, that of the human body in health, about 98.6° F. or 37° C. when measured orally. This is maintained by the thermotaxic nerve mechanism, which maintains a balance between the thermogenic, or heat-producing, and the thermolytic, or heat-dispelling, processes. **optimum t.**, the temperature promoting the most rapid growth of a given species of microorganism. **room t.**, the ordinary temperature of a room, 65° – 80° F. **sub-normal t.**, temperature below the normal.

template (tem'plat) a pattern or mold. In dentistry, a curved or flat plate used as an aid in setting teeth for a denture. In theoretical immunology, an antigen that determines the configuration of combining (antigen-binding) sites of antibody molecules. In genetics, a strand of DNA which specifies the synthesis of a complementary strand of RNA (mRNA), which in turn serves as a template for the synthesis of nucleic acids or proteins. **surgical t.**, a thin plate of transparent resin shaped to duplicate the surface of an impression for an immediate denture and used as a guide in surgically shaping the alveolar process of the jaw to fit the prosthesis.

temple (tem'p'l) [*L. tempula*, dim. of *tempora*, pl. of *tempus*] the lateral region on either side of the upper part of the head; see *tempora*.

tempolabile (tem'po-la'b'il) [*L. tempus* time + *labilis* unstable] subject to change with the passage of time.

tempora (tem'po-rah) [*L.*, pl. of *tempus*] [NA] the temples: the region on either side of the head, above the zygomatic arch.

temporal (tem'po-ral) [*L. temporalis*] 1. pertaining to the lateral region of the head, above the zygomatic arch. 2. pertaining to time; limited as to time; temporary.

temporalis (tem-po-ra'lis) [*L.*] pertaining to the lateral region of the head, above the zygomatic arch.

temporoauricular (tem'po-ro-aw-rik'u-lar) pertaining to the temporal and auricular regions.

temporofacial (tem'po-ro-fa'shal) pertaining to a temple and the face.

temporofrontal (tem'po-ro-fron'tal) pertaining to the temporal and frontal bones or regions.

temporohyoid (tem'po-ro-hi'oid) pertaining to the temporal and hyoid bones.

temporomalar (tem'po-ro-ma'lar) temporozygomatic.

temporomandibular (tem'po-ro-man-dib'u-lar) pertaining to the temporal bone and the mandible.

temporomaxillary (tem'po-ro-mak'si-ler'e) pertaining to the temporal bone, or region, and the maxilla.

temporo-occipital (tem'po-ro-oks-ip'i-tal) pertaining to the temporal and occipital bones or regions.

temporoparietal (tem'po-ro-pah-ri'ë-tal) pertaining to the temporal and parietal bones or regions.

temporopontile (tem'po-ro-pon'til) pertaining to or connecting the temporal lobe and the pons.

temporospatial (tem'po-ro-spa'shal) [*L. tempus* time + *spatium* space] pertaining to both time and space.

temporosphenoid (tem'po-ro-sfe'noid) pertaining to the temporal and sphenoid bones.

temporozygomatic (tem'po-ro-zi'go-mat'ik) pertaining to the temporal and zygomatic bones, or to the region of the zygomatic arch.

tempostabile (tem'po-sta'b'il) [*L. tempus* time + *stabilis* stable] not subject to change with the passage of time.

Tempra (tem'prah) trademark for preparations of acetaminophen.

temp. sinist. abbreviation for *L. tem'pori sinis'tro*, to the left temple.

temulence (tem'u-lens) [*L. temulentia*] drunkenness; intoxication.

temuline (tem'u-lën) an alkaloid contained in seeds of darnel (*Lolium temulentum*) and at one time said to be toxic, though subsequent investigators have said the seeds are not toxic; the question is not yet settled.

tenacious (te-na'shus) [*L. tenax*] holding fast; adhesive.

tenacity (te-nas'i-te) the quality of being tenacious; toughness; the condition of being tough. **cellular t.**, the inherent tendency of all cells to persist in a given form or direction of activity.

tenaculum (te-nak'u-lum) [*L.*] 1. a hooklike instrument for seizing and holding tissues. 2. any fibrous band for maintaining structures in place. **t. ten'dinum**, retinaculum tendinum.

Tenaculum (Da Costa).

tenalgia (te-nal'je-ah) [*Gr. tenōn* tendon + *algos* pain + *-ia*] pain in a tendon.

tenderness (ten'der-nes) abnormal sensitiveness to touch or pressure. **pencil t.**, local tenderness on pressure with the rubber tip of a pencil. **rebound t.**, a sensation of pain felt on the release of pressure.

tendines (ten'di-nēz) plural of *tendo*.

tendinitis (ten'di-ni'tis) inflammation of tendons and of tendon-muscle attachments. **calcific t.**, inflammation and calcification of the subacromial or subdeltoid bursa, resulting in pain, tenderness, and limitation of motion in the shoulder. Called also *calcific bursitis* and *scapulohumeral bursitis*. **t. of horse**, inflammation of the flexor tendons, due to strain of wrenching, and causing great tenderness and lameness. **t. ossif'icans** **traumat'ica**, a condition in which areas of ossification develop in tendons as a result of trauma. **t. steno'sans**, **stenosing t.**, stenosing tendovaginitis of the flexor tendons of the finger.

tendinoplasty (ten'di-no-plas'te) [*L. tendo* tendon + *Gr. plassein* to mold] the plastic surgery of the tendons.

tendinosuture (ten'di-no-su'tür) [*L. tendo* tendon + *sutura* sewing] the suturing of a tendon.

tendinous (ten'di-nus) [*L. tendinosus*] pertaining to, resembling, or of the nature of a tendon.

tendo (ten'do), pl. *ten'dines* [*L.*] [NA] tendon: a fibrous cord of connective tissue in which the fibers of a muscle end and by which the muscle is attached to a bone or other structure. **t. Achil'is**, NA alternative for *t. calcaneus*. **t. calca'neus** [NA], calcaneal tendon: a powerful tendon at the back of the heel which attaches the triceps surae muscle to the tuberosity of the calcaneus; called also *tendo Achillis* or *Achilles tendon*. **t. conjuncti'vus**, NA alternative for *falx inguinalis*. **t. cor'difor'mis**, centrum tendineum. **t. cricoesopha'geus** [NA], cricoesophageal tendon: the tendon giving origin to the longitudinal fibers of the esophagus that come from the upper part of the lamina of the cricoid cartilage. **t. oc'uli**, **t. palpebra'rum**, ligamentum palpebrale mediale.

tendolysis (ten-dol'i-sis) [*L. tendo* tendon + *Gr. lysis* dissolution] tenolysis.

tendomucin (ten'do-mu'sin) a mucin derivable from tendons and closely related to submaxillary mucin.

tendon (ten'dun) [*L. tendo*; *Gr. tenōn*] a fibrous cord by which a muscle is attached; see *tendo*. **Achilles t.**, tendo calcaneus. **calcaneal t.**, tendo calcaneus. **central t. of diaphragm**, centrum tendineum. **central t. of perineum**, centrum tendineum perinei. **common t.**, a tendon that serves more than

one muscle. **conjoined t.**, falc inguinalis. **cordiform t. of diaphragm**, centrum tendineum. **coronary t's**, two fibrous rings, one surrounding the cardiac orifice of the aorta and the other the pulmonary trunk orifice; see *anuli fibrosi cordis*. **cricoesophageal t.**, tendo cricoesophageus. **hamstring t.**, see *hamstring*. **t. of Hector**, heel t., tendo calcaneus. **intermediate t. of diaphragm**, centrum tendineum. **kan-garoo t.**, the prepared tendon from the tail of certain species of kangaroo, used as a material for sutures or ligatures. **mem-branaceous t.**, aponeurosis. **patellar t., anterior**, patellar t., inferior, ligamentum patellae. **pulled t.**, disruption of the fibers attaching a muscle to its point of origin, occurring as the result of unusual muscular effort. **riders' t.**, injury to the adductor tendons of the thigh incurred in horseback riding. **slipped t.**, perosis. **trefoil t.**, centrum tendineum. **t. of Zinn**, zonula ciliaris.

tendonitis (ten''do-ni'tis) tendinitis.

tendoplasty (ten''do-plas'te) [L. *tendo* tendon + Gr. *plassein* to mold] plastic surgery of the tendons.

tendosynovitis (ten''do-sin''o-vi'tis) tenosynovitis.

tendotome (ten''do-tōm) tenotome.

tendotomy (ten-dot/o-me) tenotomy.

tendovaginal (ten''do-vaj'i-nal) [L. *tendo* tendon + *vagina* sheath] pertaining to a tendon and its sheath.

tendovaginitis (ten''do-vaj'i-ni'tis) 1. inflammation of a tendon and its sheath. 2. tenosynovitis.

tenebrimycin (tē-neb''rī-mi'sin) tobramycin.

tenectomy (te-nek'to-me) [Gr. *tenōn* tendon + *ektomē* excision] excision of a lesion of a tendon or of a tendon sheath.

tenemycin (ten''ē-mi'sin) tobramycin.

tenesmic (te-nez'mik) pertaining to or of the nature of tenesmus.

tenesmus (te-nez'mus) [L.; Gr. *teinesmos*] straining, especially ineffectual and painful straining at stool or in urination. **rec-tal t.**, painful, long-continued, and ineffective straining at stool. **vesical t.**, that which sometimes accompanies urination.

ten Horn see *Horn*.

tenia (te'ne-ah), pl. *te'niae* [L. "a flat band," "bandage," "tape"] 1. [NA] a flat band or strip of soft tissue; called also *taenia*. 2. *taenia* (def. 2). **te'niae acus'ticae**, striae medullares ventriculi quarti. **t. choro'i-dea** [NA], the line of attachment of the lateral choroid plexus to the medial wall of the cerebral hemisphere; specifically, the line of attachment of the ependyma of the ventricle to the ependyma of the choroid plexus. **te'niae co'li** [NA], three thickened bands, about $\frac{1}{4}$ inch wide and one-sixth shorter than the colon, formed by the longitudinal fibers in the muscular tunic of the large intestine and extending from the root of the vermiform appendix to the rectum, where the fibers spread out and form a continuous layer encircling the tube; they include the *t. libera*, *t. mesocolica*, and *t. omentalis*. **t. for'ni-cis** [NA], **t. of fornix**, the line of attachment of the choroid plexus of the lateral ventricle to the fornix, including the line of its attachment to the fimbria of the hippocampus (*taenia fimbriae*). **t. of fourth ventricle**, *t. ventriculi quarti*. **t. li'bera** [NA], the thickened band formed by anterior longitudinal muscle fibers of the large intestine, almost equidistant from the *tenia mesocolica* and the *tenia omentalis*. **t. mesocol'ica** [NA], the thickened band of longitudinal muscle fibers of the large intestine along the site of attachment of the mesocolon. **t. omenta'lis** [NA], the band of longitudinal muscle fibers of the large intestine along the site of attachment of the greater omentum. **t. plex'us choro'i-dei ventric'uli quar'ti**, **t. si'nus rhombo'i-deae**, *t. ventriculi quarti*. **t. te'lae** [NA], the line of attachment of the ependymal cells of the choroid plexus to various portions of the brain; called *taenia telarum*. **t. thal'ami** [NA], **t. of thalamus**, the line of attachment of the ependymal cells of the roof of the third ventricle to the dorsal margin of the thalamus. **t. of third ventricle**, *t. thalami*. **t. ventric'uli quar'ti** [NA], *tenia of fourth ventricle*: the line of attachment of the ependymal cells of the choroid plexus to the ependyma along the edge of the caudal part of the fourth ventricle. **t. ventric'uli ter'tii**, *t. thalami*.

teniace (te'ne-ah-sīd') taeniaceae.

teniae (te'ne-e) plural of *tenia*.

teniafugal (ten''e-ah-fu'gal) taeniafugal.

teniafuge (te'ne-ah-fūj') taeniafuge.

tenial (te'ne-al) 1. pertaining to tenia of anatomical nomenclature. 2. taenial (def. 1).

teniamyotomy (te'ne-ah-mi-ot'o-me) an operation involving a series of transverse incisions of the teniae coli; done in diverticular disease.

taeniasis (te-ni'ah-sis) taeniasis.

tenicide (ten'i-sid) taenicide.

teniform (ten'i-form) taeniform.

tenifugal (te-nif'u-gal) taeniafugal.

tenifuge (ten'i-fūj) taeniafuge.

tenioid (te'ne-oid) taeniform.

teniola (te-ne'o-lah) [L. *taeniola*] a thin, grayish ridge which separates the striae of the floor of the fourth ventricle from the cochlear part of the acoustic nerve; called also *taeni'ola cine'rea*.

teniotoxin (te''ne-o-tok'sin) a poisonous principle occurring in tapeworms.

tennis thumb (ten'is) tendinitis of the tendon of the long flexor muscle of the thumb, with calcification.

teno-, tenonto- [Gr. *tenōn*, *tenontos* tendon] combining form denoting relationship to a tendon.

tenodesis (ten-od'ē-sis) [*teno-* + Gr. *desis* a binding together] tendon fixation; suturing of the end of a tendon to a bone.

tenodynia (ten''o-din'e-ah) [*teno-* + Gr. *odynē* pain] pain in a tendon.

tenofibril (ten'o-fi'bril) tonofibril.

tenolysis (ten-ol'i-sis) [*teno-* + Gr. *lysis* dissolution] the operation of freeing a tendon from adhesions; called also *tendolysis*.

tenomyoplasty (ten''o-mi'o-plas'te) [*teno-* + Gr. *mys* muscle + *plassein* to form] a plastic operation involving tendon and muscle.

tenomyotomy (ten''o-mi-ot'o-me) [*teno-* + Gr. *mys* muscle + *tomē* a cutting] excision of a portion of tendon and muscle.

Tenon's capsule (fascia, membrane), space (te'nonz) [Jacques René Tenon, French surgeon, 1724-1816] see *vagina bulbi* and *spatium intervaginale*.

tenonectomy (ten''o-nek'to-me) [*teno-* + Gr. *ektomē* excision] excision of a part of a tendon for the purpose of shortening it.

tenonitis (ten''o-ni'tis) 1. tendinitis. 2. inflammation of Tenon's capsule.

tenonometer (ten''o-nom'ē-ter) [Gr. *teinein* to stretch + *metron* measure] an apparatus for measuring intraocular tension.

tenonostosis (ten''on-os-to'sis) tenostosis.

tenontagra (ten''on-ta'grah, ten-on'tag-rah) [*tenonto-* + Gr. *agra* seizure] a gouty affection of the tendons.

tenontitis (ten''on-ti'tis) inflammation of a tendon; tendinitis. **t. prolif'era calca'rea**, tendinitis.

tenonto- see *teno-*.

tenontodynia (ten''on-to-din'e-ah) [*tenonto-* + Gr. *odynē* pain + *-ia*] pain in the tendons.

tenontography (ten''on-tog'rah-fe) [*tenonto-* + Gr. *graphein* to write] a written description or delineation of the tendons.

tenontolemmittis (ten-on''to-lem-mi'tis) [*tenonto-* + Gr. *lemma* rind + *-itis*] tenosynovitis.

tenontology (ten''on-to'l'o-je) the sum of what is known regarding the tendons.

tenontomyoplasty (ten-on''to-mi'o-plas'te) tenomyoplasty.

tenontomyotomy (ten-on''to-mi-ot'o-me) tenomyotomy.

tenontophyma (ten-on''to-fi'mah) [*tenonto-* + Gr. *phyma* growth] a tumorous growth in a tendon.

tenontoplasty (ten-on'to-plas'te) tenoplasty.

tenontothecitis (ten-on''to-the-si'tis) [*tenonto-* + Gr. *thēke* sheath + *-itis*] inflammation of a tendon sheath.

tenontotomy (ten''on-tot'o-me) tenotomy.

tenophyte (ten'o-fit) [*teno-* + Gr. *phyton* growth] a growth or concretion in a tendon.

tenoplastic (ten''o-plas'tik) of or relating to tenoplasty.

tenoplasty (ten'o-plas'te) [*teno-* + Gr. *plassein* to shape] plastic surgery of the tendons; operative repair of a defect in a tendon.

tenoreceptor (ten''o-re-sep'tor) [*teno-* + *receptor*] a proprioceptor situated in tendon; such receptors are stimulated by contraction.

tenorrhaphy (ten-or'ah-fe) [*teno-* + Gr. *rhaphe* suture] the union of a divided tendon by a suture.

tenositis (ten''o-si'tis) tendinitis.

tenostosis (ten''os-to'sis) [*teno-* + Gr. *osteon* bone + *-osis*] ossification of a tendon.

tenosuture (ten''o-su'tūr) [*teno-* + L. *sutura* suture] tenorrhaphy.

tenosynitis (ten''o-si-ni'tis) tendovaginitis.

tenosynovectomy (ten''o-sin''o-vek'to-me) excision or resection of a tendon sheath.

tenosynovitis (ten''o-sin''o-vi'tis) inflammation of a tendon sheath. **t. acu'ta purulen'ta**, tenosynovitis with pus formation.

adhesive t., tenosynovitis in which the tendons become bound in an inflammatory mass. **t. crep'itans**, a form accompanied by a crackling sound in the soft tissues on movement.

gonococcic t., **gonorrheal t.**, tenosynovitis due to metastatic gonococcal infection. **t. granulo'sa**, tuberculosis of tendon sheaths, which become filled with granulation tissue. **t. hypertroph'ica**, a condition marked by swellings along the tendons and their sheaths. **nodular t.**, giant cell tumor of tendon sheath; see under *tumor*.

t. sero'sa chron'ica, tenosynovitis with serous effusion. **t. steno'sans**, a painful condition of the wrist, marked by thickening and narrowing of the tendon sheath of the extensor brevis and abductor longus pollicis (De Quervain).

tuberculous t., chronic tuberculous infection

of tendon sheaths and bursae. **villonodular t.**, a condition characterized by exaggerated proliferation of synovial membrane cells, producing a solid tumor-like mass, commonly occurring in periarthritic soft tissues and less frequently in joints. **villous t.**, chronic infection of tendon sheaths and bursa, with proliferation of villous projections from the surface of the membranes.

tenotome (ten'o-tōm) a cutting instrument used in tenotomy.

tenotomize (ten-ot'o-mīz) to perform tenotomy.

tenotomy (ten-ot'o-me) [*teno-* + Gr. *tomē* a cutting] the cutting of a tendon as for strabismus or clubfoot. **curb t.**, the operation of cutting an eye muscle in squint and inserting it farther back on the globe of the eye. **graduated t.**, the incomplete division of a tendon.

tenovaginitis (ten'o-vaj'i-ni'tis) inflammation of a tendon sheath; tenosynovitis.

tense (tens) drawn tight; rigid.

Tensilon (ten'si-lon) trademark for a solution of edrophonium chloride.

tensio-active (ten'se-o-ak'tiv) having an effect on surface tension.

tensiometer (ten'se-om'ē-ter) [*tension* + Gr. *metron* measure] an apparatus for measuring the surface tension of liquids.

tension (ten'shun) [L. *tensio*; Gr. *tonos*] 1. the act of stretching. 2. the condition of being stretched or strained; the degree to which anything is stretched or strained. 3. voltage. 4. the partial pressure of a gas in a fluid, e.g., of oxygen in blood. **arterial t.**, blood pressure within an artery; intra-arterial pressure. **electric t.**, electromotive force. **interfacial surface t.**, the tension or resistance to separation possessed by the film of liquid between two well-adapted surfaces, as by the thin film of saliva between the denture base and the tissues. **intraocular t.**, see under *pressure*. **intravenous t.**, venous pressure. **muscular t.**, the condition of moderate contraction produced by stretching a muscle. **oxygen t.**, that concentration of dissolved oxygen at which its partial pressure is in equilibrium with the liquid (solvent). **premenstrual t.**, a syndrome sometimes occurring during the ten days preceding menstruation, marked by emotional instability, irritability, insomnia, and headache. There may also be pain in the breasts, abdominal distention, bearing-down pelvic discomfort, nausea, anorexia, constipation, urinary frequency, and general weakness. Called also *premenstrual syndrome*. **surface t.**, the tension or resistance which acts to preserve the integrity of a surface, such as the tension or resistance to rupture possessed by the surface film of a liquid, or the tension or strain upon the surface of a liquid in contact with another substance with which it does not mix. **tissue t.**, a state of equilibrium between tissues and cells which prevents overaction of any part. **wall t.**, the circumferential stretching force in a vessel wall, usually expressed as a function of intraluminal pressure and the radius according to the Laplace equation.

tensometer (tens-om'ē-ter) an apparatus by which the tensile strength of materials can be determined.

tensor (ten'sor) [L., "stretcher," "puller"] any muscle that stretches or makes tense.

tent (tent) [L. *tenta*, from *tendere* to stretch] 1. a covering of fabric designed to enclose an open space, especially such an arrangement over a patient's bed for the purpose of administering oxygen or vaporized medication by inhalation. 2. a conical and expandable plug of soft material, as lint, gauze, etc., for dilating an orifice or for keeping a wound open, so as to prevent its healing except at the bottom. **oxygen t.**, a tent erected over a bed into which a constant flow of oxygen can be maintained. **sponge t.**, a slender, cone-shaped piece of compressed sponge used for dilating the os uteri. **steam t.**, a tent erected over a bed into which steam is passed; used in certain respiratory conditions.

tentacle (ten'tah-k'l) a slender whiplike appendage in animals that may function in prehension and feeding or as a sense organ.

tentative (ten'tah-tiv) experimental and subject to change.

tenthmeter (tenth-me'ter) one ten-millionth of a meter.

tentoria (ten-to're-ah) plural of *tentorium*.

tentorial (ten-to're-al) pertaining to the tentorium of the cerebellum.

tentorium (ten-to're-um), pl. *tentoria* [L. "tent"] an anatomical part resembling a tent or a covering. **t. cerebel'li** [NA], **t. of cerebellum**, the process of dura mater that supports the occipital lobes and covers the cerebellum. Its internal border is free and bounds the tentorial notch; its external border is attached to the skull and encloses the transverse sinus behind. **t. of hypophysis**, diaphragma sellae.

tentum (ten'tum) the penis.

Tenuate (ten'u-āt) trademark for preparations of diethylpropion hydrochloride.

tenulin (ten'u-lin) a crystalline principle, $C_{17}H_{22}O_5$, from the bitter weed, *Helenium tenuifolium*, and other species that is mildly sternutatory and poisonous to fish.

Tepanil (tep'ah-nil) trademark for preparations of diethylpropion hydrochloride.

tephromalacia (tef'ro-mah-la'she-ah) [Gr. *tephros* ash-colored +

malakia softening] softening of the gray matter of the brain or cord.

tephromyelitis (tef'ro-mi'ē-li'tis) [Gr. *tephros* ash-colored + *myelos* marrow + *-itis*] inflammation of the gray substance of the spinal cord.

tephrosis (tef-ro'sis) [Gr. *tephrōsis*] incineration or cremation.

tephrylometer (tef'ril-om'ē-ter) [Gr. *tephros* ash-colored + *hyle* matter + *metron* measure] a graduated glass tube for measuring the thickness of the gray matter of the brain.

tepidarium (tep'i-da're-um) [L., from *tepidus* lukewarm] a warm bath: more correctly, a place for a warm bath.

tepor (te'por) [L. "lukewarmness"] gentle heat.

teprotide (tep-ro-tid) chemical name: 2-L-tryptophan-3-de-L-leucine-4-de-L-proline-8-L-glutamine-bradykinin potentiator B; a nonapeptide, $C_{53}H_{76}N_{14}O_{12}$, that inhibits the enzyme which converts angiotensin I to the active form (angiotensin II) and thus has antihypertensive properties.

ter- [L. *ter* thrice] a prefix meaning three, three-fold.

tera- [Gr. *teras* monster] a combining form used in naming units of measurement to indicate a quantity one trillion (10^{12}) times the unit specified by the root with which it is combined.

teracurie (ter'ah-ku're) a unit of radioactivity, being one trillion (10^{12}) curies.

teras (ter'as), pl. *ter'ata* [L.; Gr.] a monster. **ter'ata anadid'yma**, anadidyms; sometimes applied to a double monster with duplication of the cephalic pole and single toward the podalic pole. **ter'ata kata-anadid'yma**, anakatadidyms. **ter'ata katadid'yma**, katadidyms; sometimes applied to a double monster with duplication of the podalic pole and single toward the cephalic pole.

terata (ter'ah-tah) [Gr.] plural of *teras*.

teratic (ter-at'ik) [Gr. *teratikos*] monstrous; having the characters of a monster.

teratism (ter'ah-tizm) [Gr. *teratisma*] an anomaly of formation or development; the condition of a monster. See under *teras*, *monster*, and *monstrum*, and names of specific monsters.

terato- [Gr. *teras*, *teratos* monster] a combining form denoting relationship to a monster.

teratoblastoma (ter'ah-to-blas-to'mah) a neoplasm containing embryonic elements and differing from a teratoma in that its tissue does not represent all the germinal layers.

teratocarcinogenesis (ter'ah-to-kar'si-no-jen'ē-sis) the production of teratomas.

teratocarcinoma (ter'ah-to-kar'si-no'mah) a malignant neoplasm consisting of elements of teratoma with those of embryonal carcinoma or choriocarcinoma, or both; occurring most often in the testis.

teratogen (ter'ah-to-jen) an agent or factor that causes the production of physical defects in the developing embryo.

teratogenesis (ter'ah-to-jen'ē-sis) [*terato-* + Gr. *genesis* production] the production of physical defects in offspring in utero.

teratogenetic (ter'ah-to-jē-net'ik) pertaining to teratogenesis.

teratogenic (ter'ah-to-jen'ik) tending to produce anomalies of formation, or teratism.

teratogenous (ter'ah-toj'ē-nus) developed from fetal remains.

teratogeny (ter'ah-toj'ē-ne) teratogenesis.

teratoid (ter'ah-toid) [*terato-* + Gr. *eidos* form] resembling a monster.

teratologic, teratological (ter'ah-to-loj'ik; ter'ah-to-loj'i-kal) pertaining to teratology.

teratology (ter'ah-to-loj'e) that division of embryology and pathology which deals with abnormal development and congenital malformations.

teratoma (ter'ah-to'mah), pl. *teratomas* or *terato'mata*. A true neoplasm made up of a number of different types of tissue, none of which is native to the area in which it occurs; most often found in the ovary or testis. **adult t.**, dermoid cyst. **benign cystic t.**, cystic t., dermoid cyst. **immature t.**, malignant t. **malignant t.**, a solid, malignant ovarian tumor resembling a dermoid cyst but composed of immature embryonal and/or extraembryonal elements derived from all three germ layers. Called also *immature t.* and *solid t.* **mature t.**, dermoid cyst. **solid t.**, malignant t.

teratomata (ter'ah-to'mah-tah) plural of *teratoma*.

teratomatous (ter'ah-to'mah-tus) pertaining to or of the nature of teratoma.

teratosis (ter'ah-to'sis) [Gr. *teras* monster + *-osis*] teratism.

teratospermia (ter'ah-to-sper'me-ah) the presence of malformed spermatozoa in the semen.

terbium (ter-be-um) a rare metallic element; symbol, Tb; atomic number, 65; atomic weight, 158.924.

terbutaline sulfate (ter-bu'tah-lēn) [USP] chemical name: 5-[2-[(1,1-dimethylethyl)amino]-1-hydroxyethyl]-1,3-benzenediol sulfate (2:1) salt. A β -adrenergic receptor antagonist, $(C_{12}H_{19}NO_3)_2 \cdot H_2SO_4$, used as a bronchodilator, administered orally, by aerosol inhalation, and subcutaneously.

terchloride (ter-klo'rid) trichloride.

tere (te're) rub.

terebene (ter'ē-bēn) [L. *terebenum*, from *terebinthus* turpentine] a thin, yellowish, fragrant mixture of terpene hydrocarbons, $C_{10}H_{16}$, obtained from oil of turpentine by the action of sulfuric acid. It is antiseptic and expectorant, and has been used in catarrh, bronchitis, cystitis, fermentative dyspepsia, genitourinary disease, and as an application to gangrenous wounds, etc.

terebenthene (ter'ē-ben'thēn) oil of turpentine.

terebinth (ter'ē-binth) [L. *terebinthus*] 1. the tree *Pistacia terebinthus*, L. (Anacardiaceae), formerly a source of turpentine. 2. turpentine; it also produces pistacia galls, a source of tannin.

terebinthina (ter'ē-bin'thī-nah) [L.] turpentine.

terebinthinate (ter'ē-bin'thī-nāt) resembling or containing turpentine.

terebinthinism (ter'ē-bin'thī-nizm) poisoning with oil of turpentine; symptoms include hemoglobinemia, pulmonary edema, convulsions, and damage to nervous system and kidneys.

terebrant, terebrating (ter'ē-brant; ter'ē-brāt'ing) [L. *terebrans* boring] of a boring or piercing quality.

terebration (ter'e-bra'shun) [L. *terebratio*] an act of boring or trephining; also a boring pain.

teres (te'rēz) [L.] long and round, as a muscle.

terfenadine (ter-fen'ah-dēn) chemical name: α -[4-(1,1-dimethylethyl)phenyl]-4-(hydroxydiphenylmethyl)-1-piperidine butanol; an antihistaminic, $C_{24}H_{31}NO_2$.

Terfonyl (ter'fo-nīl) trademark for preparations of sulfamethazine, sulfadiazine, and sulfamerazine (trisulfapyrimidines). See *trisulfapyrimidines oral suspension*, under *suspension*.

tergal (ter'gal) [L. *tergum* back] pertaining to the back or the dorsal surface.

ter in die (ter in de'a) [L.] three times a day.

term (term) [L. *terminus*, from Gr. *terma*] 1. a word or combination of words commonly used to designate a specific entity. 2. a limit or boundary. 3. a definite period or specified time of duration, such as the culmination of pregnancy at the end of nine months. **ontogenetic t's**, termini ontogenetici.

terminad (ter'mī-nad) [L. *terminus* limit + *ad* to] toward the end or terminus.

terminal (ter'mī-nal) [L. *terminalis*] 1. forming or pertaining to an end; placed at the end. 2. a termination, end, or extremity; see *ending*. **C t.**, C-terminal. **N t.**, N-terminal.

terminatio (ter'mī-na'she-o), pl. *terminatio'nes* [L. "a limiting, bounding"] an ending; the site of discontinuation of a structure. **terminatio'nes nervo'rum li'berae** [NA], free nerve endings: those neural receptors having the simplest form, in which the peripheral nerve fiber divides into fine branches that terminate freely in connective tissue or epithelium.

termination (ter'mī-na'shun) [L. *terminatio*] a distal end; a cessation.

terminationes (ter'mī-na'she-o'nēz) [L.] plural of *terminatio*.

termini (ter'mī-nī) [L.] plural of *terminus*.

terminology (ter'mī-nol'o-je) [L. *terminus* term + *-logy*] 1. the vocabulary of an art or science. 2. the science which deals with the investigation, arrangement, and construction of terms.

terminus (ter'mī-nus), pl. *ter'mini* [L.] an ending. **ter'mini ad extremita'tes spectan'tes**, termini ad membra spectantes. **ter'mini ad mem'bra spectan'tes**, the NA category embracing terms relating to the upper and lower limbs; called also *termini ad extremitates spectantes*. **ter'mini genera'les**, the NA category embracing general terms (that is, terms not applied exclusively to one specific structure but to all structures belonging to the particular category or to which the term is applicable). **ter'mini ontogenet'ici** [NA], ontogenetic terms: terms relating to development, including those pertaining to the placenta and other fetal membranes or other structures. **ter'mini si'tum et directio'nem par'tium cor'poris indican'tes**, the NA category embracing terms indicating position and direction of parts of the body.

termolecular (ter'mo-lek'u-lar) involving three molecules.

ternary (ter'nah-re) [L. *ternarius*] 1. third in order. 2. made up of three distinct chemical elements.

ternitrate (ter-nī'trāt) a trinitrate.

terodiline hydrochloride (ter'o-di'lēn) chemical name: *N*-(1,1-dimethylethyl)- α -methyl- γ -phenylbenzopropanamine hydrochloride; a coronary vasodilator, $C_{20}H_{27}N \cdot HCl$, used in the treatment of angina of effort.

teroxide (ter-ok'sīd) [L. *ter* three + *oxide*] trioxide.

terpene (ter'pēn) any hydrocarbon of the formula $C_{10}H_{16}$, derivable chiefly from essential oils, resins, and other vegetable aromatic products. They may be acyclic, bicyclic, or monocyclic, and differ somewhat in physical properties.

terpenism (ter'pen-izm) poisoning with a terpene, resulting in vomiting, convulsions, unconsciousness, pulmonary edema, and tachycardia.

terpin (ter'pin) [L. *terpinum*] a product, $(CH_3)_2C(OH) \cdot C_6H_5 \cdot (OH) \cdot CH_3$, obtained by the action of nitric acid on oil of turpentine and alcohol. **t. hydrate** [USP], chemical name: 4-hydroxy- $\alpha, \alpha, 4$ -trimethylcyclohexanemethanol monohydrate. An expectorant, $C_{10}H_{20}O_2 \cdot H_2O$, occurring as colorless, lustrous crystals or as a white powder; administered orally.

terpineol (ter-pin'e-ol) chemical name: *p*-menth-1-en-8-ol. An alcohol, $(CH_3)_2 \cdot C(OH) \cdot C_6H_5 \cdot CH_3$, consisting of a mixture of several isomers occurring in many essential oils; formerly used as an antiseptic, but now used as a perfuming agent.

Terpinol (ter'pi-nol) trademark for terpin hydrate.

terra (ter'ah) [L.] earth. **t. al'ba**, white clay, used as an adsorbent. **t. lem'nia**, a yellowish, ferruginous clay. **t. mer'ita**, turmeric. **t. pondero'sa**, barium sulfate, or synthetic baryta. **t. sigilla'ta** [L. "sealed earth" of ancient Lemnos], Armenian bole, sold in masses stamped with a seal. **t. silic'ea purifica'ta**, purified siliceous or infusorial earth; siliceous earth, boiled, washed, and calcined; it is a fine gray powder and is used in certain pharmaceutical operations.

Terramycin (ter'ah-mi'sin) trademark for preparations of oxytetracycline.

terrein (ter'e-in) a cyclopentane compound, $C_8H_{10}O_2$, formed by the action of *Aspergillus terreus*.

Terridens (ter'ri-denz) a genus of nematode worms. **T. diminut'us**, a parasite frequently present in monkeys and occasionally in man; called also *Triodontophorus diminutus*.

territoriality (ter'i-tor'i-al'i-te) a pattern of behavior in which an individual organism or a group of organisms delineates a territory and vigorously defends it against intrusion by other members of the same or competing species.

terror (ter'er) intense fright. **day t's**, pavor diurnus. **night t's**, pavor nocturnus.

tersulfide (ter-sul'fid) trisulfide.

tertian (ter'shun) [L. *tertianus*] recurring every third day, counting the day of occurrence as the first day; applied to the type of fever caused by certain forms of malarial parasites. **double t.**, an intermittent fever in which there are two sets of recurrences, each tertian.

tertiarism (ter'she-ah-rizm) former term for the combined symptoms of tertiary syphilis.

tertiary (ter'she-er-e) [L. *tertiarius*] third in order.

tertigravida (ter'she-grav'i-dah) [L. *tertius* third + *gravida* pregnant] a woman pregnant for the third time; also written *gravida III*.

tertipara (ter-ship'ah-rah) [L. *tertius* third + *parere* to bring forth, produce] a woman who has had three pregnancies which resulted in viable offspring; also written *para III* or *III-para*.

tesicam (tes'i-kam) chemical name: 4'-chloro-1,2,3,4-tetrahydro-1,3-dioxo-4-isoquinolinecarboxanilide; an anti-inflammatory, $C_{16}H_{11}ClN_2O_3$.

tesimide (tes'i-mīd) chemical name: 5,6,7,8-tetrahydro-4-(phenylmethylene)isoquinolinedione; an anti-inflammatory, $C_{16}H_{15}NO_2$.

tesla (tes'lah) the SI unit of magnetic flux density, calculated as webers per square meter. It replaces the gauss. Abbreviated T.

Teslac (tes'lak) trademark for preparations of testolactone.

teslaization (tes'la-i-za'shun) [named for Nikola Tesla, a Serbian inventor in New York, 1856-1943] treatment by Tesla's currents; d'arsonvalism.

Tessalon (tes'sah-lon) trademark for a preparation of benzonate.

tessellated (tes-el-lāt'ed) [L. *tessellatus*; *tessella* a square] divided into squares, like a checker board.

test (test) [L. *testum* crucible] 1. an examination or trial. 2. a significant chemical reaction. 3. a reagent. For specific tests, see *Table of Tests*. See also under *method*, *phenomenon*, *reaction*, *reagent*, *sign*, and *symptom*.

test card (test kard) a card printed with various letters or symbols, used in testing vision. **stigmometric t. c.**, a card with dots and squares arranged in groups, for testing vision (Fridenberg).

test letter (test let'er) see *test type*.

A TABLE OF TESTS

(See also under *method*, *phenomenon*, *reaction*, *reagent*, *sign*, and *symptom*.)

Abderhalden's t., see under *reaction*.

Abelin's t. (for *arsphenamine*), see under *reaction*.

abortus Bang ring (ABR) t.: a screening test for brucellosis in cattle; since *Brucella* agglutinins, as well as the organisms, are

shed in the milk of infected cattle, a drop of hematoxylin-stained brucellae are mixed in a sample of pooled milk from the herd. After incubation, agglutinated bacteria rise to the surface to form a colored ring. Called also *milk-ring t.* and *ring t.*

ABR t., abortus Bang ring t.

Abrams' t. (for lead in the urine): add ammonium oxalate to urine (1:150) and introduce metallic magnesium (wire or rod). Lead is precipitated on the magnesium, and can be identified by warming with a fragment of iodine (yellow lead iodide), or dissolving in nitric acid and applying other reagents.

acetanilid t., see *Yvon's t.* (1).

acetic acid t. (for albumin in urine): a few drops of acetic acid are added to the boiled urine, when a white precipitate is formed.

acetic acid and potassium ferrocyanide t. (for proteins): acidify the unknown with acetic acid and add a few drops of potassium ferrocyanide; protein produces a white flocculent precipitate.

acetoacetic acid t., see specific tests, including *Arnold's t.*, *Gerhardt's t.* (2), *Harding and Rutten's t.*, *Hurtley's t.*, *Lindemann's t.*, and *Nobel's t.* (1). See also *acetoacetic acid, methods for*, under *method*.

acetone t.: a test for the presence of acetone in the urine made by adding a few drops of sodium nitroprusside, shaking, and pouring over the mixture stronger ammonia water: a magenta-colored line is formed over the area of contact if acetone is present. See specific tests, including *Bayer's t.*, *Behre and Benedict's t.*, *Braun's t.*, *Chautard's t.*, *Denigès' t.* (2), *Frommer's t.*, *Gerhardt's t.* (1), *Gunning's t.*, *Lange's t.* (2), *Legal's t.* (1), *Lieben's t.*, *Lieben-Ralfe t.*, *Malerba's t.*, *Nobel's t.* (1), *Penzoldt's t.* (1), *Ralfe's t.* (1), *Rantzman's t.*, *Reynold's t.*, *Rothera's t.*, *Stock t.*, and see *acetone, methods for*, under *method*.

acetonitrile t., see *Hunt's reaction*, under *reaction*.

Achard and Castaigne's t., see *methylene blue t.* (1).

acid elution t. (for fetal hemoglobin): air-dried blood smears on a glass slide are fixed in 80 per cent methanol and immersed in a buffer at pH 3.3 (citric acid and sodium phosphate); all hemoglobulins are eluted except fetal hemoglobin, which remains fixed in the red cells and can be detected after staining.

acidity reduction t.: 250 ml. of 0.4 per cent hydrochloric acid is introduced into an empty stomach through a tube; samples are withdrawn at intervals of fifteen minutes and titrated for free acid.

acid-lability t.: a test to distinguish rhinoviruses from enteroviruses on the basis of their activity at various pH levels, rhinoviruses being inactivated by incubation at pH 3 to 5 for one to three hours.

acidosis t., see *Sabrazés t.*, *Sellard's t.*

Acree-Rosenheim t. (for proteins): a few drops of formaldehyde solution (1:5000) are placed in a solution of the suspected matter. A little concentrated sulfuric acid is slowly placed in the test tube so that the solutions do not mix. At the line of contact a violet color appears if proteins are present.

acrolein t. (for glycerol and fats): heat the substance with an equal quantity of potassium acid sulfate and note the peculiar penetrating odor of acrolein.

Adamkiewicz's t. (for proteins): add the substance to a mixture of 1 volume of strong sulfuric acid and 2 volumes of glacial acetic acid and heat it; a reddish violet color shows the presence of proteins.

Adams' t. (for fat in milk): dry a known quantity of milk on filter paper, extract in Soxhlet's apparatus, dry to constant weight, and weigh.

Addis t.: after the patient is given a dry diet for 24 hours, the specific gravity of the urine is determined; called also *Addis method*.

Adler's t., see *benzidine t.*

Admiralty t.: a test for the efficiency of excremental disinfectants in which gelatin and starch are used as the organic test substances.

adrenalin t., see *epinephrine t.*

Adson's t. (for thoracic outlet syndrome): with the patient in a sitting position, his hands resting on thighs, the examiner palpates both radial pulses as the patient rapidly fills his lungs by deep inspiration and, holding his breath, hyperextends his neck and turns his head toward the affected side. If the radial pulse on that side is decidedly or completely obliterated, the result is considered positive. Called also *Adson's maneuver*.

agglutination t.: one of various specific and nonspecific tests the results of which depend on agglutination of bacteria or of other cells; used as an aid in diagnosis of certain bacterial or of viral and rickettsial diseases, and of rheumatoid arthritis. See also specific tests, such as *Bang t.* and *Bass-Watkin t.*

Agostini's t. (for dextrose): mix 5 drops of the urine with 5 drops of a 0.5 per cent solution of gold chloride and 3 drops of a 20 per cent solution of potassium hydroxide, and warm the mixture; dextrose will give a red tint.

air t., see *Franken's t.*

Albarrán's t. (for renal inadequacy): a test for the renal function based upon the principle that the greater the destruction of epithelium in the kidney, the less likely is that organ to respond by an increase in secretion after the administration of quantities of water. Called also *polyuria t.*

albumin t., see specific tests, including *acetic acid t.*, *Almén's t.* (1), *Alper's t.*, *ammonium sulfate t.* (2), *Axenfeld's t.*, *Barral's t.*, *Berzelius' t.*, *Blum's t.*, *Boedeker's t.*, *Boston's t.*, *Bychowski's t.*, *Carrez's t.*, *Castellani's t.* (1), *Cohen's t.*, *Esbach's t.*, *Extón's t.*, *Fürbringer's t.*, *Geissler's t.*, *Heller's t.* (1), *Heynsius' t.*, *Hindenlang's t.*, *Ilimow's t.*, *Johnson's t.*, *MacWilliams' t.*, *magnesianitric t.*, *Méhu's t.*, *Millard's t.*, *Oliver's t.* (1), *Osgood-Haskin's t.*, *oxyphenylsulfonic acid t.*, *Parnum's t.*, *Polacci's t.*, *Posner's t.* (1), *Purdy's t.* (2), *Raabe's t.*, *Rees' t.*, *Riegler's t.* (1), *Roberts' t.* (1), *Spiegler's t.*, *Suranyi's t.*, *Tanret's t.*, *Tidy's t.* (1), (2), *Tretop's t.*, *Tsuchiya's t.*, *Ulrich's t.*, *Zouchlos' t.* See also the tests listed under *protein t.*, and see *albumin in urine, methods for*, under *method*.

albumin A t., see *Kahn t.* (2).

alcohol t., see *Anstie's t.*, *Berthelot's t.* (2), *chromic acid t.*, *ethyl acetate t.*, *iodoform t.* (2), *Woodbury's t.*

aldehyde t., see specific tests, including *formol-gel t.*, *Napier's serum t.*, and *Tollens' t.* (1).

Aldrich-McClure t., see *McClure-Aldrich t.*

Alfraise's t. (for iodine): a reagent consisting of 1 drop of hydrochloric acid in 100 parts of water, 1 of starch, and 1 of potassium nitrate is boiled, and 1 drop of the reagent is added to the liquid being tested; a blue color will be produced if iodine is present.

alizarin t. (for gastric secretion): after a test drink containing alizarin the intensity of the coloration of the urine gives an indication of the degree of acidity of the urine.

alkali t., see specific tests, including *Bachmeier's t.*, *Degener's t.*

alkali denaturation t.: a moderately sensitive spectrophotometric method for determining the concentration of fetal (F) hemoglobin, which depends on the resistance of the hemoglobin molecule to denaturation of its globin moiety when exposed to alkali.

alkali tolerance t.: 20 gm. of sodium bicarbonate given while fasting should raise the pH of the urine to 8 within two hours.

alkaloid t., see specific tests, including *Arnold's t.* (2), *Bouchardat's t.*, *Erdman's t.*, *Fröhde's t.*, *Frohn's t.*, *Mayer's t.*, *Vitali's t.* (1) and (2), *Winckler's t.* (1), *Wormley's t.* (1) and (2), *Yvon's t.* (2).

allantoin t., see *Schiff's t.* (4).

Allen's t.: 1. (for glucose in the urine) add urine to boiling Fehling's solution, and allow it to cool; turbidity will be seen if dextrose is present. (Alfred Henry Allen.) 2. (for phenol) to 2 drops of the suspected liquid add 5 drops of hydrochloric acid and 1 of nitric acid. Phenol, if present, will produce a cherry-red color. (Alfred Henry Allen.) 3. (for strychnine) extract with ether, concentrate by letting drops fall into a warmed porcelain capsule, cool the residue, and treat with sulfuric acid and manganese dioxide. Strychnine gives a violet color. 4. (obs.) (for *tinea versicolor*) compound solution of iodine is applied to the suspected eruption; a dark mahogany stain will be produced if the eruption is *tinea*. (Charles Warren Allen.) 5. (for occlusion of ulnar or radial arteries) the patient makes a tight fist so as to express the blood from the skin of the palm and fingers; the examiner makes digital compression on either the radial or the ulnar artery. If on opening the hand blood fails to return to the palm and fingers, there is indicated obstruction to the blood flow in the artery that has not been compressed. (Edgar V. Allen.)

Allen-Doisy t. (for estrogenic substance in laboratory animals): a positive test is the presence in the vaginal secretion of cornified epithelial cells; a negative test shows only leukocytes in the secretion.

Allesandri-Guaceni t. (for nitric acid; nitrates): dissolve a few drops of phenol in hydrochloric acid by heating twelve hours on a water bath. Heat 10 drops of the reagent with the dry residue of suspected liquid on the water bath. Nitric acid or nitrates give an intense violet color, changed by ammonia to green.

Almén's t.: 1. (for albumin in urine) one part of Almén's reagent is added to 6 parts of the urine; a cloudiness is produced when albumin is present. 2. (for blood or blood pigment) shake the suspected liquid with a mixture of equal parts of tincture of guaiacum and oil of turpentine; blood pigment, if present, will turn the mixture blue. 3. (for dextrose) heat the liquid with bismuth subnitrate dissolved in sodium hydroxide solution and sodium potassium tartrate; dextrose will cause the mixture to become dark brown or nearly black, and to deposit a black precipitate.

aloïn t., see *Rosset's aloïn t.*

Alper's t. (for albumin in the urine): acidulate the urine with hydrochloric acid and add equal volumes of a 1 per cent mercury succinimide solution; a white cloudiness forms.

alpha t.: a psychological test designed to determine the mental capacity of persons able to read English.

alphanaphthol t., see specific tests, including *Molisch's t.* (2) and (3).

alternate cover t.: a test for determining the type of tropia and/or phoria done by alternately covering each eye and noting the movement of the uncovered eye.

Althausen t.: a test for the velocity of intestinal absorption by determining at intervals the concentration of galactose in the blood after the oral administration of sugar.

alum t., see *Bell's t.* (2).

Amann's t. (for indican in urine): to 20 ml. of urine are added a few drops of pure sulfuric acid, 5 ml. of chloroform, and then 5 ml. of a 10 per cent solution of sodium pyrosulfate. They are mixed

A TABLE OF TESTS (Continued)

gently for several minutes. The chloroform is then allowed to settle and will be colored blue by the indigo.

Ames t. (for carcinogenicity): a strain of *Salmonella typhimurium* that lacks the enzyme necessary for histidine synthesis is mixed with rat-liver extract and is plated thinly on an agar medium; a disk of filter paper containing the suspected carcinogen is then placed on the bacteria. If the substance causes DNA damage resulting in mutations, some of the bacteria will regain the ability to synthesize histidine and will proliferate to form colonies. The ability to cause mutations indicates that the substance is carcinogenic.

amidopyrine t., see *aminopyrine t.*

amino acid t., see *Folin's t.* (4), and *Folin's method*, (3), under *method*.

amino-acid nitrogen t., see *triketohydrindene hydrate t.* See also *nitrogen, amino-acid, method for*, under *method*.

amino-nitrogen t., see *Van Slyke t.* (1).

aminopyrine t.: 1. (for occult blood in feces) a small portion of the feces is stirred up in 3 to 4 ml. of distilled water and filtered. To the filtrate add 3 or 4 ml. of a 90 per cent alcoholic solution of aminopyrine (Pyramidon) and several drops of a 30 per cent acetic acid with hydrogen peroxide. A violet-blue color indicates occult blood. 2. (in urine) to the urine add tincture of iodine; a yellow ring indicates aminopyrine (Pyramidon).

ammonia t., see specific tests, including *Brown's t.* (2), *Nessler's t.*, *Ronchese's t.*, *Spiro's t.* (1).

ammonium sulfate t. (for spinal fluid): 1. (for globulin) in a test tube place 2 ml. of a solution of 85 gm. of ammonium sulfate in 100 ml. of water. Overlay with spinal fluid. A clean-cut, grayish white ring appearing within five minutes indicates excess of globulin. 2. (for albumin) mix contents of tube, filter, add acetic acid and boil. A gray cloud indicates increase of albumin. A faint opalescence is normal.

Ammons quick t.: a rapid screening test for determining the mental age of a child. The subject indicates, by pointing, which of several printed drawings best illustrates the meaning of a given word.

amylase t.: 1. (for kidney function) the urine is tested for starch; a diminution below the normal starch content indicates a diminution of kidney function. 2. see *Hawk's t.*

amylopsin t.: add 0.5 ml. of duodenal contents to 50 ml. of a 3 per cent solution of soluble starch; incubate for one-half hour and test for reducing sugars.

Anderson's t. (to distinguish pyridine chloroplatinate from quinoline chloroplatinate): boil the salt in water; the pyridine salt becomes an insoluble double salt, and gives off hydrogen chloride, but the quinoline salt remains in solution.

Anderson and Goldberger's t. (for typhus): the patient's blood is injected into the peritoneal cavity of guinea-pigs; if the disease is typhus, a typical temperature curve will be obtained.

André's t. (for quinine): chlorine and ammonia produce a green color changing to blue on saturation with acid. Excess of acid changes the color to violet or bright red, but ammonia again turns it green.

Andreassch's t. (for cysteine): dissolve the substance in hydrochloric acid, and add a few drops of a dilute solution of ferric chloride and a little ammonia water; cysteine causes the liquid to assume a dark purplish tint.

Andrewes' t. (for uremia): to one volume of serum two volumes of alcohol are added. The mixture is centrifuged and the alcoholic supernatant layer removed. To four volumes of this alcoholic extract are added two volumes of alcohol and one volume of freshly prepared diazo reagent, as in van den Bergh's test. In uremia the mixture slowly develops a brown-buff color.

anemia t.: see specific tests, including *autohemolysis t.*, *Ham t.*, *Macht t.*, *sickling t.*

Anstie's t. (for alcohol in the urine): a reagent consisting of a solution of potassium dichromate, 1, in concentrated sulfuric acid, 300, is added by drops; an emerald-green color signifies the presence of alcohol in toxic quantity.

antibody absorption t.: antiserum against one antigen is absorbed with a cross-reacting antigen, the titer of antibody against the original homologous antigen being determined both before and after absorption with the cross-reacting antigen.

antiglobulin t., *Coombs' test*.

antiglobulin consumption t., see *Coombs t.*

antimony t., see *Marsh's t.*

antipyrine t., see *Fioux's t.*

antithrombin t.: a test for typhoid based on the action of thrombin on the patient's serum.

antitrypsin t.: a test based on the power of the blood serum to inhibit the action of trypsin. The antitryptic power of the blood serum is increased in carcinoma, nephritis, pregnancy, etc. Called also *Bergmann-Meyer t.*, *Fuld-Goss t.*, and *Müller-Jochmann t.*

Antonucci t.: a method for rapid cholecystography with tetraiodophenolphthalein.

anvil t.: the striking of a part with the closed fist used like a hammer: a blow so given on the sole of the foot with the leg extended produces pain in the hip in early hip-joint disease; such a blow given over the top of the head elicits pain in a diseased vertebra.

apomorphine t., see *Bedson's t.*

Apt t. (for differentiating fetal from adult hemoglobin): mix the infant's specimen (vomitus or stool) with 5 volumes of water,

centrifuge the mixture, and separate the clear pink supernatant. Add 1 ml. 1 per cent sodium hydroxide to 5 ml. of the supernatant. If hemoglobin F is present, the pink color persists for more than 2 minutes (indicating fetal blood). If hemoglobin A is present, it turns from pink to yellow within 2 minutes (indicating swallowed maternal blood).

aptitude t's: tests given to determine aptitude or ability to undertake study or training in a particular field.

Arakawa's t. (for peroxidase in milk), see under *reagent*.

Archetti's t. (for caffeine): heat a solution of potassium ferricyanide with half its volume of nitric acid to boiling, then dilute with water; the reagent gives a precipitate of Prussian blue with caffeine (uric acid does also).

arginine t., see *Sakaguchi t.*

Arloing-Courmont t.: the Widal test in tuberculosis.

Arnold's t.: 1. (for aceto-acetic acid in urine) a. Dissolve 1 gm. of para-amidoacetophenone in 80 to 100 ml. water by shaking and adding hydrochloric acid by drops, then add more concentrated acid until the solution is colorless. b. Dissolve 1 gm. sodium nitrite in 100 ml. distilled water. Just before using mix 2 parts a with 1 part b, add an equal volume of urine, and 2 or 3 drops concentrated ammonia water: an intense brownish red color develops. Now add 1 volume of this colored urine to 10 or 12 volumes of concentrated hydrochloric acid, 2 to 4 drops of ferric chloride, and 3 ml. of chloroform; a beautiful purplish violet color develops in the chloroform if acetoacetic acid is present. Strongly colored urine should first be decolorized with animal charcoal. 2. (alkaloidal tests) a. Some alkaloids heated on the water bath with syrupy phosphoric acid obtained by dissolving metaphosphoric acid or phosphoric acid anhydride in phosphoric acid yield characteristic color reactions: aconitine, violet; nicotine, yellow; coniine, green. b. Triturated with concentrated sulfuric acid, many alkaloids yield characteristic color reactions upon adding 30 to 40 per cent alcoholic (in some instances aqueous) potassium hydroxide solution.

Aron's t. (for cancer): a biopsy specimen of the adrenal cortex of a rabbit is taken; the animal is then injected with urinary extract from the patient. After two days the rabbit is killed and its adrenal cortex compared with the biopsy specimen.

arsenic t., see *Bettendorff's t.*, *Fleitmann's t.*, *Gutzeit's t.*, *Marsh's t.*, *Reinsch's t.* (1).

arsphenamine t., see *Abelin reaction*, under *reaction*.

Aschheim-Zondek t. (for pregnancy): the subcutaneous injection of the urine of pregnant women into immature female mice is followed by swelling, congestion, and hemorrhages of the ovaries and premature maturation of the ovarian follicles. Abbreviated AZT and A-Z t.

Aschner's t., **Aschner-Danini t.**, see *Aschner's phenomenon*, under *phenomenon*.

Ascoli's t.: [Alberto Ascoli] the formation of a ring of precipitate at the junction of the two fluids when the extract of the infected tissue of an anthrax animal, after boiling with saline solution, is added to anthrax immune serum. 2. [Maurizio Ascoli] see *miostagmin reaction*, under *reaction*.

association t.: a test based on associative reaction. It is usually performed by mentioning words to a subject and noting what other words he will give as the ones called up in his mind. The reaction time is also noted.

Atkinson and Kendall's t. (for blood): a modified form of Teichmann's test.

atropine t., see *Dehio's t.* and *Reuss' t.*

attention-alertness t., see *Bourdon's t.*

Au t.: a test of donor blood for Australian (Au) antigen, an antigen associated with viral hepatitis.

augmented histamine t. (of gastric function): after a 12-hour fast, the residual gastric contents are aspirated. Basal gastric secretion is then collected for 1 hour in divided 15-minute aliquots. Thirty minutes before completion of collection, a suitable dose of antihistamine is given intramuscularly. At conclusion of basal secretion collection, histamine acid phosphate (0.04 mg. per kg. of body weight) is given subcutaneously, and gastric contents collected in 15-minute aliquots for 1 hour. Volume, pH, and titratable acidity are measured for each aliquot. When Histalog (1.7 mg. per kg. of body weight) is used in place of histamine, the antihistamine injection is omitted and 8 (rather than 4) 15-minute aliquots are taken after its injection.

Auricchio and Chieffi's t.: a test for leishmaniasis based on the fact that the serum of patients flocculates rapidly on the addition of a solution of iron peptonate.

autohemolysis t.: one performed in investigation of certain hemolytic states, particularly the congenital, nonspherocytic hemolytic anemias. Defibrinated blood is incubated at 37° C., under sterile conditions, for 24 and 48 hours, and the amount of spontaneous hemolysis is quantitated.

auto-urine t. (former test for tuberculosis): into the superficial layers of the patient's skin is injected 0.05 ml. of the patient's own urine. If the patient is actively tuberculous a local reaction develops which consists of a palpable lump of infiltration. Called also *Wildbolz's t.*

Axenfeld's t. (for albumin in urine): acidulate the urine with formic acid, and drop by drop add a 0.1 per cent solution of gold chloride. On warming, albumin, if present, will produce a red tint,

which more of the gold chloride will turn to a blue. Many other substances will produce the blue tint, but not the red.

Ayer's t. (for spinal block): with a spinal manometer, the pressure in lumbar puncture and that in a cisterna magna puncture should be identical in the normal subject.

Ayer-Tobey t., see *Tobey-Ayer t.*

A-Z t., Aschheim-Zondek test.

Babcock's t. (for fat in milk): to 17.6 ml. of milk add 17.5 ml. sulfuric acid, specific gravity 1.82-1.83; centrifuge five minutes; bring level of liquid up to base of neck by adding hot water, at about 140° F.; centrifuge three minutes; add hot water to bring fat column well up into neck; centrifuge two minutes; read directly from scale on neck.

Babinski's t., see under *sign*.

Babinski-Weil t.: the patient, with his eyes shut, is made to walk forward and backward ten times in a clear space. A person with labyrinthine disease deviates from the straight path, bends to one side when walking forward and to the other side when walking backward.

Bachman t. (for trichinosis): an extract of powdered trichina larvae is injected intradermally; an immediate or delayed wheal-and-flare reaction denotes present or past infection; the immediate reaction is more reliable.

Bachmeier's t. (for alkalies): tannin solution produces a red to reddish brown color, changing to dirty green.

bactericidal t., see *Neisser and Wechsberg's t.*, and *Wright's method*, def. 2, under *method*.

bacteriolytic t., see *Pfeiffer's phenomenon*, under *phenomenon*.

Baermann t. (for extraction of soil nematodes from earth and detecting larvae of *Strongyloides stercoralis* in feces): a specimen of soil or feces is suspended over gauze or wire mesh in a water-filled funnel to which a piece of rubber tubing is attached; larval nematodes migrate from the specimen to the water, and collect in the rubber tubing.

Baeyer's t.: 1. (for dextrose) boil the liquid with orthonitrophenylpropionic acid and sodium carbonate: if dextrose is present, indigo is formed; but an excess of dextrose will destroy the blue tint by forming white indigo. 2. (for indole) the suspected substance is dissolved in water, acidulated with 2 or 3 drops of fuming nitric acid; a 2 per cent solution added drop by drop produces a red color and then a red deposit of nitrosoindole nitrate.

balance t.: a functional test made by comparing the intake and output of a normal constituent, as of the urine.

Balfour's t.: the ascertainment of whether the heart is still active in cases of apparent death by inserting pins bearing paper streamers into the skin over the heart; movement of the heart muscles will be shown by movement of the papers.

ball t., see *Müller's test* (3).

Bang t.: abortus Bang ring t.

Barány's t., see under *symptom*, def. 2.

Barány's pointing t.: have the patient point at a fixed object alternately with the eyes open and closed; a constant error with the eyes closed indicates a brain lesion.

barbital t., see *Fabre's t.*

Bardach's t. (for protein): a test dependent on the fact that, in the presence of protein, acetone and potassium mercuric iodide and alkali react to yield canary-yellow needles instead of the usual hexagonal crystals of iodoform.

Bareggi's t. (for typhoid fever): the clot formed in the blood of typhoid patients after twenty-four hours is watery and soft, with only a small amount of separated serum.

Barfoed's t. (for monosaccharides): boil 5 ml. of Barfoed's reagent (dissolve 4.5 gm. of neutral crystallized copper acetate and 1.2 ml. of 50 per cent acetic acid in 100 ml. of water) and add the unknown slowly and with boiling. Monosaccharides reduce this mixture (formation of a red precipitate), while disaccharides do so only very slowly, if at all, and so can be distinguished from the former.

Barral's t. (for albumin and biliary pigments): overlay the urine with a 20 per cent solution of azoic acid; a white ring develops at the contact point if albumin is present, a green ring if biliary pigments are present.

bar-reading t.: a test for binocular and stereoscopic vision, which consists of holding a ruler midway between the eyes and the printed page. It is also used as an exercise to develop stereoscopic vision.

Basham's t. (for bile pigment): the liquid is shaken with chloroform, evaporated, and a drop of nitric acid added; a play of bright colors is produced, finally becoming a fine red.

basophil t. (for sensitivity): a drop of the subject's blood is mixed with a small amount of solution of the substance being tested; disintegration of the basophils accompanies the release of histamine and is evidence of hypersensitivity to the substance.

basophil degranulation t. (for hypersensitivity): estimation of the amount of degranulation of basophil leukocytes following *in vitro* exposure to specific antigen, as compared to that in control preparations; the degranulation reaction is due to binding of the specific antigen by surface-bound IgE on the basophil membrane.

Bass-Watkins t. (for agglutination): a form of the Widal test so modified that it can be performed at the bedside in about five minutes. Place $\frac{1}{4}$ drop of the patient's blood on a glass slide, dissolve in 1 drop of water, add 1 drop of a rather heavy killed suspension of

typhoid bacilli, and mix by tilting the slide from side to side. In a positive case small grayish clumps and a fine granular sediment form within two minutes.

Bauer's t.: 1. a modification of the Wassermann test by relying entirely on the antishock amboceptor present in the patient's serum. 2. galactose tolerance test; test of carbohydrate tolerance of the liver, performed by administering 30 gm. of galactose, the urine being tested later for galactose by means of Fehling's solution: the elimination of more than 3 gm. indicates hepatic functional impairment. 3. (for milk) to 2 ml. of milk add 1 drop of 0.25 per cent aqueous solution of Nile-blue sulfate; the blue color can be extracted from human milk, but not from cow's milk by means of ether.

Baumann's t. (for dextrose): to a watery solution of the substance, add benzoyl chloride and an excess of sodium hydroxide, and shake until the odor of benzoyl chloride disappears and a precipitate of the benzoic acid ester of dextrose is formed.

Baumann and Goldman's t. (for cystine): a solution containing the cystine is shaken with sodium hydroxide and benzoyl chloride; a voluminous precipitate is formed, composed of benzoyl cystine.

Bayer's t. (for acetone in the urine): equal volumes of urine and nitrobenzaldehyde are mixed with alkaline water; acetone turns it to an indigo-blue tint.

Bayrac's t. (for uric acid in urine): evaporate 50 ml. of urine to dryness on the water bath, treat residue with hydrochloric acid (1:5), wash with alcohol, dissolve in 20 drops of sodium hydroxide solution heated to 90° or 100° C. on water bath, and decompose with sodium hypobromite in the apparatus for determining urea. Each 1 ml. of nitrogen at ordinary temperature equals 0.00357 gm. uric acid.

B. C. G. t., see *bicolor guaiac t.*

Becker's t.: 1. (for picrotoxin) Fehling's solution is added and the mixture is warmed; if the alkaloid is present, the solution is reduced. 2. (for astigmatism) the patient looks at a test card containing lines radiating in sets of three and points out which seem blurred.

Bekhterev's t.: the patient seated in bed is directed to stretch out both legs; in sciatica he cannot do this, but can stretch out each leg in turn.

Bedson's t. (for apomorphine): on boiling morphine solution containing apomorphine with potassium hydroxide, a brown color develops.

Behre and Benedict's t. (for acetone bodies): distill out the acetone bodies from acid solution, and determine colorimetrically with salicylic aldehyde and alkali. A red color is dihydroxy benzal-acetone.

Bell's t.: 1. (for percentage of free hydrochloric acid in stomach contents) filter the contents, and to 4 ml. add drop by drop a solution of dimethyl-amido-azobenzol until the pink color ceases to grow darker. Compare with Bell's color scale for percentage. 2. (for alum in flour or bread) fresh 5 per cent logwood tincture in methylated spirit. Moisten 10 gm. flour with water, then add 1 ml. tincture and an equal quantity saturated ammonium carbonate solution. Sample, if pure, gives pinkish color, gradually fading to buff or brown. If alum is present, a lavender or bluish tint is formed, becoming more marked on drying.

belt t. (for enteroptosis): the lower abdomen of the patient is encircled by both hands and lifted up; the patient will experience a sensation of relief if enteroptosis is present.

Bender gestalt t., **Bender visual-motor gestalt t.**: a psychological test used for evaluating perceptual-motor coordination, for assessing personality dynamics, as a test of organic brain impairment, and for measuring neurological maturation. The subject is asked to make free-hand copies of nine simple geometric designs presented separately on cards or sometimes to reproduce the design from memory.

Bendien's t.: 1. a vanadic acid flocculation and spectrophotometric test for cancer. 2. a serum test for prognosis in tuberculosis.

Benedict's t.: 1. (for dextrose) 200 gm. of sodium or potassium citrate and 200 gm. crystallized sodium carbonate and 125 gm. of potassium sulfocyanate are dissolved in 800 ml. of boiling water. This is cooled and filtered and 18 gm. copper sulfate dissolved in 100 ml. of water are added and the whole diluted to make 1 liter. To 5 ml. of this reagent, in a test tube, 8 or 10 drops of the solution to be tested are added. Boil for one or two minutes and allow to cool slowly. If dextrose is present the solution will be filled with a precipitate red, yellow, or green in color. 2. (for urea) the urea is hydrolyzed to ammonium carbonate by KHSO_4 and ZNSO_4 , made alkaline, and distilled as usual.

Benedict and Denis' t. (for total sulfur in urine), see under *method*.

Benedict and Murlin's t. (for amino-acid nitrogen in urine), see under *method*.

bentonite t.: a flocculation test for rheumatoid arthritis in which sensitized bentonite particles are added to inactivated serum; results are considered positive when half of the particles are clumped and half still remain in suspension.

benzidine t. (for blood): to a saturated solution of benzidine in glacial acetic acid add an equal volume of 3 per cent hydrogen peroxide and 1 ml. of the unknown; a blue color indicates blood.

benzidine peroxidase t. (for raw milk): to 10 ml. of the milk

add 2 ml. of a 4 per cent alcoholic solution of benzidine and sufficient acetic acid to coagulate the milk. Mix and allow 2 ml. of a 3 per cent solution of hydrogen peroxide to flow slowly down the wall of the tube. An immediate blue color indicates raw milk (not heated to 78° C.).

benzoin t. (for cerebrospinal syphilis): when a colloidal solution of benzoin resin is added to syphilitic cerebrospinal fluid, flocculation or precipitation occurs.

Berenreuther t.: a test of interests and attitudes, consisting of 125 questions to be answered by yes or no.

Bergmann-Meyer t., see *antitrypsin t.*

Berthelot's t.: 1. (for phenol) an ammoniacal solution of phenol treated with solution of chlorinated soda takes on a fine blue color. 2. (for alcohol) shake with a few drops of benzyl chloride and an excess of sodium hydroxide until the irritating odor of benzyl chloride disappears; the aromatic odor of ethyl benzoate indicates alcohol.

Bertoni-Raymondi t. (for nitrous acid in blood): dialyze, evaporate the dialysate to dryness, take up with hot alcohol, and add starch paste and potassium iodide; a blue color develops.

Bertrand's t. (for dextrose): boil the unknown with an excess of Fehling's solution, filter out the cuprous oxide, dissolve in an acid solution of ferric sulfate, and titrate with potassium permanganate.

Berzelius's t. (for albumin): albumin is precipitated from solution by a fresh concentrated solution of metaphosphoric acid.

beta t.: a psychological test for intelligence to be used instead of the alpha test on persons unacquainted with English.

beta-oxybutyric acid t., see specific tests, including *Black's t., Hart's t., Kulz's t.* (1) (2), *Osterberg's t.*

Bettendorff's t. (for arsenic): the liquid to be tested is mixed with hydrochloric acid; a freshly prepared solution of stannous chloride is added, and a bit of tin foil is put into it. A brown color or precipitate is formed.

Bettmann's t., see *Bettendorff's t.*

Bial's t. (for pentose in urine): make a reagent consisting of orcinol 1.5 gm., fuming hydrochloric acid 500 gm., and ferric chloride (10 per cent) 20–30 drops. Five ml. of this reagent are boiled in a test tube, and after removal from the flame, several drops of urine are added. A green color appearing at once indicates pentose.

bicarbonate tolerance t., see *Sellards' t.*

bicolor guaiac t.: a colloidal reaction in the cerebrospinal fluid: the reagents are a suspension of guaiac resin with two colored solutions, naphthol green and brilliant basic fuchsin; called also *B. C. G. t.*

bile acid t., see specific tests, including *Bischoff's t., Drechsel's t., Francis' t.* (1), *Hay's t., Mylius' t., Neukomm's t., Oliver's t.* (4), *Pettenkofer's t., Strassburg's t., Tyson's t., Udránsky's t.* (1).

bile pigment t., see specific tests, including *Barral's t., Bascham's t., Bonanno's t., Brücke's t.* (1), *Capranica's t.* (1), *Cunisset's t., Dragendorff's t., Dumontpallier's t., Fleischl's t., foam t., Gerhardt's t.* (3), *Gluzinski's t.* (1), *Gmelin's t., Hammarsten's t.* (2), *Huppert's t., Huppert-Cole t., Jolles' t.* (1), *Kapsinow's t., Krokiewicz's t., Maréchal's t., Masset's t., Nakayami t., Nobel's t.* (2), *Quinlan's t., Rosenbach-Gmelin t., Salkowski and Schipper's t., sand t., Schmidt's t.* (1), *Smith's t.* (1), *Stokvis' t., Torquay's t., Trousseau's t., Ultzmann's t., Vitali's t.* (3) (4). See also *bile pigments, methods for, under method.*

bile solubility t. (for differentiation between pneumococci and streptococci): the broth culture to be tested is divided into two parts in separate test tubes. Add 0.5 ml. of sterile ox bile to one tube and 0.5 ml. of salt solution to the other (control) tube. Pneumococci generally dissolve and the cultures become clear; cultures of streptococci remain cloudy.

bilirubin t., see specific tests, including *Fouchet's t., Harrison spot t., Schmidt's t.* (1), *van den Bergh's t.*

binaural distorted speech t's, tests of the capacity of the central nervous system to coordinate two incoming speech patterns, each of which is incomplete.

Binet's t.: a method of testing the mental capacity of children and youth by asking a series of questions adapted to, and standardized on, the capacity of normal children at various ages. According to the answers given the mental age of the subject is ascertained.

Binet-Simon t., see *Binet's t.*

Bing t.: a vibrating tuning fork is held to the mastoid process and the auditory meatus is alternately occluded and left open: an increase and decrease in loudness (positive Bing) is perceived by the normal ear and in sensorineural hearing impairment, but in conductive hearing impairment no difference in loudness is perceived (negative Bing).

Bing's entotic t.: when words are not audible through an ear trumpet as ordinarily applied, but may be heard when spoken into a trumpet joined to a catheter in the eustachian tube, it is probable that there is a lesion of the incus or malleus.

Binz's t. (for quinine in urine): the reagent consists of 2 parts iodine, 1 part potassium iodide, and 40 parts water.

Bio Lab t.: a modification of the Ide test for syphilis.

biological t., see *serum t.*

Birkhaug t.: a skin test for rheumatism: intracutaneous injection of 0.1 ml. of a 1 to 100 dilution of the toxin of a streptococcus derived from a case of rheumatic fever.

Bischoff's t. (for biliary acids): heated with diluted sulfuric acid and cane sugar, these yield a red color.

bismuth t., see *Nylander's t.*

bitterling t. (for pregnancy): a small carplike fish of Japan (the bitterling) is placed in a quart of fresh water containing 2 teaspoonfuls of a woman's urine; if the woman is pregnant, there grows out from the belly of the bitterling its long tubular oviduct.

biuret t.: 1. (for proteins) to 2 ml. of unknown solution add 2 ml. of 2 N sodium hydroxide solution and then a few drops of 1 per cent copper sulfate solution. A pinkish-violet color indicates the presence of biuret or of a similar double —CO—NH— grouping. 2. (for urea) melt the substance in a dry test tube and gently heat it. Cool, and dissolve in 2 ml. of water. Add 2 ml. of 2 N sodium hydroxide solution, and mix drop by drop with a 1 per cent copper sulfate solution. A pink and finally a bluish color is produced.

Black's t. (for beta-oxybutyric acid): evaporate 50 ml. of urine in a small dish to about one-fourth; acidify with a few drops of hydrochloric acid and add plaster of paris to a thick paste. When the mass begins to harden, break it up into a meal, add 30 ml. of ether, and mix. Draw the clear ether into an evaporating dish; evaporate over a water bath and dissolve the residue in 10 ml. of water. Neutralize with an excess of dry barium carbonate; pour into a test tube, add a few drops of hydrogen peroxide and 5 drops of 10 per cent ferric chloride. A red color indicates beta-oxybutyric acid.

Blackberg and Wanger's t. (for melanin): concentrate the urine to one-third, add 1 per cent of potassium persulfate, and let it stand two hours. Precipitate the melanin with an equal volume of methyl alcohol. Filter, wash, and dry.

blanche t.: blanching of the tissues just lingual to the maxillary medial incisors after a tug on the upper lip indicates persistence of attachment of a heavy fibrous frenum which may well interfere with normal development closure of the spacing between the teeth.

blister t. (for infectious disease): a blister is raised on the skin and its contents examined. If the proportion of eosinophils present is less than 25 per cent, infectious disease is probable. Called also *Roger-Josué t.*

Block-Steiger t.: a test for simulated deafness based on the fact that if two tuning-forks, vibrating in unison, but one struck stronger than the other, are held before the two ears of a person with normal hearing, the louder fork only will be heard.

blood, tests for, see specific tests, including *Almén's t.* (2), *aminopyrine t., Atkinson and Kendall's t., benzidine t., Cowie's guaiac t., Day's t., Deen's t., Donagany's t., Fleig's t., Gannther's t., Gregerson and Boas' t., guaiac t., Heller's t.* (2), *hematein t., hydrogen peroxide t., Klimow's t., Kobert's t., Ladendorff's t., Lechini's t., Lyle and Curtman's t., Meyer's t.* (3), *Nippe's t., phenolphthalein t.* (1), *Rose's t., Rosenthal's t.* (1), *Rossel's aloin t., Roussin's t., Ruttan and Hardisty's t., sand t., Saundby's t., Schalfjew's t., Schönbein's t.* (1), *serum t., Stokes' t., Struve's t., Taylor's t., Teichmann's t., von Zeynek and Mencki's t., Weber's t.* (3), *Williamson's t.*

blood cholesterol t.: increase of the cholesterol content of the blood indicates deficiency of the cholaligenic power of the liver.

blood-urea clearance t.: a test for renal function based on the volume of blood which is cleared of its urea per minute.

Bloor's t.: 1. (for fat) the protein is precipitated, the fat is saponified, and the amount determined nephelometrically. 2. (for cholesterol in blood) extract the blood with a mixture of alcohol and ether and evaporate to dryness. Extract residue with chloroform and add acetic anhydride and sulfuric acid.

Bloxam's t. (for urea): if a nitrate is present, add a few drops of an ammonium chloride solution; if absent, acidulate with hydrochloric acid. Evaporate to dryness in a watch glass, and heat cautiously as long as thick, white fumes evolve. Dissolve the residue in a drop or two of ammonia, add a drop of barium chloride solution, and stir. If urea is present, a crystalline streak of barium cyanurate will form in the track of the rod.

Blum's t. (for albumin): dissolve 0.03 to 0.05 gm. manganous chloride in a little water; acidulate with hydrochloric acid, and treat with 100 ml. of 10 per cent solution sodium metaphosphate. Then add lead oxide a little at a time, let the liquid settle, and filter. Resulting pink solution of manganic metaphosphate detects albumin in urine. Place reagent in a test tube and filter urine into it.

Blumenau's t. (for tuberculosis): a drop of tuberculin is applied to the forearm and covered with adhesive plaster; an eruption develops if the patient has tuberculosis.

Blyth's t. (for lead in drinking water): a little alcoholic tincture of cochineal makes a precipitate with it.

Boas' t.: 1. (for hydrochloric acid in the stomach contents) dissolve 5 gm. of resorcinol and 5 gm. of sugar in 100 ml. of dilute alcohol. A thin layer of this reagent is warmed upon a porcelain dish. If a glass rod is dipped in this layer and touched to a drop of the filtered stomach liquid, a scarlet streak is formed. Called also *resorcinol t.* 2. (for free hydrochloric acid in the stomach contents) resublimed resorcinol, 5 parts; cane sugar, 3 parts; 94 per cent alcohol, to make 100 parts; boil the fluid with the reagent: free hydrochloric acid will give a transient rose-red mirror. 3. (for lactic acid) test for lactic acid in gastric juice depends on oxidation of the acid to aldehyde and formic acid by action of sulfuric acid and manganese. The aldehyde is detected by addition of Nessler's reagent or by formation of iodoform when iodine solution is added. 4. chlorophyll t.

Bodal's t.: test of color perception by the use of colored blocks.

Boedeker's t. (for albumin): the liquid is treated with acetic acid, and potassium ferrocyanide in solution is added drop by drop; albumin will form a white precipitate.

Boerner-Lukens t.: a flocculation test for syphilis.

Bohmansson's t. (for dextrose): to 10 ml. of the urine add 2 ml. of 25 per cent hydrochloric acid and 5 ml. of bone black. Shake well, filter, and make Nylander's test on the filtrate.

Boltz's t. (for diagnosis of schizophrenia): place 1 ml. of fresh cerebrospinal fluid in a small glass test tube and to it add 0.3 ml. of acetic anhydride. Shake the mixture well and then add, drop by drop, 0.8 ml. of concentrated sulfuric acid. Shake the mixture gently once more. Then hold the test tube against a white background. The presence of a lilac tint indicates a positive reaction; a brownish-yellow, reddish-yellow, or clear fluid is noted if the reaction is a negative one.

Bonanno's t. (for bile pigments): to 5 ml. of the unknown add a few drops of concentrated hydrochloric acid containing 2 per cent of sodium nitrite; an emerald green color indicates bile pigments.

bone conduction t.: if a vibrating tuning-fork, when the handle is placed against the skull, is heard more distinctly than when held near the ear, it indicates loss in conduction through the middle ear.

borates and boric acid t.: dry the milk and ash the residue. Add 1 ml. of water and 2 drops of hydrochloric acid. Soak a strip of turmeric paper in the solution one minute and allow it to dry in the air. A deep red color which changes to green or blue on treatment with dilute alkali indicates boric acid.

Borchardt's t. (for levulose in urine): a few milliliters of a mixture of equal parts of water and concentrated hydrochloric acid are heated for one and one half minutes with an equal amount of urine and a few crystals of resorcin. The mixture is allowed to cool, made alkaline with sodium carbonate, then poured into a test tube and shaken with acetic ether; a yellow color in the ether indicates the presence of levulose.

Borden's t. (for typhoid fever): a modification of the Gruber-Widal reaction. The patient's blood serum is mixed with salt solution and then with a suspension of killed typhoid bacilli, so as to bring the dilution up to 1 to 50. The positive reaction consists in the sinking of the clump of bacteria to the bottom of the test tube, leaving a clear fluid above a small white mass of agglutinated bacilli.

Bordet's t., see *serum t.*

Boston's t.: a method of performing the ring tests for albumin in which the fluids are brought into contact in a glass pipet.

Botelho's t. (for cancer): to centrifuged suspect blood serum, dilute nitric acid and an iodine reagent are added in several small amounts at short intervals, the test tube being shaken after each addition. Normal serum remains clear, that of cancer patients continues clouded.

Böttger's t.: 1. [R. Böttger] (for carbon monoxide) paper moistened with palladium chloride solution (0.0002 gm. in 100 ml.) becomes darkened in the presence of carbon monoxide. 2. [W. C. Böttger] (for dextrose in the urine) the urine is treated with sodium hydroxide and then boiled with a very small amount of bismuth subnitrate; if dextrose is present the precipitate is black.

Bottu's t. (for dextrose): to 8 ml. of Bottu's reagent (3.5 gm. of orthonitrophenylpropionic acid and 5 ml. of freshly prepared 10 per cent solution of sodium hydroxide per liter) in a test tube, add 1 ml. of the urine and mix. Boil the upper portion, add one more ml. of the mixture, and heat again. A blue color accompanied by the precipitation of small particles of indigo indicates dextrose.

Bouchardat's t. (for alkaloids): potassium tri-iodide as a test for alkaloids gives a brown precipitate, soluble in alcohol.

Bouin and Ancel t.: a test for the presence of progestin.

Bourdon's t. (for mental alertness): a test based on the accuracy and time required for a patient to strike out certain letters, numbers or words as required.

Bourget's t. (for iodides in urine and saliva): impregnate a filter paper with a 5 per cent starch solution, dry, and cut into squares 5 cm. each. Then drop 2 or 3 drops of a 5 per cent ammonium persulfate solution in the center of each square, and dry the pieces in the dark. Even with traces of iodine the prepared paper gives an intensely blue color.

Boveri's t. (for excess of globulin in cerebrospinal fluid): over 1 ml. of cerebrospinal fluid in a test tube is poured an equal quantity of a 1:1000 solution of potassium permanganate. If there is excess of globulin a yellow ring will form at the line of junction, and on shaking, the entire contents of the tube will become bright yellow.

Boyksen's t. (for cancer): serum from animals immunized with cancer material is injected intracutaneously; the resulting reaction is said to be more frequently positive in cancer patients than in controls.

Bozicevich's t.: a serologic test for the detection of trichinosis.

Brace t.: a method of testing the general motor ability of school-age children.

bracelet t.: the production of pain on moderate lateral compression of the lower ends of the radius and ulna; observed in rheumatoid arthritis.

Bram's t.: persons with Graves' disease are more tolerant of quinine hydrobromide than normal persons.

Brande's t. (for quinine): when a solution of quinine is treated with chlorine water and ammonia, a green color is produced.

Braun's t. (for dextrose in urine): the urine is alkalinized with sodium hydroxide and boiled with a solution of trinitrophenol; if dextrose is present, a deep-red color is produced. Acetone gives the

same reaction, though less decidedly, whereas creatine will give it even in a cold solution.

Braun-Husler t.: to 1 ml. of cerebrospinal fluid add 5 ml. of 1:300 aqueous solution of hydrochloric acid; the mixture becomes cloudy if there is an excess of globulin in the cerebrospinal fluid.

Bremer's t. (for diabetic blood): the blood is prepared for staining, dried in a hot-air sterilizer, and stained with methylene blue and eosin. The red corpuscles of normal blood become brownish; but those of diabetic blood take on a greenish yellow tint.

Brenner's t., see under *formula*.

Brieger's t.: 1. (for pyrocatechin) add 1 drop of urine to 1 drop of very dilute ferric chloride solution on a watch glass—pyrocatechin causes an emerald-green color; on adding now a dilute solution of sodium bicarbonate or ammonium carbonate, the fluid becomes violet, changing back to green with acetic acid. 2. (for strychnine) pure chromic acid is added, and a violet color is produced. 3. see *cachexia reaction*, under *reaction*.

Broadbent's t. (for cerebral dominance of language function): different numbers (or words) are presented simultaneously to the two ears; right-handed persons tend to report first the words going into the right ear.

bromine t.: 1. (for melanin) see *Zeller's t. (1)*. 2. (for tryptophan) see *tryptophan t. (1)*. 3. (for pregnancy) a chemical test for the histamine found in the pituitary hormone excreted in the urine; in a test tube 2.5 ml. of urine are mixed with 1 ml. of bromine water, heating the solution to boiling. A positive reaction is indicated by a pink coloration.

Bromsulphalein t., see *sodium sulfobromophthalein*.

Brown's t.: 1. a modification of the Friedman test in which the patient's blood serum is used instead of urine. Called also *Brown's reaction*. [T. K. Brown.] 2. (for quantitative estimation of ammonia in urine) heat 60 ml. of urine with 3 gm. of basic lead acetate, stir well, let stand for a few minutes, and filter. This removes nitrogenous substances. Heat the filtrate with 2 gm. of neutral potassium oxalate, stir well, and filter. Take 10 ml. of the filtrate, add 50 ml. of water and 15 gm. of neutral potassium oxalate, and estimate the ammonia.

Brown fever t. (for lesions of the sympathetic nervous system): fever is induced with intravenous typhoid vaccine, and the increase of surface temperature is measured at half-hour intervals with a galvanometer.

brucellin t.: an allergic skin test made by the intradermal injection of melitin for the diagnosis of undulant fever (brucellosis).

Brücke's t.: 1. (for bile pigments in urine) it is made by shaking with nitric acid, and then slowly adding sulfuric acid; color reactions follow. 2. (for proteins) the suspected liquid is acidulated with hydrochloric acid and treated with potassic iodide; the proteins will be precipitated. 3. (for urea) the suspected liquid is heated with an alcoholic solution of fusel oil, filtered, and treated with a solution of oxalic acid in fusel oil; a crystalline deposit is formed.

Brugsch's t.: potassium ferrocyanide is injected intradermally as a test for iron in the skin: development of a blue stain at the site of injection denotes the presence of iron.

Bryce's t.: the determination of a degree of immunity against smallpox conferred by vaccination by repeating the inoculation after the lapse of several days; if the first is successful, the second will rapidly overtake it.

Bufano t. (for liver function): intravenous injection of 10 ml. of a 12 per cent solution of glycocholl is preceded and followed by measurement of the blood amino nitrogen. Normally there is a decrease in the amino acid after the injection.

Bühler's baby t.: a test for evaluating the development status of infants in the first two years of life.

Burchardt-Liebermann t., see *Liebermann's t.*

Bürger's t.: in persons without metabolic disturbance, there develops a hypercholesterolemia after the ingestion of cholesterol.

Burnam's t. (for formaldehyde in urine): to 10 ml. of urine in a test tube is added 3 drops of a 5 per cent solution of phenylhydrazine hydrochloride, 3 drops of a 5 per cent solution of sodium nitroprusside, and then a few drops of sodium hydroxide solution are poured down the side of the test tube. If formaldehyde is present, a deep purplish color is seen, changing to dark green, and then to pale yellow.

Buscaino's t.: three ml. of urine are mixed with 1.5 ml. of a 5 per cent solution of silver nitrate and the whole boiled for thirty minutes. The color of the precipitate indicates the reaction: a white precipitate is negative, a brown or black precipitate indicates disease of the brain.

butter t.: a test for pancreatic insufficiency based on the fact that in deficiency of the external secretion of the pancreas so much fat may be present in the stool after the ingestion of butter that the stool looks like butter.

butyric acid t., see *pineapple t.*, and *Noguchi reaction*, under *reaction*.

Bychowski's t. (for albumin in urine): two drops of urine are placed in a test tube of hot water and shaken; the water becomes cloudy if albumin is present.

caffeine t., see *Archetti's t.*, *Delff's t.*

Caillan's t. (for dextrose in urine): shake 2 parts of urine with 1 part of chloroform; on settling, dextrose will be present in the upper layer.

calcium t., see *Clark's t.* (2) and *Sulkowitch's t.* See also *calcium, methods for*, under *method*.

California mastitis t. (C.M.T.) (for subclinical mastitis in cows): equal amounts of milk, bromocresol purple, and an anionic surface-active substance are mixed in four separate cups within a plastic paddle by rapidly rotating the paddle horizontally; a positive reaction is indicated by various degrees of gel formation, according to the degree of abnormality of the milk. Called also *Schalm t.*

Callaway's t.: a test for dislocation of the humerus, consisting in the fact that the circumference of the affected shoulder, measured over the acromion and through the axilla, is greater than that on the unaffected side.

Calmette's t., see *ophthalmic reaction*, under *reaction*.

caloric t., see *Bárány's symptom* (def. 2), under *symptom*.

Calvert's t.: the patient takes his usual food, but no fluids from 12 noon. At 9 P.M. the bladder is emptied and 15 gm. of urea are drunk in 4 oz. of water; at 10 P.M. the bladder is again emptied and the urine discarded. The patient then goes to bed and all the night urine, together with that passed on rising—say 7 A.M.—is kept. A sample (a) of these mixed portions is analyzed for its urea content. The patient then drinks 30 oz. of weak tea or water and the urine passed up to the end of two hours—9 A.M.—is kept and a sample (b) again analyzed for its urea percentage. The two specimens a and b represent the maximum and minimum concentrations of urea in the urine and the difference between them represents the urea range.

Cambridge's t., pancreatic reaction.

Campani's t. (for dextrose): a mixture of a concentrated solution of lead subacetate and a dilute solution of copper acetate is productive of a yellow or red color.

Campbell's t.: the erythrocytes of pellagrous blood cause more rapid discoloration of iodine solutions than do other red corpuscles.

camphor t.: if $7\frac{1}{2}$ grains of camphor are given by the mouth it should cause glycuronic acid to appear in the urine; this will not occur in liver disease.

cancer t., see specific tests including *antitrypsin t.*, *Aron's t.* (1), *Bolen's t.*, *Botelho's t.*, *Boyksen's t.*, *Chrobak t.*, *Clark t.* (1), *D'Amato's t.*, *Fuchs' t.*, *Gluzinski's t.*, *glycyltryptophan t.*, *Gröbly's t.*, *Gross' t.* (2), *Gruskin's t.* (1), *Haagensen t.*, *Hirschfeldt's t.*, *Huggins t.*, *Kahn t.* (2), *Kelling's t.* (2), *Klein's t.*, *Links' t.*, *Lowy's t.*, *Mendeléeff's t.*, *miostagmin t.*, *Pap t.*, *Peret's t.*, *Ringold t.*, *Salomon's t.*, *Schiller's t.*, *Schubert-Dannmeyer t.*, *Suranyi's t.*, *tryptophan t.* (1), *Wolff-Jung-hans t.* See also *cancer reaction*, under *reaction*.

cane sugar t., see *Nicklé's t.*

Cannabiss indica t., see *Gayer t.*

Cantani t. (in syphilis): Reagent A, 56 gm. of powdered ox heart, 300 ml. of 95 per cent ethyl alcohol, 150 ml. of 99.2 per cent ethyl alcohol and 2.5 gm. of cholesterol; reagent B, 20 gm. of egg lecithin, 370 ml. of 95 per cent ethyl alcohol and 3.75 ml. of pure phenol; reagent C, 225 ml. of 95 per cent ethyl alcohol, 25 ml. of pure phenol and 0.1 ml. of a 5 per cent solution of petrolatum in benzine. One part of reagent A, one part of reagent B and 0.5 part of reagent C are placed in a tube with two parts of a 3 per cent solution of sodium chloride. It is shaken for seven minutes before using. Eight times the original amount of sodium chloride solution is put in another tube, and after seven minutes the contents of the second tube are poured into the first tube and thoroughly mixed. Then 0.25 ml. of the mixture is poured into the tubes (generally five) containing the serum to be examined; the tubes are shaken at the rate of from 150 to 200 times per minute for four minutes, then left at rest for two minutes, and 2 ml. of an 0.85 per cent solution of sodium chloride is added to each tube. Negative serums show opalescence without flocculation; positive serums, clear flocculation; strongly positive serums, heavy flocculation with clarification of the liquid.

capillary fragility t., capillary resistance t.: apply blood pressure cuff for five minutes tightly enough to obstruct venous return only, or apply a cupping glass, and note the number of petechiae thus produced.

capon comb growth t.: a test for the presence of androgenic hormone based on the growth response of the comb of a capon following subcutaneous injection of the test material.

Cappagnoli's t. (for dextrose): a solution of cupric hydroxide and potassium hydroxide is added; a blue color is produced.

Capranica's t.: 1. (for bile pigments) shake the liquid with chloroform containing bromine; it turns green, blue, violet, yellowish red, and then becomes nearly colorless. 2. (for guanine) a warm solution of guanine hydrochloride gives a yellow precipitate in silky needles with a cold saturated solution of trinitrophenol. 3. (for guanine) mix the solution with a concentrated solution of potassium ferrocyanide; a yellowish-brown precipitate in prisms appears. 4. (for guanine) add to the suspected solution a concentrated solution of potassium dichromate; guanine will cause an orange-red precipitate in crystals.

carbohydrate t., see *Moore's t.*, *Schiff's t.* (1).

carbohydrate tolerance t., see *Bauer's t.* (2) and *Killian's t.*

carbon clearance t. (for activity of mononuclear phagocytes): colloidal carbon particles are injected intravenously into an experimental animal; the amount of carbon remaining is then ascertained colorimetrically from lysed blood samples and the rate of carbon removed by phagocytosis is determined.

carbon monoxide t., see specific tests, including *Böttger's t.* (1), *Dejust's t.*, *Hoppe-Seyler t.* (1), *Katayama's t.*, *Preyer's t.*, *Rubner's t.* (1), *Salkowski's t.* (1), *tannin t.*, *Wetzel's t.*, *Zaleski's t.*

carbon monoxide hemoglobin t., see *tannin t.*

Carnot's t. (for atonic dilatation of the stomach): the patient's stomach is emptied by the stomach pump and 500 ml. of water introduced. The patient remains in an erect posture for an hour, after which the water is withdrawn and measured. Then 500 ml. of water are introduced and the patient placed on his right side for an hour. In this position the stomach should be nearly empty in an hour.

carotid sinus t. (for angina pectoris): on slowing of the heart rate by massage over the right (or left) carotid sinus, the pain of an attack of angina pectoris will lessen or disappear.

carotinemia t.: to 2 ml. of serum add 2 ml. of 95 per cent alcohol and 2 ml. of petroleum ether; compare the color of the ether layer with a standard.

Carr-Price t.: a quantitative color test for vitamin A in oils.

Carrez's t. (for albumin): one gram of resorcinol is dissolved in 2 ml. of distilled water in a test tube and the urine is poured upon the surface; a white ring shows albumin.

Casamajor's t. (for glucose): the suspected liquid is shaken with methyl alcohol; glucose makes the mixture cloudy.

casein t., see *Leiner's t.* See also *casein, method for*, under *method*.

Casilli's t.: an adaptation of the Kahn antigen for slide agglutination.

Casoni's intradermal t. (for hydatid disease): injection into the skin of hydatid fluid followed by the immediate or delayed production of a wheal-and-flare reaction denotes hydatid infection.

Castellani's t.: 1. (for albuminuria) the filtered urine 5 ml., is placed in a test tube and 1.5 ml. of liquefied phenol is added by pouring it slowly down the sides of the tube by means of a pipet. The liquefied phenol will collect at the bottom of the tube. If within two minutes a definite white ring forms where the two liquids come in contact the test is considered positive; namely, the urine contains albumin. 2. an agglutination test for ascertaining the existence of a mixed infection with allied species of organisms.

catoptric t.: a test for cataract made by observing the reflections from the cornea and from the surfaces of the crystalline lens.

cellulose t., see *Cutola t.*, *Schultze's t.* (1).

cephalin-cholesterol flocculation t., see *Hanger's t.*

Chapman's t. (for acute abdominal conditions): the patient is told to assume a supine position with his arms at his sides and then to raise himself by the abdominal muscles alone; when he fails to rise or feels great pain in doing so the test is positive.

Chautard's t. (for acetone in the urine): a drop of aqueous solution of magenta is dissolved with sulfurous acid and added to the urine; a violet color is produced.

Chediak's t. (for syphilis): a drop of blood is put on a slide, stirred for one minute and thus defibrinated, then exposed to the air and dried. To the dried drop 0.015 ml. of a solution containing 3.5 per cent of sodium chloride and 0.3 per cent of sodium carbonate is added. The blood is diluted with this solution and is placed in a paraffin ring (1.5 cm. in diameter) on another slide. Then 0.03 ml. of a dilution of the Meinicke clarification extract made with the aforementioned freshly prepared salt solution in a ratio of 1:10 is added. Before use, the extract and diluting fluid are heated separately for eight minutes in the water bath at 56° C. (132.8° F.), and, after being mixed, the solution remains two minutes longer in the water bath. The slide is shaken for three minutes and kept for thirty minutes in the moist chamber at room temperature. In negative tests the microscope reveals brown granules, but the positive reaction is indicated by black floccules and clots in the reddish-brown fluid.

Chick-Martin t.: a test for the efficiency of disinfectants in which dried human feces are used as the test material; see under *method*.

Chiene's t.: two strips of lead or tape are carried across the front of the body, the upper over the anterior superior spines, the lower over the great trochanters; convergence of these lines points to the side of upward displacement of the trochanter in fracture of the neck of the femur.

Chimani-Moos t.: a test for detecting simulated deafness.

chi-square t.: a statistical test in which the square of the difference between the expected frequency and the observed frequency is divided by the expected frequency, the sum of the quotients (for each category under test) being the chi-square (symbol χ^2); the smaller the value of chi-square, the closer the agreement between the hypothetical and the actual frequency.

chloride balance t., see *balance t.*

chlorides t., see *Volhard's t.* (1).

chlorophyll t. (for gastric motility): on a fasting stomach the patient drinks 400 ml. of water which has been colored green by the addition of 20 drops of chlorophyll solution. After half an hour the residue is aspirated from the stomach, and the amount that has passed out of the stomach in one-half hour is ascertained.

cholera red t. (for indole): to the unknown add one tenth its volume of a 0.02 per cent solution of potassium nitrite and mix. Underlay with sulfuric acid. The purple color will change to bluish green on neutralization with potassium hydroxide.

cholesterol t., see *Bloor's t.* (2), *Bürger's t.*, *Libermann-Burchard's t.*, *Obermüller's t.*, *Salkowski's t.* (2), *Schiff's t.* (2), (3), *Schultze's t.* (2), and *Zwenger's t.* (1). See also *cholesterol, methods for*, under *method*.

Chopra's antimony t. (for kala-azar): see under *reaction*.

Chorine's t. (for malaria): dilute the serum with 10 parts of

A TABLE OF TESTS (Continued)

distilled water. Determine the optical density at once with the photometer of Vernes, Briq, and Yvonne. Incubate three hours, allow to stand thirty minutes and take a second reading. The difference in the two readings in degrees represents the index of the serum.

Chovstek t. (for hyperexcitability of muscles): tap on the facial nerve just anterior to the ear; if positive, the muscles at the angle of the mouth on the same side contract.

Chrobak t.: if irritation of an eroded cervix by a sound causes bleeding and crumbling of the tissue, cancer should be suspected.

chromatin t. (for determination of genetic sex): examination of body cells for presence of the sex chromatin situated at the periphery of the nucleus in normal females but not in normal males.

chromic acid t. (for alcohol): warm with dilute sulfuric acid or hydrochloric acid and add 1 to 2 drops of very dilute potassium dichromate solution; the color will change from red to green and the odor of acetaldehyde will appear.

Ciamician and Magnanini's t. (for skatole): warm the solution with sulfuric acid; skatole produces a purplish-red tint.

Cipollina's t. (for dextrose or levulose in urine): four ml. of urine, 5 drops of pure phenylhydrazine, and 0.5 ml. of glacial acetic acid are boiled for one minute. Four or 5 drops of potassium hydroxide solution are added and the mixture boiled again for a few seconds. Cool and examine for crystals of phenyl-levulosazone or phenyl-dextrosazone.

cis-trans t.: in microbial genetics, a test to determine whether two mutations that have the same phenotypic effect (in a haploid cell or a cell with single phage infection) are located in the same gene (resulting in noncomplementation) or in different genes (resulting in complementation and hence in loss of the mutant defect). The test depends on the independent behavior of two alleles of a gene in a diploid cell or in a cell infected with two phages carrying different alleles.

citochol t., see *Sachs-Witebsky t.*

Clark's t.: 1. bleeding upon insertion into the interior of the uterus with a sound; usually indicative of cancer. 2. (for calcium in blood) precipitate the calcium with ammonium oxalate, remove excess of oxalate, dissolve precipitate in sulfuric acid, and titrate against potassium permanganate [Guy Wendell Clark].

Clauberg t.: a biological assay method for the standardization of corpus luteum preparations or progesterone. Immature rabbits are primed with estrogen before the material to be tested is administered. The degree of endometrial development is observed.

Clive's t.: an acetic anhydride method of testing the blood serum for syphilis.

C.M.T., see *California mastitis t.*

coagulase t.: a test for coagulase activity in which bacteria are added to citrated or oxalated (human or rabbit) blood plasma; in the presence of coagulase, the plasma gels within three hours. Coagulase activity is also demonstrable by mixing bacteria with blood plasma on a slide; if positive, clumping occurs, with fibrin formation.

coagulation t. (for proteins in urine): acidify the urine with acetic acid and boil; a white coagulum or a white precipitate or a cloudiness indicates protein.

cobra venom t., see *Weil's t.*

coccidioidin t.: an intracutaneous test for coccidioidomycosis; see *coccidioidin.*

cockscorn t.: a test for the activity of the ergot preparations, based on the fact that ergot, when administered to a cock, produces a blue coloration of its comb.

Cohen's t. (for albumin): to the acidulated solution add a solution of potassium bismuthic iodide and potassium iodide; albumin is precipitated.

Cohn's t.: a test for color perception by the use of variously colored embroidery patterns.

coin t.: a test for pneumothorax made by auscultating the chest while a coin laid against the chest is struck with another coin; a metallic, ringing sound is produced over a cavity containing air.

colchicin t., see *Zeisel's t.*

cold pressor t., see *Hines and Brown t.*

Cole's t.: 1. (for dextrose) add acetic acid to the urine and filter through blood charcoal to remove other reducing substances; then make a modified Fehling's test. 2. (for lactose) adsorb the lactose on to blood charcoal, extract it again with hot dilute acetic acid, and make an osazone test. 3. (for uric acid) add 2 drops of ammonium hydroxide to 5 ml. of urine and then saturate with ammonium chloride; pour off the supernatant fluid, filter, evaporate residue, and make murexid test.

collateral circulation t., see specific tests, including *Henle-Coenen t.*, *Korotkoff's t.*, *Pachon's t.*, *tourniquet t.* (2), (3), *Tuffier's t.*, *von Frisch t.*

colloidal benzoin t., see *benzoin t.*

colloidal gold t., (for protein-globulin—in the cerebrospinal fluid, and thus for the diagnosis of certain central nervous system disorders, such as neurosyphilis, multiple sclerosis, poliomyelitis, and encephalitis): progressive dilutions of cerebrospinal fluid are added to ten test tubes containing colloidal gold solution. The extent of precipitation is indicative of various diseases, and the results are interpreted according to the color changes that result. When no color change occurs the reaction is negative, i.e., the deep red colloidal gold color remains unchanged, and is recorded as 0. The appearance of the solution in the tube depends upon the amount of gold precipi-

tated and is scored as 1+ (reddish blue), 2+ (lilac to purple), 3+ (deep blue), 4+ (pale blue), and 5+ (colorless, due to complete precipitation of the gold). Called also *Lange's t.* or *Lange's colloidal gold t.*

color perception t.: see specific tests, including *Bodal's t.*, *Cohn's t.*, *Donders' t.*, *Holmgren's t.*, *Ishihara's t.*, *Jenning's t.*, *lantern t.*, *Mauthner's t.*, *Nagel's t.*

Comessatti's t. (for epinephrine): to 5 ml. of the unknown solution add an equal volume of 1 per cent sodium acetate solution and 1 ml. of 0.1 per cent mercuric chloride solution; a rose color indicates epinephrine.

complement fixation t., see under *fixation.*

concentration t. (for renal function): the patient is placed under conditions which cause the normal person to elaborate urine containing one or more constituents in high concentration and the results observed to see whether the patient is able to attain this concentration, as in the *urea concentration t.*, *xylose concentration t.*

Congo red t. (for amyloidosis): Congo red is injected intravenously; if more than 60 per cent of the dye disappears after one hour, amyloidosis is indicated.

conjugate glycuronates t., see *Tollen's t.* (4).

conjunctival t.: 1. see *ophthalmic reaction*, under *reaction*. 2. the local reaction which occurs when a pollen or an extract of the pollen is instilled into the conjunctival sac of a person sensitive to that pollen.

connective tissue t., see *Schmidt's t.* (5).

consumption t.: a serological reaction in which antibody or antigen is removed from the reaction medium by its homologue. By comparing the quantity of reactant not removed with the amount originally present, the amount of reactant taken up during the reaction may be ascertained.

contact t., see *patch t.*

Contejean t.: dissolve freshly precipitated cobalt carbonate in specimen; a red color changing to blue on evaporation indicates free HCl.

Cooke's t. (for purine bodies in urine): in a centrifuge tube take 10 ml. urine and add 1 gm. sodium carbonate and 1 or 2 ml. strong ammonia. Shake until the sodium carbonate is dissolved; the earthy phosphates will be precipitated. Centrifuge and pour off clear fluid. Add 2 ml. ammonia and 2 ml. silver ammonionitrate solution; centrifuge again. Each 0.1 ml. of sediment represents 0.001176 gm. of purine bodies.

Coombs' t.: a test for detection of antibodies to red cells by means of antiglobulin. In the *direct* Coombs test, used to detect cell-bound antibody, the red cells are washed free of serum and unbound antibody, and antiglobulin is added. Agglutination indicates the presence of antibody. This method is used to detect sensitized red cells in erythroblastosis fetalis and autoimmune hemolytic anemia. In the *indirect* Coombs' test, used to detect circulating antibody, a sample of the subject's serum is incubated with donor red cells (or bacteria), the cells are washed, and the antiglobulin is added. If antibody has adsorbed to the cells, they will be agglutinated. Called also *antiglobulin t.*

Cope's t.: with the patient supine, the examiner flexes the right thigh and rotates the hip joint internally; an inflamed appendix will be irritated by this movement and pain will be felt in the hypogastrium.

copper t., see *Schönbein's t.* (2).

copper soap t. (for lipase): make up a hydrogel with 1 per cent of agar-agar, 2½ per cent of starch, and 2½ per cent of a neutral fat; pour into Petri dishes, cool, and place drops of the unknown on its surface. Incubate at 38° C. one hour and pour over the surface a saturated solution of cupric sulfate. Bluish green spots of copper soap where the drops were indicate lipase action.

Corner-Allen t.: a biological method of assay for progesterone or corpus luteum preparations containing it. The rabbits are mated, the ovaries removed eighteen hours later, and the material to be assayed injected. The results are read according to the intensity of the endometrial changes.

Costa's t. (for the activity of infections): a test based on observing the rapidity with which precipitation is produced in blood serum by a procaine formaldehyde reagent.

cover t.: see *alternate cover t.* and *cover-uncover t.*

cover-uncover t.: a test for determining the type of phoria, by covering one eye and noting its movement as it is uncovered.

Cowie's guaiac t. (for blood in feces): add glacial acetic acid to the feces and extract with ether. To the filtrate add an equal volume of water, some powdered guaiac resin, and old turpentine or hydrogen peroxide. A blue color indicates blood.

Crafts' t.: in organic disease of the pyramidal tract, stroking with a blunt point upward over the dorsal surface of the ankle, the leg being extended and the muscles relaxed, produces dorsal extension of the great toe.

Craig's t.: 1. (for tuberculosis) a complement-fixation test for tuberculosis in which the antigen is made by growing several strains of bacilli on an alkaline bouillon containing a teaspoonful of aseptically removed egg white and egg yolk for each 250 ml. of bouillon. 2. a modification of the Wassermann test using a human hemolytic serum instead of a sheep hemolytic serum.

Cramer's t. (for dextrose): place 3 ml. of Cramer's "2.5 reagent" (0.4 gm. of mercuric oxide and 6 gm. of potassium iodide dissolved in 100 ml. of water and the reaction so adjusted that 10 ml. will be

neutralized to phenolphthalein by 2.5 ml. of N/10 acid) in a test tube and boil. Add 3 ml. of the urine and again boil. If positive the mixture becomes turbid, darkens, and a precipitate of finely divided mercury settles out.

Crampton's t.: a test for physical resistance and condition based on the difference between the pulse and blood pressure in the recumbent position and in the standing position. A difference of 75 or more indicates good condition; one of 65 or less shows a poor condition.

creatinine t., see specific tests, including *balance t., Braun's t., Jaffé's t. (1), Kerner's t., Salkowski's t. (5), Thudichum's t., von Maschke's t., Weyl's t. (1)*. See also *creatinine, methods for, under method*.

creatinine clearance t.: a test for renal function based on the rate at which ingested creatinine is filtered through the renal glomeruli.

Crismers's t. (for dextrose): the solution is made alkaline, and is boiled with 1 part of safranin in 1000 parts of water: if dextrose is present, the mixture is decolorized or turned to a pale yellow.

Cronin Lowe t.: a precipitation test for malignancy.

cuff t.: a test for angina pectoris by producing ischemia in the left arm for five minutes by raising the pressure in a blood-pressure cuff on the arm to 50 mm. above the usual systolic pressure. This may produce an angular attack in persons with coronary disease.

Cuignet's t. (for simulated unilateral blindness): with the patient reading a book, the examiner inserts a pencil vertically between the eyes and the book. If patient continues to read uninterruptedly, he is seeing with both eyes.

Cunisset's t. (for bile in the urine): the urine is shaken with chloroform; if biliary matter is present, a yellow color is produced.

currant t.: if, after a meal of currants, the seeds do not appear in the stools in twenty-four hours, there is defective motility.

Cutler-Power-Wilder t. (for Addison's disease): the sodium chloride in the diet is restricted for a few days, and potassium citrate is administered; a marked rise in urinary chloride concentration on the third day indicates adrenal insufficiency.

Cutola t.: a 50 per cent hydriodic acid solution containing iodine colors cellulose blue.

Cutting's t. (for spinal fluid): add a colloidal suspension of gum mastic to a series of dilutions of the spinal fluid; a heavy white precipitate is positive.

cysteine t., see specific tests, including *Andreasch's t., nitroprusside t. (1), Sullivan's t.*

cystine t., see specific tests, including *Baumann and Goldmann's t., Liebig's t., Müller's t. (1)*.

cytopherometric t.: a method of assaying lymphocyte sensitization based on the principle that the interaction of sensitized lymphocytes with specific antigen results in liberation of a substance that slows electrophoretic migration of normal macrophages.

cytosine t., see *Wheeler and Johnson's t.*

cytotoxicity t.: any of a variety of tests of the ability to lyse cells, as when living cells are incubated with specific antibody and complement or with T-lymphocytes primed against cell surface antigens. Dead cells are then detected by staining, plaque formation, or other technique.

Daclin t.: shake 10 ml. of urine with 5 ml. of chloroform; allow this mixture to separate; decant the chloroform layer; evaporate this at a gentle heat; treat the residue with 2 drops of pure H_2SO_4 . A violet color indicates *santonine*.

D'Amato's t.: in persons sensitized to the causative organism of a disease such as typhoid, paratyphoid, undulant fever, syphilis, the injection of the corresponding vaccine produces a hemoclastic reaction. In bearers of malignant tumors, the injection of neoplastic extracts produces a specific hemoclastic reaction.

dark-adaptation t. (for vitamin A deficiency): a test based on the fact that with a deficient intake of vitamin A the ability to see a dimly illuminated object in a dark room is diminished.

darkroom t.: a test to determine the tendency to develop acute angle glaucoma: ocular pressure is measured by the applanation tonometer, the subject is placed in a darkroom for one hour, and applanation tonometry is then repeated.

Davidsohn's t. (differential test for infectious mononucleosis): the determination of the agglutination of sheep erythrocytes by the patient's serum after absorption with Forssman antigen (guinea pig kidney or horse kidney) and beef antigen, respectively.

Davy's t. (for phenol): to a drop or two of the suspected solution add 3 or 4 drops of a solution of 1 part of molybdic acid in 10 or 15 parts of concentrated sulfuric acid; if phenol is present, a pale yellow-brown tint is produced, changing to a reddish brown and then to a fine purple.

Day's t. (for blood): the suspected substance is treated with fresh guaiacum tincture and then with hydrogen dioxide; if blood is present, a blue tint is produced.

Dedichen's t. (for liver function): a test based on the assumption that urobilinuria is a sign of absolute liver insufficiency. Tincture of iodine is added to the urine, drop by drop, and then an equal amount of Schlesinger's reagent. The mixture is filtered. If urobilin is present, fluorescence takes place.

Deen's t. (for blood in gastric juice): to the gastric juice is added 1 ml. of a fresh tincture of guaiac and 1 ml. of Hühnerfeld's solution (2 ml. of glacial acetic acid, 1 ml. of distilled water, and 100 ml. each

of oil of turpentine and alcohol). On shaking, the fluid turns blue if blood is present. Iron compounds give the same reaction as blood.

Degener's t. (for alkalis): phenacetolin is turned red by alkalis.

Dehio's t.: if bradycardia is relieved by injections of atropine, the condition is caused by increased vagal tone; but if the bradycardia is not relieved, the cause is some affection of the heart muscle.

dehydrocholate t. (for the speed of blood circulation): sodium dehydrocholate solution is injected intravenously; the usual time elapsing until a bitter taste in the mouth occurs is between 10 and 14 seconds.

Dejust's t. (for carbon monoxide): if air containing carbon monoxide is passed through an ammoniacal silver solution, metallic silver will be deposited and the solution will take on a brown or black color.

Delif's t. (for caffeine): a solution of red mercuric oxide and potassium iodide; it is used as a test for caffeine, which it throws down as a crystalline precipitate.

Denigès' t.: 1. (for uric acid) add nitric acid, which changes uric acid into alloxan, heat gently so as to drive off free nitric acid; add a few drops of sulfuric acid and of commercial benzol, which contains thiophen. This gives a blue color if alloxan has been formed. 2. (for acetone in urine) about 1 inch of the distillate in a test tube is mixed with an equal amount of a solution of the subsulfate of mercury (mercuric oxide 50, sulfuric acid 200, water up to 1000) and the mixture is allowed to simmer in a stoppered flask for about five minutes. A white crystalline precipitate occurs on cooling, which is very distinctive in appearance. If acetone is present in excess, the test is less distinct. If but a trace is present, a trace of sodium chloride will aid the precipitation. The precipitate is not soluble in dilute hydrochloric acid. 3. (for morphine) to 10 ml. of the unknown add 1 ml. of hydrogen peroxide, 1 ml. of ammonium hydroxide and 1 drop of 4 per cent solution of copper sulfate; a red color indicates morphine.

Dennis and Silverman's t. (for the pH of stomach contents): a few drops of stomach contents are placed on test papers impregnated with Töpfer's reagent and with thymol blue. These are then matched up with similar test papers to which buffered solutions of known pH are applied.

Derrien's t. (for alphanitrophenol in the urine): to 10 ml. of urine add 1 ml. of 10 per cent H_2SO_4 and 1 ml. of 0.5 per cent $NaNO_2$. Shake and keep in the dark five minutes. Place 2 ml. of a fresh 0.5 per cent betanaphthol solution in ammonia water (22 B) in a 25 ml. capacity tube, and add the treated urine. Shake and after one minute add 10 ml. of sulfuric ether. Shake and cork. If the ether is violet, wine color, or orange-red the reaction is positive; if colorless or yellow, negative.

desmoid t., see under *reaction*.

dextrose t., see specific tests, including *Agostini's t., Allen's t. (1), Almén's t. (3), Baeyer's t. (1), Barfoed's t., Baumann's t., Benedict's t. (1), Bertrand's t., Bohmansson's t., Böttger's t. (2), Bottu's t., Braun's t., Caillan's t., Campani's t., Cappagnoli's t., Casamajor's t., Cipollina's t., Cole's t. (1), Cramer's t., Crismers's t., Donaldson's t. (1), Edlefsen's t., Fehling's t., fermentation t., Fischer's t., Folin's t. (3), Folin-McElroy t., Gawalowski's t., Gentile's t., Gerrard's t., Hager's t., Haines' t., Heller's t. (3), Horsley's t., hydroxylamine t., Jaffé's t. (1), Knapp's t. (1), Kowarsky's t. (1), Loewe's t., Löwenthal's t., Mathew's t., Maumené's t., Molisch's t. (1), (2), Moore's t., Mulder's t. (1), mycologic t., Nicklés' t., nitropropiol t., Nylander's t., Oliver's t. (2), Pavy's t., Pélouse-Moore t., Penzoldt's t. (2), Purdy's t. (1), Riegler's t. (3), Robert's t. (2), Rubner's t. (2), saccharimeter t., Sachsse's t., Salkowski's t. (4), Schmidt's t. (2), silver t., Soldaini's t., Tollen's t. (2), Trommer's t., von Jaksch's t. (2), Wender's t., Worm-Müller t. See also *glucose (dextrose), methods for, under method*.*

diabetes t.: see specific tests, including *Bremer's t., Hickey-Hare t., Kowarsky's t. (2), Loewi's t., Williamson's blood t.*

diabetic acid t., see *acetoacetic acid t.*

diacetyl t. (for urea): the solution to be tested is mixed with concentrated hydrochloric acid and diacetyl monoxime; a yellow color develops on boiling if urea is present.

dialysis t., see *Abderhalden's reaction, under reaction*.

Diamond slide t.: a serologic test for Rh typing performed on open microscope slides.

diastase t., see *Wohlgemuth's t.*

diazot t., see *Ehrlich's diazo reaction, under reaction*.

Dick t. (for susceptibility to scarlet fever): a small amount of erythrogenic toxin is injected intracutaneously; appearance within 24 to 48 hours of a small area of reddening of the skin indicates susceptibility of the subject.

Dicken's t. (for salvarsan): to 10 ml. of urine add 3 drops of hydrochloric acid and 10 drops of a 0.5 per cent solution of sodium nitrite. Mix 5 ml. of 10 per cent resorcinol and 3 ml. of a 20 per cent solution of sodium carbonate. Stratify the two solutions; a rose-red ring indicates salvarsan, a yellow ring atoxyl.

differential t. for infectious mononucleosis: a test based on the fact that antishape agglutinins in infectious mononucleosis are not absorbed by Forssman antigen (whereas as those in serum disease and of normal persons are), but are absorbed by beef cells (whereas those in conditions other than infectious mononucleosis may or may not be).

digitalin t., see *Grandeau's t.*

dilution t., see specific tests, including *Strauss' t. (2), Volhard t., and water t.*

A TABLE OF TESTS (Continued)

p-dimethylaminoazobenzene (for free hydrochloric acid): to a little of the filtered gastric juice in a test tube add a drop of 0.5 per cent alcoholic solution of p-dimethylaminoazobenzene; in the presence of free hydrochloric acid there will at once appear a cherry-red color.

diphtheria t.: see specific tests, including *Schick t.* and *tellurite t.*

dirt t. (for milk): filter a pint of milk through a little disk of absorbent cotton and note the stain produced.

Dold's t.: a flocculation test for syphilis.

Dolman's t. (for ocular dominance): the patient holds in both hands a card with a hole in it through which to sight at a light.

Donaldson's t.: 1. (for sugar) add to a suspected fluid a few drops of a solution of 5 parts of sodium carbonate, 5 of potassium hydroxide, 6 of potassium bitartrate, 4 of cupric sulfate, and 32 of water; heat it, and if sugar is present, a yellow-green color will be produced. 2. (for amebic cysts) add Donaldson's stain to a small amount of the feces; amebic cysts are stained yellow or brown.

Donath's t. (for paroxysmal hemoglobinuria), see under *phenomenon*.

Donath-Landsteiner t. (for paroxysmal cold hemoglobinuria): a test based on the fact that the blood of patients with this disease contains complement-dependent iso- and autohemolysis which unites with red cells only at low temperatures (2° to 10° C.), hemolysis occurring only after warming to 37° C.

Donders' t.: a color vision test performed by lanterns with sides of colored glass.

Donné's t. (for pus in urine): separate sediment from the urine, add to it a piece of solid potassium hydroxide, and stir. If pus is present the sediment will become slimy and tough, whereas mucus will pass into solution.

Donogany's t. (for blood in urine): one ml. of ammonium sulfide solution and 1 ml. of pyridine solution are added to 10 ml. of urine; an orange color appears if blood is present.

Dorn-Sugarman t.: a test for sex determination by observing the effect of urine from a pregnant woman on the testicles of rabbits.

double-blind t.: a study of the effects of a specific agent in which neither the administrator nor the recipient, at the time of administration and of recording of the effects, knows whether the active or an inert substance is being given.

double diffusion t.: a gel diffusion test in which solutions of antigen and antibody diffuse toward each other in a gel to form lines of precipitate. It may be in a single dimension as in a fine test tube, the antigen and antibody being separated by a layer of neutral agar, or in two dimensions, as in a Petri dish in which reagents are placed in opposing wells in a layer of agar (see *Ouchterlony t.*).

double glucagon t. (for deficiency of amylo-1-6-glucosidase): glucagon is administered after a twelve hour fast and again shortly after a meal; if the blood sugar fails to rise after the first administration but has a normal rise after the second, the test is positive.

Dragendorff's t. (for bile pigments): wet an unglazed porcelain plate with the suspected urine, which is soon absorbed; add a drop or more of nitric acid: if bile pigments are present, colored rings are formed.

Drechsel's t.: 1. (for bile) on heating the liquid on a water bath with phosphoric acid and cane sugar, a reddish brown color will be produced if bile is present. 2. (for xanthine) add cupric chloride to an ammoniacal solution of the substance; xanthine, if present, causes a muddy precipitate.

Dreyer's t.: an agglutination test for the differentiation of typhoid and paratyphoid infections from other infections in persons vaccinated against typhoid-paratyphoid infection.

drinking t. (for glaucoma): one quart of water is ingested as rapidly as possible before breakfast. The intraocular pressure is measured every fifteen minutes. A rise of from 8 to 15 mg. Hg in less than one-half hour indicates glaucoma.

Duane's t.: the employment of a candle blaze and prisms to measure the degree of ocular heterophoria.

Dugas' t.: a test for the existence of dislocation of the shoulder, made by placing the hand of the affected side on the opposite shoulder and bringing the elbow to the side of the chest. If this cannot be accomplished (Dugas' sign), dislocation of the shoulder exists.

Duke's t.: a test which measures bleeding time.

Dumontpallier's t. (for bile pigments): over the liquid to be tested carefully pour iodine tincture; if bile pigment is present, a green ring is seen between the two liquids.

Dungern's t., see *von Dungern's t.*

Dupont's t. (for death): the action of a drop of atropine in the pupil is observed.

dye exclusion t.: the determination of cell viability *in vitro*. Following exposure of a cell preparation to trypan blue or eosin, dead cells take up the dye from the medium whereas living cells remain unstained.

Eagle t. (for syphilis): an alcoholic beef heart antigen is prepared and is fortified by a combination of cholesterol and sitosterol to the point of oversaturation. One ml. of the fortified antigen is mixed with 1.3 ml. of a 4 per cent sodium chloride solution. This antigen-saline mixture is left at rest for thirty minutes, and 0.04 ml. is then placed into test tubes, followed by 0.4 ml. of the serum. The set is shaken in the Kahn shaker for two minutes, and the racks are incubated at

37° C. for four hours or longer. The tubes are then centrifugated for ten minutes. Physiologic solution of sodium chloride, 1.2 ml., is then run into each tube and the results are read.

early pregnancy t.: a do-it-yourself immunological test for pregnancy performed in the home as early as nine days after menstruation was expected (missed period). The test materials consist of a mixture of human chorionic gonadotropin (HCG) antiserum and HCG-coated red blood cells in a glass test tube, a vial of water, and a medical dropper. Three drops of urine are placed in the test tube and the vial of water is added. The tube is shaken for 10 seconds and placed in a holder for 2 hours. A brown ring of nonagglutinated red blood cells is positive (indicates pregnancy).

Ebbinghaus' t. (for mental disease): the examiner gives the patient sentences from which several words have been omitted, and asks him to complete them.

Edlfsen's t. (for dextrose), see under *reagent*.

Ehrlich's t.: 1. see *Ehrlich's diazo reaction*, under *reaction*. 2. the benzaldehyde test for urobilinogen; see *para-dimethylaminobenzaldehyde t.*

Ehrmann's t. (for mydriatic substances): the suspected substance is applied to an enucleated frog's eye, dilatation indicating the presence of a mydriatic substance.

Ehrmann's pancreatic t. (for pancreatic efficiency): after a test meal of hydrated fats and of chopped meat, the gastric contents and feces are examined for the fat-splitting of pancreatic lipase and for the presence of undigested muscle fibers which are characteristic for decrease of trypsin.

Eijkman's t.: (for phenol) add to the suspected solution a few drops of an alcoholic solution of ethylic ether and nitrous acid, each, 1 part, and concentrated sulfuric acid, 2 parts: a red color is produced.

Einhorn string t.: a test for determining whether the site of bleeding is in the low esophagus, stomach, or duodenum.

Eiselt's t. (for melanin in the urine): oxidizing agents like nitric and sulfuric acids or potassium dichromate render the urine dark colored if melanin is present.

Eitelberg's t. (obs.): large tuning-fork is held near the ear, at intervals, for twenty to thirty minutes. If the ear is normal the perception of the vibrations increases after each interval; if there is a lesion of the conducting apparatus, the perception decreases.

Ellermann and Erlandsen's t., see *tuberculin titer t.*

Elsberg's t.: a method of testing the sense of smell for determining the existence of brain tumor.

Ely's t.: with the patient prone, if flexion of the leg on the thigh causes the buttocks to arch away from the table and the leg to abduct at the hip joint, there is contracture of the lateral fascia of the thigh.

Emanuel-Cutting t., see *mastic t.*

emulsoid-gelatin t., see *gel t.*

epinephrine t.: 1. in persons with Graves' disease the injection of 1 mg. of epinephrine produces a lowering of blood pressure in vagotonic patients and an exaggerated rise of temperature in patients with sympathicotonia. 2. see *Goetsch's skin reaction*, under *reaction*. 3. see specific tests, including *Comessatti's t.*, *Meyer's t.* (1), *Vulpian t.* See also *epinephrine, method for*, under *method*.

epiphanin t., see under *reaction*.

Erdmann's t. (for alkaloids), see under *reagent*.

ergot t., see specific tests, including *cockscorn t.*, *Houghton's t.*

Erhard's t.: a test for detecting simulated deafness.

Erichsen t., see under *sign*.

erythrocyte sedimentation t., see under *rate*.

Esbach's t. (for albumin), see under *reagent*.

Escherich's t.: a modification of the von Pirquet reaction in which the tuberculin is injected subcutaneously.

Escudero's t. (for gout): after a meal containing a given quantity of purines, the quantity eliminated after a period of twenty-four to forty-eight hours is measured; if more than 50 per cent is eliminated gout is excluded.

ether t.: a small amount of a 25 per cent solution of sulfuric acid is added to urine in a test tube and a thin layer of ether is floated over it; the contents of the tube are shaken and allowed to stand. If the froth becomes sticky allergic asthma is indicated.

ethyl acetate t. (for alcohol): add an equal volume of concentrated sulfuric acid and a little sodium acetate and heat; the ethereal odor of ethyl acetate indicates alcohol.

ethyl butyrate t. (for pancreatic lipase): a neutral mixture of water, ethyl butyrate, and litmus turns red when acted on by lipase due to the liberation of butyric acid.

euglobulin lysis t.: a test for the presence of plasminogen activator, done by determining the time required to dissolve an incubated clot composed of precipitated plasma euglobulin and exogenous thrombin.

Ewald's t.: 1. (for hydrochloric acid in stomach contents) mix 2 ml. of a 10 per cent solution of potassium thiocyanate, 0.5 ml. of a neutral solution of iron acetate, and 7.5 ml. of water. This makes a ruby-red solution. A few drops are put into a porcelain dish and a drop or two of the suspected liquid are added. If HCl is present, a slight violet is seen; but on mixing the color becomes brown. 2. (for motility of the stomach) the injection of phenyl salicylate (salol) after a light meal. The phenyl salicylate passes into the intestine, where it is decomposed and salicylic acid secreted in the urine. Normally the salicylic acid should appear in from one to two hours, and may be detected by adding to the urine a weak solution

of ferric chloride, when a purple color will appear. Called also *salol* t.

exercise t's, tests for detecting previously undetected coronary artery disease; they are graded tests of coronary fitness in which the subject performs exercise, as by walking a treadmill or pedaling a stationary bicycle, while under continuous electrocardiographic monitoring, usually by means by an oscilloscope, before, during, and after the exercise. Called also *stress t's*. See also *Master 2-step exercise t.*

extinction t.: Schultz-Charlton reaction.

Exton's t. (for albumin in urine): heat together equal volumes of Exton's reagent and urine; a precipitate indicates the presence of albumin.

Exton and Rose's glucose tolerance t.: 50 gm. of glucose are given and thirty minutes later another 50 gm.; the blood sugar level at sixty minutes should not be greater than at thirty minutes.

Fabre's t.: a test for barbitals based on the formation of crystalline dicanthyl compounds developed in the presence of acetic acid.

Fahraeus' t.: erythrocyte sedimentation rate.

Falk and Tedesco's t.: a test for bronchial disease based on the fact that if salicylates are given to a patient in whom the bronchial mucosa is injured, salicylic acid will appear in the sputum.

Fantus t. (for differentiating between predominant water or salt depletion): place 10 drops of urine in a test tube with 1 drop of 20 per cent potassium chromate, then add 2.9 per cent silver nitrate 1 drop at a time, all the while agitating the tube, until there is a sudden color change from yellow to brick red. The number of drops of silver nitrate required to attain this change is the number of grams of chloride per liter in the urine; thus the addition of 4 drops to elicit the end point indicates a urine chloride concentration of 400 mg./100 ml. (4 gm./L.).

Farber's t.: presence of swallowed vernix cells in the meconium of a newborn baby indicates partial intestinal stenosis; their absence indicates intestinal atresia.

Farr t.: radioimmunoassay to measure the absolute amount of antibody.

fat t., see specific tests, including *acrolein t.*, *Adams' t.*, *Babcock's t.*, *Bloor's t.* (1), *Leffmann-Beam t.*, *Meigs' t.*, *Saathoff's t.*, *Valenta's t.*

fatigue t., see under *reaction*.

FE_{Na} t.: excreted fraction of filtered sodium test, a measure of renal tubular reabsorption of sodium, calculated as follows: (U/P)-Na/(U/P)-Cr × 100, where U and P represent concentrations of sodium and creatinine in urine and plasma, respectively.

Fearon's t. (for vitamin A): add 1 gm. of phosphorus pentoxide to 5 ml. of oil; a purple color indicates vitamin A.

Fehling's t. (for dextrose in the urine): mix the suspected liquid with freshly prepared Fehling's solution (q.v. under *solution*) and boil; a red precipitate of cuprous oxide shows the presence of dextrose.

femoral nerve stretch t. (for lesions of third or fourth lumbar disk): passive knee flexion in the prone position causes pain in the back or thighs.

fermentation t. (for dextrose): fill a graduated fermentation tube with the urine or unknown solution, add a small portion of compressed yeast, and incubate for twelve hours; the amount of gas that accumulates in the closed arm indicates the amount of dextrose present.

fern t. (for estrogen): the appearance of a fernlike pattern in dried smears of uterine cervical mucus indicates the presence of estrogen; the level of secretion is determined by the extent of ferning.

ferric chloride t.: 1. (for thiocyanates in saliva) add a few drops of dilute ferric chloride to saliva and acidify with hydrochloric acid; red ferric thiocyanate forms, which is decolorized by adding mercury bichloride. 2. (for salicylic acid) see *Remont's t.*

Feulgen's t.: 1. (for animal nucleic acid) hydrolyze with HCl solution and add a 1 per cent solution of decolorized rosaniline; a red color develops. 2. (for deoxyribonucleic acid) a microchemical test for the deoxyribose type of nucleic acid found in chromatin.

fibrinogen t. (for liver function): decrease in the amount of fibrinogen in the blood plasma below the normal amount points to liver injury. Whipple adds 1 ml. of a 2.5 per cent solution of calcium chloride to 1 ml. of plasma and judges the amount of fibrinogen by the toughness of the resulting clot. Rowntree heats the plasma on a water bath at 59° C. for twenty to thirty minutes, then washes, dries, and weighs the clot.

fibroderm bismuth capsule t., see *Schwarz's t.* (2).

Fieux's t. (for antipyrine): to the suspected liquid add 12 drops of sulfuric acid and 2.5 gm. of sodium metaphosphate; filter, and to the filtrate add a few drops of a solution of sodium nitrate. If antipyrine is present, a green color will be produced.

Finckh's t. (for mental disease): the patient is directed to explain the meaning of proverbs, such as "when the cat's away the mice will play," etc.

finger-to-finger t.: similar to finger-nose test, for testing coordinated movements of the extremities.

finger-nose t. (for coordinated movements of the extremities): with arm extended to one side the patient is asked to slowly try to touch the end of his nose with the point of his index finger.

Fischer's t. (for dextrose): the urine is boiled with phenylhydrazine and sodium acetate; if dextrose is present, yellow crystals of phenylglucosazone will be formed.

fish t., see *erythrophore reaction*, under *reaction*.

Fishberg concentration t. (for renal function): the patient is given supper with not more than 200 ml. of fluid and nothing thereafter. Urine voided during the night is discarded. The morning urine is saved, the patient kept in bed, and the urine of one hour later and of two hours later is saved. If the specific gravity of any of these three specimens is less than 1.024 there is impairment of renal function.

Fishberg and Friedfield t., see *xylose concentration t.*

Fishman-Doublet t. (for quick differential diagnosis of acute pancreatitis): a minute amount of starch is incubated with serum for 5 minutes. A normal concentration of amylase will leave some of the starch undigested and give a blue color with iodine; a high serum amylase digests all the starch, and the addition of iodine will give only the yellow color of iodine. When the reaction color is yellow, the diagnosis of acute pancreatitis is strongly indicated. Called also *rapid serum amylase t.*

fistula t.: the air in the external auditory canal is compressed or rarefied: if there is erosion of the inner osseous wall of the tympanum exposing the membranous labyrinth, nystagmus will be produced, provided the labyrinth still functions. The site of the fistula is usually in the bony lateral semicircular canal.

fixation t., see *fixation of the complement*, under *fixation*.

Flack t. (of physical efficiency): after a full inspiration the subject blows as long as he can into a mercury manometer with a force of 40 mm. mercury.

Fleig's t. (for blood in the urine): a test based on the fact that fluorescein is easily reduced to fluorescin in the presence of oxygenated water and a catalytic agent, such as hemoglobin and its derivatives.

Fleischl's t. (for bile pigments in urine): heat the urine with a strong solution of sodium nitrate and add sulfuric acid with a pipet; the acid sinks to the bottom of the tube and forms colored layers.

Fleitmenn's t. (for arsenic compound): in a tube containing the suspected fluid, hydrogen is generated from zinc and solution of potassium hydroxide. The mouth of the tube is closed by a piece of filter paper moistened with a solution of silver nitrate. On heating, if an inorganic arsenic compound is present, the filter paper will turn black.

flicker t.: see *flicker*.

flocculation t.: one in which a positive result depends on the degree of flocculent precipitation produced in the material being tested, as in the *Sachs-Georgi t.*, *Sachs-Witebsky t.*, or *Vernes' t.*

Florence's t. (for spermatic fluid): to the suspected substance add a strong aqueous solution of iodine and potassium iodide; if spermatic fluid is present, brown plates or needles will be formed.

Flohmann's t.: a modification of the Allen-Doisy test for estrogenic substance in the body, using mice in which a positive reaction is the mucinification of the vaginal mucosa.

fluorescent treponemal antibody absorption (FTA-ABS) t. (for syphilis): a specific serological test for syphilis using the *Treponema pallidum* (Nicols strain) as antigen. Syphilitic serum is bound to the surface of treponemes fixed onto a slide, and the antibody is made visible by utilizing fluorescein-tagged antiserum against human globulin.

foam t. (for bile pigments): shake the specimen of urine in a test tube; a brownish-yellow foam indicates bile pigments.

Focker's t.: to urine rendered alkaline with sodium hydroxide, add a solution of ammonium chloride; a precipitate of acid ammonium urate is formed.

Folin's t.: 1. (for quantity of uric acid) see *Folin-Shaffer method* (for uric acid), under *method*. 2. (for uric acid) to the unknown add a saturated solution of oxalic acid and evaporate to dryness; cool and extract phenols with 95 per cent alcohol; dissolve residue in water, add sodium carbonate and Folin's sodium phosphotungstate reagent. A blue color indicates uric acid. 3. (for sugar in normal urine) shake the urine with trinitrophenol and bone black to remove creatinin. Filter, add a small amount to Folin's sugar reagent, shake while boiling for one and a half minutes, and centrifugalize. A red layer of cuprous oxide in bottom of tube indicates sugar. 4. (for amino acids) amino acids develop a pink color in the presence of betanaphthaquinone sulfonic acid and alkali.

Folin and Denis' t. (for tyrosine): to 1 to 2 ml. of the unknown add an equal volume of the reagent (containing 10 per cent of sodium tungstate, 2 per cent of phosphomolybdic acid), and 3 to 10 ml. of a saturated solution of sodium carbonate. A blue color indicates tyrosine.

Folin and McEllroy's t. (for dextrose): (reagent: 100 gm. of sodium pyrophosphate, 30 gm. of disodium phosphate, and 50 gm. of dry sodium carbonate in 1 liter of water. Dissolve with heat and add 13 gm. of copper sulfate dissolved in 200 ml. of water.) To 5 ml. of the reagent add 5 to 8 drops of the urine and boil. In the presence of sugar the hot solution is filled with a colloidal greenish yellow or reddish precipitate.

Folin and Wu's t., see under *method*.

formaldehyde t., see specific tests, including *Burnam's t.*, *Jorissen's t.*, *Kentmann's t.*, *Leach's t.*, *Lebbin's t.*, *Luebert's t.*, *Schiff's t.* (6). See also *formalin t.*

formalin-gel t., **formol-gel t.** (for kala-azar): a drop of the patient's serum is placed on a slide, which is then inverted over a watch glass containing a few drops of formaldehyde solution; the serum from cases of kala-azar will solidify into a stiff opaque jelly.

Fornet's ring t., see *Fornet's reaction*, under *reaction*.

Foshay's t. (for *tularemia*): a suspension of *Pasteurella tularensis* is injected into the skin; a positive reaction resembles that in a positive tuberculin test.

Fouchet's t. (for *bilirubin in blood*): to a sample of the blood serum there is added an equal part of a reagent consisting of 5 gm. trichloroacetic acid, 20 ml. water, and 2 ml. ferric chloride; a green color is produced if bilirubin is present.

Fournier t.: the patient is asked to rise on command from a sitting position; he is asked to rise and walk, then stop quickly on command; he is asked to walk and turn around quickly on command. The ataxic gait is thus brought out.

fragility t.: add 1 drop of blood to 25 ml. portions of salt solutions varying in concentration from 0.28 to 0.50 per cent. Shake and allow to stand two hours. Note concentration at which hemolysis begins to show a tinge of pink. Normal bloods begin at 0.42 to 0.44 and are complete at 0.36 to 0.32.

Francis' t. 1. (for *bile acids in urine*) in a test tube is placed 2 gm. of dextrose in 15 gm. of sulfuric acid and the urine is placed on top of this; a purple color forms if bile acids are present. 2. an intracutaneous test in pneumonia for ascertaining the body response to the infection and whether the specific antibodies are present after treatment with antipneumococcus serum. The homologous pneumococcus polysaccharide is used in the skin test.

Fränkel's t. examination of the nasal cavity with the patient's head bent down between his knees and rotated so that the side to be examined is turned upward. If pus is seen in the middle meatus, suppuration in some of the anterior accessory sinuses is indicated.

Franken's t. (for *completeness of placenta*): the placenta held by the umbilical cord is put in a wash basin containing warm water; air is introduced through the umbilical vein. In this way defects in the placenta can be recognized.

Frei t.: sterile pus from the lesion is injected intracutaneously; the development of a raised red papule indicates venereal lymphogranuloma.

Friderichsen's t. (for *vitamin A deficiency*): determination of the weakest light stimulus which will give rise to an oculomotor reflex. A variation from normal indicates vitamin A deficiency.

Friedman's t., Friedman-Lapham t. (for *pregnancy*): the injection of the urine of a pregnant woman into female rabbits will cause the formation of corpora lutea and corpora haemorrhagica in the rabbits.

frog t., see *male frog t.*

Fröhde's t. (for *alkaloids*): a 1 per cent solution of sodium molybdate in sulfuric acid.

Frohn's t.: the use of the double iodide of bismuth and potassium as a test for alkaloids.

Frommer's t. (for *acetone in urine*): alkalize about 10 ml. of the urine with 2 or 3 ml. of 40 per cent sodium hydroxide solution, add 10 or 12 drops of 10 per cent alcoholic solution of salicylic acid (salicylaldehyde), heat the upper portion to about 70° C. (it should not reach the boiling point), and keep at this temperature five minutes or longer. In the presence of acetone an orange color, changing to deep red, appears in the heated portion.

fructose t., see *levulose t.*

FTA-ABS t., fluorescent treponemal antibody absorption t.

Fuchs's t.: a test for cancer based on the observation that the serum of normal persons digests all fibrin except that of normal persons while the serum of cancer subjects digests all fibrin except that of cancer subjects.

Fuld's t. (for *antitryptic power of blood serum*): three solutions are used: a 0.1 per cent solution of Grüber's dry trypsin in slightly alkaline normal saline, a 0.2 per cent neutral solution of casein, and an alcoholic solution of acetic acid. A series of test tubes are prepared containing definite amounts of casein solution and of diluted blood serum and increasing amounts of trypsin solution. After incubating, 1 or 2 drops of the acetic acid solution are added to each test tube. If any turbidity appears it indicates the presence of undigested casein. The amount of trypsin necessary to digest the casein completely in one-half hour can then be determined.

Fuld-Goss t., see *antitrypsin t.*

fundus reflex t., retinoscopy.

Funkenstein t.: an index of central autonomic reactivity, consisting of observing the response in systolic blood pressure after intramuscular injection of 10 mg. of acetylcholine.

Fürbringer's t. (for *albumin*): in the urine are placed gelatin capsules opened at each end and containing mercuric chloride, sodium chloride, and citric acid; if albumin is present cloudiness or a flocculent precipitate is produced.

furfurol t. (for *proteins*): heat the suspected substance with sulfuric acid; if proteins are present, furfurol is formed.

Gaenslen's t., see under *sign*.

Gairdner's coin t., see *coin t.*

galactose t., see *mucic acid t., phloroglucin t.*

galactose tolerance t., see *Bauer's t. (2).*

Galli Mainini t. (for *pregnancy*): 10 ml. of urine from the patient is injected into a normal male batrachian (frog or toad); the presence of spermatozoa in a drop of the batrachian's urine indicates the existence of pregnancy.

Gallois' t. (for *inosite*, when proteins, tyrosine, and other sugars are present): evaporate a solution of the suspected substance to

partial dryness, and moisten the residue with a solution of mercuric nitrate. On drying, it assumes a yellow color, which heating turns to a bright red and which disappears when the liquid cools.

Ganassini's t. (for *uric acid*): precipitate the alkaline urate with ZnCl₂. In contact with the air the precipitate turns blue.

Gannther's t.: hydrogen dioxide, H₂O₂, liberates oxygen when brought into contact with blood.

Gardiner-Brown t. (obs): a vibrating tuning-fork is placed on the mastoid process of the patient; if the vibrations are heard longer than they can be felt by the examiner, or if they cease to be heard while they can still be felt by the examiner, there is disease of the middle ear.

Garriga's t.: a flocculation test for syphilis.

Garrod's t. 1. (for *hematoporphyrin in urine*) to 100 ml. of urine, 20 ml. of a 10 per cent solution of sodium hydroxide is added, and the whole is filtered. The filtrate is washed in water-free alcohol and the precipitate dissolved in hydrochloric acid. The test is completed with the spectroscope, which gives two absorption bands indicative of hematoporphyrin (Sir A. E. Garrod). 2. (for *uric acid in the blood*) 30 ml. of blood serum are treated with 0.5 ml. of acetic acid. A fine thread is immersed in it, on which are formed crystals of uric acid (A. B. Garrod).

gastric function t., see specific tests, including *augmented histamine t., chlorophyll t., Ewald's t. (2), pentagastrin t., Rehfuess t., Sahli's t., Sahli's glutoid t., saline load t., Schmidt's t. (5), Schwarz's t. (2).*

Gault t. (for *simulated deafness*): the patient's good ear is closed and a sound is made near the supposed bad ear; a winking motion of the lid on the tested side indicates hearing.

Gauran t.: a complement fixation test for the diagnosis of gonorrheal infection.

Gawalowski's t. (for *glycosuria*): ammonium molybdate is added to suspected urine and heated to 100° C. If dextrose is present, the solution becomes blue.

Gay-Force t., see *typhoidin t.*

Gayer t. (for *Cannabis indica*): the amount of the extract or pure drug which injected intravenously produces full anesthesia of the cornea in rabbits.

Geissler's t. (for *albumin in the urine*): a test paper is dipped in citric acid and dried; another is dipped in a solution containing 3 per cent mercuric chloride and 14 per cent potassium iodide, and dried; the two papers are placed in the urine. If there is albumin present, a precipitate will be formed.

gel t.: differentiation of syphilitic serum by the opacity and rapid precipitation produced by addition of glacial acetic acid to small quantities of the serum (J. E. R. MacDonagh, 1916).

gel diffusion t., a precipitin test in which antigen and antibody are placed in a gel medium (e.g., agar) and one diffuses toward the other (single diffusion) or each diffuses toward the other (double diffusion) to form lines of precipitation.

Gellé's t.: a rubber tube is inserted in the ear and a tuning-fork is brought in contact with it; by means of a bulb on the tube, pressure is increased or decreased. If the change in pressure does not reduce the loudness, fixation of the ossicular chain is present.

Gentile's t. (for *dextrose or uric acid*): add to the suspected liquid a solution of potassium ferrocyanide made alkaline with sodium hydroxide; on heating it becomes decolorized.

Georgi's t., Sachs-Georgi t.

Geraghty's t.: the phenolsulfonphthalein test.

Gerhardt's t. 1. (for *acetone in the urine*) add a solution of ferric chloride and a red color is produced. This test is not reliable (Carl J. Gerhardt). 2. (for *acetoacetic acid in the urine*) filter, in order to remove the phosphates, and add a few drops of a solution of ferric chloride, which produces a deep red color, which disappears when sulfuric acid is added. 3. (for *bile pigments in the urine*) it is made by shaking with an equal measure of chloroform and soon after adding tincture of iodine and potassium hydroxide to the separated chloroform, when a yellow or yellowish brown color is produced (Charles Frédéric Gerhardt).

Gerrard's t. (for *dextrose in the urine*): Fehling's solution is treated with a 5 per cent solution of potassium cyanide until the blue color begins to disappear. The suspected liquid is heated with this mixture, and if there is dextrose present, more or less discoloration takes place.

Gibbon and Landis t. (for *peripheral circulation*): a pair of extremities (the hands, if the feet are to be tested; the feet, if the hands are to be tested) are immersed in a bath of 43°–45° C. If the temperature in the unimmersed extremities rises, the circulation is normal.

Gies' biuret t. (for *proteins*): Gies uses the following reagent in making the test: mix 25 ml. of a 3 per cent solution of cupric sulfate and 975 ml. of a 10 per cent solution of potassium hydroxide.

globulin t., see specific tests, including *ammonium sulfate t. (1), Boveri's t., Braun-Husler t., Gordon's t., Hammarsten's t. (1), Kaplan's t., colloidal gold t., Mayerhofer's t., Noguchi's t. (2), Nonne-Apelt t., Pandey's t., Pohl's t., Ross-Jones t., Weichbrodt's t.*

glucagon stimulation t. (for *deficiency of growth hormone*): blood samples are taken immediately and at intervals of 1, 2, 2½, and 3 hours after subcutaneous or intramuscular injection of glucagon; radioimmunoassay of the serum is then done by enzyme partition.

glucose t., see *dextrose t.*

glucose tolerance t.: a metabolic test of carbohydrate toler-

A TABLE OF TESTS (Continued)

ance; it measures active insulin, a hepatic function based on the power of the normal liver to absorb and store large quantities of glucose, and the effectiveness of intestinal absorption of glucose. Blood sugar should return to normal in two to two and one-half hours after ingesting 100 gm. of glucose into a fasting stomach. See also *Exton and Rose's glucose tolerance t.*

glutoid t., see *Sahli's glutoid t.*

Gluzinski's t.: 1. (for bile pigments) boil the solution with solution of formaldehyde until it becomes green; adding a little hydrochloric acid changes the tint to an amethyst violet. 2. (for differentiation between ulcer and cancer of stomach) examination of the gastric contents recovered from a fasting patient: (a) after a test breakfast consisting of the white of a boiled egg and 200 ml. of water, which is recovered after three quarters of an hour. (b) after a test dinner consisting of a beefsteak and 250 ml. of water, which is recovered after three and three-quarters hours. In ulcer, both the breakfast and the dinner give the reaction of free HCl. In beginning cancer, the first meal will give reaction of free HCl, whereas the second meal will show only a slight trace or none at all.

glycerol t., see specific tests, including *acrolein t.*, and *hypochlorite-ornicinol t.*

glycerol-cholesterol t., see *Hinton's t.*

glycerophosphate t. (for renal function): 500 mg. of sodium glycerophosphate are injected intravenously, and then the free and total phosphorus in the urine collected during the following hour is determined.

glycosylated hemoglobin t.: measurement of the percentage of hemoglobin A molecules that have formed a stable ketoamine linkage between their terminal amino acid position of the β -chains and a glucose group; in normal persons this amounts to about 7 per cent of the total, in diabetics about 14.5 per cent.

glycuronates t., see specific tests, including *phloroglucin t.*, *Tollens' t.* (4), *Tollens, Neuberg and Schwket's t.*

glycyltryptophan t. (for carcinoma of stomach): filtered gastric contents and glycyltryptophan are placed in a test tube and kept at body temperature for twenty-four hours; if on the addition of a few drops of bromine, a reddish violet color is formed, carcinoma is indicated.

glyoxylic acid t., see *Hopkins-Cole test.*

Gmelin's t. (for bile pigments): fuming nitric acid is so added to the suspected urine that it forms a layer under it. Near the junction of the two liquids, rings are formed—a green ring above, and under it a blue, violet-red, and reddish yellow. If the green and violet-red rings are absent, the reaction shows the probable presence of lutein.

Goetsch's t., see *Goetsch's skin reaction*, under *reaction*.

gold number t., see *colloidal gold t.*

Goldscheider's t. (for cutaneous thermal sensibility) (obs.): consists in touching the skin with the slightly pointed end of a metallic cylinder varying heated.

gold-sol t., see *colloidal gold t.*

Goodenough draw-a-man t., **Goodenough draw-a-person t.**: a method of testing the general intelligence of children by asking the subject to draw a picture of a man to the best of his ability.

Goodenough-Harris drawing t.: a revision of the Goodenough draw-a-man test, in which scoring emphasizes the presence or absence of body and clothing detail rather than artistic skill.

Gordon's t. (for the presence of globulin-albumin in the spinal fluid): one ml. of spinal fluid is placed in a small test tube and 0.1 ml. of 1 per cent solution of corrosive mercuric chloride in distilled water; the formation of a cloud or precipitate after standing an hour indicates a positive reaction.

Gordon's biological t. (for Hodgkin's disease): lymphadenomatous tissue injected intracerebrally into rabbits causes the development of a characteristic lesion in the rabbits' nervous tissues, accompanied by ataxia, spasm, and paralysis.

Göthlin's t.: a test for capillary fragility, done by testing the capillary resistance in the arm.

Graefe's t. (for heterophoria): on holding a prism of 10 degrees before one eye, base up or down, two images are formed; one of these images is displaced laterally in heterophoria.

Graham's t.: the intravenous or oral administration of tetraiodophthalein sodium prior to roentgenologic examination of the gallbladder.

Grandeau's t. (for digitalin): the substance is dissolved in concentrated sulfuric acid, to which bromine is added; a rose color is formed if digitalin is present.

Gregerson and Boas' t. (for blood): a modification of the benzidine test to make it less sensitive for use in testing feces. Use a 0.5 per cent solution of benzidine instead of a saturated solution and barium peroxide instead of hydrogen peroxide.

Griess's t. (for nitrites in the saliva): mix it with 5 parts of water; add a few drops of dilute solution of sulfuric acid and a few drops of metadiamidobenzene; this produces a strong yellow color if nitrites are present.

Grigg's t. (for proteins): metaphosphoric acid precipitates all proteins except the peptones.

Grococo's t. (obs.): in slight cases of purpura and purpura rheumatica, if an elastic ligature is placed around the forearm, punctiform hemorrhages will appear in the bend of the elbow.

Gross' t.: 1. (for trypsin in feces) in a mortar, thoroughly rub up a portion of the fecal mass with three times its bulk of 0.1 per cent

sodium carbonate solution. Filter. Mix 10 ml. of the filtrate with 100 ml. of a fresh solution consisting of 0.5 gm. Grüber's pure casein, 1 gm. sodium carbonate, and 1000 ml. distilled water. Add a little toluol to prevent bacterial activity and place in an incubator at about 38° C. At intervals remove a few cubic centimeters and test for casein by adding a few drops of acetic acid of about 1 per cent strength. A white cloud appears as long as any casein remains undigested. With the patient upon a protein diet, there is normally a sufficient amount of trypsin to digest all the casein in from ten to fifteen hours. Delay or complete failure of digestion shows diminution or absence of trypsin. 2. a color reaction for the diagnosis of carcinoma.

group t.: a test of intelligence or aptitude given to a number of persons at one time.

Gruber's t. (for the sensitivity of the ear to sounds): (obs.) the end of the finger is inserted in the ear after the sound of a tuning-fork has ceased to be heard; the tuning-fork is then held against the finger, and the sound again becomes audible.

Gruber-Widal t. (for typhoid fever), **Widal's t.**

Gruskin t.: 1. (for malignancy) inject intradermally a serum containing an alcoholic extract of embryonic tissue cells; a slight area of infiltration, with pseudopod formation, occurs in positive cases. 2. (for tuberculosis) a preparation of the fibrin from tuberculous guinea pigs is injected intracutaneously; the appearance of pseudopodia extending outward from the wheal within six minutes is positive.

guaiac t. (for occult blood): glacial acetic acid and a solution of gum guaiac are mixed with the specimen; on addition of hydrogen peroxide, the presence of blood is indicated by a blue tint.

guanine t., see *Capranica's t.* (2), (3), and (4).

Gunning's t. (for acetone in urine): to a few milliliters of urine or distillate in a test tube, add a few drops of tincture of iodine and of ammonia alternately until a heavy black cloud appears. This cloud will gradually clear up and, if acetone is present, iodoform, usually crystalline, will separate out. The iodoform can be recognized by its odor or by detection of the crystals microscopically. Iodoform crystals are yellowish six-pointed stars or six-sided plates.

Gunning-Lieben t., see *Gunning's t.*

Günzburg's t. (for hydrochloric acid in the stomach contents): dissolve 2 gm. of phloroglucin and 1 gm. of vanillin in 30 ml. of alcohol; of this mix 2 drops with 2 drops of filtered gastric juice; heat it slowly in a porcelain cell. Free HCl produces a bright-red color; it is not present if the color is brownish red or brown.

Gutzeit's t. (for arsenic): a paper is moistened with an acidulated silver nitrate solution and exposed to the fumes from the suspected liquid, which is mixed with zinc and dilute sulfuric acid. The formation of a yellow spot on the paper indicates the presence of inorganic arsenic compounds.

Haagensen t.: observation of the contour of the breasts when the patient leans forward as a means of detecting malignant changes in the mammae.

Hager's t. (for dextrose), see under *reagent*.

Haines' t. (for dextrose): copper sulfate, 30 grains; glycerin, $\frac{1}{2}$ fl.oz.; liquor potassae, 5 fl.oz.; water, sufficient to make 6 fl.oz. When boiled and a little urine added, and again boiled, a yellow or reddish yellow precipitate is produced.

Hallion's t., see *Tuffier's t.*

Ham t.: a test performed by incubating red cells in an acid environment for the diagnosis of paroxysmal nocturnal hemoglobinuria; a positive test may be obtained in other forms of anemia.

Hamburger's t.: a test made by injecting 0.1 ml. of a 1:10,000 dilution of tuberculin just below the skin; subcutaneous infiltration follows in twenty-four hours if the patient is tubercular.

Hamel's t. (for slight jaundice): a little blood is drawn by puncture from the lobe of the ear into a capillary tube and the tube is allowed to stand for a few hours; the serum which collects in the upper part of the tube will be yellow if jaundice is present.

Hamilton's t.: when the shoulder joint is luxated, a rule or straight rod applied to the humerus can be made to touch the outer condyle and the acromion at the same time.

Hammarsten's t.: 1. (for globulin) in a neutral solution suspected to contain globulin, dissolve magnesium sulfate to saturation; the globulin will be precipitated and may be filtered out. 2. (for bile pigment) to one volume of acid mixture (1 part HNO₃ and 19 parts HCl, each 25 per cent) add four volumes of alcohol, then a few drops of the unknown; a green color indicates biliverdin.

Hammer's t.: a complement fixation test for tuberculosis, in which the antigen is a mixture of Koch's old tuberculin and an extract of tuberculous granulation tissue.

Hammerschlag's t., see under *method*.

Hanganatzu-Deicher t. (for infectious mononucleosis): the serum of the patient is inactivated by a temperature of 58° C. Then a series of dilutions of serum with physiologic solution of sodium chloride is set up (1:4, 1:8, 1:16, and so on up to 1:4096). To each 0.5 ml. of serum dilution, 0.5 ml. of a 2 per cent suspension of washed corpuscles of sheep's blood and then 1 ml. of sodium chloride solution are added. The tubes are put in the incubator for two hours and then in the refrigerator over night. In infectious mononucleosis there is a thick clotted conglomeration of the corpuscles of the sheep's blood up into the high dilutions; otherwise agglutination is either entirely absent or extremely weak in the 1:4, 1:8 and, in exceptional cases, the 1:16 tubes.

Hanger's t. (for liver cell disease): a test based on the flocculation of a cephalin-cholesterol emulsion by the patient's serum.

Hanke and Koessler's t. (for phenols, hydroxyaromatic acids, and imidazoles): to 5 ml. of 1.1 per cent sodium carbonate solution add 2 ml. of para-diazobenzene sulfonic acid reagent. Then add 1 ml. of solution to be tested.

hapten inhibition t.: serological characterization of an antigenic determinant by employing known haptens to mask the antigen binding site of antibody specific for it.

Harding and Ruttan's t. (for acetoacetic acid): acidify the urine with acetic acid, add 0.5 ml. of N/10 sodium nitroprusside, and then overlay the solution with concentrated aqueous NH_4OH ; a violet ring is produced.

Harris and Ray t.: a microtitration for vitamin C in the urine.

Harrison spot t. (for bilirubin in urine): add to 10 ml. of urine 5 ml. of a 10 per cent solution of barium chloride, mix, and filter. Spread filter paper on dry filter paper. Add one to two drops of Fouchet's reagent (trichloroacetic acid 25 gm., water 100 ml., and 10 per cent solution of ferric chloride 10 ml.); a positive reaction gives a blue to green color (Godfried).

Hart's t. (for oxybutyric acid in urine): remove acetone and diacetic acid by diluting 20 ml. urine with 20 ml. of water, adding a few drops of acetic acid, and boiling down to 10 ml. To this add 10 ml. of water, mix, and divide between two test tubes. To one tube add 1 ml. of hydrogen peroxide, warm gently, and cool. This transforms β -hydroxybutyric acid to acetone. Now apply Lange's test for acetone to each tube. A positive reaction in the tube to which hydrogen peroxide has been added shows the presence of β -oxybutyric acid in the original sample of urine.

hatching t.: a test for the detection of schistosome eggs in urine or feces, dependent upon the eggs hatching to produce miracidia when placed in water; the miracidia are attracted to light and can readily be identified.

Hawk's t. (for fecal amylase): rub up and dilute the feces with seven volumes of a neutral mixture of Na_2HPO_4 , NaH_2PO_4 , and NaCl . Add varying amounts of this to tubes containing soluble starch and toluene and incubate for twenty-four hours. Test for digestion with iodine.

Hay's t. (for bile salts): a pinch of sublimated sulfur is dropped in the urine; the sulfur sinks if bile is present, but floats if it is absent.

Heaf t., see *tuberculin t.*, Sternedle.

Hecht's t. (for syphilis): a modification of Wassermann's reaction, based on the fact that normal human serum is capable of dissolving ten times its volume of a 2 per cent solution of sheep's blood.

Hecht-Weinberg t., see *Hecht's t.*

Hecht-Weinberg-Gradwohl t. (for syphilis): a modification of the Wassermann reaction using not only the natural antisheep amboceptor in human serum, but also the native hemolytic complement, the hemolytic index of the human serum being determined before the sheep corpuscles are added to the tube.

heel-knee t. (for coordinated movements of the extremities): the patient, lying on his back, is asked to touch the knee of one leg with the heel of the other and then to pass the heel slowly down the front of the shin to the ankle.

heel-tap t., see *heel tap*, under *tap*.

Heller's t.: 1. (for albumin in urine) stratify cold nitric acid below the urine in a test tube; albumin will form a white coagulum between the urine and the acid. 2. (for blood in the urine) add potassium hydroxide solution and heat; the earthy phosphates are precipitated, and if blood is present, they are stained red by hematin. 3. (for dextrose in urine) add a solution of potassium hydroxide; sugar will cause a brownish or reddish precipitate.

hemadsorption t.: an *in vitro* test for detecting hemagglutinating viruses based on the adherence of red blood cells to cells of the infected tissue in the presence of hemagglutinin.

hematein t. (for blood): to 5 ml. of the unknown add 5 ml. of sodium hydroxide, 2 drops of hematein solution, and 10 drops of hydrogen peroxide. If blood is present the contents will turn rapidly to violet red, then to clear brown, and then to pale yellow. Without blood these changes occur more slowly.

hematin t., see *Schumm's t.* (2).

hematoporphyrin t., see *Garrod's t.* (1).

heme t., see *Schumm's t.* (2).

hemin t. (for blood), see *Teichmann's t.*

hemoglobin t., see specific tests, including *alkali denaturation t.*, *Almén's t.* (2), *Heller's t.* (2), *Katayama's t.*, *Kobert's t.*, *sand t.*, *Stokes's t.* See also *hemoglobin, methods for*, under *method*.

hemosiderin t., see specific tests, including *Perl's t.*, *Rous's t.*

Hench-Adrich t. (for the mercury-combining power of saliva): titrate 5 ml. of saliva with a 5 per cent solution of bichloride of mercury until a drop gives a reddish brown color with a saturated solution of sodium carbonate.

Henle-Coenen t.: the amount of retrograde flow of blood which is obtained from the open end of the distal stump of a divided artery, while the proximal portion is being compressed with a clamp, is a measure (or index) of the adequacy of the collateral circulation.

Hennebert's t., see under *sign*.

Henry's t., **Henry's melanoflocculation t.** (for malaria): a seroflocculation test in which a formalized suspension of melanin from ox eyes is added to the suspected serum. It is a nonspecific test

depending on increased levels of euglobin in the serum and precipitation of the melanin.

Henshaw t.: a test to aid in the selection of the appropriate homeopathic remedy in a given case of disease. A visible flocculation zone develops in the patient's blood serum when brought into contact with a potentized remedy homeopathically indicated in the case.

hepatic function t., see *liver function t.*

Hering's t.: the subject looks with both eyes through a tube blackened within and having a thread running vertically across the farther end, and a small round body is placed either before or behind the thread—if vision is binocular, the subject is able at once to tell whether the ball is nearer to him than the thread or farther off; but if vision is monocular, he cannot tell whether it is nearer or farther than the thread.

Herring's t., **Herring-Binet t.**: a modification of the Binet test for intelligence.

Herter's t.: 1. (for indole) to the unknown add 1 drop of a 2 per cent solution of beta-naphtha-quinone-sodium-mono-sulfonate, and then a drop of a 10 per cent solution of potassium hydroxide; a blue or bluish green color indicates indole. 2. (for skatole) to the unknown add 1 ml. of an acid solution of para-dimethyl-amino-benzaldehyde and heat to boiling. The purplish blue color is intensified by the addition of hydrochloric acid.

Herzberg's t. (for free hydrochloric acid in the gastric juice): moisten a paper with a solution of Congo red and dry it; free HCl colors it blue or bluish black.

Hess capillary t. (for condition of the capillary walls), see *tourniquet t.*, def. 1.

Heynsius' t. (for albumin): to a suspected liquid add enough acetic acid to render acidulous, and then boil with a saturated solution of sodium chloride; albumin will form a flocculent precipitate.

Hickey-Hare t. (for diabetes insipidus): intravenous infusion of hypertonic saline after establishment of water diuresis induces antidiuresis in normal subjects but not in patients with diabetes insipidus.

Hildebrandt's t. (for urobilin in urine): the reagent consists of an unfiltered solution of 10 parts of zinc acetate and 90 parts of absolute alcohol. The reagent is shaken before using, and equal parts of reagent and urine are mixed, the precipitate which forms being filtered off. With increase of urobilin the filtrate shows a distinct green fluorescence, either directly or after the addition of ammonia.

Hindenlang's t. (for albumin): to the liquid to be tested add solid metaphosphoric acid; albumin, if present, forms a precipitate.

Hines and Brown t.: cold pressor test; a test which measures the response of the blood pressure to the immersion of one hand in ice water: an excessive increase in pressure (hyperreaction) is said to identify a latent hypertensive state.

Hinton t. (for syphilis): (a) pipet into the first tube 0.1 ml. of serum, into the second, 0.2 ml., and into the third, 0.3 ml. with a 1 ml. pipet graduated in one tenths. (b) add 0.5 ml. of the glycerinated indicator to each tube with a 10 ml. pipet. (c) shake thoroughly the rack containing the tests by first inclining it at an angle of about 60 degrees to the body and then thrusting it quickly forward and backward. By repeating this ten times one obtains a quick but thorough mixture of the serum with the glycerinated indicator. The presence of distinct foam in each tube is the only safe criterion of adequate mixing. (d) place the rack containing the tubes in the Wassermann bath or incubator which registers a temperature continuously between 25° and 28° C. for from twelve to eighteen hours (overnight). At the end of six hours the difference between the positive and negative reactions is marked, but the final decision should not be made in less than twelve hours, and preferably only after eighteen hours.

hippuric acid t., see specific tests, including *Lücke's t.*, *Quick's t.* (1), *Spiro's t.* (2). See also *hippuric acid, methods for*, under *method*.

Hirschfeldt's t. (for cancer): a complement fixation test for detecting in cancer patients antibodies for cancer lipids.

Hirst t., **Hirst and Hare t.** (for influenza): heterophile antibodies, if present in the blood, agglutinate chicken erythrocytes.

Histalog t., see *augmented histamine t.*

histamine t.: 1. one ml. of a 0.1 per cent solution of histamine is injected subcutaneously as a stimulant of gastric secretion; see also *augmented histamine t.* 2. (for lesions of the sympathetic nervous system) a small area of skin on the wrist, ankle or knee is cleansed with alcohol, which is allowed to dry. A drop of 1:1000 solution of histamine phosphate is placed on it and introduced into the epidermis by multiple needle punctures in a manner similar to that used for cowpox vaccination. The excess histamine is gently removed. (a) A reddish purple spot appears as the result of local capillary dilatation. (b) A local wheal succeeds, because of transudation of serum from increased permeability of the capillaries. (c) A flare results as the effect of dilatation of the arteries by the reflex of a local axon. The flare being dependent on the integrity of the peripheral nerve, it therefore occurs in hysterical anesthesia and malingering but not in neural lesions. 3. (for pheochromocytoma) following rapid intravenous injection of histamine phosphate administered in a standardized dosage of 0.010 to 0.050 mg. of histamine base, normal individuals experience transient headache, flush, and a brief fall in blood pressure, but those with pheochromocytoma, after fall in blood pressure, experience a marked rise in blood pressure, fear, excitability, etc.

histamine flare t. (for leprosy and postherpetic neuralgia): a drop of 1:1000 histamine acid phosphate solution is placed on the skin and a needle puncture is made through it; the test is positive if there is no erythema flare when the puncture is made within the suspected lesion area, or if the flare stops at the border of the lesion when it is made slightly to the outside of it.

histidine loading t. (for folic acid deficiency): a loading dose of histidine is given, and the resultant urinary excretion of excess formiminoglutamic acid (FIGLU), secondary to decreased amounts of tetrahydrofolic acid, is measured. Called also *FIGLU excretion t.*

Hitzig t. (for vestibular apparatus): the positive electrode of a galvanic current is applied just in front of the ear being examined, while the negative electrode is held in the patient's hand, the patient standing with feet together and eyes closed. A current of 5 milliamperes causes a leaning toward the positive pole in normal persons.

hock t., spavin t.

Hoffmann's t. (for tyrosine): add mercuric nitrate to the suspected fluid and boil it; then add nitric acid with a little nitrous acid. A red color is produced if tyrosine is present, and a red precipitate is seen.

Hofmeister's t.: 1. (for leucine) warm the suspected liquid with mercurous nitrate; if leucine is present, metallic mercury is deposited. 2. (for peptones) mix phosphotungstic and hydrochloric acids; let the mixture stand twenty-four hours, and filter. With this reagent a solution containing peptones with no albumin will afford a precipitate.

Hogben t., see *Xenopus t.*

Holmgren's t.: the use of skeins of colored worsted as a test of the perception of colors; a skein is given to the subject of the test, and he is asked to match it out of a set of variously colored skeins.

Holten's t.: a creatinine clearance test for renal efficiency.

Hopkins' thiophene t. (for lactic acid): add a few drops of stomach contents to 5 ml. of concentrated sulfuric acid containing a little cupric sulfate and heat two minutes. Cool and add a very little thiophene. A cherry-red color indicates lactic acid.

Hopkins-Cole t. (for protein): glyoxylic acid is prepared by the action of sodium amalgam on a solution of oxalic acid. A few drops of this solution are added to the protein solution and strong sulfuric acid is poured down the side of the tube. A bluish violet color is produced at the junction of the two fluids due to the presence of tryptophan.

Hoppe-Seyler t.: 1. (for carbon monoxide in the blood) add to blood twice its volume of a solution of sodium hydroxide of 1.3 specific gravity: normal blood will form a dingy brown mass with a green shade if spread thin on a white surface; but if carbon monoxide is present, the mass is red, and so is the thin layer. 2. (for xanthine) add the substance to be tested to a mixture of chlorinated lime in a porcelain dish; a dark-green ring is formed at first.

hormone t., see specific tests, including *Aschheim-Zondek t.,* and *Siddall t.*

Horsley's t. (for dextrose): the solution is boiled with potassium hydroxide and potassium chromate; if dextrose is present a green color is produced.

Hotis t. (for garget or mastitis in cows): fresh milk containing bromocresol purple is incubated for twenty-four hours; a positive reaction is the formation of yellow flakes on the sides of the test tube.

Houghton's t.: ergot is given to a white leghorn cock; if the comb becomes darkened there is ergot activity and the result is positive.

Howard t. (for renal function): both ureters are catheterized and urine collected separately from each kidney; the quantity of urine in each collection and its sodium and creatinine concentrations are then determined. Called also *split-renal function t.*

Howell's t. (for prothrombin): a test for the amount of prothrombin in the blood depending on the clotting time of the oxalated plasma treated with calcium chloride and thromboplastin.

Huddleson's t.: an agglutination test for brucellosis in man.

Huggins t. (for cancer): a sample of patient's blood is treated with iodoacetate and is heated; the serum albumin clots more readily in healthy subjects than in subjects who have cancer.

Huhner t.: examination of the secretions aspirated from the vaginal fornix and the endocervical canal after coitus, to determine the number and condition of spermatozoa present and the extent to which they have penetrated the cervical mucus.

human erythrocyte agglutination t.: an adaptation of the sheep cell agglutination test, human Rh-positive cells coated with incomplete anti-Rh antibody being used instead of the sheep red blood cells sensitized with rabbit gamma globulin. The sera of some patients with rheumatoid arthritis will agglutinate these cells. The agglutination may be inhibited by some normal sera, and not others, and this test is the basis for the determination of the inherited gamma globulin groups (Gm system). Abbreviated *HEAT*.

Hunt's t., see under *reaction.*

Huppert's t. (for bile pigments): the suspected solution is treated with lime water or calcium chloride solution and then with a solution of ammonium or sodium carbonate. The precipitate of bile pigments may be removed by shaking with chloroform after washing with water and acidulating with acetic acid. Bilirubin colors the chloroform yellow and the acetic acid solution green.

Huppert-Cole t. (for bile pigments): to 50 ml. of the unknown add an excess of baryta water or lime water. To the precipitate add

5 ml. of 95 per cent alcohol, 2 drops of strong sulfuric acid, and 2 drops of a 5 per cent solution of potassium chlorate. Boil, and the supernatant liquid will be emerald or bluish green if bile is present.

Hurtley's t. (for acetoacetic acid): to 10 ml. of the unknown add 2 ml. of strong hydrochloric acid and 1 ml. of fresh 1 per cent sodium nitrite solution. Shake and add 15 ml. of concentrated ammonium hydroxide and 5 ml. of 10 per cent ferrous sulfate. A violet or purple color develops slowly if acetoacetic acid is present.

hydrobilirubin t., see *Schmidt's t. (1).*

hydrochloric acid t., see specific tests, including *Bell's t. (1), Boas' t. (1), (2), Contejean t., Dennis and Silverman's t., dimethyl-amino-azobenzene t., Ewald's t. (1), Günzburg's t., Herzberg's t., Leo's t., Lüttke's t., Maly's t. (1), (2), Mohr's t., Rabuteau's t. (1), (2), Riegler's t. (2), Scivoletto's t., Szabo's t., Töpfer's t., Uffelmann's t., von Jaksch's t. (1), (2), Winckler's t. (2), Witz's t.*

hydrogen peroxide t. (for blood): a 20 per cent solution of hydrogen peroxide is added to the suspected fluid; if blood is present even in minute proportion, bubbles will rise, forming foam on the surface of the fluid.

hydrostatic t.: floating of the lungs of a dead infant when placed in water indicates that the child was born alive; called also *Raygat's t.*

hydroxyaromatic acid t., see *Hanke and Koessler's t.*

hydroxylamine t. (for dextrose), see *Bang's method,* under *method.*

hyperemia t., see *Moscowitz's t.*

hypochlorite-orcein t. (for glycerin): to 3 ml. of the unknown add 3 drops of N/1 sodium hypochlorite solution and boil one minute to drive off chlorine. Then add an equal volume of strong hydrochloric acid and a little orcein. Boil, and a violet or greenish blue color indicates glycerine or a sugar, or some substance that can be oxidized to a sugar.

hypoxanthine t., see *Kossel's t.*

icterus index t.: the comparison by dilution colorimetry of the blood serum with a standard solution of potassium bichromate.

Ide t. (for syphilis): one drop of blood, or serum, or cerebrospinal fluid, is mixed with saline on a hollow glass slide and the antigen is added. The slide is then shaken for four to five minutes and the result read under the low-power objective of a microscope or with a powerful lens. Positive reactions show purplish blue clumps, while in a negative reaction there is no sign of clumping. The preparation of the antigen: oxheart is extracted with alcohol, and then to the extract are added measured amounts of cholesterin, gum benzoin, and dyes (crystal violet and azure II).

Ilimow's t. (for albumin): acidulate with acid sodium phosphate, filter, and add a solution of phenol (1:20); a cloudy precipitate indicates albumin.

Ilosvay's t. (for nitrites), see under *reagent.*

imidazole t., see *Hanke and Koessler's t.*

immobilization t.: detection of antibody based on its ability to inhibit the motility of a bacterial cell or protozoan.

indican t., see specific tests, including *Amann's t., Jaffé's t. (2), Jolles' t. (2), MacMunn's t., Obermeyer's t., Porter's t. (2), Wang's t., Weber's t. (2).* See also *indican, methods for,* under *method.*

indigo carmine t. (for renal permeability): a solution of indigo carmine is injected intramuscularly and the time of its appearance in the urine is noted. Normally, it begins to appear in about five minutes. Delay beyond this points to defective renal adequacy.

indigo red t., see specific tests, including *Rosenbach's t.* and *Rosin's t.*

indole t., see specific tests, including *Baeyer's t. (2), cholera red t., Herter's t. (1), Kondo's t., Legal's t. (2), Nencki's t., nitroso-indole-nitrate t., pine wood t., Salkowski's t. (3), vanillin t.* See also *indole, methods for,* under *method.*

indophenol t. (for the presence of oxidizing enzymes in cells and for detecting the presence of myeloblasts, etc.): cover glass films of the cells are fixed in alcohol. Float for ten to twenty minutes, face down, upon a freshly prepared solution of equal parts of 1 per cent aqueous solutions of dimethyl paraphenylenediamine and of alphanaphthol (Nadi's reagent). Rinse and mount in glycerin. The cytoplasm of cells containing oxidase (myeloblasts, myelocytes, polymorphonuclears, and large mononuclears) will be colored blue by indophenol.

inkblot t., see *Rorschach t.*

inoculation t. (for acute anterior poliomyelitis): the cerebrospinal fluid of the suspected patient (i.e., before the appearance of paralytic symptoms) is injected into a monkey. Paralysis will appear in the monkey within seven days if the patient is affected.

inosite t., see specific tests, including *Gallois' t., Scherer's t. (1), Seidel's t.*

intelligence t., see specific tests, including *alpha t., beta t., Binet t., group t., Herring's t., Kuhlmann t., performance t., Pintner-Patterson t., Rorschach t., Stanford t., vocabulary t., Yerkes-Bridges t.*

intracutaneous t.: one which involves introduction of an antigen between the layers of the skin and evaluation of the reaction elicited by it.

intracutaneous tuberculin t., see *Mantoux t.*

intradermal salt solution t., *McClure-Aldrich t.*

inulin clearance t., see under *inulin.*

iodine t.: 1. (for starch) when a compound solution of iodine is added to starch, and especially to an acid or neutral solution of cooked starch paste, a deep-blue color is produced which disappears

on heating and reappears on cooling. Erythrodestrin and glycogen give a red color with iodine. 2. see specific tests, including *Al-fraise's t.*, *Bourget's t.*, *Lesser's t.*, *Winckler's t.* (3).

Iodoform t.: 1. (for acetone) see *Gunning's t.* 2. (for alcohol) make the unknown alkaline, and add a few drops of iodine solution. Heat gently, and yellow iodoform crystals indicate alcohol or some similar body.

Iowa pressure articulation t.: a test of the ability to produce the consonant sounds in isolated words, particularly the pressure sounds.

iron t., see specific tests, including *Brugsch's t.*, and *Tizzoni's t.* See also *iron, methods for*, under *method*.

Irresistible impulse t.: a court decision supplementing the *M'Naghten rule*, which stated that if it could be shown that a person accused of an unlawful act was impelled to commit the act by an urge which he could not resist, then he could not be held criminally responsible for such action. It is based on the assumption that mental illness produces sudden or spontaneous impulses to commit criminal acts. See also *M'Naghten rule*, under *rule*, and *Durham's decision*, under *decision*.

Irrigation t.: the patient is examined with the bladder full. The anterior urethra is washed out with a warm solution of boric acid (3 per cent), the perineum being compressed to prevent the entrance of the fluid into the posterior urethra. When the washings are perfectly clear, the patient voids his urine and any turbidity must come from the posterior urethra.

Ishihara's t.: 1. a test for color vision made by the use of a series of plates composed of round dots of various sizes and colors. 2. a flocculation test for syphilis, using as antigen an alcoholic extract of the kidney of a pregnant rabbit.

Israelson's t.: the reagent consists of 1 part of alcoholic extract of dried brain of rabbit, guinea pig, or beef, 9 parts of physiologic solution of sodium chloride, and one or two drops of a 0.2 per cent solution of fuchsin for each milliliter of the reagent. To one drop of the suspected serum, placed on a microscopic slide, one drop of reagent is added and mixed with the aid of a glass rod. In positive reactions there are rosy, flaky shreds in transparent fluid. In negative reactions the appearance is uniformly rosy. In weakly positive reactions, the flocculent particles are very small but are plainly visible under the magnifying lens.

Ito-Reenstierna t.: intracutaneous injection of a vaccine of killed *Hemophilus ducreyi* elicits a positive skin reaction in persons who have been infected with chancroid.

Jacobsthal's t. (for serodiagnosis of syphilis): 1. the patient's serum is mixed with alcoholic extract of syphilitic liver in the proportion of 1 to 10, and the resulting precipitate is examined with the darkfield illuminator. A strong positive reaction appears as a clumpy precipitate, a weak positive reaction as a small conglomeration of little fat particles, while a negative reaction is shown as a thick emulsion of fine dancing particles: called also *optic serodiagnosis of syphilis*. 2. a modification of the Wassermann test in which complement fixation is done at a low temperature.

Jacoby's t. (for pepsin): the greatest dilution of gastric juice which will clarify an acid solution of ricin in three hours at 38° C. gives the number of peptic units in the juice.

Jacquemin's t. (for phenol): add to the suspected liquid an equal quantity of aniline and some sodium hypochlorite in solution; a blue color is produced.

Jadassohn's t., see *irrigation t.*

Jadassohn-Bloch t.: a skin test for allergic conditions made by holding the suspected substance in contact with the skin for a considerable time by binding it on.

Jaffe's t.: 1. (for creatinine and dextrose) to the liquid add trinitrophenol and then make alkaline with sodium hydroxide. A red color without heating indicates creatinine; a red color after heating indicates dextrose. 2. (for indican) to the suspected liquid are added an equal amount of concentrated hydrochloric acid, 1 ml. of chloroform, and a few drops of a strong solution of chlorinated soda. The chloroform is colored blue if indican is present.

Jaksch's t., see *von Jaksch's t.*

Janet's t. (for differentiating between functional and organic anesthesia): the patient is instructed to say "yes" or "no," according as he does or does not feel the examiner's touch. He may say "no" in functional anesthesia, but he will say nothing in cases of organic anesthesia.

Jansen's t. (for osteoarthritis deformans of the hip): the patient is told to cross his legs with a point just above the ankle resting on the opposite knee; this motion is impossible when the disease exists.

Javorski's t., Jaworski's t.: in hourglass stomach a splashing sound will be heard on succussion of the pyloric portion after siphonage.

Jendrasic's t. (for water-soluble vitamin B): prepare the reagent by mixing equal volumes of N/10 ferric chloride and N/10 potassium ferricyanide and use at once. To a concentrated aqueous solution of the substance add about 2 per cent of acetic acid, then add the reagent as long as the depth of the blue color increases. Stopper, let stand ten minutes, and read. One to five volumes of distilled water may be added to reduce the color. A distinct blue color or a bright blue precipitate is positive. A green color is negative.

Jenner-Kay t.: a test for serum phosphatase.

Jenning's t.: a modification of Holmgren's test for color perception. Small patches of colored worsted are placed so as to be protected

from light and dust. The person to be examined indicates his color selection by pricking the record sheet with a pointed pencil.

Jochmann's t., 1. Müller-Jochmann t. 2. antitrypsin t.

Johnson's t. (for albumin): put the urine in a test tube and carefully pour upon it a strong solution of trinitrophenol; a white coagulum of albumin appears at the junction of the liquids which heating augments.

Jolles' t.: 1. (for bile pigments in urine) the urine is shaken with barium chloride solution, chloroform, and a few drops of hydrochloric acid. The precipitate is removed and partially dried. Treatment with 2 drops of strong sulfuric acid will bring out the characteristic colors of the bile pigments. 2. (for indican) to the urine add a little alcoholic solution of thymol and fuming hydrochloric acid containing 0.5 per cent of ferric chloride; chloroform shaken with this mixture becomes violet in color.

Jones and Cantarow t., see *urea concentration t.*

Jorissen's t. (for formaldehyde): add 0.5 ml. of a 1 per cent solution of phloroglucinol in 10 per cent sodium hydroxide to 1 ml. of the urine; a bright red color indicates free formaldehyde.

Justus' t. (for syphilis): administration of mercury by inunction or subcutaneously; if syphilis is present, there will be a fall of hemoglobin of from 10 to 20 per cent.

Kabatschnik's t. (for hearing): (obs.) a tuning-fork is held near the open ear and removed the moment the sound ceases; it is then applied to the nail of the examiner's finger and this finger is placed so as to close the patient's external auditory meatus. In a normal ear the sound will be heard again, although the fork has not been struck a second time.

Kafka's t. for cerebrospinal syphilis: a modification of the mastic test, made with a solution of sodium bicarbonate, sodium chloride, mastic resin, and a stain.

Kahn t.: 1. [R. L. Kahn] a precipitation test for syphilis. The serum is inactivated as in the Wassermann test. To 0.3 ml. of serum in a test tube is added 0.05 ml. of diluted antigen. After shaking for three minutes the tube is incubated at 37° C. overnight. A positive reaction is shown by the presence of one or more lumps of precipitate. In the "presumptive" Kahn test a sensitized antigen is employed. 2. [Herbert Kahn] a test for the presence of cancer based on quantitative determination of a certain constituent of the patient's blood called albumin A.

Kantor and Gies' t. (for proteins): test papers, made by dipping them in Gies' reagent (see under *Gies' t.*), drying, and cutting into strips, are used in making biuret test.

Kaplan's t. (for globulin-albumin in spinal fluid): to 0.2 ml. of the fluid in a test tube is added 0.3 ml. of distilled water. This is boiled up twice. Three drops of a 5 per cent solution of butyric acid in physiologic salt solution are added and the mixture carefully underlaid with 0.5 ml. of a saturated aqueous solution of ammonium sulfate. After twenty minutes a definite ring will form at the point of contact if globulin-albumin is present.

Kapsinow's t. (for bile pigments): add Obermayer's reagent to the urine and heat; a green color indicates bile pigments.

Kashiwado's t. (for pancreatic disease): the patient swallows stained nuclei from a calf's thymus mixed with lycopodium grains; these later serve to indicate the portion of the feces which is to be examined.

Kastle's t. (for raw milk): to 5 ml. of the milk add 0.3 ml. of N/10 hydrogen peroxide solution and 1 ml. of a 1 per cent solution of tricrosol; raw milk will give a slight yellow color, boiled milk will not.

Kastle-Meyer t., see *phenolphthalein t.*

Katayama's t. (for carbonyl-hemoglobin): to 5 drops of blood add 10 ml. of water, 5 drops of orange-colored ammonium sulfide, and enough acetic acid to make the mixture acid. CO causes a rose-red color; normal blood, a dirty greenish gray.

Kathrein's t., see *Maréchal's t.*

Kato t.: a technique for the quantitative estimation of the worm burden of an individual, based on estimation of a standard 50 mg. sample of fresh feces cleared with glycerine.

Kelling's t.: 1. (for lactic acid in the stomach) the stomach contents are diluted with water, and to them are added one or two drops of a 5 per cent watery solution of ferric chloride. A greenish yellow color is formed when lactic acid is present. 2. a test for the presence and location of an esophageal diverticulum by the sound of swallowing. 3. (for gastric carcinoma) a test based on the fact that the serum of cancer patients will dissolve the red corpuscles of the hen.

Kentmann's t. (for formaldehyde): dissolve in a test tube 0.1 gm. of morphine in 1 ml. of sulfuric acid; add, without mixing, an equal volume of the liquid to be tested; in a short time the latter will take on a reddish violet color if any formaldehyde is present.

Kerner's t. (for creatinine): acidify the suspected solution and add phosphomolybdic or phosphotungstic acid in solution; if creatinine is present, it will form a crystalline precipitate.

kinase function t., see specific tests, including *Albarra's t.*, *amylase t.* (1), *blood-urea clearance t.*, *concentration t.*, *creatinine clearance t.*, *Fishberg concentration t.*, *glycerophosphate t.*, *Holten's t.*, *Howard t.*, *indigo carmine t.*, *inulin clearance t.*, *lactose t.* (1), *methylene blue t.* (1), *Mosenthal's t.*, *Nyiri's t.*, *phenolsulfophthalein t.*, *phlorhizin t.*, *potassium iodide t.*, *Pregl's t.*, *radioactive renogram t.*, *radioisotope renal excretion t.*, *Rehberg's t.*, *Simonelli's t.*, *Strauss's t.* (2), (4), *urea concentration t.*, *urine concentration t.*, *Volhard's t.* (2),

Wohlgemuth's t., xylose clearance or tolerance t., xylose concentration t.

Killian's t. (for carbohydrate tolerance): two hours after a standard breakfast, give the patient 200 ml. of water. One hour later, give 1.75 gm. of dextrose per kilogram of body weight. Determine amount of dextrose in blood specimens taken at hourly intervals, and also in the twenty-four-hour specimen of urine.

Kinberg's t. (for liver function): after a low nitrogen content diet for several days, 50 gm. of gelatin dissolved in hot chocolate is taken fasting; in liver disease there is an increase in the output of amino acids, except in congestion of the liver and catarrhal jaundice.

Kitzmiller t., see *antithrombin t.*

Kjeldahl's t. (for nitrogen), see under *method.*

Klein t., see under *reaction.*

Klimow's t. (for blood in urine): to a specimen of urine is added an equal quantity of H_2O_2 and a little powdered aloin; formation of a purple color indicates the presence of blood.

Kline t., Kline-Young t.: a microscope slide precipitation test for syphilis.

Knapp's t.: 1. (for sugar in the urine) ten gm. of mercuric cyanide are dissolved in 100 ml. of a solution of caustic soda and diluted; heated with diabetic urine, metallic mercury is precipitated. 2. (for organic acids in stomach) stomach contents are filtered and 1 ml. treated with 5 ml. of ether; the extract is floated on dilute iron solution in test tubes, and the various colored rings formed will indicate the presence of the various acids.

Knott t.: a test for microfilariae or worm larvae in the blood by lysis of the blood in a dilute (2 per cent) formalin solution, centrifugation, and examination of the stained sediment for microfilariae or larvae.

Kober t.: 1. (for estrogens) when estrogens are treated with a mixture of sulfuric acid and phenolsulfonic acid and then diluted with water, a clear pink color is formed. 2. (for proteins in milk) the proteins are precipitated with sulfosalicylic acid and the precipitate estimated nephelometrically.

Kobert's t. (for hemoglobin): the suspected liquid is treated with zinc powder or a solution of zinc sulfate; the resulting precipitate is stained red by alkalis.

Kolmer's t.: 1. a modification of the Wassermann test for syphilis. 2. a specific complement-fixation test for various bacterial diseases.

Kondo's t. (for indole or skatole): to 1 ml. of the unknown add 3 drops of solution of formaldehyde and 1 ml. of concentrated sulfuric acid; a violet-red color indicates indole, a yellow or brown color skatole.

Konew's t. (for glanders): a test tube is filled to the depth of 3 cm. with mallease, and blood serum from the subject is introduced by means of a pipet at the bottom of the tube beneath the mallease. If the patient is affected with glanders a white cloudiness will appear along the line separating the two liquids. Called also *ring t.*

Korotkoff's t.: in aneurysm, if the blood pressure in the peripheral circulation remains fairly high while the artery above the aneurysm is compressed, the collateral circulation is good.

Kossel's t. (for hypoxanthine): the liquid to be tested is treated with zinc and hydrochloric acid and with sodium hydroxide in excess; if hypoxanthine is present, a ruby-red color is produced.

Kottmann's t. (for thyroid function): to 1 ml. of clear blood serum add 0.25 ml. of 0.5 per cent solution of KI and 0.3 ml. of 0.5 per cent solution of $AgNO_3$. Expose serum for five minutes to light of 500-watt Mazda lamp at 25 cm. distance. Then add 0.5 ml. of 0.25 per cent solution of hydroquinone. Normal serum turns brown in a short time; that of patients with hypothyroidism in a shorter time; that of patients with hyperthyroidism only after considerable delay.

Kowarsky's t.: 1. (for dextrose in urine) in a test tube place 5 drops of pure phenylhydrazine, 10 drops of glacial acetic acid, and 1 ml. of saturated solution of sodium chloride. To the mass which results add 2 or 3 ml. of urine; boil two minutes, and cool. If dextrose is present, crystals of phenylglucosazone will be seen with the microscope. 2. (blood test for diabetes) test of the patient's blood based on the reduction of a copper solution by the sugar in the blood to cuprous oxide, and the dissolving of the latter in an acid solution of ferrous sulphate, which causes the separation of an equal amount of ferrous oxide, which is measured by titration with potassium permanganate.

Krokiewicz's t. (for bile pigment in urine): 1 ml. of a 1 per cent solution of sodium nitrate and 1 ml. of a 1 per cent solution of sulfanilic acid are mixed and added drop by drop to 0.5 ml. of urine. The amount added must not exceed 10 drops. The mixture becomes bright red, changing to amethyst on the addition of 1 or 2 drops of concentrated hydrochloric acid and a large amount of water.

Kuhlmann's t.: a modification of the Binet's test for intelligence so changed as to adapt it for use on infants.

Külz's t. (for β -hydroxybutyric acid): 1. the fermented urine is evaporated to a syrupy consistence, strong sulfuric acid in equal volume is added, and the mixture is distilled. If hydroxybutyric acid is present, α -crotonic acid will be formed, which will crystallize. 2. if, after fermentation, the urine shows dextrorotatory properties, β -hydroxybutyric acid is present.

Kurzrok-Miller t.: an *in vitro* test of compatibility of cervical mucus and spermatozoa, involving observation, under the microscope, of the behavior of sperm placed beside a sample of mucus taken from the cervical canal at the time of ovulation.

Kveim t. (for sarcoidosis): intracutaneous injection of an antigen prepared from human sarcoid tissue, usually lymph nodes or spleen; appearance in about a week of a red-purple papule which increases in size and on biopsy resembles the tuberculoid granulomas of sarcoidosis is considered positive for sarcoidosis.

Laborde's t. (for death), see *Cloquet's needle sign*, under *sign.*

Lactic acid t., see specific tests, including *Boas' t. (3)*, *Hopkins' thiophene t.*, *Kelling's t. (1)*, *MacLean t.*, *Strauss' t. (1)*, *Uffelmann's t.* See also *lactic acid, methods for*, under *method.*

Lactose t.: 1. (for renal function) twenty gm. of lactose dissolved in 20 ml. of distilled water are injected under aseptic precautions into a vein at the bend of the elbow. The urine is collected hourly and tested (Nylander's test) until the sugar reaction ceases to be positive. If lactose secretion continues for more than five hours, renal disease is indicated. 2. see specific tests, including *Cole's t. (2)*, *Mathews' t.*, *Meyer's t. (2)*, *Moore's t.*, *mucic acid t.*, *Rubner's t. (2)*.

Ladendorff's t. (for blood): treat the suspected liquid with tincture of guaiacum, and afterward with eucalyptus oil; the upper stratum of the mixture is turned violet and the lower blue if blood is present.

Lancefield precipitation t.: a ring precipitation test used to classify and identify streptococci. Group specific antibody reacts *in vitro* with group specific polysaccharide to produce a ring of precipitation where the two reagents react at the interface.

Landau color t. (for syphilis): to 0.2 ml. of clear serum from the patient add 0.01 ml. of a reagent consisting of a 1 per cent solution of iodine in carbon tetrachloride. Shake thoroughly until the iodine color has disappeared. Let stand for four or five hours. A positive reaction is shown by a clear, transparent, yellow color; a negative one by an opaque grayish color.

Lang's t. (for taurine): the solution to be tested is boiled with freshly prepared mercuric oxide; taurine will cause a white precipitate to appear.

Lange's t., 1. see *colloidal gold t.* 2. (for acetone in urine) 15 ml. of urine are mixed with 0.5 to 1 ml. of acetic acid, and a few drops of a freshly prepared concentrated solution of sodium nitroprusside added. The mixture is overlaid with ammonia. At the point of junction a characteristic violet ring is formed.

lantern t.: a test for color blindness made with a set of specially devised lanterns.

latex agglutination t., latex fixation t.: a test in which soluble antigens are adsorbed to polystyrene latex, i.e., to very small spherical particles of the plastic in suspension. The antigen-coated latex particles agglutinate following the addition of specific antibody. This test has been used extensively for the detection of rheumatoid factor and of C-reactive protein.

Lautier's t. (for tuberculosis): a few drops of a 1 per cent solution of Old Tuberculin are placed on the arm, covered with cotton, and left for forty-eight hours; if tuberculosis is present there will develop a patch of vesicles on an elevated reddened base.

LE t.: serum from patients with systemic lupus erythematosus is combined with normal leukocytes; following incubation at 37°C., polymorphonuclear leukocytes engulf nuclei or nuclear fragments of cells to form so-called LE cells.

Leach's t. (for formaldehyde): to 10 ml. of milk add 10 ml. of concentrated hydrochloric acid containing 0.02 per cent of ferric chloride. Heat, and if formaldehyde is present a violet color will be produced.

lead t., see specific tests, including *Abrams' t.* and *Blyth's t.*

Lebbin's t. (for formaldehyde in milk): a small amount of milk is boiled with a mixture of 0.05 gm. of resorcinol and the same quantity of a 5 per cent solution of sodium hydroxide. Change from a yellow to a red color indicates the presence of formaldehyde.

Lechini's t. (for blood in urine): ten ml. of urine are treated with 1 drop of acetic acid and 3 ml. of chloroform; with blood the chloroform layer becomes red.

Lee's t. (for rennin): add 5 drops of gastric juice to 5 ml. of milk; coagulation should take place in twenty minutes in the incubator.

Leffmann-Beam t.: a modification of the Babcock test used for determination of fat concentration in human breast milk.

Legal's t.: 1. (for acetone) render the urine acid with HCl and distill it. Solution of sodium hydroxide and sodium nitroprusside added to the distillate produce a ruby-red tint, which acetic acid changes to purple. Creatinine will also produce a red color, but this color disappears when acetic acid is put in. 2. (for indole) to the unknown add a few drops of sodium nitroprusside; make alkaline with potassium hydroxide. The violet color changes to blue on the addition of acetic acid.

Leiner's t. (for casein or paracasein): a piece of feces is fixed by heat on a slide and stained with a solution of acid fuchsin and methyl green; a pale blue or violet color is formed.

leishmanin skin t., see *Montenegro t.*

Le Nobel's t., see *Nobel's t.*

lentochol t., see *Sachs-Georgi t.*

Leo's t. (for free hydrochloric acid): calcium carbonate is added to the solution, which is neutralized if the acidity is due to free acid, but not if due to acid salts.

lepromin t. (for leprosy): intradermal injection of lepromin is followed by development of an inflammatory papule, which may ulcerate, in persons with cellular immunity against *Mycobacterium leprae*; this includes well over half the normal adult population, and

all patients with tuberculoid leprosy, but no patients with lepromatous leprosy. The test is read at three weeks. Called also *Mitsuda t.*
leprosy t., see specific tests, including *histamine flare t.*, *lepromin t.*

Lesser's t.: any iodine-containing secretion turns yellow when treated with calomel.

leucine t., see specific tests, including *Hofmeister's t.* (1), *Scherer's t.* (2).

Levinson t. (for tuberculous meningitis and other intracranial conditions): one ml. of spinal fluid is placed in each of the two test tubes 8 mm. in diameter. To one is added 1 ml. of a 1 per cent solution of mercuric chloride and, to the other, 1 ml. of a 3 per cent solution of sulfosalicylic acid. The tubes are well shaken, stoppered, and allowed to stand at room temperature for forty-eight hours. At the end of twenty-four and forty-eight hours the column of precipitate in each tube is measured in millimeters. When the height of the precipitate in the first test tube is seen to be twice that of the precipitate in the second tube, the result of the test is positive.

levulose t., see *Borchardt's t.*, *Cipollina's t.*, *methylphenylhydrazine t.*, *Rubner's t.* (2), *Selivanoff's t.*

levulose tolerance t.: a test of hepatic function based on the power of the liver to absorb and store large quantities of levulose.

Lewis and Pickering t.: the employment of a rapid rise of temperature to produce vasodilatation in the part to be tested for the state of the peripheral circulation.

Lichtheim t.: if a patient is able to indicate the number of syllables in a word which he cannot utter, it indicates that the cortex is less involved than the association fibers.

Lieben's t. (for acetone in urine): acidulate and distill it, and treat with ammonia and tincture of iodine; if acetone is present, a yellow precipitate of iodoform is produced.

Lieben-Ralfe t. (for acetone): boil 1.3 gm. of potassium iodide in 3.75 ml. of solution of potassium hydroxide; float the urine on the surface of the reagent in a test tube: a precipitate of phosphate is formed at the upper surface of the reagent, which, if acetone is present, will be rendered yellow by iodoform.

Liebermann's t. (for proteins): a precipitate is made from the urine with alcohol; wash this with ether and heat with strong hydrochloric acid: this produces a fine violet-blue color if proteins are present.

Liebermann-Burchardt t. (for cholesterol): dissolve the suspected substance in chloroform, add acetic anhydride, and treat with strong sulfuric acid; if cholesterol is present, a violet color is produced, which soon changes to green.

Liebig's t. (for cystine): boil the suspected substance with a sodium hydroxide solution and a little lead sulfide; if cystine is present, the lead sulfide will form a black precipitate.

Ligat's t. (for cutaneous hyperesthesia in abdominal disease): the skin is pinched between the thumb and forefinger and lifted up from the parts below.

Lignières t.: a modification of the cutireaction consisting in shaving the skin and rubbing in a few drops of raw tuberculin; in tuberculous persons there appear papules whose color varies from pale pink to deep red.

limulus t.: an extract of blood cells from the horseshoe crab (*Limulus polyphemus*) is exposed to a blood sample from a patient; if gram-negative endotoxin is present in the sample, it will produce gelation of the extract of blood cells.

Lindemann's t. (for acetoacetic acid in urine): to about 10 ml. of urine add 5 drops of 30 per cent acetic acid, 5 drops Lugol's solution, and 2 or 3 ml. chloroform, and shake. The chloroform does not change color if diacetic acid is present, but becomes reddish violet in its absence. Uric acid also decolorizes iodine, and if much is present double the amount of Lugol's solution should be used.

Lindner's t., see under *sign*.

Links' t. (for carcinoma): a serum test for early carcinoma based on the relationship of the potassium and magnesium content of the serum to the erythrocyte count of the blood.

lipase t.: 1. (for liver function) a test based on the fact that lipase is present in the blood plasma of normal persons in a constant amount. Liver injury will cause a rise in the lipase of the blood plasma as measured by the power of the blood to split ethyl butyrate. 2. see specific tests, including *copper soap t.*, *ethyl butyrate t.*, *litmus milk t.*

Lipps's t., see *sand t.*

litmus milk t. (for pancreatic lipase): add pancreatic lipase to litmus milk, incubate, and note change of color; pancreatic lipase is indicated by a pink coloration.

liver function t., see specific tests, including *alkaline phosphate t.*, *Bauer's t.* (2), *blood ammonia t.*, *bromsulphalein excretion t.*, *Bufano t.*, *camphor t.*, *Dedichen's t.*, *fibrinogen t.*, *Hanger's t.*, *Kinberg's t.*, *levulose tolerance t.*, *lipase t.*, *Macdonald's t.*, *nitrogen partition t.*, *phenoltetrachlorophthalein t.*, *Quick's t.* (1), *rose bengal t.*, *Rosenthal's t.* (2), *santonin t.*, *Strauss's t.* (3), *thymol turbidity t.*, *Zappacosta's t.*

Loewe's t. (for dextrose in urine): treat the urine with a solution of sodium carbonate containing bismuth subnitrate and glycerine; sugar gives a dark precipitate.

Loewi's t.: three drops of epinephrine chloride solution 1:1000 are instilled into the conjunctival sac, followed in five minutes by 3 more drops. This produces dilatation of the pupil in pancreatic insufficiency, diabetes, and hyperthyroidism.

Lombard's t.: a test for simulated deafness using a noise apparatus.

loudness balance t's: tests for determining whether perception of loudness rises normally with progressive increases in intensity of a pure tone.

Löwenthal's t. (for dextrose not in urine): boil the suspected substance with a solution of ferric chloride, tartaric acid, and sodium carbonate; if dextrose is present, the liquid becomes dark, and iron oxide is freely precipitated.

Lowy's t.: a modified Abderhalden test for the diagnosis of cancer.

Lücke's t. (for hippuric acid): add boiling hot nitric acid, evaporate, and heat the dry residue; a strong odor of nitrobenzene proves the presence of hippuric acid.

Luebert's t. (for formaldehyde in milk): five gm. of coarsely powdered potassium sulfate are placed in a 100 ml. flask; 5 ml. of suspected milk are put over it by a pipet, and 10 ml. of sulfuric acid (specific gravity, 1.84) are run down the side of the flask. If formaldehyde is present, a violet coloration soon occurs; if none is present, the fluid becomes brown or black.

luetin t., see *Noguchi's luetin reaction*, under *reaction*.

lupus band t.: an immunofluorescence test to determine the presence and extent of immunoglobulin and complement deposits at the dermal-epidermal junction of skin specimens from patients with systemic lupus erythematosus.

lupus induction t.: serum from a patient suspected of having lupus erythematosus is mixed with normal blood and rotated in a vial with glass beads to induce the formation of the LE cell.

Lüttke's t. (for free hydrochloric acid in gastric juice): a quantitative determination in succession of the total chlorides, the chlorine in the fixed chlorides, and then the combined and free HCl.

Lyle and Curtman's t. (for blood): boil the stool with acetic acid, extract it with ether, and to the ethereal extract add a little guaiaconic acid in 95 per cent alcohol; a decided green, light-blue, or purple color indicates the presence of blood.

Lyon's t., Meltzer-Lyon t.

McClure-Aldrich t.: an 0.8 per cent solution of sodium chloride is injected intradermally; the rate with which it is absorbed (disappearance of wheal or Q. R. Z.) is decreased from the normal time in intoxications.

MacDonagh's t., see *gel t.*

Macdonald's t. (for liver function): inject 2 mg. per kilogram of sodium sulfobromophthalein (Bromsulphalein) and take blood specimens every five minutes for thirty minutes after the injection.

Machado t., **Machado-Guerreiro t.** (for Chagas' disease): a complement-fixation test, using as antigen an extract of the spleen of puppies severely infected with *Trypanosoma cruzi*.

Macht t.: the effect of blood sera on the growth of seedlings of *Lupinus albus*; the serum of pernicious anemia and other abnormal blood conditions delays the growth of the seedlings.

McKinnon's t. (for smallpox): material from the patient's lesion is inoculated intradermally into a normal rabbit and into a vaccinated rabbit; if the material contains smallpox virus the normal rabbit, but not the immunized one, will develop a local lesion.

MacLagan's t., see *thymol turbidity t.*

MacLean t. (for lactic acid in gastric juice): to 5 ml. of gastric juice add 5 drops of the following reagent: ferric chloride, 5 gm.; concentrated hydrochloric acid, 1.5 ml.; saturated solution of mercury bichloride, 100 ml. Lactic acid is indicated by a yellow coloration.

MacLean-de Wesselow t., see *urea concentration t.*

MacMunn's t. (for indican): boil the urine in an equal quantity of hydrochloric acid and a little nitric acid; cool, and shake with chloroform, which becomes violet, and shows one absorption band due to indigo blue and one due to indigo red.

McMurray's t. (for torn meniscus): as the patient lies supine with knee fully flexed, the examiner rotates the patient's foot fully outward and the knee is slowly extended; a painful "click" indicates a tear of the medial meniscus of the knee joint. If the click occurs when the foot is rotated inward, the tear is in the lateral meniscus.

MacQuarrie t.: a pencil and paper test for estimating general mechanical ability.

macrophage migration (inhibition) t.: migration inhibition t.

MacWilliams' t. (for albumin): take 20 ml. of urine and add 2 drops of a saturated solution of salicylsulfonic acid; if albumin is present, a cloudiness or precipitate will be seen; if albumoses or peptones are present, this precipitate will disappear on boiling, but appear again on cooling.

magnesianitric t. (for albumin in urine): mix 1 part of nitric acid and 1 part of magnesium sulfate; turbidity indicates the presence of albumin.

Magpie's t. (for salts of mercury): stannous chloride is added to the suspected solution; a white and gray precipitate is formed, consisting of metallic mercury and mild mercurous chloride.

malaria t., see specific tests, including *Chorine's t.*, *Henry's t.*, *protein tyrosine t.*, *Urriolla's t.*

male frog t., **male toad t.** (for pregnancy): urine or serum of a woman suspected of being pregnant is injected into the dorsal lymph sac of two male frogs (*Rana pipiens*) or male toads (*Bufo marinus*). The presence of spermatozoa in the cloacal fluid of both

animals is positive; in one animal, inconclusive; in neither animal, negative.

Malerba's t. (for acetone): add a solution of dimethyl-paraphenylenediamine; a fine red or reddish color is seen.

mallein t., see *mallein*.

Malot's t.: a test for the quantitative determination of phosphoric acid in urine by the reaction with cochineal and a uranium salt.

maltose t., see *Rubner's t.* (2).

Maly's t.: 1. (for free hydrochloric acid in the gastric juice) a solution of methylene blue is added; the free acid will turn it from a violet to a green or blue tint. 2. (for free hydrochloric acid in stomach contents) filter into a glass dish and stain blue with ultramarine; place a piece of lead paper over it and cover; warm the mixture. The free acid will turn the blue to brown and darken the lead paper.

Manson evaluation t.: a test for the psychometric differentiation of alcoholics and nonalcoholics.

Mantoux t. (for tuberculosis): give intracutaneous injection of 0.1 ml. of desired dilution of tuberculin and successive injections of gradually increasing concentration until a reaction occurs; called also *intracutaneous tuberculin t.*, *Mantoux reaction*, and *Mendel's t.*

Manzullo's t., see *tellurite t.*

Maréchal's t. (for bile pigments in urine): drop tincture of iodine carefully into the tube; when the drops touch the urine, a green color is seen.

Maréchal-Rosin t., see *Maréchal's t.*

Marie's three-paper t. (of attention and recall): three pieces of paper are given to the subject, who is told to cross the room, drop one piece into the waste basket, place another on the table, and return the third to the examiner.

Marlow's t. (for heterophoria): one eye is occluded by a bandage for some time; after the bandage is removed, measurements for heterophoria are made.

Marquardt's t. (for fusel oil): add a few drops of dilute potassium permanganate until the light pink color persists. Cork for twenty-four hours. Add more permanganate if necessary to keep the pink color. Note the sickening odor of valeric acid.

Marquis' t. (for morphine): evaporate the unknown to dryness on a white porcelain plate and touch with a mixture of 3 ml. of concentrated sulfuric acid and 2 drops of formalin. A purple-red color changing to violet and then to blue indicates morphine.

Marsh's t. (for arsenic or antimony): hydrogen obtained from zinc and dilute sulfuric acid is allowed to act on the suspected substance; if arsenic is present, hydrogen arsenide (AsH_3) is formed. Ignite this gas and hold a piece of porcelain in the jet of flame; metallic arsenic is deposited. For antimony the same test is serviceable, but the arsenical mirror is dissolved by sodium hypochlorite solution, while the antimonial mirror is not affected by it.

Marshall's t. (for urea): treat the specimen with urease and titrate the ammonia so formed; see under *method*.

Maschke's t., see *von Maschke's t.*

Masset's t. (for bile pigments in urine): add 2 or 3 drops of sulfuric acid and a crystal of potassium nitrite; a grass-green color shows the presence of bile pigments.

Master "2-step" exercise t. (for coronary insufficiency): an electrocardiographic test, the tracings being recorded while the subject repeatedly ascends and descends two steps, each 9 inches high, immediately after cessation of the climbs, and then 2 and 6 minutes later. The amount of work (number of trips) is standardized for age, weight, and sex.

mastic t. (for cerebrospinal syphilis): a test depending on the precipitation of a solution containing mastic in cases of syphilis; there is no change in the solution in negative cases. Called also *Emanuel-Cutting test*.

Matas' t., see *tourniquet t.*, def. 2.

match t.: a screening test of expiration in which a match is held 3 inches from the subject's wide open mouth and several attempts are made to blow it out. Failure after six attempts indicates a maximal breathing capacity below 40 liters per minute and a maximal midexpiratory flow rate below 0.6 liter per second.

Mátéfy t.: a serum test for the early diagnosis of pulmonary tuberculosis.

Mathews' t. (for lactose and dextrose): if both dextrose and lactose are suspected, make a total quantitative test by Benedict's method. Add yeast to the urine and ferment out the dextrose, then make a second quantitative determination. The second determination is or may be lactose; confirm with the osazone test. The difference between the two determinations is dextrose.

Maumené t. (for dextrose): heat the urine with a little stannous chloride; if sugar is present, a dark-brown precipitate will be formed.

Mauthner's t.: a method of testing color blindness by the use of small bottles filled with different pigments, some with one only and some with two, the latter containing either pseudoisochromatic or isochromatic solutions.

Mayer's t. (for alkaloids): mercuric chloride, $1\frac{1}{2}$ gm., and potassium iodide, 50 gm., are dissolved in 1000 ml. of water: this is used as a test for alkaloid, with which it gives a white precipitate.

Mayerhofer's t.: the reduction of a decinormal solution of potassium permanganate solution by 1 ml. of spinal fluid in an acid medium as an index of the amount of protein substance present in

the fluid; used as an indication of the existence of tuberculous meningitis.

Mazzini t.: a flocculation test for the diagnosis of syphilis.

Méhu's t. (for albumin in urine): add a little nitric acid, and mix with 10 volumes of a solution of 2 parts of alcohol, 1 part of phenol, and 1 part of acetic acid; shake it and a white precipitate appears. This test is said not to be entirely trustworthy.

Meigs's t. (for fat in milk): to 10 ml. of milk in a special apparatus add 20 ml. of water, 20 ml. of ethyl ether, and shake. Then add 20 ml. of 95 per cent alcohol. Remove the ethereal layer, evaporate, and weigh.

Meinicke t. (for syphilis): 1. flocculation test: alcoholic extract of horse's heart diluted with water and a 2 per cent sodium chloride solution is added to the blood serum. After incubation for twenty-four hours flocculation is produced in syphilis. 2. turbidity test: the same solution, greatly diluted and containing balsam of tolu, gives a turbid mixture in syphilis. 3. clearing or clarification test: a milky dilution of alcoholic beef heart containing balsam of tolu will be cleared by the addition of syphilitic blood serum.

melanin t., see specific tests, including *Blackberg and Wagner's t.*, *Eiselt's t.*, *Thormählen's t.*, *von Jaksch's t.* (3), *Zeller's t.* (1).

Meltzer-Lyon t. (for biliary disease): a strong solution of magnesium sulfate is instilled into the duodenum by means of a tube, with the hope that this will paralyze the sphincter of Oddi, and that this paralysis will be followed by reflex contraction of the gallbladder, thus permitting the collection of separate specimens of bile from the common duct, the gallbladder, and the liver.

Mendel's t., see *Mantoux t.*

Mendeléeff's t.: a test for cancer based on the theory that there is a specific difference between the coagulating powers of leukocytic and erythrocytic extracts in cancerous and noncancerous subjects.

Mendelsohn's t.: a test for efficiency of the heart muscle based on the rapidity of the recovery of the pulse from its acceleration produced by exertion.

meningitis t.: see specific tests, including *Levinson's t.*, *Mayerhofer's t.*, *Takata-Ara t.*, *tryptophan t.* (2).

mercury t., see specific tests, including *Magpie's t.*, *Reinsch's t.* (2), *Vogel and Lee's t.*

Mester's t. (for rheumatic disease): blood is withdrawn from the middle finger of the right hand of a fasting patient before and again thirty and sixty minutes after administration of two or three intracutaneous injections of 0.2 ml. each of a sterile 0.1 per cent aqueous solution of salicylic acid, and the number of leukocytes is determined after each withdrawal. The injections are made at the flexor aspect of the right forearm at a distance of about 5 cm. from each other. They are followed by severe pain and burning sensation of short duration and by the formation, at the points of the injections, of wheals which disappear in a few hours. Positive results are shown by transient leukopenia within the first thirty minutes after administration of the injections.

methylene blue t.: 1. (for renal permeability) a solution of methylene blue is injected intramuscularly and the time of its appearance in the urine is noted. Normally, it appears in about thirty minutes. When delayed beyond this, renal permeability is reduced. Called also *Achard and Castaigne's t.* 2. (for milk) to 10 ml. of milk add 1 ml. of standard methylene blue solution, stopper, mix, and incubate at 37° C. in the dark. Mix each half hour. Good quality milk should not decolorize the mixture in less than six to eight hours.

methylphenylhydrazine t. (for levulose): add 4 gm. of methylphenylhydrazine to 10 ml. of unknown (containing about 2 gm. of levulose) and enough alcohol to clarify the solution; add 4 ml. of 50 per cent acetic acid and heat from five to ten minutes. Reddish yellow needles of methylphenyl-levulosazone indicate levulose.

Mett's t. (for estimating pepsin): tubes (Mett's tubes) of coagulated albumin are introduced into the unknown and into a standard pepsin HCl mixture and the amount of digestion occurring in a given time is noted.

Meyer's t.: 1. the blood vessel of a freshly killed ox is placed in the solution to be tested; if it contracts, epinephrine is assumed to be present. 2. (for lactose) precipitate the proteins of the milk with phosphotungstic acid and titrate the filtrate with Benedict's solution. 3. (for blood) see *Meyer's reagent*, under *reagent*.

Michailow's t. (for proteins): add ferrous sulfate to the solution, underlay it with strong sulfuric acid and a drop or so of nitric acid; a brown ring and red coloration indicate the presence of proteins.

microprecipitation t.: a precipitation test in which a minute quantity of the serum is employed.

Middlebrook-Dubos hemagglutination t.: a test for the detection of serum antibodies to certain components of *Mycobacterium tuberculosis*.

migration inhibition t.: an *in vitro* test for detection of cell-mediated immunity (or delayed hypersensitivity) in which peritoneal exudate cells (lymphocytes and macrophages) are packed in capillary tubes; if the medium contains an antigen to which the lymphocytes are primed, macrophage migration from the tubes is inhibited by lymphokines (macrophage inhibiting factor) released by the lymphocytes. Called also *macrophage migration (inhibition) t.*

milk t., see specific tests, including *Babcock's t.*, *Bauer's t.* (3), *benzidine peroxidase t.*, *dirt t.*, *Kastle's t.*, *Kober t.* (2), *methylene blue t.* (2), *phosphatase t.* (1), *Storck's t.*, *Wilkinson and Peter's t.*

milk-ring t., abortus Bang ring t.

Millard's t. (for albumin): make a reagent of 2 parts of liquefied carbolic acid, 6 parts of glacial acetic acid, and 22 parts of a solution of potassium hydroxide; this precipitates albumin.

Miller-Kurzkrook t.: a laboratory procedure to test the ability of the sperm to penetrate the mucus plug in the woman's cervix.

40 millimeter t. (for athletic efficiency): the subject sits with nasal respiration occluded with a clamp, and by expiring through a mouthpiece, sustains a column of mercury at the height of 40 mm. as long as he can. The pulse rate is taken meanwhile, every five seconds. In a satisfactory test the pulse rate is unaltered for a minute or more.

Millon's t. (for proteins and nitrogenous compounds): a solution is made of 10 gm. of mercury and 20 gm. of nitric acid; this is diluted with an equal volume of water and decanted after standing twenty-four hours. This reagent gives a red color with proteins and other substances, such as tyrosine, phenol, and thymol, which contain the hydroxyphenyl group.

Mills's t. (for tennis elbow): with the wrist and fingers fully flexed and the forearm pronated, complete extension of the elbow is painful.

miostagmin t., see under reaction.

mirror t.: a mirror is held horizontally above the larynx and the patient instructed to cough. The mirror is thus sprayed with bronchial secretion. Small flecks of secretion on the mirror indicate the nature of the expectoration.

Mitscherlich's t. (for phosphorus in the stomach): the contents of the stomach are made acid and distilled in the dark. The condenser will contain a luminous ring. Small amounts of alcohol, ether, or turpentine will prevent the reaction.

Mitsuda t., lepromin t.

Mittelmeyer's t.: the patient is directed to take marching steps on one spot without progressing: in vestibular disorder he will turn to the side ipsilateral to vestibular loss, or contralateral to vestibular excitation.

mixed leukocyte culture t., mixed lymphocyte culture t., see mixed leukocyte reaction, under reaction.

Moerner-Sjöqvist t., Sjöqvist method.

Mohr's t. (for hydrochloric acid in the stomach contents): dilute to a light-yellow color a solution of iron acetate, free from alkaline acetates; add a few drops of a solution of potassium thiocyanate, and then the filtered contents of the stomach: if they contain the acid, a red coloring ensues, which is destroyed by sodium acetate.

Molisch's t.: 1. (for dextrose in urine) add 2 ml. of urine, 2 drops of a 15 per cent solution of thymol, and an equal volume of strong sulfuric acid; a deep-red color results. 2. (for dextrose in urine) to 1 ml. of urine add 2 or 3 drops of a 5 per cent solution of alphanaphthol in alcohol, then add 2 ml. of strong sulfuric acid; a deep-violet color is produced, and a violet precipitate follows if water is added. 3. (for proteins) the substance is treated with a 15 per cent alcoholic solution of alphanaphthol and then with concentrated sulfuric acid; a violet color is formed if proteins are present.

Moloney t. (for delayed sensitivity to diphtheria toxoid): 0.1 ml. of 1:10 dilution of fluid toxoid is injected intradermally on the flexor surface of the forearm; the appearance in 12 to 24 hours of an area of redness with induration of more than 12 mm. in diameter is a positive reaction. Called also *anatoxireaction*, *Moloney reaction*, and *Zeller's t.*

monaural distorted speech t's, tests to determine subtle unilateral disturbances in the central auditory pathways, in which various forms of distorted speech are used.

monosaccharide t., see Barfoed's t.

Montenegro t. (for leishmaniasis): an intradermal test of the delayed sensitivity type, using a killed suspension of leptomnads as antigen.

Montigne's t.: heat an alcoholic solution of a sterol with silicogentic acid; a red-brown color appears.

Moore's t. (for dextrose or any carbohydrate): boil the suspected solution with sodium or potassium hydroxide; if dextrose or lactose is present, a yellow or brown color is produced.

Morelli's t. (to differentiate between an exudate and a transudate): add a few drops of the suspected fluid to a saturated solution of mercuric chloride in a test tube; a flaky precipitate indicates a transudate, a clot indicates an exudate.

Moretti's t. (for typhoid fever): twenty-five ml. of urine are saturated with 20 gm. of crystallized ammonium sulfate. After a quarter of an hour the urine is filtered and diluted to about one third. To 10 ml. of the filtrate one fifth of its volume of a 10 per cent solution of sodium hydroxide is added, and then a drop of 5 per cent tincture of iodine. The solution is shaken, and if the reaction is positive a persistent golden-yellow color is produced.

Moritz t., see *Rivalta's reaction*, under reaction.

Mörner's t.: 1. (for tyrosine) to a small quantity of the crystals in a test tube add a few milliliters of Mörner's reagent (solution of formaldehyde, 1 ml.; distilled water, 45 ml.; concentrated sulfuric acid, 55 ml.). Heat gently to the boiling point. A green color shows the presence of tyrosine. 2. see *nitroprusside t.* (1).

Moro's t., see under reaction.

morphine t., see specific tests, including *Denigès' t.* (3), *Marquis' t.*, *Oliver's t.* (3), *Weppen's t.*

Morton's t.: in metatarsalgia, transverse pressure across the

heads of the metatarsals causes a sharp pain, especially between the second and third metatarsals.

Moschcowitz t.: a test for arteriosclerosis made by rendering the lower limb bloodless by means of an Esmarch bandage. This is removed after five minutes have elapsed, when, in a normal limb, the color will return in a few seconds, but in one affected by arteriosclerosis the return of color takes place much more slowly. Called also *hyperemia t.*

Mosenthal's t. (for kidney function): with the patient on a prescribed general diet, take samples of urine in two-hour periods during the day and once at night. Examine them for volume, specific gravity, total nitrogen, and chlorides, and compare with normal.

Moynihan's t. (for hourglass stomach): the two parts of a Seidlitz powder are given separately; in hourglass stomach two separated protrusions on the abdominal wall can be observed.

mucic acid t. (for galactose, lactose, etc.): to the unknown add 20 per cent of its volume of nitric acid and evaporate on water bath to about 20 per cent of its original volume; a fine white precipitate of mucic acid indicates galactose or a carbohydrate containing galactose.

mucification t.: the vagina of a mouse is injected with blood serum; the extent of mucification of the mucosa developing in four days is noted.

Mulder's t.: 1. (for dextrose) alkalize the solution with sodium carbonate; on adding a solution of indigo-carmin and heating, the mixture is decolorized, but becomes blue again when shaken with air. 2. (for proteins) treat the suspected substance with nitric acid: proteins are turned yellow by it; alkalize the substance and it becomes an orange yellow, due to the presence of the phenyl group. Called also *xanthoproteic reaction*.

Müller's t.: 1. (for cystine) boil the substance with potassium hydroxide until dissolved; when cold, dilute it with water. A solution of sodium nitroprusside produces a violet coloration, which soon changes to a yellow (Edward Müller). 2. a drop of pus is allowed to fall into a small vessel containing some Millon's reagent. Ordinary pus forms a little lump that soon disintegrates and colors the liquid bright red. Tuberculous pus forms a tough skin on the surface of the fluid, which, if pushed down, takes on a globular shape [Edward Müller]. 3. (for syphilis) a conglobation or clotting reaction for the diagnosis of syphilis, employing cholesterinized ox heart extract and an inactivated serum [Rudolf Müller]; called also *ball t.*, *conglobation reaction*, and *Müller's reaction*.

Müller-Jochmann t.: 1. when a trace of pus is placed on some sterile coagulated blood serum, and the latter put in an incubator, no change takes place if the pus is tuberculous. Ordinary pus, on the other hand, will form a cup-shaped depression in the culture medium. 2. see *antitrypsin t.*

multiple-puncture t.: an intracutaneous test in which the material used (e.g., tuberculin) is introduced into the skin by pressure of several needles or pointed tines or prongs. See also *tine t.* and *tuberculin t.*, *Sternelele*.

Murata t.: a ring modification of the Sachs-Georgi test for syphilis.

murexide t., see *Weidel's t.* (1).

Murphy's t.: the patient sits with his arms folded in front of him; the examiner's thumb is placed under the twelfth rib and short jabbing movements are made. Thus deep-seated tenderness and muscular rigidity are determined. Called also *Murphy's kidney punch*.

mycobiologic t.: mycologic test.

mycologic t. (for sugar in urine): to the specimen of urine an equal quantity of 1 per cent peptone solution is added; this mixture is sown with some species of *Candida*. If sugar is present, gas is developed. Called also *mycobiologic t.*

mydriatic substances t., see *Ehrmann's t.*

Myers and Fine t. (for amylolytic activity): add decreasing amounts of stomach contents to constant amounts of starch solution and note by means of iodine the amount required to completely hydrolyze the starch.

Mylius' t. (for bile acids): to each milliliter of the solution of bile acids add 1 ml. of strong sulfuric acid and 1 drop of furfural solution; if bile acids are present, a red color is produced, which turns to a bluish violet in the course of a day or so.

Nafziger's t. (for nerve root compression): increase or aggravation of pain or sensory disturbance over the distribution of the involved nerve root upon manual compression of the jugular veins bilaterally confirms the presence of an extruded intervertebral disk or other mass.

Nagel's t.: a test for color vision performed by means of cards with the colors printed in concentric circles.

Nagler's t., see under reaction.

Nakayama's t. (for bile pigments): add 5 ml. of acid urine to the same amount of 10 per cent barium chloride solution and centrifugize. To the precipitate is added 2 ml. of a reagent consisting of 99 parts of 95 per cent alcohol, 1 part of fuming hydrochloric acid to a liter of which 4 gm. of ferric chloride has been added. The fluid is boiled; a green color is obtained, which, on the addition of yellow nitric acid, becomes violet or red.

Napier's serum t. (for kala-azar): add one drop of 40 per cent formaldehyde to 1 ml. of blood serum; if the serum becomes white and opalescent it indicates kala-azar.

Nathan's t. (for tuberculosis): a piece of gauze 1 cm. in diameter

A TABLE OF TESTS (Continued)

is moistened in Old Tuberculin and applied to healthy skin on the flexor surface of the forearm. The edges are secured to the skin by adhesive substance. The dressing is removed twenty-four hours later and the reaction is observed for the next five or six days. When positive, the reaction is characterized by the appearance of small vesicopapular lesions on a normal or somewhat hyperemic base.

NBT t., nitroblue tetrazolium dye t.

Neisser and Wechsberg's t. (for bactericidal power of blood): patient's serum is inactivated, mixed with fresh guinea-pig complement, and the bacteria incubated and then plated on agar.

Nencki's t. (for indole): treat the suspected material with nitric acid and a little nitrous acid; a red color follows, and in concentrated solution a red precipitate may appear.

Nessler's t. (for free ammonia), see under reagent.

Neubauer and Fischer's t.: the glycoltryptophan test.

Neufeld's t., see under reaction.

Neukomm's t. (for bile acids): a drop of the suspected substance is placed on a small white porcelain cover with a drop of dilute cane sugar solution and one of dilute sulfuric acid. The mixture is carefully evaporated over a flame, a violet stain being left if bile acids are present.

neutralization t.: a test for the power of an antiserum or other substance to antagonize the pathogenic properties of the virus or other organism concerned.

niacin t. (for *Mycobacterium tuberculosis*): in a chemical hood, add 0.1 ml. of heavy growth from a 10-day-old culture of organisms in Dubos' liquid Tween-albumin medium to 3 ml. of the same medium in a screw-cap tube. Add 1 ml. of 4 per cent aniline in 95 per cent ethanol and 1 ml. of 10 per cent aqueous cyanogen bromide. A distinct yellow color indicates the presence of niacin, a characteristic of human strains of *M. tuberculosis*; bovine strains are doubtful or negative; other strains are negative. Alternatively, add to the culture being tested, 0.5 to 0.1 ml. sterile saline or water, place the tube so that the fluid layers over the colonies, and allow to stand 15 minutes. Remove 0.5 ml. of the aqueous extract to a test tube. Add equal quantities of 4 per cent aniline in 95 per cent ethanol and 10 per cent aqueous cyanogen bromide. If niacin is present, a yellow color will appear.

Nickerson-Kveim t., see Kveim t.

Nicklès' t. (for distinguishing cane sugar from dextrose): heat the sugar with carbon tetrachloride to 100° C. This blackens cane sugar, but not dextrose.

Ninhydrin t., see triketohydrindene hydrate t.

Nippe's t. (for blood): a modified form of Teichmann's test.

nitrate reduction t., see Ilosvay's reagent, under reagent.

nitrites t., see Allesandri-Guaceni t.

nitric acid t.: 1. (for albumin) see Heller's t. (1). 2. see specific tests, including Allesandri-Guaceni t. and Weyl's t. (2).

nitric acid-magnesium sulfate t. (for albumin), see Roberts' t. (1).

nitrites t. (in saliva): to the saliva add 1 or 2 drops of H₂SO₄, a few drops of KI solution, and some starch paste; a blue color indicates nitrites. See also Griess's t., Ilosvay's t., Schaffer's t.

nitroblue tetrazolium (NBT) t.: a test of the phagocytic function of polymorphonuclear leukocytes based on the increased metabolic activity of phagocytes during particle uptake and digestion, as measured colorimetrically by the reduction of nitroblue tetrazolium to a dark blue formazan pigment.

nitrogenous compounds t., see Millon's t.

nitrogen partition t.: a test of hepatic function based on alterations in the distribution of nitrogen in the various nitrogenous bodies of the blood and urine.

nitropropiol t. (for sugar in urine): the urine is mixed with an alkali and heated with orthonitrophenylpropionic acid; the indigo blue to green (blue and yellow) color reaction will be seen.

nitroprusside t.: 1. (for cysteine) if a protein containing cysteine is dissolved in water and 2 to 4 drops of a 4 or 5 per cent solution of sodium nitroprusside and then a few drops of ammonia are added, a deep purple-red color appears; called also Morner's t. 2. (for acetone) see Legal's t. (1). 3. (for indole) see Legal's t. (2). 4. (for creatinine) see Weyl's t. (1).

nitroso-indole-nitrate t. (for indole and skatole): acidify the unknown with nitric acid and add a few drops of potassium nitrite; a red color or a red precipitate indicates indole, a white turbidity indicates skatole.

nitrous acid t., see Bertoni-Raymondi t.

Nobel's t.: 1. (for aceto-acetic acid and acetone) stratify ammonium hydroxide on urine acidified with acetic acid and to which a little sodium nitroprusside has been added; a violet ring at the junction indicates acetoacetic acid or acetone. 2. (for bile pigments) add zinc chloride and a little of the tincture of iodine; a dichroic coloration follows.

Noguchi's t.: 1. see Noguchi's reaction, under reaction. 2. (for globulin) to 0.5 ml. of Noguchi's reagent add 0.1 ml. of spinal fluid; boil and add 0.1 ml. of N/1 sodium hydroxide. A flocculent precipitate indicates globulin.

Nonne's t., see Ross-Jones t.

Nonne-Apelt t., see under reaction.

nonverbal t.: a mental test in which language is not used.

nuclear t., **nucleus t.** (for proteolytic pancreatic function): a test based on the fact that cell nuclei are digested by the pancreatic juice, and not by the stomach.

nucleoalbumin t., see Ott's t.

Nyiri's t.: a concentration test for kidney function by the use of thiosulfate.

Nylander's t. (for dextrose in urine): dissolve 2 parts of bismuth subnitrate and 4 of sodium and potassium tartrate in 100 ml. of a 10 per cent solution of sodium hydroxide; of this add 1 part to 10 of the suspected urine and boil five minutes; a black coloration or black precipitate indicates a reducing sugar.

nystagmus t., see Bárány's symptom, under symptom.

Oakley-Fulthorpe t., a double diffusion test employing narrow tubes containing antibody in agar separated from antigen in solution by a layer of plain agar, into which both antigen and antibody diffuse to produce a precipitate.

Ober's t.: with the patient on his left side and his left leg and thigh flexed, the examiner holds the patient's right leg abducted and extended. If on the sudden withdrawal of the examiner's support the right leg holds up instead of dropping, there is contraction of the tensor fasciae femoris and the fascia lata.

Obermayer's t. (for indican in urine): precipitate the urine with a 1:5 lead acetate solution with care, lest an excess of the reagent be taken; filter and agitate the filtrate with an equal amount of fuming hydrochloric acid containing a little of the solution of ferric chloride; to this add chloroform, which is turned blue by indigo.

Obermüller's t. (for cholesterolin): put the substance to be tested in a test tube and melt it with a drop or two of propionic anhydride over a small flame; on cooling, the mass becomes successively blue, green, orange, carmine, and copper colored.

obturator t., see Cope's t.

occult blood t., see tests listed under blood t.

Oliver's t.: 1. (for albumin) underlay the urine with a 1:4 solution of sodium tungstate and a 10:6 solution of citric acid; a white coagulum at the junction of the two layers shows the presence of albumin. 2. (for sugar) boil the suspected liquid with indigo carmine; sugar will change the blue to a red or yellow. 3. (for morphine) if, to a solution of morphine, a few milliliters of hydrogen peroxide is added and the mixture is stirred with a piece of copper wire, the solution takes on a deep port wine color, with the evolution of gas. 4. (for bile acids) to 5 ml. of the unknown add 2 to 3 drops of acetic acid and filter; an equal volume of 1 per cent solution of peptone will produce a precipitate insoluble in excess of acetic acid if bile acids are present.

one-stage prothrombin time t., see Quick's t. (2).

orcinol t. (for pentose in urine), see Bial's t.

organic acid t., see Knapp's t. (2).

orientation t.: see if patient can give correctly the time of day, the day of the week, month, and year, and the place.

orthotoluidine t. (for blood), see Ruttan and Hardisty's t.

osazone t. (for sugars), see Kowarsky's t. (1) and von Jaksch's t. (2).

Osgood-Haskins t. (for albumin): to 5 ml. of urine add 1 ml. of 50 per cent acetic acid; a precipitate at room temperature indicates bile salts, urates, or resin acids. Add 3 ml. of a saturated solution of sodium chloride; a precipitate suggests Bence Jones protein or globulin. The Bence Jones protein will redissolve on heating.

Osterberg's t. (for beta-oxylbutyric acid): to 800 mg. of ammonium sulfate add 0.15 ml. of concentrated ammonium hydroxide solution, 2 drops of a 5 per cent solution of nitroprusside, and 1 ml. of the urine. Dilute to 50 ml. and compare with a standard.

Ott's t. (for nucleoalbumin in urine): to the urine is added an equal volume of saturated solution of sodium chloride, and then Almén's reagent (dissolve 5 gm. of tannic acid in 240 ml. of 50 per cent alcohol and add 10 ml. of 25 per cent acetic acid); a precipitate forms when nucleoalbumin is present.

Ouchterlony t.: a two-dimensional double diffusion test in which solutions of antigen and antibody are placed in separate wells in an agar plate and then diffuse radially to form lines of precipitate in any of three patterns (see reaction of identity, under reaction). Called also Ouchterlony technique. See also double diffusion test, under test.

Oudin t.: a single diffusion precipitin test in gel media. Antiserum incorporated into agar is placed in a narrow test tube and overlaid with antigen; precipitation rings form where the antigen diffuses into the agar and reacts with the antibody.

ovarian hyperemia t. (for pregnancy): the intraperitoneal injection of urine or blood serum of pregnant women into immature female mice produces a reddened appearance of the ovaries.

oxyphenylsulfonic acid t. (for albumin in urine): dissolve in 20 parts of water 3 parts of oxyphenylsulfonic acid and 1 part of salicylsulfonic acid; add to 1 ml. of urine a drop of the reagent; if albumin is present, a clear white precipitate appears.

Pachon's t.: measuring of the blood pressure for the purpose of determining the state of the collateral circulation in aneurysm.

Paget's t.: a solid tumor is most hard in its center, whereas a cyst is least hard in its center.

palmin t., **palmitin t.** (for pancreatic efficiency): after a test meal containing palmitin, the contents of the stomach are examined for the presence of fatty acids. They will be found in cases in which the pancreas is normal, for the presence of fat in the stomach causes the pylorus to open and admit the pancreatic juice, which splits palmitin into fatty acids.

pancreatic function t., see specific tests, including butter t.,

A TABLE OF TESTS (Continued)

Ehrmann's pancreatic t., *Kashiwado's t.*, *litmus milk t.*, *Loewi's t.*, *nuclear t.*, *palmin t.*, *Sahli-Nencki t.*, *secretin t.*

Pandy's t.: a test for globulin in the cerebrospinal fluid. Mix 80 to 100 ml. pure phenol with distilled water, shake, and place in incubator several hours. After several days at room temperature pour off the top watery part, which serves as the reagent. With a Pasteur pipet a drop (0.01 ml.) of the fluid to be tested is deposited on the bottom of a watch crystal filled with the reagent. If no cloudy precipitate forms within five seconds the reaction is negative.

Pap t., **Papanicolaou t.:** an exfoliative cytological staining procedure for the detection and diagnosis of various conditions, particularly malignant and premalignant conditions of the female genital tract (cancer of the vagina, cervix, and endometrium), in which cells which have been desquamated from the genital epithelium are obtained by smears, fixed and stained, and examined under the microscope for evidence of pathologic changes. Cytologic findings have commonly been expressed in terms of histologic lesions classified as Class I to Class V, but preferably each examination should have an individual histological description. The test is also used in evaluating endocrine function, and in the diagnosis of malignancies of other organs, as of the respiratory tract and lungs, gastrointestinal tract, urinary tract, and breast. See also *Table of Stains*.

paracasein t., see *Leiner's t.*

paradimethylaminobenzaldehyde t. (for urobilinogen): to the unknown add an equal volume of hydrochloric acid and boil; then add 2 drops of a 5 per cent solution of paradimethylaminobenzaldehyde in 10 per cent sulfuric acid. A red to violet color indicates urobilinogen. Called also *Ehrlich's t.*

Parnum's t. (for albumin): filter the urine, add one-sixth volume of a saturated solution of magnesium or sodium sulfate, acidulate with acetic acid, and boil; if albumin is present, a white precipitate is formed.

partial thromboplastin time t.: a one-stage clotting test used clinically to detect deficiencies of the components of the intrinsic thromboplastin system; in reality prolonged clotting time may reflect deficiency or absence of coagulation factors I, II, V, and VIII through XII, separately or in combination.

passive cutaneous anaphylaxis t., see *passive cutaneous anaphylaxis*.

passive protection t.: a test in which antiserum is tested for protective antibody by parenteral inoculation of groups of animals with graded doses in constant volume.

passive transfer t., see *Prausnitz-Küstner reaction*, under *reaction*.

patch t.: a test for hypersensitiveness made by applying to the skin the substances in question by means of small pieces of linen or blotting paper impregnated with the substances; on removal of the patches the reactions of the skin are noted. The same method is used for applying tuberculin test for tuberculosis (*Vollmer's t.*).

Patrick's t.: with the patient supine, the thigh and knee are flexed and the external malleolus is placed over the patella of the opposite leg; the knee is depressed, and if pain is produced thereby arthritis of the hip is indicated. Patrick calls this test *fabere sign*, from the initial letters of movements that are necessary to elicit it, namely, flexion, abduction, external rotation, extension.

Patterson's t.: a chemical spot test for the diagnosis of uremia. A drop of Ehrlich's reagent is applied to a drop of blood placed on a white filter paper; if there is greatly increased blood urea, the spot on the filter paper turns a greenish color.

Paul's t.: pus from a suspected pustule is rubbed into the scarified eye of a rabbit; if the pus is variolous or vaccinal, a condition of epitheliosis develops in the rabbit in from thirty-six to forty-eight hours.

Paul-Bunnell t.: a method of testing for the presence of heterophil antibodies in the blood, used to confirm the clinical and hematologic diagnosis of infectious mononucleosis. The test is based on the agglutination of sheep red blood cells by the inactivated serum of patients with the disease. Called also *heterophil antibody reaction* and *Paul-Bunnell reaction*.

Paunz' t. (for amyloidosis): inject intravenously 10 ml. per kg. of a 0.6 per cent solution of Congo red. After one hour withdraw some blood and to the serum add a little hydrochloric acid. No blue color in the coagulated proteins indicates amyloidosis.

Pavy's t. (for dextrose in urine): prepare a reagent by mixing 120 ml. of Fehling's solution with 200 ml. of ammonia (specific gravity 0.88), 400 ml. of a solution of sodium hydroxide (specific gravity 1.14), and 1000 ml. of water; boil the suspected liquid with this solution: if dextrose is present, the reagent is decolorized.

PCA t., see *passive cutaneous anaphylaxis*.

Pélouse-Moore t. (for sugar in urine): boil the urine with a solution of potassa, cool, and add 1 drop of concentrated sulfuric acid; the odor of burnt sugar will be given off.

pentose t., see *Bial's t.*, *phloroglucin t.*

Penzoldt's t.: 1. (for acetone) to the suspected liquid add a warm saturated solution of orthonitrobenzaldehyde, and render it alkaline with sodium hydroxide: if acetone is present, the mixture becomes yellow and then green; thereafter a precipitate forms which, on shaking with chloroform, gives a blue color. 2. (for dextrose in urine) add sodium hydroxide solution and a slightly alkaline solution of sodium diazobenzenesulfonate; shake the mixture until it foams: a red or yellow-red color is produced, the foam also being red.

Penzoldt-Fischer t. (for phenol): alkalize strongly the substance to be tested and dissolve in a solution of diazobenzenesulfonic acid; phenol, if present, produces a deep-red color.

peppermint t. (for pulmonary perforation): the pneumothorax cavity is filled with the vapor of essence of peppermint; if there is a pulmonary perforation the patient will recognize the characteristic smell.

pepsin t., see specific tests, including *Jacoby's t.* and *Mett's t.*

peptide t., see *triketohydrindene hydrate t.*

peptone t., see specific tests, including *Hofmeister's t.* (2), *Ralfe's t.* (2), *Randolph's t.*, *triketohydrindene hydrate t.*

perchloride t.: a port-wine colored reaction obtained by treating the urine of hyperemetic pregnant women with solution of ferric chloride; the intensity of the reaction indicates the gravity of the case.

percutaneous tuberculin t., see *Moro's reaction*, under *reaction*.

performance t.: an intelligence test such as the *Pinter-Patterson t.* or *Porteus maze t.*, in which the subject is required to do certain things rather than to answer questions.

Pieria's t. (for tyrosine), see *Piria's t.*

Perlis' t.: a test for hemosiderin made by treating the substance with hydrochloric acid and potassium ferrocyanide; the Prussian blue reaction is produced if hemosiderin is present.

permanganate t., see *Weiss' t.*

peroxidase t., see *Arakawa's reagent*, under *reagent*, and *Good-pasture's stain*, under *stain*.

Perthes' t. (for collateral circulation in varicose veins), see *tourniquet t.*, def. 3.

Peterman's t. (for syphilis): 0.05 ml. of inactivated serum of the patient is stirred with 0.01 ml. of diluted beef heart antigen; this is inactivated between microscope slides at 37° C. for ten minutes and examined microscopically.

Petri's t. (for proteins): add diazobenzenesulfonic acid and sodium hydroxide; an orange or brownish color is formed, and on shaking a red froth is produced.

Pettenkofer's t. (for bile acids in urine): drop a solution of the suspected material into a mixture of sugar and sulfuric acid; a purplish crimson color is produced. This test is also given by aminomyelin, cephalin, lecithin, and myelin.

Petzetaki's t. (for typhoid fever): 15 ml. of urine are placed in a test tube and to this is added a little 5 per cent alcoholic solution of iodine; if the upper part of the urine takes on a golden-yellow color, the test is positive.

phenacetin t. (in urine): to the urine add a little concentrated hydrochloric acid, a little 1 per cent solution of sodium nitrate, and a little alkaline alphanaphthol solution; make alkaline and a red color indicates phenacetin.

phenol t., see specific tests, including *Allen's t.* (2), *Berthelot's t.* (1), *Davy's t.*, *Eijkman's t.* (1), *Hanke and Koessler's t.*, *Jacquemin's t.*, *Penzoldt-Fischer t.*, *Plugge's t.* See also *phenol*, *methods for*, under *method*.

phenolphthalein t.: 1. (for blood) boil a thin fecal suspension, cool, and add it to half as much reagent (made by dissolving 1 to 2 gm. of phenolphthalein and 25 gm. of potassium hydroxide in water. Add 10 gm. of metallic zinc and heat until decolorized). A pink color indicates the presence of blood. 2. (in urine) make the urine alkaline; a red color indicates phenolphthalein.

phenolsulfonphthalein t. (for kidney function): inject 1 ml. of 0.6 per cent solution of the monosodium salt of phenolsulfonphthalein intravenously or intramuscularly and collect the urine at hourly intervals. Make specimens alkaline with sodium hydroxide and match color in colorimeter with standard solution. Usually 60 to 75 per cent of the dye is excreted in two hours; 40 per cent or less indicates impaired function.

phenoltetrachlorophthalein t. (for liver function): phenoltetrachlorophthalein is injected intravenously, and normally it appears in the feces, being excreted by the liver with the bile, and giving a bright color to the feces. A decrease in the normal excretion of this substance points to liver injury.

phenylhydrazine t., see specific tests, including *Kowarsky's t.* (1) and *von Jaksch's t.* (2).

phlorhizin t., **phlorizin t.** (for renal insufficiency): the bladder is emptied and a hypodermic injection given of a mixture of 5 to 10 gm. each of sodium carbonate and phlorhizin. Sugar will appear in the urine within half an hour if the kidney is healthy. If only a small quantity of sugar appears, there is probably renal insufficiency; if none at all, then serious kidney disease probably exists.

phloroglucin t., **phloroglucinol t.**, (for galactose, pentose, and glycuronates in urine): a solution of phloroglucin in hydrochloric acid is added to the urine and warmed; a red color forms if suspected substances are present.

phosphatase t.: 1. (for adequate pasteurization of milk) *Mycobacterium tuberculosis* is killed more easily than milk phosphatase is destroyed by heat, so if there is no phosphatase in the milk, the pasteurization has been adequate. Add 2,6-dibromquinonechlorimide and disodium phenyl phosphate to the sample of borax buffered milk. If phosphatase is present, the phenol will be set free and will undergo an indophenol reaction with the production of a blue color. 2. (for serum phosphatase) see *Jenner-Kay t.*

phosphoric acid t., see specific tests, including *Malot's t.* and *Mitscherlich's t.*

phthalein t., see *phenolsulfonphthalein t.*

phytotoxin t., see *Macht t.*

Piazza's t. (for *tuberculosis*): the patient's urine is mixed with the serum of a guinea pig or rabbit which has received an injection of Koch's old tuberculin; the formation of a precipitate is positive.

picrotoxin t., see *Becker's t. (1).*

Pincus t.: typical colors are produced on heating 17-ketosteroids with concentrated antimony trichloride in glacial acetic acid.

pineapple t. (for *butyric acid in stomach*): a few drops of sulfuric acid and alcohol are added to a dried ethereal extract of the gastric juice; if butyric acid is present, an odor of pineapple will be given off, caused by the formation of ethylbutyrate.

pine wood t. (for *indole*): a pine splinter moistened with concentrated hydrochloric acid is turned cherry red by a solution of indole.

Piotrowski's t., see *biuret t. (1).*

Piria's t. (for *tyrosine*): moisten the suspected material with strong sulfuric acid and warm it; then dilute and warm it again; neutralize it with barium carbonate, filter, and add ferric chloride in dilute solution: if tyrosine is present, a violet color is seen, which is destroyed by an excess of ferric chloride.

Pirquet's t., see under *reaction*.

P-K t., see under *reaction*.

plantar ischemia t.: a test for circulatory disturbances in the legs and feet, in which the plantar surface of the patient's foot is checked for blanching after he extends and flexes his inclined leg.

plasmacrit t.: a rapid but reasonably sensitive and specific screening test for syphilis, using plasma from microhematocrit tubes.

Plesch's t. (for *persistent ductus arteriosus*): determination of the amount of oxygen and of carbonic acid in the blood.

Plugge's t. (for *phenol*): a dilute solution containing phenol becomes red on mixture with a mercuric nitrate solution containing a trace of nitrous acid; mercury is also precipitated and the odor of salicyl is given off.

pneumatic t., Hennebert's sign.

Pohl's t. (for *globulins*): these substances are precipitated from solution by ammonium sulfate.

pointing t., see *Bárány's pointing t.*

Politzer's t. (for *deafness in one ear*): when a tuning-fork is placed in front of the nares, it is heard only by an unaffected ear during deglutition.

Pollacci's t. (for *albumin in urine*): dissolve in 100 ml. of water 1 gm. of tartaric acid, 5 gm. of mercuric chloride, and 10 gm. of sodium chloride, and add 5 ml. of solution of formaldehyde; this solution added to urine will cause coagulation of albumin in a white zone.

polyuria t., see *Albarran's t.*

Porges-Meier t. (for *syphilis*): a 1 per cent emulsion of lecithin in physiologic salt solution is mixed with an equal volume of blood serum and allowed to stand for five hours; when serum from the patient to be tested is added, the lecithin will be precipitated if the patient has syphilis.

Porges-Salomon t. (for *syphilis*): a 1 per cent sodium glycocholate solution is mixed with an equal volume of clear activated serum from the patient; if the serum is syphilitic, distinct flocculi will appear at the top of the fluid.

porphobilinogen t., see *Watson-Schwartz t.*

Porter's t.: 1. (for *excess of uric acid*) the upper portion of the urine is boiled in a test tube and a few drops of 4 per cent acetic acid added; in a few hours crystals of uric acid will form just below the surface. 2. (for *indican*) 10 ml. of urine is shaken with an equal amount of hydrochloric acid and 5 drops of a 0.5 per cent solution of potassium permanganate; add 5 ml. of chloroform and shake. A purple color with a deposit of blue matter indicates indican.

Porteus maze t.: a performance test in which the subject is required to trace with a pencil through printed mazes of increasing difficulty.

Posner's t.: 1. (for *the source of albumin in urine*) a twenty-four-hour sample of urine is preserved with solution of formaldehyde, shaken, and the leukocytes counted in the blood-counting chamber—100,000 leukocytes per 2 ml. of urine indicate 0.1 per cent of albumin. In this case the albumin is probably due solely to the pus. If albumin is present in greater proportion than this, it is probably due to Bright's disease. 2. (for *proteins*) Posner makes a ring biuret test by mixing the potassium hydroxide solution and the unknown and then stratifying very dilute copper sulfate solution on top of the mixture.

potassium iodide t. (for *renal function*): the patient receives 0.5 gm. of potassium iodide in solution by mouth, and the urine is tested every two hours for iodine; if iodine secretion is prolonged beyond sixty hours, excretion through the renal tubules is indicated.

Pratt's t.: a modification of Volhard's test combining the dilution and concentration tests.

Prausnitz-Küstner (P-K) t., see under *reaction*.

precipitation t., **precipitin t.**: any test in which the positive reaction consists in the formation and deposit of a precipitate in the fluid being tested.

Pregl's t. (for *kidney function*): determine the specific gravity of the urine obtained by catheterization of the ureters. Using Haeser's coefficient, estimate the amount of solid substances excreted, and compare it with the weight of ash. The diseased kidney may excrete the same volume of water, but less solid material. A predominance

of mineral substances (ash) over the organic also speaks for a lower function of the kidney.

pregnancy t., see specific tests, including *antitrypsin t.*, *Aschheim-Zondek t.*, *bitterling t.*, *bromine t. (3)*, *Brown's t. (1)*, *early pregnancy t.*, *Friedman's t.*, *Galli Mainini t.*, *male frog or male toad t.*, *ovarian hyperemia t.*, *pregnanediol t.*, *Prostigmin t.*, *Venning Browne t.*, *Vischer-Bowman t.*, *Xenopus t.*

Prendergast's t. (for *typhoid fever*): give an intradermal injection of 5 mg. of typhoid vaccine; in the nontyphoid patient there develops within twenty-four hours an area of redness about the site of the injection, while in the typhoid patient there is no reaction.

Preyer's t.: a spectroscopic test for carbon monoxide in the blood.

Proetz t. (for *acuity of sense of smell*): use of a series of substances each in 10 different concentrations in a liter of petroleum of specific gravity 0.880, to determine the least concentration at which the substance can be recognized; termed *olfactory coefficient* or *minimal identifiable odor*.

projective t., any of various tests in which an individual interprets ambiguous stimulus situations, e.g., a series of inkblots (Rorschach t.), according to his own unconscious dispositions, thus yielding information about his personality structure and its underlying dynamics.

Prostigmin t. (for *pregnancy*): administration of Prostigmin (neostigmine) to a woman who has missed her regular menstruation will bring on menstruation if she is not pregnant.

protection t., serum neutralization t.

protein t., see specific tests, including *acetic acid and potassium ferrocyanide t.*, *Acree-Rosenheim t.*, *Adamkiewicz's t.*, *Bardach's t.*, *biuret t. (1)*, *Brücke's t. (2)*, *coagulation t.*, *colloidal gold t.*, *Gies' biuret t.*, *Grigg's t.*, *Hopkins-Cole t.*, *Kantor and Gies' t.*, *Kober t. (2)*, *Liebermann's t.*, *Michailow's t.*, *Millon's t.*, *Molisch's t. (3)*, *Mulder's t. (2)*, *Petri's t.*, *Posner's t. (2)*, *Reichl's t.*, *Schulte's t.*, *Schultze's t. (3)*, *Sicard-Canteloube t.*, *sulfur t.*, *triketohydrindene hydrate t.*, *von Aldor's t.* See also tests listed under *albumin t.*

protein tyrosin t. (for *malaria*): to 0.1 ml. of serum add 3 ml. of a 14 per cent solution of sodium sulfate, mix, and incubate for three hours. Centrifuge and wash the precipitate with fresh solution of sodium sulfate. Dissolve the precipitate in 1.75 ml. of water and add 0.1 ml. of a 5N solution of sodium hydroxide. Heat on water bath for ten minutes, add 0.15 ml. of Folin and Ciocalteu's phenol reagent, and compare with a standard.

protease t.: protease does not coagulate on boiling, but gives a ring test with trichloroacetic acid. See also *von Aldor's t.*

prothrombin t.: a test for prothrombin based on clotting time; see under *time*, and see *Quick's t. (2)*.

prothrombin consumption t.: a test used, for the most part, to measure the formation of intrinsic thromboplastin by determining the residual serum prothrombin after blood coagulation is complete. Because the test is made on whole blood, it also measures, indirectly, the thromboplastic function of platelets.

prothrombin-proconvertin t.: a test used in the control of coumarin-type anticoagulants similar to the Quick method, except that it employs a saline extract of brain as a thromboplastin and requires the presence of excess blood coagulation factor V, usually derived from deprothrombinized ox plasma.

protozoan t.: the use of protozoan protoplasm as a test for pathologic tissue change, by observing the rate of reproduction of cultures of paramecium bred on normal and pathologic tissue.

psychological t., any test to measure one's development, achievement, personality, intelligence, thought processes, etc.

psychometric t's, see *intelligence t.*

pulp t.: a diagnostic test to determine tooth pulp vitality or abnormality, usually by means of electric pulp testers or by application of a hot or cold stimulus.

Purdy's t. (for *albumin*): fill a test tube two thirds full of the clear urine, add one sixth of its volume of a saturated solution of sodium chloride and 5 to 10 drops of 50 per cent acetic acid. Gently heat the upper part of the tube and look for a cloud.

purine bodies t., see *Cooke's t.* See also *purine bodies, methods for*, under *method*.

pus t., see specific tests, including *Donné's t.*, *Vitali's t. (6)*, *Waterhouse pus t.*

Pyramidon t.: 1. (for *occult blood in feces*) see *aminopyrine t.* 2. (in *urine*) to the urine add tincture of iodine; a yellow ring indicates Pyramidon.

pyridine t., see *Anderson's t.*

pyrocatechin t., see *Brieger's t. (1)*.

quadriceps t. (for *hyperthyroidism*): the patient sits well forward on the edge of a straight chair and holds the leg out at right angles to the body. Normal persons can hold this position for at least a minute; those with hyperthyroidism can maintain it for only a few seconds.

Queckenstedt's t., see under *sign*.

Quellung t., see *Neufeld's reaction*, under *reaction*.

Quick's t.: 1. (for *liver function*) a test based on excretion of hippuric acid following the administration of sodium benzoate. 2. (one-stage prothrombin time) by adding an extrinsic thromboplastin such as dried rabbit brain and calcium to oxalated blood the integrity of the prothrombin complex, composed of factors II, V, VII, X, may be defined; used widely to control administration of coumarin-type anticoagulants.

A TABLE OF TESTS (Continued)

Quick tourniquet t., see *tourniquet t.* (1).

quinine t., see specific tests, including *André's t.*, *Binz's t.*, *Brande's t.*, *thalleioquin t.*

Quinlan's t. (for bile): a 3-mm. layer of the suspected liquid is examined by the spectroscopic; if bile is present, some of the violet color of the spectrum will be absorbed.

Raabe's t. (for albumin): filter the urine into a test tube and drop a crystal of trichloroacetic acid into it; albumin will form a white ring about the crystal; uric acid may form a similar ring, but it is not so well defined.

Rabuteau's t.: 1. (for hydrochloric acid in urine) add a little indigosulfonic acid to color the urine, and sulfurous acid to decompose what hydrochloric acid may be present; the urine will be decolorized. 2. (for hydrochloric acid in stomach contents) one gm. of potassium iodate and 0.5 gm. of potassium iodide are added to 50 ml. of starch mucilage; filtered stomach liquids are added to it; free hydrochloric acid will render the mixture blue.

radioactive renogram t.: an intravenous injection of radioisotopic material is given and its uptake and excretion is monitored by an external scintillation counter over the kidneys.

radioallergosorbent t. (RAST): a radioimmunoassay assay test for the measurement of extremely small amounts of specific IgE antibody to a variety of allergens, in which antigen is fixed in a solid-phase matrix, the antibody-containing specimen is added to the matrix, and then a second, radiolabeled anti-gamma globulin is added.

radioimmunosorbent t. (RIST): a radioimmunoassay technique for measuring IgE immunoglobulins in serum; the serum sample is mixed with a standard amount of radiolabeled IgE and then exposed to Sephadex particles coated with anti-human IgE.

radioisotope renal excretion t. (for study of renal function): radioisotopic material diluted with saline is rapidly injected into a well-hydrated patient; urine collected by an indwelling urethral catheter or a ureteral catheter previously inserted into the kidney is collected at known intervals and the radioactivity of each specimen is determined and recorded.

Ralfe's t.: 1. (for acetone in urine) boil 4 ml. of solution of potassium hydroxide with 1.5 gm. of potassium iodide; overlay it with 4 ml. of urine; a yellow ring with specks of iodoform appears at the plane of contact. 2. (for peptones in urine) put 4 ml. of Fehling's solution in a test tube and overlay it with urine; a rose-colored ring shows the presence of peptones.

Ramon's flocculation t.: to a series of tubes containing a constant amount of toxin, e.g., diphtheria toxin, antitoxin is added in increasing amounts; when a zone of flocculation appears, the tube showing it contains a completely neutralized mixture of toxin and antitoxin. The first tube in which flocculation occurs is taken as the end-point.

Randolph's t. (for peptones in urine): add 2 drops of a saturated solution of potassium iodide and 3 drops of Millon's reagent to 5 ml. of cold and slightly acid urine; a yellow precipitate shows the presence of peptones.

Rantzman's t.: a modification of Lange's test for acetone. in which ammonium nitrate is used as a preservative.

rapid plasma reagin (RPR) t.: a group of screening flocculation tests for syphilis using a modified VDRL antigen containing choline chloride to check plasma or unheated serum; addition of charcoal particles to the antigen permits macroscopic identification of the flocculation.

rapid serum amylase t., Fishman-Doubilet t.

rash-extinction t., see *Schultz-Charlton reaction*, under *reaction*.

Raygat's t., see *hydrostatic t.*

Rebuck t., Rebuck skin window technique.

reckoning t.: a mental test consisting in requiring the patient to add in pairs a series of numbers. The total number of sums accomplished per minute indicates the patient's capacity for mental work, while their accuracy indicates the patient's fixed associations and power of attention.

red t., see *phenolsulfonphthalein t.*

Ree's t. (for albumin): small amounts of albumin are precipitated from solution by tannic acid in alcoholic solution.

Rehberg's t.: a test of kidney function based on the excretion of creatinine administered 2 gm. in 500 ml. of water.

Rehfuß's t. (of gastric secretion): by means of a specially devised tube (*Rehfuß tube*) inserted into the stomach immediately after an Ewald test meal, a specimen of the contents is drawn off at fifteen-minute intervals until the close of digestion. Each specimen is examined and the results are plotted in a graphic curve, the abscissa of which is the number of minutes at which the gastric contents were removed, and the ordinate the number of milliliters of decinormal sodium hydroxide solution necessary to titrate the free acidity and the total acidity of the gastric contents.

Reichl's t. (for proteins): add 2 or 3 drops of an alcoholic solution of benzaldehyde and a quantity of sulfuric acid previously diluted to twice its volume with water; then add a few drops of ferric sulfate solution. The mixture will sooner or later take on a deep-blue color if proteins are present.

Reid Hunt's t., see *Hunt's reaction*, under *reaction*.

Reinsch's t. (for heavy metals, including arsenic, mercury, bismuth, antimony, and large amounts of selenium, tellurium, and sulfide): insert a strip of clean copper into the suspected acidified

liquid or finely ground tissue, and boil; if one or more heavy metals are present, a coating will form on the copper strip.

Remont's t. (for salicylic acid): make the milk acid with sulfuric acid, extract the salicylic acid with ether, and identify it by the purple or violet color produced on the addition of ferric chloride.

renal function t., see *kidney function t.*

rennin t., see individual tests, including *Lee's t.* and *Riegel's t.*

resorcinol t. (for hydrochloric acid), see *Boas's t.* (1).

resorcinol-hydrochloric acid t. (for levulose), see *Selivanoff's t.*

Reuss' t. (for atropine): the substance examined is treated with sulfuric acid and oxidizing agents; if atropine is present, an odor of roses and orange-flowers is given off.

Reynold's t. (for acetone): to the liquid to be examined add freshly prepared mercuric oxide, shake and filter, and overlay the filtrate with ammonium sulfide; the liquid turns black if acetone is present.

rheumatoid arthritis t., see specific tests, including *agglutination t.*, *bentonite t.*, *bracelet t.*, *latex agglutination t.*, *sheep cell agglutination t.*

rhubarb t. (in urine): make the urine alkaline; a red color indicates rhubarb.

Rieckenberg's t., see under *phenomenon*.

Riegel's t. (for rennin): to 10 ml. of milk add 5 ml. of neutral gastric juice and incubate for fifteen minutes; coagulation will occur if rennin is present.

Riegler's t.: 1. (for albumin) 10 gm. of betanaphtholsulfonic acid is dissolved in 200 ml. of distilled water and filtered; 5 ml. of urine is treated with 20 to 30 drops of solution. Turbidity shows the presence of albumin. 2. (for hydrochloric acid in the gastric juice) Congo red is changed to blue if hydrochloric acid is present. 3. (for dextrose) place in a test tube 0.1 gm. of phenyl-hydrazine-hydrochloride, 0.25 gm. of sodium acetate, and 20 drops of the urine. Heat to boiling. Add 10 ml. of a 3 per cent solution of potassium hydroxide and gently shake the tube. A red color indicates sugar.

Rimini's t., see *Burnam's t.*

ring t.: 1. (for antibiotic activity) the solution is placed in a ring resting on the surface of seeded agar and the size of the surrounding clear area of inhibition indicates the activity. 2. (for glanders) see *Konew's t.* 3. (for protein) see *Heller's t.* (1), *Posner's t.* (2), *Roberts' t.* (1).

Rinne t.: a hearing test made, with the opposite ear masked, with tuning forks of 256, 512, and 1024 Hz; by alternately placing the stem of the vibrating fork on the mastoid process of the temporal bone of the patient and holding it $\frac{1}{2}$ inch from the external auditory meatus until it is no longer heard at one of these positions. When air conduction is greater than bone conduction, it indicates normal hearing or sensorineural hearing loss. When bone conduction is greater than air conduction, it indicates conductive hearing loss.

Rivalta's t., see under *reaction*.

Roberts' t.: 1. (for albumin) underlay the urine with a mixture containing 5 parts of saturated solution of magnesium sulfate and 1 part of nitric acid; a white ring or layer forms at the plane of junction. 2. (for dextrose) determine the specific gravity of the urine at a certain temperature; add a little tartaric acid and some yeast; after twenty-four hours filter and again find the specific gravity. Each degree of density lost represents a grain of dextrose in a fluidounce of the urine.

Robinson-Kepler t. (for adrenocortical insufficiency): a test based on the fact that patients with adrenocortical insufficiency are unable to excrete a large water load at a normal rate, as opposed to normal subjects who will, for example, excrete 50 per cent of 1500 ml. of ingested water within four hours.

Robinson-Kepler-Power water t. (for sprue): a test based upon the fact that in sprue there is increased nocturnal elimination of urine, perhaps due to decreased absorption of water.

Roffo's t.: to 2 ml. of fresh centrifugized blood serum are added 5 drops of a 5 per cent solution of neutral red; the normal yellow of the serum changes to red if the subject has cancer.

Roger's t., see *camphor t.*

Roger-Josué t., see *blister t.*

Romberg t. (for differentiating between peripheral and cerebellar ataxia): an increase in clumsiness in all movements and in the width and uncertainty of the gait when the patient's eyes are closed indicates peripheral ataxia; no change indicates the cerebellar type.

Römer's t.: intracutaneous injection of tuberculin into a tuberculous guinea-pig produces a papule with a hemorrhagic center; called also *cockade reaction* and *Römer's reaction*.

Ronchese t. (for quantitative determination of ammonia in urine): one based on the action of solution of formaldehyde on the ammonia salts. A 10 per cent solution of sodium carbonate is added, a drop at a time, to the urine until the reaction becomes neutral. The solution of formaldehyde (40 per cent) is neutralized with a one-fourth normal soda solution against phenolphthalein until a slight pink tint develops. Then 25 ml. of the neutral urine and 10 ml. of the neutral solution of formaldehyde are mixed and titrated against decinormal sodium carbonate solution until a deep pink develops. The calculation is simple: 1 ml. of the decinormal sodium carbonate solution for 100 ml. of urine corresponds to 0.017 gm. ammonia in 1000 ml. of urine.

Rorschach t.: a projective test (q.v.) which is sensitive to disorders of thought and emotion. It consists of a series of 10 ink blot

designs, some black and some in colors. The patient is directed to look at the cards and tell what he sees. He is then asked to indicate which aspect of the blot and which location suggest the percept he reports.

Rose's t. (for blood): the scrapings from a blood stain are boiled in dilute caustic potash; when examined the liquid will show a greenish color in a thin layer and a red color in a thicker layer.

rose bengal t. (for liver function): rose bengal (1 per cent in sodium chloride solution) is injected into the blood stream. Normally it disappears from the blood rapidly; delay in the normal disappearance time points to diminished activity of the liver.

Rose-Waaler t. (for rheumatoid factor), see *sheep cell agglutination t.* (1).

Rosenbach's t.: 1. (for indigo red) boil with nitric acid; a blue color will be formed. 2. (for circulating cold hemolysins) immersion of the hands or feet in ice water will be followed by symptoms of paroxysmal cold hemoglobinuria if cold hemolysins are present.

Rosenbach-Gmelin t. (for bile pigment): filter the urine through a very small filter, and put a drop of nitric acid with a trace of nitrous acid on the inside of the filter; a pale-yellow spot will appear, surrounded with yellowish red, violet, blue, and green rings.

Rosenheim-Drummond t. (for vitamin A): dissolve 1 or 2 drops of cod liver oil in about 5 ml. of an anhydrous fat solvent. Add 1 drop of concentrated sulfuric acid. A temporary deep-violet color indicates vitamin A.

Rosenthal's t.: 1. (for blood in urine) add potassium hydroxide solution to the urine, remove the precipitate and dry it; place a small amount on a slide with a crystal of sodium chloride; apply a coverglass and cause a few drops of glacial acetic acid to flow under it; warm the plate. When it is cool hemin crystals will appear if blood is present. 2. (for liver function) a modification of the phenoltetrachlorophthalein test based on the amount of the dye which remains in the blood at definite periods after injection of 5 mg. per kilogram of body weight. The normal liver will remove most of the dye from the blood in fifteen minutes and all of it within an hour.

Rosin's t. (for indigo red): render the suspected liquid alkaline with sodium carbonate and extract with ether; this is colored red.

Ross-Jones t. (for excess of globulin in cerebrospinal fluid): 1 ml. of cerebrospinal fluid is floated over 2 ml. of concentrated ammonium sulfate solution; excess of globulin produces a fine white ring at the line of junction.

Rossel's aloin t. (for blood in stools): about 1 drachm of the feces is put in a test tube and extracted with 5 to 10 ml. of ether to remove the fat. After pouring off the ether the feces are thoroughly shaken up with 5 ml. of glacial acetic acid. The acid is then poured into another test tube and extracted with 5 to 10 ml. of ether. The test is then made with this ether. To that ether are added 20 to 30 drops of old oil of turpentine and 10 to 15 drops of a 1 to 4 per cent solution of Barbados aloin in 60 to 70 per cent alcohol. In the presence of blood the mixture takes on a light red color, turning to bright cherry red in about ten minutes.

Rothera's t. (for acetone): to 5 ml. of urine add a little solid ammonium sulfate and add 2 to 3 drops of a fresh 5 per cent solution of sodium nitroprusside and 1 to 2 ml. of ammonium hydroxide; a purple color forms if acetone is present.

Rotter's t. (for ascorbic acid in the body): cutaneous injection of 2,6-dichlorophenolindophenol produces colorization of the tissues; decolorization occurring in ten minutes indicates adequate ascorbic acid.

Rous t. (for hemosiderin): centrifuge the urine; to the sediment add 5 ml. of a 2 per cent solution of potassium ferrocyanide and 5 ml. of a 1 per cent solution of hydrochloric acid. Hemosiderin granules stain blue.

Roussin's t.: microscopic examination of suspected blood stains.

Rowntree and Geraghty's t., see *phenolsulfonphthalein t.*

RPR t., rapid plasma reagin t.

Rubin's t.: 1. a test for patency of the uterine tubes made by transuterine insufflation with carbon dioxide. If the tubes are patent the gas enters the peritoneal cavity and may be demonstrated by the fluoroscope or roentgenogram. This subphrenic pneumoperitoneum causes pain in one or both shoulders of the patient. If the manometer registers not over 100 mm. Hg the tubes are patent; if between 120 and 130, there may be stenosis or stricture, but not complete occlusion; if it rises to 200, the tubes are completely occluded. 2. a test to detect avian leukosis viruses in egg-culture vaccines; if the viruses are present, they induce a cellular resistance to Rous viruses subsequently inoculated (resistance-inducing factor).

Rubino's t., see under *reaction*.

Rubner's t.: 1. (for carbon monoxide in blood) shake the blood with 4 or 5 volumes of lead acetate in solution: if the blood contains CO, it will retain its bright color; if not, it becomes a chocolate brown. 2. (for lactose, dextrose, maltose, and levulose in urine) add lead acetate to the urine, boil, and then add an excess of ammonium hydroxide: lactose gives a brick-red color, dextrose a coffee-brown color, maltose a light-yellow color, and levulose no color at all.

Ruhemann's t. (for uric acid in urine), see under *method*.

ruler t., see *Hamilton's test*.

Rumpel-Leede t., see under *phenomenon*.

Russo's t., see under *reaction*.

Ruttan and Hardisty's t. (for blood): blood in the presence of

a 4 per cent glacial acetic acid solution of orthotoluidine and hydrogen peroxide gives a bluish color.

Rytz t. (for syphilis): the test requires only one tube for each serum. In a tube 75 mm. by 10 mm., 0.15 ml. of serum is placed and heated in a water bath at 60° C. for three minutes; 0.05 ml. of half saturated ammonium sulfate is added and mixed by shaking. The antigen emulsion, 0.05 ml., is added, mixed by shaking, and 1 ml. of a 0.9 per cent solution of sodium chloride is added and rotated in such a manner that the antigen particles become evenly distributed. This is shaken in the Kahn shaker for three minutes, and then 2 ml. of a 0.9 per cent solution of sodium chloride is added and the tube is inverted slowly two or three times just before the reading is taken. A 1 plus reaction consists of tiny, densely scattered flocculation particles in a slightly opalescent fluid. Plus 2, 3, and 4 reactions show clumps of flocculation in a clear fluid, the clumps varying in size according to the positiveness of the serum. A negative test shows only minute antigen particles in a slightly hazy fluid without clumping.

Saathoff's t. (for fat in stools): rub up the feces with sudan and warm; fat droplets stain yellow to red.

Sabin-Feldman dye t.: a serologic test for the diagnosis of toxoplasmosis, based on the failure of living toxoplasmas, in the presence of specific antibody and accessory factor, to take up methylene blue dye.

saccharimeter t.: dextrose in solution rotates the plane of polarized light to the right, while levulose turns it to the left.

Sachs-Georgi t. (for syphilis): 1 ml. of a solution of cholesterolized alcoholic extract of human or beef heart (1 part) and 0.9 per cent sodium chloride solution (9 parts), when added to 0.3 ml. of syphilitic serum, will cause a flocculent precipitation; called also *lentochol reaction*. Abbreviated S.-G. t.

Sachs-Witebsky t. (for syphilis): a quickly performed seroreaction for syphilis using a more concentrated cholesterolized extract of beef heart than that used in the Sachs-Georgi test; called also *citochol reaction* or *test*, and *Sachs-Witebsky reaction*.

Sachsse's t. (for sugar in the urine): a solution of 18 gm. of red mercuric iodide, 25 gm. of potassium iodide, 80 gm. of potassium hydroxide, in water enough to make a liter; sugar, if present, causes a black precipitate.

Sahli's t. (for motive and digestive power of stomach): the patient is fed a soup made of definite amounts of water, flour, butter, and salt, and in an hour the stomach contents are removed. The amount of fat present shows how much of the meal has been digested, and the acidity indicates how much the stomach has secreted.

Sahli's desmoid t., see *desmoid reaction*, under *reaction*.

Sahli's glutoid t. (for digestive function): a glutoid capsule containing 0.15 gm. of iodoform is taken with an Ewald breakfast. The capsule is not digested by the stomach fluid, but is readily digested by pancreatic juice. Appearance of iodine in the saliva and urine within four to six hours indicates normal gastric motility, normal intestinal digestion, and normal absorption. Glutoid capsules are prepared by soaking gelatin capsules in solution of formaldehyde.

Sahli-Nencki t. (for lipolytic activity of the pancreas): phenyl salicylate (salol) is administered: it is excreted as salicylic acid when pancreatic activity is normal.

Sakaguchi t. (for arginine): a reddish or wine color is produced in the presence of arginine when a tissue section is treated with an alkaline mixture of α -naphthol and sodium hypochlorite.

salicylaldehyde t. (for acetone), see *Frommer's t.*

salicylic acid t., see specific tests, including *Remont's t.*, *Siebold and Bradbury's t.*

saline wheal t., see *McClure-Aldrich t.*

Salkowski's t.: 1. (for CO in the blood) add to the blood 20 volumes of water and sodium hydroxide in solution (specific gravity, 1.34). If CO is present, it becomes cloudy and then red; flakes of red afterward float on the surface. 2. (for cholesterol) dissolve in chloroform and add an equal volume of strong sulfuric acid: if cholesterol is present, the solution becomes bluish red, and slowly changes to a violet red, the sulfuric acid becomes red, with a green fluorescence. 3. (for indole) to the solution to be tested add a little nitric acid, and drop in slowly a solution of potassium nitrite (2 per cent): a red color shows that indole is present, and a red precipitate is afterward formed. 4. (for dextrose) a modified form of Trommer's test. 5. (for creatinine) to the yellow solution obtained in Weyl's test add an excess of acetic acid and heat; a green color results, which turns to blue.

Salkowski-Ludwig t. (for uric acid): a solution of silver ammoniurate and ammonium and magnesium chlorides precipitates uric acid.

Salkowski and Schipper's t. (for bile pigments): to 10 ml. of the unknown add 5 drops of a 20 per cent solution of sodium carbonate and 10 drops of a 20 per cent solution of calcium chloride. To the precipitate add 3 ml. of alcohol containing 5 per cent of strong hydrochloric acid and a few drops of sodium nitrite. Heat. A green color indicates bile pigments.

salol t., see *Ewald's t.* (2) and *Sahli-Nencki t.*

Salomon's t.: test the stomach washing by means of Esbach's reagent, after twenty-four hours without protein food; the presence of albumin indicates ulcerative cancer.

salvarsan t., see *Dicken's t.*

sand t. (for bile and hemoglobin in urine): a layer of white sand

A TABLE OF TESTS (Continued)

is spread on a plate and on this is poured some of the urine; if the urine contains pigments, a spot is left on the sand, which is brown with hemoglobin and greenish with bile pigment. Called also *Lipp's t.*

Sandrock t. (for thrombosis): vigorous friction is applied to the part; the degree of hyperemia which follows is an indication of the condition of the circulation.

Sanford's t.: prepare a series of dilutions of salt from 0.28 to 0.5 per cent; add 1 drop of blood to each dilution, mix, allow to settle, and note the tubes which show hemolysis.

santonin t.: 1. (for the antitoxic efficiency of the liver) the patient is given 0.02 gm. of santonin on a fasting stomach; the urine is examined hourly for oxysantonin by treating it with a dilute sodium hydroxide solution which will produce a red color with oxysantonin.

2. see *Daclin t.*

Saundby's t. (for blood in feces): to a small quantity of feces in a test tube 10 drops of a saturated benzidine solution is added; to this is added 30 drops of hydrogen peroxide solution. A dark blue color will develop if blood is present.

scarification t., see *Pirquet reaction*, under *reaction*.

Schaffer's t. (for nitrites in urine): decolorize 4 ml. of urine with animal charcoal and add to it 4 ml. of 10 per cent acetic acid and 3 drops of 5 per cent solution of potassium ferrocyanide; an intense yellow color indicates nitrites.

Schalijew's t. (for blood): treat defibrinated blood with excess of glacial acetic acid, heat to 80° C., cool, and examine for hemin crystals.

Schalm t., see *California mastitis t.*

Scherer's t.: 1. (for inosite) evaporate on platinum foil with nitric acid, add ammonia water and a single drop of calcium chloride in solution, and reevaporate to dryness; a rose-red coloration indicates the presence of inosite. 2. (for pure leucine) a small portion of leucine with a few drops of nitric acid are evaporated on platinum foil. The transparent residue turns a brownish color on the addition of a sodium hydroxide solution. When the mixture is concentrated an oil-like drop is obtained. 3. (for tyrosine) treat with nitric acid and dry with care on platinum foil; the formation of nitrotyrosine nitrate renders it yellow, and sodium hydroxide solution changes the color to reddish yellow.

Schick t.: intracutaneous injection of a quantity of diphtheria toxin equal to one fiftieth of the minimal lethal dose diluted in salt solution. If the patient has less than 0.03 unit of antitoxin per milliliter of blood, the toxin is not neutralized, and an area of inflammation is produced on the skin at the site of the injection. The test is a measure of immunity to diphtheria.

Schick t. control [USP], diagnostic diphtheria toxin that has been inactivated for use as control for the Schick test. Called also *inactivated diagnostic diphtheria toxin*.

Schiff's t.: 1. (for carbohydrates in urine) warm and add sulfuric acid; expose to the fumes of the urine a paper dipped in a mixture of equal volumes of xyldine and glacial acetic acid with alcohol and then dried: the paper becomes red if carbohydrates are present. 2. (for cholesterol) add a reagent composed of 2 parts of sulfuric acid with 1 part of a dilute solution of ferric chloride; evaporate to dryness and a violet color is produced. 3. (for cholesterol) evaporate with nitric acid and add ammonia water; a red color not changed by alkalis is produced. 4. (for allantoin and urea) add a solution of furfural in hydrochloric acid; a yellow color appears, turning to purple and then to a brownish black. 5. (for uric acid) treat silver nitrate paper with an alkaline solution of the suspected substance; a brown stain shows the presence of uric acid. 6. (for formaldehyde in milk) the solution consists of an aqueous solution of magenta, 40 ml.; distilled water, 250 ml.; aqueous solution of sodium bisulfite, 10 ml.; pure concentrated sulfuric acid, 10 ml., which is allowed to stand until it is colorless; 2 ml. of this solution is added to a test tube two thirds full of milk. If formaldehyde is present, a pink or lilac color will appear in from thirty to sixty seconds.

Schiller's t. (for cancer of cervix): a test for early squamous cell cancer by treating the tissue with a solution of 1 gm. of pure iodine and 2 gm. of potassium iodide in 300 ml. of water: if the cervix is healthy, the surface turns brown; if there is cancer, the treated area turns white or yellow, because cancer cells do not contain glycogen and therefore do not stain with iodine.

Schilling t. (for gastrointestinal absorption of vitamin B₁₂): a measured amount of radioactive vitamin B₁₂ is given orally, followed by a parenteral flushing dose of the nonradioactive vitamin, and the percentage of radioactivity is determined in the urine excreted over a 24-hour period.

Schirmer's t. (for keratoconjunctivitis sicca): a test of tear production in which a piece of filter paper is inserted over the conjunctival sac of the lower lid, with the end of the paper hanging down on the outside. The range of normal wetting, determined by measuring the area of moisture on the projecting paper, depends on age and sex.

Schlesinger's t. (for urobilin): to about 5 ml. of the urine in a test tube, add a few drops of Lugol's solution to transform the chromogen into the pigment. Now add 4 or 5 ml. of a saturated solution of zinc chloride in absolute alcohol and filter. A greenish fluorescence, best seen when the tube is viewed against a black background and the light is concentrated upon it with a lens, shows the presence of urobilin. Bile pigment, if present, should be removed

by adding about one fifth volume of 10 per cent calcium chloride solution and filtering.

Schmidt's t.: 1. (for bile) particles of fresh feces are rubbed up with concentrated aqueous solution of corrosive mercuric chloride in a glass dish. After standing covered for twenty-four hours the matter is examined, bilirubin appearing as green particles, hydrobilirubin as red ones. 2. (for sugar) lead acetate is added and precipitated with ammonia water; on heating, the white precipitate remains unchanged if saccharose or milk sugar is present, but if dextrose is present, an orange tint is seen. 3. (for proteolytic pancreatic function) see *nuclear t.* 4. (for intestinal indigestion) the patient is placed upon a definite diet; after a few days the feces are examined for fermentation. If this occurs within forty-eight hours it points to the imperfect intestinal digestion of starch. 5. (for digestive function of the stomach) a test based upon the fact that when the gastric secretion is absent or greatly diminished, connective tissue masses appear in the stool after eating raw chopped meats.

Schönbein's t.: 1. (for blood) blue coloration obtained by adding solution of hydrogen peroxide to tincture of guaiac mixed with suspected blood. 2. (for copper) a solution containing a copper salt becomes blue if potassium cyanide and tincture of guaiac are added.

Schopfer's t.: minute amounts of vitamin B in the blood catalyze the mold *Phycomyces blaksleeana*.

Schroeder's t. (for urea): add a crystal of the substance to a solution of bromine in chloroform; the urea will decompose and gas will be formed.

Schubert-Dannmeyer t.: a test for cancer based on the difference of certain electrical properties between a lipin extract of cancer serum and that from normal serum.

Schulte's t. (for proteins): remove all coagulable protein, precipitate with six volumes of absolute alcohol, dissolve the precipitate in water, and apply the biuret test.

Schultz-Charlton t., see under *reaction*.

Schultze's t.: 1. (for cellulose) iodine is dissolved to saturation in a zinc chloride solution (specific gravity, 1.8), and 6 parts of potassium iodide are added; this reagent colors cellulose blue. 2. (for cholesterol) evaporate with nitric acid, using a porcelain dish and water bath; if cholesterol is present, a yellow deposit is formed, which changes to yellowish red when ammonia is added. 3. (for proteins) to a suspected solution add a very little of a dilute solution of cane sugar and concentrated sulfuric acid; keep it at 60° C., and a bluish red coloration is produced.

Schultze's indophenol oxydase t., see *indophenol t.*

Schumm's t.: 1. see *benzidine t.* 2. (for heme in plasma) a given volume of plasma is covered with a layer of ether; one-tenth the volume of concentrated ammonium sulfide (analar) is then run in with a pipette and subsequently mixed by shaking. A positive reaction is indicated by the appearance of a hemochromogen with a sharply defined band at 558 mμ in a depth up to 4 cm. of plasma.

Schürmann's t. (for syphilis): a color reaction proposed for the recognition of syphilitic blood serum.

Schwabach t.: a hearing test made, with the opposite ear masked, with tuning forks of 256, 512, 1024, and 2048 Hz, alternately placing the stem of the vibrating fork on the mastoid process of the temporal bone of the patient and that of the examiner (whose hearing should be normal) until it is no longer heard by one of them. The result is expressed as "Schwabach prolonged" if heard longer by the patient (indicative of conductive hearing impairment), as "Schwabach shortened or diminished" if heard longer by the examiner (indicative of sensorineural hearing impairment), and as "Schwabach normal" if heard for the same time by both.

Schwartz's t. (for varicose veins): the flats of the fingers are placed along the course of the supposed varicose saphenous vein in the thigh and some prominent part of the vessel below is tapped; a shock is transmitted to the fingers above if the vein is varicose.

Schwartz-McNeil t.: a complement fixation test for gonorrhea in which the antigen is an autolysate of a large number of strains of gonococci.

Schwarz's t.: 1. heat the substance with charcoal; the odor of mercaptan indicates the presence of sulfomethane. (K. L. H. Schwarz.) 2. (for digestive function of stomach) with a test breakfast there is administered a capsule of goldbeaters' skin containing 4 gm. of bismuth carbonate and 0.25 gm. of neutral pepsin. The patient is then examined fluoroscopically. At first the capsule appears as a circular, sharply defined area, but if it is dissolved by the stomach juice the area becomes a broad band. If the shadow of the capsule remains unchanged after five hours, acidity of the stomach is indicated. Called also *fibroderm bismuth capsule t.* (G. Schwarz.)

Scioletto's t. (for hydrochloric acid in urine): dip filter paper in starch paste and dry; sprinkle it with urine and dry; hang it in a flask containing strontium acetate in solution: a blue color indicates the presence of the acid.

scratch t.: cutireaction.

screen t.: 1. alternate cover t. 2. cover-uncover t.

screening t., any test used to eliminate those who are definitely not affected by the disease in question, the remainder (those with positive reactions) being subjected to more refined diagnostic tests.

secretin t.: a test for pancreatic function done by examining the pancreatic secretion produced by the intravenous injection of secretin.

A TABLE OF TESTS (Continued)

sedimentation t.: 1. see *agglutination t.* 2. see *erythrocyte sedimentation rate, under rate.*

Seidel's t. (for inositol): evaporate in a platinum crucible with nitric acid, and treat with ammonia and strontium acetate in solution; inositol, if present, causes a green coloration and a violet precipitate.

Seidlitz powder t. (for diaphragmatic hernia): the stomach is distended by the administration of a Seidlitz powder, which will enable roentgen visualization of a herniated stomach loop.

Selivanoff's t., Seliwanow's t. (for fructose in urine): to the urine is added an equal volume of hydrochloric acid containing resorcinol in the following proportion: 5 mg. resorcinol, 5 ml. water, and 5 ml. 25 per cent concentrated hydrochloric acid. Formation of a burgundy-red color after boiling for 10 seconds indicates fructose.

Sellards' t. (for acidosis): the patient is given 5 gm. of sodium bicarbonate, dissolved in water, by mouth, every two or three hours until the urine, passed before each dose, becomes neutral or faintly alkaline. Tolerance of 20 to 30 gm. shows moderate acidosis; tolerance of from 75 to 100 gm. indicates distinct acidosis. Called also *bicarbonate tolerance t.*

semen t., see specific tests, including *Barberio's t., Florence t., Huhner t., serum t.*

senna t. (in urine): make the urine alkaline; a red color indicates senna.

sensitized sheep cell t., see *sheep cell agglutination t. (1).*

sero-enzyme t., see *Abderhalden's reaction, under reaction.*

serologic t.: any laboratory test on the blood serum of a patient.

serum t. (for blood, meat, sperm, etc.): the antigen, human blood serum, is injected several times, at intervals, into a rabbit. The suspected specimen is dissolved in physiologic salt solution and added to the serum of a rabbit treated in the way mentioned. The serum will become clouded if the suspected specimen is of the same species as the antigen used for immunizing the rabbit. Called also *biological t., Bordet's t., and Uhlenhuth's t.*

serum neutralization t.: a test of the antimicrobial activity of a serum done by inoculating a mixture of the serum and the virus or other microorganism being tested into a susceptible animal; called also *protection t.*

shadow t.: retinoscopy.

Shear's t. (for vitamin D): to the oil add an equal volume of acid aniline (1 part concentrated HCl and 15 parts aniline). Mix and boil. A green color changing to red indicates vitamin D.

sheep cell agglutination t.: 1. *(for the presence of rheumatoid factor in serum)* sheep erythrocytes sensitized with rabbit anti-sheep erythrocyte immune globulin will agglutinate following the addition of human serum in which rheumatoid factor (IgM) is present. Called also *Rose-Waaler t., sensitized sheep cell t., and Waaler-Rose t.* 2. *(for infectious mononucleosis)* when the antibody level of a person with infectious mononucleosis reaches a certain level, a sample of his blood will cause agglutination of sheep erythrocytes.

short increment sensitivity index (SISI) t., see *under index.*

Sia t. (for macroglobulinemia): a simple screening test performed by adding a drop of serum to 10 to 100 ml. of cold distilled water; a positive reaction is indicated by the formation of a heaving cloud of precipitate at the bottom of the container. It is not diagnostic, because it may be positive in other conditions, as in rheumatoid arthritis.

Sicard-Canteloube t.: place 4 ml. of spinal fluid in a specially graduated tube, add 12 drops of a 33 per cent trichloroacetic acid, mix, and read the amount of protein precipitated after twenty-four hours' sedimentation.

sickling t.: a method to demonstrate hemoglobin S and the sickling phenomenon in erythrocytes, particularly in the heterozygous state, performed by reducing the environmental oxygen to which the red cells are exposed. This may be done by simply sealing a drop of blood under a coverslip or, to hasten the morphologic change, by adding 2 per cent sodium metabisulfite or sodium dithionite to the preparation.

Siebold and Bradbury's t. (for salicylic acid in urine): alkalize with potassium carbonate, add a solution of lead nitrate in excess, filter, and add a dilute solution of ferric chloride; a violet color will be produced.

Sieur's t., coin t.

sigma t., see *under reaction.*

silver t. (for dextrose in the urine): boil the urine with silver nitrate solution and an excess of ammonia; metallic silver will be deposited. Tartaric acid and aldehyde also produce this reaction.

Simonelli's t. (for renal inadequacy): iodine is administered and the urine and saliva tested for iodine; if iodine does not appear in the urine at the same time as in the saliva, the kidneys are diseased.

Sims' t.: a postcoital test for the ability of the spermatozoa to penetrate the cervical mucus.

skatole t., see specific tests, including *Ciamician and Magnanini's t., Herter's t. (2), Kondo's t., nitroso-indole-nitrate t.*

skin t., see *cutaneous reaction, under reaction, and see cutireaction.*

skin window t., Rebuck skin window technique.

slide t., see *Kline t.*

smear t., see *Papanicolaou's stain, under Table of Stains.*

Smith's t. (for bile pigments): overlay the suspected liquid with

tincture of iodine diluted 1:10; a green ring or plane appears at the junction of the two liquids in the tube.

Snellen's t.: 1. *(for pretended blindness in one eye)* the patient is requested to look at alternate red and green letters; the admittedly sound eye is covered with a red glass and if the green letters are read, evidence of fraud is present. 2. determination of visual acuity by means of Snellen test types.

Snider match t. (a screening test for pulmonary ventilation): an ordinary book match which is burned nearly half way is held 6 inches from the mouth of the patient, who attempts to extinguish it by exhaling, after taking as deep a breath as possible, and without bringing the lips together.

sniff t.: when a patient sniffs, the paralyzed half of the diaphragm is seen to rise and the intact half to descend, as observed by fluoroscopy.

sodium chloride balance t., see *balance t.*

Soldaini's t. (for glucose in the urine): dissolve 15 gm. of copper carbonate and 416 gm. of potassium bicarbonate in 1400 ml. of water for a reagent; 2 parts of urine are boiled with 1 part of the reagent. A yellow precipitate of cupric oxide shows the presence of dextrose.

Solera's t. (for thiocyanates): saturate filter paper with 0.5 per cent starch paste containing 1 per cent of iodic acid; dry and preserve as test paper. A piece of this paper moistened with saliva will turn blue if thiocyanate is present.

solubility t. (for pneumococcus): reagent: sodium desoxycholate 10 gm., alcohol 10 ml., water 90 ml. Add 2 drops of the reagent to 1 ml. of a broth culture. Pneumococci dissolve within five minutes.

Sonnenschein's t. (for strychnine): the suspected substance is dissolved in a drop of sulfuric acid, some cerous oxide is added, and stirred with a glass rod; a deep-blue color is formed, changing to violet, and finally to cherry red in the presence of strychnine.

soy bean t., see *urease t.*

spavin t.: a test for spavin in horses made by holding up the limb with the hock bent sharply; the horse is then started suddenly, and in cases of spavin the first steps are very lame. Called also *hock t.*

specific gravity t., see specific tests, including *Fishberg concentration t., urine concentration t., Volhard's t. (2).* See also *specific gravity, methods for, under method.*

sphenopalatine t.: the sphenopalatine ganglion is anesthetized with Novocain in order to determine whether the efferent current which is motivating a symptom is routed through either sphenopalatine ganglion, and if so, whether the left one or the right one.

Spiegler's t. (for albumin): acidulate with acetic acid and filter; prepare a reagent with 8 gm. of mercuric chloride, 10 gm. of sodium chloride, and 4 gm. of tartaric acid in 200 ml. of water and 20 ml. of glycerin; overlay the reagent with the filtrate. If albumin is present, a white ring appears at the junction of the liquids.

spinal t.: any laboratory serologic test of the spinal fluid.

Spiro's t.: 1. a test for the determination of ammonia and urea, embracing a combination of Folin's method for urea and the Sjöqvist method for urea. 2. *(for hippuric acid)* warm the unknown with acetic anhydride, anhydrous sodium acetate, and benzaldehyde. Cool, and crystals of phenylaminocinnamic acid-lactimide form.

split-renal function t., see *Howard t.*

sponge t.: a test performed by passing a hot sponge up and down the spine; if any lesion of the spine is present, pain is felt as the sponge passes over its locality.

Staehlin's t. (for functional efficiency of myocardium): the pulse rate after walking is more accelerated in impending heart failure than in health.

Stanford t.: a modified Binet test.

starch t., see *iodine t. (1).*

station t.: a test for disturbances of coordination, made by placing the patient in an erect posture, with the heels and toes of the two feet together; if the swaying of the body is beyond normal, coordination may be defective.

Staub-Traugott t., see *under effect.*

steapsin t., see *ethyl butyrate t.*

Stein's t.: inability to stand on one foot with the eyes shut; seen in disease of the labyrinth.

Steinle-Kahlenberg t.: heat a chloroform solution of a sterol with antimony pentachloride; the purple color changes to cobalt blue in the light.

Stenger t.: a test for detecting simulated unilateral hearing loss: a signal is presented at an intensity less than the admitted threshold to the affected ear and a less intense signal of the same frequency is presented simultaneously to the unaffected ear. If the subject is feigning a loss of hearing, the subject will not be able to detect the signal in the unaffected ear.

Stern's t.: a modification of the Wassermann test by using fresh active serum and the patient's complement, and overcoming nonspecific reactions by two fifths to one fifth of the usual dose of extract and three or four times the amboceptor unit.

Stock t. (for acetone in urine): the distillate of the urine is used; 50 to 100 ml. of urine is made acid by the addition of either acetic, hydrochloric, or sulfuric acid. The first 10 ml. of distillate will contain all the possible acetone. About 1 inch of the distillate is placed in a test tube; a drop or two of a 10 per cent solution of hydroxylamine hydrochloride is added, and sufficient sodium hydroxide or carbonate solution to render the solution alkaline to

liberate hydroxylamine; the mixture is shaken and a couple of drops of pyridine is added and the mixture shaken; then 1 inch of ether is added and the mixture shaken. Bromine water is then added drop by drop, with mixing, until the ether layer becomes yellow; then a few drops of strong hydrogen peroxide is added; if acetone is present the ether will turn a distinctive green blue.

Stokes's t., see under *reagent*.

Stokvis' t. (for bile pigment): with 25 ml. of urine mix 8 ml. of a 1:5 zinc acetate solution; wash the precipitate in water on a filter, and dissolve in ammonia water. Filter again, and in a short time the filtrate shows a bluish green tint.

Stoll t.: a technique for the quantitative estimation of the worm burden of an individual based on collection of a 24-hour stool specimen and counting the number of ova present in an aliquot.

Storck's t. (for human milk): the ferment of human milk will decompose hydrogen dioxide.

Strange's t., see *Henderson's t.*

Strassburg's t. (for bile acids in albumin-free urine): add cane sugar to the urine; dip filter paper into it and dry; a drop of sulfuric acid on the paper will cause a red or violet spot if bile acids are present.

Straus's biological t. (for glanders), see *Straus' reaction*, under *reaction*.

Strauss's t.: 1. (for lactic acid in stomach) extract the lactic acid from the stomach contents by means of ether. To the ether add distilled water and a little ferric chloride solution; a green color indicates lactic acid. 2. a concentration test for kidney function by the ingestion of water. 3. a levulose tolerance test for hepatic function. 4. a urea balance test for renal function.

stress t's, exercise t's.

Srurve's t. (for blood in the urine): alkalize the urine and add tannic and acetic acids until the reaction becomes acid and a dark precipitate is formed. When this is dried, crystals of hemin may be obtained from it by adding ammonium chloride and glacial acetic acid.

strychnine t., see specific tests, including *Allen's t.* (3), *Brieger's t.* (2), *Sonnenschein's t.*, *Wenzell's t.*

Stypven time t.: a test similar to the Quick one-stage prothrombin time test, but performed with Russell's viper venom (Stypven) as the thromboplastic agent; useful in defining deficiencies of blood coagulation factor X.

sugar t., see tests listed under *dextrose t.*, *galactose t.*, *levulose t.*, and *maltose t.*

sulfosalicylic acid t., same as *Exton's t.*

sulfur t. (for protein): the suspected liquid is heated with an excess of sodium hydroxide and a small quantity of acetate of lead; if proteins are present, a black precipitate of lead sulfide is formed.

Sulkowitch's t. (for calcium in urine): the precipitation of calcium in urine as an oxalate with use of a reagent consisting of 2.5 gm. of oxalic acid, 2.5 gm. of ammonium oxalate, and 5 ml. of glacial acetic acid dissolved in 150 ml. of distilled water.

Sullivan's t. (for cysteine): to 1 or 2 ml. of the unknown solution add 1 to 2 drops of a 0.5 per cent solution of 1,2-naphthoquinone-4-sodium sulfonate and then 5 ml. of a 20 per cent sodium thiosulfate made up in 0.25 normal sodium hydroxide. A brilliant red color indicates a free SH group, cysteine rather than cystine.

Suranyi's t.: an albumin reaction for the diagnosis of carcinoma.

syphilis t., see specific tests, including *Bauer's t.* (1), *benzoin t.*, *Bio-Lab t.*, *Boerner-Luken's t.*, *Cantani t.*, *Casilli's t.*, *Chediak's t.*, *Clive's t.*, *colloidal gold t.*, *Craig's t.* (2), *Doid's t.*, *Eagle t.*, *fluorescent treponemal antibody absorption t.*, *Fornet's ring t.*, *FTA t.*, *Garriga's t.*, *gel t.*, *Hecht's t.*, *Hecht-Weinberg-Gradwohl t.*, *Hennebert's t.*, *Hinton t.*, *Idé t.*, *Ishihara's t.* (2), *Jacobsthal's t.* (1), (2), *Justus' t.*, *Kafka's t.*, *Kahn t.* (1), *Kline t.*, *Kolmer's t.* (1), *Landau color t.*, *mastic t.*, *Mazzini t.*, *Meinicke t.* (1), (2), (3), *Müller's t.* (3), *Murata t.*, *Peterman's t.*, *plasmacrit t.*, *Porges-Meier t.*, *Porges-Salomon t.*, *Rytz t.*, *Sachs-Georgi t.*, *Sachs-Witesky t.*, *Schürmann's t.*, *Stern's t.*, *Takata-Ara t.*, *Targowla t.*, *Treponema pallidum complement fixation t.*, *Treponema pallidum cryolysis complement fixation t.*, *treponemal hemagglutination t.*, *Treponema pallidum immobilization t.*, *Tschernogoubou's t.*, *Veneral Disease Research Laboratory t.*, *Wassermann t.*, *Weil's t.* See also *syphilis reaction*, under *reaction*.

Szabo's t. (for HCl in the stomach contents): add to the suspected liquid a reagent containing equal parts of a 0.5 per cent solution of sodioferric tartrate and ammonium thiocyanate; if HCl is present, the reagent is changed from a pale yellow to a brownish red.

Takata-Ara t.: an obsolete, nonspecific test: by mixing a mercuric chloride solution with sodium carbonate in the presence of the normal spinal fluid, a colloidal solution of mercuric oxide is formed which turns a deep bluish violet by adding a solution of diamond-fuchsin. With pathologic spinal fluids the reaction is different. The abnormal protein content of the latter causes either a flocculation of the mercuric oxide with a discoloration of the fluid or color changes from bluish violet to pink with practically no precipitation. The first type of reaction, according to Takata and Ara, is typical of syphilis of the central nervous system while the change of the color occurs in bacterial meningitis.

tannic acid t. (for nuclealbumin), see *Ott's t.*

tannin t. (for carbon monoxide hemoglobin): dilute the blood with 4 volumes of distilled water and add a little potassium ferricyanide to change the oxyhemoglobin into methemoglobin. Divide into two parts and thoroughly oxygenate one by shaking to decompose the

carbon monoxide hemoglobin in it. Add to each part a little yellow ammonium sulfide and a little tannin solution. A bright red precipitate in the part not shaken indicates carbon monoxide hemoglobin. The methemoglobin in the other part gives a dirty, olive-green precipitate.

Tanret's t. (for albumin): Tanret's reagent gives a white precipitate with albumin. See under *reagent*.

Tardieu's t. (for infanticide): presence of air bubbles in gastric mucosa after establishment of fetal respiration.

Targowla's t., see under *reaction*.

taurine t., see *Lang's t.*

Taylor's t.: a modification of Schönbein's test for blood, the blue precipitate forming a deep sapphire blue solution when taken up by alcohol or ether.

Teichmann's t. (for blood): the suspected liquid is put under a coverglass with a crystal of sodium chloride and a little glacial acetic acid; heat carefully without boiling and then cool. If blood is present, rhombic crystals of hemin will appear.

tellurite t. (for diphtheria): a 2 per cent solution of potassium tellurite is applied to the membrane or exudate in the throat; any area affected with diphtheria will become blackened in from five to ten minutes (Manzullo, 1938).

Tensilon t. (for myasthenia gravis): after administration of Tensilon (edrophonium chloride), the patient's eye signs (ptosis and extraocular muscle abnormalities) markedly decrease.

Terman t.: the Stanford modification of the Binet test.

thalleioquin t. (for quinine): a neutralized solution of the suspected liquid is treated with chlorine, or bromine water, and then with an excess of ammonia; a green substance, thalleioquin, will be formed.

thematic apperception t. (TAT): a projective test in which the subject tells a story based on each of a series of standard ambiguous pictures, so that his responses reflect a projection of some aspect of his personality and current psychological preoccupations and conflicts.

thermoagglutination t.: a test to detect antigenic variants, in which slightly rough strains may be detected by their agglutination upon boiling saline for two hours.

thermoprecipitin t.: the finely divided organ or part is mixed with 5 to 10 parts of water, boiled, filtered, and stratified with a specific serum; a precipitate forming in five minutes is positive.

thiamine t., see *thiochrome t.*

thiochrome t. (for thiamine): oxidize the thiamine to thiochrome and then recognize the latter by its blue-violet fluorescence in ultraviolet radiation.

thiocyanate t., see *ferric chloride t.* (1), *Solera's t.*

Thomas t.: when one thigh is flexed on the abdomen to flatten lumbar lordosis, any flexion of the other thigh represents a fixed flexion contracture of that hip.

Thomas-Binetti t.: rapid decoloration of methylene blue by cancer serum in the presence of cancer extracts.

Thompson's t. (for gonorrhea), see *two-glass t.*

Thormählen's t. (for melanin in urine): treat urine with a solution of sodium nitroprusside, potassium hydroxide, and acetic acid; if melanin is present, a deep-blue color will form.

Thorn t.: a test of adrenal cortical response after injection of ACTH or of epinephrine.

thread t., see *Garrod's t.* (2).

three-glass t.: on arising in the morning the patient urinates successively into three glass receptacles labeled I, II, and III. In acute anterior urethritis the urine in I will be turbid from pus, while II and III will be clear; but in posterior urethritis the urine in all three glasses will be turbid. Blood in I comes only from the anterior urethra, but if it comes from the posterior urethra all three will contain blood. Shreds in glass III point to chronic prostatitis.

three-paper t., see *Marie's three-paper t.*

threshold tone decay t.: a test for abnormal auditory adaptation, in which continuous pure tones are presented at the threshold level to determine the amount of tone decay (auditory adaptation).

thromboplastin generation t.: a sensitive test for delineation of defects in formation of intrinsic thromboplastin (prothrombinase, intrinsic prothrombin-converting principle) and hence deficiencies of the factors involved. Patient plasma, serum, calcium chloride, and autologous platelets or platelet lipid substitute are incubated concurrently, and, at appropriate intervals, the clotting times of normal citrated plasma substrate, to which aliquots of the incubation mixture are added in sequential fashion, are determined.

Thudichum's t. (for creatinine): add to the suspected substance a dilute solution of ferric chloride; a dark-red color indicates the presence of creatinine.

thumb-nail t. (for fractured patella): the examiner's thumbnail is passed over the subcutaneous surface of the patella; a fracture will be felt as a sharp crevice.

thymol turbidity t. (for disordered liver metabolism): direct precipitation of a protein from the serum of a patient with hepatic insufficiency by means of a solution of thymol.

thyroid function t.: see specific tests, including *acetonitrile t.*, *Kottmann's t.*, *Loewi's t.*, *quadriceps t.* See also *thyroid function reaction*, under *reaction*, and *thyroid activity*, method for, under *method*.

Tidy's t. (for albumin in urine): 1. add equal volumes of phenol and glacial acetic acids; albumin will form a white precipitate.

2. add 15 drops of alcohol and 15 drops of phenol; albumin will form a white precipitate.

tine t., tine tuberculin t. (Rosenthal): four tines or prongs 2 mm. long, attached to a plastic handle and coated with dip-dried Old tuberculin (O.T.) are pressed into the skin of the volar surface of the forearm, where they deposit a dose of the tuberculin in the outer layer. The skin is checked 48 to 72 hours later for the presence of palpable induration; if the induration around one or more of the puncture wounds is 2 mm. or more in diameter, the test is considered positive.

Tizzoni's t. (for iron in tissues): treat a section of tissue with a 2 per cent solution of potassium ferrocyanide, and then with a 0.5 per cent solution of HCl; the tissue will be stained a blue color if iron is present.

TNT t., see *Webster's t.*

toad t., 1. see *male frog or male toad t.* 2. see *Xenopus t.*

Tobey-Ayer t. (in the diagnosis of lateral sinus thrombosis): after spinal puncture a manometer is attached to the puncture needle; compression on both jugular veins causes the fluid to rise in the manometer; pressure on one jugular vein alone, causes a rise in spinal fluid pressure if the lateral sinus is normal, but little or no rise if there is thrombosis of the sinus on the same side as compression of the vein. The significance of the test is greater on the right side than on the left.

tolerance t.: 1. an exercise test to determine the efficiency of the circulation. 2. a test to determine the body's ability to metabolize a substance or to endure administration of a drug.

Tollens' t.: 1. (for aldehyde) treat the suspected solution with an ammoniacal solution of silver nitrate and potassium hydroxide; if aldehyde is present, a mirror of metallic silver appears. 2. (for dextrose) prepare a reagent by precipitating a silver nitrate solution with potassium hydroxide and dissolving with ammonia; this is reduced by dextrose. 3. (for pentose) see *phloroglucin t.* 4. (for conjugate glycuronates) to 5 ml. of the urine add 1 ml. of a 1 per cent solution of naphthoresorcinol in 95 per cent alcohol and 5 ml. of strong hydrochloric acid. Boil and cool. An ether extract of this mixture is violet red if glycuronates are present.

Tollens, Neuberg, and Schwket's t. (for glycuronic acid): extract the glycuronic acid from acidified urine with ether, add water, evaporate the ether, and make orcinol test.

tongue t., see under *phenomenon.*

Töpfer's t's: quantitative tests for hydrochloric acid in gastric contents. 1. (for total acidity) 1 per cent solution of phenolphthalein is used as the indicator. 2. (for free HCl) 0.5 per cent alcoholic solution of *p*-dimethylaminoazobenzene is used as the indicator. 3. (for combined HCl) 1 per cent aqueous solution of sodium alizarin sulfonate is used as the indicator.

Torquay's t. (for bile): a small amount of the suspected liquid is added to a test tube containing an aqueous solution of methyl violet, 1:2000. Bile will change the blue color to red.

tourniquet t.: 1. (for capillary fragility) after application of pressure midway between diastolic and systolic for 5 minutes by a manometer cuff, the petechiae are counted in a previously marked area, 2.5 cm. in diameter, on the inner aspect of the forearm, about 4 cm. below the crease of the elbow. A number between 10 and 20 is marginal, above 20, abnormal. Called also *Hess capillary t.* 2. (for collateral circulation) after hyperemia of the limb has been artificially produced by application of the tourniquet, the tourniquet is removed and the extent of collateral circulation is determined by compressing the main artery. Called also *Matas' t.* 3. (for collateral circulation in patients with varicose veins) a bandage is applied to the upper part of the leg below the knee and the patient walks around with it on; varicose veins of the leg will become evacuated from continuous compression if there is sufficient collateral circulation in the deep veins. Called also *Perthes' t.*

TPCF t., *Treponema pallidum* complement fixation t.

TPCP t., *Treponema pallidum* cryolysis complement fixation t.

TPHA t., *treponemal hemagglutination t.*

TPI t., *Treponema pallidum* immobilization t.

Trambusti t. (for tuberculosis), see under *reaction.*

trapeze t.: when the patient hangs from a trapeze, a spinal deformity will disappear if the deformity is postural but will remain if it is structural.

Trendelenburg's t.: 1. raise the leg above the level of the heart until the veins are empty, then lower it quickly. If the veins become distended at once, varicosity and incompetence of the valves are indicated. 2. the patient, standing erect, stripped, with back to the examiner, is told to lift one leg and then the other: when weight is supported by the affected limb, the pelvis on the sound side falls instead of rising; seen in disturbances of the gluteus medius mechanism, as in deformity of the femoral neck, dislocated hip joint, and weakness or paralysis of the gluteus medius muscle.

treponemal hemagglutination t. (TPHA) t. (for syphilis): a passive serological test for syphilis using as antigen disrupted *Treponema pallidum* coated onto tannin-treated sheep erythrocytes that are agglutinated in the presence of specific antibody.

Treponema pallidum complement fixation (TPCF) t. (for syphilis): a specific serological test for syphilis utilizing an antigen prepared from *Treponema pallidum* by making an extract of infected rabbit testicular tissue with citrate, acetone, and deoxycholate.

Treponema pallidum cryolysis complement fixation (TPCP) t. (for syphilis): a specific serological test for syphilis, utilizing an antigen obtained by differential centrifugation of *Treponema pallidum* from infected rabbit tissue, cryolysis, and ammonium sulfate precipitation.

Treponema pallidum immobilization (TPI) t. (for syphilis): a specific serological test for syphilis using living motile *Treponema pallidum* as antigen, immobilized by antibody in the presence of complement.

Treponema pallidum immune adherence (TPIA) t. (for syphilis): the spirochetes are mixed with complement, antiserum, and red cells, and the adherence of the red cells to the spirochetes is observed microscopically *in vitro*.

Tretop's t.: to fresh urine in a test tube a few drops of 40 per cent formalin are added; albumin in the urine is coagulated.

Triboulet's t. (for tuberculous ulceration of the intestines): a lump of feces as large as a walnut is dissolved in 20 ml. of distilled water and filtered; 3 ml. of the filtrate is diluted with 12 ml. of distilled water; 20 minims of Triboulet's reagent (sublimite 3.5, acetic acid 1, distilled water 100) are added. As a control the same solution is prepared without Triboulet's reagent. The test tubes containing the two solutions are well shaken, and are compared after five and twenty-four hours. A positive reaction is indicated by a cloudy gray or brown deposit.

trichophytin t. (for trichophyton infection): when filtrates of the fungus are injected into persons who have been infected with the disease, a reaction is produced somewhat resembling the tuberculin reaction.

tricrosol peroxidase t. (for raw milk), see *Kastle's t.*

triketohydrindene hydrate t.: to 25 ml. of water add 10 mg. of aminoacetic acid. To 1 ml. of this solution add a solution of 50 mg. of sodium acid in 2 ml. of water, then add 0.2 ml. of a solution of 5 mg. of triketohydrindene hydrate (Ninhydrin) in 1 ml. of water. Add the suspected matter and boil for 1-2 minutes. A violet color indicates a free carboxyl and alpha-amino group in proteins, peptones, peptides, or amino acids.

Trommer's t. (for dextrose in the urine): to 2 parts of urine add 1 part of potassium or sodium hydroxide, then add a very dilute solution of copper sulfate drop by drop, and boil the whole. Sugar, if present, causes precipitation of an orange-red deposit.

Trousseau's t. (for bile in urine): tincture of iodine diluted with 10 parts of alcohol is added to urine in a test tube; a green ring is formed where the liquids touch if bilirubin is present.

trypsin t., see *antitrypsin t., Gross' t. (1).*

tryptophan t.: a test of the stomach contents for the presence of tryptophan, which indicates the presence of carcinoma of the stomach. The test is performed by adding to the suspected liquid a few drops of 3 per cent acetic acid, and then adding to this carefully, drop by drop, a few drops of bromine water. A reddish-violet color is formed if tryptophan is present. 2. see also *vanillin t.*

Tschernogowbou's t.: a modification of the Wassermann test, using the natural amboceptor and complement in the patient's serum against guinea-pig erythrocytes.

Tsuchiya's t. (for albumin): a modified test in which Tsuchiya's reagent is used instead of Esbach's reagent.

tuberculin t.: a test for the existence of tuberculosis, consisting in the subcutaneous injection of 5 mg. of tuberculin. In healthy persons it produces no appreciable effect, but in tuberculous patients it produces a moderate fever, which lasts for several hours, and also a swelling and redness in tuberculous lesions of the patient. The test does not differentiate between infection in a resistant individual without the disease and a person with clinical features of the disease. See also *ophthalmic reaction, Pirquet's reaction, Moro's reaction, under reaction, and Mantoux t.*

tuberculin t., Sterneedle: the needle points of the Sterneedle are dipped into 1 to 2 drops of tuberculin P.P.D. and then placed on the forearm, where the six needle points are caused to penetrate the skin (by means of a spring device in the handle), through the P.P.D. solution, to a depth of 1 mm., thus depositing tuberculin in the outer layer of the skin. Palpable, coalescing induration (edema) extending more than 5 mm. around the puncture wounds in three to seven days indicates a positive reaction. In England, it is known as the *Heaf test*.

tuberculin patch t.: a test made by applying to the skin a piece of surgical adhesive on which some Old tuberculin has been placed.

tuberculin titer t.: a test for the hypersensitivity of the organism to tuberculin by a graduated cutaneous tuberculin test with varying concentrations of the tuberculin; called also *Ellerman-Erlandsen's t.*

tuberculosis t., see specific tests, including *Arloing-Courmont t., Blumenau's t., Craig's t., Escherich's t., Gruskin's t. (3), Hamburger's t., Hammer's t., Imhof's t., Lautier's t., Lignières' t., Malmjeide's t., Mantoux t., Mátéfy t., Merieux-Bailion t., mirror t., Müller's t. (2), Müller-Jochmann t., Nasso's t., Nathan's t., niacin t. (1), (2), Piazza's t., Römer's t., tine t., Triboulet's t., tuberculin t., tuberculin t., Sterneedle, tuberculin patch t., tuberculin titer t., urorosein t., Vollmer's t.* See also *tuberculosis reaction, under reaction.*

Tuffier's t.: in aneurysm, when the main artery and vein of a limb are compressed, swelling of the veins of the hand or foot will occur only if the collateral circulation is free.

two-glass t. (for urethritis): the patient collects his urine on rising, the first part in one glass and the second part in a separate glass. If he has anterior urethritis the first portion will be turbid and

the second portion clear; if he has both anterior and posterior urethritis both portions will be turbid.

two-stage prothrombin t.: a method of quantitating prothrombin after tissue thromboplastin and excess Factor V have converted it to thrombin, by determining the clotting time of a standard fibrinogen solution to which the previously generated thrombin has been added.

typhoid fever t., see specific tests, including *antithrombin t.*, *Bareggi's t.*, *Borden's t.*, *Dreyer's t.*, *Ehrlich's t.* (1), *Marriss' atropine t.*, *miostagmin t.*, *Moretti's t.*, *Petzetaki's t.*, *Prendergast's t.*, *typhoidin t.*, *urorosein t.*, *Widal's t.* See also *typhoid fever reaction*, under *reaction*.

typhoidin t.: a cutaneous test for typhoid fever made by inoculating typhoidin into the skin of the forearm; a positive reaction consisting in the formation of an indurated and reddened area at the site of inoculation.

tyrosine t., see specific tests, including *Folin and Denis' t.*, *Hoffmann's t.*, *Mörner's t.* (1), *Piria's t.*, *Scherer's t.* (3), *Udránszky's t.* (2), *Wurster's t.* (2).

Tyson's t. (for bile acids in urine): 180 to 240 ml. of urine are evaporated to dryness on the water bath. The residue is extracted with absolute alcohol, and to the extract 12 to 14 volumes of ether are added. The bile acids are precipitated, then are filtered off, dissolved in water, and the aqueous solution decolorized with animal charcoal.

Tzanck t.: examination of tissue from the floor of a lesion, in vesicular or bullous diseases, to discover the type of cell present as a means of diagnosing the disease. Certain cells are pathognomonic of varicella, herpes simplex, herpes zoster, or pemphigus.

Udránszky's t.: 1. (for bile acids) take 1 ml. of a solution of the suspected substance, add a drop of 0.1 per cent solution of furfural in water, underlay with strong sulfuric acid, and cool; if bile is present, a bluish-red color is formed. 2. (for tyrosine) take 1 ml. of the suspected substance in solution, add a drop of 0.5 per cent aqueous solution of furfural, and underlay with 1 ml. of concentrated sulfuric acid; a pink color shows the presence of tyrosine.

Uffelmann's t. (for hydrochloric acid and lactic acid in the gastric contents): to a quantity of material taken from the stomach add a few drops of a reagent containing 3 drops of a solution of ferric chloride, 3 drops of a concentrated solution of phenol, and 20 ml. of water; hydrochloric acid, if present, decolorizes this solution, while lactic acid turns it yellow.

Uhlenhuth's t., see *serum t.*

Ulrich's t. (for albumin): the reagent consists of saturated solution of common salt, 98 ml.; glacial acetic acid, 2 ml. It must be perfectly clear. Boil a few milliliters of this fluid in a test tube, and immediately overlay with the urine. Albumin and globulin give a white ring at the zone of contact.

Ultzmann's t. (for bile pigments): to 10 ml. of the urine to be tested add 3 or 4 ml. of a 1:3 solution of potassium hydroxide, and an excess of HCl; bile pigments will cause an emerald-green coloration.

Umber's t. (for scarlet fever): to a small quantity of urine add 2 drops of a solution made with 30 ml. concentrated hydrochloric acid, 2 gm. of paradimethylaminobenzaldehyde and 70 ml. of water; a red reaction indicates scarlet fever.

uracil t., see *Wheeler and Johnson's t.*

urea t., see specific tests, including *Benedict's t.* (2), *biuret t.* (2), *Bloxam's t.*, *Brücke's t.* (3), *diacetyl t.*, *Marshall's t.*, *Schiff's t.* (4), *Schroeder's t.*, *Spiro's t.* (1), *urease t.*, *Van Slyke t.* (2). See also *urea*, *methods for*, under *method*.

urea clearance t., see *blood-urea clearance t.*

urea concentration t. (for renal efficiency): a test based on the fact that urea is absorbed rapidly from the stomach into the blood, and is excreted unaltered by the kidneys: 15 gm. of urea is given with 100 ml. of fluid, and the urine which is collected at the end of two hours is tested for urea concentration. Called also *MacLean-de Wesselow t.* and *Jones and Cantarow t.*

urease t.: a test for urea based on the conversion of urea into ammonium carbonate by the urease of soy bean; see *Marshall's method* and *urease*, *methods for*, under *method*.

Urecholine supersensitivity t. (for neurogenic bladder): administer 2.5 mg. of Urecholine (bethanechol) subcutaneously; the bladder is neurogenic if it exhibits a rise in intravesical pressure more than 15 cm. greater than that of a control.

uric acid t., see specific tests, including *Bayrac's t.*, *Cole's t.* (3), *Denigès' t.* (1), *Folin's t.* (2), *Ganassini's t.*, *Garrod's t.* (2), *Gentile's t.*, *Porter's t.* (1), *Salkowski-Ludwig t.*, *Schiff's t.* (5), *von Jaksch's t.* (4), *Weidel's t.* (1). See also *uric acid*, *methods for*, under *method*.

urine concentration t.: under a controlled diet the specific gravity of the urine should reach 1.18 or more at certain times.

urobilin t., see specific tests, including *Hildebrandt's t.*, *paradi-methylaminobenzaldehyde t.*, *Schlesinger's t.* See also *urobilinogen*, *methods for*, under *method*.

urochromogen t., see *Weiss's t.*

urorosein t., urorrhodin t.: add to the urine half as much concentrated hydrochloric acid and a few drops of a 1 per cent solution of potassium nitrate; a red color indicates urorosein (urorrhodin); seen in typhoid fever, nephritis, pulmonary tuberculosis, and other diseases.

Urriolla's t.: the discovery of blood pigment in the urine is indicative of the existence of malaria.

Valenta's t. (for foreign fats in butter): the butter is heated with an equal amount of glacial acetic acid and then cooled. If opacity begins to show at 96° F., there is adulteration; if opacity is not observed until about 62° F., the butter is pure.

Valsalva's t. (for pneumothorax): after a deep inspiration, the mouth and nose are held tightly closed, and a strong attempt at expiration is made.

van Deen's t., see *Deen's t.*

van den Bergh's t.: a test for bilirubin in which diazotized serum or plasma is compared with a standard solution of diazotized bilirubin.

van den Velden's t., see *Maly's t.*

vanillin t. (for indole and tryptophan): to 5 ml. of the culture add 5 drops of 5 per cent vanillin solution in 95 per cent alcohol and 2 ml. of hydrochloric acid; indole gives an orange color, tryptophan a reddish violet color.

Van Slyke t.: 1. (for amino-nitrogen) nitrous acid acting on amino-nitrogen sets free nitrogen gas, which is collected and its volume determined. 2. (for urea) treat the sample with urease, pass the ammonia so formed into fiftieth normal acid, and titrate the excess of acid.

Van Slyke and Cullen's t., see under *method*.

Vaughan and Novy's t. (for tyrotoxin): adding 2 or 3 drops each of sulfuric and carboic acids and a few drops of an aqueous solution of the suspected substance to tyrotoxin gives a yellow or orange-red color.

VDRL t.: a slide flocculation test for syphilis using VDRL antigen, which contains cardiolipin, cholesterol, and lecithin, to test serum or spinal fluid; the test was designed by the Venereal Disease Research Laboratory.

Venning Browne t.: the presence of pregnanediol in the urine indicates the presence of corpus luteum hormone in the body.

ventilation t.: measurement of the quantity of air expired by a person during a period of exercise.

Vernes' t.: either of two obsolete nonspecific tests. 1. (for syphilis) direct method: a test based on the degree of flocculation produced by various blood sera on a specially prepared extract of dried horse heart muscle, called perethynol. Indirect method: a test based on measuring the amount of flocculation produced in perethynol according to the degree of inhibition of hemolysis of sheep corpuscles by swine serum. The degree of flocculation by normal serum and that by syphilitic serum is noted during a course of time, and the various readings are plotted into curves (syphilimetry). Normal sera give a horizontal line, but with syphilitic sera the curve of flocculation oscillates up and down. 2. (for tuberculosis) the patient's blood is mixed with an equal amount of 1.25 per cent aqueous solution of resorcin. If the optic density of the mixture is below 15, the subject is free from tuberculosis; if it is above 30 the subject has tuberculosis.

Vischer-Bowman t. (for pregnancy): a chemical test for pregnancy, depending on the presence of anterior pituitary hormones in the urine.

Vitali's t.: 1. (for alkaloids) evaporate with fuming nitric acid and add a drop of potassium hydroxide; color reactions will occur. For atropine the color is violet, turning to red. 2. (for alkaloids) add sulfuric acid, potassium chlorate, and an alkaline sulfide; various color reactions will follow. 3. (for bile pigments) add a few drops of potassium nitrate in solution and dilute sulfuric acid. The color reactions are green, followed by blue or red and yellow. 4. (for bile pigments) add quinine bisulfate in solution and follow with ammonia water, sulfuric acid, a crystal of sugar, and alcohol; a violet color results. 5. (for thymol) distill, and pass the vapor through a mixture of chloroform and potassium hydroxide solution; a red color results. 6. (for pus in the urine) the urine is acidified with acetic acid and filtered. On the filter paper thus obtained a small quantity of guaiacum is dropped. The paper will turn a dark blue if pus is present.

vitality t., see *pulp t.*

vitamin t., see specific tests, including *Carr-Price t.*, *Fearon's t.*, *Gothlin's t.*, *Harris and Ray t.*, *Jendrasic's t.*, *Rosenheim-Drummond t.*, *Rotter's t.*, *Schopfer's t.*, *Shear's t.*, *thiochrome t.*

vocabulary t.: a form of intelligence test based on the subject's knowledge of a selected list of words.

Voelcker and Joseph's t., see *indigo carmine t.*

Vogel and Lee's t. (for mercury): add 3 per cent of hydrochloric acid and concentrate the urine to one fifth its original volume. Add a piece of clean copper wire. A silvery film indicates mercury. To confirm, place the wire in a tube with a plug of gold foil and distill the mercury over onto the gold. Sublime a crystal of iodine onto the mercury and form the red iodide of mercury.

Voges-Proskauer t.: a test to detect the presence of acetyl-methyl carbinol and thus to distinguish between the colon group and the aerogenes group of bacteria.

Volhard's t.: 1. (for chlorides) the chlorides are precipitated by a known amount of AgNO₃. The excess of AgNO₃ is then titrated by KCNS. See under *method*. 2. (specific gravity test for renal function) the patient is given 1500 ml. of water to drink within three quarters of an hour in the early morning, and then nothing but a dry diet for the rest of the day. Following the ingestion of water, the specific gravity of the urine drops below 1.002 and the water taken is eliminated in about four hours. Later in the day, the specific gravity rises, passing 1.025 late in the afternoon.

Vollmer's t.: trademark for a tuberculin patch test done with an adhesive strip on which are two test squares and one control square of filter paper, the test squares saturated with concentrated Old Tuberculin and the control square with uninoculated broth.

von Aldor's t. (for proteoses): precipitate the urine with phosphotungstic acid, wash the precipitate with alcohol, bring into solution with potassium hydroxide, and apply the biuret test.

von Jaksch's t.: 1. (for free HCl in gastric juice) a test paper prepared with benzopurpurine B takes on a fine violet color if HCl is present. If present in considerable amount, it becomes dark blue. 2. (for dextrose in urine) add to the urine a mixture of 3 parts of sodium acetate and 2 parts of phenylhydrazine hydrochloride, warm it, and put the test tube in hot water for half an hour. On cooling, yellow needles of phenylglucosazone are seen as a precipitate. 3. (for melanin) add to the suspected liquid a few drops of a solution of ferric chloride. If melanin is present, a gray appearance is produced. After precipitation add more ferric chloride, and the precipitate will be redissolved. 4. (for uric acid) heat the powder slowly on a glass dish with a few drops of bromine water or chlorine water; the substance becomes red. After cooling, add ammonia, and it becomes purplish red.

von Maschke's t. (for creatinine): to the suspected solution add a few drops of Fehling's solution, after mixing with a cold solution of sodium carbonate; an amorphous, flocculent precipitate proves the presence of creatinine.

von Pirquet's t., see Pirquet's reaction, under reaction.

von Recklinghausen's t. (of heart function): a test based on the proposition that the product of the frequency of the pulse and the amplitude of the blood pressure is equal to the amount of blood expelled by the heart in a second, divided by the distensibility of the circulatory system.

von Zeynek and Mencki's t. (for blood): precipitate the urine with acetone, extract the precipitate with acidified acetone, and examine the colored extract under the microscope for small hemin crystals.

Vulpian t. (for epinephrine): add a few drops of ferric chloride solution, and a green color indicates epinephrine.

Waler-Rose t. (for rheumatoid factor), see sheep cell agglutination t. (1).

Wada t. (for cerebral dominance of language function): amobarbital is injected into an internal carotid artery to produce transient hemiparesis of the contralateral limbs. Injection into the artery of the hemisphere dominant for language produces a transient aphasia, into that of the nondominant hemisphere does not interfere with language function.

Wagner's t. (for occult blood), see benzidine t.

Walter's bromide t.: a test based on the fact that in normal persons the ratio of the amount of bromide in the blood and cerebrospinal fluid is constant; in persons with mental disorder the ratio may vary.

Wang's t. (quantitative test for indican): the indican is converted into indigosulfuric acid and titrated by means of a potassium permanganate solution.

Warren's t., see Trommer's t.

Wassermann t., see under reaction.

water t. (for Addison's disease): the volume of urine excreted from 10:30 P.M. to 8:30 A.M. is measured. Twenty ml. of water per kilogram of body weight (9 ml. per pound) is administered without breakfast. The urine is collected at 9:30, 10:30, 11:30 A.M. and at 12:30 P.M. If the volume of any single specimen exceeds the volume of urine excreted during the night, Addison's disease is ruled out.

water-gurgle t. (for stricture of the esophagus): the swallowing of water causes a peculiar gurgle heard on auscultation.

water provocative t.: a test used in the early diagnosis of open-angle glaucoma. After the intraocular pressure is measured by applanation tonometry, the patient drinks a liter of water in 5 minutes. Forty-five to sixty minutes later the intraocular pressure is again measured; a pressure rise of 8 to 10 mm.Hg. is positive.

Watson-Schwartz t.: a simple qualitative procedure, depending upon the chloroform- and butanol-insolubility of porphobilinogen aldehyde, for differentiating porphobilinogen from urobilinogen and other Ehrlich reactors; it is of value in the diagnosis of acute porphyria.

Weber's t.: 1. (for differentiating between hearing impairment of conductive or sensorineural origin) the stem of a vibrating tuning fork is placed on the vertex or midline of the forehead; if the sound is heard best in the affected ear, the impairment is probably of the conductive type; if heard best in the normal ear, the impairment is probably of the sensorineural type. (Friedrich Eugen Weber.) 2. (for indican) boil 30 ml. of suspected urine with an equal volume of hydrochloric acid containing a little nitric acid; cool it, and shake with ether; if indican is present, the ether will become red or violet and the froth will be blue. (Ernest Heinrich Weber.) 3. (for blood) mix the blood with 30 per cent acetic acid and extract with ether; to the ethereal extract add an alcoholic solution of guaiac and hydrogen peroxide. A blue color indicates blood. (Ernest Heinrich Weber.)

Weber's t. (for TNT in urine): the urine is extracted with ether, then acidified with a mineral acid, and again extracted with ether. In the latter extract the presence of the azoxy-compound formed from TNT is shown by the development of a violet tint on the addition of alcoholic potash.

Weichbrodt's t. (for globulin): to 0.7 ml. of spinal fluid add 0.3

ml. of a 1 per cent solution of mercuric bichloride; a cloudiness or opalescence indicates globulin.

Weidel's t.: 1. (for uric acid) the substance tested is treated with nitric acid, evaporated, and moistened with ammonia water; if uric acid is present, murexide will be formed, and a purple color is produced. Called also *murexide t.* 2. (for xanthine) warm with freshly prepared chlorine water containing a trace of nitric acid until gas ceases to be produced; contact with gaseous ammonia develops a pink or purple color. 3. (for xanthine bodies) dissolve in warm chlorine water, evaporate, and treat with ammonia water, a pink or purple color will form, changing to violet on the addition of sodium or potassium hydroxide solution.

Weil's t. (for syphilis): a test for syphilis based on the fact that the erythrocytes of syphilitics are especially resistant to the hemolyzing power of cobra venom.

Weil-Felix t., see under reaction.

Weinberg's t.: a complement-fixation test for hydatid disease.

Weiss permanganate t., see Weiss's t.

Weiss's t. (for urochromogen): to 2 ml. of the urine add 4 ml. of distilled water and 3 drops of a 1:1000 solution of potassium permanganate; a canary yellow color indicates urochromogen.

Weiland's t.: a vertical bar placed between the eyes and the letters to be read shows the degree of binocular fixation.

Wender's t. (for dextrose): make a reagent by dissolving 1 part of methylene blue in 300 parts of distilled water; alkalize this with potassium hydroxide and heat with a suspected solution; dextrose, if present, will decolorize it.

Wenzell's t. (for strychnine): treat the suspected material with a solution of 1 part of potassium permanganate in 2000 parts of sulfuric acid; strychnine, even in very small proportion, will cause color reactions.

Weppen's t. (for morphine): treat with sugar, bromine, and sulfuric acid; a red color shows the presence of morphine.

Wernicke's t., see hemiopic pupillary reaction, under reaction.

Wetzel's t. (for carbon monoxide in blood): to the blood to be examined add 4 volumes of water and treat with 3 volumes of a 1 per cent tannin solution. If CO is present, the blood becomes carmine red; normal blood slowly assumes a grayish hue.

Weyl's t.: 1. (for creatinine) to the suspected solution add a little of a dilute solution of sodium nitroprusside, and then carefully put in a few drops of a weak solution of sodium hydroxide; a ruby-red color results, changing to blue on warming with acetic acid. 2. (for nitric acid in the urine) distill 200 ml. of urine with 0.2 part of sulfuric or hydrochloric acid, receiving the distillate in a potassium hydroxide solution. If metaphenyl-diamine is added, a yellow color will form; if there is added pyrogallol acid in aqueous solution with a little sulfuric acid, the color will be brown; but sulfanilic acid in solution, followed in ten minutes by naphthylamine hydrochlorate, produces a red tint.

Wheeler and Johnson's t. (for uracil and cytosine): to the unknown solution add bromine water until the color is permanent, but avoid excess. Now add an excess of barium hydroxide. A purple color indicates one of these substances.

Whipple's t., see fibrinogen t. (1), lipase t. (1), phenoltetrachlorophthalein t.

whisper t. (obs.): test for hearing in which the patient stands at one end of the room with the ear opposite to that being tested closed with the finger and with the eyes closed. The examiner, whispering as he goes, approaches the patient and notes at what point the whisper is perceived by the patient.

Whiteside t.: a test for the detection of subclinical mastitis in cows as indicated by an excessively high leukocyte count of the milk. Mix 2 ml. of a normal solution of sodium hydroxide with 10 ml. of milk; the development of a viscous mass is positive. A modified version consists in mixing 1 drop of milk with 5 drops of normal sodium hydroxide solution on a glass plate, and stirring for about 20 seconds with a glass rod. No changes in consistency—negative; threads, clumps, or flakes of coagulated material—positive; the development of a viscous mass with separation of a clear whey—strongly positive.

Widal's t., Widal's serum t. (for typhoid fever): agglutination of *Salmonella typhosa* by dilutions of the patient's serum.

Wideroe's t.: a test for the character of puncture fluids. A few drops of Millon's reagent is placed in a water glass, and 1 drop of the fluid to be tested is placed on the surface. A film of coagulated protein at once forms. If this film is coherent and can be lifted readily, the exudate is tuberculous; if less readily, it is inflammatory; if it breaks up so that it cannot be lifted at all, it is a transudate.

Widmark's t.: a blood test for the diagnosis of alcoholic intoxication.

Wijs' t.: an iodine number test which employs Wijs iodine solution; see *iodine number, under number.*

Wilbrand's prism t.: a small circle of white paper is placed upon a black surface, and the patient is seated before it with one eye bandaged. He is directed to look at the spot, and a strong prism is placed before the eye in such a way that the image of the spot is thrown upon the blind half of the retina. It is noticed if the eye at once moves to find the object again, and whether the movement is reversed when the prism is withdrawn. The presence of this reaction places the lesion in the cerebrum; the absence of the reaction locates it in the tract.

Wilkinson and Peter's t. (for raw milk): benzidine and hydrogen peroxide give a blue color in raw milk, but not in heated milk.

Williamson's blood t.: in a narrow test tube 4 ml. of water and 2 ml. of blood are placed; to this are added 1 ml. of methylene blue (1:6000) and 4 ml. of solution of potassium hydroxide. The tube is placed in a pot of boiling water. If the blood is from a diabetic patient, the blue soon disappears, but not otherwise.

Winckler t.: 1. (for alkaloids) a solution of mercuric chloride with an excess of potassium iodide is added; alkaloids will cause a white precipitate. 2. (for free HCl in the gastric juice) filter the juice into a porcelain cell with a few drops of the 5 per cent alcoholic solution of alphanaphthol containing 1 per cent or less of dextrose. Heat carefully, and a bluish-violet zone will appear, which rapidly grows darker. 3. (for iodine) sodium nitrate is mixed with a starch paste; iodine gives a blue color with it.

Winslow's t.: test for respiration in doubtful death by observing a vessel of water placed at the bottom of the chest.

Wishart t. (for acetoneuria): a few drops of plasma are placed in a small test tube. Enough dry powdered ammonium sulfate is added to supersaturate, so that at the end of the test there will still be some of the solid sulfate in the bottom of the tube. A couple of drops of a fresh solution of sodium nitroprusside are next added and shaken, and finally 1 or 2 drops of ordinary ammonia water. On shaking, a purple color develops, a little more slowly than in the case of urine. The intensity of the color indicates the degree of acetoneuria.

Witz's t. (for hydrochloric acid in the gastric juice): a 1:48 aqueous solution of methyl violet causes a violet color, changing to blue and then green.

Wohlgemuth's t. (for renal inadequacy): the urine is mixed with a solution of soluble starch, 1:1000, and is incubated to permit digestive reaction. The fluid is then tested with iodine to determine the amount of starch hydrolysis. The test is based on the fact that the normal kidney tissue secretes a diastatic enzyme which is diminished in proportion as the kidney parenchyma is diseased.

Woldman's t.: a test for gastrointestinal lesion based on the principle that free phenolphthalein may pass through a lesion in the gastrointestinal mucosa and appear in the urine.

Wolff-Eisner t., ophthalmic reaction.

Wolff-Jungmans t. (for gastric cancer): quantitative estimation of the soluble albumin in the gastric extracts after giving a test meal; marked increase of dissolved albumin indicating malignant disease.

Woodbury's t. (for alcohol in the urine): to 2 ml. of urine 1 ml. of sulfuric acid is added, and a crystal of potassium dichromate; a green color will soon form.

Woods's t.: complement fixation with uveal pigment for sympathetic ophthalmitis.

Worm-Müller t. (for dextrose in the urine): a test made by boiling in a test tube 0.33 ml. of a 2.5 per cent solution of copper sulfate and 2.5 ml. of a solution of potassium hydroxide. Boil each and mix, and a yellowish or red precipitate will be formed.

Wormley's t. (for alkaloids): 1. made by treating with an alcoholic solution of picric acid; a yellow precipitate will be formed. 2. made by treating with a solution of 1 part of iodine and 2 parts of potassium iodide in 60 parts of water; a colored precipitate will be formed.

worsted t., see Holmgren's t.

Wurster's t.: 1. (for hydrogen peroxide) test paper is saturated with the solution of tetramethylparaphenylenediamine; hydrogen peroxide turns it to a blue-violet color. 2. (for tyrosine) the suspected material is dissolved in boiling water and a little quinone; a ruby-red color will form, changing slowly to brown.

X² t., chi-square t.

xanthemia t., see carotinemia t.

xanthine t., see specific tests, including Drechsel's t. (2), Hoppe-Seyler t. (2), Weidel's t. (2), (3).

xanthoproteic t., see Mulder's t. (2).

Xenopus t. (for pregnancy): a female African toad (*Xenopus laevis*) is injected with 2 ml. of urine, or 1 ml. of an extract, into the dorsal lymph sac; a deposit of 5-6 or more eggs within four to twelve hours indicates pregnancy.

xylidine t., see Schiff's t. (1).

xylose concentration t.: under uniform controlled conditions the ingestion of 50 gm. of xylose should result in a concentration of 2.5 per cent in the urine within two hours.

D-xylose absorption t., D-xylose tolerance t. (for differential diagnosis in malabsorption syndromes): after the oral administration of 25 gm. (sometimes 5 gm. is used) of D-xylose dissolved in 250 ml. of water, followed immediately by an additional 250 ml. of water, to a fasting adult, the amount excreted in the urine during a five-hour period is determined. Since poor renal function may also result in low xylose absorption, blood levels are also determined at two hours. Normally, more than 4.0 gm. of xylose should be excreted over the five-hour period; less than this amount suggests intestinal malabsorption. Blood values are normally more than 25 mg. xylose per 100 ml. of blood.

Yerkes-Bridges t.: a modified and improved form of the Binet test for intelligence.

Young's t. (for cataract): on a disk with a varied number of pinholes in different portions, the patient's ability to recognize the number of holes is a test of the integrity of macular function.

Yvon's t.: 1. (for acetanilid in urine) extract it with chloroform and heat the residue with mercurous nitrate; a green color will form. 2. (for alkaloids) add a solution of 3 gm. of bismuth subnitrate, made by boiling in 40 ml. of water, to which are added 14 gm. of potassium iodide and 40 drops of hydrochloric acid; a red color will show the presence of an alkaloid.

Zaleski's t. (for carbon monoxide in blood): to 2 ml. of blood add an equal volume of water and 3 drops of a one-third saturated solution of copper sulfate; if carbon monoxide is present, a brick-red deposit is thrown down; otherwise the precipitate is greenish brown.

Zangemeister t. (for paternity): a decrease in the light permeability (detected by the photometer) when the serum of the child is mixed with that of the father; when the serum of a man other than the father is added to a child's serum this decrease does not occur.

Zappacosta's t. (for liver function): glycochamine is injected intravenously; if in one quarter of an hour after the injection the substance is still present in the blood, liver function is impaired.

Zeisel's t. (for colchicine): dissolve in hydrochloric acid, boil with ferric chloride, and shake with chloroform; a brown or dark-red layer will form at the bottom.

Zeller's t.: 1. (for melanin in urine) add bromine water; a yellow precipitate will form, changing slowly to black. 2. see Molloney's t.

Ziehen's t. (for mental disease): the patient is requested to explain the difference between such contrasted objects as ice and water, cat and dog, etc.

zinc fluorescence t. (for urobilin), see Schlesinger's t.

Zondek-Aschheim t., see Aschheim-Zondek t.

Zouchlos' t. (for albumin in the urine): 1. precipitate the urine with a mixture of 1 part of acetic acid and 6 parts of a 10 per cent solution of mercuric chloride. 2. prepare a reagent with 100 parts of a 10 per cent solution of potassium thiocyanate and 20 parts of acetic acid; drop it slowly into the urine until the albumin appears as a white cloudiness. 3. add equal parts of succinic acid and potassium thiocyanate; albumin, if present, will be precipitated.

Zsigmondy's gold number t., see colloidal gold t.

Zwenger's t.: 1. (for cholesterol) a crystal of cholesterol with 5 parts of sulfuric acid and 1 part water gives a red ring changing to violet. 2. see Liebermann's t.

test meal (test mēl) a meal containing material given for the specific purpose for aiding diagnostic examination of the stomach, as by roentgenoscopy or by chemical analysis later of the stomach contents. See also *meal*. **Boas' t. m.,** a tablespoonful of oatmeal in a quart of water boiled down to a pint; once used to evaluate gastric secretion. **Boydén t. m.,** a motor meal for testing the evacuation of the gallbladder, containing three or four egg yolks combined with milk and seasoned with sugar, port wine, etc. **motor t. m.,** a meal or drink containing a radiopaque substance, permitting roentgenoscopic observation of its progress through the stomach, pylorus, and other portions of the gastrointestinal tract.

test type (test tip) printed letters of varying size, used in the testing of visual acuity; see also under *chart*. **Jaeger's t. t.,** ordinary printer's type of seven different sizes imprinted on a card; used in testing near vision. **Snellen's t. t.,** block letters used in testing visual acuity, so designed that the whole letter subtends, at the appropriate distance, a visual angle usually of 5 minutes, and each component part subtends an angle of 1 minute. See also *Snellen's chart*.

Two of Snellen's test types.

testa (tes'tah) [L.] a shell; oyster shell. **t. o'vi,** egg shell.

testaceous (tes-ta'she-us) [L. *testa* shell] of the nature of shell; having a shell.

testalgia (tes-tal'je-ah) [*testis* + *-algia*] pain in the testicle.

Tes-Tape (tes'tāp) trademark for a test strip impregnated with glucose oxidase, peroxidase, and orthotolidine; used for determining the approximate concentration of glucose in urine.

testectomy (tes-tek'to-me) [*testis* + Gr. *ektomē* excision] orchiectomy.

testes (tes'tēz) [L.] plural of *testis*.

testicle (tes'tī-k'l) [L. *testiculus*] the testis.

testicond (tes'tī-kond) [*testis* + L. *condere* to hide] having the

testes retained within the abdominal cavity, as occurs normally in many mammals, such as the elephant and armadillo.

testicular (tes-tik'u-lar) pertaining to a testis.

testiculoma (tes-tik'u-lo'mah) a testicular tumor. **t. ova'rii**, arrhenoblastoma.

testiculus (tes-tik'u-lus) [L.] testis.

testis (tes'tis), pl. *tes'tes* [L.] [NA] the male gonad; either of the paired egg-shaped glands normally situated in the scrotum; each testis is surrounded by an outer mesothelial layer (tunica vaginalis) and an inner white capsule (tunica albuginea), and is composed of compartments (lobuli testis) which contain the seminiferous tubules, wherein the spermatozoa are produced. Specialized interstitial cells (Leydig cells) secrete testosterone. Called also *testicle*. **Cooper's irritable t.**, a testis affected with neuralgia. **ectopic t.**, a testis which has become lodged in some abnormal location. **inverted t.**, a testis whose position in the scrotum is reversed, the epididymis being attached to the anterior instead of the posterior surface. **t. mulie'bris**, an ovary. **obstructed t.**, a testis whose descent has been prevented by a fascial sheet at the entrance to the scrotum. **pulpy t.**, a testis affected with medullary sarcoma. **t. re'dux**, a testis which tends to be drawn to the upper part of the scrotum. **retained t.**, undescended t., see *cryptorchidism*. **undescended t.**, a testis which has failed to descend into the scrotum, but remains in the inguinal canal, and the condition so produced; called also *cryptorchism* or *cryptorchidism*.

testitis (tes-ti'tis) orchitis.

testitoxicosis (tes'ti-tok'si-ko'sis) [*testis* + Gr. *toxikon* poison] a condition of intoxication which sometimes follows double ligation of the vas deferens.

testoid (tes'toid) a term applied to testicular hormones and other natural or synthetic compounds having a similar effect.

testolactone (tes-to-lak'tōn) [USP] chemical name: D-homo-17 α -oxaandrost-1,4-diene-3,17-dione. An antineoplastic agent, C₁₉H₂₄O₃, occurring as a white to off-white, crystalline powder, which may be prepared from testosterone or progesterone. It is used as adjunctive therapy in the palliative treatment of advanced or disseminated breast cancer in postmenopausal women; administered orally or by intramuscular injection.

testopathy (tes-top'ah-the) [*testes* + Gr. *pathos* disease] any disease of the testes.

testosterone (tes-tos'tē-rōn) chemical name: 17 β -hydroxy-androst-4-en-3-one. 1. the principal androgenic hormone, C₁₉H₂₈O₂, produced by the interstitial (Leydig) cells of the testes in response to stimulation by the luteinizing hormone of the anterior pituitary gland; it is thought to be responsible for regulation of gonadotropic secretion, spermatogenesis, and Wolffian duct differentiation (formation of the epididymis, vas deferens, and seminal vesicle). It is also responsible for other male characteristics after its conversion to dihydrotestosterone (q.v.) by 5 α -reductase in peripheral tissue. In addition, testosterone possesses protein anabolic properties, manifested by retention of nitrogen, calcium, phosphorus, and potassium, and is important in maintaining muscle mass and bone tissue in the adult male. It is also converted by aromatization to estradiol in peripheral tissue. See also *anabolic steroid*, under *steroid*. 2. [USP] the same principle prepared synthetically from cholesterol or isolated from bull testes, occurring as white or slightly creamy white crystals or crystalline powder; used in the treatment of male hypogonadism, cryptorchidism, and the symptoms of the male climacteric, and may be used for its anabolic properties; administered by subcutaneous implantation or intramuscular injection or buccally. **t. cyclopentylpropionate**, t. cypionate. **t. cypionate** [USP], an ester of testosterone, C₂₇H₄₀O₃, occurring as a white or creamy white, crystalline powder, having the same actions as the free alcohol but a prolonged duration of effect; used chiefly in the treatment of male hypogonadism, frigidity, and inoperable female breast cancer, to suppress lactation, and as an anabolic agent, administered by intramuscular injection. Called also *t. cyclopentylpropionate*. **t. enanthate** [USP], an ester of testosterone, C₂₈H₄₀O₃, occurring as a white or creamy white, crystalline powder, having the same actions as the free alcohol but a prolonged duration of effect; used chiefly in the treatment of male hypogonadism, oligospermia, and the symptoms of male climacteric, administered by intramuscular injection. Called also *t. heptanoate*. **ethinyl t.**, ethisterone. **t. heptanoate**, t. enanthate. **t. ketolaurate**, an ester of testosterone, having the same actions as the other esters. **methyl t.**, see *methyltestosterone*. **t. phenylacetate**, an ester of testosterone, C₂₈H₃₈O₃, occurring as a white to almost white, crystalline powder, having the same actions as the free alcohol but a prolonged duration of effect; administered by subcutaneous and intramuscular injection. **t. propionate** [USP], an ester of testosterone, C₂₂H₃₂O₃, occurring as white or creamy white crystals or crystalline powder, having the same actions as the free alcohol but with a relatively short duration of effect; used chiefly in the treatment of male hypogonadism, symptoms of male climacteric, postpubertal cryptorchidism, and inoperable female breast cancer, and to prevent postpartum breast engorgement; administered buccally or intramuscularly.

Testryl (tes'tril) trademark for a suspension of pure crystalline testosterone.

tetanal (tet'ah-nal) pertaining to or derived from tetanus.

tetania (tē-tā'ne-ah) [L.] tetany. **t. grāvīda'rum**, tetany in pregnant women. **t. parathyreopri'va**, tetany caused by removal of the parathyroids.

tetanic (tē-tan'ik) [Gr. *tetanikos*] 1. pertaining to or of the nature of tetanus. 2. producing tetanus.

tetaniform (tē-tan'i-form) [*tetanus* + L. *forma* shape] like or resembling tetanus.

tetanigenous (tet'ah-nij'ē-nus) [*tetanus* + Gr. *gennan* to produce] producing tetanus or tetanic spasms.

tetanilla (tet'ah-nil'ah) 1. a form of tetany without rigidity, but attended by mental changes. 2. paramyoclonus multiplex.

tetanism (tet'ah-nizm) a form of more or less continuous muscular hypertonicity sometimes seen in young infants; a series of clinical conditions resembling those of tetanus, but dependent on infection with an organism other than the *Clostridium tetani*.

tetanization (tet'ah-ni-za'shun) the induction of tetanic convulsions or symptoms.

tetanize (tet'ah-niz) to throw into a state or condition of tetanus or continuous spasm; to induce tetanic contractions in a muscle.

tetanocannabin (tet'ah-no-kan'ah-bin) a poisonous principle sometimes found in hemp; it resembles strychnine in its action.

tetanode (tet'ah-nōd) the unexcited stage of tetany.

tetanoid (tet'ah-noid) [*tetanus* + Gr. *eidos* form] like or resembling tetanus.

tetanolysin (tet'ah-nol'i-sin) [*tetanus* + *lysin*] the hemolytic component of the exotoxin (tetanus toxin) produced by *Clostridium tetani*, which may or may not contribute to the pathogenesis of tetanus. See also *tetanospasmin*.

tetanometer (tet'ah-nom'ē-ter) [*tetanus* + Gr. *metron* measure] an apparatus for measurement and analysis of tetanus.

tetanospasmin (tet'ah-no-spaz'min) [*tetanus* + L. *spasmus* spasm + *-in* chemical suffix] the neurotoxic component of the exotoxin (tetanus toxin) produced by *Clostridium tetani*, which causes the typical muscle spasms of tetanus. See also *tetanolysin*.

tetanus (tet'ah-nus) [Gr. *tēnanos*, from *teinēin* to stretch] 1. an infectious disease in which tonic muscle spasm and hyperreflexia result in trismus ("lockjaw"), generalized muscle spasm, arching of the back (opisthotonus), glottal spasm, seizures, and respiratory spasms and paralysis; it is caused by the neurotoxin of anaerobically vegetating *Clostridium tetani*, with onset one to two weeks after inoculation of spore forms into a traumatized area of the body. 2. continuous tonic contraction of a muscle; steady contraction of a muscle without distinct twitching. **acoustic t.**, a series of induction shocks in a frog's nerve and muscle preparation; the speed is measured by the pitch of a vibrant rod. **anodal closure t.**, tetanic muscular contraction occurring at the anode when the electric circuit is closed. Abbreviated ACTe. **anodal opening t.**, tetanic muscular contraction occurring at the anode when the electric circuit is opened or broken. Abbreviated AOTe. **t. anti'cus**, tetanus in which the body is bowed forward. **apyretic t.**, tetany, def. 1. **artificial t.**, drug t. **cathodal closure t.**, tetanic muscular contraction occurring at the cathode when the electric circuit is closed. Abbreviated COTe. **cathodal opening t.**, tetanic muscular contraction occurring at the cathode when the electric circuit is opened or broken. Abbreviated COTE. **cephalic t.**, a rare disease developing after injuries to the scalp, face, or neck, associated with palsies of cranial nerves 3, 4, 6, 7, 9, 10, 12, and invariably associated with some degree of trismus. **cerebral t.**, tetanus following a wound of the head, combining the generalized rigidity of the disease arising elsewhere and a cranial nerve palsy, especially of cranial nerve VII (the facial nerve); called also *cephalotetanus*, *kopf-tetanus*, *Janin's t.*, and *Klemm's t.* **chronic t.**, a form seen in man in which the onset is later, the progress of the disease is slower, and the prognosis more favorable than in the acute form. **cryptogenic t.**, tetanus which occurs without any wound or other ascertainable cause. **t. dorsa'lis**, t. posticus. **drug t.**, toxic spasm produced by some tetanic drug. **extensor t.**, that which affects especially the extensors. **flexor t.**, tonic spasm of flexor muscles. **head t.**, **hydrophobic t.**, cerebral t. **idiopathic t.**, that which does not follow an obvious lesion. **imitative t.**, hysteria which simulates tetanus. **t. infan'tum**, t. neonatorum. **inoculation t.**, experimental tetanus produced by inoculation with a culture of *Clostridium tetani*. Called also *impf-tetanus*. **intermittent t.**, tetany, def. 1. **Janin's t.**, **Klemm's t.**, **kopf t.**, cerebral t. **t. latera'lis**, tetanus in which the body is bent sideways. **localized t.**, tetanic spasm of a single part. **modified t.**, localized t. **t. neonato'rum**, tetanus of very young infants, usually due to the infection of the umbilicus. **t. paradox'us**, cephalic tetanus in which trismus is combined with paralysis of the facial or other cranial nerve. **paralytic t.**, cerebral t. **partial t.**, tetany, def. 1. **t. posti'cus**, tetanus in which the body is bowed backward. **postserum t.**, tetanus which develops even after the administration of tetanus serum. **puerperal t.**, that which occurs in women after

childbirth. **Ritter's t.**, tetanic contractions taking place at the opening of a constant current which has been passing for some time along a nerve; seen in tetany. **Rose's t.**, cerebral t. **splanchnic t.**, a form in which the muscles of deglutition and of respiration are severely involved and in which there is severe dysphagia. **toxic t.**, that produced by an overdose of nux vomica or strychnine. **traumatic t.**, that which follows wound infection with *Clostridium tetani*. **uterine t.**, puerperal t. **Wundt's t.**, tetanic contraction in a frog's muscle produced by electric current or injury.

tetany (tet/'ah-ne) 1. a syndrome manifested by sharp flexion of the wrist and ankle joints (carpopedal spasm), muscle twitchings, cramps, and convulsions, sometimes with attacks of stridor. It is due to abnormal calcium metabolism and occurs in parathyroid hypofunction, vitamin D deficiency, alkalosis, and as a result of the ingestion of alkaline salts. 2. tetanus, def. 2. **duration t.**, a continuous tetanic contraction in response to a very strong continuous current; it occurs especially in degenerated muscles; abbreviated Dt. **gastric t.**, a severe form due to disease of the stomach, attended by difficult respiration and painful tonic spasms of the extremities. **grass t.**, an often fatal condition that may be produced in "fresh" cows that are turned out into lush pastures; it is apparently due to a deficiency of magnesium in the diet. **hyperventilation t.**, tetany produced by forced inspiration and expiration continued for a considerable time. **lactation t.**, grass tetany. **latent t.**, tetany elicited by the application of electrical and mechanical stimulation. **parathyroid t.**, **parathyropival t.**, tetany due to removal of the parathyroids. **transit t.**, **transport t.**, a condition usually affecting well-fed cows and ewes in advanced pregnancy and in lactating mares that have been shipped long distances, which may result in paralysis, unconsciousness, and death unless treatment is begun early in the course of the disease. The etiology is unknown, but may be due to acute hypocalcemia associated with improper care and feeding. Called also *railroad disease* or *sickness*.

tetarcone (tet/'ar-kōn) tetartocone.

tetartanope (tet-ar/'tah-nōp) an individual exhibiting tetartanopia.

tetartanopia (tet/'ar-tah-no/'pe-ah) [Gr. *tetartos* fourth + *an* neg. + *ōpē* sight + *-ia*] 1. quadrantanopia. 2. a rare problematic type of defective color vision, characterized by retention of the sensory mechanism for two hues only (red and green), and lacking that for blue and yellow, which are replaced in the spectrum by an achromatic (gray) band. Coined by G. E. Miller (1924), who conceded yellow as a fourth, "inner" primary. Cf. the correlative terms *protanopia*, *deutanopia*, and *tritanopia*, in which the color vision deficiency is in the first, second, and third primary, respectively. Called also *blue-yellow blindness*.

tetartanopic (tet/'ar-tah-nop/'ik) pertaining to or characterized by tetartanopia.

tetartanopsia (tet/'ar-tah-nop/'se-ah) tetartanopia.

tetartocone (tet-ar/'to-kōn) [Gr. *tetartos* fourth + *cone*] the posterior internal cusp of an upper premolar tooth.

tetartoconid (tet/'ar-to-ko/'nid) the posterior internal cusp of a lower premolar tooth.

tetia (te/'te-ah) a native name for yaws on the Congo Coast.

tethiothalein sodium (te/'she-o-thal/'e-in so/'de-um) γ -iodophthalein sodium.

tetmil (tet/'mil) ten millimeters taken as a unit of measurement.

tetra- [Gr. *tetra* four] a combining form meaning four.

tetra-amylose (tet/'rah-am/'fī-lōs) an anhydride obtained from dextrin; it consists of two units of diamylose, $[(C_6H_{10}O_5)_2]$.

tetrabasic (tet/'rah-ba/'sik) [*tetra-* + Gr. *basis* base] containing four atoms of replaceable hydrogen.

tetrablastic (tet/'rah-blas/'tik) having four germ layers.

tetrabrachius (tet/'rah-bra/'ke-us) [*tetra-* + Gr. *brachion* arm] a double monster having four arms.

tetrabromofluorescein (tet/'rah-bro/'mo-floo/'o-res/'e-in) eosin.

tetrabromophenolphthalein (tet/'rah-bro/'mo-fe/'nol-thal/'e-in) an indicator, $C_6H_4 \cdot CO \cdot O \cdot C(C_6H_2Br_2OH)_2$, which is colorless with acids and violet with alkalis.

tetrabromophthalein sodium (tet/'rah-bro/'mo-thal/'e-in so/'de-um) the sodium salt of tetrabromophenolphthalein, $NaOOC \cdot C_6H_4 \cdot C \cdot C_6H_2Br_2 \cdot O \cdot C_6H_2Br_2 \cdot ONa$, used for roentgenological examination of the gallbladder, in which organ it appears after intravenous injection.

tetracaine (tet/'rah-kān) [USP] chemical name: 4-(butylamino)-benzoic acid 2-(dimethylamino)ethyl ester. A local anesthetic, $C_{15}H_{24}N_2O_2$, occurring as a white or light yellow, waxy solid; applied topically to the eyeball and conjunctiva. **t. hydrochloride** [USP], a fine, white, crystalline powder, applied topically to the conjunctiva and eyeball, to the mucous membranes of the nose, throat, and respiratory tract, and to the skin to produce surface anesthesia and also used parenterally for conduction and infiltration anesthesia. Called also *amethocaine hydrochloride*.

tetracetate (tet-ras/'ē-tāt) [*tetra-* + *acetate*] a compound of a base with four acetic acid molecules.

tetrachirus (tet/'rah-ki/'rus) [*tetra-* + Gr. *cheir* hand] a fetus having four hands.

tetrachlorethane (tet/'rah-klōr-eth/'ān) acetylene tetrachloride, $CHCl_2 \cdot CHCl_2$, formed by the action of chlorine on acetylene; it is antihelminthic, and is used as a solvent and in dry cleaning. Called also *cellon*.

tetrachloride (tet/'rah-klōr/'id) a compound of a radical with four atoms of chlorine.

tetrachlormethane (tet/'rah-klōr-meth/'ān) carbon tetrachloride, CCl_4 .

tetrachloroethylene (tet/'rah-klōr-'ro-eth/'ī-lēn) [USP] chemical name: perchloroethylene. An antihelminthic, C_2Cl_4 , occurring as a clear, colorless, mobile liquid; used in the treatment of hookworm infections and certain trematode infections, administered orally.

tetrachlorophenoxide (tet/'rah-klōr/'fen-ok/'sīd) a fungicide used for the preservation of lumber: it may cause a dermatitis in workmen.

tetrachromic (tet/'rah-kro/'mik) [*tetra-* + Gr. *chrōma* color] 1. pertaining to or exhibiting four colors. 2. able to distinguish only four of the seven colors of the spectrum.

tetracid (tet/'ras-id) capable of replacing four atoms of hydrogen in an acid, or having four atoms of hydrogen replaceable by acid radicals.

tetracrotic (tet/'rah-krot/'ik) [*tetra-* + Gr. *krotos* beat] showing four elevations in the sphygmographic tracing of the pulse.

tetracycline (tet/'rah-sī/'klēn) 1. any of a group of biosynthetic antibiotics isolated from certain species of *Streptomyces* or produced semisynthetically by catalytic hydrogenation of chlortetracycline or oxytetracycline. The tetracyclines, e.g., chlortetracycline (the first of the group to be discovered), oxytetracycline, tetracycline (see def. 2), demeclocycline, rolitetracycline, methacycline, doxycycline, and minocycline, are effective against a wide variety of organisms, including gram-positive and gram-negative bacteria, rickettsias, mycoplasmas, chlamydias, and certain viruses, protozoa, and actinomycetes. 2 [USP] chemical name: [4S-(4 α , 4a α , 5 α , 6 β , 12 $\alpha\alpha$)]-4-(dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-2-naphthacene-carboxamide. A semisynthetic antibiotic, $C_{22}H_{24}N_2O_8$, occurring as a yellow, crystalline powder having the same wide spectrum of antimicrobial activity as the other tetracyclines (see def. 1), used as an antibacterial, antiamoebic, and antirickettsial, administered orally. **t. hydrochloride** [USP], the monohydrochloride salt of tetracycline, $C_{22}H_{24}N_2O_8 \cdot HCl$, occurring as a yellow crystalline powder, having the same actions and uses as the base; administered orally, intramuscularly, or intravenously, or applied topically to the conjunctiva or eyelid. **t. phosphate complex** [NF], a phosphate complex salt of tetracycline, prepared by the addition of a solution of sodium metaphosphate to a solution of tetracycline or tetracycline hydrochloride; used as an antibacterial, administered orally; intramuscularly, or intravenously.

Tetracyn (tet/'rah-sin) trademark for preparations of tetracycline.

tetrad (tet/'rad) [Gr. *tetra-* four] a group of four similar or related entities, as (1) any element or radical having a valence, or combining power, of four; (2) a group of four chromosomal elements formed in the pachytene state in the first meiotic prophase; (3) a square of cells produced by the division into two planes of certain cocci (*Sarcina*). **Fallo's t.**, tetralogy of Fallot.

tetradactylous (tet/'rah-dak/'ti-lus) pertaining to or characterized by tetradactyly.

tetradactyly (tet/'rah-dak/'ti-le) [*tetra-* + Gr. *daktylos* finger] the condition of having four digits on the hand or foot.

tetradecanoate (tet/'rah-dek/'ah-no/'āt) systematic name for myristate, denoting that it has fourteen (*tetra* four + *deca* ten) carbon atoms in a straight chain.

tetraerythrin (tet/'rah-er/'fī-thrin) crustaceorubin.

tetraethylammonium (tet/'rah-eth/'il-ah-'mo/'ne-um) the radical $(C_2H_5)_4N$; the bromide and chloride salts are short acting quaternary ammonium ganglion-blocking agents that have been used in the treatment of acute hypertension, peripheral vascular diseases, and other disorders of the peripheral circulation. They are now seldom employed, having been replaced by more effective drugs. Abbreviated TEA.

tetraethylthiuram disulfide (tet/'rah-eth/'il-thi/'u-ram/' di-sulfiram).

tetrafilcon A (tet/'rah-fil/'kon) chemical name: 2-hydroxyethyl methacrylate polymer with divinylbenzene methyl methacrylate and 1-vinyl-2-pyrrolidinone; a hydrophilic contact lens material, $(C_6H_{10}O_2)_w(C_{10}H_{10})_x(C_5H_8O_2)_y$.

tetragonum (tet/'rah-go/'num) [L.; Gr. *tetragōnon*] a square or quadrant; a quadrangular area or space. **t. lumbale**, the quadrangular space bounded by the four lumbar muscles—by the serratus posterior inferior above, the internal oblique below, the erector spinae internally, and the external oblique externally.

tetragonus (tet/'rah-go/'nus) the platysma.

tetrahydric (tet/'rah-hi/'drik) containing four atoms of replaceable hydrogen: said of an acid or alcohol.

tetrahydrocannabinol (tet/'rah-hi/'dro-kah-nab/'i-nol) the active principle of cannabis, $C_{21}H_{30}O_2$, occurring in two isomeric forms: Δ^1 -3,4-*trans* and Δ^6 -3,4-*trans* tetrahydrocannabinol, both considered psychomimetically active. Abbreviated THC.

tetrahydrofolate (tet/'rah-hi/'dro-fol/'ät) an ester or dissociated form of tetrahydrofolic acid.

tetrahydropalmatine (tet/'rah-hi/'dro-pal/'mah-tin) a crystalline, berberine type alkaloid, $C_{21}H_{25}NO_4$, from the roots of *Corydalis tuberosa* DC. (Fumariaceae).

tetrahydrozoline hydrochloride (tet/'rah-hi/'dro/'zo-lën) [USP] chemical name: 4,5-dihydro-2-(1,2,3,4-tetrahydro-1-naphthalenyl)-1*H*-imidazole monohydrochloride. An adrenergic, $C_{13}H_{16}N_2 \cdot HCl$, occurring as a white solid; applied topically to the nasal mucosa and to the conjunctiva to produce vasoconstriction.

Tetrahymena (tet/'rah-hi/'men-ah) a genus of ciliate protozoa of the subclass Euciliata, which are normally free-living but are commonly found as facultative commensals in various vertebrates and invertebrates, and will become parasitic when experimentally injected into various hosts. **T. pyriformis**, a species used extensively in experimental genetics.

tetraiodophenolphthalein (tet/'rah-i/'o-do-fe/'nol-thal/'e-in) chemical name: 3',3'',5',5''-tetraiodophenolphthalein. A dye, $C_{20}H_{14}CO_3O_2(C_6H_4I_2OH)_2$, which after intravenous injection is excreted in the bile in sufficient amount to make possible roentgenography of the gallbladder; it was once used in treating typhoid fever carriers.

tetraiodophthalein sodium (tet/'rah-i/'o-do-thal/'e-in) iodo-phthalein sodium.

tetraiodothyronine (tet/'rah-i/'o-do-thi/'ro-nën) thyroxine; so called because it is formed by the conjugation of two molecules of diiodotyrosine.

tetralogy (të-tral/'o-je) a combination of four elements or factors, such as four concurrent symptoms or defects. **t. of Eisenmenger**, Eisenmenger's complex. **t. of Fallot**, a combination of congenital cardiac defects consisting of pulmonary stenosis, interventricular septal defect, dextroposition of the aorta so that it overrides the interventricular septum and receives venous as well as arterial blood, and right ventricular hypertrophy.

Tetralogy of Fallot. (Blalock and Taussig.)

tetramastigote (tet/'rah-mas/'ti-göt) [*tetra* + Gr. *mastix* lash] 1. having four flagella. 2. an organism having four flagella.

tetramazia (tet/'rah-ma/'ze-ah) [*tetra* + Gr. *mazos* breast + *-ia*] the condition of having four mammary glands.

Tetrameres (të-tram/'er-ëz) a genus of nematode worms parasitic in the alimentary tract of chickens and other fowl. **T. americana**, a parasite of the proventriculus of chickens and other birds.

tetrameric (tet/'rah-mer/'ik) having four parts.

tetramethyl (tet/'rah-meth/'il) a chemical compound each molecule of which contains four methyl groups.

tetramethylammonium hydroxide (tet/'rah-meth/'il-ah-mo/'ne-um hi-drok/'sid) a toxic fraction, $N(CH_3)_4OH$, isolated from the sea anemone, *Actinia equina*, and from the salivary glands of whelks.

tetramethylenediamine (tet/'rah-meth/'il-ën-di'am-in) putrescine.

tetramethylputrescine (tet/'rah-meth/'il-pu-tres/'in) an extremely poisonous crystalline base, $N(CH_3)_2(CH_2)_4N(CH_3)_2$, derivable from putrescine; it produces symptoms like those of muscarine poisoning.

tetramine (tet/'rah-mën) tetramethylammonium hydroxide.

tetramisole hydrochloride (të-tram/'i-söl) chemical name: (+)-2,3,5,6-tetrahydro-6-phenylimidazo[2,1-b]thiazol monohydrochloride; an anthelmintic, $C_{11}H_{12}N_2S \cdot HCl$, effective against roundworms, hookworms, and strongyloids.

Tetramitus mesnili (të-tram/'i-tus mes-ni/'le) *Chilomastix mesnili*.

tetramylose (tet-ram/'i-lös) tetra-amylose.

tetranitrol (tet/'rah-ni/'trol) erythrityl tetranitrate.

tetranophthalmos (tet/'ran-of-thal/'mos) [*tetra* + Gr. *ophthalmos* eye] a monster having four eyes.

tetranopsia (tet/'ran-op/'se-ah) quadrantanopia.

tetranucleotide (tet/'rah-nu/'kle-o-tid) former name for nucleic acid, which was thought by Levene to be a polymer of four mononucleotides.

Tetranychus (tet-ram/'i-kus) [*tetra* + Gr. *onyx* nail] a genus of mites. **T. autumnalis**, *Trombicula autumnalis*. **T. molestus**, an acarid attacking man and causing severe itching. **T. telarius**, the spider mite, which sometimes infests man.

Tetraodontoidea (tet-ra/'o-don-toi/'de-ah) a suborder of bony tropical marine fish, including puffers and sunfish; see also *tetrodotoxin* and *tetrodotoxism*.

tetraodontoxin (tet-ra/'o-don-tok/'sin) [*Tetraodon*, from Gr. *tetra* four + *odus* tooth, a puffer fish + *toxikon* poison] tetrodotoxin.

tetraodontoxism (tet-ra/'o-don-tok/'sizm) tetrodotoxism.

tetraotus (tet/'rah-o/'tus) [Gr. *tetraōtos* four-eared] a monster with two nearly separate heads, two faces, four eyes, and four ears.

tetraparesis (tet/'rah-par/'e-sis) muscular weakness affecting all four extremities.

tetrapeptide (tet/'rah-pep/'tid) a peptide which on hydrolysis yields four amino acids.

Tetraphyllidea (tet/'rah-fil-'lid'e-ah) an order of moderate-sized cestodes possessing four leaf-, trumpet-, or earlike sucking outgrowths on the scolex; the adults are intestinal parasites of elasmobranch fishes.

tetraplegia (tet/'rah-ple/'je-ah) [*tetra* + Gr. *plēgē* stroke + *-ia*] paralysis of all four extremities; quadriplegia.

tetraploid (tet/'rah-ploid) 1. pertaining to or characterized by tetraploidy. 2. an individual or cell having four sets of chromosomes.

tetraploidy (tet/'rah-ploi/'de) the state of having four sets of chromosomes (4n).

tetrapodisis (tet/'rah-po-di/'sis) locomotion on four feet; quadruped locomotion, as in young children.

tetrapus (tet/'rah-pus) [*tetra* + Gr. *pous* foot] a human fetus having four feet.

tetrasaccharide (tet/'rah-sak/'ah-rid) a carbohydrate composed of four monosaccharide groups, $C_{24}H_{42}O_{21}$.

tetrascelus (tet-ras/'e-lus) [*tetra* + Gr. *skelos* leg] a monster having four legs.

tetrasomic (tet/'rah-so/'mik) pertaining to or characterized by tetrasomy.

tetrasomy (tet/'rah-so/'me) [*tetra* + Gr. *sōma* body] the presence of two additional chromosomes of one type in an otherwise diploid cell (2n + 2).

tetraspore (tet/'rah-spōr) 1. a haploid asexual spore in the red algae, which is meiotically produced, usually in groups of four, from the carpospore. 2. in fungi, one of the spores of a four-spored basidium.

tetraster (tet-ras/'ter) [*tetra* + Gr. *astēr* star] a figure in abnormal mitosis characterized by four centrosomal centers or asters.

tetrastichiasis (tet/'rah-sti-'ki'ah-sis) [*tetra* + Gr. *stichos* row + *-iasis*] an extremely rare condition in which there are four rows of eyelashes.

tetratomic (tet/'rah-tom/'ik) 1. consisting of four atoms. 2. having four replaceable atoms.

Tetratrichomonas buccalis (tet/'rah-trik-om/'o-nas buk-ka/'lis) *Trichomonas tenax*.

tetravaccine (tet/'rah-vak/'sën) a vaccine containing dead cultures of the bacteria of typhoid, paratyphoid A, paratyphoid B, and cholera.

tetravalent (tet-rav/ah-lent) having a chemical valence or combining power of four.

tetrodotoxin (tet/'ro-do-tok/sin) a pure, crystalline, highly lethal neurotoxic substance, $C_{11}H_{17}N_3O_8$, present in numerous species of puffer fish of the suborder Tetraodontidae and in newts of the genus *Taricha* (in which it is called tarichatoxin). Ingestion results, within minutes, in malaise, dizziness, and tingling about the mouth, which may be followed by ataxia, convulsions, respiratory paralysis, and death.

tetrodotoxism (tet/'ro-do-tok/sizm) [*Tetraodon*, from Gr. *tetra* four + *odous* tooth, a puffer fish + *toxikon* poison] the most severe form of ichthyosarcotoxism, produced by ingestion of puffer fish which contain tetrodotoxin (q.v.).

tetronal (tet/'ro-nal) diethylsulfondiethylmethane, $(C_2H_5)_2C \cdot (SO_2C_2H_5)_2$, occurring in the form of colorless scales; it is hypnotic.

tetronerythrin (tet/'ron-er/i-thrin) a pigment from certain birds' feathers, mullets, and many invertebrates, e.g., lobsters.

tetrophthalmos (tet/'rof-thal/mos) [*tetra* + Gr. *ophthalmos* eye] a double-faced monster with two ears and four eyes.

tetrose (tet/'rōs) a monosaccharide containing four carbon atoms in a molecule.

tetrotus (tet-ro'tus) tetraotus.

tetroxide (tē-trok/'sīd) a compound of an element or a radical with four oxygen atoms, as osmium tetroxide.

tetrydamine (tet-tri/'dah-mēn) chemical name: 4,5,6,7-tetrahydro-2-methyl-3-(methyldamino)-2H-indazole; an analgesic and anti-inflammatory, $C_9H_{11}N_3$.

tetryl (tet/'ril) an organic explosive and expellant, tetra-nitro-methyl-aniline, $(NO_2)_3C_6H_4N(NO_2)CH_3$, which may cause an industrial dermatitis.

tetter (tet/'er) 1. a once popular name for various eczematous skin diseases. 2. a skin disease of animals communicable to man, and characterized by intense itching. **milky t.**, crusta lactea.

tetterwort (tet/'ter-wort) *Sanguinaria canadensis* L. (Papaveraceae).

teucrin (tu/'krin) a crystalline glycoside, $C_{21}H_{24}O_{11}$, from *Teucrium fruticans* L. (Labiatae).

Teucrium (tu/'kre-um) [Gr. *teukrion* an herb of the germander kind] a genus of labiate plants called germander; generally used for their aromatic qualities.

teutlose (tūt/lōs) [Gr. *teutlon* beet] a kind of sugar found in beet root.

tewfikose (tu/'fi-kōs) a sugar occurring in the milk of the Egyptian buffalo, *Bos bubalus*.

texis (tek/'sis) [L.; Gr.] child-bearing.

textiform (teks/'tī-form) [L. *textum* any material put together + *forma* form] formed like a tissue, network, or web.

textoblastic (teks/'to-blas/tik) [L. *textum* any material put together + Gr. *blastos* germ] forming adult tissue; regenerative; said of cells.

textometer (teks/'to-me/ter) [L. *textum* any material put together + Gr. *metēr* mother] protoplasm regarded as the mother of tissues.

textural (teks/'tu-ral) pertaining to the texture, or constitution, of the tissues.

texture (teks/'tūr) [L. *textura*] the structure or organization of a tissue or organ.

textus (teks/'tus) [L.] a tissue.

TF transfer factor.

T.F. tuberculin filtrate.

T-group training group; see *sensitivity group*, under *group*.

TGT thromboplastin generation test.

Th chemical symbol for *thorium*.

thalamectomy (thal/'ah-mek/'to-me) [*thalamus* + Gr. *tomē* cutting] a stereotaxic surgical technique for the discrete destruction of specific groups of cells with the thalamus, as for the relief of pain or for relief of tremor and rigidity in Parkinson's disease.

thalamencephalic (thal/'ah-men/'sē-fal/'ik) pertaining to the thalamencephalon.

thalamencephalon (thal/'ah-men-sef/'ah-lon) [NA] the part of the diencephalon that comprises the thalamus, metathalamus, and epithalamus; called also *interbrain*.

thalami (thal/'ah-mi) [L.] genitive singular and nominative plural of *thalamus*.

thalamic (thah-lam/'ik) pertaining to the thalamus.

thalamocoele (thal/'ah-mo-sēl/'o) [Gr. *thalamos* inner chamber + *koilia* hollow] the third ventricle of the brain (ventriculus tertius cerebri) [NA].

thalamocortical (thal/'ah-mo-kor/'tī-kal) pertaining to the thalamus and cerebral cortex.

thalamolenticular (thal/'ah-mo-len-tik/'u-lar) pertaining to the thalamus and the lenticular nucleus.

thalamomamillary (thal/'ah-mo-mam/'i-ler/'e) pertaining to the thalamus and mamillary bodies.

thalamotegmental (thal/'ah-mo-teg-men/'tal) pertaining to the thalamus and tegmentum.

thalamotomy (thal/'ah-mot/'o-me) [*thalamus* + Gr. *tomē* a cutting] a stereotaxic surgical technique for the discrete destruction of specific groups of cells within the thalamus, as for the relief of pain or for relief of tremor and rigidity in Parkinson's disease. **anterior t.**, production of lesions in the anterior nucleus of the thalamus. **dorsomedial t.**, production of lesions in the dorsomedial nucleus of the thalamus.

thalamus (thal/'ah-mus), pl. *thalami* [L.; Gr. *thalamos* inner chamber] [NA] a constituent of the thalamencephalon, being the middle and larger portion of the diencephalon, which forms part of the lateral wall of the third ventricle and lies between the hypothalamus and the epithalamus. It comprises the medullary laminae and various nuclear groups, and is the main relay center for sensory impulses and cerebellar and basal ganglia projections to the cerebral cortex. Its nuclei include the anterior, central, intralaminar, lateral, medial, posterior, and reticular thalamic nuclei (see under *nucleus*). The lateral and medial geniculate bodies (the metathalamus) are also considered by many to be part of the thalamus. **optic t.**, corpus geniculatum laterale.

thalassanemia (thah-las/'sah-ne/'me-ah) thalassemia.

thalassemia (thal/'ah-se/'me-ah) [Gr. *thalassa* sea (because it was observed originally in persons of Mediterranean stock) + *haima* blood + *-ia*] a heterogeneous group of hereditary hemolytic anemias which have in common a decreased rate of synthesis of one or more hemoglobin polypeptide chains and are classified according to the chain involved (α , β , δ); the two major categories are α - and β -thalassemia. It is manifested in homozygotes by profound anemia or death in utero, and in heterozygotes by relatively mild red cell anomalies. α -t., that caused by decreased rate of synthesis of the alpha chains of hemoglobin. The *homozygous* form is incompatible with life, the stillborn infant displaying severe hydrops fetalis. The *heterozygous* form may be asymptomatic or marked by mild anemia. β -t., that caused by diminished synthesis of beta chains of hemoglobin. The *homozygous* form (Cooley's anemia; Mediterranean anemia; erythroblastic anemia of childhood; thalassemia major) in which hemoglobin A is completely absent and which appears in the newborn period, is a severe form marked by a hemolytic, hypochromic microcytic anemia, pronounced hepatosplenomegaly, skeletal deformation, mongoloid facies, and cardiac enlargement. The *heterozygous* form (thalassemia minor), in which hemoglobin A synthesis usually is retarded, is asymptomatic, but there is sometimes moderate anemia and splenomegaly. δ -t., that involving suppression of the delta chains of hemoglobin, but having no clinical significance. δ β -t., a form of heterozygous thalassemia in which synthesis of both delta and beta chains of hemoglobin is decreased; clinically it resembles β -thalassemia. **hemoglobin C-t.**, see under *disease*. **hemoglobin E-t.**, see under *disease*. **hemoglobin S-t.**, sickle cell-thalassemia disease. **t. intermedia**, that which clinically appears to be intermediate between homozygous and heterozygous β -thalassemia. **t. major**, see β -t. **t. minor**, see β -t. **sickle cell-t.**, see under *disease*.

thalassin (thah-las/'sin) a toxic substance derived from tentacles of the sea anemone, *Anemonia sulcata*, which, when injected into dogs, produces allergic symptoms.

thalassoposia (thah-las/'so-po/'ze-ah) [Gr. *thalassa* sea + *posis* drinking + *-ia*] the ingestion of sea water.

thalassotherapy (thah-las/'so-ther/'ah-pe) [Gr. *thalassa* sea + *therapeia* treatment] the treatment of disease by sea bathing, sea voyages, and sea air.

thalgrain (thal/'grān) grain mixed with thallium sulfate; used as a poison for rodents.

thalidomide (thah-lid/'o-mīd) chemical name: 2-(2,6-dioxo-3-piperidonyl)-1H-isoindole-1,3(2H)-dione. A sedative and hypnotic, $C_{13}H_{10}O_4$, commonly used in Europe in the late 1950's and early 1960's. Its use was discontinued because it was discovered to cause serious congenital anomalies in the fetus, notably amelia and phocomelia, when taken by a woman during early pregnancy. Thalidomide has been shown to be very effective in relieving severe pain associated with acute lepra reactions; it should not be used when pregnancy is possible.

thalleioquin (thal-i/'o-kwin) a greenish, resinous substance, produced in a test for quinine; see under *tests*.

thallitoxicois (thal/'i-tok/'sī-ko/'sis) poisoning by thallium or thallium-containing substances.

thallium (thal/'e-um) [Gr. *thallos* green shoot] a heavy, soft, bluish white metal; symbol, Tl; atomic number, 81; atomic weight, 204.37; specific gravity, 11.85; its salts are active poisons. **Tl-201**, a radioactive isotope of thallium having a half-life of 73.5 hours; used as a diagnostic aid in the form of thallous chloride (q.v.).

Thallophyta (tha-lof/'i-tah) [Gr. *thallos* green shoot + *phyton* plant] in former classifications, a taxonomic division of the plant kingdom comprising the fungi and algae, i.e., organisms possessing a thallus, and sometimes including bacteria and slime molds.

thallophyte (thal/'o-fit) [Gr. *thallos* green shoot + *phyton* plant] an individual of the Thallophyta.

thallospore (thal'o-spōr) a thallus modified to serve as an organ of reproduction.

thallotoxycosis (thal'o-tok'sī-ko'sis) thallitoxycosis.

thallous chloride Tl 201 (thal'us) the form in which thallium-201 in solution is injected intravenously as a diagnostic aid in scintillation scanning in myocardial disease. Called also *thallium chloride* (²⁰¹TlCl).

thallus (thal'us) 1. a simple plant body not differentiated into root, stem, and leaf, which is characteristic of mycelial fungi and some algae. 2. the actively growing vegetative organism as distinguished from reproductive or resting portions, as in fungi.

thalposis (thal-po'sis) [Gr. *thalpos* warmth] warmth sense; the sense which perceives warmth.

thalpotic (thal-pot'ik) pertaining to thalposis.

THAM tromethamine.

Thamnidium (tham-nid'e-um) [Gr. *thamnos* bush] a genus of molds of the family Mucoraceae, order Mucorales, which resembles *Mucor* and which is often found growing on meat in cold storage. It can grow at 28° F. and forms a profuse hairy growth. The species most frequently found are *T. elegans* and *T. chaetocladioides*.

thamuria (tham-u're-ah) [Gr. *thamys* often + *ouron* urine + *-ia*] frequency of urination.

thanato- (than'ah-to) [Gr. *thanatos* death] a combining form denoting relationship to death.

thanatobiologic (than'ah-to-bi'o-loj'ik) [*thanato-* + Gr. *bios* life + *-logy*] pertaining to death and life.

thanatognomonic (than'ah-to-no-mon'ik) [*thanato-* + Gr. *gnōmonikos* decisive] indicating the approach of death.

thanatoid (than'ah-toid) [*thanato-* + Gr. *eidos* form] resembling death.

thanatology (than'ah-to'l'o-je) the medicolegal study of death and conditions affecting dead bodies.

thanatometer (than'ah-tom'ē-ter) [*thanato-* + Gr. *metron* measure] a thermometer used to prove the occurrence of death by registering the reduction of the bodily temperature.

thanatophidia (than'ah-to-fid'e-ah) [*thanato-* + Gr. *ophis* snake] the venomous snakes collectively; toxicophidia.

thanatophidial (than'ah-to-fid'e-al) pertaining to venomous snakes.

thanatophoric (than'ah-to-fōr'ik) [*thanato-* + Gr. *pherein* to bear] deadly; lethal.

thanatopsia, thanatopsy (than'ah-top'se-ah; than'ah-top'se) [*thanato-* + Gr. *opsis* view] necropsy.

thanatosis (than'ah-to'sis) gangrene or necrosis.

Thane's method (thānz) [Sir George Dancer *Thane*, British anatomist, 1850-1930] see under *method*.

Thapsia (thap'se-ah) [L.; Gr. *thapsia*; named from the isle of *Thapsus*] a genus of umbelliferous plants. *T. garganica* L. (Umbelliferae), of Northern Africa, affords an irritant resin somewhat used in plasters; the plant is locally employed as a polychrest remedy.

thaumatropism (thaw-mat'ro-pe) [Gr. *thauma* wonder + *tropos* a turning] the transformation of an organ or structure into another organ or structure.

thaumaturgic (thaw'mah-ter'jik) [Gr. *thauma* wonder + *ergon* work] working wonders; magical; miraculous.

Thaysen's disease (thi'senz) [Thornwald Einar Hess *Thaysen*, Copenhagen physician, 1883-1936] nontropical sprue.

THC tetrahydrocannabinol.

thea (the'ah) [L.] tea.

theaism (the'ah-izm) a morbid condition resulting from ingestion of excessive quantities of tea.

thebaic (the-ba'ik) [L. *Thebaicus* Theban, named for Thebes, where opium was once prepared] pertaining to or derived from opium.

thebaine (the-ba'in) a crystalline, poisonous, and anodyne alkaloid from opium, C₁₅H₂₁NO₃, having properties similar to those of strychnine; called also *dimethyl morphine*.

thebesian (the-be'ze-an) named for or described by Adam Christian *Thebesius*, German physician, 1686-1732, as *thebesian foramen* (foramina venarum minimarum cordis), *thebesian valve* (valvula sinus coronarii), and *thebesian veins* (venae cordis minimae).

theca (the'kah), pl. *thecae* [L.; Gr. *thēkē*] an enclosing case or sheath, as of an ovarian follicle or tendon. **t. cor'dis**, pericardium. **t. exter'na**, tunica externa thecae folliculi. **t. of follicle**, t. folliculi. **t. of follicle of von Baer**, tunica externa thecae folliculi. **t. folliculi** [NA], an envelope of condensed connective tissue surrounding a vesicular ovarian follicle, comprising an internal vascular layer and an external fibrous layer. **t. inter'na**, tunica interna thecae folliculi. **t. medulla're spina'lis**, dura mater of the spinal cord. **t. vertebra'lis**, dura mater of the spinal cord.

thecae (the'se) [L.] plural of *theca*.

thecal (the'kal) pertaining to a theca.

thecitis (the-si'tis) inflammation of the sheath of a tendon; tenosynovitis.

thecodont (the'ko-dont) [Gr. *thēkē* sheath + *odontos* tooth] having the teeth inserted in sockets or alveoli.

thecoma (the-ko'mah) a theca cell tumor.

thecomatosis (the'ko-mah-to'sis) diffuse hyperplasia of the ovarian stroma.

thecostegnosis (the'ko-steg-no'sis) [Gr. *thēkē* sheath + *stegnōsis* narrowing] contraction of a tendon sheath.

Theden's bandage (ta'denz) [Johann Christian Anton *Theden*, German surgeon, 1714-1797] see under *bandage*.

Theelin (the'lin) trademark for preparations of estrone.

Theile's canal, glands (ti'lez) [Friedrich Wilhelm *Theile*, German anatomist, 1801-1879] see under *canal* and *gland*.

Theiler's disease, virus [Max *Theiler*, microbiologist and physician in U.S., born 1899 in South Africa; winner of the Nobel prize for medicine and physiology in 1951] see under *disease* and *virus*.

Theileria (thi-le're-ah) [Sir Arnold *Theiler*, Swiss microbiologist, 1867-1936] a genus of minute intraerythrocytic protozoan parasites of the family Babesiidae, order Haemosporidia. **T. annulata**, **T. parva**. **T. dispar**, **T. parva**. **T. hir'ci**, a species that causes a fatal disease in sheep and goats. **T. par'va**, a species causing a disease of cattle in Africa which is similar to Texas cattle fever and cattle anemia; called also *T. annulata* and *T. dispar*. See *East Coast fever*, under *fever*. **T. tsutsugamu'shi**, *Rickettsia tsutsugamushi*.

theileriasis (thi'lē-ri'ah-sis) infection with *Theileria*.

theine (the'in) the alkaloid of tea, isomeric with caffeine.

theinism (the'in-izm) theaism.

thelalgia (the-lal'je-ah) [Gr. *thēlē* nipple + *algos* pain + *-ia*] pain in the nipple.

thelarche (the-lar'ke) [Gr. *thēlē* nipple + *archē* beginning] the beginning of development of the breasts at puberty.

Thelazia (the-la'ze-ah) a genus of nematode worms of the superfamily Spiruroidea, which are allied to *Filaria*. Several species (*T. callipaeda*, *T. californiensis*) are parasitic in the eyes of animals.

thelaziasis (the'la-zi'ah-sis) infection of the eye with *Thelazia*.

theleplasty (the'le-plas'te) [Gr. *thēlē* nipple + *plassein* to form] a plastic operation upon the nipple.

thelerethism (thel-er'ē-thizm) [Gr. *thēlē* nipple + *erethisma* a stirring up] erection or protrusion of the nipple.

thelitis (the-li'tis) [Gr. *thēlē* nipple + *-itis*] inflammation of a nipple; mamillitis.

thelium (the'le-um), pl. *thē'lia* [L.] 1. a papilla. 2. a nipple.

Thelohania (the'lo-ha'ne-ah) a genus of sporozoa of the order Microsporidia, which are parasitic in the larvae of the mosquito, *Culex pipiens*.

thelorrhagia (the'lo-ra'je-ah) hemorrhage from the nipple.

thelothism, thelotism (the'lo-thizm; the'lo-tizm) thelerethism.

thelyblast (thel'e-blast) [Gr. *thēlys* female + *blastos* germ] the female pronucleus.

thelyblastic (thel'e-blas'tik) pertaining to or of the nature of a thelyblast (female pronucleus).

thelygenic (the'le-jen'ik) [Gr. *thēlys* female + *gennan* to produce] producing only female offspring.

thelykinin (the'le-ki'nin) estrone.

thelytocia (the'le-to'she-ah) [Gr. *thēlys* female + *tokos* birth] normal parthenogenesis producing females only.

thelytocus (the-lit'o-kus) pertaining to or characterized by thelytocia.

thelytoky (the-lit'o-ke) thelytocia.

Themison (them'i-son) of **Laodicea** (1st century B.C.) a Greek physician who founded the Methodist school of medicine.

thenad (the'nad) toward the thenar eminence or toward the palm.

thenal (the'nal) pertaining to the palm or thenar.

thenar (the'nar) [Gr.] 1. [NA] the mound on the palm at the base of the thumb; called also *thenar eminence*. 2. pertaining to the palm.

thanium closylate (then'i-um klo'sī-lāt) chemical name: dimethyl(2-phenoxyethyl)-2-thenylammonium *p*-chlorobenzene-sulfonate; a veterinary antihelmintic, C₂₂H₂₄ClNO₄S₂.

thenyldiamine hydrochloride (then'il-di'ah-mēn) chemical name: *N,N*-dimethyl-*N'*-2-pyridinyl-*N'*-(3-thienylmethyl)-1,2-ethanediamine hydrochloride. An antihistamine, C₁₄H₁₆N₂S·HCl, used for preoperative sedation, to control postoperative nausea, and to potentiate the action of analgesics.

Thenylene (then'i-lēn) trademark for a preparation of methapyrilene.

thenylpyramine (then'il-pir'ah-mēn) methapyrilene.

Theobaldia (the'o-bal'de-ah) [Frederic Vincent *Theobald*, British zoologist, 1868-1930] *Culiseta*.

Theobroma (the'o-bro'mah) [Gr. *theos* god + *brōma* food] a genus of sterculiaceae plants; the cacao. The seeds of *T. cacao* L. (called theobroma and cacao) contain the alkaloid theobromine, and are used in the preparation of cacao and chocolate.

theobromine (the'o-bro'min) chemical name: 3,7-dimethylxanthine. A white crystalline alkaloid, $C_7H_8N_4O_2$, prepared from the dried ripe seed of *Theobroma cacao*, or made synthetically from xanthine. It has physiologic properties similar to those of caffeine, and is used as a diuretic and smooth muscle relaxant and as a myocardial stimulant and vasodilator. Derivatives such as t. calcium salicylate, t. sodium acetate, t. sodium salicylate, t. sodium formate, and t. salicylate are available for use.

Theoglycinate (the'o-gli'si-nāt) trademark for a preparation of theophylline sodium glycinate.

theolin (the'o-lin) a colorless, volatile liquid hydrocarbon, heptane, C_7H_{16} , obtainable from petroleum, etc.; it resembles benzene and has similar uses.

theophylline (the-of'i-lin) [L. *thea* tea + Gr. *phyllon* leaf] [USP] chemical name: 3,7-dihydro-1,3-dimethyl-1*H*-purine-2,6-dione. A xanthine derivative, $C_7H_8N_4 \cdot H_2O$, found in tea leaves and prepared synthetically; it is a smooth muscle relaxant, used chiefly for its bronchodilator effect for the symptomatic treatment of chronic obstructive pulmonary emphysema, bronchial asthma, chronic bronchitis, and bronchospastic disorders; administered orally. It also may be used for its myocardial stimulant and coronary vasodilator actions, diuretic action, and respiratory center stimulant effect. **t. aminoisobutanol**, ambuphylline. **t. choline**, oxtriphylline. **t. ethanalamine**, t. olamine. **t. ethylenediamine**, aminophylline. **t. monoethanolamine**, t. olamine. **t. olamine** [USP], a compound containing theophylline (about 75 per cent) and monoethanolamine; used chiefly for its smooth muscle relaxant activity in the treatment of acute bronchial asthma and bronchospasm associated with chronic bronchitis and emphysema, administered rectally. Called also *t. ethanalamine* and *t. monoethanolamine*. **t. sodium acetate**, a hydrated mixture containing theophylline sodium and sodium acetate in approximately equimolecular proportions, and yielding 55 to 65 per cent of anhydrous theophylline; used as a smooth muscle relaxant and also as a diuretic. **t. sodium glycinate** [USP], an equilibrium mixture containing theophylline sodium and aminoacetic acid in approximately equal proportions, and yielding 49 to 52 per cent theophylline; used chiefly as a smooth muscle relaxant for the symptomatic treatment of bronchial asthma, administered orally.

Theorell (the'o-rel'), Axel Hugo Teodor. Swedish biochemist, born 1903; winner of the Nobel prize in medicine and physiology for 1955, for his discoveries concerning the nature and mode of action of oxidation enzymes.

theorem (the'o-rem) [Gr. *theōrēma* a principle arrived at by speculation] a proposition capable of demonstration. **Gibbs's t.**, substances which lower the surface tension of the pure dispersion medium tend to collect on its surface. **Hazen's t.**, the proposition that for every death from typhoid fever avoided by the purification of public water supplies two or three deaths are avoided from other causes.

theory (the'o-re) [Gr. *theōria* speculation as opposed to practice] 1. the doctrine or the principles underlying an art as distinguished from the practice of that particular art. 2. a formulated hypothesis, or, loosely speaking, any hypothesis or opinion not based upon actual knowledge. **Adami's t.**, a hypothesis for the explanation of heredity, resembling Ehrlich's side-chain theory of immunity. **Adler's t.**, the theory that neuroses are developed as compensations for a social or physical inferiority. **aging t. of atherosclerosis**, a theory that atherosclerosis is an inevitable consequence of aging and therefore an irreversible process. **Altman's t.**, a theory that protoplasm is made up of granular particles (bioblasts) grouped in masses and enclosed in indifferent matter. **apposition t.**, the theory that tissues grow by the deposit of cells from without. **Arrhenius' t.**, the theory of electrolytic dissociation. **atomic t.**, the theory that the molecules of a substance are made up of one or more atoms, each representing a definite amount of the element, which amount does not vary in the molecule, whatever combinations the molecule may enter. **avalanche t.**, the theory that nervous influence increases in force as it descends along an efferent nerve. **Bolk's retardation t.**, the theory that man, in his development, is at a stage which, in the higher primates, is still a fetal stage. **Bowman's t. (of urinary secretion)**, the theory that water and inorganic salts are secreted by the glomeruli, whereas the urea and related bodies are secreted by the epithelial cells in the convoluted tubes. Cf. *Ludwig's t.* **brunonian t.**, brunonianism. **Buergi's t.**, two different substances causing identical therapeutic manifestations when combined are increased in their effects if they possess identical pharmacologic points of attack. **cell t.**, the doctrine that all living matter is composed of cells and that cell activity is the essential process of life. **cell-chain t.**, the theory that the nerve fiber consists of a chain of special cells which have only secondarily been brought into relation with the central cell. **chemicoparasitic t.**, the theory that dental caries is caused by combined chemical and microbial action. **cloaca t.**, in psychoanalysis, the fantasy of young children and some

schizophrenics that babies are expelled through the anal canal. **clonal-selection t. of immunity**, a selective theory of antibody formation proposed by Burnet, according to which a complement of clones of lymphoid cells capable of reacting with all possible antigenic determinants is present in the normal individual. During fetal life, those clones that react against self-antigens are suppressed on contact with antigen. By contrast, there occurs a change in the response to contact with antigen following birth, when the normal response is proliferation, antibody formation, and cell-mediated immunity. Thus, suppression of clones leads to the development of immunological tolerance. If suppressed clones against self-antigens again become active at some time later in life, autoimmune disease may result. **closed circulation t.**, one of the theories explaining how the blood in the spleen gets from the arteries to the venous sinuses; it holds that the capillaries empty directly into the venous sinuses. Cf. *open circulation t.* and *closed-open circulation t.* Called also *fast circulation t.* **closed-open circulation t.**, the theory that both an open and a closed circulation are present in the spleen; e.g., a closed circulation in a contracted spleen may become an open circulation when the organ is distended. Cf. *closed circulation t.* and *open circulation t.* **Cohnheim's t.**, 1. the theory that the emigration of leukocytes is the essential feature of inflammation. 2. the theory that tumors develop from embryonic rests which do not participate in the formation of normal surrounding tissue. **contractile ring t.**, a theory advanced to explain the formation of a furrow in a dividing cell. According to this theory, the gelated ring in the cortex of the dividing cell contracts (cortical gel contraction) like the nonmotile portion of an amoeba, and, therefore, decreases the surface area. Actually, however, before division the surface increases by about 26 per cent. **convergence-projection t.**, a theory advanced as an explanation for reference of pain, according to which some visceral afferent nerve fibers converge with cutaneous pain afferents to end upon the same neuron at some point in the sensory pathway. **core conductor t.**, a theory regarding the development of electrotonic potentials and their associated currents along nerve fibers, according to which the nerve fibers are considered to be core conductors, i.e., cylinders of conducting fluid material with a sheath of high electrical resistance, surrounded by a layer of conducting medium. **darwinian t.**, see *darwinism*. **De Vries' t.**, t. of mutations. **Dieulafoy's t.**, the theory that appendicitis is always due to the appendix becoming a closed cavity. **dimer t.**, the theory that the tooth organ of primates is composed of two halves, each of which is a representative of an independent tooth in the lower orders of animals. **dualistic t.**, the theory that the blood cells arise from two distinct types of primitive cells, the myeloblasts and lymphoblasts. Cf. *monophyletic t.*, *polyphyletic t.*, and *trialistic t.* **ectopic focus t.**, a theory advanced by Rothberger, which states that atrial fibrillation arises as a result of rapid discharges from an ectopic focus. **Ehrlich's biochemical t.**, the theory that specific chemical affinity exists between the substance of specific living cells and specific chemical substances. **Ehrlich's side-chain t.**, a theory advanced regarding the phenomena concerned in immunity and cytotoxicity. According to this theory, the protoplasm of the body cells contains highly complex organic molecules, consisting of a tolerably stable central group, to which are attached less stable lateral chains (or side chains) of atoms or atomic groups. The ordinary chemical transformations in the protoplasm are carried on by means of these lateral chains (or *receptors*), the stable center of the molecule remaining unaffected. The lateral chains contain a group of atoms (*haptophore group*), which is capable of uniting with similar groups in toxins, bacterial cells, and foreign cells. See also *amboceptor* and *complement*. **electron t.**, all bodies are complex structures composed of small particles called atoms together with still smaller particles called electrons. **emergency t.**, Cannon's theory that the adrenal medulla is stimulated to secrete by activity on the part of the sympathetic nervous system in conditions of emotional excitement, pain, etc.; or, in other words, to meet bodily emergencies. **emigration t.**, Cohnheim's t., def. 1. **encrustation t.**, a theory advanced by Rokitsansky, which states that fibrinous material derived from the blood is deposited on the inner surface of the intima of vessels and that fatty metamorphosis occurs secondarily in this deposit. **equilibrium t.**, a theory that the number of breeding species in a biome is a result of the rate of immigration of new species and the rate of extinction. **expanding surface t.**, a theory of cell division which postulates that a nuclear substance is liberated, probably from chromosomes, which causes expansion of the cellular membrane at the poles; as the polar areas expand, the equator contracts, leading to division. **fast circulation t.**, closed circulation t. **Flourens' t.**, the opinion that the entire cerebrum is concerned in each and every psychic operation or process, as opposed to the phrenologic views of Gall. **frequency t.**, a theory which postulates that the pattern of excitation of auditory nerve fibers is more important in perception of pitch than is the excitation of any of the fibers in any particular area of the cochlear basilar membrane. Cf. *place t.* **Frerichs' t.**, the theory that uremia is really a poisoning by ammonium carbonate formed by the action on urea of an enzyme contained in the blood. **gate t.**, **gate-control t.**, neural impulses gen-

erated by noxious painful stimuli and transmitted to the spinal cord by small-diameter C-fibers and A-delta fibers are blocked at their synapses in the dorsal horn by the simultaneous stimulation of large-diameter myelinated A-fibers, thus inhibiting pain by preventing pain impulses from reaching higher levels of the central nervous system. Called also *gate hypothesis*. **germ t.**, the doctrine that infectious diseases are of microbic origin. **germ layer t.**, the teaching that the embryo develops three primary germ layers, each of which gives rise to definite organ derivatives. **gestalt t.**, see *gestaltism*. **Golgi's t.**, the theory that the neurons communicate by the axons of Golgi's cells and the collaterals of the axons of Deiters' cells. **Goltz's t.**, the theory that the function of the semicircular canals is to transmit sensations of position, and thus materially aid in the sense of equilibrium. **ground water t.**, Pettenkofer's t. **Helmholtz t.**, a theory of sound perception: each basilar fiber responds sympathetically to a definite tone and stimulates the hair cells of Corti's organ, which rest upon the fiber. The nerve impulse from this stimulation of the hair cells is carried to the brain. **Hering's t.**, the doctrine that color sensation depends on decomposition and restitution of the visual substance: disassimilation producing red, yellow, and white, and restitution producing blue, green, and black. **hit t.**, target t. **humoral t.**, the ancient theory that the body contains four humors—blood, phlegm, yellow bile, and black bile—health being the result of their proper adjustment, and disease resulting from their imbalance or irregular distribution. See also *humoralism*. **incasement t.**, the formerly advocated theory that all animals and plants develop from preexisting germs, and that they encase the germs of all future generations, one within another. **information t.**, a system for analyzing, chiefly by statistical methods, the characteristics of communicated messages and the systems that encode, transmit, distort, receive, and decode them. **ionic t.**, a theory that, on going into solution, the molecules of an electrolyte either completely or partially break up or dissociate into two or more portions, these portions being positively and negatively charged electrically, the positively charged portions being different chemically from those negatively charged. When an electric current is passed through the solution of an electrolyte the positively charged portions are attracted by the negative pole or electrode, and move toward it; the negatively charged portions are attracted by and migrate toward the positive electrode. From this property of moving toward one of the electrodes, these charged molecular fractions of electrolytes are called ions, from the Greek verb meaning "to move." **James-Lange t.**, the theory that emotion is the sensory awareness of response to the emotion-provoking stimulus, particularly autonomic response; e.g., we feel sad because we cry. **Kern plasma relation t.**, the theory that for each cell there exists a definite size relation of nuclear mass to cell mass. **Ladd-Franklin t.** (of color vision), that red, green, and blue stimulating substances are liberated in the nerve endings by suitable light waves from a complex photosensitive molecule. **Lamarck's t.**, the theory that acquired characteristics may be transmitted. **lateral-chain t.**, Ehrlich's side-chain t. **Liebig's t.**, the hydrocarbons which oxidize easily are the foods which produce animal heat. **local circuit t.**, in neurophysiology, the theory that current flows from the unstimulated, positively charged areas of the cell membrane of a neuron to the stimulated, depolarized or negative portion, and that as each new area becomes depolarized or negative, it in turn acts as the sink toward which the current flows from the adjacent area, which results in progressive depolarization, or reversal charge, along the neuron from the point of stimulation; the source of the current is the flow of Na^+ into the cell. **Ludwig's t.** (of urinary secretion), the theory that urine is formed by the simple process of filtration in the glomeruli and that reabsorption occurs in the urinary tubules by the process of diffusion. Cf. *Bowman's t.* **MacDougal's t.**, the hypothesis that many, if not all variations in nature are formed by chemical modifications of the germ cells. **t. of medicine**, the body of principles of the science and art of medicine as distinguished from the *practice of medicine*, or the application of those principles in actual practice. **membrane ionic t.**, the theory that the resting potential difference between the inside and outside of the cell is related to (1) the thin, electrically insulating membrane between the cytoplasm and the interstitial conducting medium, which is poorly and variably permeable to diverse ions; (2) the presence of a metabolic cellular pump that promotes the efflux of sodium ions from the cell interior to the outside against its electrochemical gradient and, coupled with this, the influx of potassium ions into the cell against its ionic concentration gradient. **mendelian t.**, see *Mendel's law*, under *law*. **metabolic t. of atherosclerosis**, a theory that atherosclerosis is caused by a disturbance in lipid metabolism, specifically cholesterol metabolism. **Metchnikoff's (Mechnikov's) t.**, the theory that bacteria and other harmful elements in the body are attached and destroyed by cells called phagocytes, and that the contest between such harmful elements and the phagocytes produces inflammation. **migration t.** (obs.), the theory that sympathetic ophthalmia is produced by migration of the pathogenic agent through the lymph channels of the optic nerve. **mnemic t.**, the theory that the cell has an inherited "memory" of the influences that are brought to bear upon it, and

that consequently it tends to inherit acquired characteristics; called also *Semon-Hering hypothesis*. **Monakow's t.**, the theory of diaschisis; see *diaschisis*. **monophyletic t.**, the theory that all forms of blood cells, both red and white, have their origin in one and the same form of primordial blood cell (hemocytoblast), the several types of cells arising by a process of differentiation. Called also *unitarian t.* Cf. *dualistic t.*, *polyphyletic t.*, and *trialistic t.* **t. of mutations**, the theory of heredity according to which the variability in the germ plasma is such that it may at times give rise not to fluctuating variations, but to marked and permanent variations, and these latter, if advantageous to the animal, are preserved by natural selection. Such permanent variations are called mutations or sports. Called also *De Vries' t.* **myogenic t.**, the theory that the muscle fibers of the heart possess in themselves the power of originating and maintaining the contraction of the heart. **neuron t.** (Waldeyer, 1801), the obsolete theory that the nervous system consists of innumerable neurons in contiguity, but not in continuity. See *neuron*. **open circulation t.**, one of the theories explaining how the blood in the spleen gets from the arteries to the venous sinuses; it holds that the capillaries open directly into the pulp reticulum, and that the blood gradually filters back into the venous sinuses. Called also *slow circulation t.* Cf. *closed circulation t.* and *closed-open circulation t.* **open-closed circulation t.**, see *closed-open circulation t.* **overproduction t.**, see *Weigert's law*, under *law*. **paralytic t.**, the doctrine that hyperemia is the most essential fact of inflammation, and is caused by paralysis of the vasomotor nerves. **Pasteur's t.**, the theory that the immunity secured by an attack of a disease is caused by the exhaustion of material needed for the growth of the organism of the disease; called also *t. of exhaustion of the medium*. **Pettenkofer's t.**, the theory that epidemics, as of typhoid fever, occur at the time when the ground water is at a low level; and that bacteria of the disease do not pass directly from the sick to the healthy, but pass into the soil, where they ripen when the soil is dry. **phlogiston t.**, see *phlogiston*. **pithecoïd t.**, the theory that man is descended from apelike ancestors. **place t.**, a theory of pitch perception which postulates that excitation of specific areas of the basilar membrane of the cochlea determine the pitch that is perceived. Cf. *frequency t.* **Planck's t.**, quantum t. **point de repère t.**, the theory that there is always an external object, however small, to serve as a starting point for hallucination or for illusion (Binet). **polarization-membrane t.**, the theory that living, resting cells are surrounded by a semipermeable membrane lined by a series of electrical doublets, or dipoles, with negative charges on the inner and positive charges on the outer surface. When the membrane is electrically intact, its entire surface is surrounded by doublets, and is said to be polarized. **polyphyletic t.**, the theory that the various corpuscles and cells of the blood have their origin from two or more distinct varieties of primordial (mother) cells. Cf. *dualistic t.*, *monophyletic t.*, and *trialistic t.* **P. O. U. t.**, Ishihara's theory of the placenta-ovary-uterus production of internal secretion. **preformation t.**, the outmoded theory that the individuals of successive generations are contained, completely formed, within the reproductive cell of one of the parents. **proteomorphous t.**, the theory that immunity against bacterial infection is handled by the hematopoietic system primarily, and secondarily by all the cells of the body, the waste products of the process being excreted by the liver. **quantum t.**, the theory that the radiation and absorption of energy take place in definite quantities called quanta (E) which vary in size and are defined by the equation $E = h\nu$, in which h is Planck's constant and ν is the frequency of the radiation. **recapitulation t.**, ontogeny recapitulates phylogeny; that is, an organism in the course of its development goes through the same successive stages as did the species in developing from the lower to the higher forms of animal life. Called also *biogenetic law* and *Haeckel's law*. **t. of reentry**, the theory that the sinus impulse preceding the premature beat activates the heart, but the activation wave is delayed in an area of diminished irritability; see *reentry*. **resonance t.**, 1. Helmholtz theory. 2. the theory of specificity which assumes that the surface forces of reacting substances must harmonize. **Ribbert's t.**, a tumor is formed from the development of cell rests owing to reduced tension in the surrounding tissues. **Schiefferdecker's symbiosis t.**, the theory that among the tissues of the body there is a sort of symbiosis, so that the products of metabolism in one tissue serve as a stimulus to the activities of other tissues. **Schön's t.**, the theory (of ocular accommodation) that the ciliary muscle exerts on the lens the same effect as is produced on a rubber ball held in both hands and compressed by the fingers. **Semon-Hering t.**, mnemic t. **side-chain t.**, Ehrlich's side-chain t. **single hit t.**, the theory that hemolysis results from a single complement-induced lesion of the erythrocyte surface, rather than that lesions at several sites are necessary. **sliding filament t.**, 1. a theory which postulates that the thin and thick filaments of a myofibril slide past each other, while maintaining their length, during muscle contraction. 2. a theory that postulates that contraction of cilia involves a sliding of filaments (microtubules) in a manner comparable to the sliding filament mechanism for the contraction of muscle (see def. 1). **slow circulation t.**, open circulation t. **spindle elongation t.**, the theory which suggests that

the spindle and asters have a decisive role in cell division. The theory is based on the observation that the elongation of the cell at anaphase is accompanied by a shrinkage at the equator. The centers are believed to be pushed apart by the spindle tubules, since the spindles and asters appear to be rigid structures. **Spitzer's t.**, the formation of the septa in the heart are teleologically conditioned, phylogenetically brought about, and mechanically achieved by the appearance and development of the lungs through phylogeny. **target t.**, the theory advanced to explain some biological effects of radiation on the basis of ionization occurring in a very small sensitive region within the cell, which postulates that one or more ionizing events, or "hits," within the sensitive volume are necessary to bring about the biological end-effect; called also *hit t.* **thermostat t.**, a theory which suggests that the feeding and satiety centers of the brain, like the thermoregulatory centers, are sensitive to body temperature; a decrease in body temperature activates the feeding center and depresses the satiety center, whereas increased temperature acts on the centers in the opposite way. **Traube's resonance t.**, resonance t., def. 2. **trialistic t.**, the theory that the blood cells arise from three distinct types of primitive cells, the myeloblasts, lymphoblasts, and monocytes. Cf. *dualistic t.*, *monophyletic t.*, and *polyphyletic t.* **undulatory t.**, wave t. **unitarian t.**, monophyletic t. **unitary t.**, the theory that disease is single in its nature and is not made up of separate and distinct morbid entities. **Villemin's t.**, the theory of the infectiousness and specificity of tuberculosis held before the discovery of the bacillus. **Wagner's t.**, migration t. **wave t.**, the theory that light, heat, and electricity are transmitted through space in the form of waves. **Weismann's t.**, see *weismannism*. **Woods-Fildes t.**, the theory that the antibacterial activity of at least some chemotherapeutic drugs (especially the sulfonamides) is a consequence of a competitive inhibition of essential metabolic reactions of the microorganism. **Young-Helmholtz t.**, the doctrine that color vision depends on three sets of retinal fibers, corresponding to the colors red, green, and violet. **Zuntz's t.**, a theory of muscle contraction.

theotherapy (thē'o-ther'ah-pe) [Gr. *theos* god + *therapeia* treatment] the treatment of disease by prayer and religious exercises.

Thephorin (thef'o-rin) trademark for preparations of phenindamine tartrate.

theque (tĕk) [Fr. a "box or small chest"] a round or oval collection, or nest, of melanin-containing nevus cells occurring at the dermoepidermal junction of the skin or in the dermis proper.

therapeusis (ther'ah-pu'sis) therapeutics.

therapeutic (ther'ah-pu'tik) [Gr. *therapeutikos* inclined to serve] 1. pertaining to therapeutics, or to the art of healing. 2. curative.

therapeutics (ther'ah-pu'tiks) 1. the science and art of healing. 2. a scientific account of the treatment of disease. **alimentary t.**, treatment by careful regulation of the diet. **cellular t.**, organotherapy. **dental t.**, that branch of dentistry which deals with the treatment of diseases of the teeth. **empiric t.**, treatment by remedies that experience has proved to be useful. **massive sterilizing t.**, *therapia sterilisans magna*. **mediate t.**, medication of a nursing child through its mother's milk, the remedy being administered to the mother. **mental t.**, treatment directed to influencing the mind, including hypnotic suggestion, etc. **rational t.**, treatment based upon a knowledge of the disease and of the action of the remedies employed. **ray t.**, therapy utilizing radiation from some part of the electromagnetic spectrum. **specific t.**, see under *therapy*. **stomatologic t.**, the treatment of diseases of the mouth. **testicular t.**, treatment by the hypodermic injection of testicular extract. **vibratory t.**, treatment by vibrations of various kinds, as by vibratory motions in massage.

therapeutist (ther'ah-pu'tist) therapist.

Theraphosidae (ther'ah-fō'si-de) a family of very large hairy spiders (suborder Orthognatha) found in temperate and tropical areas. *Sericoelma communis* is the only species whose venom has a harmful effect on man, but some are capable of inflicting painful bites. The members of this family are sometimes improperly called tarantulas.

therapia (ther'ah-pi'ah) [L.; Gr.] therapy. **t. sterilisans magna**, Ehrlich's procedure of treatment by the use of some chemical agent which will destroy the parasites in the body of a patient without being seriously toxic for the patient.

therapist (ther'ah-pist) [Gr. *therapeutēs* one who attends to the sick] a person skilled in the treatment of disease; often combined with a term indicating the specific type of disorder treated (as *speech therapist*) or a particular type of treatment rendered (as *physical therapist*). **physical t.**, a person skilled in the techniques of physical therapy and qualified to administer treatments prescribed by a physician and under his supervision; called also *physiotherapist*. **speech t.**, a person specially trained and qualified to assist patients in overcoming speech and language disorders.

therapy (ther'ah-pe) [Gr. *therapeia* service done to the sick] the treatment of disease; therapeutics. See also under *treatment*.

anticoagulant t., the use of drugs to render the blood sufficiently incoagulable to discourage thrombosis. **autoserum t.**, treatment of disease by the injection of the patient's own blood serum. **aversion t.**, therapy directed at associating an undesirable behavior pattern with unpleasant stimulation or at making the unpleasant stimulation a consequence of the undesirable behavior. **bacterial t.**, opsonic t. **beam t.**, 1. treatment by exposure to light from one of the colors of the spectrum. 2. treatment by radiation emitted from a source located at a distance from the body. **behavior t.**, a therapeutic approach in which the focus is on the patient's observable behavior, rather than on conflicts and unconscious processes presumed to underlie his maladaptive behavior. This is accomplished through systematic manipulation of the environmental and behavioral variables related to the specific behavior to be modified; operant conditioning, systematic desensitization, token economy, aversive control, flooding, and implosion are examples of techniques that may be used in behavior therapy. Called also *behavior modification* and *conditioning therapy*. **biological t.**, treatment of disease by the injection of the substances which produce a biological reaction in the organism. The term includes the use of sera, antitoxins, vaccines, and nonspecific proteins. **buffer t.**, intravenous injection of buffer substances, such as sodium bicarbonate, with the object of lowering the hydrogen ion concentration. **carbon dioxide t.**, a form of (rarely used) shock therapy employed to produce emotional abreactions and relieve anxiety, in which unconsciousness is induced by the administration of carbon dioxide gas by inhalation. **carbonic t.**, the administration of carbon dioxide for starting respiration in newborn infants and for resuscitating persons overcome by asphyxiating gases. **Chaoul t.**, short source-to-tissue distance, low-voltage roentgen therapy; see also under *tube*. **collapse t.**, treatment of pulmonary tuberculosis by operative collapse of the diseased lung; called also *collapse therapy*. Cf. *artificial pneumothorax*, under *pneumothorax*, and *Forlanini's treatment*, under *treatment*. **conditioning t.**, behavior t. **convulsive shock t.**, electroconvulsive t. **corrective t.**, the planning and administration of progressive physical exercise and activities most effective in improving or maintaining general physical and emotional health, through individual or group participation. **Curie t.**, treatment with a radioactive source, e.g., radium. **deep roentgen-ray t.**, treatment by x-radiations generated by at least 150 kilovolts and capable of penetrating significantly below the skin level. **deleading t.**, the use of chelating agents in the mobilization and excretion from the body of heavy metals, such as lead, radium, etc. **diathermic t.**, treatment by thermopenetration; see *diathermy*. **duplex t.**, treatment by diathermic and galvanic currents in combination, both currents being passed through the body at the same time by way of the same two electrodes. **electric convulsive t.**, electroconvulsive t. **electroconvulsive t.** (E.C.T.), **electroshock t.** (E.S.T.), a form of shock therapy that is most effective in the treatment of depression, in which unconsciousness and/or convulsions are induced by the passage of an electric current through the brain; in contemporary practice, the convulsions are minimized by the administration of a muscle relaxant prior to treatment. **emanation t.**, treatment by ionizing radiations emitted by a radioactive source. **family t.**, group therapy in which the patient and his family are treated together. **fever t.**, treatment of disease by induction of high body temperature, accomplished by physical means or by injection of fever-producing vaccines. **Fleiss t.**, see under *treatment*. **gametocyte t.**, treatment aimed at destruction of the forms of the malarial parasites infective for mosquitoes. **grid t.**, therapeutic application of ionizing radiations through a metal grid having a pattern of small, evenly spaced perforations. **group t.**, psychotherapy carried out with a group of patients or the relatives of patients or both, which includes utilization of interactions of members of the group, under the guidance of a single therapist, who may be a psychiatrist, psychologist, psychoanalyst, social worker, clergyman, etc. Called also *group psychotherapy*. **heterovaccine t.**, bacterial vaccine therapy by the use of some infectious agent other than the specific one causing the disease. **high-voltage roentgen t.**, treatment by deeply penetrating x-rays generated by voltages of over 300 kilovolts. **humidification t.**, the use of air supersaturated with moisture in congestive conditions of the upper and lower respiratory tract. **hunger t.**, limotherapy. **hypoglycemic t.**, insulin coma t. **immunization t.**, treatment with antiserum and with actively antigenic substances, e.g., vaccines. **immunosuppressive t.**, treatment with agents, such as x-rays, corticosteroids, and cytotoxic chemicals, which suppress the immune response to antigen(s); it is used in various conditions, including autoimmune disease, allergy, multiple myeloma, chronic nephritis, and in organ transplantation. **Indoklon t.**, a form of shock therapy in which convulsions are induced by the inhalation of Indoklon (flurothyl). **inhalation t.**, treatment aimed at restoring toward normal any pathophysiologic alterations of gas exchange in the cardiopulmonary system, as by the use of respirators, aerosol-producing devices, and the therapeutic use of oxygen, helium-oxygen, and carbon dioxide mixtures. **insulin coma t.**, **insulin shock t.**, a form of shock therapy, now rarely used, primarily employed in the treatment of schizophrenia, in which

hypoglycemic coma is induced by the injection of insulin; called also *hypoglycemic t.* See also *subcoma insulin t.* **intraosseous t.**, the infusion of blood or other solutions into the circulation by injection through the bone marrow. **intravenous t.**, the introduction of therapeutic liquid agents directly into the venous circulation. **irritation t.**, stimulation t. **light t.**, the therapeutic application of radiation in the visible spectrum. **liquid air t.**, see *refrigeration*. **malarial t.**, **malarization t.**, see *malariotherapy*. **metatrophic t.**, administration of a diet that acts as an adjunct to the drug taken. **Metrazol shock t.**, a form of shock therapy, now rarely used, in which convulsions are induced by intravenous injection of Metrazol (pentylenetetrazol). **milieu t.**, daily participation in group psychiatric therapy at a hospital, providing for observation and utilization of the patient's interpersonal relationships in a social setting, as well as occupational, physical, and individual psychotherapy. **Morita t.**, a school of psychotherapy originating in Japan, based on the essential elements of conduct in Zen Buddhism. It emphasizes the combating of egocentricity and the correction of alienation from nature. **myofunctional t.**, use of muscle exercises as an adjunct to mechanical correction of malocclusion. **narcosis t.**, treatment of certain intense anxiety reactions, exhaustion, and severe agitation by inducing prolonged sleep (18 to 20 hours a day for about two weeks) with drugs, usually barbiturates; called also *sleep t.* **nonspecific t.**, treatment of infections by the injection of nonspecific substances, such as proteins, proteoses, bacterial vaccines, etc., which produce a general and nonspecific effect on cellular activity. **occupational t.**, the use of any occupation for remedial purposes. **opsonic t.**, nonspecific therapy with bacterial vaccines to increase the opsonic index of the blood; called also *vaccine t.* **organic t.**, organotherapy. **orthomolecular t.**, treatment of disease, especially psychiatric disorders, based on the theory that restoration of optimal concentrations of substances normally present in the body will effect a cure. **oxygen t.**, treatment by means of oxygen inhalation. **paraspecific t.**, nonspecific t. **phage t.**, the use of bacteriophage in the treatment of bacterial infections. **physical t.**, the treatment of disease by physical agents and methods to assist in rehabilitation and restoration of normal bodily function after illness or injury, including the use of massage and manipulation, therapeutic exercises, hydrotherapy, and various forms of energy (electrotherapy, actinotherapy, and ultrasound). Called also *physiotherapy*. **play t.**, a method of psychotherapy used in treating emotional disorders in children, in which play is used to a considerable extent as a substitute for verbal communication between the patient and therapist. **primal t.**, psychotherapy in which the patient is encouraged to relive his early traumatic experiences. **protective t.**, sparing t. **protein t.**, **protein-shock t.**, injection of foreign proteins by the parenteral route in inflammatory and venereal disease; nonspecific therapy. **pulp canal t.**, root canal t. **radium t.**, the treatment of disease by means of radium. **radium beam t.**, see *beam t.*, def. 2. **recurrence t.**, inoculation with *Treponema*. **reflex t.**, treatment by producing a reflex action. **replacement t.**, treatment to replace deficient formation or loss of body products by administration of the natural body products or synthetic substitutes. **root canal t.**, the treatment of diseases and injuries that affect the roots of the teeth and the pulp canals. **rotation t.**, in radiotherapy, circular movement of the patient or of the radiation source and beam around a fixed anatomical axis during a treatment exposure; it may entail complete, partial, or skip-field exposure. **serum t.**, see *serotherapy*. **shock t.**, the treatment of psychiatric illnesses, chiefly severe affective disorders, by convulsions induced by means of passing an electric current through the brain. Rarely convulsions are induced by the inhalation of Indoklon (flurothyl). Formerly comas were induced by the injection of insulin or the inhalation of carbon dioxide. Called also *shock treatment*. See also *electroconvulsive t.* **short wave t.**, short wave diathermy. **solar t.**, heliotherapy. **sparing t.**, treatment directed to the protecting and sparing of an organ by allowing it to rest as much as possible. Called also *protective t.* **specific t.**, treatment by a remedy which acts directly against the cause of the disease, as of malaria by quinine. **speech t.**, the use of special techniques for correction of speech and language disorders. **stimulation t.**, treatment by the parenteral injection of certain substances with the result that the nervous vascular systems of the body function more vigorously and the metabolism is increased; called also *irritation t.* **subcoma insulin t.**, the induction of a state of drowsiness or somnolence short of coma by the administration of insulin; used to relieve anxiety, stimulate appetite, and produce a feeling of well-being. See also *insulin coma t.* **substitution t.**, the administration of a hormone to compensate for deficiency of that gland. **substitutive t.**, see *substitutive medication*, under *medication*. **suggestion t.**, the treatment of disease by hypnotic suggestion. **thyroid t.**, treatment of various diseases with thyroid or with derivatives from it; it is used in various forms of hypothyroidism e.g., myxedema and cretinism. **vaccine t.**, active immunization against a disease by the injection of the infectious agents of the disease or their products directly into a patient. **zomo t.**, treatment by the administration of meat juice. **zone t.**, treatment of disorder by mechanical stimula-

tion of a body area located in the same longitudinal zone as the disorder; called also *Fitz Gerald method or treatment*.

Theria (the'ri-ah) [Gr. *thērion* beast, animal] in some systems of classification, a subclass of the Mammalia, including the infra-classes Eutheria and Metatheria, the members of which are viviparous.

theriac (ther'e-ak) *theriaca*.

theriaca (the-ri'ah-kah) [Gr. *thēriaka* antidotes to the poison of wild animals, from *thērion* wild animal] a mixture regarded as effective against bites by poisonous animals; it contained at one time 60 to 70 substances which were pulverized and made into an electuary with honey. **t. androm'achi**, a celebrated mixture of sixty-one drugs, formerly prescribed as an antidote for poisons, supposedly originated by Andromachus (the elder) of Crete.

theriatrics (the're-at'riks) [Gr. *thērion* beast + *iatrikē* surgery, medicine] veterinary medicine.

Theridiidae (ther'i-di'i-de) a family of small, dark, comb-footed spiders (suborder Labidognatha), including the genus *Latrodectus*, whose venomous bite sometimes causes death in human beings.

theriogenologic (the're-o'jen-o-loj'ik) pertaining or relating to theriogenology.

theriogenological (the're-o-je'n-o-loj'i-kal) pertaining or relating to theriogenology; of or affecting the reproductive processes of animals.

theriogenologist (the'reo'jen-ol'o-jist) one who specializes in theriogenology.

theriogenology (the're-o'jen-ol'o-je) [Gr. *thērion* beast + *gennan* to produce + *-logy*] that branch of veterinary medicine which deals with reproduction, including the physiology and pathology of male and female reproductive systems and the clinical practice of veterinary obstetrics, gynecology, and semenology.

theriotherapy (the're-o-ther'ah-pe) [Gr. *thērion* beast + *therapeia* treatment] treatment of the diseases of lower animals.

therm (therm) [Gr. *thermē* heat] a unit of heat. The word has been used as equivalent to (a) large calorie; (b) small calorie; (c) 1000 large calories; (d) 100,000 British thermal units.

therm- see *thermo-*.

thermacogenesis (ther'mah-ko-je'n'ē-sis) [Gr. *thermē* heat + *genesis* production] the action of a drug in elevating the body temperature.

thermae (ther'me) [L., pl.; Gr. *thermē* heat] 1. warm springs or warm baths. 2. establishments for the therapeutic use of warm medicinal springs.

thermaerotherapy (therm-a'er-o-ther'ah-pe) [*therm-* + Gr. *aēr* air + *therapeia* treatment] treatment by the application of hot air.

thermal (ther'mal) pertaining to or characterized by heat.

thermalgia (ther'mal-je'ze-ah) [*therm-* + Gr. *algēsis* sense of pain + *-ia*] a condition in which the application of heat produces pain.

thermalgia (ther-mal'je-ah) [*therm-* + Gr. *algos* pain + *-ia*] a condition marked by sensations of intense burning pain; causalgia.

thermanalgesia (therm'an-al-je'se-ah) absence of pain on application of heat.

thermanesthesia (therm'an-es-the'ze-ah) [*therm-* + *an-* neg. + Gr. *aisthēsis* perception + *-ia*] inability to recognize sensations of heat and cold; absence of the heat sense.

thermatology (ther'mah-to'l'o-je) the scientific study of heat as a therapeutic agent.

thermelometer (ther'mel-om'ē-ter) an electric thermometer.

thermesthesia (therm'es-the'ze-ah) [*therm-* + Gr. *aisthēsis* perception + *-ia*] ability to recognize heat and cold; the temperature sense.

thermesthesiometer (therm'es-the'ze-om'ē-ter) [*thermesthesia* + *metron* measure] an instrument for measuring sensibility to heat.

thermhyperesthesia (therm'hi-per-es-the'ze-ah) excessive sensitiveness to high temperatures.

thermhypesthesia (therm'hi-pes-the'ze-ah) [*therm-* + Gr. *hypo* under + *aisthēsis* perception + *-ia*] decrease in the normal sensitiveness to heat.

thermic (ther'mik) of or pertaining to heat.

thermion (ther'me-on) a particle containing an electric charge emitted by an incandescent substance; such as the electrons emitted from the cathode in a Coolidge tube.

thermionics (ther'me-on'iks) the science of the phenomena exhibited by thermions.

thermistor (ther-mis'tor) a thermometer whose impedance varies with the ambient temperature and so is able to measure extremely small changes in temperature.

thermo-, therm- [Gr. *thermē* heat] combining form denoting relationship to heat.

Thermoactinomycetes (ther'mo-ak'ti-no-mi'sēz) [*thermo-* + Gr. *aktis*, *aktinos* a ray + *mykēs* fungus] a genus of microorganisms of the family Streptomycetaceae, order Actinomycetales,

made up of saprophytic soil and water microorganisms distinguished by their ability to grow at high (50°–65° C.) temperatures.

thermoaesthesia (ther''mo-es-the'ze-ah) thermesthesia.

thermoalgnesia (ther''mo-al-je'ze-ah) thermalgesia.

thermoanalgesia (ther''mo-an'al-je'ze-ah) thermanalgesia.

thermoanesthesia (ther''mo-an'es-the'ze-ah) thermanesthesia.

thermocauterectomy (ther''mo-kaw'ter-ek'to-me) [*thermocautery* + Gr. *ektomē* excision] excision of an organ by the thermocautery.

thermocautery (ther''mo-kaw'ter-e) cauterization by means of a hot wire or point.

thermochemistry (ther''mo-kem'is-tre) the aspect of physical chemistry dealing with heat changes that accompany chemical reactions.

thermochroic (ther''mo-kro'ik) [*thermo-* + Gr. *chroa* color] reflecting some of the heat rays and absorbing or transmitting others.

thermochroism, **thermochrosis** (ther-mok'ro-izm; ther''mo-kro'sis) the state or condition of being thermochroic.

thermocogulation (ther''mo-ko-ag'u-la'shun) coagulation of tissue by the action of high-frequency currents; used in removal of growths and also used to produce stereotactic lesions in the brain.

thermocouple (ther''mo-kup'l) a pair of dissimilar electrical conductors (such as platinum and platinum-rhodium, or copper and constantan), so joined that an electromotive force is developed by the thermoelectric effects when the junctions are at different temperatures; used for measuring temperature differences.

thermocurrent (ther''mo-kur'ent) a thermoelectric current.

thermodiffusion (ther''mo-dī-fu'zhun) diffusion under the influence of a temperature gradient.

thermodilution (ther''mo-di-lu'shun) a method of measuring ventricular blood volume and cardiac output in which a cold or cool indicator, such as a saline solution or distilled water, is injected and sampled by a thermistor.

thermoduric (ther''mo-du'rik) [*thermo-* + L. *durus* enduring] capable of withstanding high temperature.

thermodynamics (ther''mo-di-nam'iks) [*thermo-* + Gr. *dynamis* power] the branch of science which deals with heat, energy, and the interconversion of these, and with related problems. See also under *law*. **equilibrium t.**, that dealing with the application of the laws of thermodynamics to systems in equilibrium states, or undergoing transformations between two equilibrium states. **laws of t.**, see under *law*. **nonequilibrium t.**, that dealing with steady states and irreversible processes.

thermoelectric (ther''mo-e-lek'trik) pertaining to electricity generated by heat.

thermoelectricity (ther''mo-e'lek-tris'i-te) electricity generated by heat.

thermoesthesia (ther''mo-es-the'ze-ah) thermesthesia.

thermoesthesiometer (ther''mo-es-the'ze-om'ē-ter) thermesthesiometer.

thermoexcitatory (ther''mo-ek-si'tor-e) exciting or stimulating the production of heat in the body.

thermogenesis (ther''mo-jen'ē-sis) [*thermo-* + Gr. *genesis* production] the production of heat, especially within the animal body.

thermogenetic (ther''mo-jē-net'ik) pertaining to the production of heat.

thermogenic (ther''mo-jen'ik) producing heat.

thermogenics (ther''mo-jen'iks) the science relating to heat production.

thermogenous (ther-moj'ē-nus) caused by elevation of temperature, or by heat.

thermogram (ther''mo-gram) 1. a graphic record of variations in temperature (heat). 2. the visual record obtained by thermography.

thermograph (ther''mo-graf) 1. an instrument for recording variations in temperature (heat). 2. a thermogram (def. 2). 3. the apparatus or device employed in thermography. **continuous scan t.**, a thermograph that presents a continuous scan image of the thermal pattern (thermogram) of a patient or object on cathode ray tube.

thermographic (ther''mo-graf'ik) pertaining to a thermogram or to thermography.

thermography (ther-mog'rah-fe) [*thermo-* + Gr. *graphein* to write] a technique wherein an infrared camera is used to photographically portray the surface temperatures of the body, based on the self-emanating infrared radiation; sometimes employed as a means of diagnosing underlying pathologic processes, such as breast tumors.

thermogravimeter (ther''mo-grah-vim'ē-ter) an analytical instrument for measuring change in mass of a substance at changing temperature.

thermohyperalgesia (ther''mo-hi'per-al-je'ze-ah) a condition in which the application of moderate heat causes extreme pain.

thermohyperesthesia (ther''mo-hi'per-es-the'ze-ah) extreme sensitiveness to high temperatures.

thermohypesthesia (ther''mo-hi'pes-the'ze-ah) a state of diminished sensitiveness to high temperatures.

thermohypoesthesia (ther''mo-hi'po-es-the'ze-ah) thermohypoesthesia.

thermoinactivation (ther''mo-in-ak'ti-va'shun) destruction of the power to act by exposure to heat.

thermoinhibitory (ther''mo-in-hib'i-tor'e) inhibiting or retarding the production of bodily heat.

thermointegrator (ther''mo-in'te-gra'tor) an apparatus for recording environmental warmth.

thermolabile (ther''mo-la'b'il) easily altered or decomposed by heat; called also *heat labile*.

thermolamp (ther''mo-lamp) [*thermo-* + Gr. *lampē* torch] a lamp for heating.

thermolaryngoscope (ther''mo-lah-ring'go-skōp) a laryngoscope heated by electricity so that the mirror does not become obscured by condensing moisture.

thermology (ther-mol'o-je) [*thermo-* + *-logy*] the science of heat.

thermoluminescence (ther''mo-lu-mī-nes'ens) the production of light by a substance when its temperature is increased.

thermolysis (ther-mol'i-sis) [*thermo-* + Gr. *lysis* dissolution] 1. chemical dissociation by means of heat. 2. the dissipation of bodily heat by means of radiation, evaporation, etc.

thermolytic (ther''mo-li'tik) [*thermo-* + Gr. *lytikos* dissolving] pertaining to, characterized by, or promoting thermolysis.

thermomassage (ther''mo-mah-sahzh'f) massage with heat.

thermomastography (ther''mo-mas-tog'rah-fe) the use of thermography in the diagnosis of lesions of the breast.

thermometer (ther-mom'ē-ter) [*thermo-* + Gr. *metron* measure] an instrument for determining temperatures. In principle, it makes use of some substance with a physical property that varies in magnitude with temperature, to determine a value of temperature on some defined scale. See also under *scale*. **air t.**, one in which the expansible material is air. **alcohol t.**, a liquid-in-glass thermometer in which alcohol is the liquid used. **axilla t.**, a surface thermometer to be used in the axilla. **Beckmann t.**, a thermometer with a large bulb and fine bore stem for measurement of small differences in temperature. **bimetal t.**, one made of two metals of dissimilar temperature coefficients of expansion so bonded together that a change in temperature causes it to curl. **Celsius t.**, a thermometer employing the Celsius scale (q.v.). **centigrade t.**, one employing the Celsius scale (q.v.), that is, having the interval between the two established reference points divided into 100 units. **clinical t.**, one for use in determining temperature of the human body. **depth t.**, a thermometer whose sensitive element may be introduced into the tissues, for registering the actual temperature of a tissue. **differential t.**, one for measuring small differences in temperature. **Fahrenheit t.**, a thermometer employing the Fahrenheit scale (q.v.). **fever t.**, clinical t. **gas t.**, one in which the expansible material is a gas, such as air, carbon dioxide, helium, neon, nitrogen, or oxygen. **half-minute t.**, a clinical thermometer with a short time lag. **kata t.**, see *katathermometer*. **Kelvin t.**, a thermometer employing the Kelvin scale (q.v.). **liquid-in-glass t.**, the common type of thermometer, containing a liquid which expands with increase in temperature; most of the liquid is in a bulb, but its free surface is in a capillary tube graduated to indicate the degree of temperature causing expansion to each particular point. **maximum t.**, one which registers the highest temperature to which it has been exposed. **mercurial t.**, a liquid-in-glass thermometer in which mercury is the liquid used. **metallic t.**, one in which some solid metal is used as the expansible element. **metastatic t.**, one which indicates minute changes of temperature. **minimum t.**, one which registers the lowest temperature to which it has been exposed. **oral t.**, a clinical thermometer which is placed under the tongue, to record the temperature in the mouth; characteristically the bulb containing the mercury is elongated. **Rankine t.**, a thermometer employing the Rankine scale (q.v.). **Réaumur t.**, a thermometer employing the Réaumur scale (q.v.). **recording t.**, a temperature-sensitive instrument by which the temperature to which it has been exposed is continuously recorded on a specially designed chart. **rectal t.**, a clinical thermometer which is inserted in the rectum, for determining body temperature; characteristically the bulb containing the mercury is pear shaped. **resistance t.**, a thermometer which uses the electric resistance of metals for determining temperature; it consists of a resistance bulb of platinum or other metal wire, and uses a Wheatstone bridge. **self-registering t.**, recording t. **surface t.**, a clinical thermometer for determining the temperature on the surface of the body. **thermocouple t.**, a combination of a thermocouple with some device for measuring its electromotive force, such as a potentiometer; in use the thermocouple's reference junction is kept at a reference temperature (such as the ice point) and its measuring junction at the temperature being measured.

thermometric (ther''mo-met''rik) pertaining to a thermometer or to the measurement of degrees of temperature.

thermometry (ther-mom''ē-tre) the measurement of temperatures.

thermoneurosis (ther''mo-nu-ro''sis) pyrexia of vasomotor origin.

thermonuclear (ther''mo-nu''kle-or) of, pertaining to, or derived from nuclear reactions (e.g., the fusion of hydrogen nuclei) in which the energy required for the reaction is in the form of extraordinarily high temperatures.

thermopalpation (ther''mo-pal-pa''shun) palpation for the purpose of determining differences of temperature at different portions of the body.

thermopenetration (ther''mo-pen''ē-tra''shun) application of currents of low tension and high amperage, which produce warmth in the deeper parts of the body; medical diathermy.

thermophile (ther''mo-fil) an organism which grows best at elevated temperatures.

thermophilic (ther''mo-fil''ik) [*thermo* + Gr. *philein* to love] growing best at or having a fondness for high temperatures. Cf. *mesophilic* and *psychophilic*.

thermophore (ther''mo-fōr) [*thermo* + Gr. *pherein* to bear] 1. a device or apparatus for retaining heat. 2. an instrument for estimating heat sensibility.

thermopile (ther''mo-pīl) [*thermo* + L. *pila* pillar, pile] a number of thermocouples in series; used to increase the sensitivity for a temperature-measuring device, or for the direct conversion of heat into electric energy.

thermoplacentography (ther''mo-plas''en-tog''rah-fe) the use of thermography for determining the site of placental attachment.

thermoplastic (ther''mo-plas''tik) softening under heat and capable of being molded into shape with pressure, then hardening on cooling without undergoing chemical change.

thermoplegia (ther''mo-ple''je-ah) [*thermo* + Gr. *plēgē* stroke + *-ia*] heat stroke or sunstroke (thermic fever).

thermopolypnea (ther''mo-pol''ip-ne''ah) [*thermo* + Gr. *polys* many + *pnoia* breath] a quickening of the respiration due to great heat or high temperature.

thermopolypneic (ther''mo-pol''ip-ne''ik) pertaining to or characterized by the thermopolypnea.

thermoprecipitation (ther''mo-pre-sip''i-ta''shun) precipitation by heat.

thermoprecipitin (ther''mo-pre-sip''i-tin) a heated extract of a bacterium used for precipitin tests (a misleading term, since it does not describe a precipitin).

thermoprecipitinogen (ther''mo-pre-sip''i-tin''o-jen) a heated precipitinogen; when injected into animals coctoprecipitins are produced.

thermoradiotherapy (ther''mo-ra''de-o-ther''ah-pe) application of ionizing radiation to an anatomical site whose tissue-temperature has been elevated by artificial means on the theory of increasing its radiosensitivity.

thermoreceptor (ther''mo-re-sep''tor) a nerve ending that is sensitive to stimulation by heat.

thermoregulation (ther''mo-reg''u-la''shun) heat regulation.

thermoregulator (ther''mo-reg''u-la''tor) 1. controlling or regulating heat. 2. thermostat.

thermoresistance (ther''mo-re-zis''tans) the quality of being little affected by heat.

thermoresistant (ther''mo-re-zis''tant) not greatly affected by heat.

thermoscope (ther''mo-skōp) [*thermo* + Gr. *skopein* to examine] a differential thermometer.

thermostable (ther''mo-sta''bil) unaffected by heat; able to withstand the effects of heat without undergoing change; called also *heat stabile*.

thermostability (ther''mo-stah-bil''i-te) the quality of withstanding the effects of heat without undergoing change.

thermostasis (ther''mo-sta''sis) [*thermo* + Gr. *stasis* a placing, setting] the maintenance of body temperature in warm-blooded animals.

thermostat (ther''mo-stat) [*thermo* + Gr. *histanai* to halt] a device interposed in a heating system by which the temperature can be automatically maintained between certain levels.

thermosteresis (ther''mo-stē-re''sis) [*thermo* + Gr. *sterēsis* deprivation] the deprivation of heat.

thermostromuhr (ther''mo-strōm''oor) an instrument for measuring the amount of blood flowing in a blood vessel.

thermosystaltic (ther''mo-sis-tal''tik) [*thermo* + Gr. *systellein* to contract] contracting under the influence or stimulus of heat; pertaining to thermosystaltism.

thermosystaltism (ther''mo-sis-tal-tizm) [*thermo* + Gr. *systellein* to contract] muscular contraction in response to temperature changes.

thermotactic (ther''mo-tak''tik) pertaining to thermotaxis.

thermotaxis (ther''mo-tak''sik) thermotactic.

thermotaxis (ther''mo-tak''sis) [*thermo* + Gr. *taxis* arrangement] 1. the normal adjustment of the bodily temperature. 2. the movement of an organism in response to an increase in temperature.

thermotherapy (ther''mo-ther''ah-pe) [*thermo* + Gr. *therapeia* treatment] treatment of disease by the application of heat.

thermotics (ther-mot''iks) the science of heat.

thermotolerant (ther''mo-tol''er-ant) enduring heat; said of bacteria whose activity is not checked by high temperature.

thermotonometer (ther''mo-to-nom''ē-ter) [*thermo* + Gr. *tonos* tension + *metron* measure] an instrument for measuring the amount of muscular contraction caused by heat.

thermotracheotomy (ther''mo-tra''ke-ot''o-me) incision of the trachea by actual cautery.

thermotropic (ther''mo-tro''pik) pertaining to or exhibiting thermotropism; called also *caloritropic*.

thermotropism (ther-mot''ro-pizm) [*thermo* + Gr. *tropē* turn] the orientation of a living cell in response to the stimulus of heat.

theroid (the''roid) [Gr. *theriōdēs* beast-like] resembling an animal of a lower order.

theromorph (the''ro-morf) [Gr. *thēr* wild beast + *morphē* form] a morphologic part of an organism or individual with supernumerary, teratic, or absent parts, giving it a resemblance to a lower animal.

theromorphism (the''ro-mor''fizm) the abnormal resemblance of some part of the organism to the normal structure of the corresponding part of an animal of lower type.

Theromyzon (ther-o''mī-zon) a genus of leeches of the family Gnathobdellidae.

thesaurismosis (the-saw''riz-mo''sis) [Gr. *thēsauros* treasure] a metabolic disorder in which some substance accumulates or is stored in certain cells in unusually large amounts. The stored substances may be lipoids, proteins, carbohydrates, and other substances. See *storage disease*, under *disease*. **amyloid t.**, amyloidosis. **calcium t.**, calcinosis. **cholesterol t.**, Hand-Schüller-Christian disease. **glycogenic t.**, glycogen storage disease; see under *disease*. **kerasin t.**, Gaucher's disease. **lipoid t.**, lipoidosis. **melanin t.**, Addison's disease. **phosphatide t.**, Niemann-Pick disease. **urate t.**, gout. **water t.**, edema.

thesaurosis (the''saw-ro''sis) [Gr. *thēsauros* treasure + *-osis*] a condition resulting from the storing up in the body of unusual amounts of normal or foreign substance; see *storage disease*, under *disease*.

Thessalus (thes''sah-lus) of Cos (4th century B.C.) a Greek physician; the son of Hippocrates, he followed his father's teachings closely.

Thessalus (thes''sah-lus) of Tralles (1st century A.D.) a Greek physician of the Methodist school and a pupil of Themison.

thiabendazole (thi''ah-ben''dah-zol) [USP] chemical name: 2-(4-thiazolyl)-1*H*-benzimidazole. A broad-spectrum anthelmintic, C₁₀H₇N₃S, occurring as a white to almost white powder; used in the treatment of pinworm, threadworm, whipworm, roundworm, and hookworm infections, and in cutaneous larva migrans, administered orally.

thiacetazone (thi-ah-set''ah-zōn) chemical name: *N*-[4-[(aminothioxomethyl)hydrazono]methylene]phenyl]acetamide; an antibacterial, C₁₀H₁₂N₃OS, with tuberculostatic and antileprotic properties. Called also *amithiozone*.

thiadiazide, thiadiazine (thi''ah-di''ah-zid; thi''ah-di''ah-zēn) thiadiazide.

thiamazole (thi-am''ah-zōl) methimazole.

thiamin (thi''ah-min) thiamine.

thiaminase (thi-am''i-nās) an enzyme that catalyzes the splitting of thiamine into a pyrimidine derivative and a thiazole derivative; occurring in raw fish and certain bacteria and plants, e.g., bracken. **t. I**, a transferase that catalyzes the conversion of thiamine and pyridine to heteropyrithiamine and a methyl thiazole. **t. II**, a hydrolase that catalyzes the conversion of thiamine into pyrimidine and thiazole derivatives.

thiamine (thi''ah-min) 3-[(4-amino-2-methyl-5-pyrimidinyl)-methyl]-5-(2-hydroxyethyl)-4-methylthiazolium. A water-soluble component of the B complex of vitamins, first isolated in 1926; present in beans, green vegetables, sweet corn, egg yolk, liver, corn meal, and brown rice, and found in blood plasma and cerebrospinal fluid in the free state. Its active form is thiamine pyrophosphate (q.v.). Deficiency of this vitamin results in beriberi. Called also *vitamin B*, and also written *thiamin*. See also *phosphorylated t.* **t. hydrochloride** [USP], the monohydrochloride salt of thiamine, C₁₂H₁₇ClN₄OS·HCl, occurring as white crystals or crystalline powder; administered orally and intramuscularly for the prophylaxis and treatment of thiamine deficiency states. **t. mononitrate** [USP], the mononitrate salt of thiamine, C₁₂H₁₇N₄O₄S, occurring as white crystals or crystalline powder; used in the preparation of various multivitamin dosage forms. **phosphorylated t.**, **t. pyrophosphate**, the active form of thiamine, which serves as a coenzyme in reactions involving

oxidative decarboxylation of certain important intermediates in carbohydrate metabolism. Called also *cocarboxylase*.

thiamphenicol (thi-am-fen'ī-kōl) chemical name: [*R*-(*R**,*R**)-2,2-dichloro-*N*-[2-hydroxy-1-(hydroxymethyl)-2-[4-(methylsulfonyl)phenyl]ethyl]acetamide. A broad-spectrum antibacterial, $C_{12}H_{11}Cl_2NO_5S$, effective against a wide range of gram-positive and gram-negative organisms.

thiamylal sodium, (thi-am'fī-lal) chemical name: dihydro-5-(1-methylbutyl)-5-(2-propenyl)-2-thioxo-4,6-(1*H*,5*H*)-pyrimidine-dione monosodium salt. A very short-acting barbiturate, $C_{12}H_{17}N_2NaO_5S$. A preparation suitable for injection [NF] is administered intravenously to produce general anesthesia of brief duration, for induction of anesthesia, to supplement other anesthetics, or to induce hypnosis.

Thiara (thi-ah'rah) a genus of widely distributed, fresh-water snails (family Meloniidae), species of which, such as *T. granifera* and *T. tuberculata*, act as the main snail hosts of various trematode parasites, including *Paragonimus*, *Metagonimus*, and *Haplorchis*.

thiasine (thi'ah-sin) ergothioneine.

thiazide (thi'ah-zīd) any of a group of benzene disulfonamide derivatives, typified by chlorothiazide, that act as diuretics by inhibiting the reabsorption of sodium in the proximal renal tubule and stimulating chloride excretion, with resultant increase in excretion of water. Called also *benzothiadiazide*, *benzothiadiazine*, *thiadiazide*, and *thiadiazine*.

thiazole (thi'ah-zōl) the chemical ring:

Thiele's syndrome (thēlz) [George Henry Thiele, American proctologist, born 1896] see under *syndrome*.

thiemia (thi-e'me-ah) [Gr. *theion* sulfur + *haima* blood + *-ia*] an excess of sulfur in the blood.

Thiersch's graft operation (tērsh'ez) [Karl Thiersch, German surgeon, 1822-1895] see *Ollier-Thiersch graft*, under *graft*, and see under *operation*.

thiethylperazine (thi-eth'īl-per'ah-zēn) chemical name: 2-(ethylthio)-10-[3-(4-methyl-1-piperazinyl)propyl]phenothiazine. A phenothiazine derivative, $C_{22}H_{29}N_3S_2$. **t. maleate** [USP], a slightly yellow, voluminous powder, having the same actions and uses as the maleate salt; administered by intramuscular injection. **t. maleate** [USP], the maleate salt of thiethylperazine, $C_{22}H_{29}N_3S_2 \cdot 2C_4H_4O_4$, occurring as a white to faintly yellow, crystalline powder; used as an antiemetic. It is useful in reducing nausea and vomiting associated with the use of general anesthesia and that following the use of radiation and mustard therapy and is possibly effective in the treatment of vertigo; administered orally or rectally.

thigh (thi) the portion of the lower extremity situated between the hip above and the knee below; the femur (def. 2). **cricket t.**, rupture of some of the fibers of the rectus femoris, which may occur in playing cricket or football; sometimes the tendon of the quadriceps or that of the patella is also ruptured. **drivers' t.**, sciatic neuralgia caused by pressure from the use of the accelerator in driving an automobile. **Heilbronner's t.**, broadening and flattening of the thigh; seen in cases of organic paralysis when the patient lies on his back on a hard mattress; it does not appear in hysterical paralysis.

thigmesthesia (thig'mes-the'ze-ah) [Gr. *thigmatō* touch + *aisthēsis* perception + *-ia*] tactile sensibility.

thigmotactic (thig'mo-tak'tik) pertaining to, characterized by, or causing thigmotaxis.

thigmotaxis (thig'mo-tak'sis) movement occurring in response to the stimulus of contact or touch, which may be toward (*positive t.*) or away from the stimulating object (*negative t.*).

thigmotropic (thig'mo-trop'ik) pertaining to or exhibiting thigmotropism; responding to the stimulus of contact or touch.

thigmotropism (thig-mot'ro-pizm) [Gr. *thigma* touch + *trōpē* turn] the orientation of an organism in response to the stimulus of contact or touch.

thihexinol methylbromide (thi-hek'sī-nōl) chemical name: α -[4-(diethylamino)cyclohexyl]- α -2-thienyl-2-thiophene methanol methyl bromide. An anticholinergic, $C_{18}H_{28}BrNOS_2$, claimed to inhibit intestinal hypermotility.

thimble (thim'b'l) coping.

thimerosal (thi-mer'o-sal) [USP] chemical name: ethyl(2-mercaptobenzoato-S)mercury sodium salt. An organomercurial antiseptic, $C_9H_9HgNaO_2S$, occurring as a light cream-colored, crystalline powder, which is actively antifungal and bacteriostatic for many nonsporulating bacteria; used as a topical anti-infective and as a preservative in pharmaceutical preparations. Called also *thiomersalate*.

thimethaphan camphorsulfonate (thi-meth'ah-fan) tri-methaphan camsylate.

thinking (think'ing) the formulation of images or concepts in one's mind. **autistic t.**, autism. **dereistic t.**, see *dereism*.

thio- [Gr. *theion* sulfur] a prefix signifying the presence of sulfur.

thio-acid (thi'o-as'id) an organic compound produced by replacement of one of the oxygens of the carboxyl group by divalent sulfur.

thioalbumose (thi'o-al'bu-mōs) an albumose that has a large sulfur content.

thioalcohol (thi'o-al'ko-hol) mercaptan.

thioarsenite (thi'o-ar'se-nit) any compound of sulfur and arsenic of the type K_3AsS_3 .

Thiobacillus (thi'o-bah-sil'us) a genus of microorganisms of the family Thiobacteriaceae, suborder Pseudomonadales, order Pseudomonadales, occurring as small, gram-negative, rod-shaped cells. It includes nine species, *T. concretivorus*, *T. coproliticus*, *T. denitrificans*, *T. ferrooxidans*, *T. neopolitana*, *T. novellus*, *T. thiooxidans*, *T. thio-parus*, and *T. trautweinii*.

Thiobacteriaceae (thi'o-bak-te're-a'se-e) a family of chemosynthetic microorganisms (order Pseudomonadales, suborder Pseudomonadales) occurring as coccoid or straight or curved rod-shaped cells which oxidize sulfur compounds, usually depositing free sulfur granules inside or outside the cells. It includes four genera, *Thiobacillus*, *Thiobacterium*, *Thiospira*, and *Thiovulum*.

Thiobacterium (thi'o-bak-te're-um) a genus of microorganisms of the family Thiobacteriaceae, suborder Pseudomonadales, order Pseudomonadales, occurring as rod-shaped sulfur bacteria in fresh or salt water or in the soil. It includes three species, *T. bovis*, *T. crystalliferum*, and *T. retiformans*.

thiobarbital (thi'o-bar'bi-tal) chemical name: 5,5-diethyl-2-thio-barbituric acid. A salt of thiobarbituric acid, $C_8H_{12}N_2O_2S$, used as a thyroid depressant.

thiobarbiturate (thi'o-bar-bit'u-rāt) a salt or derivative of thiobarbituric acid.

Thiocapsa (thi'o-kap'sah) [*thio-* + Gr. *kapsa* a case, casket] a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as spherical cells within a slime capsule. It includes two species, *T. florida* and *T. roseopersici*.

thiocarbamide (thi'o-kar'bah-mid) thiourea.

thiochrome (thi'o-krōm) the fluorescent yellow coloring matter of yeast, $C_{12}H_{14}ON_4S$, resulting from the oxidation of thiamine.

thiocyanate (thi'o-si'ah-nat) a salt analogous in composition to a cyanate, but containing sulfur instead of oxygen; called also *sulfocyanate*.

Thiocystis (thi'o-sis'tis) [*thio-* + Gr. *kystis* sac, bladder] a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as spherical to ovoid cells embedded in a common gelatinous capsule. It includes two species, *T. rufo* and *T. violacea*.

Thioderma (thi'o-der'mah) [*thio-* + Gr. *derma* skin] a name formerly given a genus of sulfur bacteria.

Thiodictyon (thi'o-dik'te-on) [*thio-* + Gr. *diktyon* net] a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as rod-shaped cells arranged end to end in a netlike structure. The type species is *T. elegans*.

thiodiphenylamine (thi'o-di-fen'il-am'in) phenothiazine.

thiodotherapy (thi'o-do-ther'ah-pe) [*thio-* + *iodine* + *therapy*] combined sulfur and iodine therapy.

thioether (thi'o-e'ther) a sulfur ether; an ether in which sulfur replaces oxygen.

thioethylamine (thi'o-eth'il-am'in) an amine, $SH(CH_2)_2NH_2$, formed from cysteine by the loss of CO_2 .

thioflavine (thi'o-fla'vin) [*thio-* + *flavine*] a yellow dye, methyl dehydrothio-*p*-toluidine sulfonate.

thiogenic (thi'o-jen'ik) [*thio-* + Gr. *gennan* to produce] able to convert hydrogen sulfide into higher sulfur compounds.

thioglucoase (thi'o-glu'kōs) a synthetic glucose that contains a sulfhydryl group which replaces the oxygen in the aldehyde group.

thioglucoasidase (thi'o-glu-ko'si-dās) an enzyme found in mustard seed that catalyzes the hydrolysis of thioglycoside to a thiol and a sugar; called also *myrosinase*.

thioguanine (thi'o-gwah'nēn) [USP] chemical name: 2-amino-1,7-dihydro-6*H*-purine-6-thione. An antineoplastic derived from mercaptopurine, $C_5H_5N_5S \cdot xH_2O$, occurring as a pale yellow, crystalline powder; used in the treatment of acute leukemia and chronic granulocytic leukemia, administered orally.

thiokinase (thi'o-ki'nās) any enzyme that catalyzes the joining of an acid and a thiol ($-SH$) group coupled with the release of inorganic phosphate from ATP or a similar triphosphate.

thiol (thi'ol) 1. sulfhydryl. 2. any organic compound containing the $-SH$ group; the analogue of an alcohol, which contains the $-OH$ group.

thiolase (thi'o-lās) acetyl-CoA acetyltransferase. **acetoacetyl t.**, acetyl-CoA acetyltransferase.

thiolhistidine (thi'ol-his'ti-din) the sulfur derivative of histidine occurring in the betaine form as ergothioneine.

Thiomerin (thi-o'-mer-in) trademark for a preparation of mercaptomerin sodium.

thiomersalate (thi'o-mer'sah-lāt) thimerosal.

thioneine (thi'o-ne'in) [Gr. *theion* sulfur + *neos* new] ergothioneine.

thionic (thi-on'ik) 1. pertaining to sulfur. 2. see under *acid*.

thionin (thi'o-nin) a dark-green powder, $\text{NH}_2 \cdot \text{C}_6\text{H}_5(\text{NS}) \cdot \text{C}_6\text{H}_5 \cdot \text{NH}_2$, giving a purple color in solution, and used as a metachromatic stain in microscopy. Called also *Lauth's violet*.

thionyl (thi'o-nil) the radical SO.

thiopeptic (thi'o-pek'tik) fixing sulfur.

Thiopedia (thi'o-pe'de-ah) [*thio* + Gr. *pedion* a plain] a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as spherical to short rod-shaped cells. The type species is *T. ro'sea*.

thiopental sodium (thi'o-pen'tal) [USP] chemical name: 5-ethyl-5-hydroxy-5-(1-methylbutyl)-2-thioxo-4,6(1*H*,5*H*)pyrimidine-dione monosodium salt. An ultra-short-acting barbiturate, $\text{C}_{11}\text{H}_{17}\text{N}_2\text{NaO}_2\text{S}$, occurring as a white to off-white, crystalline powder, or yellowish, hygroscopic powder; administered intravenously to produce general anesthesia of brief duration, for induction of anesthesia prior to administration of other anesthetics, to supplement regional anesthesia, as an anticonvulsive, and for narcoanalysis and narcosynthesis in psychiatric disorders.

thiopentone (thi'o-pen'ton) thiopental.

thiopexic (thi'o-pek'sik) thiopeptic.

thiopexy (thi'o-pek'se) [*thio* + Gr. *pēxis* fixation] the fixation of sulfur.

Thioploca (thi'o-plo'kah) a genus of Schizomycetes (order Beggiatoales, family Beggiatoaceae).

Thioplococcus (thi'o-pol'e-kok'us) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as spherical cells in irregularly shaped dense aggregates, held together by mucus. The type species is *T. ru'ber*.

thiopropazate hydrochloride (thi'o-pro'pah-zāt) chemical name: 4-[3-(2-chlorophenothiazine-10-yl)propyl]-1-piperazine-ethanol acetate dihydrochloride. A phenothiazine tranquilizer, $\text{C}_{23}\text{H}_{28}\text{Cl}_2\text{N}_4\text{O}_2 \cdot 2\text{HCl}$, occurring as a white, crystalline powder; used in the treatment of psychoses and to suppress involuntary muscular activity in Huntington's chorea, administered orally.

Thiorhodaceae (thi'o-ro-da'se-e) a family of Schizomycetes (order Pseudomonadales, suborder Rhodobacteriineae), occurring in environments containing sulfides, requiring light but little or no oxygen, and producing a pigment system composed of green bacteriochlorophyll and yellow and red carotenoids. It includes 13 genera: *Amoebobacter*, *Chromatium*, *Lamprocystis*, *Rhabdomonas*, *Rhodotheca*, *Thiocapsa*, *Thiocystis*, *Thiodictyon*, *Thiopedia*, *Thiopolycoccus*, *Thiosarcina*, *Thiospirillum*, and *Thiotheca*.

thiuridazine hydrochloride (thi'o-rid'ah-zēn) [USP] chemical name: 10-[2-(1-methyl-2-piperidyl)ethyl]-2-(methylthio)phenothiazine monohydrochloride. A tranquilizer, with sedative and behavioral effects, $\text{C}_{21}\text{H}_{28}\text{N}_2\text{S}_2 \cdot \text{HCl}$, occurring as a white to slightly yellow, granular powder; administered orally.

Thiosarcina (thi'o-sar-si'nah) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as spherical cells in cubical packets. The type species is *T. ro'sea*.

thiosinamine (thi'o-sin'ah-min) a bitter, crystalline substance, $(\text{NH}_2\text{CS} \cdot \text{NHCH}_2\text{CH}_2\text{CH}_2)_n$, from oil of mustard and ammonia; it has been used to promote absorption of fibrous tissue. Called also *allyl thiocarbamide*, *allyl sulfocarbamide*, and *allyl thiourea*.

Thiospira (thi'o-spi'rah) a genus of microorganisms of the family Thiobacteriaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as colorless, slightly bent, large rods with a small number of polar flagella and containing sulfur granules within the cells. It includes two species, *T. bipuncta'ta* and *T. winograd'skyi*.

Thiospirillopsis (thi'o-spi'r'il-lop'sis) a genus of Schizomycetes (order Beggiatoales, family Beggiatoaceae).

Thiospirillum (thi'o-spi-ril'lum) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring singly as spirally wound cells. It includes five species, *T. jenen'se*, *T. rosenber'gii*, *T. ru'fum*, *T. sanguineum*, and *T. viola'ceum*.

thiosulfate (thi'o-sul'fāt) any salt of thiosulfuric acid.

Thiosulfil (thi'o-sul'fil) trademark for preparations of sulfamethizole.

thiotepa (thi'o-te'pah) [USP] chemical name: 1,1',1''-phosphorothioylidynetris-aziridine. A cytotoxic alkylating agent, $\text{C}_6\text{H}_{12}\text{N}_3\text{P}_3\text{S}$, occurring as fine, white, crystalline flakes; used as an antineoplastic, especially for the palliative treatment of certain malignant tumors as an adjunct to therapy, administered paren-

terally. Also written thio-*TEPA*. Called also *triethylenethiophosphoramide*.

Thiotheca (thi'o-the'se) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as spherical to elongated cells embedded in a gelatinous capsule. The type species is *T. gelatino'sa*.

thiothixene (thi'o-thiks'en) [USP] chemical name: (Z)-N,N-dimethyl-9-[3-(4-methyl-1-piperazinyl)propylidene]-9*H*-thioxan-thene-2-sulfonamide. An antipsychotic, $\text{C}_{23}\text{H}_{29}\text{N}_5\text{O}_2\text{S}_2$, occurring as white to tan crystals; administered orally. **t. hydrochloride** [USP], the dihydrate dihydrochloride salt of thiothixene, $\text{C}_{23}\text{H}_{29}\text{N}_5\text{O}_2\text{S}_2 \cdot 2\text{HCl} \cdot 2\text{H}_2\text{O}$, occurring as a white, or nearly white, crystalline powder, having the same uses as the base; administered orally and intramuscularly.

Thiothrix (thi'o-thriks) a genus of Schizomycetes (order Beggiatoales, family Beggiatoaceae).

thiouracil (thi'o-u'rah-sil) chemical name: 2-mercapto-4-hydroxypyrimidine. A thiourea derivative, $\text{C}_4\text{H}_4\text{N}_2\text{OS}$, which affects adversely the synthesis of the thyroid hormones. It has been used as an antithyroid agent in hyperthyroidism, and in angina pectoris and congestive heart failure.

thiourea (thi'o-u're-ah) urea in which the oxygen is replaced by sulfur, H_2HCSNH_2 ; it inhibits the function of the thyroid gland, and was formerly used as an antithyroid agent. Called also *thiocarbamide*.

Thiovulum (thi-o'vu-lum) a genus of microorganisms of the family Thiobacteriaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as round to ovoid unicellular organisms, normally containing sulfur in the cytoplasm. The type species is *T. ma'jus*.

thioxanthene (thi'o-zan'thēn) a class of structurally related neuroleptic drugs, including chlorprothixene and thiothixene.

thiozine (thi'o-zin) ergothioneine.

thiphenamil hydrochloride (thi-fen'ah-mil) chemical name: α -phenylbenzene ethanethioic acid S-[2-(diethylamino)ethyl]ester hydrochloride. An anticholinergic, $\text{C}_{20}\text{H}_{26}\text{ClNOS}$, having potent antispasmodic and smooth muscle relaxant properties; used to relieve pain and discomfort due to smooth muscle spasm associated with gastrointestinal disorders, administered orally.

thiram (thi'ram) chemical name: tetramethylthioperoxydicarbonic diamide; a topical antifungal, $\text{C}_8\text{H}_{12}\text{N}_2\text{S}_4$.

third intention see under *healing*.

thirst (therst) [L. *sitis*, Gr. *dipsa*] a sensation, often referred to the mouth and throat, associated with a craving for drink; ordinarily interpreted as a desire for water. **insensible t.**, subliminal t. **real t.**, true t. **subliminal t.**, a sensation of need for water which is insufficient to prompt the ingestion of water but is at times sufficient to maintain drinking once it is initiated. **true t.**, thirst which is associated with a bodily need for water and is satisfied by the ingestion of water. **twilight t.**, subliminal t.

Thiry's fistula (thi'rēz) [Ludwig Thiry, Austrian physiologist, 1817-1897] see under *fistula*.

thixolabile (thik'so-la'bil) easily affected by shaking or stirring.

thixotropic (thik'so-trop'ik) pertaining to or characterized by thixotropy.

thixotropism (thik-sot'ro-pizm) thixotropy.

thixotropy (thik-sot'ro-pe) [Gr. *thixis* a touch + *tropos* a turning] the property, exhibited by certain gels, of becoming fluid when shaken or stirred, and then becoming semisolid again.

thlipsencephalus (thlip'sen-sef'ah-lus) [Gr. *thlipsis* pressure + *enkephalos* brain] a monster with a deficient skull, or with the upper part of the skull lacking.

thoko (tho'ko) a Fijian word for yaws, which was once heavily endemic there.

Thoma's ampulla, fluid (to'mahz) [Richard Thoma, German histologist, 1847-1923] see under *ampulla* and *fluid*.

Thoma-Zeiss counting chamber (cell) (to'mah-zis) [Richard Thoma; Carl Zeiss, German optician, 1816-1888] see under *chamber*.

Thomas' knee splint, posterior splint (tom'as) [Hugh Owen Thomas, orthopedic surgeon in Liverpool, 1834-1891] see under *splint*.

Thompson's test (tom'sonz) [Sir Henry Thompson, English surgeon, 1820-1904] two-glass test.

Thomsen's disease (tom'senz) [Asmus Julius Thomsen Thomsen, Danish physician, 1815-1896] myotonia congenita.

Thomsen's phenomenon (tom'senz) [Oluf Thomsen, Danish physician, 1878-1940] Huebener-Thomsen-Friedenreich phenomenon.

Thomson's sign (tom'sunz) [Frederick Holland Thomson, British physician, 1867-1938] Pastia's sign; see under *sign*.

thomsonianism (tom-so'ne-an-izm) [Samuel Thomson, a New Hampshire farmer, 1769-1843] an empiric system of medical practice, chiefly based on use of plants as remedies.

thonzonium bromide (thon-zo'ni-um) chemical name: N-[2-

[[[4-methoxyphenyl)methyl]-2-pyrimidinylamino]ethyl]-*N,N*-dimethyl-1-hexadecanaminium bromide; a cationic detergent, $C_{22}H_{55}BrN_4O$.

thonzylamine hydrochloride (thon-zil'ah-měň) chemical name: *N*-[[[4-methoxyphenyl)methyl]-*N,N'*-dimethyl-*N*-2-pyrimidinyl]-1,2-ethanediamine monohydrochloride; an antihistaminic, $C_{16}H_{22}N_4O \cdot HCl$.

thoracic (tho'rah-kal) thoracic.

thoracalgia (tho'rah-kal'je-ah) pain in the chest wall.

thoracotomy (tho'rah-sek'to-me) [*thoraco-* + Gr. *ektomē* excision] thoracotomy with resection of a portion of a rib.

thoracocentesis (tho'rah-sen-te'sis) [*thoraco-* + Gr. *kentēsis* puncture] surgical puncture of the chest wall into the parietal cavity for aspiration of fluids; called also *pleurocentesis* and *thoracocentesis*.

thoracic (tho-ras'ik) [L. *thoracicus*; Gr. *thōrakikos*] pertaining to or affecting the chest.

thoracicoabdominal (tho-ras'i-ko-ab-dom'i-nal) pertaining to the thorax and abdomen.

thoracicohumeral (tho-ras'i-ko-hu'mer-al) pertaining to the thorax and the humerus.

thoracispinal (tho-ras'i-spi'nal) pertaining to the thoracic portion of the spinal column.

thoraco- (tho'rah-ko) [Gr. *thōrax*, *thōrakos* chest] a combining form denoting relationship to the chest.

thoracoacromial (tho'rah-ko-ah-kro'me-al) pertaining to the chest and acromion.

thoracobronchotomy (tho'rah-ko-brong-kot'o-me) incision into the bronchus through the thoracic wall.

thoracoceloschisis (tho'rah-ko-se-los'ki-sis) [*thoraco-* + Gr. *koilia* belly + *schisis* fissure] congenital fissure of the thorax and abdomen.

thoracocentesis (tho'rah-ko-sen-te'sis) thoracocentesis.

thoracocyllosis (tho'rah-ko-si-lo'sis) [*thoraco-* + Gr. *kyllōsis* crippling] deformity of the chest.

thoracocyrstosis (tho'rah-ko-sir-to'sis) [*thoraco-* + Gr. *kyrtōsis* a being humped] abnormal curvature of the thorax, or unusual prominence of the chest.

thoracodelphus (tho'rah-ko-del'fus) [*thoraco-* + Gr. *adelphos* brother] a double monster with one head, two arms, and four legs, the bodies being joined above the navel.

thoracodidymus (tho'rah-ko-did'i-mus) [*thoraco-* + Gr. *didymos* twin] conjoined twins united at the thorax.

thoracodynia (tho'rah-ko-din'e-ah) [*thoraco-* + Gr. *odynē* pain] pain in the chest.

thoracogastrodidymus (tho'rah-ko-gas'tro-did'i-mus) [*thoraco-* + Gr. *gastēr* belly + *didymos* twin] conjoined twins united at the belly and chest.

thoracogastroschisis (tho'rah-ko-gas-tros'ki-sis) [*thoraco-* + Gr. *gastēr* belly + *schisis* fissure] fissure of the thorax and abdomen.

thoracograph (tho-rak'o-graf) [*thoraco-* + Gr. *graphein* to write] thoracopneumograph.

thoracolaparotomy (tho'rah-ko-lap'ah-rot'o-me) [*thoraco-* + Gr. *lapara* loin + *tomē* a cutting] incision through both the thorax and abdomen to gain access to the subphrenic space and adjoining regions.

thoracolumbar (tho'rah-ko-lum'bar) pertaining to the thoracic and lumbar parts of the spine.

thoracolysis (tho'rah-kol'i-sis) [*thoraco-* + Gr. *lysis* dissolution] the freeing of adhesions of the chest wall.

thoracomelus (tho'rah-kom'e-lus) [*thoraco-* + Gr. *melos* limb] a monster with a supernumerary arm or leg attached to the thorax.

thoracometer (tho'rah-kom'ē-ter) [*thoraco-* + Gr. *metron* measure] stethometer.

thoracometry (tho'rah-kom'ē-tre) measurement of the thorax.

thoracomylodynia (tho'rah-ko-mi'o-din'e-ah) [*thoraco-* + Gr. *mys* muscle + *odynē* pain] pain in the muscles of the chest.

thoracopagus (tho'rah-kop'ah-gus) [*thoraco-* + Gr. *pagos* thing fixed] a double monster consisting of two nearly complete individuals joined in or near the sternal region, so the two components are face to face. **t. epigast'ricus**, an asymmetrical double monster in which the parasitic component is attached to the epigastric region of the autosite. **t. parasit'icus**, an asymmetrical double monster in which the parasitic component is attached to the thorax of the autosite.

thoracoparacephalus (tho'rah-ko-par'ah-sef'ah-lus) [*thoraco-* + Gr. *para* beside + *kephalē* head] asymmetrical conjoined twins, a parasite with rudimentary head being attached to the thorax of the autosite.

thoracopathy (tho'rah-kop'ah-the) [*thoraco-* + Gr. *pathos* disease] any disorder of the thorax or of the thoracic organs.

thoracoplasty (tho'rah-ko-plas'te) [*thoraco-* + Gr. *plassein* to mold] surgical removal of ribs, allowing the chest wall to move

inward and collapse a diseased lung. **costoversion t.**, removal of several ribs and their replacement "inside out," occasionally with one rib placed vertically as a strut, providing a concave bony framework, to prevent paradoxical movement during the healing of the chest wall with the lung in the collapsed position.

thoracopneumograph (tho'rah-ko-nu'mo-graf) [*thoraco-* + Gr. *pneuma* breath + *graphein* to write] an instrument for recording the respiratory movements of the chest.

thoracoschisis (tho'rah-kos'ki-sis) [*thoraco-* + Gr. *schisis* fissure] congenital fissure of the chest, which may result in herniation of lung tissue.

thoracoscope (tho-ra'ko-skōp) 1. an endoscope for examining the pleural cavity; it is pushed into the cavity through an intercostal space. 2. a stethoscope.

thoracoscopy (tho'rah-kos'ko-pe) [*thoraco-* + Gr. *skopein* to examine] the diagnostic examination of the chest, specifically the direct examination of the pleural cavity by means of the endoscope; pleural endoscopy.

thoracostenosis (tho'rah-ko-stē-no'sis) [*thoraco-* + Gr. *stenōsis* contraction] abnormal contraction of the chest wall.

thoracostomy (tho'rah-kos'to-me) [*thoraco-* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of an opening in the wall of the chest for the purpose of drainage; also, the opening so created.

thoracotomy (tho'rah-kot'o-me) [*thoraco-* + Gr. *tomē* a cutting] surgical incision of the wall of the chest.

thoracodelphus (tho'rah-del'fus) thoracodelphus.

thorax (tho'raks), pl. *tho'races* [Gr. *thōrax*] [NA] the part of the body between the neck and the respiratory diaphragm, encased by the ribs; the chest. **amazon t.**, a chest with only one mammary gland, or breast. **t. asthen'icus**, *t. paralyticus*. **barrel-shaped t.**, a malformed chest which is rounded like a barrel; seen in advanced pulmonary emphysema. **cholesterol t.**, accumulation in the pleural cavities of fluid with a high cholesterol content. **t. paralyt'icus**, the long flat thorax of patients with constitutional visceroptosis. **Peyrot's t.**, a chest that is obliquely oval; seen in large pleural effusions. **pyriform t.**, a pear-shaped thorax, large above, small below.

Thorazine (thor'ah-zēn) trademark for preparations of chlorpromazine hydrochloride.

Thorel's bundle (to'relz) [Christen Thorel, German physician, 1880–1935] see under *bundle*.

thoriogram (tho're-ah-gram) [*thorium* + Gr. *gramma* mark] a photograph made with thorium.

thorium (tho're-um) [*Thor*, a Norse deity] a rare, heavy gray metal, atomic number, 90; atomic weight, 232.038; symbol, Th. It is a radioactive metal with a half-life of the order of 10^{10} years, and the parent element of a radioactive disintegration series. Because of its radiopacity, various compounds of thorium have been used to facilitate visualization in roentgenography. **t. D**, the last element of the disintegration series derived from thorium, a stable isotope of lead with an atomic weight of 208. **t. dioxide**, ThO_2 , used in roentgenography of the alimentary tract. **t. nitrate**, $Th(NO_3)_4 \cdot 4H_2O$, formerly used externally in parasitic skin diseases and internally in rheumatism. **radioactive t.**, radiothorium. **sodium t. tartrate**, used in roentgenography, especially of the gastrointestinal tract. **t. X**, a radioactive element produced by disintegration of thorium, and an isotope of radium with a half-life of about $3\frac{1}{2}$ days; formerly used in treatment of superficial skin conditions, but replaced now by soft x-rays and grenz rays.

Thormählen's test (tor'ma-lenz) [Johann Thormählen, German physician] see under *tests*.

Thornton's sign (thorn'tonz) [Knowsley Thornton, British physician, 1845–1904] see under *sign*.

Thornwaldt see *Tornwaldt*.

thoron (tho'ron) thorium emanation.

thoroughpin (thur'o-pin) a distention of the synovial sheath of the flexor perforans tendon of the horse at the hock joint; also a similar distention on the carpal joint of the foreleg.

thozalinone (tho-zal'i-nōn) chemical name: 2-(dimethylamino)-5-phenyl-2-oxazolin-4-one; an antidepressant, $C_{11}H_{12}N_2O_2$.

Thr threonine.

thread (thred) a long slender structure, such as a continuous filament of some substance used as suture material. **celluloid t.**, Pagenstecher's linen t. **t's of Golgi-Rezzonico**, threads of nerve tissue in the incisure of Lanterman surrounding the axon spiral arrangement. **Pagenstecher's linen t.**, ordinary linen thread which has been immersed in a solution of celluloid; used as a suture material. **Simonart's t.**, a band formed by the stretching of adhesions between the amnion and fetus when the amniotic cavity is distended with its proper fluid.

threadworm (thred'wurm) any long slender nematode, especially *Enterobius vermicularis*.

thremmatology (threm'ah-tol'o-je) [Gr. *thremma* nursling + *logos* treatise] the science of the laws of heredity and variation.

threonine (thre'o-nin) α -amino- β -hydroxy butyric acid, $\text{CH}_3\cdot\text{CH}(\text{OH})\cdot\text{CH}(\text{NH}_2)\cdot\text{COOH}$; a natural amino acid essential for optimal growth in infants and for nitrogen equilibrium in adults.

threose (thre'os) a sugar, $\text{C}_4\text{H}_8\text{O}_4$, isomeric with erythrose.

threpsis (threp'sis) [Gr.] nutrition.

threpsology (threp-sol'o-je) [Gr. *threpsis* nutrition + *-logos*] the sum of what is known concerning nutrition; the science of nutrition.

threptic (threp'tik) pertaining to nutrition; pertaining to the nurturing of offspring by the parents, especially in certain insect species.

threshold (thresh'old) 1. that value at which a stimulus just produces a sensation, is just appreciable, or comes just within the limits of perception; see also *absolute t.* and *differential t.* 2. a hypothetical barrier that stimuli must pass to enter the mind. 3. that degree of concentration of a substance in the blood plasma above which the substance is excreted by the kidneys and below which it is not excreted; such a substance is called a *threshold substance*. 4. limen. **absolute t.**, the lowest possible limit of stimulation that is capable of producing sensation; called also *stimulus t.* **achromatic t.**, the least intensity of the spectrum that produces a sensation of color; reduction of intensity below this point produces a sensation of brightness only, without any color distinction. **auditory t.**, the *minimum audible*, or slightest perceptible sound. **t. of consciousness**, the *minimum sensible*, or lowest limit of sensibility; the point of consciousness at which a stimulus is barely perceived. **convulsant t.**, the minimum amount of electric current or drug required to produce a convulsion in shock treatment. **differential t.**, the lowest limit of discriminative sensibility; the ratio which the difference of two stimuli must bear to half their sum in order that their difference may be just perceptible. **displacement t.**, the threshold of perception of a break in the continuity of a contour or of a border; called also *Vernier acuity*. **double point t.**, the smallest distance apart at which two stimuli of touch are felt as distinct. **erythema t.**, the size of the radiation dose that is required to cause erythema of the skin. **flicker fusion t.**, the frequency at which a flickering light just appears to be continuous; see *flicker*. **galvanic t.**, rheobase. **neuron t.**, that degree of stimulation of a neuron which just suffices to call forth a fruitful excitation (sensation, movement, or the like) in a neuron. **t. of nose**, limen nasi. **parasite t.**, pyrogenic t. **pyrogenic t.**, the number of malarial parasites required to be in the blood to produce fever. **relational t.**, the ratio which two stimuli must have to each other in order that the difference between them may be just perceptible. **renal t.**, that concentration of a substance in plasma at which it begins to be excreted in the urine. **renal t. for glucose**, the point of sugar (glucose) concentration in the blood (180 mg. per ml. in the normal) at which the kidney will excrete sugar (glucosuria); called also *leak point*. **resolution t.**, t. of consciousness. **sensitivity t.**, **stimulus t.**, **absolute t.** **swallowing t.**, the minimal stimulation necessary to elicit the reflex action that leads to swallowing. **t. of visual sensation**, the least possible amount of stimulus that gives rise to the sensation of sight.

thrill (thrill) a sensation of vibration felt by the examiner on palpation of the body, as over an incompetent heart valve. **aneurysmal t.**, the vibratory sensation felt on the palpation of an aneurysm. **aortic t.**, a thrill perceptible over the aortic orifice in disease of its valves. **diastolic t.**, the vibratory sensation felt over the precordium in advanced aortic insufficiency. **fat t.**, a peculiar thrill sometimes felt in abdominal examinations due to excessive fatness of the parietes. **hydatid t.**, a tremulous impulse sometimes felt on palpation of the body surface over a hydatid cyst; called also *hydatid fremitus*. **presystolic t.**, a thrill felt just before the systole by the hand placed over the apex of the heart. **purring t.**, a thrill of a quality suggesting the purring of a cat. **systolic t.**, a thrill felt on systole over the precordium, as in aortic stenosis, pulmonary stenosis, and ventricular septal defect.

thrinx (thriks) [Gr.] hair; used as a word termination denoting a resemblance or a relationship to hair.

-thrinx [Gr. *thrinx* hair] a word termination meaning hair.

throat (thrōt) 1. the pharynx. 2. the fauces. 3. the anterior part of the neck. **sore t.**, see *sore throat*, under *S.* **trench t.**, necrotizing ulcerative gingivitis.

throb (throb) a pulsating movement or sensation.

throbbing (throbb'ing) beating; attended with a rhythmic beating sensation.

Throckmorton's reflex [Thomas Bentley Throckmorton, American neurologist, born 1885] see under *reflex*.

throe (thro) a severe pain or paroxysm.

thrombapheresis (throm'bah-fer'ē-sis) thrombocytapheresis.

thrombase (throm'bās) thrombin.

thrombasthenia (throm'bas-the'ne-ah) [*thrombocyte* + Gr. *astheneia* weakness] a platelet abnormality characterized by defective clot retraction, abnormal glass adhesion, impaired aggregation to ADP, collagen, and thrombin, and prolonged bleeding time; it is manifested clinically as Glanzmann's disease, with

epistaxis, inappropriate bruising, and excessive bleeding, as during surgery. **Glanzmann's t.**, see *thrombasthenia*.

thrombectomy (throm-bek'to-me) [Gr. *thrombos* clot + *ektomē* excision] removal of a thrombus from a blood vessel; properly indicative of such removal by excision.

thrombembolia (throm'bem-bo'le-ah) thromboembolism.

thrombi (throm'bi) plural of *thrombus*.

thrombin (throm'bin) 1. the enzyme derived from prothrombin which converts fibrinogen to fibrin; called also *fibrinogenase* and *thrombase*. 2. [USP] a pharmaceutical preparation (*topical t.*), a sterile protein substance prepared from prothrombin of bovine origin through interaction with added thromboplastin in the presence of calcium is used therapeutically as a local hemostatic.

thrombinogen (throm-bin'o-je) prothrombin.

thrombo- [Gr. *thrombos* clot] a combining form denoting relationship to a clot, or thrombus.

thromboangiitis (throm'bo-an'je-i'tis) [*thrombo-* + Gr. *angeion* vessel + *-itis*] inflammation of a blood vessel with thrombosis. **t. oblit'erans**, an inflammatory and obliterative disease of the blood vessels of the extremities, primarily the lower extremities, occurring chiefly in young men and leading to ischemia of the tissues and gangrene; called also *Buerger's disease*.

thromboarteritis (throm'bo-ar'ter-i'tis) thrombosis occurring in association with inflammation of an artery. **t. purulen'ta**, purulent softening of an arterial thrombosis, with infiltration of the artery walls.

thromboasthenia (throm'bo-as-the'ne-ah) thrombasthenia.

thromboclasia (throm-bok'lah-sis) [*thrombo-* + Gr. *klasis* a breaking] thrombolysis.

thromboclastic (throm'bo-klas'tik) thrombolytic.

thrombocyst (throm'bo-sist) [*thrombo-* + Gr. *kystis* cyst] the chronic sac which may form around a thrombus in a hematoma.

thrombocystitis (throm'bo-sis'tis) thrombocyst.

thrombocytapheresis (throm'bo-sit'ah-fē-re'sis) [*thrombocyte* + Gr. *aphairesis* removal] the selective separation and removal of thrombocytes (platelets) from withdrawn blood, the remainder of the blood then being retransfused into the donor. Called also *plateletpheresis* and *thrombapheresis*.

thrombocyte (throm'bo-sit) [*thrombo-* + Gr. *kytos* hollow vessel] a blood platelet.

thrombocythemia (throm'bo-si-the'me-ah) [*thrombocyte* + Gr. *haima* blood + *-ia*] a fixed increase in the number of circulating blood platelets; called also *plastrinemia*. **essential t.**, hemorrhagic t. **hemorrhagic t.**, a clinical syndrome characterized by repeated spontaneous hemorrhages, either external or into the tissues, and a remarkable increase in the number of circulating platelets; regarded as one of the myeloproliferative syndromes. Called also *essential*, *idiopathic*, or *primary thrombocythemia*, and *megakaryocytic leukemia*. **idiopathic t.**, **primary t.**, hemorrhagic t.

thrombocytic (throm'bo-sit'ik) 1. pertaining to, characterized by, or of the nature of a blood platelet (thrombocyte). 2. pertaining to the thrombocytic series.

thrombocytin (throm'bo-sit'in) serotonin.

thrombocytocrit (throm'bo-sit'o-krit) [*thrombocyte* + Gr. *kri-nein* to separate] the volume of packed blood platelets in a given quantity of blood; the instrument used to measure the platelet volume.

thrombocytolysis (throm'bo-si-tol'i-sis) destruction of blood platelets (thrombocytes).

thrombocytopathia (throm'bo-si'to-path'ē-ah) a heterogeneous hemorrhagic disorder characterized by platelets with defective clot-promoting (platelet factor 3) activity.

thrombocytopathic (throm'bo-si'to-path'ik) pertaining to or characterized by thrombocytopathia.

thrombocytopathy (throm'bo-si-top'ah-the) a general term applied to a qualitative disorder of the blood platelets, due mainly to deficiency of platelet factor 3, (PF-3). **constitutional t.**, Glanzmann's thrombasthenia.

thrombocytopenia (throm'bo-si'to-pe'ne-ah) [*thrombocyte* + Gr. *penia* poverty] decrease in the number of blood platelets. **essential t.**, idiopathic thrombocytopenic purpura. **immune t.**, that associated with the presence of anti-platelet antibodies (IgG). **malignant t.**, an old term for aleukia hemorrhagica.

thrombocytopoiesis (throm'bo-si'to-poi-e'sis) [*thrombocyte* + Gr. *poiesis* a making, creation] the production of blood platelets.

thrombocytopoietic (throm'bo-si'to-poi-et'ik) concerned in the formation of blood platelets.

thrombocytosis (throm'bo-si'to-sis) increased numbers of platelets in the peripheral blood.

thromboelastogram (throm'bo-e-las'to-gram) the graphic record of the values determined by thromboelastography.

thromboelastograph (throm'bo-e-las'to-graf) an apparatus used in study of the rigidity of blood or plasma during coagulation.

thromboelastography (throm'bo-e'las-tog'rah-fe) determi-

nation of the rigidity of the blood or plasma during coagulation, by use of the thromboelastograph.

- thromboembolia** (throm/'bo-em-bo/'le-ah) thromboembolism.
- thromboembolism** (throm/'bo-em-bo/'lizm) obstruction of a blood vessel with thrombotic material carried by the blood stream from the site of origin to plug another vessel.
- thromboendarterectomy** (throm/'bo-end/'ar-ter-ek/'tō-me) [*thrombo-* + *Gr. endon* within + *arteria* artery + *ektomē* excision] removal of an obstructing thrombus together with the inner lining of an obstructed artery. **coronary t.**, excision of blood clot and the intima from an occluded coronary artery.
- thromboendarteritis** (throm/'bo-end-ar/'ter-i/'tis) inflammation of the innermost coat of an artery, with thrombus formation.
- thromboendocarditis** (throm/'bo-en/'do-kar-di/'tis) 1. formation of a thrombus on a heart valve which has previously been eroded. 2. an infectious disease of rabbits.
- thrombogenesis** (throm/'bo-jen/'ē-sis) the formation of blood clots.
- thrombogenic** (throm/'bo-jen/'ik) [*thrombo-* + *Gr. gennan* to produce] producing a clot, curd, or coagulum.
- thromboid** (throm/'boid) [*Gr. thromboeidēs*] resembling a thrombus.
- thrombokinase** (throm/'bo-kin/'ās) activated Factor X; see *coagulation factors*, under *factor*.
- thrombokinesis** (throm/'bo-ki-ne/'sis) [*thrombo-* + *Gr. kinēsis* motion] the formation of a blood clot; clotting of blood.
- thrombokinetics** (throm/'bo-ki-net/'iks) the dynamics of blood coagulation.
- thrombolympangitis** (throm/'bo-lim/'fan-ji/'tis) inflammation of a lymph vessel due to a thrombus.
- Thrombolsin** (throm-bol/'i-sin) trademark for a preparation of fibrinolysin.
- thrombolysis** (throm-bol/'i-sis) [*thrombo-* + *Gr. lysis* dissolution] the phenomenon by which preformed thrombi are lysed by a complex series of events, the most important of which involves the local action of plasmin confined within the substance of the thrombus.
- thrombolytic** (throm/'bo-lit/'ik) 1. dissolving or splitting up a thrombus. 2. a thrombolytic agent.
- thrombon** (throm/'bon) [*thrombo-* + *Gr. on* neuter ending] the element of the blood consisting of the platelets and their precursors; it is the counterpart of erythron and leukon.
- thrombopathia** (throm/'bo-path/'e-ah) a blood coagulation disorder due to failure of the platelets to release ADP in response to aggregating agents (collagen, epinephrine, thrombin).
- thrombopathy** (throm-bop/'ah-the) see *thrombopathia*.
- thrombopenia** (throm/'bo-pe/'ne-ah) thrombocytopenia. **essential t.**, idiopathic thrombocytopenic purpura.
- thrombopeny** (throm/'bo-pe/'ne) thrombocytopenia.
- thrombophilia** (throm/'bo-fil/'e-ah) [*thrombo-* + *Gr. philein* to love] a tendency to the occurrence of thrombosis.
- thrombophlebitis** (throm/'bo-fle-bi/'tis) [*thrombo-* + *Gr. phleps* vein + *-itis*] inflammation of a vein associated with thrombus formation. Cf. *phlebothrombosis*. **iliofemoral t.**, **postpartum**, thrombophlebitis of the iliofemoral vein following childbirth; called also *phlegmasia alba dolens puerperarum*. **t. mi'grans**, a recurring phlebitis usually affecting segments of superficial peripheral veins, and sometimes involving major and visceral veins; it may occur in multiple sites simultaneously or at intervals. **t. purulen'ta**, thrombophlebitis with purulent softening of the thrombus, and infiltration of the wall of the vessel.
- thromboplastic** (throm/'bo-plas/'tik) [*thrombo-* + *Gr. plassein* to form] causing or accelerating clot formation in the blood.
- thromboplastid** (throm/'bo-plas/'tid) a blood platelet.
- thromboplastin** (throm/'bo-plas/'tin) a substance having procoagulant properties or activity. **extrinsic t.**, the prothrombin activator formed as the result of interaction of coagulation Factors III, VII, and X which, with Factor IV, aids in the formation of thrombin: called *extrinsic* because not all of the components required for its production (e.g., Factor III, or tissue thromboplastin) are derived from intravascular sources. **intrinsic t.**, the prothrombin activator formed as the result of interaction of coagulation Factors V, VIII, IX, X, XI, and XII and platelet factor 3 (PF-3) which, with Factor IV, aids in the conversion of prothrombin to thrombin: called *intrinsic* because the components required for its production are derived from intravascular sources. **tissue t.**, Factor III; see *coagulation factors*, under *factor*. So called because it is released by or derived from extravascular tissues.
- thromboplastinogen** (throm/'bo-plas-tin/'o-jen) former term for Factor VIII; see *coagulation factors*, under *factor*.
- thrombopoiesis** (throm/'bo-poi-e/'sis) 1. thrombogenesis. 2. thrombocytopenia.
- thrombopoietic** (throm/'bo-poi-et/'ik) pertaining to or characterized by thrombopoiesis.

- thrombopoietin** (throm/'bo-poi-e/'tin) a hypothetical substance(s) believed to serve as the humoral regulator of the production of blood platelets.
- thrombosed** (throm/'bōsd) affected with thrombosis.
- thrombosinuitis** (throm/'bo-si/'nu-si/'tis) thrombosis of a sinus of the dura mater.
- thrombosis** (throm-bo/'sis) [*Gr. thrombōsis*] the formation, development, or presence of a thrombus. **agonal t.**, clotting of blood in the heart and great vessels before death (Ribbert, 1916). **atrophic t.**, marasmic t. **cardiac t.**, thrombosis in the heart. **cavernous sinus t.**, thrombosis affecting the cavernous sinus. **cerebral t.**, thrombosis of a cerebral vessel, which may result in cerebral infarction. **coronary t.**, development of an obstructive thrombus in a coronary artery, often causing sudden death or a myocardial infarction. **creeping t.**, thrombosis gradually involving one portion of a vein after another. **dilatation t.**, thrombosis due to the slowing of circulation on account of dilatation of a vein. **infective t.**, that which is associated with a bacterial infection. **marantic t.**, **marasmic t.**, thrombosis, chiefly of the longitudinal sinus, occurring in the wasting diseases of infancy and of old age; called also *atrophic t.* **mesenteric t.**, formation of a clot in an artery or arteriole of the mesentery. **placental t.**, 1. a normal formation of thrombi in the placenta. 2. an abnormal extension of the placental thrombus formation to the veins of the uterus. **plate t.**, **platelet t.**, an aggregation of blood platelets forming the nidus of a thrombus; see also *white thrombus*, under *thrombus*. **propagating t.**, progressive clot formation upon an occlusive thrombus, producing an elongated mass sometimes extending into other blood vessels. **puerperal t.**, coagulation of blood in the veins (thrombophlebitis) occurring after childbirth. **Ribbert's t.**, **agonal t.** **sinus t.**, thrombosis of a venous sinus. **traumatic t.**, thrombosis following injury to a part. **venous t.**, the presence of a thrombus in a vein; phlebothrombosis.
- thrombostasis** (throm-bos/'tah-sis) stasis of blood in a part, attended with the formation of a thrombus.
- thrombosthenin** (throm/'bo-sthe/'nin) [*thrombo-* + *Gr. sthenos* strength + *-in* chemical suffix] a contractile protein of platelets, active in clot retraction.
- thrombotest** (throm/'bo-test) a test similar to the one-stage prothrombin test except that it is supposedly sensitive to depression of blood coagulation Factor IX and hence has an advantage over the one-stage test in controlling anticoagulant therapy; such superiority, however, has not been demonstrated.
- thrombotic** (throm-bot/'ik) pertaining to or affected with thrombosis.
- thrombotonin** (throm/'bo-to/'nin) serotonin.
- thromboxane** (throm-boks/'ān) an intermediate in the metabolic pathway of arachidonic acid, formed from prostaglandin endoperoxides and released from suitably stimulated platelets; the unstable form, thromboxane A₂, is a potent inducer of platelet aggregation and constrictor of arterial smooth muscle, but quickly breaks down to the inactive stable form, thromboxane B₂.
- thrombus** (throm/'bus), pl. *throm'bi* [*Gr. thrombos* clot] an aggregation of blood factors, primarily platelets and fibrin with entrapment of cellular elements, frequently causing vascular obstruction at the point of its formation. Some authorities thus differentiate thrombus formation from simple coagulation or clot formation. Cf. *embolism*. **agonal t.**, **agony t.**, a clot formed in the heart during the process of dying. **annular t.**, one which has an opening through its center, while the circumference is attached to the wall of the vessel. **antemortem t.**, a thrombus or a clot formed in the heart or in a large vessel before death. **ball t.**, a roughly spherical, organized thrombus which may obstruct an orifice (usually the mitral valve) intermittently like a ball valve. **bile t.**, a plug in one of the intrahepatic bile ducts, causing cholestasis. **blood plate t.**, **blood platelet t.**, one formed by an abnormal accumulation of blood platelets. **calcified t.**, a phlebolith. **coral t.**, a red clot formed by coagulated fibrin enclosing red corpuscles. **currant jelly t.**, a soft, reddish, jelly-like clot. **fibrin t.**, a thrombus composed mainly of fibrin, and attached to the walls of a blood vessel. **hyaline t.**, a thrombus composed of erythrocytes which have lost their hemoglobin, forming a colorless translucent mass. **infective t.**, a thrombus associated with an infective agent. **laminated t.**, a thrombus whose substance is disposed in layers, suggesting different periods of formation. **lateral t.**, a clot attached to the side of a vessel, incompletely obstructing the blood current. **marantic t.**, **marasmic t.**, a form associated with severe wasting diseases, often a terminal event; see also under *thrombosis*. **milk t.**, an accumulation of curdled milk in a lactiferous duct. **mixed t.**, laminated t. **mural t.**, a thrombus attached to the wall of the heart, the endocardium in the area being diseased. **obstructive t.**, one which plugs the lumen of the vessel at its site. **occluding t.**, **occlusive t.**, one that occupies the entire lumen of a vessel and obstructs blood flow. **organized t.**, one which has been invaded by fibroblasts and thereby changed to loose fibrous tissue with varying degrees of vascularity. **pale t.**, a dull-white thrombus. **parasitic t.**, an accumulation of the pigmented bodies of free malarial parasites

and their spores in the capillaries of the brain, and causing a condition known as *cerebral malaria*. **parietal t.**, one attached to the wall of a vessel. **phagocytic t.**, an accumulation of melaniferous leukocytes in the capillaries of the brain. **pigmentary t.**, an accumulation of free pigment in the capillaries of the brain. **plate t.**, **platelet t.**, one formed by an abnormal accumulation of blood platelets. Called also *blood plate t.* or *blood platelet t.* **postmortem t.**, a thrombus or clot of blood formed in the heart or in a large vessel after death. **primary t.**, one which remains at the place of its origin. **propagated t.**, one which has grown beyond its original limits. **red t.**, a thrombus of a dark-red color formed by the coagulation of blood. **stratified t.**, one made up of layers of different colors. **traumatic t.**, one which results from an injury. **white t.**, 1. one which contains few or no red cells. 2. one composed chiefly of leukocytes. 3. one composed chiefly of platelets and fibrin, usually seen in arterial thrombosis.

thrush (thrush) 1. candidiasis of the mucous membranes of the mouth of infants (sometimes of adults), characterized by the formation of aphthae, or whitish spots in the mouth. It is due to infection by the fungus *Candida albicans*. The aphthae are followed by shallow ulcers. The disease is often accompanied by fever and gastrointestinal irritation. Such infection may spread to the groin, buttocks, and other parts of the body. Called also *mycotic stomatitis* and *white mouth*. 2. a disease of the horse's foot characterized by a fetid discharge. **sheep t.**, orf, def. 1.

thrust (thrust) a sudden forceful movement forward. **paraspinal t.**, the same as spinal thrust, except that the therapist's hands are placed on either side of the spinous processes, the fingers pointing toward the head. **spinal t.**, with the patient in the prone position on the examining table, the physician stands on the patient's right, facing him, places his right palm over the patient's lumbosacral joint perpendicular to the spinal axis, and using the left hand as reinforcement makes a series of short rapid thrusts downward and toward the head, progressing along each interspace to the midthoracic spine; done for relief of lumbosacral strain. **tongue t.**, the infantile pattern of the suckle-swallow in which the tongue is placed between the incisor teeth or alveolar ridges during the initial stages of deglutition, resulting sometimes in anterior open bite, deformation of the jaws, and abnormal function.

thrypsis (thrip/sis) [Gr. "a breaking in small pieces"] a comminuted fracture.

Thudichum's test (too/de-koomz) [John Lewis William Thudichum, London physician of German birth, 1829-1901] see under tests.

Thuja (thu/jah) [L.; Gr. *thyia*] a genus of coniferous trees, also called *arbor vitae*; secretions of the leafy twigs of *T. occidentalis* are poisonous to man on ingestion.

thuja (thu/jah) fresh tops of *Thuja occidentalis*, white cedar: diuretic, antipyretic, sudorific, and emmenagogue.

thujone (thu/jon) an aromatic terpene ketone present in many essential oils. It is $\text{CH}_3 \cdot \text{C}_6\text{H}_9 \cdot \text{O} \cdot \text{CH}(\text{CH}_3)_2$.

thulium (thu/le-um) [*Thule*, ancient name of Shetland] a very rare metallic element; symbol, Tm; atomic number, 69; atomic weight, 168.934.

thumb (thum) [L. *pollex, pollux*] the first digit of the hand, being the most preaxial of the five fingers, having only two phalanges, and being appposable to the four other fingers of the hand. Called also *pollex* [NA]. **bifid t.**, a deformed thumb in which the distal phalanx is divided or bifurcated. **tennis t.**, tendinitis with calcification in the flexor pollicis longus, resulting from repeated friction experienced in playing tennis.

thumbprint (thum/print) an imprint of the cutaneous ridges of the fleshy distal portion of the thumb. See also *thumbprinting*.

thumbprinting (thum/print-ing) a roentgenographic sign appearing as smooth indentations on the barium-filled colon, as though made by depression with the thumb; seen in various disorders of the colon, especially ischemic colitis.

thumb-sucking (thum-suk/ing) an infantile oral habit that is normal quite early in the child's development but that may persist and cause deformation of supporting bony tissue and abnormal function.

thumps (thumps) 1. a disease of swine caused by *Ascaris* larvae in the lungs. 2. a kind of singultus, or hiccup, of horses, due to spasm of the diaphragm.

thylakoid (thi/lah-koid) [Gr. *thylakon* a small sac, a seed pouch + *eidos* form] any of the membranous sacs which are the widened portions of lamellae of chloroplasts and which are arranged in stacks to form grana; thylakoids contain the photosynthetic pigments of chloroplasts and the enzymes that catalyze light-dependent reactions.

thyme (tim) [L. *thymus*; Gr. *thymos*] a plant of the genus *Thymus*. The *Thymus vulgaris* L. (Labiatae), or garden thyme, contains a volatile oil, which is aromatic and carminative. It also contains *thymol*, *thymene*, and *cumene*. **creeping t.**, **wild t.**, *Thymus serpyllum*, which contains a volatile oil similar to that of *Thymus vulgaris* L.

thymectomize (thi-mek/to-miz) to remove the thymus gland.

thymectomy (thi-mek/to-me) [Gr. *thymos* thymus + *ektomē* excision] surgical removal of the thymus gland.

thymelcosis (thi/mel-ko/sis) [Gr. *thymos* thymus + *helkōsis* ulceration] ulceration of the thymus.

thymene (thi/mēn) a clear, oily hydrocarbon, $\text{C}_{10}\text{H}_{18}$, from the oil of thyme.

thymergasia (thi/mer-ga/se-ah) see *thymergastic*.

thymergastic (thi/mer-gas/tik) [Gr. *thymos* mind + *ergon* work] Meyer's term for the affective psychoses (the manic-depressive group).

-thymia [Gr. *thymos* mind + *-ia*] a word termination denoting a condition of mind.

thymian (thim/e-an, tim/e-an) [Ger.] thyme.

thymiasis (thi-mi/ah-sis) yaws.

thymic (thi/mik) [L. *thymicus*] 1. pertaining to the thymus. 2. contained in or derived from thyme.

thymicolymphatic (thi/mi-ko-lim-fat/ik) pertaining to the thymus and the lymphatic glands.

thymidine (thi/mi-dēn) thymine deoxyriboside, a nucleoside isolable from deoxyribonucleotide.

thymidylate (thi/mi-dil/āt) a salt or ester of thymidylic acid, or thymidylic acid in dissociated form, which is important in the formation of DNA.

thymin (thi/min) a hormone-like substance secreted by the thymus that impairs postsynaptic neuromuscular transmission.

thymine (thi/min) a pyrimidine base, 5-methyl uracil, $\text{C}_5\text{H}_6\text{N}_2\text{O}$, found in deoxyribonucleic acid.

thymion (thim/e-on) [Gr.] a cutaneous wart.

thymiosis (thim/e-o/sis) yaws.

thymitis (thi-mi/tis) inflammation of the thymus.

thymo- 1. [Gr. *thymos* thymus] a combining form denoting relationship to the thymus gland. 2. [Gr. *thymos* mind, spirit.] a combining form denoting relationship to the soul or emotions.

thymocrescin (thi/mo-kres/in) a hypothetical growth-promoting substance in extracts of the thymus gland.

thymocyte (thi/mo-sit) [*thymo*-(1) + Gr. *kytos* hollow vessel] a lymphocyte arising in the thymus.

thymoform (thi/mo-form) a yellowish, antiseptic powder, thymolform, $\text{CH}_2[\text{C}_6\text{H}_3(\text{CH}_3)_2\text{C}_3\text{H}_7\text{O}]_2$, prepared from formaldehyde and thymol.

thymogenic (thi/mo-jen/ik) [*thymo*-(2) + Gr. *gennan* to produce] of affective or hysterical origin.

thymohydroquinone (thi/mo-hi/dro-kwin-ōn/) chemical name: 2,5-dihydroxy-p-cymene. A compound, $\text{CH}_3 \cdot \text{C}_6\text{H}_2(\text{OH})_2\text{CH}(\text{CH}_3)_2$, occurring in the urine after the administration of thymol, and also found in various essential oils.

thymokesis (thi/mo-ke/sis) enlargement of the remnant of the thymus that is found in the adult.

thymokinetic (thi/mo-ki-net/ik) tending to stimulate the thymus.

thymol (thi/mol) [NF] chemical name: 5-methyl-2-(1-methyl-ethyl)phenol. A phenol, $\text{C}_{10}\text{H}_{14}\text{O}$, occurring as colorless, often large, crystals, or white, crystalline powder, obtained from thyme oil or other volatile oils; used as a stabilizer in pharmaceutical preparations. It has been used for its antiseptic, antibacterial, and antifungal actions, and was formerly used as a vermifuge. **t. iodide**, a mixture of iodine derivatives of thymol, principally dithymol diiodide, $(\text{C}_6\text{H}_2 \cdot \text{CH}_3 \cdot \text{C}_3\text{H}_7 \cdot \text{OI})_2$, occurring as a reddish brown or reddish yellow bulky powder, formerly used as an antifungal and antibacterial agent. **t. phthalein**, see *thymolphthalein*.

thymoleptic (thi/mo-lep/tik) [*thymo*-(2) + Gr. *lēpsis* a taking hold] any drug that favorably modifies mood in serious affective disorders such as depression or mania; the main categories of thymoleptics include the tricyclic antidepressants, monoamine oxidase inhibitors and lithium compounds. Also called antidepressants.

thymolize (thi/mo-liz) to treat with thymol.

thymolphthalein (thi/mol-thal/e-in) an indicator, $\text{C}_{20}\text{H}_{14}\text{O}_6$, with a pH range of 9.3 to 10.5, being colorless at 9.3 and blue at 10.5.

thymolysin (thi-mol/i-sin) an antibody that damages or kills thymus cells.

thymolysis (thi-mol/i-sis) [*thymo*-(1) + Gr. *lysis* dissolution] involution or dissolution of the thymus.

thymolytic (thi/mo-lit/ik) pertaining to, characterized by, or promoting thymolysis.

thymoma (thi-mo/mah) [*thymo*-(1) + *-oma*] a tumor derived from the epithelial or lymphoid elements of the thymus.

thymometastasis (thi/mo-mē-tas/tah-sis) a metastasis from the thymus.

thymopathic (thi-mo-path/ik) pertaining to, characterized by, or causing thymopathy.

thymopathy (thi-mop/ah-the) any disease of the thymus.

thymopoietin (thi/mo-poi/ē-tin) a polypeptide hormone se-

creted by the thymus, which induces differentiation of thymocytes and impairs postsynaptic neuromuscular transmission.

thymoprivic (thi'mo-priv'ik) thymoprivous.

thymoprivous (thi-mop'ri-vus) [*thymo*-(1) + *L. privus* without] pertaining to or caused by removal or atrophy of the thymus.

thymosin (thi'mo-sin) a humoral factor, believed to be a hormone, secreted by the thymus which promotes the maturation of T-lymphocytes and restores their function in thymus-deficient animals; called also *thymic hormone*.

thymotoxic (thi'mo-tok'sik) toxic for thymus tissue.

thymotoxin (thi'mo-tok'sin) an element that exerts a deleterious effect on the thymus.

thymotrophic (thi'mo-trōf'ik) having an influence on the thymus.

thymovudin (thi-mo'vī-din) a hormone which originates in the thymus of birds and stimulates the oviduct to the production of normal egg envelopes.

Thymus (thi'mus) a genus of herbs (family Labiatae) native to south central Europe and grown extensively in other countries. See *thyme*.

thymus (thi'mus) [*L.*; *Gr. thymos*] [*NA*] a lymphoid organ situated in the anterior superior mediastinum, which reaches its maximum weight at about puberty and then undergoes involution. It is necessary in early life for development and maturation of cell-mediated immunological functions. Of grayish red color, it originates as two separate primordia and develops into two lobes, which later become joined by connective tissue. The thymus is composed chiefly of epithelial cells (primarily in the medulla) and lymphocytes, or thymocytes (primarily in the cortex). Precursor cells migrate to the thymus, where they differentiate into lymphocytes, most of which are destroyed, but the remainder of which migrate to tissues to form T-lymphocytes. The thymus also secretes the hormone-like substances thymine, thymopoietin, and thymosin. **accessory t.**, a separated portion of the thymus gland which may be found occasionally. **persistent t.**, **t. persis'tens hyperplas'tica**, a thymus which persists into adult life, sometimes even becoming hypertrophied.

thymus-dependent (thi'mus-de-pen'dent) depending on passage through or on being influenced by the thymus for the development of function; said of T-lymphocytes (see under *lymphocyte*). See also under *area*.

thymusectomy (thi'mus-ek'to-me) [*thymus* + *Gr. ektomē* excision] excision of the thymus.

thymus-independent (thi'mus-in-de-pen'dent) able to function without passing through or being influenced by the thymus; said of B-lymphocytes (see under *lymphocyte*). See also under *area*.

thynnin (thin'in) a protamine from the sperm of the tunny fish, *Thunnus thynnus*.

thypar (thi'pahr) deprived of the thyroid and parathyroid glands; lacking thyroid and parathyroid secretions.

Thyrar (thi'rar) trademark for a preparation of thyroid (def. 3).

thyatron (thi'rah-tron) a form of discharge tube containing mercury vapor and a multiplicity of electrodes, used as an electric valve to rectify alternating current.

thyremphraxis (thi'rem-frak'sis) [*Gr. thyreos* shield + *empharaxis* stoppage] obstruction of the thyroid gland.

thyreo- for other words beginning thus, see also those beginning *thyro-*.

thyreoiditis (thi're-o-i'tis) thyroiditis.

thyro- [*Gr. thyreos* shield] a combining form denoting relationship to the thyroid gland.

thyroactive (thi'ro-ak'tiv) having a metabolic effect similar to thyroid hormone.

thyroadenitis (thi'ro-ad'ē-ni'tis) [*thyro-* + *Gr. adēn* gland + *-itis*] inflammation of the thyroid gland.

thyroaplasia (thi'ro-ah-pla'ze-ah) [*thyro-* + *a neg.* + *Gr. plasis* molding + *-ia*] defective development of the thyroid gland with deficient activity of its secretion.

thyroarytenoid (thi'ro-ar'ī-te'noid) pertaining to the thyroid and arytenoid cartilages.

thyrocalcitonin (thi'ro-kal'si-to'nin) calcitonin.

thyrocardiac (thi'ro-kar'de-ak) pertaining to the thyroid and the heart.

thyrocarditis (thi'ro-kar-di'tis) any affection of the heart muscle occurring in hyperthyroidism.

thyrocele (thi'ro-sēl) [*thyro-* + *Gr. kēlē* tumor] a tumor of the thyroid gland; goiter.

thyrochondrotomy (thi'ro-kon-drot'o-me) [*thyro-* + *Gr. chondros* cartilage + *tomē* a cutting] surgical incision of the thyroid cartilage.

thyrocolloid (thi'ro-kol'oid) the colloid matter of the thyroid gland.

thyrocricotomy (thi'ro-kri-kot'o-me) incision of the cricothyroid membrane.

thyrodesmic (thi'ro-dez'mik) [*thyro-* + *Gr. desmos* bond] thyrotropic.

thyroepiglottic (thi'ro-ep'fī-glot'ik) pertaining to the thyroid and to the epiglottis.

thyrofissure (thi'ro-fish'ur) the operation of making an opening through the thyroid cartilage for the purpose of gaining access to the interior of the larynx.

thyrogenic (thi'ro-jen'ik) thyrogenous.

thyrogenous (thi-roj'ē-nus) [*thyro-* + *Gr. gennan* to produce] originating in the thyroid gland.

thyroglobulin (thi-ro-glob'u-lin) 1. an iodine-containing glycoprotein of high molecular weight occurring in the colloid of the follicles of the thyroid gland; the iodinated tyrosine moieties of thyroglobulin form the active hormones thyroxine and triiodothyronine, which are released into the blood on proteolysis of thyroglobulin. 2. [USP] a substance obtained by fractionation of thyroid glands from the hog, *Sus scrofa* var. *domesticus*, containing not less than 0.7 per cent of total iodine, occurring as a cream to tan-colored, free-flowing powder; administered orally as a thyroid supplement in the treatment of hypothyroidism.

thyroglossal (thi'ro-glos'al) pertaining to the thyroid gland and the tongue.

thyrohyal (thi'ro-hi'al) 1. pertaining to the thyroid cartilage and the hyoid bone. 2. cornu majus ossis hyoidei.

thyrohyoid (thi'ro-hi'oid) pertaining to the thyroid gland or cartilage and the hyoid bone.

thyroid (thi'roid) [*Gr. thyreoidēs; thyreos* shield + *eidōs* form] 1. resembling a shield; scutiform. 2. the thyroid gland (glandula thyroidea [NA]); see under *gland*. 3. [USP] the cleaned, dried, and powdered thyroid gland previously deprived of connective tissue and fat, obtained from domesticated animals that are used for food by man, containing 0.17–0.23 per cent of iodine in thyroid combination, occurring as a yellowish to buff-colored amorphous powder; used as a source of thyroid hormones in the treatment of hypothyroidism. **aberrant t.**, a mass of thyroid tissue situated in an abnormal location. **accessory t.**, an exclave or detached portion of thyroid tissue. **intrathoracic t.**, a mass of thyroid tissue that is located within the thoracic cavity. **lingual t.**, thyroid tissue located at the base of the tongue, between the foramen cecum and the hyoid bone. It may project into the pharynx from the dorsum of the tongue, or be entirely within the tongue or located just beneath it; it may also be accessory to a normally located thyroid gland, or be the only thyroid tissue present. **retrosternal t.**, **substernal t.**, a mass of thyroid tissue situated in the thorax behind the sternum.

thyroidea (thi-ro'i'de-ah) the thyroid gland. **t. accesso'ria**, **t. i'ma**, accessory thyroid.

thyroidectomy (thi'roi-dek'to-miz) to deprive of the thyroid gland by surgical removal.

thyroidectomy (thi'roi-dek'to-me) [*thyroid* + *Gr. ektomē* excision] surgical removal of the thyroid. **medical t.**, diminution of thyroid function by the use of drugs.

thyroidism (thi'roid-izm) a morbid condition caused by overactivity of the thyroid gland (hyperthyroidism), or excessive doses of thyroid.

thyroiditis (thi'roi-di'tis) inflammation of the thyroid gland. **acute t.**, inflammation of the thyroid gland caused by staphylococcus, streptococcus, or other infection, with suppuration and abscess formation, and progressing to the subacute stage. **acute nonsuppurative t.**, granulomatous t. **chronic t.**, **chronic fibrous t.**, Riedel's struma. **chronic lymphadenoid t.**, **chronic lymphocytic t.**, struma lymphomatosa. **de Quervain's t.**, granulomatous t. **giant cell t.**, **giant follicular t.**, granulomatous t. **granulomatous t.**, a condition characterized by fever, weakness, sore throat, and painful enlargement of the thyroid gland, with granulomas in the gland consisting of masses of colloid surrounded by giant cells and mononuclear cells, and a moderate amount of fibrosis. **Hashimoto's t.**, struma lymphomatosa. **invasive t.**, **ligneous t.**, Riedel's struma. **lymphocytic t.**, **lymphoid t.**, struma lymphomatosa. **t. parasita'ria**, **parasitic t.**, Chagas' disease. **pseudotuberculous t.**, granulomatous t. **Riedel's t.**, Riedel's struma. **subacute t.**, **subacute diffuse t.**, granulomatous t. **woody t.**, Riedel's struma.

thyroidization (thi'roid-i-za'shun) 1. treatment with a preparation of the thyroid. 2. in histopathology, the thyroid-like appearance of a tissue.

thyroidomania (thi'roid-o-ma'ne-ah) mental disorder associated with hyperthyroidism.

thyroidotherapy (thi'roid-o-ther'ah-pe) thyrotherapy.

thyroidotomy (thi'roi-dot'o-me) [*thyroid* + *Gr. tomē* a cutting] surgical incision of the thyroid.

thyroidotoxin (thi'roid-o-tok'sin) a toxin specific for thyroid tissue.

thyroigenous (thi-ro'i'jē-nus) due to thyroid disorder.

thyrointoxication (thi'ro-in-tok'si-ka'shun) thyroid poisoning; thyrotoxicosis.

Thyrolar (thi'ro-lar) trademark for a preparation of liotrix.

thyrolysin (thi-rol'i-sin) a thyrolytic serum.

thyrolytic (thi'ro-lit'ik) [*thyroid* + Gr. *lysis* dissolution] destructive to thyroid tissue.

thyromegaly (thi'ro-meg'ah-le) [*thyro* + Gr. *megaleia* bigness] enlargement of the thyroid gland; goiter.

thyromimetic (thi'ro-mi-met'ik) producing effects similar to those of thyroid hormones or the thyroid gland.

thyroncus (thi-rong'kus) [*thyroid* + Gr. *onkos* mass, tumor] goiter.

thyronuclealbumin (thi'ro-nu'kle-o-al-bu'min) a nuclealbumin present in the thyroid gland.

thyro-oxyindole (thi'ro-ok'se-in'dol) thyroxine.

thyroparathyroidectomy (thi'ro-par'ah-thi'roi-dek'to-me) [*thyroid* + *parathyroid* + Gr. *ektomē* excision] excision of the thyroid and parathyroids.

thyroparathyroprivic (thi'ro-par'ah-thi'ro-priv'ik) lacking thyroid and parathyroid glands or secretions.

thyropathy (thi-rop'ah-the) [*thyroid* + Gr. *pathos* disease] any disease of the thyroid.

thyropenia (thi'ro-pe'ne-ah) [*thyroid* + Gr. *penia* poverty] deficiency of thyroid secretion.

thyrophyma (thi'ro-fi'mah) [*thyroid* + Gr. *phyma* tumor] thyrocele.

thyroprival (thi'ro-pri'val) [*thyroid* + L. *privus* without] pertaining to, characterized by, or resulting from deprivation or loss of thyroid function.

thyroprivia (thi'ro-priv'e-ah) [*thyroid* + L. *privus* without] hypothyroidism: the condition resulting from lack of thyroid hormone, as a consequence of removal of the thyroid gland or suppression of its functions.

thyroprivic, thyroprivous (thi'ro-priv'ik; thi-rop'ri-vus) thyroprival.

thyroptosis (thi'rop-to'sis) [*thyroid* + Gr. *ptōsis* fall] downward displacement of the thyroid gland into the thorax.

thyrosis (thi-ro'sis), pl. *thyro'ses*. Any disease based on disordered thyroid action.

thyrotherapy (thi'ro-ther'ah-pe) treatment of disease by preparations of the thyroid glands of domestic animals used for food by man.

thyrotome (thi'ro-tōm) an instrument for cutting the thyroid cartilage.

thyrotomy (thi-rot'o-me) [*thyroid* + Gr. *tomē* a cutting] 1. the surgical division of the thyroid cartilage. 2. the operation of cutting the thyroid gland.

thyrotoxicemia (thi'ro-tok-se'me-ah) thyrotoxicosis.

thyrotoxia (thi'ro-tok'se-ah) thyrotoxicosis.

thyrotoxic (thi'ro-tok'sik) marked by toxic activity of the thyroid gland.

thyrotoxicosis (thi'ro-tok'si-ko'sis) a morbid condition resulting from overactivity of the thyroid gland. See *Graves' disease*, under *disease*.

thyrotoxin (thi'ro-tok'sin) a toxic substance produced in the thyroid.

thyrotrope (thi'ro-trōp) any of the basophils (beta cells) of the adenohypophysis, the granules of which secrete thyrotropin; called also *beta basophil*.

thyrotroph (thi'ro-trōf) thyrotrope.

thyrotrophic (thi'ro-trōf'ik) thyrotropic.

thyrotrophin (thi'ro-trōf'in) thyrotropin.

thyrotropic (thi'ro-trop'ik) 1. pertaining to or marked by thyrotropism. 2. having an influence on the thyroid gland.

thyrotropin (thi-rot'ro-pin) a hormone of the anterior pituitary that has affinity for and specifically stimulates the thyroid gland.

thyrotropism (thi-rot'ro-pizm) [*thyroid* + Gr. *tropos* a turning] affinity for the thyroid.

thyroxin (thi-rok'sin) thyroxine.

thyroxine (thi-rok'sin) a crystalline iodine-containing hormone, 3,5,3',5'-tetraiodothyronine, formed from thyroglobulin and secreted by the thyroid gland; its chief function is to increase the rate of cell metabolism. Thyroxine is deiodinated in peripheral tissues (liver, kidney, and heart) to form triiodothyronine, presumably the active "tissue" form of thyroid hormone, which is much more biologically active. Originally isolated by Kendall from the thyroid gland and later prepared synthetically, it is used in the treatment of hypothyroidism. Symbol T₄. **levo t.**, see *levothyroxine*, under *L*.

thyroxinemia (thi-rok'sin-e'me-ah) the presence of thyroxine in the blood.

thyroxinic (thi'rok-sin'ik) pertaining to thyroxine.

thyroxinsodium (thi-rok'sin-so'de-um) a preparation of thyroxine treated with sodium carbonate.

thyroxinum (thi-rok'si-num) thyroxine.

thysus (thir'sus) [Gr. *thysos* Bacchic wand] the penis.

Thysanosoma (this'ah-no-so'mah) a genus of the family Anoplocephalidae. **T. actinoides**, the fringed tapeworm, found

in the bile ducts and small intestine of sheep, cattle, antelope, and deer, in western and southwestern United States and in Africa.

Thytropar (thi'tro-par) trademark for a preparation of thyrotropin.

Ti chemical symbol for *titanium*.

tiacarana (te'ah-kar-an'yah) cutaneous leishmaniasis of the ulcerative type.

tiamenidine hydrochloride (ti'ah-men'i-dēn) chemical name: *N*-(2-chloro-4-methyl-3-thienyl)-4,5-dihydro-1*H*-imidazol-2-amine monohydrochloride; an antihypertensive, C₈H₁₀ClN₃S·HCl.

tiazuril (ti-az'ur-il) chemical name: 2-[4-[(4-chlorophenyl)thio]-3,5-dimethylphenyl]-1,2,4-triazine-3,5(2*H*,4*H*)-dione; a coccidiostat for poultry, C₁₇H₁₄ClN₃O₂S.

tibia (tib'e-ah) [L. "a pipe, flute"] [NA] the shin bone: the inner and larger bone of the leg below the knee; it articulates with the femur and head of the fibula above and with the talus below. See plate accompanying *skeleton*. **saber t.**, **saber-shaped t.**, a tibia curved outward as a result of gummatous periostitis. **t. val'ga**, a bowing of the leg in which the angulation is away from the midline of the body. **t. va'ra**, osteochondrosis deformans tibiae.

tibiad (tib'e-ad) toward the tibial aspect.

tibial (tib'e-al) [L. *tibialis*] pertaining to the tibia.

tibiale (tib'e-a'le) a bone on the tibial side of the tarsus of the embryo, partly represented in the adult by the astragalus. **t. exter'num**, **t. posti'cum**, a sesamoid bone found in the tendon of the tibialis posterior muscle.

tibialgia (tib'e-al'je-ah) painful shin, with lymphocytosis and eosinophilia (von Schrötter, 1916).

tibialis (tib'e-a'lis) tibial; [NA] a term designating relationship to the tibia.

tibien (tib'e-en) pertaining to the tibia alone or in itself.

tibiocalcaneal (tib'e-o-kal-ka'ne-an) pertaining to the tibia and the calcaneus.

tibiofemoral (tib'e-o-fem'or-al) pertaining to the tibia and the femur.

tibiofibular (tib'e-o-fib'u-lar) pertaining to the tibia and the fibula.

tibionavicular (tib'e-o-nah-vik'u-lar) pertaining to the tibia and the navicular bone.

tibioperoneal (tib'e-o-per'o-ne'al) tibiofibular.

tibioscapoid (tib'e-o-skaf'oid) tibionavicular.

tibiotarsal (tib'e-o-tar'sal) pertaining to the tibia and the tarsus.

tibolone (ti'bo-lōn) chemical name: 17-hydroxy-7α-methyl-19-nor-17α-pregn-5(10)-en-20-yn-3-one; an anabolic steroid, C₂₁H₂₈O₂.

tic (tik) [Fr.] an involuntary, compulsive, repetitive, stereotyped movement, resembling a purposeful movement because it is coordinated and involves muscles in their normal synergistic relationships; tics usually involve the face and shoulders. **bowing t.**, nodding spasm. **convulsive t.**, spasm of those parts of the face supplied by the seventh nerve. **degenerative t.**, tic occurring in connection with degeneration of the central nervous system. **t. de pensée** (de pah-sa'), the habit of involuntarily expressing any thought that happens to come to mind. **diaphragmatic t.**, spasmodic twitching movements of the diaphragm; called also *respiratory t.* **t. douloureux** (doo-loo-roo'), trigeminal neuralgia. **facial t.**, spasm of the facial muscles. **gesticulatory t.**, that marked by spasmodic movements resembling the gestures of an orator or an actor. **t. de Guinon**, Gilles de la Tourette syndrome. **laryngeal t.**, that marked by a noisy expulsion of air through the glottis. **local t.**, a tic affecting only a limited locality, as the eye. **mimic t.**, facial tic. **motor t.**, a tic which is marked only by the spasmodic movement without mental disturbance; it includes facial spasm, rotatory spasm, blepharospasm, and diaphragmatic, laryngeal, and other varieties of tic. **t. nondouloureux**, myoclonus. **occupation t.**, occupation neurosis. **progressive choreic t.**, a chronic disease beginning in early life, marked by spasms which at first affect the neck muscles, but, as the disease advances, spread to the rest of the body. The disease ends fatally. **respiratory t.**, diaphragmatic t. **rotatory t.**, rotatory spasm. **saltatory t.**, saltatory spasm. **t. de sommeil**, an involuntary movement of the head during sleep. **spasmodic t.**, a condition marked by spasmodic movements of groups of muscles occurring at irregular intervals.

Ticar (ti'kar) trademark for a preparation of ticarcillin disodium.

ticarbodine (ti-kar'bo-dēn) chemical name: α,α,α-trifluoro-2,6-dimethylthio-1-piperidinecarboxy-*m*-toluidide; an antelminthic, C₁₅H₁₉F₃N₃S.

ticarcillin (ti'kar-sil'in) chemical name: 6-[(carboxy-3-thienylacetyl)amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid. A semisynthetic penicillin bactericidal against both gram-negative and gram-positive organisms. **t. cresyl sodium**, a salt of ticarcillin, C₂₂H₂₁N₂NaO₈S₂. **t.**

- disodium, t. sodium**, the disodium salt of ticarcillin, $C_{15}H_{14}N_2Na_2O_5S_2$, used primarily in the treatment of severe systemic infections and septicemia and infections of the genitourinary and respiratory tracts and of the soft tissues due to susceptible strains of *Pseudomonas aeruginosa*, *Proteus* species, and *Escherichia coli*; administered intramuscularly and intravenously. Sterile ticarcillin disodium conforms to USP specifications for antibiotics.
- tick** (tik) a blood-sucking acarid parasite of the suborder Ixodidae, superfamily Ixodoidea. The ticks are larger than their relatives, the mites. There are two families: the Argasidae, or soft ticks, and the Ixodidae, or hard ticks. The former includes the genera *Antricola*, *Argas*, *Otobius*, and *Ornithodoros*; the latter the genera *Amblyomma*, *Anocentor*, *Aponomma*, *Boophilus*, *Dermacentor*, *Haemaphysalis*, *Hyalomma*, *Ixodes*, *Margaropus*, *Rhipicephalus*, and *Rhipicentor*. **adobe t.**, *Argas persicus*. **American dog t.**, *Dermacentor variabilis*. **bandicoot t.**, *Haemaphysalis humerosa*. **beady-legged winter horse t.**, *Margaropus winthemi*. **black pitted t.**, *Rhipicephalus simus*. **bont t.**, *Amblyomma hebraeum*. **British dog t.**, *Ixodes canisuga*. **brown dog t.**, *Rhipicephalus sanguineus*. **castor bean t.**, *Ixodes ricinus*. **cattle t.**, *Boophilus annulatus*. **dog t.**, 1. *Haemaphysalis leachi*. 2. *Dermacentor variabilis*. 3. *Rhipicephalus sanguineus*. **ear t.**, *Otobius megnini*. **Gulf Coast t.**, *Amblyomma maculatum*. **hard t.**, **hard-bodied t.**, an individual of the family Ixodidae. **Kenya t.**, *Rhipicephalus appendiculatus*. **Lone Star t.**, *Amblyomma americanum*. **miana t.**, *Argas persicus*. **Pacific coast dog t.**, *Dermacentor occidentalis*. **pajaroello t.**, *Ornithodoros coriaceus*. **pigeon t.**, *Argas reflexus*. **rabbit t.**, *Haemaphysalis leporipalustris*. **Rocky Mountain wood t.**, *Dermacentor andersoni*. **russet t.**, *Ixodes pilosus*. **scrub t.**, *Ixodes holocyclus*. **seed t.**, the young six-legged larva of a tick: after moulting it emerges as an eight-legged nymph. **sheep t.**, *Melophagus ovinus*. **soft t.**, **soft-bodied t.**, an individual of the family Argasidae. **spinous ear t.**, *Otobius megnini*. **taiga t.**, *Ixodes persulcatus*. **tampan t.**, 1. *Ornithodoros moubata*. 2. *Argas persicus*. **winter t.**, *Dermacentor albipictus*. **wood t.**, *Dermacentor andersoni*.
- tickling** (tik'ling) light stimulation of a surface, and its reflex effect, such as involuntary laughter, etc.
- ticlatone** (tik'lah-tōn) chemical name: 6-chloro-1,2-benzisothiazolin-3(2H)-one; an antibacterial and antifungal, C_7H_4ClNOS .
- ticlopidine hydrochloride** (ti-klo'pī-dēn) chemical name: 5-[(2-chlorophenyl)methyl]-4,5,6,7-tetrahydrothieno[3,2-c]pyridine hydrochloride; a platelet inhibitor, $C_{14}H_{14}ClNS \cdot HCl$.
- tipiclonga** (tik'po-long'ah) an extremely venomous serpent of Ceylon and India, *Vipera russelli*; called also *Russell's viper* and *cobra-monil*.
- ticrynafen** (ti-krin'ah-fen) chemical name: [2,3-dichloro-4-(2-thienylcarbonyl)phenoxy]acetic acid; a diuretic, uricosuric, and antihypertensive, $C_{13}H_8Cl_2O_4S$. Called also *tienilic acid*.
- tictology** (tik-tol'o-je) [Gr. *tiktein* to give birth + *logos* treatise] obstetrics.
- t.i.d.** abbreviation for *L. ter in di'e*, three times a day.
- tide** (tid) a physiological variation or increase of a certain constituent in body fluids. **acid t.**, temporary increase in the acidity of the urine which sometimes follows fasting. **alkaline t.**, temporary increase in the alkalinity of the urine during gastric digestion. **fat t.**, the increase of fat in the lymph and blood following a meal.
- Tidy's test** (ti'dēz) [Charles Meymott Tidy, English physician, 1843-1892] see under *tests*.
- Tiedemann's nerve** (te'dē-manz) [Friedrich Tiedemann, German physician, 1781-1861] see under *nerve*.
- Tietze's syndrome (disease)** (tēt'sez) [Alexander Tietze, Breslau surgeon, 1864-1927] see under *syndrome*.
- Tigan** (ti'gan) trademark for preparations of trimethobenzamide hydrochloride.
- tigestol** (ti-jes'tōl) chemical name: 19-nor-17 α -pregn-5(10)-en-20-yn-17-ol; a progestin, $C_{20}H_{28}O$.
- tigilium** (tig'le-um), gen. *tig'lii* [L.] the croton oil plant, *Croton tigilium* L. (Euphorbiaceae).
- tigogenin** (tig-ōj'ē-nin) a complex aglycone, $C_{27}H_{44}O_3$, from tigoinin.
- tigoinin** (tig'o-nin) a saponin, $C_{56}H_{92}O_{27}$, from *Digitalis purpurea* L. and *D. lanata* Ehrh. (Schrophulariaceae). On hydrolysis, it yields tigogenin, glucose, galactose, and rhamnose.
- tigretier** (te-gret'e-a') [Fr.] a form of hysterical dancing mania peculiar to Tigré, a region in Abyssinia.
- tigroid** (ti'groid) [Gr. *tigroeidēs* tiger-spotted] marked like a tiger; a term applied to Nissl bodies or masses of deeply staining substance in the protoplasm of neurons.
- tigrolysis** (ti-grol'i-sis) chromatolysis, def. 2.
- tikitiki** (te'ke-te'ke) the Japanese name for rice polishings; see *polishing*, def. 2.
- tiletamine hydrochloride** (ti-let'ah-mēn) chemical name: 2-(ethylamino)-2-(2-thienyl)cyclohexanone hydrochloride; an anesthetic and anticonvulsant, $C_{12}H_{17}NOS \cdot HCl$.

- tilidine hydrochloride** (til'i-dēn) chemical name: (+)-ethyl *trans*-2-(dimethylamino)-1-phenyl-3-cyclohexane-1-carboxylate hydrochloride; an analgesic, $C_{17}H_{23}NO_2 \cdot HCl$.
- Tillaux's disease** (te-yōz') [Paul Jules Tillaux, French physician, 1834-1904] see under *disease*.
- Tilletia** (til-le'she-ah) a genus of basidiomycetous fungi of the order Ustilaginales, family Tilletiaceae, causing smut on cereals. *T. caries* causes stinking bunt of wheat.
- Tilletiaceae** (til-le'she-a'se-e) a family of basidiomycetous fungi of the subclass Heterobasidiomycetidae, order Ustilaginales, including the genera *Tilletia* and *Urocystis*.
- tilmus** (til'mus) [Gr. *tilmos* a plucking] carphology.
- tilorone** (til'or-ōn) a low-molecular-weight aromatic amine that stimulates the production of interferon in serum. **t. hydrochloride**, chemical name: 2,7-bis[2-(diethylamino)ethoxy]-9H-fluoren-9-one dihydrochloride; an antiviral agent, $C_{25}H_{33}N_2 \cdot O_3 \cdot 2HCl$.
- tiltmeter** (til-tom'ē-ter) an instrument for measuring the degree of tilting of the operating table in spinal anesthesia and other procedures.
- timbre** (tim'ber, tam'br) [Fr.] a musical quality in a tone or sound. **t. métallique**, a high-pitched tympanic second sound heard in dilatation of the aorta. When heard in persons under fifty-five years of age it has been considered suggestive of syphilitic aortitis. Called also *Potain's sign* and *bruit de tabourka*.
- time** (tim) [Gr. *chronos*; L. *tempus*] a measure of duration. **apex t.**, the interval at which the apex of the summated twitches of a muscle succeeds the second stimulus applied to the same muscle. **bleeding t.**, the period of duration of bleeding that follows controlled, standardized puncture of the earlobe (Duke method) or forearm (Ivy method); a relatively inconsistent measure of capillary and platelet function. **bleeding t., secondary**, the time required for the arrest of bleeding when the crust is removed from a traumatized area 24 hours after the original injury; this is generally prolonged in patients with Factor VIII deficiency (hemophilia) and with related hemophiloid states. **chromoscopy t.**, the time elapsing between the intramuscular injection of a dye and its appearance in the gastric secretion. **circulation t.**, the time required for blood to flow between two designated points, as arm-to-tongue time. **clot retraction t.**, the time required for 50 per cent of a blood clot (coagulum) to retract from the wall of the vessel containing it; a semiquantitative measure of this phenomenon is available. **clotting t.**, coagulation t. **coagulation t.**, the time required for blood to clot in a glass tube. **dextrinizing t.**, the time required for saliva to convert starch into sugar. **generation t.**, the time elapsing from one generation to the next, or in bacteria the time from one scission to the next. Also, the reciprocal of the growth rate, which is less than the doubling time since growth is exponential rather than linear. **inertia t.**, the time required to overcome the inertia of a muscle after the reception of a stimulus from a nerve. **prothrombin t.**, the time required for clot formation after thromboplastin (brain extract) and calcium have been added to blood plasma. **reaction t.**, the time elapsing between the application of a stimulus and the resulting reaction. **recalcification t.**, the interval required for clot formation when calcium ion is replaced in anticoagulated platelet-rich plasma; an insensitive measure of hemostasis. **sedimentation t.**, see *erythrocyte sedimentation rate*, under *rate*. **thermal death t.**, the duration of exposure required to kill a bacterium at a stated temperature.
- timer** (tim'er) a clock mechanism which may be set to automatically signal the expiration of a given interval of time or to activate or cut off certain other apparatus at the desired time.
- Timme's syndrome** (tim'ez) [Walter Timme, American neurologist, 1874-1956] see under *syndrome*.
- timolol maleate** (ti'mo-lōl) chemical name: (S)-1-[(1,1-dimethyl-ethyl)amino]-3-[4-(4-morpholinyl)-1,2,5-thiadiazol-3-yl]oxy]-2-propanol (Z)-2-butanedioate (1:1) (salt). A beta-adrenergic blocking agent, $C_{13}H_{24}N_4O_5S \cdot C_4H_4O_4$, with antihypertensive and antiarrhythmic properties; it is used topically to lower intraocular pressure in glaucoma, by decreasing the formation of aqueous humor.
- tin** (tin) [L. *stannum*] a white, metallic element, atomic number, 50; atomic weight, 118.69; valence 2 or 4; symbol, Sn. Some of its salts are reagents, others are stains, while some of its compounds, particularly the oxide, have been tried in medicine. Its organic compounds exhibit moderate but variable toxicity. **t. chloride**, a compound, $SnCl_2 + 2H_2O$, or stannous chloride; used as a test reagent. **t. oxide**, a pure white powder, obtained from the product of a reaction between tin and concentrated nitric acid at a high temperature; used in dentistry as a polishing agent for teeth and metallic restorations in the mouth.
- tina** (te'nah) pinta.
- Tinactin** (tin-ak'tin) trademark for preparations of tolinaftate.
- Tinbergen** (tin'berg-en) Nikolaas. Dutch zoologist, born 1907; co-winner, with Karl von Frisch and Konrad Lorenz, of the Nobel prize in medicine and physiology for 1973, for his work on animal behavior.

tinct. abbreviation for *tincture*, or *tinctura*.

tinctable (tink'tah-b'l) stainable or tingible.

tinction (tink'shun) [L. *tingere* to dye] 1. the act of staining. 2. the addition of coloring or flavoring agents to a prescription.

tinctorial (tink-to're-al) pertaining to dyeing or staining.

tinctura (tink-tu'rah), gen. and pl. *tinctu'rae* [L.] tincture.

tincturation (tink'tu-ra'shun) the preparation of a tincture; the treatment of a drug with a menstruum, such as alcohol or ether, for the purpose of preparing a tincture.

tincture (tink'tür) [L. *tingere* to wet, to moisten] an alcoholic or hydroalcoholic solution prepared from animal or vegetable drugs or from chemical substances. **arnica t.**, a preparation of powdered arnica in equal parts of alcohol and water, formerly used as a local irritant. **belladonna t.** [USP], an alcoholic preparation of belladonna leaf, containing, in each 100 ml., 27–33 mg. of the alkaloids of belladonna leaf; used as an anticholinergic for the same purposes as atropine and hyoscyamine. **benzethonium chloride t.** [USP], a preparation containing 97–103 per cent of benzethonium chloride, calculated on a dried basis; used as a topical anti-infective. **benzoin t., compound** [USP], a preparation of benzoin, aloe, storax, and tolu balsam in alcohol, used as a topical protectant. Called also *frar's balsam*. **camphorated opium t.**, former name for paregoric. **capsicum t.**, a preparation of powdered capsicum in equal parts of alcohol and water; used as an irritant and carminative. **cardamom t., compound**, a preparation of powdered cardamom seed, cinnamon, caraway, and cochineal in glycerin and diluted alcohol; used as a flavoring agent. **digitalis t.**, finely powdered digitalis in a menstruum of alcohol and water, used as a cardiotonic. **ferric chloride t.**, a hydroalcoholic solution of ferric chloride, formerly used as a hematinic in the treatment of iron-deficiency anemias; it has also been used as a topical astringent and styptic. **ferric citrochloride t.**, a hydroalcoholic solution of ferric chloride and sodium citrate, used as a hematinic. **gentian t., compound**, a preparation of powdered gentian, bitter orange peel, and cardamom seed in a menstruum of glycerin, alcohol, and water; formerly used as a bitter. **green soap t.** [USP], a preparation of green soap, lavender oil, and alcohol used as a skin detergent; called also *medicinal soft soap liniment* and *linimentum saponis mollis*. **hyoscyamus t.**, a preparation of powdered hyoscyamus in alcohol and water; formerly used as an anticholinergic for the same purposes as atropine. **iodine t.** [USP], a preparation of iodine and sodium iodide in diluted alcohol, each 100 ml. of which contains 1.8–2.2 gm. of iodine and 2.1–2.6 gm. of sodium iodide; used as an anti-infective on the skin. **iodine t., strong**, an alcoholic solution of iodine and potassium iodide, each 100 ml. of which contains 6.8–7.5 gm. of iodine and 4.7–5.5 gm. of potassium iodide; used as an irritant, antibacterial, and antifungal agent. **lemon t.** [USP], **lemon peel t.**, a preparation of lemon peel in alcohol used as a flavoring agent. **myrrh t.**, a preparation of powdered myrrh in alcohol used as a protective. **nitromersol t.** [USP], a preparation of nitromersol, sodium hydroxide, and acetone, in alcohol and purified water; used as a local anti-infective, applied topically. **nux vomica t.**, a preparation of powdered nux vomica in equal parts of alcohol, hydrochloric acid, and water; used as a bitter. **opium t.** [USP], a preparation, obtained by percolation of granulated opium and concentration of the product, each 100 ml. of which yields 0.95–1.05 gm. of anhydrous morphine; used as an antipruritic. Called also *deodorized opium t.* **opium t., camphorated**, paregoric. **opium t., deodorized**, opium t. **rhubarb t., aromatic**, a preparation of powdered rhubarb, cinnamon, clove, and myristica in glycerin, alcohol, and water; used as a cathartic. **stramonium t.**, a hydroalcoholic solution of powdered stramonium formerly used as a parasympatholytic. **sweet orange peel t.** [USP], a preparation produced by the maceration in alcohol of the outer rind of the nonartificially colored fresh ripe fruit of *Citrus sinensis*; used as a flavoring agent. **thimerosal t.** [USP], a preparation of thimerosal, alcohol, acetone, ethylenediamine solution, and monoethanolamine in water; used as a local anti-infective, applied topically to the skin. **tolu balsam t.** [NF], a preparation of tolu balsam in alcohol; used as a flavor and as ingredient of *tolu balsam syrup*. **vanilla t.** [NF], a preparation of vanilla and sucrose in equal parts of diluted alcohol and water; used as a flavor and as an ingredient of *acacia syrup*.

Tindal (tin'dal) trademark for a preparation of acetophenazine maleate.

tinea (tin'e-ah) [L. "a grub, larva, worm"] a name applied to many different kinds of superficial fungal infection of the skin, the specific type (depending on characteristic appearance, etiologic agent, or site) usually being designated by a modifying term. Popularly called *ringworm*. **t. amiantacea**, a nonfungal condition of the scalp, characterized by a dense concentration on its surface of silvery-white or gray scales which extend up on the hair shafts to form an asbestos-like encasement. **asbestos-like t.**, *t. amiantacea*. **t. axilla'ris**, trichomycosis axillaris. **t. bar'bae**, infection of the bearded area of the face and neck, caused by various species of fungi, the type depending on the organism involved: the inflammatory type, caused by *Trichophyton mentagrophytes* or *T. verrucosum* (see *t. kerion*); the ringworm type, caused by various species of fungi, with annular lesions

resembling those appearing on nonhairy skin; the sycosiform type, caused by *Trichophyton violaceum* or *T. rubrum* (see *t. sycosis*). **t. cap'itis**, fungal infection of the scalp, almost exclusively in children, caused by various species of *Microsporum* and *Trichophyton*, and characterized by irregular, patches of baldness, erythema, scaling, crusting, and black dots produced by breakage of infected hairs close to the scalp surface. Called also *ringworm of the scalp*. **t. cilio'rum**, fungal infection of the scalp, involving the eyelashes. **t. circina'ta**, fungal infection of glabrous skin, characterized by presence of the annular lesions responsible for the appellation "ringworm." **t. cor'poris**, fungal infection of glabrous skin, usually caused by various species of *Trichophyton* and *Microsporum*, sometimes acquired from animals or other infected persons and often named for some specific characteristic. See *t. circinata*, *trichophytic granuloma*, and *favus*. Called also *ringworm of the body*. **t. cru'ris**, a fungal infection common in males, starting in the crural or perineal folds, and extending onto the upper inner surfaces of the thighs; caused usually by *Epidermophyton floccosum* or species of *Trichophyton*. **t. favo'sa** (obs.), *favus*. **t. gal'li**, *favus* of fowl. **t. imbrica'ta**, a distinctive chronic type of *tinea corporis*, occurring in tropical countries, caused by *Trichophyton concentricum*; the early lesion is annular, with a circle of scales at the periphery, characteristically attached along one edge. New and larger concentric scaling rings form, sometimes reaching as many as 10 per lesion. **t. ke'ron**, *kerion*. **t. ni'gra**, a minor fungal infection, caused by *Cladosporium mansonii* or *C. werneckii*, producing strikingly dark lesions with the appearance of stains of spattered silver nitrate on the skin of the hands or, rarely, on other areas. **t. nodo'sa**, *pedra*. **t. pe'dis**, a chronic superficial fungal infection of the skin of the foot, especially of that between the toes and on the soles, caused by species of *Trichophyton* or by *Epidermophyton floccosum*; of different types and degrees of severity, it may be marked by maceration, cracking, and scaling of the skin, and by intense itching. Called also *athlete's foot*. **t. profun'da**, trichophytic granuloma. **t. syco'sis**, an inflammatory, deep type of *tinea barbae*. **t. tar'si**, blepharitis ulcerosa. **t. tonsu'rans**, a condition caused by *Trichophyton tonsurans*, which is similar to ordinary *tinea capitis*, except that the areas of baldness are smaller and the black dots are usually absent because there is less breakage of the infected hairs. **t. un'guium**, onychomycosis. **t. versic'olor**, a common chronic, noninflammatory and usually symptomless disorder, characterized only by occurrence of multiple macular patches, of all sizes and shapes, varying from whitish in pigmented skin to fawn-colored or brown in pale skin; seen most frequently in hot, humid tropical regions, and caused by *Pityrosporon orbiculare*.

Tinel's sign (tin-elz') [Jules Tinel, French neurologist, 1879–1952] see under *sign*.

tingibility (tin'jī-bil'i-te) the quality of being tingible.

tingible (tin'jī-b'l) [L. *tingere* to stain] susceptible of being tinged or stained.

tingling (ting'ling) a pricklike thrill, caused by cold or by striking a nerve, or as a result of various diseases of the central or peripheral nervous system. **distal t. on percussion**, see *Tinel's sign*, under *sign*.

tinidazole (ti-nid'ah-zōl) chemical name: 1-[2-(ethylsulfonyl)-ethyl]-2-methyl-5-nitroimidazole; an antiprotozoal, $C_8H_{13}N_3O_4S$, effective against *Trichomonas vaginalis*, *Entamoeba histolytica*, and *Giardia intestinalis*.

tinkle (ting'k'l) an auscultatory sound like the ringing of a small bell, sometimes heard over large pulmonary cavities and in pneumothorax. **metallic t.**, a ringing sound, as of a metallic object, sometimes heard in connection with other respiratory sounds.

tinnitus (ti-ni'tus) [L. "a ringing"] a noise in the ears, as ringing, buzzing, roaring, clicking, etc. Such sounds may at times be heard by others than the patient. **t. aurium**, a subjective sensation of noises in the ears. **clicking t.**, a clicking sound occurring in the ear in chronic catarrhal otitis media; it may be heard by others than the patient. **Leudet's t.**, a crackling sound in the ear, audible also to an observer, produced by involuntary contraction of an internal muscle, coinciding with a tic of some of the fibers of the mandibular division of the trigeminal (fifth cranial) nerve. **nervous t.**, that which arises from some disturbance of the otic nerve or its central connection. **nonvibratory t.**, tinnitus produced by biochemical changes occurring in the nerve mechanism of hearing. **objective t.**, abnormal or pathological sounds originating within the body of the patient, in the region of the ear, which are audible to others than the patient. **vibratory t.**, tinnitus resulting from transmission to the cochlea of vibrations originating in adjacent tissues of the body.

Tinospora (tin-os'po-rah) a genus of menispermaceous vines; the stalk and root of *T. cordifolia* Miers. are used in snakebite, indigestion, ulcers, and fevers.

tiodonium chloride (ti'o-dō-ne-um) chemical name: (4-chlorophenyl)-2-thienyliodonium chloride; an antibacterial, $C_{10}H_7Cl_2S$.

tioperidone hydrochloride (ti'o-per'i-dōn) chemical name:

3-[4-[4-[2-(propylthio)phenyl]-1-piperazinyl]butyl]-2,4(1*H*,3*H*)-quinazolin-6-one monohydrochloride; a tranquilizer, $C_{28}H_{32}N_4O_2S \cdot HCl$.

tiopinac (ti-o'pi-nak) chemical name: 6,11-dihydro-11-oxo-11-phenyl-3-acetic acid; an anti-inflammatory, analgesic, and antipyretic, $C_{18}H_{17}O_3S$.

tioxadazole (ti'ok-si'dah-zöl) chemical name: (6-propoxy-2-benzothiazolyl)carbamic acid methyl ester; an anthelmintic, $C_{12}H_{14}N_2O_4S$.

tint B a color shown by the pastille in an x-ray-measuring instrument that denotes the amount of radiation which will cause depilation.

tintometer (tin-tom'ë-ter) [*tint* + Gr. *metron* measure] an instrument used in determining the relative proportion of coloring matter in a liquid.

tintometric (tin'to-met'rik) pertaining to tintometry.

tintometry (tin-tom'ë-tre) the use of the tintometer.

tip (tip) a pointed extremity of a body part; called also *apex*. **t. of nose**, apex nasi. **t. of sacral bone**, apex ossis sacri. **t. of tongue**, apex linguae. **Woolner's t.**, tuberculum auriculæ.

tippling (tip'ing) a tooth movement in which its vertical position is altered.

tiprenolol hydrochloride (ti-pren'o-löl) chemical name: (+)-1-(isopropylamino)-3-[o-(methylthio)phenoxy]-2-propanol hydrochloride; an antiadrenergic (β -receptor), $C_{13}H_{21}NO_2S \cdot HCl$.

tiqueur (te-ker') [Fr.] a person subject to a tic.

tiquinamide hydrochloride (ti-kwin'ah-mid) chemical name: 5,6,7,8-tetrahydro-3-methyl-8-quinoline carbothioamide monohydrochloride; a gastric anticholinergic, $C_{11}H_{14}N_2S \cdot HCl$.

tirebal (tër-bahl') [Fr.] an instrument resembling a corkscrew, for extracting bullets.

tirefond (tër-fö') [Fr.] an instrument like a corkscrew, for raising depressed portions of a bone.

tires (tirz) trembles.

tiring (tir'ing) the operation of passing a wire around a fractured patella, like a tire around a wheel; cerclage.

Tiselius apparatus (te-sa'le-us) [Arne Wilhelm Kaurin *Tiselius*, biochemist in Uppsala, Sweden, born 1902; winner of the Nobel prize for chemistry in 1948] see under *apparatus*.

tisic (tiz'ik) phthisic.

tisis (tis'is) phthisis.

tissue (tish'u) [Fr. *tissu*] an aggregation of similarly specialized cells united in the performance of a particular function. **accidental t.**, a tissue growing in or upon a part to which it is foreign; it is either analogous or heterologous. **adenoid t.**, lymphoid t.

adipose t., fatty tissue; connective tissue made up of fat cells in a meshwork of areolar tissue. **adipose t., brown**, a thermogenic type of adipose tissue containing a dark pigment, and arising during embryonic life in certain specific areas in many mammals, including man; it is prominent in the newborn of all species in which it occurs and remains a distinct and conspicuous tissue in the adults of certain species, especially those that hibernate. Called also *brown fat*. Cf. *white adipose t.* **adipose t., white**, **adipose t., yellow**, the adipose tissue comprising the bulk of the body fat. Cf. *brown adipose t.* **adrenogenic t.**, the inner zone of the cortex of an adrenal gland which begins to involute shortly after birth, usually referred to as the fetal cortex.

analogous t., an accidental tissue similar to one found normally in other parts of the body. **areolar t.**, connective tissue made up largely of interlacing fibers. **areolar connective t.**, see *connective t.* **basement t.**, the substance of a basement membrane. **bony t.**, bone, whether normal or of a soft tissue, which has become ossified. **brown fat t.**, fatty tissue in various regions of the body of some mammals which contains a dark pigment. Called also *moruloid* or *mulberry fat*. The masses have been called interscapular gland, hibernating gland, and Bonnot's gland. **bursal equivalent t.**, an unidentified component of the lymphoid system, analogous to the bursa of Fabricius in birds, which is considered to be the primary site of the origin of B-lymphocytes and to consist of gut-associated lymphoid tissue, fetal liver, and bone marrow. **cancellous t.**, the loose spongy tissue of the interior and articular ends of bone. **cartilaginous t.**, the substance of the cartilages. **cavernous t.**, erectile t. **cellular t.**, loose connective tissue with large interspaces. **chondroid t.**, an embryonic form of cartilage composed of vesicular cells provided with elastic capsules and having collagenous fibers in its interstitial substance. **chordal t.**, the tissue of the notochord. **chromaffin t.**, a tissue composed largely of chromaffin cells, well supplied with nerves and vessels; it occurs in the adrenal medulla and also forms the paraganglia of the body. **cicatricial t.**, the dense fibrous tissue forming a scar or cicatrix and derived directly from granulation tissue; called also *scar t.* **compact t.**, the hard external portion of a bone. **connective t.**, the tissue which binds together and is the support of the various structures of the body. It is made up of fibroblasts, fibroglia, collagen fibrils, and elastic fibrils. It is derived from the mesoderm and in a broad sense includes the collagenous, elastic, mucous, reticular osseous, and cartilaginous tissue. Some also

include the blood in this group of tissues. Cf. *fibroblast*. Connective tissue is classified according to concentration of fibers as loose (areolar) and dense, the latter having more abundant fibers than the former. **criciform t.**, areolar t. **dartoid t.**, that which resembles the dartos in structure. **elastic t., elastic t., yellow**, connective tissue made up of yellow, elastic fibers, frequently massed into sheets. **endothelial t.**, endothelium. **episcleral t.**, the loose connective tissue over the sclera, between it and the conjunctiva. **epithelial t.**, epithelium. **epivaginal connective t.**, connective tissue surrounding the sheath of the optic nerve. **erectile t.**, tissue containing large venous spaces with which arteries communicate directly, as in the penis and clitoris. Another type formed of dilated venules occurs in the nasal mucosa. The smooth muscle of the nipples constitutes another erectile organ. **extracellular t.**, the total of tissues and body fluids outside the cells, including the plasma volume and all plasma components, the extracellular fluid volume and its components, plus the intercellular and extracellular tissue solids, most notably the collagen, cartilage, bone, elastin, and other connective tissues of the body framework and viscera. **fatty t.**, adipose t. **fibrohyaline t.**, chondroid t. **fibrous t.**, the ordinary connective tissue of the body, made up largely of yellow or white fibers. **fibrous t., white**, that which is composed almost wholly of collagenous fibers. **Gamgee t.**, a surgical dressing consisting of a thick layer of absorbent cotton between two layers of absorbent gauze. **gelatinous t.**, that which yields gelatin on boiling with water. **gelatinous t.**, mucous tissue. **glandular t.**, an aggregation of epithelial cells that elaborate secretions. **granulation t.**, the newly formed vascular tissue normally produced in the healing of wounds of soft tissue and ultimately forming the cicatrix; it consists of small, translucent, red, nodular masses or granulations that have a velvety appearance. **gut-associated lymphoid t. (GALT)**, lymphoid tissue associated with the gut, including the tonsils, Peyer's patches, lamina propria of the gastrointestinal tract, and appendix. **hematopoietic t.**, tissue that takes part in the production of the formed elements of the blood. **heterologous t.**, tissue unlike any other that is normal to the organism. **heterotopic t.**, choristoma. **homologous t.**, tissue identical with another tissue in structural type. **hylic t.**, Adam's term for embryonic tissues constituting the body of an organ, in contrast to lining (lepidic) tissue; see also *hylic*. **hy-perplastic t.**, 1. tissue affected by hyperplasia. 2. in dentistry, an overgrowth of tissue about the maxilla or mandible that is excessively movable, or more readily displaced than is normal. **indifferent t.**, undifferentiated embryonic tissue. **interrenal t.**, the tissue composing the adrenal cortex. **interstitial t.**, the connective tissue between the cellular elements of a body; the stroma. **intertubular t. (obs.)**, the dense tissue of dentin in which the dentinal tubes are embedded. **junctional t.**, the bridge between the atrium and ventricle of the heart formed by the atrioventricular node and the atrioventricular bundle. **Kuhnt's intermediary t.**, glial tissue surrounding the optic nerve and separating it from the retina. **lardaceous t.**, tissue charged with lardaceous as a result of a degenerative process. **lepidic t.**, the lining membrane tissue of the embryo. Cf. *hylic t.* **loose connective t.**, see *connective t.* **lymphadenoid t.**, tissue resembling that of the lymph nodes, found in the spleen, bone marrow, tonsils, and other organs. **lymphatic t.**, lymphoid t. **lymphoid t.**, a lattice work of reticular tissue the interspaces of which contain lymphocytes; lymphoid tissue may be diffuse, or densely aggregated as in lymph nodules and nodes. **mesenchymal t.**, embryonic connective tissue composed of stellate cells and a ground substance of coagulable fluid; the mesenchyma. **metanephrogenic t.**, the more caudal nephrogenic tissue that gives rise to the nephrons of the permanent kidney. **mucous t.**, a jelly-like connective tissue, such as occurs in the umbilical cord. **muscular t.**, the substance of a muscle. **myeloid t.**, medulla ossis rubra. **nephrogenic t.**, tissue of the nephrotomes which furnishes the material out of which the three kidney types arise. **nerve t.**, nervous t., the substance of which the nerves and nerve centers are composed. **nodal t.**, tissue made up of nerve and muscle fibers, such as that composing the sinoatrial node of the heart. **osseous t.**, the specialized tissue forming the bones. **osteogenic t.**, that part of the periosteum adjacent to bone and concerned in the formation of osseous tissue; any tissue capable of generating bone. **osteoid t.**, uncalcified bone tissue. **parenchymatous t.**, parenchyma. **periodontal t.**, periodontium. **primitive pulp t.**, hylic t. **reticular t.**, reticulated t., connective tissue consisting of reticular cells and fibers. **rubber t.**, rubber in sheets for use in surgery. **scar t.**, cicatricial t. **sclerous t's**, the cartilaginous, fibrous, and osseous tissues. **shock t.**, that tissue in the animal body which bears the brunt of the antigen-antibody reaction in anaphylaxis. **skeletal t.**, the bony, ligamentous, fibrous, and cartilaginous tissue forming the skeleton and its attachments. **splenic t.**, red pulp. **subcutaneous t.**, the layer of loose connective tissue situated directly beneath the skin; called also *tela subcutanea* [NA]. **subcutaneous fatty t.**, panniculus adiposus. **sustentacular t.**, a non-nervous structure of the retina composed of the müllerian fibers of that organ. **symplastic t.**, symplasm. **target t.**, 1. tissue, ei-

ther *in vivo* or *in vitro*, against which humoral or cell-mediated immunity is directed. 2. the tissue that responds specifically to a given hormone. **tuberculosis granulation t.**, the tissue that forms the characteristic tubercle in pulmonary productive tuberculosis, composed of epithelioid cells in concentric masses, lymphocytes, and often Langhans giant cells. **vesicular supporting t.**, chondroid t.

tissular (tish'u-lar) pertaining to organic tissue.

titanium (ti-ta'ne-um) [L. *titan* the sun] a dark-gray, metallic element of widespread distribution but occurring in small amounts; atomic number, 22; atomic weight, 47.90; symbol, Ti; specific gravity, 4.5; used for fixation of fractures. **t. dioxide** [USP], a white powder, TiO_2 , used as a topical protectant against sunburn; it is also used in other protectant preparations and in dusting powders, and as a pigment in the manufacture of artificial teeth.

titer (ti'ter) [Fr. *titre* standard] the quantity of a substance required to produce a reaction with a given volume of another substance, or the amount of one substance required to correspond with a given amount of another substance. **agglutination t.**, the highest dilution of a serum which causes clumping of microorganisms or other particulate antigens.

titillation (ti'ti-la'shun) [L. *titillatio*] the act or sensation of tickling.

titrant (ti'trant) the solution of known strength that is added in titration.

titrate (ti'trät) to determine by titration.

titration (ti-tra'shun) [Fr. *titre* standard] determination of a given component in solution by addition of a liquid reagent of known strength until a given endpoint (e.g., change in color) is reached. **colorimetric t.**, a method of determining hydrogen ion concentration by adding an indicator to the unknown and then comparing the color with a set of tubes containing this same indicator in solutions of known hydrogen ion concentration. **complexometric t.**, titration of a substance (e.g., the calcium in clear serum) with a complexing agent (e.g., EDTA); the endpoint of the titration is generally observed as a change in color of the solution. **coulometric t.**, titration by determining the amount of electricity required to electrochemically generate a titrant which reacts with the substance in question. If the current is kept constant, as for chloride determination using the Cottle titrator, the amount of electricity (coulombs) used is proportional to the elapsed time. **Dean and Webb t.**, a test for measuring antibody in which varying dilutions of antigen are mixed with a constant quantity of antiserum; antibody activity is determined by the dilution in which flocculation occurs most rapidly, i.e., the end point. In this dilution, antigen and antibody are together at a ratio of optimal proportions. **formol t.**, see *Sørensen's method*, under *method*. **potentiometric t.**, a method of determining hydrogen ion concentration by placing a hydrogen electrode in unknown solution and measuring the potential developed as compared with some standard electrode by means of a potentiometer.

titre (ti'ter) [Fr.] titer.

titrimetric (ti'tri-met'rik) pertaining to analysis by titration.

titrimetry (ti-trim'et're) [titration + Gr. *metron* measure] analysis by titration.

titubant (ti'tu-bant) a person who staggers.

titubation (ti'tu-ba'shun) [L. *titubatio*] the act of staggering or reeling; a staggering or stumbling gait with shaking of the trunk and head, commonly seen in cerebellar disease. **lingual t.**, stuttering or stammering.

Tityus serrulatus (ti'te-us ser'u-la'tus) a scorpion of Brazil which inflicts a severe, sometimes fatal, sting.

tixanox (tik'sah-noks) chemical name: 7-(methylsulfinyl)-9-oxo-9H-xanthene-2-carboxylic acid; an antiallergic, $\text{C}_{15}\text{H}_{10}\text{O}_5\text{S}$.

Tizzoni's test (ti-dzo'néz) [Guido Tizzoni, Italian physician, 1853-1932] see under *tests*.

tjettek (tyet'ek) a deadly poison prepared by the Javanese from the root of *Strychnos tieute*.

TKD tokodynamometer.

TKG tokodynograph.

Tl chemical symbol for *thallium*.

TLC total lung capacity.

Tm chemical symbol for *thulium*.

TMV tobacco mosaic virus.

Tn symbol for *normal intraocular tension* (pressure).

TNM see under *staging*.

TNT trinitrotoluene.

TO abbreviation for *tinctura opii*, tincture of opium.

T.O. original tuberculin; see *New tuberculin*, under *tuberculin*.

toadskin (töd'skin) phrynoderma.

toadstool (töd'stul) a popular name for a poisonous mushroom.

tobacco (to-bak'o) [L. *tabacum*] the dried and prepared leaves of *Nicotiana tabacum* L. (Solanaceae), a solanaceous plant. Tobacco contains various alkaloids, the principal one being *nicotine*,

and unites the qualities of a sedative narcotic with those of an emetic and diuretic. It is also a heart depressant and antispasmodic. **mountain t.**, *arnica*. **poison t.**, *hyoscyamus*.

tobaccoism (to-bak'o-izm) a morbid condition due to excessive use of tobacco; *nicotinism*.

Tobey-Ayer test (to'be a'er) [George Loring Tobey, Jr., Boston otolaryngologist, 1881-1947; James Bourne Ayer, Boston neurologist, born 1882] see under *tests*.

tobramycin (to'brah-mi'sin) [USP] chemical name: O-3-amino-3-deoxy- α -D-glucopyranosyl-(1 $\rightarrow$ 6)-O-[2,2-diamino-2,3,6-trideoxy- α -D-ribo-hexopyranosyl-(1 $\rightarrow$ 4)]-2-deoxy-D-streptamine. A purified fraction of an aminoglycoside antibiotic complex (see *nebramycin*) produced by *Streptomyces tenebrarius*, $\text{C}_{18}\text{H}_{37}\text{N}_5\text{O}_6$, bactericidal against many gram-negative and some gram-positive organisms. Administered intravenously or intramuscularly, as the sulfate salt, in the treatment of septicemia and neonatal sepsis, and in central nervous system, lower respiratory, gastrointestinal, skin, bone, and soft-tissue infections due to susceptible strains of *Pseudomonas aeruginosa*, *Escherichia coli*, indole-negative and indole-positive *Proteus*, *Providencia*, *Klebsiella-Enterobacter-Serratia* group, *Citrobacter*, and staphylococci, including coagulase-positive and coagulase-negative *S. aureus*. Called also *tenebrimycin* and *tenemycin*.

tocainide (to-ka'nid) chemical name: 2-amino-N-(2,6-dimethylphenyl)propanamide; a cardiac depressant (antiarrhythmic), $\text{C}_{11}\text{H}_{15}\text{N}_2\text{O}$.

tocamphyl (to-kam'fil) chemical name: 1-(p, α -dimethylbenzyl)-camphorate compound with 2,2'-iminodietanol (1:1); a choleric obtained from tumeric, $\text{C}_{19}\text{H}_{26}\text{O}_4 \cdot \text{C}_4\text{H}_{11}\text{NO}_2$.

Toclase (to'kläs) trademark for preparations of carbapentane citrate.

toco- [Gr. *tokos* childbirth] a combining form denoting relationship to childbirth, or labor; see also words beginning *toko-*.

tocodynagraph (to'ko-di'nah-graf) tokodynagraph.

tokodynamometer (to'ko-di'nah-mom'et-er) tokodynamometer.

tocograph (tok'o-graf) a recording tokodynamometer.

tocography (to-kog'rah-fe) [*toco-* + Gr. *graphein* to write] the graphic recording of uterine contractions.

tocokin (tok'o-kin'in) [*toco-* + Gr. *kinein* to move] an extract from yeast and certain vegetables which has the properties of an estral hormone.

tocology (to-kol'o-je) obstetrics.

tocometer (to-kom'et-er) [*toco-* + Gr. *metron* measure] tokodynamometer.

tocopherol (to-kof'er-ol) [*toco-* + Gr. *pherein* to carry] an alcohol which has the properties of vitamin E; isolated from the oil of the germ of wheat kernel, or produced synthetically. **α -t.**, **α -pha-t.**, vitamin E.

tocophobia (to'ko-fö'be-ah) [*toco-* + Gr. *phobein* to be affrighted by] abnormal dread of childbirth.

tocus (to'kus) [L.; Gr. *tokos*] labor; childbirth.

Todd bodies (tod) [John Launcelot Todd, Canadian physician, 1876-1949] see under *body*.

Todd's cirrhosis, paralysis (palsy), process (todz) [Robert Bentley Todd, English physician, 1809-1860] see under *paralysis*, see *primary biliary cirrhosis*, under *cirrhosis*, and see *fibrae intercrurales*.

Toddalia (to-dal'e-ah) a genus of rutaceous shrubs. The root of *T. aculeata* Pers., of the East Indies, is an aromatic stomachic. The bark is used in India as a source of yellow dye. The rootbark is considered to be antimalarial, and possesses antiperiodic and antipyretic properties.

toddy (tod'e) [Hind. *täre, tādī*] 1. the fermented sap of various palm trees. 2. a drink prepared from gin or whisky, sugar, and water.

toe (to) any of the five digits of the foot. **curly t's**, a condition affecting chicks, in which the toes curl underneath the feet, due to a deficiency of riboflavin. **great t.**, the first digit of the foot; called also *hallux* [NA] and *digitus I* [NA alternative]. **hammer t.**, a condition in which the proximal phalanx of a toe—most often that of the second toe—is extended and the second and distal phalanges are flexed, causing a clawlike appearance. **little t.**, the fifth digit of the foot; called also *digitus minimus* [NA] and *digitus V* [NA alternative]. **mallet t.**, flexion contracture of the distal interphalangeal joint of any of the lesser toes. **Morton's t.**, a form of metatarsalgia due to compression of a branch of the plantar nerve by the metatarsal heads; chronic compression may lead to formation of a neuroma. Called also *Morton's disease*, *foot*, or *neuralgia*. **pigeon t.**, a permanent toeing-in position of the feet. **seedy t.**, a disease of horses' feet marked by a fungous growth of a horny, honeycombed texture between the coffin bone and the wall of the hoof. **tennis t.**, painful great toe associated with subungual hematoma, which, in the absence of treatment, may lead to subungual abscess; it usually develops after a vigorous tennis game, especially when tennis shoes with protective tips are worn. **webbed t's**, toes abnormally joined by strands of tissue at their base.

toenail (to'nāl) the nail on any of the digits of the foot. See *unguis* [NA]. **ingrown t.**, aberrant growth of a toenail, with one (usually the outer) margin or, less often, both lateral margins growing deeply into the nail groove and surrounding tissues. **ingrowing t.**, ingrown nail.

Toepfer (tep'fer) see *Töpfer*.

tofenacin hydrochloride (to-fen'ah-sin) chemical name: *N*-methyl-2-[(*o*-methyl- α -phenylbenzyl)oxy]ethylamine hydrochloride; an anticholinergic, $C_{17}H_{21}NO \cdot HCl$.

Tofranil (to-fra'nil) trademark for preparations of imipramine hydrochloride.

tofu (to'foo) a Japanese food preparation from the soy bean, in white tablets.

tofukasu (to-foo-kah'soo) a Japanese food prepared from soy beans.

togavirus (to'gah-vi'rus) a subgroup of arboviruses, including mosquito-borne and tickborne viruses that cause hemorrhagic fever; they are RNA viruses with envelopes (or "togas").

toilet (toi'let) the cleansing of an accidental wound and the surrounding skin, or of an obstetrical patient.

Toison's solution (fluid) (twah-zaw'f) [J. Toison, French histologist, born 1858] see under *solution*.

tokelau (to-ke-lah'oo) [*Tokelau*, a South Pacific atoll] *tinea imbricata*.

toko- [Gr. *tokos* childbirth] for words beginning thus, see also those beginning *toco-*.

tokodynamograph (to'ko-di'nah-graf) [Gr. *tokos* childbirth + *graphein* to write] the record obtained with a tokodynamometer. Abbreviated TKG.

tokodynamometer (to'ko-di'nah-mom'ē-ter) [Gr. *tokos* childbirth + *dynamis* power + *metron* measure] an instrument for measuring the expulsive force of the uterine contractions in labor. Abbreviated TKD.

tolamolol (to-lah'mo-lōl) chemical name: 4-2-[[2-hydroxy-3-(2-methylphenoxy)propyl]amino]ethoxy]benzamide. A beta-adrenergic blocking agent, $C_{19}H_{24}N_2O_4$, which has been used as a coronary vasodilator in the treatment of angina of effort and as a cardiac depressant in the treatment of arrhythmias.

tolazamide (tol-az'ah-mid) [USP] chemical name: *N*-[(hexahydro-1-*H*-azepin-1-yl)amino]carbonyl]-4-methylbenzene sulfonamide. An orally effective hypoglycemic sulfonylurea, $C_{14}H_{21}N_3O_3S$, occurring as a white to off-white, crystalline powder; used in the treatment of diabetes mellitus.

tolazoline hydrochloride (tol-az'o-lēn) [USP] chemical name: 4,5-dihydro-2-(phenylmethyl)-1-*H*-imidazole monohydrochloride. An adrenergic blocking agent and peripheral vasodilator, $C_{10}H_{12}N_2 \cdot HCl$, occurring as a white to off-white, crystalline powder; used in the treatment of peripheral vascular disorders due to vasospasm, administered orally.

tolbutamide (tol-bu'tah-mid) [USP] chemical name: *N*-(butylamino)carbonyl]-4-methylbenzenesulfonamide. An orally effective hypoglycemic sulfonylurea, $C_{12}H_{18}N_2O_3S$, occurring as a white, or practically white, crystalline powder; used in the treatment of diabetes mellitus. **t. sodium** [USP], the monosodium salt of tolbutamide, $C_{12}H_{17}N_2NaO_3S$, occurring as a white to off-white, crystalline powder, having the same actions as the base; used as a diagnostic test for diabetes mellitus, administered intravenously.

tolciclate (tōl-si'klāt) chemical name: *O*-1,2,3,4-tetrahydro-1,4-methanonaphthalen-6-yl)ester methyl(3-methylphenyl)carbamothioic acid; a topical antifungal, $C_{20}H_{21}NOS$.

Tolectin (tol'ek-tin) trademark for a preparation of tolmetin sodium.

tolerance (tol'er-ans) [L. *tolerantia*] the ability to endure without ill effect, unusually large doses of a drug, and to exhibit decreasing effect to continued use of the same dose of a drug. **acquired t.**, the increasing resistance to the usual effects of a drug due to continued use. **adoptive t.**, immunological tolerance induced by the passive transfer to an irradiated recipient animal of lymphoid cells from a donor rendered tolerant to an antigen. **alkali t.**, ability of the body to endure the administration of alkalis, measured by the amount of alkali that must be given to cause an alkaline urine; this forms a rough measure of the degree of acidosis. **crossed t.**, the lessened susceptibility which persons who have acquired a tolerance for one drug or poison may thereafter exhibit toward another drug. **drug t.**, progressive diminution of susceptibility to the effects of a drug, resulting from its continued administration. **glucose t.**, ability of the body to metabolize glucose; it is measured by the maximum amount of total glucose in a well-balanced diet, equally divided into three meals, which can be taken without having glucosuria at any time during the twenty-four hours. **high-zone t.**, acquired immunological tolerance due to the presence in very high concentrations of an antigen that would ordinarily stimulate lymphocytes to antibody production at intermediate concentrations. **immunologic t.**, an immunological response characterized by the development of specific nonreactivity of lymphoid tissues to a particular antigen capable under other conditions of inducing humoral or cell-mediated immunity. It may

be a consequence of contact with antigen in fetal or early postnatal life, or may occur in the presence of very high (*high-zone t.*) or very low (*low-zone t.*) doses of certain antigens to adults. The induction of tolerance to a given antigen does not affect immunological reactions to unrelated antigens. Called also *immunological paralysis*. **low-dose t.**, antigen-mediated specific immunosuppression induced in immunocompetent adult animals by successive minute doses of antigen. **low-zone t.**, immunological tolerance due to the continuous presence in extremely small concentrations (below the threshold required) of antigens that would ordinarily stimulate lymphocytes to antibody production at intermediate concentrations.

tolerant (tol'er-ant) able to endure, without effect, the action of any particular drug or other agent; exhibiting tolerance.

toleration (tol'er-a'shun) tolerance.

tolerogen (tol'er-o-jen) antigen in the animal body which induces a state of specific immunological unresponsiveness to subsequent challenging doses of the antigen.

tolerogenesis (tol'er-o-jen'ē-sis) induction of immunologic tolerance.

tolerogenic (tol'er-o-jen'ik) capable of inducing immunologic tolerance.

tolindate (to-lin'dāt) chemical name: *O*-2,3-dihydro-1-*H*-inden-5-yl) ester carbamothioic acid; an antifungal, $C_{18}H_{19}NOS$.

Tolinase (tōl'in-ās) trademark for a preparation of tolazamide.

toliodium chloride (to-li'o-de-um) chemical name: bis(4-methylphenyl)iodonium chloride; a veterinary food additive, $C_{14}H_{14}ClI$.

Tollens' test (tol'enz) [Bernhard Christian Gottfried Tollens, German chemist, 1841-1918] see under *tests*.

tolmetin sodium (tol'met-in) chemical name: 1-methyl-5-(4-methylbenzoyl)-1-*H*-pyrrole-2-acetic acid. An anti-inflammatory, analgesic, and antipyretic, $C_{15}H_{14}NNaO_3 \cdot 2H_2O$, used in the treatment of certain cases of rheumatoid arthritis, administered orally.

tolnafate (tol-naf'tāt) [USP] chemical name: *O*-2-naphthalenyl ester carbamothioic acid. A synthetic antifungal, $C_{18}H_{17}NOS$, occurring as a white to creamy white, fine powder; used topically in the treatment of various forms of tinea of the skin.

tolonium chloride (to-lo'ne-um) chemical name: 3-amino-7-(dimethylamino)-2-methylphenothiazin-5-ium chloride. An antiheparin compound, $C_{15}H_{16}ClN_3S$, which has been used in the treatment of idiopathic functional uterine bleeding and menorrhagia, topically to detect and delineate oral and cervical neoplasia, and intravenously to stain the parathyroid glands. Called also *toluidine blue O*.

Tolserol (tol'ser-ol) trademark for preparations of mephensin.

toluene (tol'u-ēn) the hydrocarbon methylbenzene, $C_6H_5 \cdot CH_3$; a colorless liquid obtainable from tolu and other resins and from coal tar. It is an organic solvent used in rubber and plastic cements, paint removers, etc. Poisoning may result from ingesting the solvent or inhaling its concentrated vapors. Called also *toluol* and *methyl benzene*.

toluidine (tol-u'i-din) a compound, 2-amino-toluene, $CH_3 \cdot C_6H_4 \cdot NH_2$, made by reducing nitrotoluene. It is homologous with aniline. **t. blue O**, tolonium chloride.

toluol (tol'u-ol) toluene.

tolusafranine (tol'u-saf'rah-nin) a dibenzoparadiazine dye, $NH_2(CH_3) \cdot C_6H_3 \cdot N_2 \cdot (C_6H_5)Cl \cdot C_6H_5(CH_3) \cdot NH_2$, the chief constituent of safranin.

toluyl (tol'u-il) the univalent acid radical, $CH_3 \cdot C_6H_4$.

tolulylene (tol'u'i-lēn) the hydrocarbon, diphenyl ethylene, $C_6H_5 \cdot CH=CH \cdot C_6H_5$; called also *stilbene*.

tolyl (tol'il) the univalent radical, $CH_3 \cdot C_6H_4$, isomeric with benzyl. **t. hydroxide**, cresol.

tomatin (to-ma'tin) an antibiotic substance with antifungal properties, isolated from tomato plants affected with wilt.

-tome [Gr. *tomē* a cutting] a word termination signifying (a) an instrument for cutting or (b) a segment.

tomentum (to-men'tum) a little used term for a network of minute blood vessels of the pia mater and the cortex cerebri; called also *t. cerebri*.

Tomes' fibers (fibrils), layer, process (tōmz) [Sir John Tomes, English dentist, 1815-1895] see under *fiber* and *process*, and see *granular layer of Tomes*, under *layer*.

Tommaselli's disease (syndrome) (tom'ah-sel'ēz) [Salvatore Tommaselli, Italian physician, 1834-1906] see under *disease*.

Tommasi's sign (tom-mas'e) [L. Tommasi, Italian physician] see under *sign*.

tomo- [Gr. *tomē* a cutting] a combining form denoting relationship to a cutting, or to a designated layer, as might be achieved by cutting or slicing.

tomogram (to'mo-gram) a roentgenogram of a selected layer of the body made by tomography.

tomograph (to'mo-graf) an apparatus for moving an x-ray source in one direction as the film is moved in the opposite

direction, thus showing in detail a predetermined plane of tissue while blurring or eliminating detail in other planes.

tomography (to-mog'rah-fe) [*tomo-* + *Gr. graphein* to write] the recording of internal body images at a predetermined plane by means of the tomograph; called also *body section roentgenography*. **computed t.**, computerized axial t. **computerized axial t. (CAT)**, that in which the emergent x-ray beam is measured by a scintillation counter, the electronic impulses are recorded on a magnetic disk, and then are processed by a mini-computer for reconstruction display of the body in cross-section on a cathode ray tube. Called also *computed t.* and *CAT scan*. **ultrasonic t.**, the ultrasonographic visualization of a cross-section of a predetermined plane of the body by linear scanning with an ultrasonic probe across the desired site and displaying on a B-scan. **positron emission transaxial t. (PETT)**, that accomplished by detection of gamma rays emitted from tissues after administration of a natural biochemical substance (e.g., glucose, fatty acids) into which positron-emitting isotopes have been incorporated. The paths of the gamma rays, which result from collisions of positrons and electrons, are interpreted by a computer, and the resultant tomogram represents local concentrations of the isotope-containing substance.

-tomy [*Gr. tomē* a cutting] a word termination signifying the operation of cutting, or incision.

tonaphasia (ton'ah-fa'ze-ah) inability to recall a familiar tune; musical aphasia.

tone (tōn) [*Gr. tonos*; *L. tonus*] 1. the normal degree of vigor and tension; in muscle, the resistance to passive elongation or stretch. 2. a healthy state of a part; tonus. 3. a particular quality of sound or of voice. 4. to make permanent, or to change, the color of silver stain by chemical treatment, usually with a heavy metal. **feeling t.**, the condition or state of mind and feeling which accompanies every thought or act. **heart t's**, the sounds heard in the auscultation of the heart. **jecoral t.**, the sound produced by percussion over the liver. **plastic t.**, the posture-maintaining mechanism of muscle by virtue of which a limb passively placed in any position tends to maintain that position. **Traube's double t.**, a double heart sound heard in aortic regurgitation. **Williams' tracheal t.**, see under *sign*, def. 1.

tonga (tong'gah) a native name for yaws in New Caledonia and the Loyalty Islands.

tongs (tongs) an instrument for grasping and holding, consisting of two arms joined by a hinge or pivot. **skull t.**, tongs used to exert traction on the skull, as in surgery for fractures of cervical vertebrae; many forms are available, including Crutchfield t., Barton t., and Vinke t.

tongue (tung) [*L. lingua*, *Gr. glōssa*] 1. the movable, muscular organ on the floor of the mouth, subserving the special sense of taste and aiding in mastication, deglutition, and the articulation of sound. Called also *lingua* [NA]. 2. any structure or part having a shape similar to that of the oral organ of the same name. Called also *lingula* [NA]. **adherent t.**, a tongue that is abnor-

The tongue, showing principal structures (Eycleshymer and Jones).

mally attached by folds of connective tissue and mucous membrane to the sides and floor of the mouth. **amyloid t.**, enlargement of the tongue due to amyloidosis. **antibiotic t.**, glossitis caused by sensitivity to an antibiotic. **baked t.**, the dry, brown tongue of typhoid fever. **bald t.**, a tongue characterized by the absence of papillae, often seen in various nutritional disturbances. **beefy t.**, erythematous and/or atrophic glossitis, characterized by red, irregular ulcerations on the dorsal surface of the tongue. **bifid t.**, a tongue that is divided in its anterior part by a longitudinal fissure; called also *cleft t.* **black t.**, **black hairy t.**, a condition characterized by the presence of a brown furlike patch on the dorsum of the tongue, composed of hypertrophied filiform papillae with microorganisms

and some pigment. Called also *anthracosis linguae*, *glossophytia*, *keratomycosis linguae*, *lingua villosa nigra*, *melanotrichia linguae*, and *nigrities linguae*. **blue t.**, a disease of sheep and cattle in South Africa, caused by a virus, and characterized by hyperemia, erosions, and edema of the lips, tongue, and oral mucosa. **burning t.**, glossopyrosis. **cardinal t.**, a tongue whose surface is denuded of epithelium, giving it a bright red appearance. **cerebriform t.**, fissured t. **choreic t.**, abrupt, snakelike protrusion and withdrawal of the tongue occurring in chorea. **cleft t.**, bifid t. **coated t.**, a tongue covered with a whitish or yellowish layer consisting of desquamated epithelium, debris, bacteria, fungi, etc. **cobble-stone t.**, a condition characterized by interstitial glossitis, with hypertrophy of the papillae and a verrucous white coating on the tongue. **crocodile t.**, fissured t. **dotted t.**, stippled t. **double t.**, bifid t. **earthy t.**, a tongue that is coated with a deposit of rough, calcareous matter. **encrusted t.**, a heavily coated tongue. **fern leaf t.**, a tongue with a central furrow having lateral branches. **filmy t.**, one marked with symmetrical whitish patches. **fissured t.**, a sometimes familial condition that may be congenital but whose incidence increases with age, characterized by uniformly arranged fissures radiating forward and outward from the median raphe of the tongue, without evidence of inflammation; seen in Melkersson-Rosenthal syndrome. Called also *lingua plicata*. **flat t.**, a condition in which the borders of the tongue cannot be rolled; it is due to paralysis of the transverse lingual muscles occurring as a result of congenital syphilis. **furred t.**, a tongue with papillae so changed as to give the mucous membrane the appearance of whitish fur. **furrowed t.**, fissured t. **geographic t.**, a tongue with denuded patches surrounded by thickened epithelium; called also *lingua geographica*, *erythema migrans*, *pityriasis linguae*, and *glossitis areata exfoliativa*. **grooved t.**, fissured t. **hairy t.**, a tongue the papillae of which have a hairlike appearance. **lobulated t.**, a tongue with a congenital second lobe lying on it. **magenta t.**, the magenta-colored tongue seen in cases of riboflavin deficiency. **mappy t.**, geographic t. **parrot t.**, the dry, horny tongue of low fever, which cannot be protruded. **plicated t.**, fissured t. **raspberry t.**, a red, uncoated tongue, with elevated papillae, as seen a few days after appearance of the rash in scarlet fever. **Sandwith's bald t.**, an extremely clean tongue sometimes seen in the late stages of pellagra. **scrotal t.**, fissured t. **smokers' t.**, leukoplakia of the tongue. **t. of sphenoid bone**, *lingula sphenoidalis*. **split t.**, bifid t. **stippled t.**, a tongue on which each papilla is covered with a separate white patch of epithelium; called also *dotted t.* **strawberry t.**, a coated tongue with enlarged, red, fungiform papillae, seen in the first 24 hours after appearance of the rash in scarlet fever. **sulcated t.**, fissured t. **timber t.**, wooden t. **trombone t.**, involuntary movement of the tongue, consisting of vigorous alternating protrusion and retraction. **white t.**, a condition in which all or part of the papillae and epithelium of the tongue have a dull white color. **wooden t.**, actinobacillosis of cattle in which hard tumor-like nodules form inside the tongue; called also *timber t.* **wrinkled t.**, fissured t.

tongue-tie (tung'ti) abnormal shortness of the frenum of the tongue, resulting in limitation of its motion; called also *ankyloglossia* and *lingua frenata*.

tonic (ton'ik) [*Gr. tonikos*] 1. producing and restoring the normal tone. 2. characterized by continuous tension. 3. a term formerly used for a class of medicinal preparations believed to have the power of restoring normal tone to tissue. **bitter t.**, a tonic of bitter taste, used for stimulating the appetite and improving digestion, such as quinine, quassia, and gentian. **cardiac t.**, one which strengthens the heart's action, such as digitalis, strophanthus, or strychnine. **digestive t.**, an intestinal or stomachic tonic. **general t.**, one which braces up the whole system; cold baths, electricity, and exercise are general tonics. **intestinal t.**, one that improves the tone of the intestinal tract. **stomachic t.**, one which aids the functions of the stomach; here are classed the alcoholic stimulants, vegetable bitters, hydrochloric and nitrohydrochloric acids. **vascular t.**, one which increases the tone of the blood vessels; among them are belladonna, digitalis, ergot, and strychnine.

tonicity (to-nis'i-te) the state of tissue tone or tension; in body fluid physiology, the effective osmotic pressure equivalent.

tonicize (ton'i-siz) 1. to improve the tone of a part. 2. to induce tonic contraction of a muscle.

tonicoclonic (ton'i-ko-klon'ik) tonicoclonic.

tonka bean (tong'kah ben) the seed of *Diptyeryx odorata* Willd. (Leguminosae), a North America tree; it affords coumarin, and has been used as a flavoring agent and to disguise odors in pharmaceutical and tobacco.

tono- [*Gr. tonos* tension] a combining form denoting relationship to tone or tension.

tonoclonic (ton'o-klon'ik) both tonic and clonic; said of a spasm consisting of a convulsive twitching of the muscles.

tonofibril (ton'o-fi'bril) a bundle of fine filaments (tonofilaments) in certain cells, especially epithelial cells, the individual strands of which transverse the cytoplasm in all directions and extend into the cell processes to converge and insert on the

desmosomes; they are thought to have a supportive or cytoskeletal function and, in keratinizing epithelia, to be the principal precursor of keratin.

tonofilament (ton'o-fil'ah-ment) any of the fine filaments of a tonofibril.

tonogram (to'no-gram) the record produced by tonography.

tonograph (to'no-graf) [tono- + Gr. *graphein* to write] a recording tonometer.

tonography (to-nog'rah-fe) the recording of changes in intraocular pressure produced by the constant application of a known weight on the globe of the eye, reflecting the facility of outflow of the aqueous humor from the anterior chamber. **carotid compression t.**, a test for occlusion of the carotid artery by measuring ocular pressure and pulse before, during, and after the proximal portion of the carotid artery is compressed by the fingers.

tonometer (to-nom'ē-ter) [tono- + Gr. *metron* measure] an instrument for measuring tension or pressure; usually used specifically in reference to an instrument by which intraocular pressure is measured. **air-puff t.**, an instrument for measuring intraocular pressure; it does not touch the eye, but rather senses deflections of the cornea in reaction to a puff of pressurized air. **applanation t.**, an instrument that measures intraocular pressure by determination of the force necessary to flatten a corneal surface of constant size. **electronic t.**, one having an electronic readout. **Gärtner's t.**, an instrument for measuring blood pressure by means of a compressing ring applied to the finger. **Goldmann's applanation t.**, an instrument for measuring intraocular pressure which eliminates the effects of scleral resistance. **impression t.**, an instrument that measures direct pressure on the eyeball, such as the Schiötz, McLean, or MacKay-Marg electronic tonometer. **MacKay-Marg electronic t.**, an electronic applanation tonometer equipped with a flat plunger which measures intraocular pressure by direct application to the cornea. **McLean t.**, an instrument that registers intraocular pressure, with a scale from which the pressure can be read directly. **Musken's t.**, an instrument for measuring the tonicity of the Achilles tendon. **Recklinghausen's t.**, an instrument for observing oscillatory blood pressure. **Schiötz' t.**, an instrument that registers intraocular pressure by direct application to the cornea, the reading on the scale being translated into millimeters of mercury by means of a conversion table.

tonometry (to-nom'ē-tre) the measurement of tension or pressure, especially the indirect estimation of the intraocular pressure from determination of the resistance of the eyeball to indentation by an applied force. **applanation t.**, that done by means of the applanation tonometer. **digital t.**, estimation of the degree of intraocular pressure by pressure exerted on the eyeball by the finger of the examiner.

tonophant (ton'o-fant) [tono- + Gr. *phainein* to show] (obs.) an instrument for rendering acoustic vibrations visible.

tonoplast (ton'o-plast) [tono- + Gr. *plassein* to form] a small intracellular body which forms powerful osmotic substances within itself and thus swells up to form a small vacuole (De Vries, 1885). The term is now applied to the limiting membrane of an intracellular vacuole, the vacuole membrane.

tonoscope (ton'o-skop) [tono- + Gr. *skopein* to examine] (obs.) 1. an apparatus for rendering sound visible by registering the vibrations on a screen. 2. a device for examining the head or brain by means of sound. 3. tonometer.

tonotopic (ton'o-top'ik) having a spatial arrangement such that certain tone frequencies are transmitted along a particular portion of the structure, as in the cochlear nuclei.

tonotopicity (ton'o-top-is'i-te) the property of being tonotopic.

tonsil (ton'sil) a small rounded mass of tissue, especially of lymphoid tissue. The term is often used without qualification to designate the palatine tonsil. Called also *tonsilla*. **buried t.**, submerged t. **t. of cerebellum**, tonsilla cerebelli. **eustachian t.**, see *noduli lymphatici tubarii tubae auditivae*. **faucial t.**, see *palatine t.* **Gerlach's t.**, see *noduli lymphatici tubarii tubae auditivae*. **intestinal t.**, see *folliculi lymphatici aggregati*. **lingual t.**, tonsilla lingualis. **Luschka's t.**, tonsilla pharyngea. **palatine t.**, a small, almond-shaped mass between the palatoglossal and palatopharyngeal arches on either side, composed mainly of lymphoid tissue, covered with mucous membrane, and containing various crypts and many lymph follicles; believed to act as sources for supply to the mouth and pharynx of phagocytes which destroy bacteria entering the mouth. Called also *tonsilla palatina* [NA]. **pharyngeal t.**, tonsilla pharyngea. **resected t.**, a palatine tonsil part of which has been excised. **submerged t.**, a palatine tonsil that is shrunken and atrophied and is partly or entirely hidden by the palatoglossal arch. **third t.**, tonsilla pharyngea. **t. of torus tubarius**, tonsilla tubaria. **tubal t's**, noduli lymphatici tubarii tubae auditivae.

tonsilla (ton-sil'ah), pl. *tonsil'ae* [L.] tonsil: [NA] a general term for a small rounded mass of tissue, especially of lymphoid tissue. **t. cerebel'li** [NA], **t. of cerebellum**, a rounded mass forming part of the cerebellum on its inferior surface, between the uvula and the biventral lobule; called also *amygdala*

of cerebellum. **t. intestina'lis**, see *folliculi lymphatici aggregati*. **t. lingua'lis** [NA], lingual tonsil: an aggregation of lymph follicles on the floor of the oropharyngeal passageway, at the root of the tongue. **t. palati'na** [NA], a small, almond-shaped mass between the palatoglossal and palatopharyngeal arches on either side; see *palatine tonsil*. **t. pharyn'gea** [NA], pharyngeal tonsil: the diffuse lymphoid tissue and follicles in the roof and posterior wall of the nasopharynx. See also *adenoid* (def. 2). **t. tuba'ria** [NA], lymphoid tissue associated with the opening of the auditory tube; called also *tonsil of torus tubarius*.

tonsillar (ton'si-lar) [L. *tonsillaris*] of or pertaining to a tonsil; amygdaline.

tonsillectome (ton'si-lek'tōm) an instrument for performing tonsillectomy.

tonsillectomy (ton'si-lek'to-me) [L. *tonsilla* tonsil + Gr. *ektomē* excision] surgical removal of a tonsil or tonsils.

tonsillith (ton'si-lith) tonsillolith.

tonsillitic (ton'si-lit'ik) pertaining to or affected with tonsillitis.

tonsillitis (ton'si-li'tis) [L. *tonsilla* tonsil + *-itis*] inflammation of the tonsils, especially the palatine tonsils. **caseous t.**, lacunar t. **catarrhal t.**, **acute**, a form associated with acute catarrhal pharyngitis, in which the tonsils are red and swollen; called also *erythematous t.* **catarrhal t.**, **chronic**, a form attended by permanent hypertrophy, and usually requiring tonsillectomy. **diphtherial t.**, see *diphtheria*. **erythematous t.**, catarrhal t., acute. **follicular t.**, that which especially affects the crypts (once referred to as follicles). **herpetic t.**, a local manifestation of herpes on the tonsil. **lacunar t.**, tonsillitis in which the crypts of the tonsils are filled with plugs of caseous matter; called also *caseous t.* **t. len'ta**, chronic inflammation of the tonsils producing a prolonged chronic sepsis. **lingual t.**, inflammation of a lymphoid mass at the base of the tongue. **mycotic t.**, a form due to fungi. **parenchymatous t.**, **acute**, inflammation of the whole substance of the tonsil. **preglottic t.**, inflammation of the lingual tonsil. **pustular t.**, that which is characterized by the formation of pustules. **streptococcal t.**, see *septic sore throat*, under *sore throat*. **superficial t.**, inflammation of the mucous membrane over a tonsil. **suppurative t.**, parenchymatous t., acute. **Vincent's t.**, tonsillitis caused by Vincent's organism (*Fusobacterium plauti-vincenti*).

tonsilloadenoidectomy (ton'sil-o-ad'ē-noi-dek'to-me) excision of palatine tonsils and adenoids.

tonsillohemisporosis (ton'si-lo-hem'i-spo-ro'sis) infection of the tonsil with *Hemispora*.

tonsillolith (ton-sil'o-lith) [tonsil + Gr. *lithos* stone] a concretion or calculus in a tonsil.

tonsillomoniliasis (ton-sil'o-mo-ni-li'ah-sis) infection of the tonsil with *Monilia* (*Candida*).

tonsillomycosis (ton-sil'o-mi-ko'sis) any mycotic infection of the tonsils.

tonsillo-oidiosis (ton-sil'o-o-id'e-o'sis) infection of the tonsil with *Oidium* (*Candida*).

tonsillopathy (ton'si-lop'ah-the) [tonsil + Gr. *pathos* disease] any disease of the tonsil.

tonsilloprive (ton'si-lo-priv) [tonsil + L. *privare* to deprive] having the tonsils removed; due to removal or absence of the tonsils.

tonsilloscopy (ton'si-lo'sko-pe) diagnostic inspection of the tonsils.

tonsillotome (ton-sil'o-tōm) a knife used in tonsillotomy.

thymopoietin (tri'mo-poi'ē-tin) a polypeptide hormone secreted by the thymus, which induces differentiation of thymocytes and impairs postsynaptic neuromuscular transmission.

tonsillotomy (ton'si-lot'o-me) [L. *tonsilla* tonsil + Gr. *tomē* a cutting] incision of a tonsil; the surgical removal of a part of a tonsil.

tonsillotyphoid (ton'si-lo-ti'foid) pharyngotyphoid.

tonsolith (ton'so-lith) tonsillolith.

tonus (to'nus) [L.; Gr. *tonos*] the slight, continuous contraction of muscle, which in skeletal muscles aids in the maintenance of posture and in the return of blood to the heart. See *tone*. **acerebral t.**, tonic contraction of muscles after removal of the cerebrum. **chemical t.**, the state of slight but continuous chemical activity in muscles when at rest. **myogenic t.**, tonic contraction of muscle dependent upon some property of the muscle itself or of its intrinsic nerve cells. **neurogenic t.**, tonic contraction of muscle due to stimulation received through the nervous system.

tooth (tōōth), pl. *teeth*. One of a set of small hard structures in the jaws used for mastication of food (dens, pl. *dentes* [NA]), or a similar structure in various organisms other than man in the animal or plant kingdom. In man, there are two sets of teeth; the *deciduous teeth* and the *permanent teeth*. Each tooth has two main sections, a *crown* and a *root* or roots; the two divisions are further divided into crown, cervix (or neck), root, and apex. Clinical landmarks include the coronal portion, the cervical portion, the

Schematic cross section of an anterior and a posterior tooth in upper jaw. **Left**, Anterior tooth: A, apex; AF, apical foramen; SC, supplementary canal; C, cementum; PM, periodontal membrane; B, bone; PC, pulp canal; G, gingiva; GC, gingival sulcus; GM, gingival margin; PCH, pulp chamber; D, dentin; E, enamel; CR, crown; R, root. **Right**, Posterior tooth: A, apex; PC, pulp canal; PCH, pulp chamber; PH, pulp horn; F, fissure; CU, cusp; CEJ, cemento-enamel junction; BI, bifurcation of roots. (Wheeler.)

radicular portion and the apical portion. The tooth is solid except for a *pulp cavity* centered within it. The major portion of the tooth is made up of *dentin* or ivory. A layer of *enamel*, a very hard inorganic substance, covers the crown portion of the tooth, mostly in evidence above the gum line, and a thin layer of *cementum* covers the root portion set in the jaw bones. Cementum (crusta petrosa) is true bone. The *pulp cavity* may be divided into two portions: the *pulp chamber*, mostly within the crown, and the *pulp canal* traversing the interior of the root, ending in a constricted opening at the root apex. There is at least one pulp canal in each root even when the tooth has multiple roots. The pulp cavity contains the *dental pulp*, a soft tissue containing connective tissue, blood vessels, and nerves. The *eruption* or "cutting" of the teeth follows generally an orderly schedule as follows: *Deciduous teeth*—first incisors, 6 to 8 months; second incisors, 7 to 9 months; first molars, 12 to 14 months; canines, 16 to 18 months; second molars, 20 to 24 months. *Permanent teeth*—first molars, 6 to 7 years; first incisors, 6 to 8 years; second incisors, 7 to 9 years; premolars, 10 to 12 years; canines, 9 to 12 years; second molars, 11 to 13 years; third molars, 17 to 21 years. **accessional teeth**, the permanent molars, so called because they do not supplant any deciduous predecessors in the dental arch. Cf. *succedaneous teeth*. **acrylic resin t.**, an artificial tooth made of acrylic resin. **anatomic teeth**, a term applied to artificial teeth in which the cusps and ridges of the natural teeth are reproduced on the occlusal surface. **ankylosed t.**, a primary tooth, with or without permanent successors, which remains submerged below the occlusal level of the dentition. **anterior teeth**, the three teeth on either side in each jaw situated closest to the midline of the dental arch, including the incisor and canine (cuspid) teeth. **artificial t.**, a tooth made of porcelain or other synthetic compound in imitation of a natural tooth; see also *denture*. **auditory teeth of Huschke**, *dentes acustici*. **t. of axis**, dens axis. **bicuspid teeth**, premolar teeth (*dentes premolares* [NA]). **brown opalescent teeth, hereditary**, see *amelogenesis imperfecta*. **buccal teeth**, posterior teeth. **canine teeth**, the four teeth, one on either side in each jaw, immediately lateral to the lateral, or second, incisors; they have a long conical crown and the longest, most powerful root of all the teeth. Called also *dentes canini* [NA]. **cheek teeth**, posterior teeth. **cheoplastic teeth**, artificial teeth attached to a cheoplastic base without pins. **connate t.**, geminate t. **corner t.**, the third incisor on either side of each jaw in the horse. **cross-bite teeth**, posterior teeth designed to permit positioning of the modified buccal cusps of the upper teeth in the fossae of the lower teeth. **cross-pin teeth**, artificial teeth in which the pins are inserted horizontally. **cuspid teeth**, canine teeth (*dentes canini* [NA]). **cusplless teeth**, artificial teeth designed without cusps on the occlusal surface. **deciduous teeth**, the teeth of the first dentition, which are shed and followed, in the dental arch, by the permanent teeth. The 20 deciduous teeth, 10 in each jaw, include 4 incisor, 2 canine, and 4 molar teeth. Called also *dentes decidui* [NA], and *milk*, or *primary*, or *temporary teeth*. **diatoric teeth**, artificial teeth with holes in their bases into which the denture base material flows and, when processed, attaches the teeth to the base. **dummy t.**, pontic. **embedded t.**, an unerupted tooth, usually one completely covered by bone. **t. of epistropheus**, dens axis. **eye t.**, colloquial term for a canine tooth of the upper jaw. **Fournier teeth**, Moon's teeth.

fused teeth, the fusion, early in odontogenesis, of two normally separate tooth germs, the completeness of the fusion depending on the stage at which the union took place. **geminate t.**, a tooth with a single root and root canal, but with two completely or incompletely separated crowns, resulting from invagination of a single tooth germ, causing incomplete formation of two teeth. **Goslee t.**, an interchangeable tooth attached to a metal base. **hag teeth**, upper medial incisors that are widely separated. **hair teeth**, *dentes acustici*. **Horner's teeth**, incisor teeth that are horizontally grooved owing to a deficiency of enamel. **Hutchinson's teeth**, notched and narrow-edged permanent incisors; regarded as a sign of congenital syphilis, but not always of such origin. **impacted t.**, a tooth so placed in the jaw that it is unable to erupt, or unable to attain its normal position in occlusion. **incisor teeth**, the four front teeth, two on each side of the midline in each jaw; the cutting teeth, each with one long root. Called also *dentes incisivi* [NA]. See *incisor*. **labial teeth**, anterior teeth. **lion's t.** [Fr. *dent-de-lion* dandelion], *Taraxacum officinale* Weber. (Compositae). **malacotic teeth**, teeth that are soft in structure and are abnormally susceptible to caries. **malposed t.**, a tooth out of its normal position. **mandibular teeth**, the teeth of the mandible, or lower jaw. **maxillary teeth**, the teeth of the maxilla, or upper jaw. **metal insert teeth**, artificial teeth containing metal in the occlusal surface. **milk teeth**, deciduous teeth (*dentes decidui* [NA]). **molar teeth** [L. *molaris* to do with grinding], the most posterior teeth on either side in each jaw, totaling 8 in the

Typical Deciduous Teeth

deciduous dentition (2 on each side, upper and lower), and usually 12 in the permanent dentition (3 on each side, upper and lower). They are the grinding teeth, having large crowns with broad chewing surfaces. The upper molars characteristically have 4 major cusps and three roots. The lower first molars characteristically have 5 cusps, and the remaining lower molars 4 cusps. Normally all lower molars have two roots. The third molars ("wisdom teeth") are often malformed, but when developed normally their crown and root form corresponds in general with neighboring molars in the same jaw. Called also *dentes molars* [NA]. **Moon's teeth**, small, domed first molars observed in patients with congenital syphilis. **morsal teeth** [L. *morsus* a seizing], anterior teeth. **mottled teeth**, teeth whose enamel is marked with discoloration. **mulberry t.**, mulberry molar. **natal t.**, a prematurely erupted deciduous tooth, visible in the jaw at birth. **neonatal t.**, a primary tooth that erupts during the neonatal period. **nonanatomic teeth**, a term applied to artificial teeth the occlusal surfaces of which are especially designed on the basis of engineering concepts, without regard to the features of natural teeth. **peg t.**, a tooth whose sides converge or taper together incisally, instead of being parallel or diverging mesially and distally; a condition frequently observed in the maxillary lateral incisor. **permanent teeth**, the teeth of the second dentition; the 32 permanent teeth, 16 in each jaw. They

Typical Permanent Teeth

include 4 incisor, 2 canine, 4 premolar, and 6 molar teeth in each jaw. Called also *dentes permanentes* [NA]. **pink t. of Mummery**, internal resorption of a tooth, so called because of the pink color given the crown by the hyperplastic, vascular pulp filling the area formerly occupied by the resorbed dentin. **pinless teeth**, diatoric teeth. **plastic t.**, an artificial tooth made of synthetic resin. **posterior teeth**, the teeth on either side in each jaw, distal to the canine teeth, including the premolar (bicuspid) and molar teeth; called also *buccal* or *cheek teeth*. **predeciduous t.**, a term applied to a hornified epithelial structure, without roots, occurring on the gingiva over the crest of the ridge of the alveolar process before the eruption of deciduous teeth. **premilk t.**, 1. natal t. 2. neonatal t. **premolar teeth**, the eight permanent teeth, two on either side in each jaw, between the canine teeth and the molars; the upper premolars have two cusps (bicuspid), but the lower have from one to three. They are succedaneous to the deciduous molar teeth. Called also *dentes premolares* [NA], and *bicuspid teeth*. In zoology, those teeth which succeed the deciduous molars regardless of the number to be succeeded. **primary teeth**, deciduous teeth. **pulpless t.**, a tooth from which the pulp has been extirpated. **rake teeth**, teeth that are widely separated. **rootless teeth**, dentin dysplasia. **sclerotic teeth**, teeth that are hard in structure and resistant to caries. **screw-driver teeth**, Hutchinson's teeth.

shell t., a tooth in which the enamel appears essentially normal, the dentin is extremely thin, and the pulp chamber is enlarged. **snaggle t.**, a tooth out of proper line with the others. **stomach t.**, a canine tooth of the lower jaw, or mandible. **straight-pin teeth**, artificial teeth in which the pins are inserted vertically. **"submerged" t.**, a deciduous tooth, most commonly a mandibular second molar, which has undergone a variable degree of root resorption and then become ankylosed to the bone, preventing its exfoliation and subsequent replacement by a permanent tooth. It appears submerged in relation to the adjacent erupted permanent teeth. **succedaneous teeth**, **successional teeth**, the permanent teeth that have deciduous predecessors in the dental arch. Cf. *accessional teeth*. **superior teeth**, the teeth of the upper jaw, or maxilla. **supernumerary teeth**, **supplemental teeth** natural teeth in excess of the number normally present in the jaw. **temporary teeth**, deciduous teeth (*dentes decidui* [NA]). **tube teeth**, artificial teeth having a vertical, cylindrical aperture from the center of the base up into the body of the tooth, into which a pin may be placed or cast for attachment of the tooth to the denture base. **Turner's t.**, a permanent tooth, usually a mandibular premolar, with hypoplasia of enamel, resulting from spread to the tooth germ of periapical infection and inflammation involving a primary tooth. **vital teeth**, teeth to which the nerve and vascular supply is intact. **wandering t.**, a tooth that moves from its normal position in the dental arch. **wisdom t.**, the third molar tooth, the tooth most distal from the median line on either side in each jaw, so called because it is the last of the permanent dentition to erupt, usually at the age of 17 to 21 years. Called also *dens serotinus* [NA]. **wolf t.**, a vestigial first premolar tooth sometimes present in the jaw of a horse. **zero degree teeth**, artificial teeth which have no cusp angles in relation to the horizontal on their occlusal surfaces.

Tooth's atrophy, disease, type (tooths) [Howard Henry Tooth, English physician, 1856–1925] progressive neuropathic (peroneal) muscular atrophy.

tooth-borne (tōōth/born) supported entirely by the teeth; said of a prosthesis or part of a prosthesis entirely supported by the abutment teeth.

topagnosia (top'ag-no'ze-ah) 1. loss of touch localization. 2. loss of ability to recognize familiar surroundings.

topagnosis (top'ag-no'sis) [Gr. *topos* place + a neg. + *gnōsis* recognition] loss of touch localization.

topalgia (to-pal'je-ah) [Gr. *topos* place + *algos* pain + *-ia*] fixed or localized pain; seen in neurasthenia.

topectomy (to-pek'to-me) [*topo-* + Gr. *ektomē* excision] ablation of a small and specific area of the frontal cortex in the treatment of mental illness.

topesthesia (top'es-the'ze-ah) [Gr. *topos* place + *aisthēsis* perception + *-ia*] the power of localizing a tactile sensation.

Töpfer's test (tep'ferz) [Alfred Edouard Töpfer, German physician, born 1858] see under tests.

tophaceous (to-fa'shus) [L. *tophaceus*: *tophus* porous stone] hard or gritty; of the nature of or characterized by tophi.

tophi (to'fi) [L.] plural of *tophus*.

topholipoma (tof'o-li-po'mah) a lipoma containing tophi.

tophus (to'fus), pl. *tophi* [L. "porous stone"] a chalky deposit of sodium urate occurring in gout; tophi form most often around joints in cartilage, bone, bursae, and subcutaneous tissue and in the external ear, producing a chronic, foreign-body inflammatory response. **auricular t.**, a tophus on the ear. **dental t.**, dental calculus. **t. syphiliticus**, a syphilitic node.

topical (top'e-kal) [Gr. *topikos*] pertaining to a particular surface area, as a topical anti-infective applied to a certain area of the skin and affecting only the area to which it is applied.

Topicort (top'i-kort) trademark for a preparation of desoxymetasonone.

Topicycline (top'i-si'klēn) trademark for a topical preparation of tetracycline hydrochloride; used in treatment of acne.

Topinard's angle, line (top'e-nārz') [Paul Topinard, French physician and anthropologist, 1830–1911] see *ophryospinal angle*, under *angle*, and see under *line*.

topo- (top'o) [Gr. *topos* place] a combining form meaning place.

topoalgia (top'o-al'je-ah) topoalgia.

topoanesthesia (top'o-an'es-the'ze-ah) loss of power to localize a tactile sensation.

topochemistry (top'o-kem'is-tre) the chemical composition at specific sites of a structure, as at the surface membrane of a cell.

topodyesthesia (top'o-dis'es-the'ze-ah) localized dyesthesia.

topognosis (top'og-no'sis) [*topo-* + Gr. *gnōsis* recognition] topesthesia.

topographic (top'o-graf'ik) describing or pertaining to special regions.

topographical (top'o-graf'i-kal) pertaining to topography.

topography (to-pog'rah-fe) [*topo-* + Gr. *graphein* to write] the description of an anatomical region or of a special part.

topology (to-pol'o-je) [*topo-* + *-logy*] the relation between the presenting part of the fetus and the birth canal.

toponarcosis (top'o-o-nar-ko'sis) [*topo-* + Gr. *narkōsis* benumbing] localized anesthesia.

toponym (top'o-nim) the name of a region as distinguished from an organ.

toponymy (to-pon'i-me) [*topo-* + Gr. *onoma* name] terminology pertaining to the regions of the body.

topoparesthesia (top'o-par'es-the'ze-ah) localized paresthesia.

topophylaxis (top'o-fi-lak'sis) the application of a constricting band, intended to confine the protection following arsphenamine injections to the limb in which the injection is made.

topothermesthiometer (top'o-therm'es-the-ze-om'ē-ter) [*topo-* + Gr. *thermē* heat + *aisthēsis* perception + *metron* measure] an apparatus for measuring the local temperature sense.

topovaccinotherapy (top'o-vak'si-no-ther'ah-pe) artificial local immunization.

Topsyn (top'sin) trademark for a preparation of fluocinonide.

topterone (top'tē-rōn) chemical name: 17β-hydroxy-17-propyl-androst-4-en-one; an antiestrogen, C₂₂H₃₄O₂.

torcular (tor'ku-lar) [L. "wine-press"] a hollow, or expanded area. **t. Heroph'ili**, confluens sinuum.

Torecan (tor'ē-kān) trademark for preparations of thiethylperazine.

Torek operation (to'rek) [Franz J. A. *Torek*, New York surgeon (born in Breslau), 1861-1938] see under *operation*.

tori (to'ri) [L.] plural of *torus*.

toric (to'rik) pertaining to or resembling a torus.

tormina (tor'mī-nah) [L.] colic, def. 2.

torminal (tor'mī-nal) pertaining to or characterized by griping pain, or colic.

Tornwaldt's (Thornwaldt's) bursa, bursitis (disease) (torn'vahlt's) [Gustav Ludwig *Tornwaldt*, 1843-1910] see *bursa pharyngea*, and see under *bursitis*.

torose, torous (to'rōs; to'rus) [L. *torosus* muscular, brawny] bulging or knobby.

torpent (tor'pent) [L. *torpere* to be sluggish] 1. inactive; in abeyance. 2. an agent that reduces irritation.

torpid (tor'pid) [L. *torpidus* numb, sluggish] not acting with normal vigor and facility.

torpidity (tor-pid'i-te) sluggishness; inactivity, slowness.

torpor (tor'por) [L.] lack of response to normal or ordinary stimuli. **t. ret'inae**, a condition in which the retina is excited to action only by stimuli of considerable luminous power.

torque (tork) [L. *torquere* to twist] a rotary force; in dentistry, the rotation of a tooth on its long axis, especially the movement of the apical portions of the teeth by use of orthodontic appliances.

torquing (tork'ing) the twisting of a tooth into position, as in the correction of malposition.

torr (tor) [after Evangelista *Torricelli*, Italian mathematician, 1608-1647] a unit of pressure equal to $\frac{760}{1000}$ of normal atmospheric pressure, or to the pressure necessary to support a column of mercury 1 mm. high at 0° C. and standard gravity.

torrefaction (tor'ē-fak'shun) [L. *torrefactio*] the act of roasting or parching.

torrefy (tor'e-fi) [L. *torrefacere*] to parch, roast, or dry by the aid of heat.

torricellian (to're-chel'e-an) named for Evangelista *Torricelli*, Italian mathematician, 1608-1647; see under *vacuum*.

torsiometer (tor'se-om'ē-ter) [L. *torsio* twist + *metrum* measure] a form of clinoscope for measuring the amount of rotation of the eyeball on the visual axis.

torsion (tor'shun) [L. *torsio*; *torquere* to twist] 1. the act of twisting; the condition of being twisted. In dentistry, the condition of a tooth when it is turned on its long axis. 2. in ophthalmology, any rotation of the vertical corneal meridians. **negative t.**, rotation in a counterclockwise direction. **positive t.**, rotation in a clockwise direction.

torsionometer (tor'shun-om'ē-ter) [*torsion* + Gr. *metron* measure] an apparatus for estimating the degree of rotation of the spinal column.

torsive (tor'siv) twisted.

torsiversion (tor'si-ver'zhun) the turning or rotation of a tooth on its long axis out of its normal position.

torso (tor'so) the trunk without the head or extremities.

torsocclusion (tor'so-kloo'zhun) [L. *torquere* to twist + *cludere* to shut] 1. acupressure combined with pressure of the bleeding vessel. 2. torsiversion.

torso-occlusion (tor'so-ō-kloo'zhun) torsiversion.

torticollar (tor'ti-kol'ar) pertaining to or affected with torticollis.

torticollis (tor'ti-kol'is) [L. *tortus* twisted + *collum* neck] wry-neck; a contracted state of the cervical muscles, producing twisting

of the neck and an unnatural position of the head. **congenital t.**, torticollis due to injury to the sternocleidomastoid muscle on one side at the time of birth and its transformation into a fibrous cord which cannot lengthen with the growing neck. **dermatogenic t.**, torticollis caused by contraction of the skin of the neck. **fixed t.**, an unnatural position of the head due to actual and persistent organic muscular shortening. **hysteric t.**, **hysterical t.**, torticollis due to hysteric contracture. **intermittent t.**, spasmodic **t. labyrinthine t.**, torticollis due to irritation of the semicircular canals on one side. **mental t.**, a form of tic, or habit spasm, in which there is spasmodic contraction of the neck muscles, producing deviation of the head. This deviation usually ceases on the patient lying down, or it may be controlled by slight pressure. **myogenic t.**, a transient condition due to muscular contraction in rheumatism, and to cold. **neurogenic t.**, torticollis due to pressure or irritation of the accessory nerve. **ocular t.**, torticollis due to a high degree of astigmatism or to ocular muscle palsy. **reflex t.**, torticollis caused by inflammation or suppuration in the neck, enlarged cervical lymph nodes, or tumor in the tonsil, neck, or pharynx. **rheumatoid t.**, that which is due to rheumatism, chiefly of the sternomastoid and adjacent muscles. **spasmodic t.**, that which is due to spasm of certain muscles, occurring intermittently. **spurious t.**, twisting or stiffness of the neck due to caries of the cervical vertebrae. **symptomatic t.**, stiffness of the neck due to rheumatism.

tortipelvis (tor'ti-pel'vis) dystonia musculorum deformans.

tortua (tor'tu-ah) [L.] agony; torture. **t. fa'cies**, Avicenna's name for trigeminal neuralgia.

tortuous (tor'choo-us) twisted; full of turns and twists.

Torula (tor'u-lah) [L. "roll"] former name for *Cryptococcus*. **T. capsula'tus**, **T. histolyt'ica**, *Cryptococcus neoformans*.

toruli (tor'u-li) [L.] plural of *torulus*.

torulin (tor'u-lin) thiamine.

toruloma (tor-u-lo'mah) a tumor or nodule which is one of the lesions of cryptococcosis (torulosis).

Torulopsis (tor'u-lop'sis) a genus of imperfect fungi of the family Cryptococcaceae, order Moniliales, which are morphologically similar to *Cryptococcus* but do not have a capsule, and are normal inhabitants of the respiratory and gastrointestinal tracts and urogenital region. **T. glabra'ta**, an opportunistic organism, an etiologic agent of torulopsiosis and other infections, such as meningitis, pneumonia, cystitis, and fungemia; it is part of the normal flora of the mouth, gut, and urinary tract. **T. histolyt'ica**, *Cryptococcus neoformans*. **T. pintolope'sii**, a species similar to *T. glabrata*, found in the mouse alimentary tract.

torulopsiosis (tor'u-lop'so-sis) an infection of the tissues resembling histoplasmosis, caused by *Torulopsis glabrata*.

torulosis (tor'u-lo'sis) cryptococcosis.

torulus (tor'u-lus), pl. *tor'uli* [L., dim. of *torus*] a small elevation; a papilla. **tor'uli tac'tiles** [NA], the small elevations on the skin of the palm and the sole, richly supplied with sensory nerve endings; called also *tactile elevations*.

torus (to'rus), pl. *to'ri* [L. "a round swelling," "protuberance"] 1. a bulging projection, a swelling; [NA] a general term for such a protuberance. 2. a solid developed by the revolution of a circle about any axis other than its diameter. **t. fronta'lis**, a protuberance in the middle line of the root of the nose, on the external surface of the skull. **t. levato'rius** [NA], the mucosal fold covering the levator veli palatini muscle in the lateral wall of the nasal part of the pharynx. **t. mandibula'ris**, an outgrowth of bone found on the lingual surface of the mandible, above the mylohyoid line and usually opposite the premolar tooth; commonly bilateral, and single or multiple in type. **t. occipita'lis**, a rounded edge occasionally seen on the occipital bone in the region of the superior nuchal line. **t. palati'nus** [NA], a bony protuberance sometimes found on the hard palate at the junction of the intermaxillary and transverse palatine sutures. **t. tuba'rius** [NA], the projecting posterior lip of the pharyngeal opening of the auditory tube. **t. ureter'icus**, interureteric ridge (plica interureterica [NA]).

tosifen (to'si-fen) chemical name: (S)-4-methyl-N-[[[1-methyl-2-phenylethyl]amino]carbonyl]benzenesulfonamide; an antiangiinal, C₁₇H₂₀N₂O₃S.

tosylate (to'si-lāt) USAN contraction for *p*-toluenesulfonate.

Totacillin (to'tah-sil'in) trademark for preparations of ampicillin.

Toti's operation (to'tēz) [Addeo *Toti*, Italian ophthalmologist, born 1861] dacryocystorhinostomy.

totipotency (to'te-po'ten-se) [L. *totus* all + *potentia* power] the ability of a part to develop in any manner, or of a cell to develop into any type of cell.

totipotent (to-tip'o-ten) totipotential.

totipotential (to'te-po-ten'shal) [L. *totus* all + *potentia* power] characterized by ability to develop in any direction; said of cells which can give rise to cells of all orders, i.e., to the complete individual. Cf. *unipotent*.

totipotentiality (to'ti-po-ten/'she-al'i-te) the ability to differentiate along any line or into any type of cell.

touch (tuch) [L. *tactus*] 1. the sense by which contact with objects gives evidence as to certain of their qualities. 2. palpation or exploration with the finger. **abdominal t.**, digital palpation of the abdomen. **double t.**, digital examination of the rectum and vagina at the same time. **rectal t.**, exploration of the rectum with the finger. **royal t.**, the touching or tapping of a person with scrofula; once practiced by the kings of England and France as a supposedly curative measure; called also *adenochirapsology*. **vaginal t.**, digital exploration of the vagina. **vesical t.**, digital examination of the bladder.

tour (toor) [Fr.] turn. **t. de maître** (dē mātr) [Fr. "master's turn"], a method of passing the sound or catheter into the male bladder or into the uterus. It is first introduced in a position with its stem parallel to the thighs and between them and its convexity upward, and then, by a sweep, is brought to the ordinary position and carried on into the bladder. The motion is reversed in the uterus.

Tourette's syndrome (disease) (too-retz') see *Gilles de la Tourette* (for biographical note) and see *Gilles de la Tourette syndrome, under syndrome*.

tournesol (tur'nē-sol) litmus.

tourniquet (toor'ni-ket) [Fr.] an instrument for the compression of a blood vessel by application around an extremity to control the circulation and prevent the flow of blood to or from the distal area. Tourniquets are of various kinds, named chiefly for their inventors. **automatic rotating t.**, a system consisting of a motor, air compressor, and four blood pressure cuffs for application to the extremities; the cuffs are inflated and deflated in series and in sequence for treatment of acute pulmonary edema. **Es-march's t.**, a tourniquet consisting of a piece of strong, flat rubber bandage, which, after the blood has been forced from the limb by gravity or compression, is wound about the proximal part of the limb to arrest the circulation. **garrote t.**, Spanish windlass. **pneumatic t.**, a narrow rubber bag to be wound around a limb, pressure being applied by pumping air into the inflatable cuff. **scalp t.**, a tourniquet placed around the scalp with enough pressure to occlude the superficial blood vessels and thereby to lessen the risk of drug-induced alopecia. **Spanish t.**, **torcular t.**, Spanish windlass.

tousey (tow'ze) [Sinclair Tousey, New York radiologist, 1864-1937] a unit of roentgen-ray power; being the radiance which will produce on a photographic film an effect equal to that produced by a one-candlepower incandescent electric light.

Touton giant cell (toot'on) [Karl Touton, German dermatologist, born 1858] see under *cell*.

towelette (tow'el-et') a small towel.

toxalbumin (tok'sal-bu'mik) (obs.) relating to or caused by toxalbumin.

toxalbumin (tok'sal-bu'min) (obs.) any poisonous albumin, including those found in plant juices (abrin, ricin, phallin), serpent venoms, etc. See *toxin*.

toxanemia (tok'sah-ne'me-ah) anemia due to a poison.

toxaphene (toks'ah-fen) a chlorinated hydrocarbon, C₁₀H₁₀Cl₈, used as an agricultural insecticide.

Toxascaris (tok-sas'kah-ris) a genus of parasitic nematodes of the superfamily Ascaridoidea. **T. leoni'na**, a species found commonly in lions, tigers, and other large Felidae; found also in dogs and cats, but usually only in older animals. Its larvae differ from those of *Toxocara canis* and *Toxocara cati* by not passing through the lungs of the infected animal.

toxemia (tok-se'me-ah) [toxin + Gr. *haima* blood + -ia] 1. the condition resulting from the spread of bacterial products (toxins) by the bloodstream. 2. a condition resulting from metabolic disturbances, e.g., toxemia of pregnancy. **alimentary t.**, toxemia due to absorption from the alimentary canal of chemical poisons generated therein; a form of autointoxication. **eclamptic t.**, **eclampsia**, a form of autointoxication. **hydatic t.**, toxemia with urticaria caused by hydatid fluid which has escaped into the peritoneal cavity. **preeclamptic t.**, see *preeclampsia*. **t. of pregnancy**, a group of pathologic conditions, essentially metabolic disturbances, occurring in pregnant women, and manifested by preeclampsia and fully developed eclampsia. **pregnancy t. in ewes**, an acute disorder leading to impaired nervous function, coma, and death, occurring during the last few weeks of pregnancy in ewes that are typically carrying twins, triplets, or a particularly large single lamb; the principal predisposing cause is undernutrition association with stress. Called also *pregnancy disease*, *twin-lamb disease*, and *lambing paralysis*.

toxicemic (toks-e'mik) pertaining to or caused by toxemia.

toxenzyme (toks-en'zim) any poisonous enzyme.

toxic (tok'sik) pertaining to, due to, or of the nature of a poison or toxin; manifesting the symptoms of severe infection.

toxicant (toks'i-kant) [L. *toxicans* poisoning] 1. poisonous. 2. a poisonous agent.

toxication (tok'si-ka'shun) poisoning.

toxicemia (toks'i-se'me-ah) toxemia.

toxicide (tok'si-sid) [toxin + L. *caedere* to kill] a drug capable of overcoming toxic agents.

toxicity (tok-sis'i-te) the quality of being poisonous, especially the degree of virulence of a toxic microbe or of a poison. **O₂ t.**, **oxygen t.**, serious, sometimes irreversible, damage to the pulmonary capillary endothelium associated with breathing high partial pressures of oxygen for prolonged periods. Called also *O₂* or *oxygen poisoning*.

toxico- [Gr. *toxikon* poison] a combining form meaning poison-ous or denoting relationship to poison.

toxicodendrol (tok'si-ko-den'drol) a poisonous, nonvolatile oil found in certain plants of the genus *Rhus* (*Toxicodendron*).

Toxicodendron (tok'si-ko-den'dron) [toxico- + Gr. *dendron* tree] *Rhus*.

toxicogenic (tok'si-ko-jen'ik) [toxico- + Gr. *gennan* to produce] producing or elaborating toxins.

toxicohemia (tok'si-ko-he'me-ah) toxemia.

toxicoid (tok'si-koid) [toxico- + Gr. *eidos* form] resembling a poison.

toxicologic (tok'si-ko-loj'ik) pertaining to toxicology.

toxicologist (tok'si-kol'o-jist) an individual who specializes in toxicology.

toxicology (tok'si-kol'o-je) the sum of what is known regarding poisons; the scientific study of poisons, their actions, their detection, and the treatment of the conditions produced by them.

toxicomania (tok'si-ko-ma'ne-ah) [toxico- + Gr. *mania* madness] an intense desire for poisons, narcotic drugs, or intoxicants.

toxicomaniac (tok'si-ko-ma'ne-ak) a person affected with toxicomania.

toxicopathic (tok'si-ko-path'ik) pertaining to toxicopathy.

toxicopathy (tok'si-kop'ah-the) [toxico- + Gr. *pathos* disease] any disease induced by a poison.

toxicopectic (tok'si-ko-pek'tik) pertaining to, characterized by, or promoting toxicopexis.

toxicopexic (tok'si-ko-pek'sik) toxicopectic.

toxicopexis (tok'si-ko-pek'sis) [toxico- + Gr. *pēxis* fixation] the fixing or neutralizing of a poison in the body.

toxicopexy (tok'si-ko-pek'se) toxicopexis.

toxicophidia (tok'si-ko-fid'e-ah) [toxico- + Gr. *ophis* snake] thanatophidia.

toxicophobia (tok'si-ko-fo'be-ah) [toxico- + Gr. *phobein* to be affrighted by] morbid dread of poisons.

toxicosis (tok'si-ko'sis) [Gr. *toxikon* poison + -osis] any disease condition due to poisoning. **alimentary t.**, sitotoxism, or food poisoning. **endogenous t.**, autointoxication. **exogenic t.**, poisoning by the ingestion of toxic material, as in the food. See *food poisoning, under poisoning*. **gestational t.**, gestosis. **hemorrhagic capillary t.**, Frank's name for a hemorrhagic condition attributed to capillary weakening from some toxic action; see *Henoch's purpura, under purpura*. **proteinogenous t.**, an acute and fatal intoxication which appears in white mice which are fed an exclusive diet of various proteins. **retention t.**, that which is due to the nonexcretion of noxious waste products.

toxicosozin (tok'si-ko-so'zin) a defensive protein which counteracts a toxin.

toxiciferous (tok-sif'er-us) [toxin + L. *ferre* to bear] conveying or producing a poison.

toxigenic (tok'si-jen'ik) toxicogenic.

toxigenicity (tok'si-jē-nis'i-te) the disease-producing virulence of a parasite which acts by virtue of a soluble toxin.

toxignomic (toks'ig-nom'ik) [toxin + Gr. *gnōmē* a means of knowing] characteristic of the toxic action of a poison.

toxin (tok'sin) [L. *toxicum* poison, from Gr. *toxikos* of or for the bow] a poison; frequently used to refer specifically to a protein produced by some higher plants, certain animals, and pathogenic bacteria, which is highly toxic for other living organisms. Such substances are differentiated from the simple chemical poisons and the vegetable alkaloids by their high molecular weight and antigenicity. **amanita t.**, a toxin from *Amanita phalloides*. **animal t.**, one produced by an animal; a zootoxin. **bacterial t's**, toxic substance produced by bacteria, including exotoxins, endotoxins, and toxic enzymes. **botulinus t.**, any of the six type-specific, immunologically differentiable exotoxins (types A to F, inclusive), produced by *Clostridium botulinum*. See *botulin*. **Coley's t.**, an unfiltered mixture of cultures of certain bacteria; once used in treatment of inoperable malignant growths. **dermonecrotic t.**, an exotoxin that produces extensive local necrosis on intradermal inoculation; produced primarily by coagulase-positive staphylococci and regarded as identical with δ staphylolysin. **Dick t.**, erythrogenic t. **diphtheria t.**, a protein exotoxin produced by *Corynebacterium diphtheriae* that is primarily responsible for the pathogenesis of diphtheritic infection; it is an enzyme that inactivates transferase II of the mammalian protein-synthesizing system. **diphtheria t., diagnostic** [USP], a sterile solution of the toxic products of *Corynebacterium diphtheriae*; used as a dermal reactivity indicator (Schick test). **diphtheria t., inactivated diagnostic**

[USP], a portion of a manufacturer's lot of diphtheria toxin, inactivated by heat, used simultaneously with the diagnostic toxin of the same lot as a control. **diphtheria t. for Schick test** [USP], a sterile solution of the diluted, standardized toxic products of *Corynebacterium diphtheriae*; used as a dermal reactivity indicator. Called also *diagnostic diphtheria t.* See also *Schick test*, under *tests*. **dysentery t.**, a toxin produced by various species of *Shigella*. That formed by *Shigella dysenteriae* type I (Shiga toxin) is a soluble protein. The toxins produced by other dysentery bacilli are endotoxins, immunologically distinct between species but with a closely similar pharmacological action. **erysipelas t.**, a toxin obtained from cultures of *Streptococcus pyogenes*, the causative agent of erysipelas, which was once used in treatment of malignant growths. **erythrogenic t.**, an exotoxin produced by many, but not all, strains of *Streptococcus pyogenes*, which produces an erythematous reaction on intradermal inoculation in man and to a lesser extent in the rabbit, and is responsible for the scarlatiniform rash of scarlet fever. **extracellular t.**, a toxin excreted by a bacterial cell; an exotoxin. **fatigue t.**, a toxin formed in the body as a result of muscular effort; a kenotoxin. **fugu t.**, tetrodotoxin. **fusarial t.**, any mycotoxin produced by molds of the genus *Fusarium*. **gonococcal t.**, an endotoxin present in the gonococcus, which is extractable in dilute alkali. **intracellular t.**, a toxin developed and retained within the bacterial cell; an endotoxin. **meningococcal t.**, an endotoxin present in the meningococcus, which is extractable in dilute alkali. **necrotizing t.**, dermonecrotic t. **plant t.**, one produced by a plant; a phytotoxin. **Prigge's t.**, a hemolytic, lethal, oxygen-labile, and thermolabile toxin from *Clostridium perfringens*, which probably produces necrosis in high concentrations. **scarlatinal t.**, erythrogenic t. **Shiga t.**, the exotoxin formed by *Shigella dysenteriae* type 1. **soluble t.**, exotoxin. **staphylococcal t.**, a mixture of exotoxins formed by coagulase-positive *Staphylococcus pyogenes* var. *aureus*, including two or more hemotoxins (α , β , and δ hemolysins) having leukocidin activity (α staphylolysin) and dermonecrotic activity (δ staphylolysin), staphylocoagulase, staphylokinase, and enterotoxin. **streptococcal t.**, a mixture of exotoxins formed by *Streptococcus pyogenes*, including the hemotoxins (streptolysin O and streptolysin S), streptokinase, hyaluronidase, and erythrogenic toxin. **tetanus t.**, the potent exotoxin produced by *Clostridium tetani*, consisting of two components, one a neurotoxin (*tetanospasmin*) and the other a hemolysin (*tetanolysin*). **true t.**, exotoxin.

toxin-antitoxin (tok'sin-an'ti-tok'sin) a nearly neutral mixture of diphtheria toxin with its antitoxin. Such a mixture is used for immunization against diphtheria, the mixture being in such proportion that the diphtheria toxin has 85 per cent of its toxicity neutralized by the antitoxin. Called also *T. A. T.* and *T.-A. mixture*.

toxemia (tok'si-ne'me-ah) [*toxin* + Gr. *haima* blood + *-ia*] poisoning of the blood.

toxology (tok'sin-ol'o-je) the science dealing with the toxins produced by certain higher plants and animals and by pathogenic bacteria.

toxiosis (tok'si-no'sis) any disease condition due to the presence of a toxin.

toximum (tok-si'num) [L.] toxin.

toxipathy (tok-sip'ah-the) toxicosis.

toxiphobia (tok'si-fo'be-ah) toxicophobia.

toxiphrenia (tok'si-fre'ne-ah) [*toxin* + Gr. *phrēn* mind] schizophrenia occurring with a toxic, delirious state.

toxiresin (tok'si-rez'in) a poisonous resinous substance obtainable from digitoxin.

toxisterol (tok-sis'ter-ol) [*toxin* + *sterol*] a poisonous isomer of ergosterol, produced by ultraviolet radiation of the latter.

toxitabellae (tok'si-tah-bel'e) poison tablets.

tox- [Gr. *toxikon*; L. *toxinum*] a combining form denoting relationship to a toxin, or poison.

Toxocara (tok'so-ka'rah) a genus of nematode worms of the superfamily Ascaridoidea. **T. ca'nis**, a nematode worm parasitic in the intestine of dogs; migrating larvae may cause lesions of the lung, liver, kidney, brain, and eye. In human infections, the larvae do not complete their cycle but cause visceral larva migrans (see under *larva*). **T. ca'ti**, a species closely related to *T. canis* but commonly found in cats; it has also been reported from man, both as an accidental intestinal parasite and as causing visceral larva migrans (see under *larva*). Called also *T. mystax*. **T. mys'tax**, *T. cati*.

toxocaral (tok'so-kār'al) pertaining to or caused by *Toxocara*.

toxocariasis (tok'so-kār-i'ah-sis) infection by roundworms of the genus *Toxocara*. **human t.**, visceral larva migrans (see under *larva*).

toxogen (tok'so-jen) something that produces a poison.

toxogenin (toks-ōj'e-nin) [*toxo-* + Gr. *gennan* to produce] a substance supposed to develop in the blood under the influence of the action of an injected antigen, which, though itself inactive, on the injection of more antigen produces anaphylaxis.

toxoglobulin (tok'so-glob'u-lin) a poisonous globulin.

toxoid (tok'soid) [*toxo-* + Gr. *eidos* form] a modified bacterial exotoxin that has lost toxicity but retains the properties of

combining with, or stimulating the formation of, antitoxin. **adsorbed t.**, a bacterial toxoid adsorbed on aluminum hydroxide or aluminum phosphate, slowing its absorption in the body and providing a prolonged antigenic stimulus. **alum t.**, alum precipitated t. **alum precipitated t.**, (A.P.T.), formal toxoid precipitated with potassium alum as an adjuvant and used as an active immunizing agent. **diphtheria t.** [USP], a sterile solution of formaldehyde-treated products of the growth of *Corynebacterium diphtheriae*, used as an active immunizing agent; called also *diphtheria vaccine*, *diphtheria anatoxin*, and *diphtherotoxin*. **diphtheria t. adsorbed** [USP], a sterile suspension of diphtheria toxoid precipitated or adsorbed by the addition of alum, aluminum hydroxide, or aluminum phosphate to a formaldehyde-treated solution of the products of growth of *Corynebacterium diphtheriae*; used as an active immunizing agent. **diphtheria and tetanus t's** [USP], a sterile solution prepared by mixing suitable quantities of fluid diphtheria toxoid and fluid tetanus toxoid. The potency and the proportions of the toxoids are such as to provide an active immunizing dose of each toxoid in the total dosage prescribed on the label. **diphtheria and tetanus t's adsorbed** [USP], a sterile suspension prepared by mixing suitable quantities of adsorbed diphtheria toxoid and adsorbed tetanus toxoid, each having been precipitated or adsorbed by the same precipitating or adsorbing agent (alum, aluminum hydroxide, or aluminum phosphate). The potency and the proportions of the toxoids are such as to provide an active immunizing dose of each toxoid in the total dosage prescribed on the label. **diphtheria and tetanus t's and pertussis vaccine** [NF], a sterile suspension of killed *Bordetella pertussis*, or a fraction of this organism, in a mixture of diphtheria toxoid and tetanus toxoid, the components being combined in such proportion as to yield a mixture that meets the antigenic and other requirements of each separate component; used as an immunizing agent, administered subcutaneously or intramuscularly. **diphtheria and tetanus t's and pertussis vaccine adsorbed** [USP], a sterile suspension of the precipitate obtained by treating a mixture of diphtheria and tetanus toxoids and pertussis vaccine with alum, aluminum hydroxide, or aluminum phosphate, the components being combined in such proportion as to yield a mixture containing an immunizing dose of each in the total dosage prescribed in the labeling; used as an active immunizing agent, administered intramuscularly. **fluid t.**, plain formal toxoid used as an active immunizing agent. **formol t.**, toxoid formed by the prolonged action of formaldehyde on toxins, usually bacterial exotoxins; called also *anatoxin*. **precipitated t.**, a toxoid which has been precipitated, usually by potassium alum, creating an insoluble precipitate which is more slowly absorbed in the body, providing a prolonged antigenic stimulus. **tetanus t.** [USP], a sterile solution of formaldehyde-treated products of the growth of *Clostridium tetani*, used as an active immunizing agent. **tetanus t. adsorbed** [USP], a sterile suspension of tetanus toxoid precipitated or adsorbed by the addition of alum, aluminum hydroxide, or aluminum phosphate to a formaldehyde-treated solution of the products of growth of *Clostridium tetani*; used as an active immunizing agent. **tetanus and diphtheria t's adsorbed** [USP], a sterile suspension of adsorbed tetanus toxoid and adsorbed diphtheria toxoid prepared by mixture in such proportions that each dose contains a specified quantity of tetanus toxoid and a specified smaller quantity of diphtheria toxoid; used as an active immunizing agent.

toxoid-antitoxoid (tok'soid-an'ti-tok'soid) a toxoid mixed with an equivalent amount of antitoxic serum, the precipitate being suspended in saline.

toxolecithin (tok'so-les'i-thid) toxolecithin.

toxolecithin (tok'so-les'i-thin) a lecithin compounded with a toxin, as cobra venom.

toxolysin (toks-ol'i-sin) antitoxin.

toxosis (tok'so-no'sis) toxicosis.

toxopexic (tok'so-peks'ik) [*toxo-* + Gr. *pēxis* fixation] toxicopexic.

toxophilic (tok'so-fil'ik) [*toxo-* + Gr. *philein* to love] easily susceptible to a poison; having an affinity for toxins (like certain haptophore groups).

toxophilous (toks-ōf'i-lus) toxophilic.

toxophore (tok'so-för) [*toxin* + Gr. *phoros* bearing] the group of atoms in the molecule of a toxin which brings about its specific activity after the molecule has been properly anchored by the haptophore. See *Ehrlich's side-chain theory*, under *theory*.

toxophorous (tok-sof'o-rous) carrying the toxin; see *toxophore*.

toxophylaxin (tok'so-fi-lak'sin) any phylaxin which destroys or counteracts the poisons produced by bacteria.

Toxoplasma (toks'o-plaz'mah) [*toxo-* + Gr. *plasma* anything formed or molded] a genus of sporozoa that are intracellular parasites of many organs and tissues of birds and mammals, including man. See *toxoplasmosis*. The only known complete hosts are cats and other Felidae, in which both asexual and sexual developmental cycles occur in the intestinal epithelium, culminating in the passage of oocysts in the feces. The intestinal stages do not occur in other hosts. **T. cunic'uli**, *T. gondii*. **T. gon'**

dii, the etiologic agent of toxoplasmosis (q.v.); it also infects cats, swine, dogs, sheep, cattle, and rabbits.

toxoplasmin (tok/'so-plas'min) an antigen prepared from mouse peritoneal fluids rich with *Toxoplasma gondii*; injected intracutaneously as a test for toxoplasmosis.

toxoplasmosis (tok/'so-plaz-mo'sis) a protozoan disease of man caused by *Toxoplasma gondii*. Congenital toxoplasmosis is characterized by lesions of the central nervous system, which may lead to blindness, brain defects, and death. The acquired form is of two types: *lymphadenopathic toxoplasmosis*, which closely resembles mononucleosis, and *disseminated toxoplasmosis*, in which lesions involve chiefly the lungs, liver, heart, skin, muscle, brain, and meninges and which is characterized by pneumonitis, hepatitis, myocarditis, and meningoencephalitis in varying degrees. Chorioretinitis invariably accompanies the congenital form, and may occur in the acquired form.

toxoprotein (tok/'so-pro'te-in) a toxic protein or a mixture of a toxin and a protein.

Toxothrix (tok/'so-thriks) [Gr. *toxos* a bow + *thrix* hair] a genus of microorganisms of the family Chlamydbacteriaceae, order Chlamydbacteriales, made up of colorless, filamentous, cylindrical cells with a sheath originally thin but later thickened with impregnated iron oxide. It includes two species, *T. gelatino'sa*, and *T. trichogenes*.

toxuria (toks-u're-ah) uremia.

Toynbee's corpuscles, experiment, law, ligament, otoscope (toin'bēz) [Joseph Toynbee, English otologist, 1815-1866] see under *experiment*, *law*, and *otoscope*, see *corneal corpuscles*, under *corpuscle*, and see *musculus tensor tympani*.

TPN 1. total parenteral nutrition; see *parenteral hyperalimentation*, under *hyperalimentation*. 2. triphosphopyridine nucleotide; the former name for *nicotinamide-adenine dinucleotide phosphate*.

TPNH reduced triphosphopyridine nucleotide, the former name for the reduced form of *nicotinamide-adenine dinucleotide phosphate*.

T.R. tuberculin residue; see *New tuberculin*, under *tuberculin*.

trabecula (trah-bek'u-lah), pl. *trabeculae* [L., dim. of *trabs*] a little beam; [NA] a general term for a supporting or anchoring strand of connective tissue, as such a strand extending from a capsule into the substance of the enclosed organ. **arachnoid trabeculae**, delicate fibrous threads connecting the inner surface of the arachnoid to the pia mater. **trabeculae of bone**, anastomosing bony spicules in cancellous bone which form a meshwork of intercommunicating spaces that are filled with bone marrow. **trabeculae car'neae cor'dis** [NA], muscular ridges covering a great part of the interior of the walls of the ventricles of the heart; they may stand out in relief only, or be attached as bundles at both ends and free in the middle. **trabeculae cor'dis**, trabeculae car'neae cordis. **trabeculae of corpora cavernosa of penis, trabeculae cor'porum cavernosorum pe'nis** [NA], numerous bands and cords of fibromuscular tissue traversing the interior of the corpora cavernosa of the penis, attached to the tunica albuginea and to the septum and creating the cavernous spaces that become filled with blood during erection. **trabeculae of corpus spongiosum of penis, trabeculae cor'poris spongiosi pe'nis** [NA], numerous bands and cords of fibromuscular tissue traversing the interior of the corpus spongiosum of the penis, creating the cavernous spaces that give the structure its spongy character. **trabeculae cra'nii**, a pair of longitudinal cranial bars of cartilage in the embryo, bounding the pituitary space that becomes the sella turcica. **fleshy trabeculae of heart, trabeculae car'neae cordis. trabeculae lie'nis** [NA], trabeculae of spleen: fibrous bands that pass into the spleen from the tunica fibrosa and form the supporting framework of the organ. **Rathke's trabeculae**, trabeculae cranii. **septomarginal t., t. septomarginalis** [NA], a bundle of muscle at the apical end of the right ventricle of the heart, connecting the base of the anterior papillary muscle to the interventricular septum; it usually contains a branch of the atrioventricular bundle. **trabeculae of spleen, trabeculae lienis**.

trabeculae (trah-bek'u-le) [L.] plural of *trabecula*.

trabecular (trah-bek'u-lar) pertaining to a trabecula.

trabecularism (trah-bek'u-lar-izm) the condition of having a trabecular structure.

trabeculate (trah-bek'u-lāt) [L. *trabecula* a small beam or bar] marked with cross bars or trabeculae.

trabeculation (trah-bek'u-la'shun) the formation of trabeculae in a part.

trabes (tra-bez) [L.] plural of *trabs*.

trabs (trabs), pl. *trabes* [L. "a beam"] a supporting or anchoring strand or structure. **trabes car'neae**, trabeculae car'neae cordis.

tracer (trās'er) 1. a dissecting instrument for isolating vessels and nerves. 2. a mechanical device by which the outline of an object or the direction and extent of movement of a part may be graphically recorded; see also *tracing*. 3. a means or agent by which certain substances or structures can be identified or

followed, as a radioactive tracer. **needle-point t.**, a mechanical device used in recording jaw movements, in which the tracing is made on a horizontal plate by a weighted or a spring-loaded needle attached to the jaw. **radioactive t.**, a radioactive isotope replacing a stable chemical element in a compound introduced into the body, enabling the course of its metabolism, distribution, and elimination from the body to be traced by a Geiger-Müller counter or other type of counting instrument. **stylus t.**, a mechanical device used in recording jaw movements in which the element producing the tracing is a pointed instrument or stylus; see *needle-point t.*

trachea (tra'ke-ah) [L.; Gr. *tracheia artēria*] [NA] the cartilaginous and membranous tube descending from the larynx and branching into the right and left main bronchi. It is kept patent by a series of about twenty transverse horseshoe-shaped cartilages. **scabbard t.**, a trachea which is flattened by approximation of its lateral walls.

tracheaectasy (tra'ke-ah-ek'tah-se) dilatation of the trachea.

tracheal (tra'ke-al) [L. *trachealis*] pertaining to the trachea.

trachealgia (tra'ke-al'je-ah) [*trachea* + Gr. *algos* pain + *-ia*] pain in the trachea.

tracheid (tra'ke-id) [Gr. *tracheia* rough, rugged] any of the elongate, tapering conducting and supportive cells of the xylem of plant tissue, having thick, pitted walls without true perforations.

tracheitis (tra'ke-i'tis) inflammation of the trachea.

tracheiagra (tra'ke-lag'rah, tra-kel'ah-grah) [Gr. *trachēlos* neck + *agra* seizure] gout in the neck.

trachelectomy (tra'ke-lek'to-me) [Gr. *trachēlos* neck + *ektomē* excision] cervicectomy.

trachelematoma (tra'ke-lem'ah-to'mah) a hematoma situated in the sternocleidomastoid muscle.

trachelism, trachelismus (tra'kē-lizm; tra'kē-liz'mus) [Gr. *trachēlismos*] spasm of the neck muscles; spasmodic retraction of the head in epilepsy.

trachelitis (tra'kē-li'tis) cervicitis.

trachelo- [Gr. *trachēlos* neck] a combining form denoting relationship to the neck or to a necklike structure.

trachelocele (trak'ē-lo-sēl) tracheocele.

trachelocyllosis (tra'kē-lo-si-lo'sis) [*trachelo-* + Gr. *kyllōsis* crooking] torticollis.

trachelocytosis (tra'kē-lo-sir-to'sis) [*trachelo-* + Gr. *kyrtos* curved + *-osis*] trachelokyphosis.

trachelocystitis (tra'kē-lo-sis-ti'tis) [*trachelo-* + Gr. *kystis* bladder + *-itis*] inflammation of the neck of the bladder.

trachelodynia (tra'kē-lo-din'e-ah) [*trachelo-* + Gr. *odynē* pain + *-ia*] pain in the neck.

trachelokyphosis (tra'kē-lo-ki-fō'sis) [*trachelo-* + Gr. *kyphōsis* a being hump backed] abnormal curvature of the cervical portion of the spine.

trachelologist (tra'ke-lol'o-jist) one skilled in trachelology.

trachelology (tra'kē-lol'o-je) [*trachelo-* + *-logy*] the study of the neck and its diseases and injuries.

trachelomyitis (tra'kē-lo-mi-i'tis) [*trachelo-* + Gr. *mys* muscle + *-itis*] inflammation of the muscles of the neck.

trachelopexia (tra'kē-lo-pek'se-ah) trachelopexy.

trachelopexy (tra'kē-lo-pek'se) [*trachelo-* + Gr. *pēxis* fixation] surgical fixation of the neck of the uterus to some other part.

tracheloplasty (tra'kē-lo-plas'te) [*trachelo-* + Gr. *plassein* to mold] the plastic surgery of the uterine neck; surgical repair of defects of the neck of the uterus.

trachelorrhaphy (tra'kē-lor'ah-fe) [*trachelo-* + Gr. *rhaphe* suture] suture of the lacerated cervix uteri.

tracheloschisis (tra'kē-lor'ah-fe) [*trachelo-* + Gr. *schisis* fissure] congenital fissure of the neck.

trachelosyringorrhaphy (tra'kē-lo-sir'ing-gor'ah-fe) [*trachelo-* + Gr. *syrinx* pipe + *rhaphe* suture] trachelorrhaphy for fistula of the vagina.

trachelotomy (tra'kē-lot'o-me) [*trachelo-* + Gr. *tomē* a cutting] the surgical cutting of the uterine neck.

tracheo- a combining form denoting relationship to the trachea.

tracheoaoerocele (tra'ke-o-a'er-o-sēl) [*tracheo-* + Gr. *aēr* air + *kēlē* hernia] a tracheal hernia containing air.

tracheobronchial (tra'ke-o-brong'ke-al) pertaining to the trachea and bronchi.

tracheobronchitis (tra'ke-o-brong-ki'tis) inflammation of the trachea and bronchi.

tracheobronchomegaly (tra'ke-o-brong'ko-meg'ah-le) a rare and probably congenital condition characterized by great enlargement of the lumen of the trachea and the larger bronchi.

tracheobronchoscopy (tra'ke-o-brong-kos'ko-pe) inspection of the interior of the trachea and bronchi.

tracheocele (tra'ke-o-sēl') [*tracheo-* + Gr. *kēlē* hernia] hernial protrusion of the tracheal mucous membrane.

tracheoesophageal (tra'ke-o-e-sof'ah-je-al) pertaining to or communicating with both the trachea and esophagus.

tracheofissure (tra'ke-o-fish'er) the operation of splitting the trachea.

tracheofistulization (tra'ke-o-fis'tu-li-zah'shun) 1. percutaneous puncture of the trachea for the introduction of medicinal agents. 2. an operation to create a permanent opening in the trachea communicating with the cervical skin.

tracheogenic (tra'ke-o-jen'ik) originating in the trachea.

tracheolaryngeal (tra'ke-o-lah-rin'je-al) pertaining to the trachea and larynx.

tracheolaryngotomy (tra'ke-o-lar'in-got'o-me) incision of the trachea and larynx.

tracheomalacia (tra'ke-o-mah-la'she-ah) softening of the tracheal cartilages.

tracheopathia (tra'ke-o-path'e-ah) [*tracheo-* + Gr. *pathos* disease] disease of the trachea. **t. osteoplas'tica**, a condition marked by the formation of a bony and cartilaginous deposit in the tracheal mucosa.

tracheopathy (tra'ke-op'ah-the) tracheopathia.

tracheopharyngeal (tra'ke-o-fah-rin'je-al) pertaining to the trachea and pharynx.

Tracheophilus cymbius (tra'ke-of'i-lus sim'be-us) a trematode parasitic in the trachea of ducks in Europe and Asia.

tracheophonesis (tra'ke-o-fo-ne'sis) [*tracheo-* + Gr. *phōnēs* sounding] auscultation of the heart at the sternal notch.

tracheophony (tra'ke-of'o-ne) [*tracheo-* + Gr. *phōnē* voice] a sound heard in auscultation over the trachea.

tracheophyte (tra'ke-o-fit'v) [*tracheo-* + Gr. *phyton* plant] a vascular plant containing both phloem and xylem.

tracheoplasty (tra'ke-o-plas'te) [*tracheo-* + Gr. *plassein* to mold] a plastic operation upon the trachea.

tracheopyrosis (tra'ke-o-pi-o'sis) [*tracheo-* + Gr. *pyon* pus] purulent tracheitis.

tracheorrhagia (tra'ke-o-ra'je-ah) [*tracheo-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the trachea.

tracheorrhaphy (tra'ke-or'ah-fe) [*tracheo-* + Gr. *rhaphe* suture] repair of an incised or wounded trachea.

tracheoschisis (tra'ke-os'ki-sis) [*tracheo-* + Gr. *schisis* fissure] fissure of the trachea.

tracheoscopic (tra'ke-o-skop'ik) pertaining to or of the character of tracheoscopy.

tracheoscopy (tra'ke-os'ko-pe) [*tracheo-* + Gr. *skopein* to examine] the inspection of the interior of the trachea. **percervical t.**, tracheoscopy through a previously made tracheotomy wound; low tracheoscopy. **peroral t.**, tracheoscopy by means of a tracheoscope passed through the mouth, between the vocal cords, and into the trachea; high tracheoscopy.

tracheostenosis (tra'ke-o-stē-no'sis) [*tracheo-* + Gr. *stenōsis* narrowing] contraction or narrowing of the trachea.

tracheostoma (tra'ke-os'to-mah) [*tracheo-* + Gr. *stoma* mouth] an opening into the trachea through the neck.

tracheostomize (tra'ke-os'to-mīz) to perform tracheostomy upon.

tracheostomy (tra'ke-os'to-me) [*tracheo-* + Gr. *stomoun* to furnish with an opening or mouth] the surgical creation of an opening into the trachea through the neck, with the tracheal mucosa being brought into continuity with the skin; also, the opening so created. The term is also used to refer to creation of an opening in the anterior trachea for insertion of a tube to relieve upper airway obstruction and to facilitate ventilation.

tracheotome (tra'ke-o-tōm) an instrument for use in incising the trachea.

tracheotomize (tra'ke-ot'o-mīz) to perform tracheotomy upon.

tracheotomy (tra'ke-ot'o-me) [*tracheo-* + Gr. *tomē* a cutting] incision of the trachea. **inferior t.**, incision of the trachea through the neck, below the isthmus of the thyroid. **superior t.**, incision of the trachea through the neck, above the isthmus of the thyroid.

trachitis (trah-ki'tis) tracheitis.

trachoma (trah-ko'mah), pl. *trachomata* [Gr. *trachōma* roughness] a chronic infectious disease of the conjunctiva and cornea, producing photophobia, pain, and lacrimation, caused by an organism once thought to be a virus but now classified as a strain of the bacteria *Chlamydia trachomatis*. Clinically, it can be divided into four stages (MacCallan): (1) mild infection marked by tiny follicles on the eyelid conjunctiva and subepithelial infiltration; (2) enlargement of the follicles and inflammatory changes forming hard red papillae, usually with vascular invasion of the cornea marking the onset of pannus; (3) severe scarring and contraction resulting in symblepharon, entropion, trichiasis, and corneal scarring which may result in blindness; (4) complete arrest with permanent scarring, entropion, and symblepharon. Called also *Aret's t.*, *Egyptian*, *granular*, or *trachomatous conjunctivitis*, *Egyptian ophthalmia*, and *granular lids*. **Arlt's t.**, trachoma. **Türk's t.**, chronic catarrhal laryngitis. **t. of vocal bands**, development of nodular swellings on the vocal cords.

trachomata (trah-ko'mah-tah) [Gr.] plural of *trachoma*.

trachomatous (trah-ko'mah-tus) pertaining to, affected with, or of the nature of trachoma.

Trachybdella bistriata (tra'ke-del'ah bis'tre-ah'tah) a leech found in Brazil which attacks man and other animals.

trachychromatic (tra'ke-kro-mat'ik) [Gr. *trachys* rough + *chrōma* color] strongly or deeply staining.

trachyphonia (tra'ke-fo'ne-ah) [Gr. *trachys* rough + *phōnē* voice + *-ia*] roughness of the voice; hoarseness.

tracing (trās'ing) a graphic record produced by copying another, or scribed by an instrument capable of making a visual record of movements. In dentistry, the record of movements of the mandible produced by a tracer; the shape of the tracing depends on the relative location of the marking point and the tracing plate, and the apex of a properly made tracing is considered to indicate the most retruded unstrained position of the mandible in relation to the maxilla (centric jaw relation). In cephalometric roentgenography, the line drawing of structural outlines and landmarks on translucent paper to permit diagnostic assessment. **arrow point t.**, Gothic arch t. **cephalometric t.**, a tracing of the teeth, facial bones, and anthropometric landmarks made directly from a cephalometric radiograph and used to formulate a cephalometric analysis. **extraoral t.**, one made outside the oral cavity. **Gothic arch t.**, a tracing of the movements of the mandible that resembles the shape of an arrowhead, or a Gothic arch. **intraoral t.**, one made within the oral cavity.

track (trak) the path along which something moves, or the mark left by its movement. **fog t.**, the visible trail or track left when an electron or other particle passes through a supersaturated Wilson chamber. It consists of droplets of condensed moisture which can be photographed. **germ t.**, the lineage or continuity of germ cells which can be traced throughout innumerable generations of individuals.

tract (trakt) [L. *tractus*] a region, principally one of some length; specifically a collection or bundle of nerve fibers having the same origin, function, and termination (tractus [NA]), or a number of organs, arranged in series, subserving a common function. **alimentary t.**, canalis alimentarius. **ascending t.**, any bundle of nerve fibers that conveys impulses toward the brain. **Bekhterev's t.**, tractus tegmentalis centralis. **biliary t.**, the organs, ducts, etc., which participate in the secretion, storage, and delivery of bile into the duodenum. **Bruce's t.**, septomarginal t. **t. of Bruce and Muir**, septomarginal tract. **bulbar t.**, any of the bundles of nerve fibers of the medulla oblongata. **bulbospatial t.**, olivospinal t. **Burdach's t.**, fasciculus cuneatus medullae spinalis. **central t. of auditory nerve**, fibers that pass from the cochlear nuclei to the superior olive, to the lateral lemniscus on the same and the opposite side and then up through the brachium of the inferior colliculus into the medial geniculate body and from there to the cortex of the transverse temporal gyri. **central t. of cranial nerves**, fibers from several cranial nerves which pass upward to the thalamus closely associated with the medial lemniscus. **central t. of thymus**, tractus centralis thymi. **central t. of trigeminal nerve**, a more or less distinct bundle of fibers from the trigeminal nerve which passes upward to the thalamus on the dorsal side of the medial lemniscus. **cerebellar t.**, direct, of *Flechsig*, tractus spinocerebellaris posterior. **cerebellorubral t.**, tractus cerebellorubralis. **cerebellorubrospinal t.**, fibers passing from one dentate nucleus of the cerebellum to the contralateral red nucleus, and thence to the spinal cord. **cerebellospinal t.**, uncinat fasciculus of the cerebellum, from the fastigial nucleus to the cervical cord. **cerebellotegmental t's of bulb**, fastigiobulbar t's. **cerebellothalamie t.**, tractus cerebellothalamicus. **cerebrospinal t.**, lateral, former term for tractus pyramidalis lateralis. **comma t. of Schultze**, fasciculus interfascicularis. **conariohypophyseal t.**, a portion of the cavity of the embryonic brain connecting the pineal body and the pituitary gland. **cornucommissural t.**, fibers in the anterior part of the posterior column of the spinal cord, extending through the sacral and lumbar regions. **corticobulbar t.**, corticonuclear t. **corticocerebellar t's**, corticopontile t's. **corticohypothalamic t.**, tractus corticohypothalamicus. **corticonuclear t.**, former term for fibre corticonucleares. **corticopontile t's**, corticopontine t's, tractus corticopontinus. **corticorubral t.**, fibers passing from the cerebral cortex to the red nucleus. **corticospinal t.**, pyramidal t. **corticospinal t., anterior**, tractus pyramidalis anterior. **corticospinal t., lateral**, tractus pyramidalis lateralis. **corticothalamie t.**, fibers uniting the cerebral cortex with the thalamus. **Deiters' t.**, tractus vestibulospinalis. **descending t.**, any bundle of nerve fibers that conveys impulses from the brain toward the periphery. **digestive t.**, canalis alimentarius. **direct cerebellar t. of Flechsig**, tractus spinocerebellaris posterior. **direct spinocerebellar t.**, tractus spinocerebellaris posterior. **dorsolateral t.**, tractus dorsolateralis. **extracorticospinal t.**, extrapyramidal system. **extrapyramidal t.**, see under *system*. **fastigiobulbar t's**, bundles of efferent fibers running from the nucleus fastigii to the medulla oblongata. **fiber t's of spinal cord**, distinct bundles in the white substance of the spinal cord,

made up of fibers which have the same origin, termination, and function. **Flehsig's t.**, tractus spinocerebellaris posterior. **flow t. of the heart**, see *flow tract*, under *F. foraminous*. **spiral t.**, tractus spiralis foraminosus. **frontopontile t.**, **frontopontine t.**, tractus frontopontinus. **gastrointestinal t.**, the stomach and intestines in continuity. **geniculocalcarine t.**, radiatio optica. **genitourinary t.**, apparatus urogenitalis. **Goll's t.**, fasciculus gracilis medullae spinalis. **Gowers' t.**, tractus spinocerebellaris anterior. **habenular t's**, a term for the habenulotectal, habenulodiencephalic, and habenulotegmental fibers, and the habenulopeduncular tract. **habenulopeduncular t.**, fasciculus retroflexus. **Helweg's t.**, olivospinal t. **hypothalamicohypophyseal t.**, one of the efferent pathways of the hypothalamus, as that leading from the supraoptic nuclei into the posterior lobe of the hypophysis. **iliopubic t.**, tractus iliopubicus. **iliotibial t.**, tractus iliotibialis. **intermediolateral t.**, columna lateralis medullae spinalis. **internuncial t.**, a fiber tract connecting two nuclei or centers. **intersegmental t.**, lateral, see *fasciculi proprii*. **intestinal t.**, the small and large intestines in continuity. **Lissauer's t.**, tractus dorsolateralis. **Löwenthal's t.**, tractus tectospinalis. **Maissiat's t.**, tractus iliotibialis. **mamilopeduncular t.**, a fiber tract from the mamillary body to nuclei in the interpeduncular fossa. **mamillotegmental t.**, a branch from the mamillothalamic tract running caudally in the tegmentum of the mesencephalon. **mamillothalamic t.**, fasciculus mamillothalamicus. **Marchi's t.**, tractus tectospinalis. **marginal t.**, crossed, tractus dorsolateralis. **mesencephalic t. of trigeminal nerve**, tractus mesencephalicus nervi trigemini. **t. of Meynert**, fasciculus retroflexus. **Monakow's t.**, tractus rubrospinalis. **motor t.**, any bundle of nerve fibers conveying motor impulses from the central nervous system to a muscle. **occipitopontine t.**, tractus occipitopontinus. **olfactory t.**, tractus olfactorius. **olivocerebellar t.**, tractus olivocerebellaris. **olivospinal t.**, a crossed tract descending from the olivary nucleus to the lower cervical or upper thoracic segments of the spinal cord; called also *bulbospinal t.*, *Helweg's t.*, *triangular t.*, and *Helweg's bundle*. **optic t.**, tractus opticus. **parietopontine t.**, tractus parietopontinus. **peduncular t.**, transverse, a small band of fibers which passes from the brachium of the inferior colliculus to the sulcus medialis cruris cerebri. **t. of Philippe-Gombault**, Gombault-Philippe triangle. **predorsal t. (obs.)**, tractus tectospinalis. **projection t.**, see under *fiber*. **pyramidal t.**, a term applied to two groups of fibers (corticoculular and corticospinal) arising chiefly in the sensorimotor regions of the cerebral cortex and descending in the internal capsule, cerebral peduncle, and pons to the medulla oblongata, the corticoculular fibers synapsing with motor nuclei throughout the brain stem. Most of the corticospinal fibers cross in the decussation of the pyramids and descend in the spinal cord as the lateral pyramidal (lateral corticospinal) tract; most of the uncrossed fibers form the anterior pyramidal (anterior corticospinal) tract; both end by synapsing with internuncial and motor neurons. The pyramidal tract is a phylogenetically new tract, most prominent in man, which provides for direct cortical control and initiation of skilled movements, especially those related to speech and involving the hand and fingers. Called also *tractus pyramidalis* [NA], *corticospinal t.*, and *pyramidal system*. **pyramidal t., anterior**, tractus pyramidalis anterior. **pyramidal t., crossed**, tractus pyramidalis lateralis. **pyramidal t., direct**, tractus pyramidalis anterior. **pyramidal t., lateral**, tractus pyramidalis lateralis. **pyramidoanterior t.**, former term for tractus pyramidalis anterior. **pyramidolateral t.**, former term for tractus pyramidalis lateralis. **respiratory t.**, apparatus respiratorius. **reticulospinal t.**, tractus reticulospinalis. **rubroreticular t.**, fibers from the red nucleus to the reticular formation of the pons and medulla oblongata. **rubrospinal t.**, tractus rubrospinalis. **Schultze's t., semilunar t.**, fasciculus interfascicularis. **sensory t.**, any bundle of nerve fibers conveying sensory impulses from a peripheral receptor to the central nervous system. **septomarginal t.**, a bundle of nerve fibers along the dorsal periphery of the posterior funiculus in the thoracic region, and along the septum in the lumbar region. Called also *Bruce's tract* and *tract of Bruce and Muir*. **solitary t. of medulla oblongata**, tractus solitarius medullae oblongatae. **spinal t. of trigeminal nerve**, tractus spinalis nervi trigemini. **spinocerebellar t., anterior**, tractus spinocerebellaris anterior. **spinocerebellar t., direct**, **spinocerebellar t., dorsal**, **spinocerebellar t., posterior**, tractus spinocerebellaris posterior. **spinocerebellar t., ventral**, tractus spinocerebellaris anterior. **spinocervicothalamic t.**, a tract ascending uncrossed in the dorsal part of the lateral funiculus to the lateral cervical nucleus, which relays to the thalamus by way of the opposite medial lemniscus. **spino-olivary t.**, an ascending tract of fibers arising from the posterior gray columns of the spinal cord and running to the olivary nucleus. **spinotectal t.**, tractus spinotectalis. **spinothalamic t., anterior**, tractus spinothalamicus anterior. **spinothalamic t., lateral**, tractus spinothalamicus lateralis. **spinothalamic t., ventral**, tractus spinothalamicus anterior. **spiral t., foraminous**, tractus spiralis foraminosus.

Spitzka's t., **Spitzka-Lissauer t.**, tractus dorsolateralis. **strionigral t.**, a bundle of fibers from the corpus striatum to the substantia nigra. **sulcomarginal t.**, fasciculus sulcomarginalis. **supraopticohypophyseal t.**, tractus supraopticohypophysialis. **tectobulbar t.**, tractus tectobulbaris. **tectocerebellar t.**, a bundle of fibers from the tectum of the mesencephalon to the cerebellum. **tectospinal t.**, tractus tectospinalis. **tegmental t.**, a tract of fibers in the tegmentum, back of the nucleus posterior corporis trapezoides, believed to connect the latter with the midbrain. **tegmental t., central**, tractus tegmentalis centralis. **tegmentospinal t.**, tractus reticulospinalis. **temporopontile t.**, **temporopontine t.**, tractus temporopontinus. **thalamocortical t.**, fibers passing from the thalamus to the cerebral cortex. **thalamo-occipital t.**, radiatio optica. **thalamo-olivary t.**, a bundle of fibers descending from the thalamus to the olivary nucleus. **triangular t.**, olivospinal t. **triangular t. of Philippe-Gombault**, Gombault-Philippe triangle. **trigeminothalamic t.**, fibers from the trigeminal nerve to the thalamus. **tuberohypophyseal t.**, see *tractus supraopticohypophysialis*. **urinary t.**, the organs and ducts which participate in the secretion and elimination of the urine. **uveal t.**, the vascular tunic of the eye, comprising the choroid, ciliary body, and iris; called also *tunica vasculosa bulbi* [NA]. **vestibulocerebellar t.**, fibers of the pars vestibularis nervi octavi passing to the cortex of the cerebellum. **vestibulospinal t.**, tractus vestibulospinalis. **t. of Vicq d'Azyr**, fasciculus mamillothalamicus.

tractate (trak'tāt) to attract or to tend to come together.

tractellum (trak-tel'um), pl. *tractella* [L.] an anterior locomotive flagellum.

traction (trak'shun) [L. *tractio*] the act of drawing or exerting a pulling force, as along the long axis of a structure. **axis t.**, traction along an axis, as of the pelvis in obstetrics. **elastic t.**, traction by an elastic force or by means of an elastic appliance. **external t.**, traction applied by means of a fixed anchorage (as by a metal or plaster skull appliance) outside the oral cavity; used principally in the management of midfacial fractures. **halo-pelvic t.**, traction applied to the spine by means of two metal hoops, one (the halo) applied to the skull and the other to the pelvis, connected by four extension rods which can be lengthened by turn screws. **intermaxillary t.**, maxillomandibular t. **internal t.**, traction applied by using one of the cranial bones above the point of fracture for anchorage; used in the management of facial fractures. **maxillomandibular t.**, traction applied by means of elastic or wire ligatures and interdental wiring and/or splints. **Russell t.**, traction for the knee joint by means of a cuff applied just below the knee. **skeletal t.**, traction applied directly upon the long bones by means of pins, Kirschner's wire, etc. **skin t.**, traction on a body part maintained by an apparatus affixed by dressings to the body surface. **tongue t.**, 1. a remedial procedure which has been used as a cardiac stimulant. 2. the pulling forward of the tongue to improve the airway.

tractor (trak'tor) [L. "drawer"] an instrument for applying traction. **Perkins' t. (obs.)**, a metallic appliance formerly drawn across the skin in the attempted cure of various disorders; see *perkinism*. **Syms' t.**, a tube with an inflatable rubber bag at the end; used to bring down a prostate into the perineal incision.

tractionotomy (trak'to-ra'shun) perkinism.

tractotomy (trak-tot'o-me) the operation of severing or incising a nerve tract. **mesencephalic t.**, surgical division of nerve tracts in the mesencephalon.

tractus (trak'tus), pl. *tractus* [L. "a track," "trail"] a tract: a region, principally one of some length; [NA] a general term, especially for a collection or bundle of nerve fibers having the same origin and termination, and serving the same function. **t. centra/lis thy/mi**, central tract of thymus: the medullary core of the thymus; an irregular fibrous bundle carrying the blood vessels and giving attachment to the lobules of the gland. **t. cerebellorubra/lis** [NA], cerebellorubral tract: fibers arising chiefly in the dentate nucleus of the cerebellum and projecting to the opposite red nucleus via the superior cerebellar peduncle; impulses are then relayed to the reticular formation and spinal cord. **t. cerebellothalam'icus** [NA], cerebellothalamic tract: fibers arising chiefly in the dentate nucleus of the cerebellum and projecting to the ventral lateral nucleus of the opposite thalamus via the superior cerebellar peduncle; impulses are then relayed to the frontal lobe. **t. corticohypotham'icus** [NA], corticohypothalamic tract: a diffuse collection of fibers that arise from various parts of the frontal lobe and are distributed directly to the hypothalamus. **t. corticopont'inus** [NA], corticopontine tract: a collective term for fibers arising in the frontal, temporal, parietal, and occipital lobes, which descend in the internal capsule and cerebral peduncle and are relayed to the opposite cerebellar hemisphere via the middle cerebellar peduncle. Formerly called *fibrae corticopontinae* or *corticopontine fibers*. **t. corticospina/lis ante'rior**, NA alternative for *t. pyramidalis anterior*. **t. corticospina/lis latera/lis**, NA alternative for *t. pyramidalis lateralis*. **t. dorsolatera/lis** [NA], dorsolateral tract: a group of nerve fibers in the lateral funiculus of the spinal cord dorsal to the posterior column, composed in part

of primary pain and temperature fibers which enter the spinal cord, travel the distance of a few segments in the dorsolateral tract, and then synapse in the posterior column. Called also *dorsolateral fasciculus* and *Lissauer's marginal zone*. **t. frontopontinus** [NA], frontopontine tract: the group of corticopontine fibers arising in the frontal lobe; see *t. corticopontinus*. **t. iliopu'bicus**, iliopubic tract: a thickened band of tissue that strengthens the lower part of the deep inguinal ring and forms the base of the internal spermatic fascia. **t. iliotibia'lis** [NA], **t. iliotibia'lis** [Maissia'ti], iliotibial tract: a thickened longitudinal band of fascia lata extending from the tensor muscle downward along the lateral side of the thigh to the lateral condyle of the tibia. **t. mesencephalicus ner'vi trigem'ini** [NA], mesencephalic tract of trigeminal nerve: sensory fibers of the entering trigeminal nerve that continue rostrally along the medial aspect of the superior cerebellar peduncle, their cell bodies being located in the nucleus of the mesencephalic tract, which accompanies it. Called also *radix descendens* [mesencephalica] *nervi trigem'ini*. **t. occipitopontinus** [NA], occipitopontine tract: the group of corticopontine fibers arising in the occipital lobe; see *t. corticopontinus*. **t. olfacto'rius** [NA], olfactory tract: a narrow triangular band in the olfactory sulcus of the frontal lobe, which arises from the olfactory bulb and extends posteriorly, to end by dividing into medial and lateral olfactory striae, the latter ending in the primary olfactory cortex. **t. olivocerebella'ris** [NA], olivocerebellar tract: a fiber tract that arises from the olive, crosses to the opposite side to pierce the other olive, and enters the cerebellum through its inferior peduncle; called also *fibrae cerebello-olivares*. **t. opt'icus** [NA], optic tract: the tract arising from the optic chiasma, proceeding backward, around the cerebral peduncle, and dividing into a lateral and a medial root; the roots end in the superior colliculus and lateral geniculate body, respectively. **t. parietopontinus** [NA], parietopontine tract: the group of corticopontine fibers arising in the parietal lobe; see *t. corticopontinus*. **t. pyramida'lis** [NA], pyramidal tract. **t. pyramida'lis ante'rior** [NA], anterior pyramidal tract: a group of nerve fibers in the anterior funiculus of the spinal cord, originating in the cerebral cortex; called also *t. corticospinalis anterior* [NA alternative]. See *pyramidal tract*, under *tract*. **t. pyramida'lis latera'lis** [NA], lateral pyramidal tract: a group of nerve fibers in the lateral funiculus of the spinal cord, originating in the cerebral cortex; called also *t. corticospinalis anterior* [NA alternative] and *fasciculus cerebrosppinalis lateralis*. See *pyramidal tract*, under *tract*. **t. reticulospina'lis** [NA], reticulospinal tract: a system of fibers arising mostly from the medial parts of the reticular formation of the pons and medulla oblongata; chiefly homolateral, the fibers descend in the anterior and lateral funiculi to most levels of the spinal cord. **t. rubrospina'lis** [NA], rubrospinal tract: a group of nerve fibers in the lateral funiculus of the spinal cord, arising in the large cells of the red nucleus of the mesencephalon. **t. solita'rius medul'lae oblonga'tae** [NA], solitary tract of medulla oblongata: a descending tract in the medulla oblongata, ventrolateral to the caudal part of the fourth ventricle, near the dorsal nucleus of the vagus and glossopharyngeal nerves, and comprising primary visceral afferent fibers from the facial, glossopharyngeal, and vagus nerves. **t. spina'lis ner'vi trigem'ini** [NA], spinal tract of trigeminal nerve: a descending tract of the trigeminal nerve that extends from the level of entrance of the sensory root of the trigeminal nerves into the pons to the upper cervical segments of the spinal cord. Lying lateral to the nucleus of the spinal tract of the trigeminal nerve, in which its fibers synapse, this tract carries mainly pain and temperature impulses from the face. **t. spinocerebella'ris ante'rior** [NA], anterior spinocerebellar tract: a group of nerve fibers in the lateral funiculus of the spinal cord; arising mostly in the opposite gray matter, and activated by skin, muscle, tendon, and joint endings, they ascend to the cerebellum by way of the anterior part of the lateral funiculus and then the superior cerebellar peduncle. Called also *fasciculus anterolateralis superficialis* [Gowers]. **t. spinocerebella'ris poste'rior** [NA], posterior spinocerebellar tract: a group of nerve fibers in the lateral funiculus of the spinal cord; arising chiefly from the nucleus thoracicus and activated by skin, muscle, tendon, and joint endings, they ascend to the cerebellum by way of the dorsal part of the lateral funiculus and then the inferior cerebellar peduncle. Called also *fasciculus cerebellospinalis*. **t. spinotecta'lis** [NA], spinotectal tract: a group of nerve fibers in the lateral funiculus of the spinal cord, mostly crossed from their origin, which ascend to the superior and inferior colliculi, and carrying somatic sensory impulses. **t. spinothalam'icus ante'rior** [NA], anterior spinothalamic tract: a group of nerve fibers in the anterolateral funiculus of the spinal cord, which arise in the opposite gray matter; carrying impulses activated by light touch, they ascend to the thalamus, joining the medial lemniscus in the brain stem. **t. spinothalam'icus latera'lis** [NA], lateral spinothalamic tract: a group of nerve fibers in the lateral funiculus of the spinal cord, which arise in the opposite gray matter; carrying impulses activated by pain and temperature, they ascend to the thalamus, running with the lateral lemniscus in the brain stem. **t. spira'lis foramino'sus** [NA], foraminous spiral tract: a spiral area on the fundus of the internal acoustic meatus, below the

crista transversa and in front of the area vestibularis inferior; it corresponds to the base of the cochlea and is perforated with numerous holes for the passage of branches of the vestibulocochlear nerve. **t. subarcua'tus**, an area of small cell structure under the arch of the superior semicircular canal. **t. supraopticohypophysia'lis** [NA], supraopticohypophyseal tract: fibers arising in the supraoptic and paraventricular nuclei of the hypothalamus and descending to the neurohypophysis, where their neurosecretory material is stored as antidiuretic hormone and oxytocin. A portion of the tract arises in the tuber cinereum (tuberohypophyseal tract). **t. tectobulba'ris**, tectobulbar tract: fibers arising mostly in the superior colliculus; they descend to the lower border of the pons and end in the nuclei of the brain stem and in the reticular formation. **t. tecto-spina'lis** [NA], tectospinal tract: a group of nerve fibers, chiefly crossed, which arise mostly in the superior colliculus and descend to the cervical cord, where they lie in the anterior funiculus. **t. tegmenta'lis centra'lis** [NA], central tegmental tract: a composite nerve tract arising from the midbrain tegmentum, periaqueductal gray matter, and red nucleus; it descends in the tegmentum and reticular formation to end in the inferior olivary complex. The tract includes an ascending component from the reticular formation. Called also *Bekhterev's tract*. **t. temporopontinus** [NA], temporopontine tract: the group of corticopontine fibers arising in the temporal lobe; see *t. corticopontinus*. **t. triangula'ris**, olivospinal tract. **t. vestibulospina'lis** [NA], vestibulospinal tract: nerve fibers arising from the lateral vestibular nucleus which descend uncrossed, chiefly in the anterior part of the lateral funiculus, throughout most levels of the spinal cord. Some fibers to the caudal spinal segments lie in the anterior funiculus.

tragacanth (trag'ah-kanth) [NF] the dried gummy exudation from *Astragalus gummifer* or other species of *Astragalus*; used as a suspending agent for drugs. Called also *gum tragacanth*.

tragal (tra'gal) pertaining to the tragus.

tragi (tra'ji) [L., pl. of *tragus*] [NA] hair growing on the pinna of the external ear, especially on the cartilaginous projection anterior to the external opening (tragus).

Tragia (tra'je-ah) a genus of poisonous euphorbiaceous plants; several species (*T. urens*, etc.) are weeds of the southern United States.

tragon (tra'je-on) the anthropometric landmark located at the superior margin of the tragus of the ear.

tragomaschalia (trag'o-mas-kal'e-ah) [Gr. *tragos* goat + *maschalē* the armpit] odorous perspiration from the axilla.

tragophonia (trag'o-fō-ne-ah) egophony.

tragophony (trah-gof'o-ne) [Gr. *tragos* goat + *phōne* voice] egophony.

tragopodia (trag'o-po'de-ah) [Gr. *tragos* goat + *pous* foot] genu valgum.

tragus (tra'gus), pl. *tra'gi* [L.; Gr. *tragos* goat] [NA] the cartilaginous projection anterior to the external opening of the ear; see also *tragi*.

train (trān) 1. to prepare by instruction and practice for some definite occupation or pursuit. 2. a continuous succession of objects or of events, as of discharges of electric or magnetic energy.

trainable (tra'nah-b'l) capable of being trained; the term is used with special reference to persons with moderate mental retardation (I.Q. approximately 36-51) who are capable of achieving self-care, social adjustment at home, and economic usefulness under close supervision. Cf. *educable*.

training (trān'ing) a system of instruction or teaching; preparation by instruction and practice. **assertive t.**, a form of behavior therapy in which individuals are taught appropriate interpersonal responses, involving expression of their feelings, both negative and positive. Called also *expressive t.* **expressive t.**, assertive t.

trait (trāt) 1. any genetically determined characteristic; commonly used in medicine to designate the condition prevailing in the heterozygous state of a recessive disorder, as in sickle cell anemia. 2. a distinctive behavior pattern. **secretor t.**, the ability to secrete ABH antigens of the ABO blood group in the saliva, inherited in simple mendelian manner. **sickle cell t.**, the condition, usually asymptomatic, caused by heterozygosity for hemoglobin S.

trajector (trah-jek'tor) an instrument for locating a bullet in a wound.

Tral (tral) trademark for preparations of hexocyclium methylsulfate.

Trallianus, Alexander see *Alexander of Tralles*.

tralonide (tra'lo-nid) chemical name: 9,11β-dichloro-6α,21-difluoro-16α,17-[(1-methylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione; a glucocorticoid, C₂₄H₂₈Cl₂F₂O₄.

tramadol hydrochloride (trah'mah-dōl) chemical name: (±)-*trans*-2-[(dimethylamino)-methyl]-1-(*m*-methoxyphenyl)cyclohexanol hydrochloride; an analgesic, C₁₆H₂₅NO₂·HCl.

tramazoline hydrochloride (trah-maz'o-lēn) chemical name: 4,5-dihydro-*N*-(5,6,7,8-tetrahydro-1-naphthalenyl)-1*H*-im-

idazol-2-amine monohydrochloride; an adrenergic, $C_{15}H_{17}N_3 \cdot HCl$, with nasal decongestant properties.

Trambusti's reaction (test) (tram-boos'tēz) [Arnaldo Trambusti, Italian pathologist, born 1863] see under reaction.

tramitis (tram-i'tis) [L. *trama* woof + *-itis*] a condition of the pulmonary tissue in early tuberculosis seen in the roentgenogram as pleural adhesions, deviated mediastinum, sclerosed bands, calcified nodes, and areas of increased density.

trance (trans) a profound or abnormal sleep, from which the patient cannot be aroused easily, and not due to organic disease. Voluntary movement is lost, though sensibility and consciousness may remain. It is usually due to hysteria, and may be induced by hypnosis. **alcoholic t.**, a condition of automatism (dissociation of consciousness with complete forgetfulness) resulting from alcoholic indulgence. **death t.**, that in which the patient appears to be dead. **hypnotic t.**, an artificially induced trance. **hysterical t.**, trance occurring as a symptom of hysteria. **induced t.**, that which is mainly due to hysteria, but may be caused by hypnosis.

Trancopal (tran'ko-pal) trademark for a preparation of chlor-mezone.

tranquilizer (tran'kwī-liz'er) [L. *tranquillus* quiet, calm + *-ize* verb ending meaning to make + *-er* agent] a large class of drugs used in the treatment of anxiety states, neuroses, and mental disorders. They are of two types; *major tranquilizers* (called also *antipsychotics* and *neuroleptics*) are used primarily for the treatment of psychoses and include the phenothiazines, thioxanthenes, and butyrophenones; *minor tranquilizers* (called also *anxiolytics*) are used primarily for the treatment of neuroses and anxiety states and include the benzodiazepines, certain barbiturates, and other drugs.

trans (trans) [L., through] in organic chemistry, having certain atoms or radicals on opposite sides; in genetics, having one of the two mutant genes of a pseudoallele on each homologous chromosome.

trans- [L. *trans* through] 1. a prefix meaning through, across, or beyond. 2. in organic chemistry, denoting the presence of certain atoms or radicals on opposite sides of the molecule. In genetics, having one of the two mutant genes of a pseudoallele on each homologous chromosome. Cf. *cis*.

transabdominal (trans'ab-dom'i-nal) through the abdominal wall.

transacetylase (trans-as'ē-til-ās) acetyltransferase.

transacetylation (trans-as'ē-til-a'shun) a chemical reaction involving the transfer of the acetyl group $CH_3-C(=O)-$. It occurs in

many metabolic reactions.

transacylase (trans-as'i-lās) an enzyme that catalyzes transacylation.

transacylation (trans-as'i-la'shun) a chemical reaction involving the transfer of the acyl radical between acetic and higher carboxylic acids.

transaldolase (trans-al'do-lās) an enzyme (a transferase) that catalyzes the transfer of an aldehyde residue from sedoheptulose to form tetrose.

transamidinase (trans-am'i-din-ās) an enzyme (a transferase) that catalyzes the transfer of amidine, as from arginine to ornithine; called also *amidinotransferase*.

transaminase (trans-am'i-nās) an enzyme that catalyzes the reversible transfer of an amino group from an α -amino acid to an α -keto acid, usually α -ketoglutaric acid. Pyridoxal-5-phosphate and pyridoxamine phosphate act as coenzymes. **glutamic-oxaloacetic t. (GOT)**, an enzyme normally present in serum (SGOT) and in various body tissues, especially in the heart and liver; it is released into the serum as the result of tissue injury, hence the concentration in the serum may be increased in myocardial infarction or acute damage to hepatic cells. **glutamic-pyruvic t. (GPT)**, an enzyme normally present in serum (SGPT) and body tissues, especially in the liver; it is released into the serum as a result of tissue injury, hence the concentration in the serum may be increased in patients with acute damage to hepatic cells.

transamination (trans'am-i-na'shun) the reversible transfer of an amino group from an amino acid to what was originally an α -keto acid, forming a new keto acid and a new amino acid, without the appearance of ammonia in the free state.

transanimation (trans-an'i-ma'shun) [*trans* + L. *anima* breath] resuscitation by mouth-to-mouth breathing; see *mouth-to-mouth method of artificial respiration*, under *respiration*.

transaortic (trans'a-or'tik) performed through the aorta; used especially in reference to surgical procedures on the aortic valve, performed through an incision in the wall of the aorta.

transappendageal (trans'ah-pen'dah-je'al) across an appendage, as absorption across a hair follicle or other skin appendage.

transatrial (trans-a'tre-al) performed through the atrium; used especially in reference to surgical procedures on a cardiac valve, performed through an incision in the wall of the atrium.

transaudient (trans-aw'de-ent) permitting passage of the mechanical vibrations perceived as sound.

transaxial (trans-ak'se-al) directed at right angles to the long axis of the body or a part.

transbasal (trans-ba'sal) through the base, as a surgical approach through the base of the skull.

transcalent (trans-ka'lent) [*trans* + L. *calere* to be hot] permitting the passage of radiant heat.

transcalvarial (trans'kal-vār'e-al) through or across the calvaria.

transcarbamoylase (trans-kar'bah-moi'lās) carbamoyltransferase.

transcarboxylase (trans'kar-bok'si-lās) carboxyltransferase.

transcatheter (trans-kath'ē-ter) performed through the lumen of a catheter.

transcervical (trans-ser'vī-kal) performed through the cervical opening of the uterus.

transclomiphene (trans-clo'mī-fēn) zuclophene.

transcobalamin (trans'ko-bal'ah-min) a group of proteins (of intestinal cells) that bind to cyanocobalamin (vitamin B_{12}) and transport it to other tissues.

transcondyloid (trans-kon'di-loid) through the condyles.

transcortical (trans-kor'ti-kal) connecting two different parts of the cerebral cortex; also, dependent on disease of the tracts connecting different parts of the cerebral cortex.

transcortin (trans-kor'tin) an α -globulin that binds and transports biologically active, unconjugated cortisol in plasma; called also *corticosteroid-binding globulin (CBG)*.

transcrithyroid (trans-kri'ko-thi'roid) through or across the crithyroid membrane.

transcriptase (trans-krip'tās) RNA polymerase; an enzyme that catalyzes the synthesis (polymerization) of RNA from ribonucleoside triphosphates, with DNA serving as a template. **reverse t.**, RNA-directed DNA polymerase; an enzyme of RNA viruses that catalyzes the transcription of RNA to DNA, which is then incorporated into the genome of the host cell.

transcription (trans-krip'shun) the process by which genetic information contained in DNA produces a complementary sequence of bases in an RNA chain.

transducer (trans-du'ser) a device that translates one form of energy to another, e.g., the pressure, temperature, or pulse to an electrical signal. **neuroendocrine t.**, a neuron having the properties of both nerve and gland, such as a neurohypophyseal neuron, that on stimulation secretes a hormone, thereby translating neural information into hormonal information.

transduction (trans-duk'shun) [L. *transducere* to lead across] a method of genetic recombination in bacteria, in which DNA from a lyzed bacterium is transferred to another bacterium by bacteriophage, thereby changing the genetic constitution of the second organism.

transdural (trans-du'ral) through or across the dura mater.

transection (tran-sek'shun) [*trans* + L. *sectio* a cut] a section made across a long axis; a cross section; division by cutting transversely.

transepidermal (trans'ep-i-der'mal) occurring through or across the epidermis.

transepithelial (trans'ep'i-thē'l'e-al) occurring through or across an epithelium.

transfaunation (trans'faw-na'shun) the transfer of animal parasites from one host organism to another.

transfection (trans-fek'shun) infection by naked viral nucleic acid.

transfer (trans'fer) [*trans* + L. *ferre* to carry] the conveyance of something from one place to another. **group t.**, a chemical reaction involving the enzyme-induced transfer of a group (e.g., a phosphate group) to a substrate. **linear energy t.**, see *LET*. **passive t.**, the conference of immunity to a nonimmune host by injection of antibody or lymphocytes from an immune or sensitized donor.

transferase (trans'fer-ās) any of a class of enzymes that catalyze the transfer, from one molecule to another, of a chemical group that does not exist in the free state during the transfer. **CoA-t.**, an enzyme that catalyzes the transfer of a CoA group, as from an acetyl group to propionate, oxalate, or malonate.

transference (trans-fer'ens) 1. the passage or conveyance of a symptom or affection from one part to another, a kind of metastasis. 2. in psychiatry, the shifting of an affect from one person to another or from one idea to another, especially the transfer by the patient to the analyst of emotional tones, either of affection or of hostility, based on unconscious identification. If the transfer is favorable it is *positive t.*, if unfavorable *negative t.* **counter t.**, see *countertransference*.

transferrin (trans-fer'rin) [*trans* + L. *ferrum* iron + *-in* chemical suffix] serum β -globulin that binds and transports iron. Several types (e.g., C, B, D, and many others) have been distinguished on the basis of electrophoretic mobility and related as the products of corresponding dominant somatic genes, Tf^C , Tf^B , and Tf^D . Called also *siderophilin*.

transfix (trans/'fiks) [*trans-* + *L. figere* to fix] to pierce through and through.

transfixion (trans-'fik/'shun) a cutting through from within outward, as in amputation.

transformation (trans''fo-ra/'shun) [*trans-* + *L. forare* to pierce] the perforation or piercing of the fetal skull.

transforator (trans''fo-ra/'tor) an instrument for making a transformation.

transformation (trans''for-ma/'shun) [*trans-* + *L. formatio* formation] change of form or structure; conversion from one form to another. In oncology, the change that a normal cell undergoes as it becomes malignant. **asbestos t.**, the deposition of extraneous fibers in hyaline cartilage, which gives it a silky, glossy appearance. **bacterial t.**, the process of intercellular transfer of genetic information in which a small portion of the total DNA of a lysed bacterium enters a related bacterium and is incorporated into its genetic constitution. **G-F t.**, **globular-fibrous t.**, the reversible change of actin globules into long filaments, in the process of muscle contraction and relaxation. **lymphocyte t.**, the morphological and biochemical changes (increase in size, abundance of cytoplasm, visibility of nucleoli) in lymphocytes cultured in the presence of an antigen to which they were previously exposed, or in the presence of nonspecific stimulants such as plant mitogens, streptolysins, and anti-lymphocyte serum; these changes result in proliferation and differentiation.

transforminase (trans''for-mim/'i-nās) an enzyme that catalyzes the transfer of a formimino group, as from glutamate or glycine to tetrahydrofolate.

transfructosylase (trans-fruk''to-sil/'ās) fructosyltransferase.

transfusion (trans-fu/'zhun) [*L. transfusio*] the introduction of whole blood or blood component directly into the blood stream. Cf. *infusion*. **direct t.**, immediate t. **exchange t.**, repetitive withdrawal of small amounts of blood and replacement with donor blood, until a large proportion of the blood volume has been exchanged; used in newborn infants with erythroblastosis and in patients with severe uremia. **exsanguination t.**, exchange t. **fetomaternal t.**, transplacental passage of fetal blood into the circulation of the maternal organism. **immediate t.**, the transfer of blood from one person to another without use of an intermediate container or anticoagulant. **indirect t.**, transfer of blood from a donor to a flask or other container, and then to the recipient. **intraperitoneal t.**, infusion of blood into the peritoneal cavity; see *intrauterine t.* **intrauterine t.**, transfusion of Rh-negative blood into the peritoneal cavity of an unborn infant in the treatment of erythroblastosis fetalis *in utero*. **mediate t.**, indirect t. **placental t.**, return to the newborn, after birth, and through the umbilical vessels, of some of the blood contained in the fetal placenta. **replacement t.**, **substitution t.**, exchange t.

transgenation (trans''jen-a/'shun) mutation.

transglucosylase (trans''glu-ko-sil/'ās) glucosyltransferase. **amylo-1,4 → 1,6-t.**, α-glucan-branching glycosyltransferase.

transglutaminase (trans''gloo-tam/'in-ās) the activated form of protransglutaminase, which forms stabilizing covalent bonds within fibrin strands; called also *coagulation Factor XIIIa*.

transglycosidation (trans-gli''ko-si-da/'shun) the formation of complex sugars by the transfer of monosaccharide units once glycosidic linkages are formed.

transglycosylase (trans''gli-ko-sil/'ās) glycosyltransferase.

transhexosylase (trans-hek''so-sil/'ās) hexosyltransferase.

transhiatal (trans''hi-a/'tal) across or through a hiatus.

transiliac (trans-il/'e-ak) across or between the two ilia.

transilient (trans-sil/'e-ent) [*trans-* + *L. salire* to leap] leaping or passing across.

transillumination (trans''i-lu/'mī-na/'shun) the passage of light through body tissues for the purpose of examination, the object or part under examination being interposed between the observer and the light source; diaphanoscopy.

transinsular (trans-in/'su-lar) across the insula; crossing the insula.

transischial (trans-is/'ke-ak) between the two ischia.

transisthmian (trans-is/'me-an) across an isthmus, especially the isthmus of the gyrus fornicatus.

transistor (trans-is/'tor) a small wafer of semiconducting material having three electrodes, called the emitter, base, and collector, which perform functions similar to those of the cathode, grid, and plate of a vacuum tube.

transketolase (trans-ke/'to-lās) an enzyme that catalyzes the transfer of a ketonic residue to form a pentose.

translateral (trans-lat/'er-al) from side to side; in roentgenography, referring to the view obtained with the patient supine and the radiation directed horizontally.

translation (trans-la/'shun) [*trans-* + *L. latus* borne] a removal or change of place; in genetics, the formation of a polypeptide chain in the specific amino acid sequence directed by the genetic information carried by messenger RNA. See also *transcription*.

translocation (trans''lo-ka/'shun) [*trans-* + *L. locus* place] re-

moval to another place. In genetics, the shifting of a segment or fragment of one chromosome into another part of a homologous chromosome, or into a nonhomologous chromosome. Translocation between a chromosome of the D group and chromosome 21 sometimes results in Down's syndrome. Called also *interchange*. **balanced t.**, translocation which results in no more or no less than the normal diploid or haploid genetic material. **reciprocal t.**, the mutual exchange of fragments between two broken chromosomes, one part of one uniting with part of the other. **robertsonian t.**, that in which the breaks occur at the centromeres and entire chromosome arms are exchanged, usually involving two acrocentric chromosomes.

translucent (trans-lu/'sent) [*trans-* + *L. lucens* shining] transmitting light, but diffusing it so that objects beyond are not clearly distinguished.

transmethylase (trans-meth/'i-lās) methyltransferase.

transmethylation (trans''meth-i-la/'shun) the transfer of a methyl group (CH₃—) from the molecules of one compound to those of another.

transmigration (trans''mi-gra/'shun) [*trans-* + *L. migratio* migration] 1. a wandering, especially a change of place from one side of the body to the other. 2. diapedesis. **external t.**, the passage of an ovum from one ovary to the uterine tube of the other side without going through its own oviduct. **internal t.**, the passage of an ovum from one oviduct to the other by way of the uterus.

transmissible (trans-mis/'i-b'l) capable of being transmitted from one individual or one species to another.

transmission (trans-mish/'un) [*trans-* + *L. missio* a sending] a transfer, as of a disease or neural impulse; the communication of inheritable qualities to offspring. **duplex t.**, the transmission of neural impulses in two directions across a nerve. **ephaptic t.**, the conduction of a nerve impulse across an ephapse, as opposed to synaptic transmission. **horizontal t.**, the spread of an infectious agent from one individual to another, usually through contact with excreta, e.g., sputum, etc., containing the agent; cf. *vertical t.* **synaptic t.**, the transmission of a neural impulse across a synapse. **vertical t.**, transmission from one generation to another. The term is restricted by some to genetic transmission and extended by others to include also transmission of infection from one generation to the next, as by milk or through the placenta. Cf. *horizontal h.*

transmitter (trans-mit/'er) something that transmits; see also under *substance*; see also *neurotransmitter*.

transmural (trans-mu/'ral) [*trans-* + *L. muralis*, from *mur* wall] through the wall of an organ; extending through or affecting the entire thickness of the wall of an organ or cavity.

transmutation (trans''mu-ta/'shun) 1. evolutionary change of one species into another. 2. the change of one chemical element into another; nucleonics, the changing of an atomic nucleus to one of a different atomic number by nuclear bombardment, causing rearrangement of the protons and neutrons.

transocular (trans-ok/'u-lar) [*trans-* + *L. oculus* eye] across the eye.

transonance (tran''so-nans) [*trans-* + *L. sonans* sounding] transmission of a sound originating in one organ through the substance of another organ.

transorbital (trans-or/'bi-tal) performed through the bony socket of the eye.

transovarial (trans''o-va/'re-al) through the ovary; referring to transmission of pathogens from the maternal organism, by invasion of the ovary and infection of eggs, to individuals of the next generation, as may occur in infections of arthropods, especially mites and ticks.

transovarian (trans''o-va/'re-an) transovarial.

transoximinase (trans''oks-im/'i-nās) oximinotransferase.

transpalatal (trans-pal/'ah-tal) performed through the roof of the mouth, or palate.

transparent (trans-par/'ent) [*trans-* + *L. parere* to appear] permitting the passage of rays of light, so that objects may be seen through the substance.

transparietal (trans''pah-ri/'ē-tal) [*trans-* + *L. paries* wall] through or across a wall, as through the intact body wall.

transpentosylase (trans-pen''to-sil/'ās) pentosyltransferase.

transpeptidase (trans-pep/'ti-dās) an enzyme that catalyzes the transfer of an amino group or a peptide group from one molecule to another.

transperitoneal (trans''per-i-to-ne/'al) through or across the peritoneum.

transphosphorylase (trans''fos-for/'i-lās) an enzyme that catalyzes the transfer of a phosphate group; see *kinase* (def. 1).

transphosphorylation (trans-fos''for-i-la/'shun) the exchange of phosphate groups between organic phosphates, without their going through the stage of inorganic phosphate.

transpiration (tran''spi-ra/'shun) [*trans-* + *L. spiratio* exhalation] the discharge of air, sweat, or vapor through the skin; insensible perspiration. **pulmonary t.**, the exhalation of water vapor from the blood circulating through the lungs.

transplacental (trans-'plah-sen/'tal) through the placenta.

transplant 1. (trans-'plant/'f) to transfer tissue from one part to another. 2. (trans-'plant) an organ or tissue taken from the body for grafting into another area of the same body or into another individual. **Gallie t.**, strips of fascia lata employed as sutures in the repair of hernias.

transplantar (trans-'plan/'tar) [trans- + L. *planta* sole] across the sole.

transplantation (trans-'plan-'ta-'shun) [trans- + L. *plantare* to plant] the grafting of tissues taken from the same body or from another. See also entries under *graft*. In dentistry, the insertion, into a prepared dental alveolus, of an autogenous or homologous tooth; it may be a developing tooth germ from the same mouth, or a frozen homologous transplant. **allogeneic t.**, transplantation of tissue between genetically dissimilar animals of the same species. **heterotopic t.**, transplantation of tissue typical of one area to a different recipient site. **homotopic t.**, orthotopic t. **orthotopic t.**, transplantation of tissue typical of one area to an identical recipient site. **syngeneic t.**, transplantation of tissues between animals in the same pure line, e.g., within an inbred strain. **syngenesioplasmic t.**, transplantation of tissue from one individual to a related individual of the same species, as from a mother to her child, or from a brother to a sister. **tendon t.**, the operation of inserting the tendon of a sound muscle into the tendon of a paralyzed muscle or into bone.

transpleural (trans-'ploor/'al) through the pleura; by way of the pleural sac.

transport (trans-'port) [L. *transportare* to carry across] the movement of materials in biological systems, particularly into and out of cells and across epithelial layers. **active t.**, the movement of materials across cell membranes and epithelial layers resulting directly from the expenditure of metabolic energy. **bulk t.**, the uptake by or extrusion from a cell of fluid and of particles too large to cross the cell membrane by diffusion or active transport, accomplished by invagination and vacuole formation (uptake) or by evagination (extrusion); it includes endocytosis, phagocytosis, pinocytosis, and exocytosis.

transposition (trans-'po-'zish/'un) [trans- + L. *positio* placement] 1. displacement of a viscus to the opposite side. 2. the operation of carrying a tissue flap from one situation to another without severing its connection entirely until it is united at its new location. 3. the exchange of position of two atoms within a molecule. **corrected t. of great vessels**, a developmental cardiac anomaly characterized by transposition of the great vessels with inversion of the ventricles and atrioventricular valves; termed "corrected" because the inverted ventricles compensate for the transposition, producing a mirror-image blood flow in the heart. Called also *mixed levocardia*. **t. of great vessels**, a congenital cardiovascular malformation in which the aorta arises entirely from the right ventricle and the pulmonary artery from the left ventricle, so that the venous return from the peripheral circulation is recirculated by the right ventricle via the aorta to the systemic circulation without being oxygenated in the lungs. Life then depends on a crossflow of blood between blood in the right heart and that in the left heart, as through a ventricular septal defect or a patent duct arteriosus. Cyanosis is the chief symptom. **partial t. of great vessels**, Taussig-Bing syndrome.

transposon (trans-'po-'zon) any discrete and characteristic genetic unit (DNA sequence) that may be transferred from one cell to another and be inserted into any of multiple sites in the recipient cell's plasmid- or chromosomal-DNA, with associated rearrangement of the recipient's DNA.

transpubic (trans-'pu-'bik) performed through the pubic bone after removal of a segment of the bone.

transsacral (trans-'sa-'kral) through or across the sacrum.

transsection (trans-'sek/'shun) transection.

transsegmental (trans-'seg-'men/'tal) extending across a segment.

transseptal (trans-'sep/'tal) through or across a septum.

transsexual (trans-'seks/'u-'al) 1. a person affected by transsexualism. 2. a person whose external anatomy has been changed to that of the opposite sex.

transsexualism (trans-'seks/'u-'ah-'lizm) a disturbance of gender identity in which the affected person has overwhelming desire to change anatomic sex stemming from the fixed conviction that he or she is a member of the opposite sex; such persons often seek hormonal and surgical treatment to bring their anatomy into conformity with their belief. Cf. *transvestism*.

transsphenoidal (trans-'sfe-'noi/'dal) performed through the sphenoid bone.

transsternal (trans-'ster/'nal) through the sternum.

transtemporal (trans-'tem-'por-'al) crossing the temporal lobe.

transthalamic (trans-'thah-'lam/'ik) crossing the thalamus.

transthermia (trans-'ther-'me-'ah) [trans- + Gr. *thermē* heat] thermopenetration.

transthoracic (trans-'tho-'ras/'ik) performed through the wall of the thorax, or through the thoracic cavity.

transtracheal (trans-'tra-'ke-'al) performed by passage through the wall of the trachea.

trans tympanic (trans-'tim-'pan/'ik) across the tympanic membrane or the cavity of the middle ear.

transubstantiation (trans-'sub-'stan-'she-'a-'shun) [trans- + L. *substantia* substance] the substitution of one tissue for another, as in surgical procedures.

transudate (trans-'u-'dāt) [trans- + L. *sudare* to sweat] a fluid substance which has passed through a membrane or been extruded from a tissue, sometimes as a result of inflammation. A transudate, in contrast to an exudate, is characterized by high fluidity and a low content of protein, cells, or of solid materials derived from cells.

transudation (trans-'u-'da-'shun) 1. the passage of serum or other body fluid through a membrane or tissue surface, which may or may not be the result of inflammation. 2. transudate.

transuranium (trans-'u-'ra-'ne-'um) beyond uranium; see *transuranic elements*, under *element*.

transureteroureterostomy (trans-'u-'re-'ter-'o-'u-'re-'ter-'os/'to-me) anastomosis of the distal and of the proximal portion of one ureter to the ureter of the opposite side.

transurethral (trans-'u-'re/'thral) performed through the urethra.

transvaginal (trans-'vaj/'i-'nal) performed through the vagina.

transvaterian (trans-'vah-'te/'re-'an) through the papilla of Vater.

transvector (trans-'vek/'tor) an organism that conveys or transmits a poison which is not generated in its own body but is obtained from another source, such as the mussel, *Mytilus*, which serves as a transvector of paralytic shellfish poison derived from the dinoflagellate, *Gonyaulax*.

transventricular (trans-'ven-'trik/'u-'lar) performed through the ventricle; used especially in reference to surgical procedures on cardiac valves, performed through an incision in the wall of a ventricle.

transversalis (trans-'ver-'sa/'lis) [trans- + L. *vertere*, *versum* to turn] transverse; [NA] a term designating a structure situated at a right angle to the long axis of the body or of an organ.

transverse (trans-'vers/'f) [L. *transversus*] placed crosswise; situated at right angles to the long axis of a part.

transversectomy (trans-'ver-'sek/'to-me) [transverse + Gr. *ektomē* excision] surgical removal of the transverse process of a vertebra.

transversion (trans-'ver/'zhun) displacement of a tooth from its proper numerical position in the jaw.

transversocostal (trans-'ver-'so-'kos/'tal) costotransverse.

transversotomy (trans-'ver-'sot/'o-me) [transverse + Gr. *tomē* a cutting] the operation of cutting the transverse process of a vertebra.

transversourethralis (trans-'ver-'so-'u-'re-'thra/'lis) the transverse fibers of the sphincter urethrae muscle.

transversus (trans-'ver/'sus) transverse; [NA] a general term designating a position at right angles to a long axis.

transvesical (trans-'ves/'i-'kal) through the bladder.

transvestism (trans-'ves/'tizm) [trans- + L. *vestitus* clothed] a sexual deviation characterized by overwhelming desire to assume the attire, and be accepted as a member, of the opposite sex; called also *cross dressing* and *eonism*. Cf. *transsexualism*.

transvestite (trans-'ves/'tit) an individual exhibiting transvestism.

transvestitism (trans-'ves/'ti-'tizm) transvestism.

Trantas' dots (trans-'tas) [Alexios Trantas, Greek ophthalmologist, born 1867] see under *dot*.

Tranxene (tran-'zēn) trademark for a preparation of clordiazepate dipotassium.

transcyclopropane sulfate (tran-'il-'si-'pro-'mēn) [USP] chemical name: (+)-trans-2-phenylcyclopropylamine sulfate. A monoamine oxidase inhibitor, (C₉H₁₁N)₂·H₂SO₄, occurring as a white crystalline powder; used as an antidepressant, administered orally.

trapezial (trah-'pe/'ze-'al) pertaining to a trapezium.

trapeziform (trah-'pez/'i-'form) trapezoid.

trapeziometacarpal (trah-'pe/'ze-'o-'met/'ah-'kar/'pal) pertaining to or connecting the trapezium and the metacarpus.

trapezium (trah-'pe/'ze-'um) [L.; Gr. *trapezion*] an irregular four-sided figure; see *os trapezium*.

trapezoid (trap-'e-'zoid) [L. *trapezoides*; Gr. *trapezoidēs* table shaped] 1. having the shape of a four-sided plane, with two sides parallel and two diverging. 2. the *os trapezoidium*.

Trapp's formula (coefficient) (traps) [Julius Trapp, Russian pharmacist, 1814-1908] see under *formula*.

Trasentine (tras-'en-'tin) trademark for preparations of adiphenine hydrochloride.

Traube's curves, etc. (traw-'bez) [Ludwig Traube, German physician, 1818-1876] see under *curve*, *dyspnea*, *heart*, *membrane*, and *space*, and see *gallop rhythm*, under *rhythm*.

Traube-Hering curves, waves (traw'be-her'ing) [Ludwig Traube; Ewald Hering, physiologist in Leipzig, 1834-1918] see Traube's curve, under curve, and see under wave.

trauma (traw'mah), pl. *traumas* or *traumata* [L.; Gr.] a wound or injury, whether physical or psychic. **birth t.**, an injury to the infant received in or due to the process of being born. In some psychiatric theories, the psychic shock produced in an infant by the experience of being born. **occlusal t.**, pathologic changes in a tooth and its surrounding structures produced by abnormal occlusal stresses. **potential t.**, in dentistry, an alteration in tissue that may occur at any time as a result of an existing dental disharmony. **psychic t.**, an emotional shock that makes a lasting impression on the mind, especially upon the subconscious mind.

traumasthenia (traw'mas-the'ne-ah) [*trauma* + a neg. + Gr. *sthenos* strength + *-ia*] traumatic neurasthenia.

traumata (traw'mah-tah) [Gr.] plural of *trauma*.

traumatotherapy (traw'mah-ther'ah-pe) [*trauma* + Gr. *therapeia* treatment] that branch of surgery which deals with the treatment of wounds and injuries.

traumatic (traw-mat'ik) [Gr. *traumatikos*] pertaining to, occurring as the result of, or causing trauma.

traumatin (traw'mah-tin) a substance which stimulates the growth of plant tissues; it may be identical with wound hormone.

traumatism (traw'mah-tizm) [Gr. *traumatismos*] 1. the physical or psychic state resulting from an injury or wound. 2. a wound.

traumato- (traw'mah-to) [Gr. *trauma*, *traumatos* wound] a combining form denoting relationship to trauma, or to a wound or injury.

traumatogenic (traw'mah-to-jen'ik) [*traumato-* + Gr. *gennan* to produce] 1. caused by or due to a wound or wounds. 2. capable of causing trauma.

traumatologist (traw'mah-to'l'o-jist) a surgeon experienced in treating accidental injuries.

traumatology (traw'mah-to'l'o-je) [*traumato-* + *-logy*] the branch of surgery which deals with wounds and disability from injuries.

traumatonesis (traw'mah-to-ne'sis) suture of a wound.

traumatopathy (traw'mah-top'ah-the) [*traumato-* + Gr. *pathos* disease] any pathological condition due to wound or injury.

traumatophilia (traw'mah-to-fil'e-ah) [*traumato-* + Gr. *philein* to love] a condition in which the patient takes a subconscious delight in injuries or surgical operations.

traumatopnea (traw'mah-top-ne'ah) [*traumato-* + Gr. *pnoia* breath] a condition of partial asphyxia with collapse caused by traumatic opening of the pleural space (open pneumothorax).

traumatopyra (traw'mah-to-pi'rah) [*traumato-* + Gr. *pyr* fever] traumatic fever.

traumatosis (traw'mah-to'sis) traumatism.

traumatotherapy (traw'mah-to-ther'ah-pe) treatment of wounds and other injuries.

traumatropism (traw-mat'ro-pizm) [*trauma* + Gr. *tropos* a turning] the growth or movement of organisms in relation to injury.

travail (trav'al) childbirth; see labor.

Travasol (trav'ah-sol) trademark for a crystalline amino acid solution for intravenous administration, containing a mixture of essential and nonessential amino acids but no peptides.

tray (tra) a flat-surfaced utensil for the conveyance of various objects or material. **acrylic resin t.**, an impression tray made of acrylic resin. **impression t.**, in dentistry, a contoured metal or plastic container to hold the material with which an impression of the jaw or teeth is being made.

trazodone hydrochloride (tra'zo-dön) chemical name: 2-[3-[4-(3-chlorophenyl)-1-piperazinyl]propyl]-1,2,4-triazolo[4,3-a]pyridin-3-(2H)-one monohydrochloride; an antidepressant, tranquilizer, and hypotensive, C₁₉H₂₂ClN₅O·HCl.

TRBF total renal blood flow; see under flow.

treacle (tre'k'l) [Gr. *thēriaka*] a syrupy substance or mixture; molasses. **Venice t.**, theriac andromachi.

tread (tred) injury of the coronet of a horse's hoof, due to striking with the shoe of the opposite side.

treatment (trēt'ment) the management and care of a patient for the purpose of combating disease or disorder. See also under *maneuver*, *method*, *technique*, *tests*, and *therapy*. **active t.**, that which is directed immediately to the cure of a disease or injury. **Albertini's t.**, complete rest and abstinence from food in aneurysm of the aorta. **Allen's t.**, treatment by certain days of fasting, followed by a restricted diet and attended by a careful determination of the quantity of food which the patient can consume without producing glycosuria and glycemia. Called also *starvation t.* **antigen t.**, the production of active immunity by the injection of antigens, including bacteriotherapy, and the use of vaccine and tuberculins. **Ascoli t.**, injection of epinephrine in malaria, with resultant contraction of the spleen which forces its contents, including the malaria parasites, into the

circulation, facilitating diagnosis. **autoserous t.**, treatment of an infectious disease by inoculating the patient with his own serum. **Balfour's t.**, treatment of aneurysm by potassium iodide. **Banting t.**, treatment of obesity by a diet low in carbohydrate, but rich in nitrogenous matters. **Baunscheidt's t.**, baunscheidtism. **Beard's t.**, treatment of cancer by trypsin. **Bell t.**, treatment of cancer by injections of a preparation of colloidal lead. **Bergonié's t.**, the application of general faradization for the reduction of corpulence. **Bier's t.**, see under *hyperemia*. **Bier's combined t.**, treatment of surgical tuberculosis by artificial hyperemia, heliotherapy, and iodides. **Bird's t.**, treatment of decubitus ulcer by mild galvanic currents. **Blanchard's t.**, the plugging of tuberculous bone cavities with a mixture of white wax and petrolatum. **Bluemel's t.**, a method of treating the morphine habit, with complete withdrawal of morphine, a liquid diet, cathartics, intravenous sodium chloride solution, and chloral to insure sleep the first few nights. **Bouchardat's t.**, treatment of diabetes by use of a diet that excludes substances rich in carbohydrates. **Brandt t.** (obs.), see under *method*. **Brehmer's t.**, treatment of pulmonary tuberculosis by the use of dietetic and physical measures. **Brown-Séquard t.**, organotherapy. **Calot's t.**, treatment of tuberculosis of the spine (Pott's disease) by plaster jackets having an opening over the kyphos on which pressure is made by means of pads. **Cantani's t.**, former method of treating cholera by the repeated injection into the bowel of a large quantity of water containing tannic acid and tincture of opium at a temperature of from 100° to 104° F. **carbon dioxide t.**, see under *therapy*. **Carrel's t.**, **Carrel-Dakin t.**, treatment of wounds, based on thorough exposure of the wound, removal of all foreign material and divitalized tissue, meticulous cleansing, and repeated irrigation with a dilute sodium hypochlorite solution. The adjacent skin is protected with petrolatum gauze. **Castellani's t.**, treatment of elephantiasis by complete rest in bed, bandaging with a flannel or rubber bandage, and daily injections of fibrolysin. **causal t.**, treatment that is directed against the cause of a disease. **Chervin's t.**, a method of treatment for stuttering; called also *Chervin's method*. **choline t.**, treatment of cancer by the intravenous injection of borate of choline in connection with the use of radioactive substances. **Coffey-Humber t.**, treatment of cancer by injection of an extract of adrenal cortex of sheep. **conservative t.**, treatment designed to avoid radical medical therapeutic measures or operative procedures; often reserved for elderly or debilitated patients. **Cox's t.**, treatment of cholera by intravenous isotonic saline. **curative t.**, active treatment designed to cure an existing disease, as opposed to *palliative t.* **Dancel's t.**, treatment of obesity by a diet containing as little water as possible. **Debove's t.**, treatment of tuberculosis by a special form of forced feeding. **denture t.**, a dental prosthesis used for the purpose of treating or conditioning the tissues which are to support and retain a denture base. **dietetic t.**, treatment of disease by regulation of the diet. **drug t.**, treatment with drugs, as distinguished from treatment with physical means, such as diet, exercise, electricity, etc. **Dubois's t.**, see under *method*. **Ebstein's t.**, see under *diet*. **Ehrlich-Hata t.**, see *arsphenamine*. **electroconvulsive t.**, **electroshock t.**, see under *therapy*. **empiric t.**, treatment by means which experience has proved to be beneficial. **Etappen t.**, treatment of bowlegs and knock knee by plaster of Paris bandage and corrective wedging. **eventration t.**, application of ionizing irradiation to internal anatomical tissues through an open laparotomy wound. **expectant t.**, treatment designed only to relieve untoward symptoms, leaving the cure mainly to nature. **fever t.**, pyretotherapy. **Fichera's t.**, treatment of cancer by hypodermic injection of autolyzed human fetal tissue. **Finikoff's t.** (obs.), treatment for bone tuberculosis: iodized peanut oil is injected intramuscularly every five to eight days and 10 per cent calcium solution intravenously three times a week. **Finsen t.** (obs.), treatment of lupus vulgaris by direct application of rays of sunlight or artificial ultraviolet light. **Fitz Gerald t.**, zone therapy. **Flieiss' t.**, anesthetization of the nasal conchae for the relief of pain in dysmenorrhea and in nervous stomach pains. **foam t.**, treatment with the foam produced by blowing a current of air through water containing saponin solution. **Fournier's t.**, former method of treating syphilis by administering mercury for two months, then stopping the mercury for a month or more. This is followed by a period of alternate administration and stopping of the mercury. **Fowler-Murphy t.**, **Murphy's t.**, def. 2. **Fränkel's t.**, the use of strophanthin in cardiac failure. **Frenkel's t.**, see under *movement*. **Girard's t.**, treatment of seasickness by hypodermic or oral administration of atropine sulfate and strychnine sulfate. **gland t.**, gonadotherapy. **Goeckerman t.**, treatment of psoriasis by applying ointments of tar followed by irradiation with ultraviolet light. **Guinard's t.**, application of calcium carbide to ulcerating tumors. **Hartel's t.**, alcoholic injection for trigeminal neuralgia in which the needle is passed through the mouth into the region of the foramen ovale of the sphenoid bone. **high-frequency t.**, diathermy. **Högyes' t.**, former method of treating rabies, by the subcutaneous injection of a 1 per cent suspension of rabies virus diluted 1:100 or 1:1000. **hygienic t.**, that directed to the restoration or maintenance of hygienic conditions. **hypo-**

glycemic shock t., insulin coma therapy. **Indoklon t.**, see under *therapy*. **insulin coma t.**, **insulin shock t.**, see under *therapy*. **Jacquet's biokinetic t.**, active gymnastics of the hand and fingers. **Jarotzky's (Jarotsky's) t.**, treatment of gastric ulcer by a diet of whites of eggs, fresh butter with bread, and milk or noodles. **Karell t.**, treatment of heart and kidney disease by keeping the patient in bed and giving only 800 ml. of milk daily for four or five days, the diet then being gradually increased until, on the thirteenth day, the regular diet is resumed. **Keating-Hart's t.**, see under *fulguration*. **Kenney's t.**, treatment of infantile paralysis by wrapping the patient's back and limbs in woolen cloths wrung out of hot water; after pain has subsided passive exercise is given and the patient taught to exercise his muscles by himself. **Killgren t.**, a system of medical gymnastics combined with passive exercise, friction, and vibrations, and laying special emphasis on the mechanical treatment of the nerves. **Kittel's t.**, massage and manipulation for the dispersion of the uratic deposits in gouty joints. **Klapp's creeping t.**, treatment of scoliosis by having the patient creep about on the floor, with exaggerated movements of the spine. **Koga t.**, treatment of thromboangiitis obliterans by diluting the blood by hypodermoclysis with normal salt solution. **Koranyi's t.**, former method of treating leukemia by the use of benzol (benzene). **Kromayer's t.**, former method of treating syphilis by the inhalation of very finely divided mercury. **Lambert's t.**, a method of treating opium addiction based on gradual reduction of opium and increasing doses of codeine, which is continued for about a week after the opium is withdrawn. **Lambotte's t.**, a method of extension in fractures of the extremities by means of an extensible steel frame fastened to the bone by steel pegs. **La Porte t.**, treatment of chronic osteomyelitis by application over the infected areas of aluminum potassium nitrate in an oatmeal poultice. **Larat's t.**, treatment of diphtheritic paralysis of the palate by faradism. **Lerich's t. (of strains)**, infiltration of the periarticular tissues with a 0.5–2 per cent solution of procaine. **light t.**, phototherapy. **McPheeters' t.**, treatment of varicose ulcer by bandaging a rubber sponge over the ulcerated area and directing the patient to walk as much as possible; called *venous heart treatment*. **Maisler's t.**, gaseous dilation, once used in the treatment of gonorrhea. **malarial t.**, malariotherapy. **Matas' t.**, treatment of neuralgia by the injection of alcohol under the nerve ganglions at the base of the skull. **medicinal t.**, that in which the treatment is mainly accomplished by the use of remedies. **Metrazol shock t.**, see under *therapy*. **Minot-Murphy t.**, the treatment of pernicious anemia by the addition to the diet of raw liver or liver extract. **Mitchell t.**, see *Weir Mitchell t.* **Muirhead's t.**, treatment of Addison's disease by epinephrine given to the point of tolerance and the administration of adrenal cortex by mouth. **Murphy's t.**, 1. treatment of pulmonary tuberculosis by injecting nitrogen gas into the pleural cavity in order to cause collapse of the lung and consequent obliteration of cavities. 2. treatment of peritonitis by placing the patient in the Fowler position to favor drainage into the pelvis from the abdomen, and then irrigating the colon with physiologic salt solution administered slowly. **Nägeli's t.**, see under *maneuver*. **Nauheim t.**, Schott's t. **Neuber's t.**, treatment of tuberculosis of bones and joints by excising the carious tissue and filling the cavity with an emulsion of iodoform in glycerin. **Neuendorf t.**, treatment of rheumatoid arthritis by the mud baths of Neuendorf, Germany. **Noorden t.**, oatmeal t. **Nordach t.**, treatment of pulmonary tuberculosis by fresh air, rest, and an abundance of nourishing food. **oatmeal t.**, treatment of diabetes by restricting the protein of the diet and limiting the carbohydrates to oatmeal. **Ochsner t.**, treatment of appendicitis by securing peristaltic rest so that peritoneal adhesions may form; this is achieved by abstention from food by mouth, gastric suction, and an inlying rectal tube to facilitate the escape of gas. **Oertel's t.**, treatment of heart disease, circulatory diseases, obesity, etc., by regulation of diet, diminution of fluid elements in the food, mountain climbing and other systematic exercises, and by massage and Swedish movements. **organ t.**, organotherapy. **Orr t.**, treatment of compound fractures and osteomyelitis by débridement of the wound, alignment of fracture, drainage with petrolatum gauze, and immobilization of limb in a plaster cast which is left on until the wound discharge has softened the plaster. **palliative t.**, treatment which is designed to relieve pain and distress, but which does not attempt a cure. **Paul's t.**, the therapeutic use of lymph for cutaneous therapy of chronic rheumatism. **Petrén's t.**, see under *diet*. **Playfair's t.**, treatment by rest and feeding. **Politzer's t.**, treatment of disease of the middle ear by blowing air into the nostril while the patient goes through the movements of swallowing. **Potter t.**, treatment of intestinal fistulas by administration of tenth normal solution of hydrochloric acid to neutralize the alkalinity of the pancreatic juice, thus preventing tryptic activity. **preventive t.**, **prophylactic t.**, that in which the aim is to prevent the occurrence of the disease; prophylaxis. **Proetz t.**, the instillation of fluid into the paranasal sinuses by means of intermittent negative pressure for the treatment of sinus infection. **rational t.**, treatment based upon a knowledge of disease and the action of the remedies employed. **Retan's t.**, treatment of in-

tussusception by distending the colon with a barium mixture, followed by manipulations. **Ricord's t.**, former method of treating syphilis by administration of mercury for six months, followed by administration of potassium iodide for three months. **Roeder's t.**, removal of pus and debris from an inflamed tonsil by suction. **Rollier t.**, treatment of surgical tuberculosis by systematic exposure of the part to the rays of the sun. **salicyl t.**, treatment of rheumatism with salicylic acid or its derivatives. **sand t.**, treatment with sand baths. **Schede's t.**, see *Schede's operation* (def. 3), under *operation*. **Schlösser's t.**, treatment of facial neuralgia by injections of 80 per cent alcohol (Schlösser's injection) into the foramen from which the nerve emerges. **Schott's t.**, treatment of heart disease by use of warm saline baths of Nauheim and systematically conducted exercise. **Schroth's t. (obs.)**, treatment of obesity by the exclusion of water in any form as far as possible. **Semple's t.**, the prevention of rabies by injection of Semple vaccine. **sewage t.**, the processing of sewage to remove or so alter some of its constituents as to render it less offensive or dangerous and more fit to discharge into a public water course. **shock t.**, see under *therapy*. **Sippy t.**, a regimen of treatment of peptic ulcer based on neutralization of hydrochloric acid by frequent feedings and the use of alkalis in carefully regulated but adequate quantities. See under *diet*. **slush t.**, the treatment of acne by the application of a mixture of carbon dioxide snow, acetone, and sulfur. **solar t.**, heliotherapy. **specific t.**, treatment that is particularly adapted to the special disease being treated. **starvation t.**, Allen t. **Stoker's t.**, treatment in bronchiectasis by continuous inhalation of oxygen. **string method t.**, treatment of esophageal stricture by passing a string through the mouth and through a gastric fistula, and then, by pulling the string up and down, cutting through the stricture so that a bougie may easily be passed. Called also *Abbe's string method*. **Stroganoff's (Stroganov's) t. (obs.)**, treatment of puerperal eclampsia by morphine, chloral hydrate, and chloroform, according to a definite scheme. **subcoma insulin t.**, see under *therapy*. **supporting t.**, that which is mainly directed to sustaining the strength of the patient. **surgical t.**, that in which surgical methods are those chiefly employed. **symptomatic t.**, expectant t. **Tallerman t.**, the localized application of superheated dry air in rheumatism, gout, sprains, neuritis, eczema, etc. See also under *apparatus*. **teleradium t.**, treatment by a radium source located at a distance from the body. **terrain t.**, treatment of weak heart, neurasthenia, corpulence, etc., by regular exercise, mountain climbing, regulation of diet, etc. **three-dye t.**, treatment of burns by the application of 6 per cent gentian violet, 1 per cent brilliant green, and 0.1 per cent acriflavin base. **thymus t.**, treatment of progressive muscular atrophy by extracts from the thymus gland. **thyroid t.**, treatment of disease by preparations of the thyroid gland of domestic animals used for food by man. **tonic t.**, 1. treatment with tonics. 2. treatment of syphilis with small doses of mercury continued for a long period. **Trueta t.**, immediate treatment of fractures as follows: (1) adopt surgical treatment as soon as possible; (2) thoroughly wash wound and entire limb with water, soap, and a nail brush, shave hair, paint surrounding skin with weak alcoholic solution of iodine, avoiding the wound; (3) débride wound; (4) open neighboring cellular spaces and remove hematomas; (5) remove completely denuded or displaced bone fragments and all foreign matter; (6) reduce fracture; (7) dress wound with sterile gauze and immobilize with plaster, including two adjacent joints if possible; (8) give injection of tetanus antitoxin. **Tschmarke's t.**, treatment of a cutaneous burn by thorough washing with soap, water, and alcohol under general anesthesia. **Tuffnell's t.**, treatment of aneurysm by absolute rest and starvation diet. **underwater t.**, treatment of poliomyelitis patients by permitting active movements in the water of a bath or pool. **venous heart t.**, McPheeters' t. **Wagner-Jauregg t.**, treatment of dementia paralytica by infection of the patient with malaria. **Weir Mitchell t.**, a method of treating neurasthenia, hysteria, etc., by absolute rest in bed, frequent and abundant feeding, and the systematic use of massage and electricity. **Woodbridge t.**, treatment of typhoid fever with small doses of calomel, podophyllin, and intestinal antiseptics. **Yeo's t.**, treatment of obesity by giving large amounts of hot drinks and withholding carbohydrates.

trebenzomine hydrochloride (trē-ben'zo-mēn) chemical name: (cis or trans)-(+)3,4-dihydro-*N,N*,2-trimethyl-2*H*-1-benzopyran-3-amine hydrochloride; an antidepressant, C₁₂H₁₇NO·HCl. **Trechona** (trē-kon'ah) a genus of spiders (family Dipluridae), which is harmful to man.

tree (tre) 1. a perennial of the plant kingdom characterized by having a main stem or trunk and numerous branches. 2. an anatomical structure with branches resembling a tree. **bronchial t.**, the bronchi and their branching structures. **tracheobronchial t.**, the trachea, bronchi, and their branching structures.

trehala (tre-ha'lah) a mannitol-like substance deposited by an insect (*Larinus maculatus*) upon an Asiatic plant of the genus *Echinops*.

trehalase (tre-ha'lās) an enzyme of the intestinal mucosa that catalyzes the hydrolysis of trehalose to form 2 D-glucose.

trehalose (tre-ha'lōs) a disaccharide, $C_{12}H_{22}O_{11}$, from the cocoons of certain beetles (*Trehala manna*) and yeast; it is not digestible, but yields glucose when hydrolyzed with acids.

Treitz's arch, fossa, hernia, muscle (ligament) (trits) [Wenzel Treitz, Austrian physician, 1819-1872] see under *arch* and *hernia*, see *musculus suspensorius duodeni*, and see *recessus duodenalis superior*.

treloxinate (trē-loks'i-nāt) chemical name: methyl 2,10-dichloro-12*H*-dibenzo[*d*,*g*] [1,3]dioxocin-6-carbolate; an anticholenteric, $C_{16}H_{12}Cl_2O_4$.

Trematoda (trem'ah-to'dah) [Gr. *trematōdēs* pierced] a class of the Platyhelminthes which includes the flukes. The trematodes or flukes are parasitic in man and animals, infection generally resulting from the ingestion of uncooked or insufficiently cooked fish, crustaceans, and vegetation. All flukes require a mollusk as their first intermediate host, in which a complex developmental cycle takes place. The larval stage, which escapes from the mollusk, may then enter a second intermediate host (fish, crustacean, or another mollusk), encyst on vegetation, or penetrate directly into the skin of the definitive host. The important trematodes of man belong to the genera (1) BLOOD: *Schistosoma*. (2) INTESTINE: *Echinostoma*, *Fasciolopsis*, *Gastrodicrocoelium*, *Heterophyes*, *Metagonimus*. (3) LIVER: *Clonorchis*, *Fasciola*, *Dicrocoelium*, *Opisthorchis*. (4) LUNG: *Paragonimus*.

trematode (trem'ah-tōd) any parasitic animal organism belonging to the class Trematoda.

trematodiasis (trem'ah-to-di'ah-sis) infection with trematodes.

trembles (trem'b'lz) poisoning in cattle and sheep that feed on the white snakeroot (*Eupatorium rugosum*), in which the animal has muscular tremors and becomes weak and may suddenly stumble and fall. Persons made ill by milk, milk products, or flesh from an animal so affected are said to have milk sickness (q.v.), which may be fatal. A similar condition is caused by *Haplopappus*.

tremelloid, tremellose (trem'ē-loid; trem'ē-lōs) like jelly.

tremetol (trem'ē-tol) chemical name: 2-isopropenyl-2,3-dihydro-5-acetylbenzofuran. A toxin, $C_{13}H_{14}O_2$, in the white snakeroot, *Eupatorium rugosum* (*E. urticaefolium*), which causes trembles in cattle and sheep and milk sickness in man. Called also *tremetone*.

tremetone (trem'ē-tōn) tremetol.

Tremin (trem'in) trademark for a preparation of trihexyphenidyl hydrochloride.

tremogram (tre'mo-gram) [tremor + Gr. *gramma* mark] the tracing or record made by a tremograph; a graphic tracing of a tremor. See *ataxiometer*.

tremograph (tre'mo-graf) [tremor + Gr. *graphein* to write] an instrument for recording tremors.

tremolabile (tre'mo-la'bīl) [tremor + L. *labilis* unstable] susceptible to shaking; easily inactivated by shaking; said of a ferment.

tremor (trem'or, tre'mor) [L., from *tremere* to shake] an involuntary trembling or quivering. **action t.**, rhythmic, oscillatory, involuntary movements of the outstretched upper limb, as when writing or lifting a cup; it may also affect the voice and other parts. **arsenic t.**, a tremor resulting from arsenic poisoning. **coarse t.**, a tremor in which the vibrations are slow. **continuous t.**, a persistent tremor resembling that of paralysis agitans. **t. cor'dis**, palpitation of the heart. **darkness t.**, involuntary movements of the eyes, resembling nystagmus, which occur in young animals kept in the dark. **epidemic t.**, avian encephalomyelitis. **epileptoid t.**, intermittent clonic spasm with tremor. **essential t.**, a familial tremor with onset at varying ages, usually at about 50 years of age, beginning with a fine rapid tremor (as distinct from that of parkinsonism) of the hands, followed by tremor of the arms, tongue, heads, legs, and trunk; it is aggravated by emotional factors, is accentuated by volitional movement, and is temporarily improved by alcohol. Called also *familial t.*, *heredofamilial t.*, and *hereditary essential t.* **familial t.**, essential *t.* **fibrillary t.**, a fine rhythmic trembling due to alternate contraction of the different fibrils of a muscle; fibrillation. **fine t.**, a tremor in which the vibrations are rapid. **flapping t.**, asterixis. **forced t.**, a movement persisting after voluntary motion, due to intermittent stimulation of the nerve centers. **hereditary essential t.**, essential *t.* **heredofamilial t.**, essential *t.* **Hunt's t.**, the tremor attending every voluntary movement which is characteristic of cerebellar lesions. **hysterical t.**, tremor seen in hysteria dependent upon uncertain nervous impulse. **intention t.**, a tremor which arises or which is intensified when a voluntary, coordinated movement is attempted. **intermittent t.**, tremor seen in hemiplegia or when attempts at voluntary movement are made. **kinetic t.**, a tremor occurring in a limb during active movement. **t. lin'guae**, trembling of the tongue, as seen in alcoholism, typhoid fever, and parietic dementia. **t. mercuria'lis**, tremor due to mercurial poisoning. **metallic t.**, a tremor seen in various metallic poisonings. **motofacient t.**, a tremor in muscles which participate in an action. **t. opio-**

phago'rum, the tremor of opium users. **passive t.**, a tremor occurring only when the patient is at rest. **persistent t.**, a tremor occurring whether the patient is at rest or in motion. **t. potato'rum** ["trembling of drinkers"], delirium tremens. **purring t.**, a thrill, like the purring of a cat, felt by the hand placed over the heart. **Rendu's t.**, a hysterical intention tremor. **rest t.**, tremor occurring in a relaxed and supported limb, as in parkinsonism. **senile t.**, a tremor resulting from the infirmities of age. **static t.**, a tremor occurring on effort to hold one of the limbs in a definite position. **striocerebellar t.**, a combined form of tremor with both striatal and cerebellar components, usually due to diffuse degeneration of the central nervous system. **t. ten'dinum** ["trembling of the tendons"], subsultus tendinum. **toxic t.**, a tremor seen in states of chronic poisoning. **trombone t. of tongue**, Magnan's movement. **volitional t.**, a trembling of the entire body during voluntary effort; seen in multiple sclerosis.

tremogram (trem'or-gram) tremogram.

tremulor (trem'u-lor) a machine for the administration of vibratory treatment.

tremulous (trem'u-lus) [L. *tremulus*] shaking, trembling, or quivering.

trend (trend) inclination in a particular direction or course.

Trendelenburg cannula, etc. (tren-del'en-berg) [Friedrich Trendelenburg, surgeon in Leipzig, 1844-1924] see under *cannula*, *operation*, *position*, *symptom*, and *tests*.

trendsciber (trend'skrib-er) the apparatus used in trendscription.

trendscription (trend'skrip'shun) a programmed method of continuous electrocardiographic monitoring, wherein the tracing is condensed on a rotating drum recorder and the program permits selective sampling of rhythm data.

trepan (trē-pan') [Gr. *trypanon* auger] 1. an obsolete form of the trephine, resembling a carpenter's bit and brace. 2. to trephine.

trepanation (trep'ah-na'shun) [L. *trepanatio*] an operation with the trepan; trephination. **corneal t.**, excision of a disk of cornea in treatment of staphylocoma.

trepanner (tre-pan'er) one who performs a trepanation; trephiner.

trephination (tref'i-na'shun) the operation of trephining. **dental t.**, surgical formation of an opening through the gum and bone to the apical end of a tooth.

trephine (trē-fin', trē-fēn') [L. *trephina*] 1. a crown saw for removing a circular disk of bone, chiefly from the skull. 2. an instrument for removing a circular area of cornea, as in corneal transplant operations. 3. to operate upon with the trephine. **Horsley's t.**, a trephine that may be taken apart and cleaned.

Trephine.

trephinement (tre-fin'ment) the act or process of trephining.

trephiner (tre-fin'er) one who performs the operation of trephining.

trephocyte (tref'o-sīt) [Gr. *trephine* to feed + *kytos* cell] a cell that furnishes nutrition to other cells, as a Sertoli cell.

trepidant (trep'i-dant) [L. *trepidans* trembling] characterized by tremor.

trepidatio (trep'i-da'she-o) [L.] trepidation. **t. cor'dis**, palpitation of the heart.

trepidation (trep'i-da'shun) [L. *trepidatio*] 1. a trembling or oscillatory movement. 2. nervous anxiety and fear.

Treponema (trep'o-ne'mah) [Gr. *trepein* to turn + *nema* thread] a genus of microorganisms of the family Treponemataceae, order Spirochaetales, made up of cells 3 to 18 μ long, in acute, regular or irregular spirals, some of them being pathogenic and parasitic for man and other animals. **T. calligy'rum**, a parasitic microorganism found in smegma and in lesions of the pudenda; it is thought to be nonpathogenic. **T. carate'um**, the causative agent of pinta (carate). **T. cunic'uli**, the causative agent of rabbit syphilis; not pathogenic for man. **T. genita'lis**, a parasitic, nonpathogenic microorganism found on human genitalia. **T. herrejo'ni**, a spirochete which causes pinta. **T. mac-roden'tium**, an apparently nonpathogenic species which has been found in the mouth. **T. microden'tium**, a parasitic spiral microorganism found in the normal human mouth; non-pathogenic. **T. muco'sum**, a parasitic microorganism found in pyorrhea alveolaris; pathogenicity uncertain. **T. pal'i-dum**, the causative agent of venereal syphilis in man; some authorities believe that it is also the etiologic agent of nonvenereal syphilis. **T. perten'ue**, the causative agent of yaws (frambe-

sia tropica) in man. **T. recurren'tis**, the relapsing fever spirochete, called also *Borrelia recurrentis*.

treponema (trep'o-ne'mah) an organism of the genus *Treponema*.

treponemal (trep'o-ne'mal) of, pertaining to, or caused by treponemas.

Treponemataceae (trep'o-ne'mah-ta'se-e) a family of Schizomycetes (order Spirochaetales), made up of coarse or slender spirals, 4 to 16 μ long, sometimes showing terminal filaments and sometimes visible only with dark-field illumination. They commonly occur as parasites in vertebrates, and some of them cause disease. The family includes three genera, *Borrelia*, *Leptospira*, and *Treponema*.

treponematosi (trep'o-ne-mah-to'sis) an infection with treponema.

treponeme (trep'o-nēm) an organism of the genus *Treponema*.

treponemiasis (trep'o-ne-mi'ah-sis) infection with treponema; syphilis.

treponemicidal (trep'o-ne'mi-si'dal) destroying treponema.

trepopnea (tre'pop-ne'ah) [Gr. *trepein* to turn + *pnoia* breath] a condition in which breathing is most comfortable with the patient turned in a definite recumbent position.

treppe (trep'ē) [Ger. "staircase"] the phenomenon of gradual increase in the extent of muscular contraction following rapidly repeated stimulation (H. P. Bowditch, 1871). Also called *staircase phenomenon*.

Tresilian's sign (tre-sil'e-anz) [Frederick James Tresilian, English physician, 1862-1926] see under *sign*.

tresis (tre'sis) [Gr. *trēsis*] perforation.

Trest (trest) trademark for a preparation of methixene hydrochloride.

trestolone acetate (tres'to-lōn) chemical name: 17 β -hydroxy-7 α -methyl-4-en-3-one acetate; an antineoplastic and androgenic steroid, C₂₁H₃₀O₃.

tretinoin (tret'i-noin) [USP] the *all-trans* stereoisomer of retinoic acid, C₂₀H₂₈O₂, occurring as a yellow to light-orange, crystalline powder; used as a topical keratolytic, especially in the treatment of certain cases of acne vulgaris. Called also *retinoic acid* and *vitamin A acid*.

Treves's fold, operation (trēvs) [Sir Frederick Treves, English surgeon, 1853-1923] see *plica ileocecalis*, and see under *operation*.

TRF thyrotropin releasing factor; see *protirelin*.

TRH thyrotropin releasing hormone; see *protirelin*.

tri- [Gr. *treis*; L. *tres* three] a prefix meaning *three* or *thrice*.

triacetate (tri-as'tē-tāt) an acetate which contains three molecules of the acetic acid radical.

triacetin (tri-as'tē-tin) [USP] chemical name: 1,2,3-propanetriol. An antifungal agent, C₉H₁₆O₆, occurring as a colorless or pale straw-colored liquid; used topically in the treatment of superficial fungal infections of the skin. Called also *glyceryl triacetate*.

triacytloleandomycin (tri-as'tē-til-o'le-an'do-mi'sin) troleandomycin.

triacid (tri-as'id) a base capable of neutralizing three equivalents of monobasic acid.

triacylglycerol (tri-as'il-glis'er-ol) a term proposed to replace triglyceride.

triad (tri'ad) [L. *trias*; Gr. *trias* group of three] 1. any trivalent element. 2. a group of three entities or objects, as an association of three symptoms. **acute compression t.**, Beck's t. **adrenomedullary t.**, the symptoms produced by activation of the adrenal medulla: tachycardia, vasoconstriction, and sweating. **Andersen's t.**, see under *syndrome*. **Basedow's t.**, Merseburg t. **Beck's t.**, three symptoms characteristic of cardiac compression: (1) a high venous pressure, (2) a low arterial pressure, and (3) a small quiet heart. **Bezold's t.**, prolonged bone conduction and lessened perception of low tones, indicating otosclerosis. **Charcot's t.**, nystagmus, intention tremor, and staccato speech, often seen in multiple sclerosis. **Dieulafoy's t.**, hypersensitiveness of the skin, reflex muscular contraction, and tenderness at McBurney's point in appendicitis. **Falta's t.**, the three organs cooperating in production of diabetes mellitus: the pancreas, liver, and thyroid. **Grancher's t.**, lessened vesicular quality of breathing, kodaic resonance, and increased vocal fremitus; seen in early pulmonary tuberculosis. **hepatic t's**, the grouping of the tributaries of the hepatic artery, vein, and bile duct at the angles of the lobules of the liver. **t. of Herz**, neurocirculatory asthenia. **Hutchinson's t.**, diffuse interstitial keratitis, labyrinthine disease, and Hutchinson teeth, seen in inherited syphilis. **Kartagener's t.**, see under *syndrome*. **t. of Luciani**, asthenia, atonia, and astasia, the three major symptoms of cerebellar disease. **Merseburg t.**, **Merseburger t.**, goiter, exophthalmos, and tachycardia, the three cardinal symptoms of Graves' (Basedow's) disease; named after Merseburg, the home of Basedow. **Osler's t.**, telangiectasis, capillary fragility, and hereditary hemorrhagic diathesis. **portal t's**, hepatic t's. **Saint's t.**, hiatus hernia, colonic diverticula, and cholelithiasis, occurring concomitantly. **t. of retinal**

cone, the tip of two horizontal cell dendrites and one midget cell dendrite, enclosed in a synaptic invagination of a retinal cone pedicle. **t. of Schultz**, jaundice, gangrenous stomatitis, and leukopenia. **t. of skeletal muscle**, a pair of terminal cisterns in close apposition to the T tubule, running transversely across a myofibril of skeletal muscle; in mammalian muscle there are two triads to each sarcomere, situated at the A band-I band junction. See also *T system*, under *system* and *T tubule*, under *tubule*. **Whipple's t.**, the essential clinical features of insulin-producing tumors: (1) spontaneous hypoglycemia, (blood sugar levels below 50 mg. per 100 ml.), (2) accompanied by central nervous or vasomotor system symptoms, and (3) relief of symptoms by the oral or intravenous administration of glucose.

triaditis (tri'ad-i'tis) inflammation of three elements taken as a unit. **portal t.**, inflammation of the connective tissue around the hepatic artery, portal vein, and bile duct of the portal tract.

triafungin (tri'ah-fun'jin) chemical name: 3-(phenylmethyl)-pyrido[3,4-e]-1,2,4-triazine; an antifungal, C₁₃H₁₀N₄.

triage (tre-ahzh') [Fr. "sorting"] the sorting out and classification of casualties of war or other disaster, to determine priority of need and proper place of treatment.

trialism (tri'al-izm) trialistic theory; see under *theory*.

triallylamine (tri'al-il-am'in) a volatile, oily, liquid amine, (CH₂CH-CH₂)₃N.

triamcinolone (tri'am-sin'o-lōn) [USP] chemical name: 9-fluoro-11 β ,16 α ,17,21-tetrahydroxypregna-1,4-diene-3,20-dione. A potent synthetic glucocorticoid, C₂₁H₂₇FO₆, occurring as a white or almost white, crystalline powder, having practically no mineralocorticoid activity; used in the treatment of various conditions responsive to the anti-inflammatory action of glucocorticoids, administered orally. **t. acetate** [USP], the acetate ester of triamcinolone, C₂₃H₃₁FO₆, occurring as a white to cream-colored, crystalline powder; applied topically to the skin and oral mucosa or administered by intra-articular, intrabursal, intramuscular, and intradermal injection. **t. acetate sodium phosphate**, the 21-disodium phosphate salt of triamcinolone acetate, C₂₄H₃₀FNa₂O₆P, having anti-inflammatory actions similar to those of the base. **t. diacetate** [USP], the diacetate ester of triamcinolone, C₂₅H₃₃FO₆, occurring as a fine, white to off-white, crystalline powder; administered orally and by intramuscular, intra-articular, and soft tissue injection. **t. hexacetate** [USP], the hexacetate ester of triamcinolone, C₃₀H₄₁FO₇, occurring as a white to cream-colored powder; it is administered by intra-articular or by intralesional or sublesional injection for treatment of arthritis or of inflammatory skin lesions, respectively.

triamine (tri-am'in) a compound containing three amino (—NH₂) groups.

triamterene (tri-am'ter-ēn) [USP] chemical name: 6-phenyl-2,4,7-triamino-6-phenylpteridine. An orally effective diuretic, C₁₂H₁₁N₇, occurring as a yellow, odorless, crystalline powder, which increases sodium and chloride secretion but not potassium secretion.

triamylose (tri-am'i-lōs) a polymerized anhydride of glucose, (C₆H₁₀O₅)₃, isolable from the amylopectin of starch.

triangle (tri'ang-g'l) [L. *triangulum*; tres three + *angulus* angle] a three-cornered area, figure, or object; see also *trigone* and *trigonum*. **Alsberg's t.**, an equilateral triangle with its apex upward, formed by a line passing through the long axis of the femur, a second line passing through the long axis of the neck of the femur, and a third line on a plane passing through the base of the head of the femur. The angle at the apex is known as *Alsberg's angle*, or *angle of elevation*. **Assézat's t.**, facial t. **auditory t.**, area vestibularis. **auricular t.**, one bounded by lines drawn from the tip of the auricle and the two ends of its base of insertion. **t. of auscultation**, the area limited by the lower edge of the trapezius muscle, the latissimus dorsi, and the medial margin of the scapula. **axillary t.**, the triangular area formed by the inner aspect of the arm, the axilla, and the pectoral region. **Béclard's t.**, the area lying between the posterior edge of the hyoglossal muscle, the posterior belly of the digastric muscle, and the greater cornu of the hyoid bone. **Bolton t.**, the triangle formed by drawing a line from the nasion to the sella turcica to the Bolton point. **Bonwill t.**, an equilateral triangle said by Bonwill to be formed by a line connecting the centers of the mandibular condyles and lines connecting either center with the mesial contact area of the mandibular medial incisors, each side being approximately 4 inches long. **brachial t.**, axillary t. **Burger's scalene t.**, a triangle providing a reference frame to represent the quantitative relationships between the electromotive forces of the heart and the extremity leads of the electrocardiograph. As compared to Einthoven's triangle, the lines representing leads I and II are considerably shortened. **Calot's t.**, the triangle formed by the cystic artery superiorly, the cystic duct inferiorly, and the hepatic duct medially; called also *cystohepatic t.* **cardiohepatic t.**, the triangular region in the fifth intercostal space of the right side, separating the heart from the upper edge of the liver. **carotid t., inferior**, the part of the trigonum caroticum medial to the omohyoid muscle; called

also *t. of necessity*. **carotid t., superior**, the part of the trigonum caroticum lateral to the omohyoid muscle; called also *t. of election*. **cephalic t.**, one on the anteroposterior plane of the skull, between the lines from the occiput to the forehead and to the chin, and a third line extending from the chin to the forehead. **cervical t's**, see *t's of neck, anterior, and posterior*. **Codman's t.**, a triangular area visible roentgenographically where the periosteum, elevated by a bone tumor, rejoins the cortex of normal bone. **color t.**, a plane figure with red, green, and blue located at the three apices, and gray at the center, with lines drawn from side to side, as a guide to the color mixing equation needed to produce any intermediate hue. **crural t.**, the triangular area formed by the inner aspect of the thigh and the lower abdominal, inguinal, and genital regions. **cystohepatic t.**, Calot's t. **digastric t.**, trigonum submandibulare. **Dunham's t's**, see under *fan*. **Einthoven's t.**, an equilateral triangle used as a mathematical model of the standard electrocardiographic limb leads, in which the instantaneous heart vector in the frontal plane may be projected on the sides of the triangle thereby demonstrating that the algebraic sum of the potential differences as recorded in electrocardiographic leads I and III will equal that potential difference recorded in lead II. See *Einthoven's formula*, under *formula*. **t. of elbow**, a triangular area on the front of the elbow, having the brachioradialis muscle on the outside and the pronator teres inside, the base being toward the humerus. **t. of election**, superior carotid t. **extravesical t.**, Pawlik's t. **facial t.**, a triangular area whose points are the basion, the alveolar point, and the nasion; called also *Assézat's triangle*. **Farabeuf's t.**, one on the upper part of the neck, its sides being formed by the internal jugular vein and the facial vein, and its base by the hypoglossal nerve. **femoral t.**, trigonum femorale. **fetal t.**, a triangular space made by the side of the fetal trunk, the thigh above, and the arm below. **frontal t.**, one bounded by the maximum frontal diameter and lines from either end of this diameter to the glabella. **Garland's t.**, a triangular area of relative resonance in the lower back, close to the spine on the diseased side; seen in pleurisy with effusion. **Gerhardt's t.**, a triangular area of dullness to percussion above the third left rib, an inconstant sign in patent ductus arteriosus. **Gombault-Philippe t.**, a triangular field formed in the conus medullaris by the fibers of the septomarginal tract. **Grocco's t.**, see *Grocco's sign* (def. 1), under *sign*. **Grynfeldt's t., t. of Grynfeldt and Lesgaft**, Lesgaft's space. **Henke's t.**, a triangular area between the descending portion of the inguinal fold, the lateral portion of the inguinal fold, and the lateral border of the rectus muscle. **Hesselbach's t.**, trigonum inguinale. **hypoglossohyoid t.**, the triangular space in the subhyoid region, bounded above by the hypoglossal nerve, in front by the posterior border of the mylohyoid muscle, and behind and below by the tendon of the digastric muscle. Called also *Pinaud's t.* and *Pirogoff's t.* **iliofemoral t.**, a triangular area bounded by Nélaton's line, a line through the superior iliac spine, and one extending from this spine to the great trochanter. **infraclavicular t.**, trigonum deltoideopectoral. **inguinal t.**, 1. trigonum inguinale. 2. trigonum femorale. **Jackson's safety t.**, a triangular space bounded above by the lower end of the thyroid cartilage, its apex in the suprasternal notch, and its sides the inner edges of the sternocleidomastoid muscle; so called because it marks the limits of the area through which the trachea may safely be incised in tracheostomy. **Kanavel's t.**, a triangular area in the middle of the palm beneath which lies the common tendon sheath of the digital flexor tendons. **Korányi-Grocco t.**, see *Grocco's sign* (def. 1), under *sign*. **Korab's t.**, one included between a horizontal line along the lower border of the cartilage of the ninth rib, the line of the false ribs, and the line of the liver, being the area where the stomach lies in contact with the anterior abdominal wall. **Langenbeck's t.**, one having its apex at the anterior superior spine of the ilium, its base along the anatomical neck of the femur, and its external side by the external face of the great trochanter. **Lesgaft's t.**, see under *space*. **Lesser's t.**, one bounded by the hypoglossal nerve above and the two bellies of the digastric muscle on the other two sides. **Lieutaud's t.**, trigonum vesicae. **Livingston's t.**, a triangular area bounded by lines from the umbilicus to the crest of the ilium, from the latter to the right pubic spine, and from there to the umbilicus, marking an area which is hypersensitive to palpation in appendicitis. **lumbocostoadominal t.**, a space between the obliquus externus abdominis muscle, the serratus posterior inferior, the erector spinae, and the obliquus internus abdominis. **lymphoid t.**, see *Waldeyer's tonsillar ring*, under *ring*. **Macewen's t.**, mastoid fossa of temporal bone. **Malgaigne's t.**, superior carotid t. **mesenteric t.**, a triangular space between the two layers of the mesentery as they diverge to enclose the intestine. **Middeldorpf's t.**, a padded triangular splint for supporting the upper arm in partial extension in fracture of the humerus. **Minor's t.**, an angular defect posterior to the anus, produced by attachment of the superficial portion of the external sphincter to the coccyx. **t. of necessity**, inferior carotid t. **t's of neck, anterior**, the inferior and superior carotid triangles, and the submandibular triangle. **t's of neck, posterior**, the occipital and subclavian triangles. **occipital t.**, the area bounded by the sterno-

cleidomastoid muscle anteriorly, the trapezius muscle posteriorly, and the omohyoid muscle inferiorly. **occipital t., inferior**, a triangular area having a line between the two mastoid processes as its base and the inion as its apex. **palatal t.**, one limited by the greatest transverse diameter of the palate and lines from either end of this diameter to the alveolar point. **paravertebral t.**, see *Grocco's sign* (def. 1), under *sign*. **Pawlik's t.**, one within the vagina corresponding exactly with the trigonum vesicae, and bounded laterally by Pawlik's folds. **Petit's t.**, trigonum lumbale. **Pinaud's t., Pirogoff's t.**, hypoglossohyoid t. **popliteal t. of femur**, facies poplitea femoris. **pubourethral t.**, one in the perineum bounded externally by the ischiocavernosus muscle, internally by the bulbocavernosus, and posteriorly by the transversus perinei superficialis. **Rauchfuss' t.**, see *Grocco's sign* (def. 1), under *sign*. **Reil's t.**, trigonum lemnisci. **retromandibular t.**, a shallow triangular fossa on the mandibular bone posterior to the third molar. **sacral t.**, a shallow triangular depression overlying the sacrum. **t. of safety**, the fifth or sixth left intercostal space, considered a safe site for pericardial aspiration. **Scarpa's t.**, trigonum femorale. **sternocostal t.**, trigonum sternocostale. **subclavian t.**, trigonum omoclaviculare. **subinguinal t.**, 1. hiatus saphenus. 2. trigonum femorale. **submandibular t., submaxillary t.**, trigonum submandibulare. **submental t.**, a triangle bounded on either side by the anterior belly of the digastric muscle and below by the hyoid bone. **suboccipital t.**, a triangular area lying between the rectus capitis posterior major and the obliquus capitis superior and obliquus capitis inferior muscles. **suprameatal t.**, mastoid fossa of temporal bone. **surgical t.**, any triangular area or region in which certain nerves, vessels, or organs are located; established for reference in surgical operations. **Trautmann's t.**, a space with its anterior angle at the prominence containing the labyrinth, bounded posteriorly by the transverse sinus and superiorly by the inferior temporal line. When the bone is removed, the superior petrosal sinus will be encountered at the superior posterior angle of this triangle. **Tweed t.**, a mathematical triangle defined by facial and dental landmarks on a lateral cephalometric film, using the Frankfort horizontal plane as a base and intended for use as a guide in the evaluation and planning of orthodontic treatment. **umbilicocomammillary t.**, one having its base formed by the line joining the nipples and its apex at the umbilicus. **urogenital t.**, diaphragma urogenitale. **vaginal t.**, Pawlik's t. **vesical t.**, trigonum vesicae. **von Weber's t.**, one on the sole of the foot formed by lines connecting the head of the first metatarsal, the head of the fifth metatarsal, and the center of the under surface of the heel. **Ward's t.**, the space formed by the angle of the trabeculae in the neck of the femur; a vulnerable point for fracture. **Wernicke's t.**, the area within the posterior limb on the internal capsule in which the optic radiation, having just left the lateral geniculate body, comes into close proximity to the auditory and somesthetic radiations.

triangular (tri-ang'gu-lar) [L. *triangularis*] having three angles or corners.

triangularis (tri-ang'gu-la'ris) [L.] triangular.

triantebrachia (tri'an-te-bra'ke-ah) [*tri- + antebrachium + -ia*] a developmental anomaly characterized by tripling of the forearm.

Triatoma (tri-at'o-mah) a genus of bugs of the family Reduviidae, called the cone-nosed bugs, important in medicine as vectors of *Trypanosoma cruzi*, the etiologic agent of Chagas' disease. **T. megis'ta**, former name for *Panstrongylus megistus*. **T. sanguis'u'ga**, the blood-sucking cone-nose or Mexican bedbug of the southern United States. Its bite is painful and causes irritation, swelling, and nausea. Other species which are vectors of *Trypanosoma cruzi* are: *T. dimidia'ta*, of Central America; *T. geniculata'ta* (*Panstrongylus geniculatus*), which inhabits the burrows of the armadillo; *T. gerstaeck'eri* of Texas; *T. (Panstrongylus) infes'tans*, the unchuca or great black bug of the Argentine and Paraguay; *T. mexica'na*, found in Mexico; *T. nigrova'rius*, widely distributed in South America; *T. protra'cta*, of the southern United States; *T. recur'va* and *T. rubi'da* of Arizona; *T. (Entriatoma) sor'dida* of São Paulo; and *T. vit'ticeps*, of Rio de Janeiro.

triatomic (tri'ah-tom'ik) made up of three atoms.

triazol 156 (tri'ah-zol) a compound, 4-cyclohexyl 3-ethyl 1-2-4-triazol, once used as a convulsant in the treatment of schizophrenia.

triazolam (tri-a'zo-lam) chemical name: 8-chloro-6-(2-chlorophenyl)-1-methyl-4H-[1,2,4]triazolo[4,3-a][1,4]benzodiazepine; a tranquilizer, C₁₇H₁₂Cl₂N₄.

tribadism (trib'ah-dizm) [Gr. *tribein* to rub] 1. lesbianism in which heterosexual intercourse is simulated; sometimes used to refer to the use of an artificial penis. 2. mutual friction of the genitals between women.

tribady (trib'ah-de) tribadism.

tribasic (tri-be'sik) [*tri- + L. basis* base] having three replaceable hydrogen atoms.

tribe (trib) a taxonomic category subordinate to a family (or subfamily) and superior to a genus (or subtribe).

tribenoside (tri-ben'o-sid) chemical name: ethyl-3,5,6-tri-O-

benzyl-D-glucofuranoside; a sclerosing agent, $C_{29}H_{34}O_8$, which has been used in inflammatory and varicose disorders of the veins.

Tribolium (tri-bo'le-um) a genus of small beetles that live in and are very destructive to flour and other cereal products. The two most common species, *T. confusum* and *T. castaneum*, are reddish brown in color and 3.5 mm. in length.

tribology (tri-bol'o-je) [Gr. *tribē* a rubbing + *-logia*] the study of the lubrication, friction, and wear of the joints.

triboluminescence (tri'bo-lu'mī-nēs'ens) [Gr. *tribein* to rub + *luminescence*] luminescence produced by mechanical energy, as by the grinding, rubbing, or breaking of certain crystals.

tribranchia (tri-bra'ke-ah) [*tri-* + Gr. *brachion* arm + *-ia*] a developmental anomaly characterized by tripling of an arm.

tribrachius (tri-bra'ke-us) 1. a monster exhibiting tribrachia. 2. a monster consisting of conjoined twins having only three arms.

tribromaloin (tri'brōm-al'o-in) a yellow, crystalline compound, $C_{17}H_{15}Br_3O_7$, or bromine and barbaloin.

tribromethanol (tri'brōm-eth'ah-nol) tribromoethanol.

tribromide (tri-bro'mid) a bromine compound containing three atoms of bromine to one of the base.

tribromoethanol (tri-bro'mo-eth'ah-nol) chemical name: tribromoethyl alcohol. An anesthetic, $C_2H_5Br_3O$, occurring as a white, crystalline powder; administered by inhalation. Called also *ethobrom*. See also under *solution*.

tribromsalan (tri-brōm'sah-lan) chemical name: 3,5-dibromo-N-(4-bromophenyl)-2-hydroxybenzamide. A disinfectant with antibacterial and antifungal activities, $C_{13}H_8Br_3NO_2$, used mainly in medicated soaps.

tribulosis (tri'bū-lo'sis) poisoning in sheep in South Africa, caused by wilted plants of the species *Tribulus terrestris*.

Triburon (trib'u-ron) trademark for preparations of triclobisodium chloride.

tributylin (tri-bu'tir-in) a colorless fat, $C_8H_{16}(OCOCH_2CH_2)_3$, found in cows' milk.

tributylinase (tri'bū-tir'i-nās) an enzyme in the saliva which cleaves tributyrin.

TRIC (trik) acronym for trachoma inclusion conjunctivitis (group of organisms); see *Chlamydia*.

tricalcic (tri-kal'sik) containing three atoms of calcium.

tricellular (tri-sel'u-lar) three celled.

tricephalus (tri-sef'ah-lus) [*tri-* + Gr. *kephalē* head] a monster having three heads.

triceps (tri'seps) [L.] having three heads, as a triceps muscle. *t. su'rae*, see *Table of Musculi*.

triceptor (tri-sep'tor) an intermediary having three combining groups.

Tricercomonas (tri'ser-kom'o-nas) *Enteromonas*.

tricheiria (tri-ki're-ah) [*tri-* + Gr. *cheir* hand + *-ia*] a developmental anomaly characterized by tripling of a hand.

trichesthesia (trik'es-the'ze-ah) trichoesthesia.

trichiasis (tri-ki'ah-sis) [Gr.] 1. a condition of ingrowing hairs about an orifice, or of ingrowing eyelashes. 2. the appearance of hairlike filaments in the urine.

trichilemmal (trik'ī-lem'al) pertaining to the outer root sheath of a hair.

trichilemmoma (trik'ī-lem-o'mah) a benign neoplasm of the lower outer root sheath of the hair.

Trichina (tri-ki'nah) *Trichinella*.

trichina (tri-ki'nah), pl. *trichinae*. an individual organism of the genus *Trichinella*.

trichinae (tri-ki'ne) plural of *trichina*.

Trichinella (trik'ī-nel'ah) [Gr. *trichinos* of hair] a genus of nematode parasites of the superfamily Trichuroidea. *T. spiralis*, the etiologic agent of trichinosis, one of the smallest of the parasitic nematodes, being only about 1.5 mm. in length. It is found coiled in a cyst in the muscles of the bear, rat, pig, and man. When infected meat is eaten without proper cooking the cyst dissolves, the parasite matures, deposits its larvae in the deep mucosa, whence they enter the lymphatics, are carried to all parts of the body, and again encyst. An extract of *Trichinella* larvae is used in an intradermal skin test for trichinosis. Called also *pork worm*.

Trichinella spiralis encapsulated in muscle.

trichinelliasis (trik'ī-nel-li'ah-sis) trichinosis.

trichinellosis (trik'ī-nel-lo'sis) trichinosis.

trichiniasis (trik'ī-ni'ah-sis) trichinosis.

trichiniferous (trik'ī-ni'fer-us) [*trichina* + L. *ferre* to bear] containing trichinae.

trichinization (trik'ī-ni-za'shun) infection with *Trichinella spiralis*; trichinosis.

trichinosis (trik'ī-no'sis) a disease due to infection with trichinae. It is produced by eating undercooked meat containing *Trichinella spiralis*. It is attended in the early stages by diarrhea, nausea, colic, and fever, and later by stiffness, pain, swelling of the muscles, fever, eosinophilia, circumscribed edema, splinter hemorrhages, sweating, and insomnia.

trichinous (trik'ī-nus) affected with or containing trichinae.

trichion (trik'e-on), pl. *trichia* [Gr.] an anthropometric landmark, the point at which the midsagittal plane of the head intersects the hairline.

trichite (tri'kit) 1. A Meyer's name for one of the radially arranged needle-shaped crystals composing a starch grain. 2. one of the needle-shaped plastids which may serve a supportive function in certain protozoa.

trichlorfon (tri-klōr'fon) metrifonate.

trichlorphon (tri-klōr'fon) metrifonate.

trichloride (tri-klo'rid) any combination of three atoms of chlorine with one of another element.

trichloromethane (tri'klōr-meth'ān) chloroform.

trichloromethiazide (tri-klōr'mē-thi'ah-zid) [USP] chemical name: 6-chloro-3-(dichloromethyl)-3,4-dihydro-2H-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. A white or practically white, crystalline powder, $C_8H_6Cl_3N_3O_4S_2$, used as a diuretic and antihypertensive, administered orally.

trichloroacetaldehyde (tri-klō'rō-as'et-al'de-hid) chloral.

trichloroethylene (tri'klō-ro-eth'ī-lēn) chemical name: trichloroethene. A clear, colorless, or blue, mobile liquid, C_2HCl_3 , used as an inhalation anesthetic for short operative procedures. It is widely used as an industrial solvent, and exposure to its vapor in high concentrations has caused some poisonings, some of which were fatal. Called also *ethinyl trichloride*.

trichloromethylchloroformate (tri-klō'rō-meth'īl-klo'rō-for'māt) a chlorine-containing gas which is irritating to lung tissue.

trichloromonofluoromethane (tri-klō'rō-mon'o-floor-o-meth'ān) [NF] chemical name: trichlorofluoromethane. A clear, colorless gas having a faint, ethereal odor, CCl_3F , used as an aerosol propellant.

trichlorophenol (tri'klōr-o-fe'nol) a disinfectant and external antiseptic.

trichlorotrivinylarsine (tri-klō'rō-tri-vi'nīl-ar'sin) a sternutatory war gas $(CHCl:CH)_3As$.

tricho- [Gr. *thrix*, *trichos*, hair] a prefix denoting relationship to hair.

trichoaesthesia (trik'o-es-the'ze-ah) trichoesthesia.

trichoaesthesia (trik'o-an'es-the'ze-ah) loss of hair sensibility.

trichobacteria (trik'o-bak-te're-ah) [*tricho-* + Gr. *baktērion* rod] 1. a group of bacteria including those forms which possess flagella. 2. the filamentous or threadlike bacteria.

trichobasalioma hyalinicum (trik'o-ba-sal'e-o'mah) cylindroma, def. 2.

trichobezoar (trik'o-be'zōr) [*tricho-* + *bezoar*] a hairball; a concretion within the stomach or intestines formed of hairs.

Trichobilharzia (trik'o-bil-har'ze-ah) a genus of flukes.

T. ocella'ta, a blood fluke parasitic in European ducks.

trichocardia (trik'o-kar'de-ah) [*tricho-* + Gr. *kardia* heart] cor villosum, or hairy heart.

trichocephaliasis (trik'o-sef'ah-li'ah-sis) trichuriasis.

trichocephalosis (trik'o-sef'ah-lo'sis) trichuriasis.

Trichocephalus (trik'o-sef'ah-lus) [*tricho-* + Gr. *kephalē* head] former name for a genus of nematodes now called *Trichuris*.

trichoclasia (trik'o-kla'se-ah) trichorrhaxis nodosa.

trichoclasia (trik-ok'lah-sis) [*tricho-* + Gr. *klasis* fracture] trichorrhaxis nodosa.

trichocyst (trik'o-sist) [*tricho-* + Gr. *kystis* bladder] a cell structure derived from the cytoplasm.

Trichodectes (trik'o-dek'tēz) [*tricho-* + Gr. *dēktēs* biter] a genus of parasitic insects of the order Mallophaga, the biting lice. *T. can'is*, a biting louse that parasitizes dogs and is an intermediate host of *Dipylidium caninum*. *T. cli'max*, *Damalinia caprae*. *T. e'qui*, *Damalinia equi*. *T. herm'si*, *Damalinia hermsi*. *T. la'tus*, the dog louse, found on dogs, especially puppies. *T. pilo'sus*, *Damalinia pilosus*. *T. retu'sis*, a biting louse that infests ranch-raised mink. *T. sphaeroceph'alus*, the red-headed sheep louse, found in the wool of sheep in Europe and America.

Trichoderma (trik-o-der'mah) [*tricho-* + *derma* skin] a genus of soil fungi (family Moniliaceae, order Moniliales), some species of which cause alimentary toxic aleukia.

Trichodina (trik-od'i-nah) [*tricho-* + Gr. *dinos* whirling] a genus of the ciliate protozoa of the order Peritrichida, species of which live on hydras and the gills of fish and salamanders.

trichoepithelioma (trik'o-ep'ī-the-le-o'mah) a benign skin

tumor whose cell growth starts in the follicles of the lanugo; it may occur as a dominantly inherited condition characterized by multiple tumors (sometimes called *trichoeptithelioma papillosum multiplex*) or as a solitary lesion. **t. papillosum mul'ti-plex**, hereditary multiple trichoeptithelioma; see *trichoeptithelioma*. Called also *epithelioma adenoides cysticum*.

trichoesthesia (trik'o-es-the'ze-ah) [*tricho-* + Gr. *aisthēsis* perception + *-ia*] the sense by which one perceives when one of the hairs of the skin has been touched; hair sensibility.

trichoesthesiometer (trik'o-es-the'ze-om'ē-ter) [*tricho-* + Gr. *aisthēsis* perception + *metron* measure] an electric apparatus for measuring the hair sensibility, or the sensitiveness of the scalp by means of the hairs.

trichofibroacanthoma (trik'o-fi'bro-ak'an-tho'mah) tricho-epithelioma.

trichofibroepithelioma (trik'o-fi'bro-ep'i-the'le-o'mah) trichoeptithelioma.

trichoglossia (trik'o-glos'e-ah) [*tricho-* + Gr. *glōssa* tongue + *-ia*] a hairy state of the tongue due to a thickening of the papillae.

trichographism (tri-kog'rah-tizm) pilomotor reflex.

trichohyalin (trik'o-hi'ah-lin) [*tricho-* + *hyalin*] a keratohyaline-like substance occurring in granules in the cytoplasm of the cells of Huxley's layer of a hair follicle.

trichoid (trik'oid) [*tricho-* + Gr. *eidos* form] like or resembling a hair, or the hair.

tricholabion (tri-ko-la'be-on) [Gr.] (*obs.*) epilating forceps.

tricholeukocyte (trik'o-lu'ko-sit) hairy cell.

tricholith (trik'o-lith) [*tricho-* + Gr. *lithos* stone] a hairy concretion.

trichologia (trik'o-lo'je-ah) [*tricho-* + Gr. *legein* to pick out + *-ia*] the pulling out of the hair by delirious patients; trichotillomania.

trichology (tri-kol'o-je) the study of hair, or the sum of what is known about the hair.

trichoma (tri-ko'mah) entropion.

trichomadesis (trik'o-mah-de'sis) abnormally rapid or premature loss of hair from the scalp; called also *lipsotrichia* and *trichorrhea*.

trichomania (trik'o-ma'ne-ah) trichotillomania.

trichomatous (tri-kom'ah-tus) affected with, of the nature of, or pertaining to trichoma (entropion).

trichome (tri'kōm) [Gr. *trichōma* a growth of hair, hair generally] 1. a filamentous or hairlike structure. 2. a colony of filamentous blue-green algae in which the member cells grow end-to-end to form a chain-like structure.

trichomegaly (trik'o-meg'ah-le) [*tricho-* + Gr. *megalē* large] a congenital syndrome consisting of excessive growth of the eyelashes and brow hair associated with dwarfism, mental retardation, and pigmentary degeneration of the retina.

trichomonadal (trik'o-mo'nah-si'dal) destructive to trichomonads.

trichomonacide (trik'o-mo'nah-sid) an agent destructive to trichomonads.

trichomonad (trik'o-mo'nad, trik'o-mon'ad, tri-kom'o-nad) a parasite of the genus *Trichomonas*.

trichomonadicidal (trik'o-mo-nad'i-si'dal) trichomonadal.

trichomonal (trik'o-mo'nal, trik'o-mon'al, tri-kom'o-nal) pertaining to or caused by trichomonads.

Trichomonas (trik'o-mo'nas, trik'o-mon'as, tri-kom'o-nas) [*tricho-* + Gr. *monas* unit] a genus of parasitic flagellate protozoa of the order Polymastigida, class Zoomastigophora, occurring in the form of pear-shaped cells having four flagella in front, an undulating membrane, and a trailing flagellum. They cause rather serious disease in animals and birds and urogenital infection in man; called also *Pentatrichomonas* and *Tritrichomonas*. **T. bucca'lis**, **T. tenax**. **T. colum'bae**, **T.**

columba'rum, **T. gallinae**. **T. elonga'ta**, **T. tenax**. **T. foe'tus**, a species parasitic in the genital tract of cattle, which causes abortion in infected animals. **T. gal'linae**, a species causing lesions in the upper digestive tract, liver, and pancreas of various birds, especially pigeons; sometimes fatal to the host. Called also **T. columbae** and **T. columbarum**. **T. gal'lina'rum**, a species found in the lower digestive tract, particularly the liver and cecum, of galliform birds, especially turkeys, producing drowsiness and liquid yellow droppings; it is often fatal to young turkeys. **T. homi'nis**, a common parasite in the intestine of man, which is not thought to be pathogenic; formerly called *Cercomonas hominis*. **T. intestina'lis**, **T. hominis**. **T. mu'ris**, a species found in the cecum of the rat. **T. pulmona'lis**, a name given to **T. tenax** isolated from pulmonary abscesses. **T. te'nax**, a nonpathogenic form found in the human mouth, especially about the tartar of the teeth; called also **T. buccalis**, **T. elongata**, and *Tetratrichomonas buccalis*. **T. vagina'lis**, a species found in the vagina, which produces a refractory vaginal discharge; it has also been found in the bladder and urethra of the male.

trichomoniasis (trik'o-mo-ni'ah-sis) infection with *Trichomonas*.

Trichomycetes (trik'o-mi-se'tēs) [*tricho-* + Gr. *mykēs* fungus] a group of organisms with a simple or branched thallus attached by a basal cell to the digestive tract or external cuticle of living arthropods. In some classifications, they are included in the Phycomycetes, and are also called *Microsiphonales*.

trichomycosis (trik'o-mi-ko'sis) [*tricho-* + Gr. *mykēs* fungus] any disease of the hair due to infection by a fungus. **t. axilla'ris**, **t. chromati'ca**, a minor infection of the axillary and sometimes of the pubic hairs, caused by *Corynebacterium tenuis* and not a fungus, as originally thought, which led to the name; occurring commonly in the tropics, it is characterized by development of dense colonies of bacteria on the hairs, appearing as yellow, red, or black nodules. **t. favo'sa**, **favus**. **t. nodo'sa**, **t. palmelli'na** (*obs.*), **t. axillaris**. **t. ru'bra** (*obs.*), **t. axillaris** characterized by red nodules.

trichon (trik'on) an autolyzed preparation of the fungi of the genus *Trichophyton*.

trichonodosis (trik'o-no-do'sis) a rare condition characterized by apparent or actual knotting of the hair, thought to be the result of inability of new hairs to grow freely from their follicles, because of toughness of the surrounding tissues.

trichopathic (trik'o-path'ik) pertaining to disease of the hair.

trichopathy (tri-kop'ah-the) [*tricho-* + Gr. *pathos* disease] disease of the hair.

trichophagy (tri-kof'ah-je) [*tricho-* + Gr. *phagein* to eat] the practice or habit of eating hair.

trichophytic (trik'o-fit'ik) pertaining to trichophytosis.

trichophytid (tri-kof'i-tid) a secondary skin eruption that is the expression of an allergic reaction to a trichophyton infection occurring in an area far from the site of infection.

trichophytin (tri-kof'i-tin) the soluble broth culture products of various species of *Trichophyton*; used in the trichophytin test.

trichophytobezoar (trik'o-fi'to-be-zōr) [*tricho-* + Gr. *phyton* plant + *bezoar*] a bezoar composed of animal hair and vegetable fibers.

Trichophyton (tri-kof'i-ton) [*tricho-* + Gr. *phyton* plant] a genus of imperfect fungi of the order Moniliales, family Moniliaceae, consisting of flat, branched filaments and various types of spores. Species of *Trichophyton* attack the skin, nails, and hair (dermatophytes). As the perfect (sexual) stages are identified they are classified in the genus *Arthroderma*. The common species include **T. mentagrophy'tes**, **T. ru'brum**, **T. ton'surans**, **T. schoenlei'ni**, **T. concen'tricum**, **T. ferrugin'eum**, **T. viola'ceum**, **T. galli'nae**, and **T. sim'i**.

trichophytosis (trik'o-fi-to'sis) a fungal infection caused by species of *Trichophyton*.

Trichoptera (tri-kop'ter-ah) [*tricho-* + Gr. *pteron* wing] an order of flies, the caddis flies. The hair and scales from the wings may produce allergic symptoms in susceptible persons.

trichoptilosis (trik'o-ti-lo'sis) [*tricho-* + Gr. *ptilon* feather + *-osis*] the condition in which the hairs are split and feather-like.

trichorrhea (trik'o-re'ah) [*tricho-* + Gr. *rhoia* flow] trichomadesis.

trichorrhexis (trik'o-rek'sis) [*tricho-* + Gr. *rhēxis* fracture] a condition in which the hairs break. **t. nodo'sa**, a condition characterized by what appear to be white nodes on the hairs but are actually sites where the cortex of the shaft has fractured and split into strands, weakening the hairs so they break at these nodes. Called also *bamboo hair*.

trichoschisis (trik-os'ki-sis) [*tricho-* + Gr. *schisis* fissure] splitting of the hairs.

trichoscopy (tri-kos'ko-pe) [*tricho-* + Gr. *skopein* to examine] examination of the hair.

trichosiderin (trik'o-sid'er-in) [*tricho-* + Gr. *sidēros* iron] an iron-containing brown pigment found in normal human red hair.

Trichomonas vaginalis; permanently stained preparation (Markell and Voge).

trichosis (tri-ko'sis) [Gr. *trichōsis*] any disease or abnormal growth of the hair. **t. carun'culae**, abnormal development of the hair on the lacrimal caruncle.

Trichosoma (trik'o-so'mah) [*tricho-* + Gr. *sōma* body] *Capillaria. T. contortum*, *Capillaria contorta*.

Trichosomoides (trik'o-so-moi'dēz) a genus of nematode parasites. **T. crassicauda**, a nematode parasite of rats; the male is much smaller than the female, and is parasitic in the rat vagina or uterus.

Trichosporon (tri-kos'po-ron) [*tricho-* + Gr. *sporos* seed] a genus of imperfect fungi of the family Cryptococcaceae, order Moniliales, which are normal flora of the respiratory and digestive tract of man and animals, and may infect the hair. **T. beigeli**, *T. cutaneum*. **T. cutaneum**, the etiologic agent of white piedra. It is a normal inhabitant of the skin and the respiratory and intestinal tracts, and rarely an opportunistic agent in debilitated patients, causing a fatal systemic infection. Called also *T. biegelei* and *T. giganteum*. **T. giganteum**, *T. cutaneum*. **T. pedrosiana**, *Fonsecaea pedrosoi*.

trichosporosis (trik'o-spo-ro'sis) infestation with *Trichosporon*; see *piedra*. **t. indica**, **t. nodo'sa**, **t. trop'ica**, *piedra*.

Trichosporum (tri-kos'po-rum) *Trichosporon*.

trichostasis spinulosa (tri-kos'tah-sis spin'u-lo'sa) [*tricho-* + Gr. *stasis* a standing] a disorder in which the hair follicles appear to be obstructed with a spinulose dark plug, consisting of numerous lanugo hairs in a horny mass. The skin of the alae nasi and other areas of the face, or of the arms, chest, abdomen, or interscapular area may be affected.

trichostrongyliasis (trik'o-stron'jī-li'ah-sis) infection by nematodes of the genus *Trichostrongylus*, whose eggs are often mistaken for those of the hookworm. It is usually asymptomatic, but diarrhea may occur.

Trichostrongylidae (trik'o-stron-jil'i-de) a family of nematodes of the superfamily Strongyloidea, including the genera *Trichostrongylus*, *Haemonchus*, *Nippostrongylus*, and *Nematodirus*.

trichostrongylosis (trik'o-stron'jī-lo'sis) infestation with *Trichostrongylus*.

Trichostrongylus (trik'o-stron'jī-lus) a genus of nematode worms (family Trichostrongylidae), comprising some of the species formerly included in the genus *Strongylus*. Adult worms are small and embed their heads in the mucosa of the small intestine; their eggs are often mistaken for those of the hookworm. Infection is usually asymptomatic. **T. capricornis**, a species commonly found in ruminants. **T. colubriformis**, a species frequently present in sheep and goats and occasionally in man; called also *Strongylus subtilis* and *T. instabilis*. **T. instabilis**, *T. colubriformis*. **T. orientalis**, a species found in man in Asia. **T. probolus**, a species found in sheep, mountain goats, dromedaries, gazelles, and occasionally man in Europe, Africa, and North America. **T. vitri'nis**, a species found in sheep, goats, dromedaries, and occasionally in man.

Trichothecium (trik'o-the'se-um) [*tricho-* + Gr. *thēkē* case] a genus of imperfect fungi of the order Moniliales, family Moniliaceae. **T. ro'seum**, a species causing pinkrot of apples, lumber, etc., and very rarely recovered from otitis externa and mycotic keratitis.

trichotillomania (trik'o-til'o-ma'ne-ah) [*tricho-* + Gr. *tillein* to pull + *mania* madness] a morbid impulse to pull out one's own hair; trichologia.

trichotomous (tri-kot'o-mus) [Gr. *tricha* three-fold + *tomē* a cutting] divided into three parts.

trichotoxin (tri'ko-tok'sin) an antibody that has a toxic action on epithelial cells.

trichroic (tri-kro'ik) pertaining to or characterized by trichroism.

trichroism (tri'kro-izm) [*tri-* + Gr. *chroa* color] the exhibition of three different colors in three different aspects.

trichromat (tri'kro-mat) a person who has normal color vision.

trichromatic (tri'kro-mat'ik) trichromic.

trichromatism (tri-kro'mah-tizm) trichroism.

trichromatopsia (tri'kro-mah-top'se-ah) [*trichroic* + Gr. *opsis* vision + *-ia*] ability to see all three primary colors; normal color vision (Hering).

trichromic (tri-kro'mik) [*tri-* + Gr. *chrōma* color] 1. pertaining to or exhibiting three colors. 2. able to distinguish only three of the seven colors of the spectrum.

trichterbrust (trich'ter-broost) [Ger.] funnel chest.

trichuriasis (trik'u-ri'ah-sis) the state of being infected with nematodes of the genus *Trichuris*.

Trichuris (trik-u'ris) [*tricho-* + Gr. *oura* a tail] a genus of intestinal nematode parasites of the superfamily Trichuroidea. **T. trichiura**, the species that principally infects man. It is about 2 inches in length, the front portion of its body, the esophageal zone, being hairlike in slimness. It inhabits the large intestine, and may cause diarrhea, vomiting, and rectal prolapse

in children heavily infected, although it usually produces no symptoms. Also known as *whipworm*.

Trichuris trichiura: A, females; B, males. The posterior portion of the male is usually coiled as shown in B. Photographs of mounted specimens; natural size (Todd).

Trichuroidea (trik'u-roi'de-ah) a superfamily of aphasid nematodes including the genera *Capillaria*, *Trichinella*, and *Trichuris*.

tricipital (tri-sip'i-tal) [L. *tricipitis*] 1. pertaining to the triceps muscle. 2. having three heads.

triclobisone chloride (tri'klo-bī-so'ne-um) chemical name: *N,N,N',N'*-trimethyl-*N,N'*-bis[1-methyl-3-(2,2,6-trimethylcyclohexyl)propyl]-1,6-hexanediaminium dichloride. A quaternary ammonium compound, $C_{36}H_{74}Cl_2N_2$, occurring as a white, crystalline powder; used as a local anti-infective, primarily in the treatment of vulvitis, vaginitis, and other gynecological conditions due to *Trichomonas vaginalis*, *Candida albicans*, and *Hemophilus vaginalis* or to staphylococci and streptococci, administered intravaginally.

triclocarban (tri'klo-kar'ban) chemical name: *N*-(4-chlorophenyl)-*N'*-(3,4-dichlorophenyl)urea. A disinfectant, $C_{13}H_9Cl_3N_2O$, effective against gram-positive bacteria and to a lesser extent against gram-negative bacteria and against fungi; used in the preparation of soaps and other cleansing products and dermatological compositions to control skin infections.

trichlofenol piperazine (tri-klo'fen-ōl) chemical name: 2,4,5-trichlorophenol compound with piperazine (2:1); an anthelmintic, $C_{24}H_{10}N_2 \cdot 2C_6H_3Cl_3O$, effective against roundworms and hookworms.

triclofos sodium (tri'klo-fōs) chemical name: 2,2,2-trichloroethanol dihydrogen phosphate monosodium salt; an oral hypnotic and sedative, $C_2H_3Cl_3NaO_4P$, used especially to induce sleep in the treatment of insomnia. It may also be used as premedication for sleep induction in electroencephalography.

triclone (tri-klo'nid) chemical name: 9,11β,21-trichloro-6α-fluoro-16α,17-[(1-methylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione; an anti-inflammatory, $C_{24}H_{28}Cl_3FO_4$.

Triclos (tri'klōs) trademark for a preparation of triclofos sodium.

tricrosan (tri-klo'san) chemical name: 5-chloro-2-(2,4-dichlorophenoxy)phenol. An antibacterial, $C_{12}H_7Cl_3O_2$, effective against gram-positive and most gram-negative organisms and exhibiting slight activity against yeasts and fungi; used as a detergent in surgical scrubs, soaps, and deodorants.

Tricofuron (tri'ko-fu'ron) trademark for preparations of furazolidone.

Tricoloid (tri'ko-loid) trademark for a preparation of tricyclamol chloride.

tricorn (tri'korn) [*tri-* + L. *cornu* horn] a lateral ventricle of the brain.

tricornute (tri-kor'nūt) [*tri-* + L. *cornutus* horned] having three horns, cornua, or processes.

tricrosol (tri-kre'sol) cresol.

tricrotic (tri-krot'ik) [Gr. *trikrotos* rowed with a triple stroke; triple beating] pertaining to or characterized by tricrotism.

tricrotism (tri'kro-tizm) the quality of having three sphygmographic waves or elevations to one beat of the pulse.

tricuspid (tri-kus'pid) [L. *tricuspis*] 1. having three points or cusps. 2. pertaining to the tricuspid valves of the heart.

tricyclamol chloride (tri-si'klah-mol) chemical name: 1-(3-cyclohexyl-3-hydroxy-3-phenylpropyl)-1-methyl pyrrolidinium chloride. A quaternary ammonium anticholinergic derived from procyclidine, $C_{20}H_{32}ClNO$, which inhibits gastrointestinal hypermotility and reduces secretion of gastric juices; it has been used in the treatment of peptic ulcer and as a gastrointestinal antispasmodic.

tricyclic (tri-sik'lik) containing three fused rings or closed chains in the molecular structure; see also under *antidepressant*.

Trid. abbreviation for L. *triduum*, three days.

tridactylism (tri-dak'tī-lizm) [*tri-* + Gr. *daktylos* finger] the condition of having only three digits on one hand or foot.

tridactylous (tri-dak'tī-lus) pertaining to or characterized by tridactylism.

trident, tridentate (tri'dent; tri-den'tāt) three pronged.

tridermic (tri-der'mik) [*tri-* + Gr. *derma* skin] derived from the ectoderm, endoderm, and mesoderm.

tridermogenesis (tri'der-mo-jen'ē-sis) [*tri-* + Gr. *derma* skin + *genesis* production] the formation of the three germ layers and,

by extension, the stage in embryonic development during which it occurs.

tridermoma (tri-'der-mo'mah) [*tri-* + Gr. *derma* skin + *-oma*] a teratoma containing representatives of all three germ layers.

Tridesilon (tri-des'i-lon) trademark for preparations of desonide.

tridihexethyl chloride (tri-'di-heks-eth'il) [USP] chemical name: γ -cyclohexyl-*N,N,N*-triethyl- γ -hydroxybenzenepropanaminium. A quaternary ammonium anticholinergic, $C_{21}H_{33}ClNO$, occurring as a white, crystalline powder, which inhibits gastrointestinal hypermotility and spasms and reduces secretion of gastric juices; used as adjunctive therapy in the treatment of peptic ulcer and in the irritable bowel syndrome, administered orally and parenterally.

Tridione (tri-di'ön) trademark for preparations of trimethadione.

tridymite (tri'di-mit) a rare crystalline form of silica, SiO_2 , obtainable from quartz by heating.

triencephalus (tri-'en-sef'ah-lus) [*tri-* + Gr. *enkephalos* brain] a monster having no organs of sight, hearing, or smell.

-triene (tri'ën) a chemical suffix indicating the presence of three double bonds.

triester (tri'es-ter) a compound containing three ester groups.

triethanolamine (tri-'eth-ah-nöl'ah-mën) 1. an alkanolamine produced by ammonolysis of ethylene oxide. 2. *trolamine*.

triethylamine (tri-'eth-il-am'in) a somewhat poisonous, oily liquid ptomaine, $N(C_2H_5)_3$, with an ammoniacal smell, derived from decaying fish.

triethylenemelamine (tri-eth'i-lën-mel'ah-mën) chemical name: 2,4,6-tris(1-aziridinyl)-1,3,5-triazine. A cytotoxic alkylating agent, $C_6H_{12}N_6$, occurring as a white, crystalline powder; used as an antineoplastic in the palliative treatment of certain cancers of the lymphatic and hematopoietic systems, such as Hodgkin's disease, leukemia, retinoblastoma, and lymphosarcoma, administered orally. Called also *TEM*.

triethylenethiophosphoramidate (tri-eth'i-lën-thi'o-fos-för'-ah-mid) thiotepa.

trifacial (tri-fa'shal) [L. *trifacialis*] designating the fifth cranial nerve (nervus trigeminus [NA]).

trifid (tri'fid) [L. *trifidus*, from *tres* three + *findere* to split] split into three parts.

triflocin (tri-flo'sin) chemical name: 4-(α,α,α -trifluoro-*m*-toluidino)nicotinic acid; a diuretic, $C_{13}H_9F_3N_2O$.

triflumidate (tri-floo'mi-dät) chemical name: ethyl *m*-benzoyl-*N*-(trifluoromethyl)sulfonylcarbanilate; an anti-inflammatory, $C_{17}H_{14}F_3NO_5S$.

trifluoperazine hydrochloride (tri-'floo-o-pär'ah-zën) [USP] chemical name: 10-[3-(4-methyl-1-piperazinyl)propyl]-2-(trifluoromethyl)-10-*H*-phenothiazine dihydrochloride. An antipsychotic agent, $C_{21}H_{24}F_3N_3S \cdot 2HCl$, occurring as a white to pale yellow, crystalline powder; administered orally and intramuscularly.

trifluoperidol (tri-flu-per'i-döl) chemical name: 4'-fluoro-4-[4-hydroxy-4-(α,α,α -trifluoro-*m*-tolyl)piperidino]butyrophenone; a tranquilizer, $C_{22}H_{23}F_4NO_2$, which has been used in the treatment of mania and schizophrenia.

trifluoromazine (tri-'floo-pro'mah-zën) [USP] chemical name: *N,N*-dimethyl-2-(trifluoromethyl)-10-*H*-phenothiazine-10-propanamine. An antipsychotic agent, $C_{18}H_{16}F_3N_3S \cdot HCl$, occurring as a viscous, light amber-colored, oily liquid, which crystallizes on long standing to large irregular crystals; administered orally. **t. hydrochloride** [USP], the monohydrochloride salt of trifluoromazine, $C_{18}H_{16}F_3N_3S \cdot HCl$, occurring as a white to pale tan, crystalline powder; administered orally and intramuscularly.

trifluridine (tri-floor'i-den) chemical name: α,α,α -trifluorothymidine; an antiviral for use in ophthalmology, $C_{10}H_{11}F_3N_2O_5$.

trifluoromethylthiazide (tri-floor'o-meth'il-thi'ah-zid) flumethiazide.

trifoliosis (tri-'fo-le-o'sis) a disease of horses marked by irritation of the skin and of the mucous membrane of the mouth and by general disturbance; attributed to the eating of hybrid clover.

trifurcation (tri-'fur-ka'shun) [*tri-* + L. *furca* fork] division into three branches.

trigastric (tri-gas'trik) [*tri-* + Gr. *gastër* belly] having three bellies; said of a muscle.

trigeminal (tri-jem'i-nal) [*tri-* + L. *geminus* twin] 1. triple. 2. pertaining to the fifth cranial nerve (nervus trigeminus [NA]).

trigeminus (tri-jem'i-nus) [L.] triple; see *nervus trigeminus*.

trigeminy (tri-jem'i-ne) the condition of occurring in threes, especially the occurrence of three pulse beats in rapid succession; see *trigeminal pulse*, under *pulse*.

trigenic (tri-jen'ik) possessing three different alleles at any particular locus on the chromosome.

triglyceride (tri-glīs'er-id) a compound consisting of three molecules of fatty acid esterified to glycerol; it is a neutral fat synthesized from carbohydrates for storage in animal adipose cells. On enzymatic hydrolysis, it releases free fatty acids in the blood.

trigocephalus (tri-'go-sef'ah-lus) trigonocephalus.

trigona (tri-go'nah) [L.] plural of *trigonum*.

trigonal (tri-go-nal) triangular; pertaining to a trigone.

trigone (tri'gön) 1. a triangular area (trigonum [NA]); see also *triangle*. 2. the first three cusps of an upper molar tooth; see *hypocone*, *paracone*, and *protocone*. **t. of bladder**, trigonum vesicae. **carotid t.**, trigonum caroticum. **cerebral t.**, fornix cerebri. **collateral t.**, trigonum collaterale. **collateral t. of fourth ventricle**, trigonum nervi vagi. **femoral t.**, trigonum femorale. **fibrous t's of heart**, trigona fibrosa cordis. **t. of habenula**, habenular t., trigonum habenulae. **Henke's t.**, Henke's triangle. **t. of hypoglossal nerve**, trigonum nervi hypoglossi. **iliopectineal t.**, fossa iliopectinea. **inguinal t.**, trigonum inguinale. **interpeduncular t.**, fossa interpeduncularis. **lumbal t.**, trigonum lumbale. **olfactory t.**, trigonum olfactorium. **omoclavicular t.**, trigonum omoclaviculare. **Pawlik's t.**, Pawlik's triangle. **t. of Reil**, trigonum lemnisci. **submandibular t.**, trigonum submandibulare. **urogenital t.**, diaphragma urogenitale. **t. of vagus nerve**, trigonum nervi vagi. **vesical t.**, trigonum vesicae.

trigonectomy (tri'gön-ek'to-me) [*trigone* + Gr. *ektomē* excision] excision of the base of the bladder (trigonum vesicae).

trigonelline (tri'go-nel'in) an alkaloid, $C_7H_7NO_2$, found in fenugreek, cannabis, strophanthus, and various other plants, in sea urchins and jellyfish, and also in the urine after administration of nicotinic acid. It is a betaine of methyl nicotinic acid.

trigonic (tri-gon'id) the first three cusps of a lower molar tooth. See *hypoconid*, *paraconid*, and *protoconid*.

trigonitis (tri'go-ni'tis) [*trigone* + *-itis*] inflammation or localized hyperemia of the trigone of the bladder.

trigonocephalia (tri'go-no-sē-fa'le-ah) trigonocephaly.

trigonocephalic (tri'go-no-sē-fal'ik) pertaining to or characterized by trigonocephaly.

trigonocephalus (tri'go-no-sef'ah-lus) an individual exhibiting trigonocephaly.

trigonocephaly (tri-go'no-sef'ah-le) [Gr. *trigonos* triangular + *kephalē* head] a deformity of the head characterized by sharp angulation ventrad of the squamous portion of the frontal bones at the site of the suture between them.

trigonotome (tri-go'no-töm) an instrument for cutting the trigone of the bladder.

trigonum (tri-go'nūm), pl. *trigo'na* [L.; Gr. *trigōnon* triangle] a three-cornered area; [NA] a general term for a triangular area. Called also *triangle* and *trigone*. **t. acustici**, area vestibularis. **t. carot'icum** [NA], carotid trigone: the triangular region bounded by the posterior belly of the digastric muscle, the sternocleidomastoid muscle, and the anterior midline of the neck; called also *fossa carotica*. **t. cerebra'le**, fornix cerebri. **t. cervica'le**, 1. t. caroticum. 2. t. omoclaviculare. **t. collatera'le** [NA], collateral trigone: the triangular area in the floor of the lateral ventricle between the diverging inferior and posterior horns. **t. collatera'le ventric'uli quar'ti**, t. nervi vagi. **t. col'li latera'le**, regio colli lateralis. **t. coracacromia'le**, a triangle bounded by the coracoid process, the apex of the acromion, and the concave border of the clavicle. **t. deltoideopectora'le**, the deeper part of the infraclavicular region which is exposed by dissection. **t. femora'le** [NA], femoral trigone: a triangular area bounded superiorly by the inguinal ligament, laterally by the sartorius muscle, and medially by the adductor longus muscle; called also *Scarpa's triangle*. **trigo'na fibro'sa cor'dis** [NA], fibrous trigones of heart: two thickened and irregularly triangular portions of the fibrous skeleton of the base of the heart, one located between the right and left atrioventricular fibrous rings, posterior to the aortic orifice, and the other between the left atrioventricular fibrous ring and the left posterior margin of the aortic fibrous ring. **t. haben'ulae** [NA], trigone of habenula: the small, depressed triangular area on the dorsomedial aspect of the posterior part of the thalamus which contains the habenular nuclei and marks the habenular commissure. **t. inguina'le** [NA], inguinal trigone: the area on the inferoanterior abdominal wall bounded by the rectus abdominis muscle, the inguinal ligament, and the inferior epigastric vessels: the site in which a direct inguinal hernia begins. **t. interpeduncula're**, fossa interpeduncularis. **t. lemnis'ci**, a small, more or less distinct triangular area on the side of the isthmus just lateral to the inferior colliculus, bounded below by the superior cerebellar peduncle, dorsomedially by the brachium colliculi inferioris, and anterolaterally by the sulcus lateralis mesencephali. **t. lumba'le** [NA], **t. lumba'le** [Peti'ti], lumbal trigone: a small triangular interval between the inferolateral margin of the latissimus dorsi muscle and the external oblique muscle of the abdomen, just above the ilium; called also *Petit's triangle*. **t. lumbocosta'le**, a triangular opening of variable size between the lateral lumbocostal arch and the pars costalis diaphragmatis. **t. ner'vi hypoglos'si** [NA], trigone of hypoglossal nerve: the tapering lower end of the medial eminence of the rhomboid fossa just superficial to the position of the hypoglossal nucleus. **t. ner'vi va'gi** [NA], trigone of vagus nerve: an area in the floor of the fourth ventricle immediately

lateral to the trigonum nerve hypoglossi; beneath it lies the dorsal nucleus of the vagus nerve. Called also *ala cinerea*. **t. olfacto-rium** [NA], olfactory trigone: the area of the anterior perforated substance between the diverging lateral and medial olfactory striae, and bounded posteriorly by the diagonal band. **t. omoclavicula're** [NA], omoclavicular trigone: a deep region of the neck, corresponding to the fossa supraclavicularis major on the surface, in which the brachial plexus may be palpated, and by downward pressure the subclavian artery can be compressed against the first rib; called also *subclavian triangle*. **t. sternocosta'le**, sternocostal triangle: a triangular opening between the pars costalis and the pars sternalis diaphragmatis; beyond this point the internal thoracic vessels become the superior epigastric vessels. Called also *Larrey's cleft*. **t. submandibula're** [NA], submandibular trigone: the triangular region of the neck bounded by the mandible, the stylohyoid muscle and posterior belly of the digastric muscle, and the anterior belly of the digastric muscle; called also *regio submaxillaris*. **t. urogenita'le**, diaphragma urogenitale. **t. va'gi**, t. nervi vagi. **t. ventric'uli latera'lis**, t. collaterale. **t. vesi'cae** [NA], **t. vesi'cae** [Lieutau'di], trigone of bladder: a smooth triangular portion of the mucous membrane at the base of the bladder; it is bounded behind by the interureteric fold and ends in front in the uvula of the bladder.

trihexyphenidyl hydrochloride (tri-hek'se-fen'i-dil) [USP] chemical name: α -cyclohexyl- α -phenyl-1-piperidinepropanol hydrochloride. An anticholinergic, $C_{20}H_{31}NO \cdot HCl$, occurring as a white or slightly off-white crystalline powder, having atropine-like actions; used as an oral antiparkinsonian agent.

trihybrid (tri-hi'brid) a hybrid offspring of parents differing in three mendelian characters.

trihydrate (tri-hi'drát) trihydroxide; a compound containing three hydroxyl groups.

trihydric (tri-hi'drik) containing three hydrogen atoms that are replaceable by bases.

trihydrol (tri-hi'drol) the associated water or ice molecule, $(H_2O)_3$.

trihydroxide (tri'hi-drok'sid) trihydrate.

trihydroxyestrin (tri'hi-drok'se-es'trin) estriol.

tri-iniodymus (tri'in-e-od'i-mus) [*tri* + Gr. *inion* nape of the neck + *didymos* twin] a monster with a single body and three heads united posteriorly.

triiodide (tri-i'o-did) a compound containing three atoms of iodine to one of another element.

triiodomethane (tri-i'o-do-meth'án) iodoform.

triiodothyronine (tri'i-o'do-thi'ro-nēn) one of the thyroid hormones: an organic iodine-containing compound liberated from thyroglobulin by hydrolysis, and thought to be formed by the conjugation of one molecule each of monoiodotyrosine and diiodotyrosine, or by the partial deiodination of thyroxine. It has several times the biological activity of thyroxine. Symbol T_3 .

triketohydrindene hydrate (tri-ke'to-hi-drin'dēn) chemical name: 1,2,3-indantrione monohydrate. A compound, $C_{10}H_6O_3 \cdot H_2O$, occurring as white to brownish white crystals or crystalline powder, used as a reagent. See under *tests*.

triketopurine (tri'ke-to-pu'rín) uric acid.

trilabe (tri'lāb) [*tri* + Gr. *labē* a handle] a three-pronged instrument for taking calculi from the bladder.

Trilafon (tri'lah-fon) trademark for preparations of perphenazine.

trilaminar (tri-lam'i-nar) consisting of three layers.

trilateral (tri-lat'er-al) [*tri* + L. *latus* side] having or pertaining to three sides.

trilaurin (tri-law'rín) a crystalline glyceride, $C_3H_5(OC_{12}H_{23}O)_3$, forming the principal constituent of coconut oil, and found in bayberry oil and palm nut oil.

Trilene (tri'lēn) trademark for a preparation of trichloroethylene.

trilinolein (tri'lin-o'le-in) a glyceride, $C_3H_5(OC_{18}H_{33}O)_3$, found in linseed oil, hempseed oil, sunflower oil, etc.

Trilisate (tri'lí-sāt) trademark for choline magnesium trisalicylate.

trilliin (tri'lí-in) a concentration prepared from *Trillium erectum* L. (Liliaceae), a North American plant.

Trillium (tri'lí-um) a genus of liliaceous plants. **T. erectum** L., wake-robin; the rhizome contains trilliin.

trilobate (tri-lo'bāt) [*tri* + L. *lobus* lobe] having three lobes.

trilobectomy (tri'lo-bek'to-me) excision of three pulmonary lobes, two from one lung and one from the other.

trilobed (tri'lōbd) trilobate.

trilocular (tri-lok'u-lar) [*tri* + L. *loculus* cell] having three compartments or cells.

trilogy (tri'ló-je) a combination of three elements, such as three concurrent defects or symptoms. **t. of Fallot**, a term sometimes applied to the combination of pulmonic stenosis, atrial septal defect, and right ventricular hypertrophy.

trilostane (tri'lo-stān) chemical name: 4 α ,5-epoxy-17 β -hydroxy-3-oxo-5 α -androstan-2 α -carbonitrile; an adrenocortical suppressant, $C_{20}H_{27}NO_3$.

trimanual (tri-man'u-al) [*tri* + L. *manus* hand] accomplished by the use of three hands.

Trimastigamoeba (tri-mas'tig-ah-me'bah) a genus of amebae of the order Amoeboidea, class Rhizopoda, found in stagnant water, and having both an ameboid and a flagellate stage during its life history; in the latter stage it possesses three equal flagella. *T. philippen'sis* has been obtained in culture from city water.

trimastigote (tri-mas'ti-gōt) 1. having three flagella. 2. a cell having three flagella.

trimazosin hydrochloride (tri-ma'zo-sin) chemical name: 4-(4-amino-6,7,8-trimethoxy-2-quinazolinyl)-1-piperazine carboxylic acid 2-hydroxy-2-methylpropyl ester monohydrochloride monohydrate; an antihypertensive, $C_{20}H_{29}N_5O_6 \cdot HCl \cdot H_2O$.

trimenon (tri-me'non) [*tri* + Gr. *mēn* month + *on* neuter ending] trimester.

trimensual (tri-men'su-al) occurring every three months.

trimepazine tartrate (tri-mep'rah-zēn) [USP] chemical name: *N,N*, β -trimethyl-10*H*-phenothiazine-10-propanamine [*R*-(*R**,*R**)]-2,3-dihydroxybutanedioate (2:1). A phenothiazine derivative, $(C_{18}H_{22}N_2S)_2 \cdot C_4H_6O_6$, occurring as a white to off-white, crystalline powder, having mild central nervous system depressant, moderate antiemetic and anticonvulsant properties, and powerful antihistaminic actions; used as an antipruritic, administered orally.

trimer (tri'mer) 1. a compound formed by combination of three identical simpler molecules. 2. a capsomere having three structural units.

trimericuric (tri'mer-ku'rik) containing three atoms of bivalent mercury.

Trimeresurus (trim'rē-su'rūs) a genus of venomous pit vipers of East and Southeast Asia, which are usually green and possess a prehensile tail. *T. flavoviridis* is the habu.

trimeric (tri'mer-ik) exhibiting the characteristics of a trimer.

trimester (tri-mes'ter) a period of three months.

trimetaphosphatase (tri'met-ah-fos'fah-tās) an enzyme occurring in the liver and kidneys that catalyzes the hydrolysis of trimetaphosphate to triphosphate.

trimethadione (tri'meth-ah-di'ōn) [USP] chemical name: 3,5,5-trimethyl-2,4-oxazolidinedione. An anticonvulsant with analgesic properties, $C_8H_8NO_3$, occurring as white, crystalline granules; used for the control of petit mal seizures, administered orally. In veterinary medicine, used as an anticonvulsant-analgesic for cats. Called also *troxidone*.

trimethaphan camsylate (tri-meth'ah-fan) [USP] chemical name: decahydro-2-oxo-1,3-bis(phenylmethyl)thieno[1',2']thieno[3,4]imidazol-5-ium salt with (+)-7,7-dimethyl-2-oxobicyclo[2.2.1]heptane-1-methanesulfonic acid (1:1). A short-acting ganglionic blocking agent with direct vasodilator action, $C_{32}H_{40}N_2O_5S_2$, occurring as white crystals or white, crystalline powder; used as an antihypertensive to produce controlled hypotension during surgery and for the emergency treatment of hypertensive crises and pulmonary edema due to hypertension, administered by intravenous infusion. Called also *t. camphorsulfonate*.

trimethidinium methosulfate (tri-meth'i-din'e-um) chemical name: 1,3,8,8-tetramethyl-3-[3-(trimethylammonio)propyl]-3-azoniabicyclo[3.2.1]octane bis(methyl sulfate). A quaternary ammonium ganglion blocking agent, $C_{19}H_{40}N_2O_8S_2$, occurring as a white, hygroscopic powder, used as an oral antihypertensive in the treatment of moderate to severe hypertension in certain patients.

trimethobenzamide hydrochloride (tri-meth'o-ben'zah-mid) [USP] chemical name: *N*[[4-[2-(dimethylamino)ethoxy]phenyl]methyl]-3,4,5-trimethoxybenzamide monohydrochloride. An antiemetic, $C_{21}H_{28}N_2O_5 \cdot HCl$, occurring as a white, crystalline powder; administered orally, intramuscularly, or rectally.

trimethoprim (tri-meth'o-prim) [USP] chemical name: 5-[3,4,5-trimethoxyphenyl]methyl]-2,4-pyrimidinediamine. An antibacterial, $C_{14}H_{18}N_4O_5$, closely related to the antimalarial pyrimethamine; administered orally, in combination with a sulfonamide because the two drugs markedly potentiate each other, in the treatment of urinary tract infections due to *Escherichia coli*, *Klebsiella-Enterobacter* group, *Proteus vulgaris*, *P. mirabilis*, and *P. morganii*, and in *Pneumocystis carinii* pneumonitis in children with reduced host defenses. In certain countries, it is used alone as an antimalarial.

trimethylamine (tri'meth-il-am'in) a colorless gaseous (boiling point 3.2°-3.8° C.) tertiary amine, $(CH_3)_3N$, with an ammoniacal, fishy odor, from beet sugar residue and herring brine. In the body it probably results from the decomposition of choline; it has been reported in menstrual blood.

trimethylene (tri-meth'i-lēn) cyclopropane.

trimethylxanthine (tri-meth'il-zan'thin) caffeine.

trimetozine (tri-met'o-zēn) chemical name: 4-(3,4,5-trimethoxybenzoyl)morpholine; a sedative, $C_{14}H_{19}NO_5$.

trimipramine (tri-mip'rah-mēn) chemical name: 10,11-dihydro-*N,N*, β -trimethyl-5*H*-dibenz[*b,f*]azepine-5-propanamine; a tri-

cyclic antidepressant, $C_{20}H_{26}N_2$. **t. maleate**, the maleate salt of trimipramine, $C_{20}H_{26}N_2 \cdot C_4H_4O_4$, having the same actions as the base.

trimorphous (tri-mor'fus) [*tri-* + Gr. *morphē* form] existing in three different forms.

trimopam maleate (tri'mo-pam) chemical name: (+)-2,3,4,5-tetrahydro-7,8-dimethoxy-3-methyl-1-phenyl-1*H*-3-benzazepine (Z)-2-butenedioate (1:1); a tranquilizer, $C_{18}H_{23}NO_2 \cdot C_4H_4O_4$.

trinegative (tri-neg'ah-tiv) having three negative valencies or charges.

trineural (tri-nu'ral) pertaining to three nerves.

trineuric (tri-nu'rik) pertaining to or having three neurons.

trinitrate (tri-ni'trät) a nitrate which contains three radicals of nitric acid, as glycerol trinitrate.

trinitrin (tri-ni'trin) nitroglycerin.

trinitrocellulose (tri'ni-tro-sel'u-lös) pyroxylin.

trinitrocresol (tri'ni-tro-kre'sol) an antiseptic and highly explosive compound, $(NO_2)_3C_6H(CH_3)OH$, formed by the action of concentrated nitric acid on coal tar cresol.

trinitroglycerin (tri-ni'tro-glis'er-in) nitroglycerin.

trinitroglycerol (tri-ni'tro-glis'er-ol) nitroglycerin.

trinitrophenol (tri'ni-tro-fe'no) a yellow, crystalline, bitter-tasting substance, $C_6H_2(NO_2)_3OH$, sparingly soluble in water; it is used as a dye and a tissue fixative and as an antiseptic, astringent, and stimulant of epithelialization. It can be detonated by percussion or heating above 300° C. Called also *carbazotic*, *nitroxanthic*, *picric*, and *picronic acid*.

trinitrotoluene (tri'ni-tro-tol'u-en) a high explosive, $C_7H_5(NO_2)_3CH_3$, obtained by nitrating toluene; called also TNT.

trinomial (tri-no'me-al) [*tri-* + L. *nomen* name] composed of three names or terms.

trinucleate (tri-nu'kle-ät) having three nuclei.

trinucleotide (tri-nu'kle-o-tid) a polymer made up of three mononucleotides.

triocephalus (tri'o-sef'ah-lus) [*tri-* + Gr. *kephalē* head] a monster in which the structures of the mouth, nose, and eyes are wanting, the head being nearly a shapeless mass.

Triodontophorus diminutus (tri'o-don-tof'o-rus dim-i-nu'tus) *Territans diminutus*.

triolein (tri-o'le-in) olein.

triolism (tri'o-lizm) sexual interests or practices involving three persons, two of one sex and one of the opposite sex.

trionym (tri'o-nim) [*tri-* + Gr. *onyma* name] a name made up of three terms.

triophthalmos (tri'of-thal'mos) [*tri-* + Gr. *ophthalmos* eye] a double-faced monster with three eyes.

triopodymus (tri'o-pod'i-mus) [*tri-* + Gr. *ops* face + *didymos* twin] a monster having a fused head with three faces.

triorchid (tri-or'kid) [*tri-* + Gr. *orchis* testis] an individual with three testes.

triorchidism (tri-or'ki-dizm) the condition of having three testes.

triorchis (tri-or'kis) triorchid.

triorchism (tri-or'kizm) triorchidism.

triose (tri'ös) a monosaccharide containing three carbon atoms in a molecule.

triotus (tri-o'tus) [*tri-* + Gr. *ous* ear] an individual with a supernumerary ear.

trioxide (tri-ok'sid) a compound containing three atoms of oxygen to one of another element.

trioxsalen (tri-ok'sah-len) [USP] chemical name: 2,5,9-trimethyl-7*H*-furo[3,2-*g*]1-benzopyran-7-one. A synthetic psoralen, $C_{14}H_{12}O_3$, occurring as a white or grayish, crystalline solid; used orally in conjunction with exposure to ultraviolet light to facilitate repigmentation in vitiligo, and also as a suntan accelerator and sun protectant.

trioxypurine (tri'ok-se-pu'rin) uric acid.

tripalmitin (tri-pal'mi-tin) palmitin.

tripara (trip'ah-rah) [*tri-* + L. *parere* to bring forth, produce] a woman who has had three pregnancies which resulted in viable offspring; also written para III.

triparanol (tri-par'ah-nol) chemical name: 1-[*p*-(2-diethylaminoethoxy)phenyl]-1-(*p*-tolyl)-2-(*p*-chlorophenyl)ethanol. A crystalline substance, $C_{27}H_{32}ClNO_2$, formerly used as a cholesterol biosynthesis inhibitor but withdrawn from the market because of association with irreversible cataracts, baldness, and impotence.

tripartite (tri-par'tit) having three parts.

tripeleennamine (tri'pē-len'ah-min) chemical name: *N,N*-dimethyl-*N'*-(phenylmethyl)-*N'*-2-pyridinyl-1,2-ethanediamine. A histamine antagonist, $C_{18}H_{21}N_3$. **t. citrate** [USP], the citrate salt of tripeleennamine, $C_{18}H_{21}N_3 \cdot C_6H_5O_7$, occurring as a white, crystalline powder; used as antihistaminic in the symptomatic treatment of allergic disorders, administered orally. **t. hydrochloride** [USP], the monohydrochloride salt of tripeleennamine,

$C_{18}H_{21}N_3 \cdot HCl$, have the same appearance, actions, and uses as the citrate salt; administered orally, parenterally, and topically.

tripeptide (tri-pep'tid) a peptide which on hydrolysis yields three amino acids.

Triperidol (tri-per'i-dol) trademark for a preparation of tri-fluperidol.

triphalangeal (tri'fah-lan'je-al) pertaining to or characterized by triphalangia.

triphalangia (tri'fah-lan'je-ah) triphalangism.

triphalangism (tri-fal'an-jizm) the presence of three phalanges in the longitudinal axis of a digit normally composed of only two.

triphasic (tri-fa'zik) [*tri-* + Gr. *phasis* phase] triply varied or triply phasic; used in describing the electromotive actions of muscles. Cf. *diphasic* and *monophasic*.

triphenylethylene (tri-fen'il-eth'i-lēn) a synthetic estrogen, $C_{20}H_{16}$ (*alpha*-phenyl-stilbene), not related to naturally occurring estrogens with the phenanthrene nucleus.

triphenylmethane (tri-fen'il-meth'an) a substance from coal tar, $(C_6H_5)_3CH$, the basis of various dyes and stains, including aurin, rosaniline, basic fuchsin, and gentian violet.

triphosphate (tri-fos'fāt) a salt containing three phosphate radicals.

triphosphopyridine nucleotide (tri-fos'fo-pir'i-dēn) TPN; former name for nicotinamide-adenine dinucleotide phosphate (NADP).

tripthemia (trif-the'me-ah) [Gr. *tribein* to wear out + *haima* blood + *-ia*] the retention of waste products in the blood.

Tripier's amputation (trip'e-āz) [Léon Tripier, French surgeon, 1842-1891] see under *amputation*.

triple-angle (trip'l ang'g'l) having three angles; Black's term for a dental instrument having three angulations in the shank connecting the handle, or shaft, with the working portion of the instrument, known as the blade, or nib.

triplegia (tri-ple'je-ah) [*tri-* + Gr. *plēgē* stroke] paralysis of three of the extremities.

triplet (trip'let) 1. one of three individuals having coextensive gestation periods and produced at the same birth. 2. a combination of three objects or entities occurring or acting together, as three lenses constituting a microscope eyepiece or objective. 3. in molecular genetics, a unit of three successive bases in DNA or RNA, which codes for a specific amino acid.

triplex (tri'pleks) [Gr. *triploos* triple] triple or three-fold.

triploblastic (trip'lo-blas'tik) [Gr. *triploos* triple + *blastos* germ] having three germ layers or blastodermic membranes; said of an embryo.

triploid (trip'loid) 1. pertaining to or characterized by triploidy. 2. an individual or cell having three sets of chromosomes.

triploidy (trip'loi-de) the presence in humans of 69 chromosomes, or three full sets, a frequent finding in abortions.

triplokoris (trip'lo-ko're-ah) [Gr. *triploos* triple + *korē* pupil + *-ia*] the presence of three pupils in one eye.

triplopia (trip-lo'pe-ah) [Gr. *triploos* triple + *ōpē* sight + *-ia*] the perception of three images of a single object; triple vision.

tripod (tri'pod) [Gr. *treis* three + *pous* foot] anything having three feet or supports. **t. of the Empirics**, the three principles on which the Empirics based their theory of medicine: (1) their own chance observations; (2) learning obtained from contemporaries and predecessors; and, in case of a disease not previously encountered, (3) conclusions based on other diseases which it might resemble. **Haller's t.**, *truncus celiacus*. **t. of life, vital t.**, the brain, heart, and lungs regarded as the triple support of life.

tripodia (tri-po'de-ah) [Gr. *treis* three + *pous* foot] a type of symmeling characterized by the presence of three feet.

tripoding (tri'pod-ing) the use of three points of support, as adopted by paralyzed patients when changing from a sitting or standing position. See also *tripod position*, under *position*.

tripoli (trip'o-le) a mild abrasive and polishing agent, used in dentistry, derived from certain porous rocks first found near Tripoli.

tripositive (tri-pos'i-tiv) having three positive valencies or charges.

triprolidine hydrochloride (tri-pro'li-dēn) [USP] chemical name: (*E*)-2-[1-(4-methylphenyl)-3-(1-pyrrolidinyl)-1-propenyl]-pyridine monohydrochloride monohydrate. An antihistaminic, $C_{18}H_{22}N_2 \cdot HCl \cdot H_2O$, occurring as a white, crystalline powder; used in the treatment of various allergic conditions and their manifestations, administered orally.

triprosopus (tri'pro-so'pus) [Gr. *treis* three + *prosōpon* face] a monster having a triple face.

tripsis (trip'sis) [Gr. *tripsis* rubbing] 1. a trituration; the process of trituration. 2. the act of shampooing or of massage.

-tripsy (trip'se) [Gr. *tripsis* a rubbing, friction] a word termination designating a surgical procedure in which a structure is intentionally crushed.

triptokoria (trip/'to-ko're-ah) triplokoria.

tripus (tri/'pus) [Gr. *treis* three + *pous* foot] 1. a tripod. 2. a conjoined twin monster having three feet. **t. hal'leri**, truncus celiacus.

triquestrous (tri-kwe/'trus) [L. *triquetrus*] triangular; three cornered.

triquetrum (tri-kwe/'trum) [L.] three cornered; see *os triquetrum*.

triradial, triradiate (tri-ra/'de-al; tri-ra/'de-āt) [*tri-* + L. *radius* rayed] having three rays; radiating in three directions.

triradiation (tri/'ra-de-a'shun) radiation in three directions.

triradius (tri-ra/'de-us) in dermatoglyphics, a point from which the dermal ridges course in three directions at angles of approximately 120 degrees.

TRIS tris(hydroxymethyl)aminomethane; see *tromethamine*.

trisaccharidase (tri-sak/'ah-ri-dās) an enzyme that catalyzes the hydrolysis of trisaccharides.

trisaccharide (tri-sak/'ah-rid) a carbohydrate, $C_{18}H_{32}O_{16}$, composed of three saccharide groups.

tris(hydroxymethyl)aminomethane (tris/'hi-drok''se-meth/'il-am/'i-no-meth/'an) tromethamine.

trismic (triz/'mik) of the nature of or pertaining to trismus.

trismoid (triz/'moid) [*trismus* + Gr. *eidos* form] a variety of trismus nascentium, said to be due to pressure on the occiput during birth.

trismus (triz/'mus) [Gr. *trismos* grating, grinding] motor disturbance of the trigeminal nerve, especially spasm of the masticatory muscles, with difficulty in opening the mouth (lockjaw); a characteristic early symptom of tetanus. **t. nascentium**, inability to open the jaws sometimes observed in an infant at birth. **t. neonatorum**, tetanus of young infants due to infection of the navel.

trisintrate (tris-ni/'trāt) trinitrate.

trisomia (tri-so/'me-ah) trisomy.

trisomic (tri-so/'mik) pertaining to or characterized by trisomy.

trisomy (tri-so/'me) [*tri* + Gr. *sōma* body] the presence of an additional (third) chromosome of one type in an otherwise diploid cell ($2n + 1$): trisomy 8 (trisomy C) results in trisomy 8 syndrome; trisomy 13 (trisomy D or 13-15) results in Patau's syndrome; trisomy 18 (trisomy E or 16-18) results in trisomy 18 syndrome; trisomy 21 results in Down's syndrome; and trisomy 22 results in trisomy 22 syndrome. See these anomalies under *syndrome*.

Trisoralen (tri-sor/'ah-len) trademark for a preparation of trioxsalen.

trisplanchnic (tri-splangk/'nik) [Gr. *treis* three + *splanchna* viscera] pertaining to or supplying the three great body cavities and their viscera.

tristearin (tri-ste/'ah-rin) a white, crystalline fat, glyceryl tristearate, $C_{57}H_{113}(C_{18}H_{35}O_2)_3$, found in the harder fats, such as tallow; called also *stearin*.

tristichia (tri-stik/'e-ah) [Gr. *treis* three + *stichos* row] the existence of three rows of eyelashes.

tristimania (tris/'ti-ma'ne-ah) [L. *tristis* sad + Gr. *mania* madness] melancholia.

trisubstituted (tri-sub/'stī-tūt/'ed) having three molecules or atoms replaced by three other molecules or atoms.

trisulcate (tri-sul/'kāt) having three furrows.

trisulapyrimidines (tri-sul/'fah-pi-rim/'i-dēnz) preparations containing a mixture of the sulfonamides sulfadiazine, sulfamerazine, and sulfamethazine.

trisulfate (tri-sul/'fāt) a binary compound containing three sulfate (SO_4) groups in the molecule.

trisulfide (tri-sul/'fid) a sulfur compound containing three atoms of sulfur to one of the base.

Trit. abbreviation for L. *tritura*, triturate.

tritanomaly (tri/'tah-nom-ah/'le) tritanomalopia.

tritanomalous (tri/'tah-nom-ah-lus) pertaining to or characterized by tritanomalopia.

tritanomalopia (tri/'tah-nom-ah-lo-pe-ah) [Gr. *tritosthird* + *anōmalos* irregular + *ōpē* sight + *-ia*] a rare form of defective color vision, similar to but milder than tritanopia, in which there is decreased sensitivity of, rather than absence of, blue-sensitive visual pigment. Cf. the correlative terms *deuteranomalopia* and *protanomalopia*.

tritanope (tri/'tah-nōp'') an individual exhibiting tritanopia.

tritanopia (tri/'tah-no-pe-ah) [Gr. *tritosthird* + *an-* neg. + *ōpē* sight + *-ia*] a rare and obscure type of defective color vision, characterized by retention of the sensory mechanism for two hues only (red and green) of the normal 4-primary quota, and lacking blue and yellow, with loss of luminance and shift of brightness and hue curves toward the long-wave end of the spectrum. Often associated with drug administration, retinal detachment, or diseases of the nervous system. Formerly called "blue blindness." Cf. the correlative terms *protanopia*, *deuteranopia*, and *tetartanopia*, in which the color vision deficiency is in the first, second, and fourth primary, respectively.

tritanopic (tri/'tah-nop'ik) pertaining to or characterized by tritanopia.

tritanopsia (tri/'tah-nop-se-ah) tritanopia.

tritiate (trit/'e-āt) to treat with tritium.

triticeous (tri-tish/'us) [L. *triticeus*] resembling a grain of wheat.

triticeum (tri-tis/'e-um) [L.] cartilago triticea.

triticin (trit/'i-sin) a fructose polysaccharide, $(C_6H_{10}O_5)_n$, which occurs in the rhizome of couch grass, *Agropyron repens* (L.) Beauv. (Gramineae).

Triticum (trit/'i-kum) [L.] a genus of grasses, including wheat. *T. (Agropyron) repens* (L.) Beauv., or couch grass, is diuretic; formerly used in the treatment of cystitis and as a nutritive agent in the form of a decoction.

triticum (trit/'i-kum) the dried rhizome and roots of couch grass, *Agropyron (Triticum) repens* (L.) Beauv. (Gramineae), which has diuretic properties, and was formerly used in the treatment of cystitis; it was also used as a nutritive agent in the form of a decoction. Called also *agropyrum*.

tritium (trit/'e-um, trish/'e-um) [Gr. *tritosthird*] the mass three isotope of hydrogen, 3H , a radioactive gas obtained by bombardment of beryllium in the cyclotron with deuterium ions. It has a half-life of about 31 years and is used as an indicator or tracer in metabolic studies. Cf. *deuterium* and *protium*.

tritocone (tri/'to-kōn) [Gr. *tritosthird* + *kōnos* cone] the distobuccal cusp of a mammalian upper premolar tooth.

tritocoid (tri/'to-ko'nid) the distobuccal cusp of a mammalian lower premolar tooth.

tritrol (tri/'tol) any emulsion of the extract of filix mas with the diastasic extract of malt.

triton (tri/'ton) trinitrotoluene.

tritotoxin (tri/'to-tok/'sin) (*obs.*) a toxin which unites less easily with the antitoxin than the prototoxin and deuterotoxin. See *deuterotoxin*, *hemotoxin*, *heterotoxin*, *prototoxin*.

Trichomonas (tri-trik/'o-mo'nas) *Trichomonas*.

triturable (trich/'er-ah-bel) susceptible of being triturated.

triturate (trich/'ē-rāt) 1. to rub to a powder. 2. a triturated substance.

trituration (trich/'ē-ra'shun) [L. *tritura* the treading out of corn]

1. the reduction of solid bodies to a powder by continuous rubbing.
2. a triturated drug, especially one rubbed up with milk sugar.
3. the creation of a homogeneous whole by mixing, as the combining of particles of an alloy with mercury to form dental amalgam; called also *amalgamation*.

triturator (trit/'u-ra'tor) an apparatus in which substances can be continuously rubbed, as in the process of amalgamating an alloy with mercury.

trivalence (triv/'ah-lens) the condition or quality of being trivalent.

trivalent (triv/'ah-lent) [*tri-* + L. *valens* powerful] uniting with or replacing three hydrogen atoms.

trivalve (tri/'valv) having three valves or three blades, as a speculum.

trizonal (tri-zo/'nal) arranged in three zones.

tRNA transfer-RNA; see *ribonucleic acid*, under *acid*.

Trobicin (tro-bi/'sin) trademark for a preparation of spectinomycin hydrochloride.

trocar (tro/'kar) [Fr. *trois quarts* three quarters] a sharp-pointed instrument equipped with a cannula, used to puncture the wall of a body cavity and withdraw fluid. **Duchenne's t.**, an instrument for removing small portions of tissues from deep parts for microscopical study. **Durham's t., piloting t.**, a trocar for introducing a jointed tracheostomy tube. **rectal t.**, a curved trocar for tapping the bladder through the rectum.

troch. trochiscus.

trochanter (tro-kan/'ter) [L.; Gr. *trochantēr*] either of the two processes below the neck of the femur. **greater t.**, t. major. **lesser t.**, t. minor. **t. ma'jor** [NA], greater trochanter: a broad, flat process at the upper end of the lateral surface of the femur, to which several muscles are attached. **t. mi'nor** [NA], lesser trochanter: a short conical process projecting medially from the lower part of the posterior border of the base of the neck of the femur. **rudimentary t.**, t. tertius. **small t.**, t. minor. **t. ter'tius** [NA], **third t.**, a term applied to the gluteal tuberosity of the femur when it is unusually prominent.

trochanterian (tro/'kan-ter'e-an) trochanteric.

trochanteric (tro/'kan-ter'ik) pertaining to a trochanter.

trochanteroplasty (tro-kan/'ter-plas'te) surgical excision of a ridge of bone to form a new femoral neck.

trochantin (tro-kan/'tin) trochanter minor.

trochanterian (tro/'kan-tin'e-an) pertaining to the lesser trochanter.

troche (tro/'ke) [Gr. *trochos* a round cake] a small circular or oblong tablet usually for solution in the mouth, especially for medication of the throat, consisting of an active ingredient incorporated in a mass made up of sugar and mucilage or fruit

base, and air dried. Called also *lozenge*, *morsulus*, *rotula*, and *trochiscus*.

trochin (tro/'kin) [L. *trochinus*] tuberculum minus humeri.

trochiscus (tro-kis/'kus), pl. *trochis'chi* [L.; Gr. *trochiskos*, dim. of *trochos*, a small wheel or disk] a medicated tablet; a troche.

trochiter (trok/'i-ter) 1. trochanter major. 2. tuberculum majus humeri.

trochiterian (trok/'i-te-'re-an) pertaining to the trochiter.

trochlea (trok/'le-ah), pl. *troch'leae* [L.; Gr. *trochilia* pulley] a pulley-shaped part or structure; [NA] a general term for such a structure. **t. fibula'ris calca'nei**, NA alternative for *t. peronealis calcanei*. **t. hu'meri** [NA], **t. of humerus**, the pulley-like medial portion of the distal end of the humerus for articulation with the semilunar notch of the ulna; called also *trochlear eminence*. **t. labyrin'thi**, cochlea, def. 2. **muscular t.**, **t. muscula'ris** [NA], an anatomical part that serves to change the direction of pull of a tendon; it may be fibrous or bony. **t. mus'culi obli'qui superio'ris bul'bi** [NA], **t. mus'culi obli'qui superio'ris oc'uli**, the fibrocartilaginous pulley near the internal angular process of the frontal bone, through which the tendon of the superior oblique muscle of the eyeball passes; called also *t. of superior oblique muscle*. **peroneal t. of calcaneus**, **t. peronea'lis calca'nei** [NA], a small eminence on the lateral surface of the calcaneus, separating the tendons of the peroneus brevis and longus muscles; called also *processus trochlearis calcanei* and *t. fibularis calcanei* [NA alternative]. **t. phalan'gis digito'rum ma'nus**, caput phalangis digitorum manus. **t. phalan'gis digito'rum pe'dis**, caput phalangis digitorum pedis. **t. of superior oblique muscle**, **t. musculi obli'qui superioris bulbi**. **t. ta'li** [NA], **t. of talus**, the surface of the talus for articulation with the tibia and fibula.

trochlear (trok/'le-ar) [L. *trochlearis*] 1. of the nature of or resembling a pulley. 2. pertaining to a trochlea.

trochleariform (trok/'le-a-'ri-form) pulley-shaped.

trochlearis (trok/'le-a-'ris) [L.] trochlear.

trochocephalia (tro/'ko-sē-fa-'le-ah) trochocephaly.

trochocephaly (tro/'ko-sē-fa-'le) [Gr. *trochos* wheel + *kephalē* head] a rounded appearance of the head caused by synostosis of the frontal and parietal bones.

trochoid (tro/'koid) [Gr. *trochos* wheel + *eidos* form] resembling a pivot or a pulley.

trochoides (tro-'koi'dēz) [Gr. *trochoeidēs*, from *trochos* wheel + *eidos* form] articulation trochoidea.

trochophore (tro/'ko-fōr) [Gr. *trochos* wheel + *phoros* bearing] the pear- or top-shaped larva of certain mollusks and annelids that bears a girdle of cilia (prototroch).

Trocinate (tro/'si-nāt) trademark for a preparation of thiophenamil hydrochloride.

Troglodytella (trog/'lo-di-te'lah) a genus of ciliate protozoa, species of which occur in the gorilla and chimpanzee.

Troglotrema (trog/'lo-tre-'mah) a genus of flukes. **T. salmin'cola**, a parasite found in the kidney and under the skin of various fish, especially salmon and trout, and which serves as a vector of *Neorickettsia helminthoeca*, the etiologic agent of salmon poisoning (q.v.). It is transmitted to man, dogs, cats, foxes, bears, mink, hogs, and other animals by the ingestion of raw, infected fish. Called also *Nanophyetus salmincola*.

troilism (troi/'lizm) [Fr. *trois* three] paraphilia practiced by three persons, by two women and a man, or by two men and a woman.

Troisier's ganglion, node, sign, syndrome (trwah-ze-āz') [Charles Emile Troisier, French physician, 1844-1919] see under *ganglion*, *sign*, and *syndrome*, and see *sentinel node*, under *node*.

trolamine (tro/'lah-mēn) 1. [NF] chemical name: 2,2',2''-nitrolo-trisethanol. A mixture of alkanolamines, C₈H₁₅NO₃, consisting largely of triethanolamine and containing some di- and monoethanolamine; used as an alkalinizing agent in pharmaceutical preparations. Called also *triethanolamine*. 2. USAN contraction for triethanolamine.

troland (tro/'land) the retinal illuminance produced by the image of an object the luminance of which is 1 lumen per square meter for an area of the entrance pupil of 1 square millimeter.

Trolard's plexus (net), vein (tro-lardz') [Paulin Trolard, French anatomist, 1842-1910] see *plexus venosus canalis* and *vena anastomotica inferior*.

troleandomycin (tro/'le-an-do-mi'sin) the triacetyl ester of oleandomycin, C₄₁H₆₇NO₁₄, occurring as a white, odorless powder; used as an antibacterial, chiefly in the treatment of infections due to staphylococci and other gram-positive bacteria resistant to other systemic antibiotics, administered orally. Called also *triace-tyleandomycin*.

trolnitrate phosphate (trol-ni'trāt) chemical name: 2,2',2''-nitrolo-trisethanol trinitrate (ester) phosphate (1:2) (salt). An organic nitrate, C₈H₁₂N₄O₉, occurring as a white, crystalline powder, having vasodilating actions; used to reduce the frequency and severity of anginal attacks, administered orally.

Tröltsch's corpuscles, recesses (spaces) (tre'l'ches) [Anton Friedrich von Tröltsch, German otologist, 1829-1890] see under *corpuscle*, and see *recessus membranae tympani anterior* and *recessus membranae tympani posterior*.

Trombicula (trom-bik'u-lah) a genus of acarine mites of the family Trombiculidae. **T. akamu'shi**, the kedani mite, whose larvae (chiggers) transmit *Rickettsia tsutsugamushi*, the

Trombicula akamushi (Tanaka).

etiologic agent of scrub typhus; it is the chief vector in Japan. Called also *Microtrombidium akamushi*. **T. alfreddugē'si**, *Eutrombicula alfreddugē'si*; see also under *chigger*. **T. autumna'lis**, the autumnal chigger of Europe whose larvae cause lesions of the skin in man and animals; formerly called *Leptus autumnalis*. **T. delien'sis**, a species whose larvae transmit *Rickettsia tsutsugamushi*, the etiologic agent of scrub typhus; it is believed to be the chief vector outside of Japan. **T. fletch'eri**, a carrier of *Rickettsia tsutsugamushi*, the causative agent of scrub typhus. **T. holoseri'ceum**, *T. autumnalis*. **T. interme'dia**, a carrier of *Rickettsia tsutsugamushi*, the causative agent of scrub typhus. **T. ir'ritans**, *Eutrombicula alfreddugē'si*. **T. mus'cae domes'ticae**, a red acarid parasite on the housefly. **T. musca'rum**, *T. muscae domesticae*. **T. pal'lida**, a carrier of *Rickettsia tsutsugamushi*, the causative agent of scrub typhus. **T. scutella'ris**, a carrier of *Rickettsia tsutsugamushi*, the causative agent of scrub typhus. **T. tsal-sahua'ti**, *Eutrombicula alfreddugē'si*.

trombiculiasis (trom-bik'u-li'ah-sis) infestation with *Trombicula*.

Trombiculidae (trom-bik'u-li-'de) a family of mites which is cosmopolitan in distribution, ranging from Alaska and Labrador to New Zealand, and from sea level to an altitude of more than 16,000 feet in the Andes. The parasitic larvae of the mites infest vertebrates. The single genus of medical significance is *Trombicula*, with subgenera *Eutrombicula* and *Leptotrombidium*.

trombidiiasis (trom-bid'e-i'ah-sis) trombiculiasis.

trombidiosis (trom-bid'e-o'sis) trombiculiasis.

Trombidium (trom-bid'e-um) a name formerly given a genus of mites, now included in the genus *Trombicula*.

tromethamine (tro-meth'ah-mēn) [USP] chemical name: 2-amino-2-(hydromethyl)-1,3-propanediol. An amine base, C₄H₁₁NO₃, occurring as a white crystalline powder; used intravenously as an alkalinizer for the correction of metabolic acidosis. Called also *THAM*, *TRIS* and *tris(hydroxymethyl)aminomethane*.

Trommer's test (trom'erz) [Karl August Trommer, German chemist, 1806-1879] see under *tests*.

Trömner's sign [Ernest L. O. Trömner, German neurologist, born 1868] Hoffmann's sign, def. 2.

tromomania (trom'o-ma'ne-ah) [Gr. *tromos* trembling + Gr. *mania* madness] delirium tremens.

tromophonía (trom'o-fō'ne-ah) a form of dysphonia characterized by a tremulous voice.

trona (tro'nah) [possible anagram of *natron*] a crude sodium salt.

tronchado (tron-kah'do) a name in Central America and Mexico for a fatal paralytic disease in cattle.

Tronothane (tron'o-thān) trademark for preparations of pramoxine.

tropate (tro'pāt) a salt of tropic acid.

tropesis (tro-pe'sis) [Gr. *tropos* a turning] Haekel's term for the tendency to action shown by every substance.

trophectoderm (trof-ek'to-derm) [*tropho-* + *ectoderm*] the outer layer of cells of the early blastodermic vesicle; the earliest trophoblast.

trophedema (trof'ē-de'mah) [*tropho-* + *edema*] a disease marked by permanent edema of the feet or legs. **congenital t.**, **hereditary t.**, Milroy's disease.

trophesial, trophesic (tro-fe'ze-al; tro-fe'sik) pertaining to or characterized by trophesis.

trophesy (trof'ē-se) defective nutrition due to disorder of the trophic nerves.

trophic (trof'ik) [Gr. *trophikos*] of or pertaining to nutrition.

-trophic, -trophin [Gr. *trophikos* nourishing] word terminations denoting relationship to nutrition.

trophicity (tro-fis'i-te) a trophic function or relation.

-trophin see *-tropin*.

trophism (trof'izm) direct trophic influence.

tropho- (trof'o) [Gr. *trophē* nutrition] a combining form denoting relationship to food or nourishment.

trophoblast (trof'o-blast) [*tropho-* + Gr. *blastos* germ] a layer of extraembryonic ectodermal tissue on the outside of the blastocyst. It attaches the ovum to the uterine wall and supplies nutrition to the embryo. From it are derived the chorion and amnion. The inner cellular layer of the trophoblast covering a chorionic villus is called *cytotrophoblast* and its outer syncytial layer *syncytiotrophoblast*. The mesoblast, once thought to be trophoblastic, is now traced, in primates, to the caudal end of the primitive streak.

trophoblastic (trof'o-blas'tik) pertaining to the trophoblast.

trophoblastoma (trof'o-blas-to'mah) choriocarcinoma.

trophochromatin (trof'o-kro'mah-tin) trophochromidia.

trophochromidia (trof'o-kro-mid'e-ah) chromatin concerned with the nutrition of the cell rather than with reproduction. Cf. *idiochromidia*.

trophocyte (trof'o-sit) a lower type of cell which furnishes nourishment to a higher type of cell of a tissue. Cf. *trophospongium* (def. 1).

trophoderm (trof'o-derm) [*tropho-* + Gr. *derma* skin] trophoblast.

trophodermatoneurosis (trof'o-der'mah-to-nu-ro'sis) acro-dynia.

trophodynamics (trof'o-di-nam'iks) the study of the forces engaged in nutrition.

trophoedema (trof'o-ē-de'mah) trophedema.

tropholecithal (trof'o-les'i-thal) pertaining to the tropholecithus.

tropholecithus (trof'o-les'i-thus) [*tropho-* + Gr. *lekithos* yolk] the food yolk of a meroblastic egg.

trophology (trof'o-loj'e) the science of nutrition of the body.

trophon (trof'on) the nutritive non-neural element of the neuron.

trophoneurosis (trof'o-nu-ro'sis) any functional nervous disease due to the failure of nutrition from defective nerve influence. **facial t.**, facial hemiatrophy. **lingual t.**, progressive hemiatrophy of the tongue. **muscular t.**, trophic alteration of muscular tissue, dependent on nervous derangement. **t. of Romberg**, facial hemiatrophy.

trophoneurotic (trof'o-nu-rot'ik) pertaining to or of the nature of a trophoneurosis.

trophonosis (trof'o-no'sis) [*tropho-* + Gr. *nosos* disease] any disease or disorder due to nutritional causes.

trophonucleus (trof'o-nu'kle-us) macronucleus.

trophopathia (trof'o-path'e-ah) trophopathy.

trophopathy (trof'op'ah-the) [*tropho-* + Gr. *pathos* disease] any derangement of the nutrition.

trophoplasm (trof'o-plasm) [*tropho-* + Gr. *plasma* something formed] (*obs.*) Strasburger's name for the material thought to constitute the main mass of a cell and to be the site of nutritive processes; cf. *kinoplasm*.

trophoplast (trof'o-plast) [*tropho-* + Gr. *plastos* formed] a granular protoplasmic body; a plastid.

trophospongia (trof'o-spon'je-ah) [L.; Gr.] plural of *trophospongium*.

trophospongium (trof'o-spon'je-um), pl. *trophospon'gia* [*tropho-* + Gr. *spongion* sponge] 1. a canalicular network in the cytoplasm of certain cells which was once believed to be instrumental in the circulation of nutritive material. 2. (pl.) the vascular endometrium between the myometrium and the trophoblast.

trophotaxis (trof'o-tak'sis) [*tropho-* + Gr. *taxis* a drawing up in rank and file] an orientation movement of a motile organism in response to the stimulus provided by nutritive materials.

trophotherapy (trof'o-ther'ah-pe) treatment of disease by dietetic measures.

trophozoite (trof'o-zo'it) [*tropho-* + Gr. *zōon* animal] the active, motile, feeding stage of a protozoan organism, as contrasted with the nonmotile encysted stage. In the malarial parasite, the stage of schizogony between the signet ring stage and the schizont.

-troph [Gr. *trophē* nutrition] a word termination indicating food or nutrition.

tropia (trof'pe-ah) [Gr. *trope* a turning] a manifest deviation of an eye from the normal position when both eyes are open and uncovered; strabismus, or squint. See *cyclotropia*, *esotropia*, *exotropia*, *hypertropia*, and *hypotropia*.

-tropic [Gr. *tropikos* turning] a word termination denoting turning toward, changing, or tending to turn or change; see *tropism*.

tropical (trof'e-kal) [Gr. *tropikos* turning] pertaining to the regions of the earth bounded by the parallels of latitude 23° 27' north and south of the equator.

tropicamide (tro-pik'ah-mid) [USP] chemical name: *N*-ethyl- α -(hydroxymethyl)-*N*-(4-pyridenylmethyl)benzene acetamide. An anticholinergic, $C_{17}H_{20}N_2O_2$, occurring as a white to practically

white, crystalline powder, applied topically to the conjunctiva to produce mydriasis and cycloplegia.

tropicopolitan (trof'i-ko-pol'i-tan) [*tropical* + Gr. *polis* a city or a country] 1. occurring in all tropical areas. 2. an organism occurring in all tropical regions.

tropidine (trof'i-din) an oily, liquid base, $CH_3 \cdot N \cdot C_6H_5 \cdot CH$, with an odor like that of coniine, formed by the dehydration of tropine.

tropin (trof'pin) opsonin.

-tropin [Gr. *tropos* a turning] a word termination meaning having an affinity for the structure or thing denoted by the stem to which it is affixed, as gonadotropin.

tropine (trof'pin) a crystalline alkaloid, $C_8H_{11}NO$, with a smell like tobacco, derivable from atropine and from various plants.

tropism (trof'pizm) [Gr. *trope* a turn, turning] a growth response in a motile organism, elicited by an external stimulus. Such response may be either positive (toward) or negative (away from the stimulus). By extension, used as a word termination affixed to a stem denoting the nature of the stimulus (phototropism) or the material or entity for which an organism or substance shows a special affinity (neurotropism).

tropochrome (trof'po-krom') [*tropo-* + Gr. *chrōma* color] refusing to stain with mucin stains after formal-bichromate fixation, as applied to certain serous cells of the salivary glands. Cf. *homeochrome*.

tropocollagen (trof'po-kol'ah-jen) [Gr. *trope* a turning + *collagen*] the molecular unit of collagen fibrils, about 1.4 nm. wide and 280 nm. long. It is a helical structure consisting of three polypeptide chains, each chain composed of about a thousand amino acids coiled around each other to form a spiral; tropocollagen is rich in glycine, proline, and hydroxyproline and hydroxylysine, all types of collagen being formed by interaction of these units.

tropoelastin (trof'po-e-las'tin) the precursor of elastin.

tropometer (trof'pom'ē-ter) [Gr. *trope* a turning + *metron* measure] 1. an instrument for measuring the rotation of the eyeball. 2. an instrument for measuring the twist or torsion of a long bone.

tropomyosin (trof'po-mi'o-sin) muscle protein of the I band that inhibits contraction unless its position is modified by troponin so that the myosin molecules can make contact with the actin molecules. **t. A**, paramyosin.

tropon (trof'on) a brownish powder prepared from vegetable and animal albumins; nutrient.

troponin (trof'po-nin) a complex of globular muscle proteins of the I band that inhibits contraction by blocking the interaction of actin and myosin; when combined with Ca^{++} , it so modifies the position of the tropomyosin molecules that interaction takes place.

trotyl (trof'til) trinitrotoluene.

trough (trof) a shallow longitudinal depression or channel. **gingival t.**, gingival sulcus. **synaptic t's**, primary synaptic clefts. **vestibular t.**, the sulcus formed by reflection of the mucous membrane from the inner surface of the cheeks or lips onto the tissues overlying the alveoli of the teeth.

Trousseau's phenomenon, sign, spot, twitching (troo-sōz') [Armand Trousseau, French physician, 1801-1867] see under *phenomenon*, *sign*, and *twitching*, and see *tache cérébrale*.

troxidone (trok'si-dōn) trimethadione.

troy (troi) a system of weights commonly used in England and the United States for expressing quantities of gold and silver; for equivalents see *tables of weights and measures*.

Trp tryptophan.

TRU see under *unit*.

true (troo) actually existing; not false; real; meeting all the criteria establishing its identity.

Trueta treatment (method, technique) (troo-a'tah) [José Trueta, Spanish surgeon in England, born 1897] see under *treatment*.

truncal (trun'kal) pertaining to the trunk.

truncate (trun'kāt) [L. *truncare*, *truncatus*] 1. to amputate; to deprive of limbs. 2. having the end cut squarely off.

trunci (trun'si) [L.] plural of *truncus*.

truncus (trun'kus), pl. *trun'ci* [L. "trunk"] the main part, a stem; [NA] a general term for the main part of the body, to which the head and limbs are attached, or a major, undivided and usually short, portion of a nerve or of a blood or lymphatic vessel or other duct. **t. arterio'sus**, an arterial trunk, especially the artery connected with the fetal heart, which gives off the aortic arches and develops into the aortic and pulmonary arteries. **t. arterio'sus, persistent**, a congenital anomaly, characterized by a single arterial trunk arising from the heart, receiving blood from both ventricles and supplying blood to the coronary, pulmonary, and systemic circulations; sometimes classified according to the arrangement of the arteries supplying the lungs. **t. brachiocephalicus** [NA], brachiocephalic trunk: the first branch of the arch of the aorta, which behind the right sternoclavicular joint divides into the right common carotid and right subclavian arteries, with distribution to the right side of the head and neck

and to the right arm; the lowest thyroid artery may arise from this trunk. Called also *arteria anonyma* or *innominate artery*. **t. bronchomediastinalis** [NA], bronchomediastinal trunk: either of the two lymphatic vessels draining the pulmonary, bronchopulmonary, tracheobronchial, tracheal, and parasternal lymph nodes: that on the right side into the right lymphatic duct or subclavian vein, and that on the left into the thoracic duct or the subclavian vein. **t. bronchomediastinalis dex'ter**, the truncus bronchomediastinalis on the right side. **t. celi'acus** [NA], celiac trunk: the arterial trunk that arises from the abdominal aorta, gives off the left gastric, common hepatic, and splenic arteries, and supplies the esophagus, stomach, duodenum, spleen, pancreas, liver, and gallbladder. Called also *arteria coeli'aca* or *celiac artery*. **t. cor'poris callo'si** [NA], trunk of corpus callosum: the main central portion of the corpus callosum as distinguished from the rostrum and the splenium. **t. costocervica'lis** [NA], costocervical trunk: an artery that arises from the back of the subclavian artery, arches backward, and at the neck of the first rib divides into the deep cervical and highest intercostal arteries, thus supplying blood to the structures of the first two intercostal spaces, the vertebral column, the muscles of the back, and the deep neck muscles. **t. fascic'uli atrioven-tricula'ris** [NA], the undivided portion of the atrioventricular bundle, from its origin at the atrioventricular node to the point of division into right and left branches at the superior end of the muscular part of the interventricular septum. **t. infe'rior plex'us brachia'lis** [NA], inferior trunk of brachial plexus: the trunk of the brachial plexus that is formed by the ventral branches of the eighth cervical and first thoracic nerves; medial pectoral nerves may arise from it. Its anterior division becomes the medial cord of the plexus, and its posterior division helps form the posterior cord; modality, general sensory and motor. **trun'ci intestina'les** [NA], intestinal lymphatic trunks: short lymphatic vessels which leave the gastrointestinal tract and participate in formation of the thoracic duct. **t. jugula'ris** [NA], jugular trunk: either of the two vessels draining the deep cervical lymph nodes: on the right side, into the right lymphatic duct or subclavian vein, and on the left side, into the thoracic duct or subclavian vein. **t. linguofacia'lis** [NA], linguofacial trunk: the common trunk by which the facial and lingual arteries often arise from the external carotid artery. **trun'ci lumba'les** [dex'ter et sinis'ter] [NA], lumbar trunks: lymphatic vessels, one on either side, that drain lymph upward from the lumbar lymph nodes and help form the thoracic duct. **t. lumbosac-ra'lis** [NA], lumbosacral trunk: a trunk formed by union of the lower division of the ventral branch of the fourth lumbar nerve with the ventral branch of the fifth lumbar nerve. **t. me'dius plex'us brachia'lis** [NA], middle trunk of brachial plexus: the trunk of the brachial plexus that is formed by the ventral branch of the seventh cervical nerve. Its anterior division, from which lateral pectoral nerves may arise, helps form the lateral cord of the plexus, and its posterior division helps form the posterior cord; modality, general sensory and motor. **trun'ci plex'us brachia'lis** [NA], trunks of brachial plexus: the three trunks of the brachial plexus, arising from the ventral branches of the lower four cervical nerves and the first thoracic nerve near the lateral border of the scalenus anterior muscle; they continue laterally and downward, above and behind the subclavian artery, and near the clavicle form the lateral, medial, and posterior fasciculi or cords of the plexus. See *t. inferior plexus brachialis*, *t. medius plexus brachialis*, and *t. superior plexus brachialis*. **t. pulmona'lis** [NA], pulmonary trunk: the vessel arising from the conus arteriosus of the right ventricle, extending upward obliquely to divide into the right and left pulmonary arteries beneath the arch of the aorta, and conveying unarterated blood toward the lungs. Called also *arteria pulmonalis* or *pulmonary artery*. **t. subcla'vius** [NA], subclavian trunk: either of two lymphatic vessels draining the axillary lymph nodes; that on the right into the right lymphatic duct or subclavian vein, that on the left into the thoracic duct or the subclavian vein. **t. supe'rior plex'us brachia'lis** [NA], superior trunk of brachial plexus: the trunk of the brachial plexus that is formed by the ventral branches of the fifth and sixth cervical nerves. Its anterior division helps form the lateral cord of the plexus, its posterior division helps form the posterior cord, and it gives rise directly to the suprascapular and subclavian nerves; modality, general sensory and motor. **t. sympath'icus** [NA], sympathetic trunk: two long nerve strands, one on each side of the vertebral column, extending from the base of the skull to the coccyx. Interconnected by nerve strands, each has cervical, thoracic, lumbar, and sacral sympathetic ganglia. These receive preganglionic fibers from thoracic and upper lumbar ventral roots by way of rami communicantes, send postganglionic fibers to ventral roots by rami communicantes, and give branches to prevertebral plexuses and adjacent viscera and blood vessels. **t. thyrocervica'lis**, **t. thyrocervica'lis** [NA], thyrocervical trunk: a short artery that arises from the convex side of the subclavian artery just medial to the anterior scalene muscle and at once divides into the inferior thyroid, transverse cervical, and suprascapular arteries, supplying thyroid, neck, and scapular regions. **t. vaga'lis ante'rior** [NA], anterior vagal trunk: a nerve trunk (or trunks) formed by fibers from both left and right vagus nerves, collected from the anterior part

of the esophageal plexus; it descends through the esophageal opening of the diaphragm to supply branches to the anterior surface of the stomach. **t. vaga'lis poste'rior** [NA], posterior vagal trunk: a nerve trunk or trunks formed by fibers from both left and right vagus nerves, collected from the posterior part of the esophageal plexus; it descends through the esophageal opening of the diaphragm to supply branches to the posterior surface of the stomach.

trunk (trunk) [L. *truncus* the stem or trunk of a tree] 1. the main part of the body, to which head and limbs are attached. 2. a major, undivided and usually short, portion of a nerve or of a blood or lymphatic vessel, or other duct. See also *truncus*. **t. of atrioventricular bundle**, truncus fasciculi atrioventricularis. **basilar t.**, *arteria basilaris*. **t's of brachial plexus**, trunci plexus brachialis. **brachiocephalic t.**, truncus brachiocephalicus. **bronchomediastinal t.**, truncus bronchomediastinalis. **celiac t.**, truncus celiacus. **t. of corpus callosum**, truncus corporis callosi. **costocervical t.**, truncus costocervicalis. **inferior t. of brachial plexus**, truncus inferior plexus brachialis. **intestinal lymphatic t's**, trunci intestinales. **jugular t.**, truncus jugularis. **linguofacial t.**, truncus linguofacialis. **lumbar t's**, trunci lumbales [dexter et sinister]. **lumbosacral t.**, truncus lumbosacralis. **middle t. of brachial plexus**, truncus medius plexus brachialis. **pulmonary t.**, truncus pulmonalis. **subclavian t.**, truncus subclavius. **superior t. of brachial plexus**, truncus superior plexus brachialis. **sympathetic t.**, truncus sympathicus. **thyrocervical t.**, truncus thyrocervicalis. **vagal t.**, anterior, truncus vagalis anterior. **vagal t., posterior**, truncus vagalis posterior.

trusion (troo'zhun) [L. *trudere* to shove] malposition of a tooth. **bimaxillary t.**, malposition of the teeth of both the upper and the lower jaw. **bodily t.**, malposition of the entire tooth, crown and root. **coronal t.**, malposition of the crown of a tooth, the root being normally placed. **mandibular t.**, malposition of the mandibular teeth. **maxillary t.**, malposition of the maxillary teeth.

truss (trus) an elastic, canvas, or metallic device for retaining a reduced hernia within the abdominal cavity. **nasal t.**, a truss-like support for fractured nasal bones. **yarn t.**, a trusslike bandage of worsted yarn for the support of inguinal hernia in infants.

truxilline (truks'i-lin) an amorphous alkaloid prepared from coca leaves or made synthetically.

try-in (tri'in) a preliminary insertion of a dental restoration or prosthesis to determine its fit and suitability.

tryptaflavine (trip'ah-fla'vin) acriflavine hydrochloride.

trypanblau (tri'pan-blau') [Ger.] trypan blue; see under *blue*.

trypanid (tri'pan-id) an eruption occurring in trypanosomiasis.

trypanocidal (tri-pan'o-si'dal) trypanosomicidal.

trypanocide (tri-pan'o-sid) trypanosomicide.

trypanolysis (tri'pan-ol'i-sis) the destruction of trypanosomes.

trypanolytic (tri'pan-o-lit'ik) destructive to trypanosomes.

Trypanoplasma (tri'pan-o-plaz'mah) [Gr. *trypanon* borer + *plasma* anything formed or molded] *Crystobia*.

Trypanosoma (tri'pan-o-so'mah) [Gr. *trypanon* borer + *sōma* body] a genus of protozoan parasites of the family Trypanosomatidae, order Protomastigida, found in the blood and lymph of invertebrates and vertebrates, including man. Typically, the adult body is elongate with a whiplike flagellum arising from the posterior end and attached to the cell by a delicate undulating membrane that runs the entire length of the body. Most species live part of their life cycle in the intestines of insects and other invertebrates, where they undergo remarkable transformations. The typical adult stage or stages occur only in the vertebrate host. Called also *Trypanosomonas* and *Trypanozoon*. **T. americana'num**, a species infecting cattle in the United States. **T. a'riari**, *T. rangeli*. **T. a'vium**, a parasite 20–70μ long found in the blood of birds, but apparently not pathogenic. **T. ber'berum**, *T. evansi*. **T. bru'cei**, a widely distributed species found in horses, cattle, pigs, camels, and other domestic animals of Africa, transmitted by tsetse flies (*Glossina* spp.), and producing the disease nagana; it also causes a benign infection in wild animals, especially antelopes. Called also *T. pecaudi*. **T. calmet'ii**, a species found in the blood of a domestic fowl in Tonkin. **T. cap'rae**, *T. vivax*. **T. castella'ni**, *T. gambiense*. **T. calza'bou**, *T. vivax*. **T. confu'sum**, *T. congolense*. **T. congolense**, a species found in cattle, horses, sheep, and other domestic animals in Central Africa, transmitted by flies of the genus *Glossina*, and causing nagana. Called also *T. dimorphon*, *T. montgomeryi*, and *T. nanum*. **T. cru'zi**, a species infecting man, armadillos, bats, cats, guinea pigs, and various other animals in Central and South America and as far north as the southwestern United States. It is commonly transmitted by *Panstrongylus megistus* and other reduviid bugs, and is the etiologic agent of Chagas' disease. Called also *Schizotrypanum cruzi*. **T. dimor'phon**, *T. congolense*. **T. equi'num**, a species now considered to be identical with *T. evansi*, found in horses, mules, and dogs in South America, transmitted by tabanid flies and by vampire bats (*Desmodus rotundus*), and causing the acute

disease mal de caderas. **T. equiperdum**, a widely distributed species found in horses, donkeys, and cattle; it is the cause of the disease dourine. Called also *T. rougeti*. **T. esco'mili**, *T. rangeli*. **T. evan'si**, a species found in elephants and in horses, mules, camels, and other domestic animals; it is the etiologic agent of surra, tahaga, and El debab. Called also *T. berberum*, *T. macrocanum*, and *T. soudanense*. **T. gambi'en'se**, a species found in domestic and wild animals, including antelopes, pigs, and buffaloes, of central Africa, transmitted to man by the bite of *Glossina palpalis* and other species of *Glossina*, and causing Gambian trypanosomiasis; called also *Castellanella gambiense*, *T. castellani*, *T. hominis*, *T. nigeriense*, and *T. ugandense*. See also African trypanosomiasis, under trypanosomiasis. **T. granulo'sum**, a species parasitic in the eel; its intermediate host is the leech, *Hemicleptis marginata*. **T. guatemalen'sis**, *T. rangeli*. **T. guyanen'se**, *T. vivax*. **T. hip'picum**, a species now considered to be identical with *T. evansi*, found in horses and mules in Panama, transmitted by flies of the genus *Glossina* and by vampire bats (*Desmodus rotundus*), and causing murrina. Called also *T. venezuelense*. **T. hom'inis**, *T. gambiense*. **T. inopina'tum**, a species parasitic in the frog and transmitted by a leech, *Helobdella algira*. **T. lew'isi**, a species found in the blood of the rat, and transmitted by a second host, the rat flea, *Nosopsyllus fasciatus*. **T. lu'is**, *Treponema pallidum*. **T. macroca'num**, *T. evansi*. **T. melopha'gium**, a nonpathogenic species occurring in sheep. **T. mont-gom'eryi**, *T. congolense*. **T. na'num**, *T. congolense*. **T. neoto'mae**, a species found in woodrats in California, possibly identical with *T. cruzi*. **T. nigerien'se**, *T. gambiense*. **T. noc'tuae**, a species found in the blood of the little owl, and seminated by the gnat, *Culex pipiens*. **T. pecau'di**, *T. brucei*. **T. rangeli**, a species of Venezuela, Colombia, and Guatemala, transmitted by the reduviid bug *Rhodnius prolixus*, and causing an asymptomatic infection in man; called also *T. ariari*, *T. guatemalensis*, *T. escomili*. **T. rhodesien'se**, a species found in wild and domestic animals and wild game of southeastern Africa, transmitted to man by the bite of *Glossina morsitans* and other species of *Glossina*, and causing Rhodesian trypanosomiasis; called also *Castellanella castellani*. See also African trypanosomiasis, under trypanosomiasis. **T. rotato'rium**, the type species of the genus, and found in the blood of several species of frogs. **T. rouge'ti**, *T. equiperdum*. **T. sim'iae**, a species infecting monkeys, pigs, sheep, goats, and camels, transmitted by flies of the genus *Glossina*. It causes a rapidly fatal disease in pigs and camels and a chronic disease in monkeys. **T. soudanen'se**, *T. evansi*. **T. thei'leri**, a nonpathogenic species found in cattle in South Africa. **T. tria'tomae**, a form very similar to *T. cruzi*, found in rodents in California, probably identical with *T. neotomae*. **T. uganden'se**, *T. gambiense*. **T. unifor'me**, *T. vivax*. **T. venezuelen'se**, *T. hippicum*. **T. vi'vax**, a species found in ruminants and equines and causing nagana in cattle, sheep, and goats throughout tropical Africa; it is also found in South America. It is transmitted by flies of the genus *Glossina*. Called also *T. uniforme*, *T. caprae*, *T. cazalboui*, and *T. guyanense*.

trypanosomal (tri-pan''o-so'mal) 1. pertaining to or caused by trypanosomes. 2. denoting a morphologic stage in the development of certain hemoflagellates; see *trypomastigote*.

trypanosomatic (tri-pan''o-so-mat'ik) pertaining to or caused by trypanosomes.

Trypanosomatidae (tri''pan-o-so-mat'i-de) a family of monoflagellate, typically elongate protozoan parasites of the order Protomastigida, class Zoomastigophora, found in the blood and tissues of man and various animals; their life cycle includes at least two of the following morphologic stages: *amastigote* (leishmanial stage), *epimastigote* (crithidial stage), *promastigote* (leptomonad stage), *trypomastigote* (trypanosomal stage). It includes the genera *Trypanosoma*, *Leishmania*, *Crithidia*, *Leptomonas*, *Herpetomonas*, and *Phytomonas*.

trypanosomatosis (tri-pan''o-so'mah-to'sis) trypanosomiasis.

trypanosomatotropic (tri-pan''o-so'mah-to-trop'ik) having a selective affinity for trypanosomes.

trypanosome (tri-pan''o-sōm) 1. any organism of the genus *Trypanosoma*. 2. any individual of the family Trypanosomatidae when exhibiting the typical trypanosomal form (*trypomastigote*) during its life cycle.

trypanosomiasis (tri-pan''o-so-mi'ah-sis) the state of being infected with protozoa of the genus *Trypanosoma*. Trypanosomal infections of man include the Gambian and Rhodesian forms of African trypanosomiasis, and Chagas' disease. **African t.**, a disease common among natives of tropical Africa, due to infection with *Trypanosoma gambiense* (*Gambian t.*) or *T. rhodesiense* (*Rhodesian t.*), transmitted by the bite of various species of the genus *Glossina*. The early stage of the disease (known as trypanosome fever) is ushered in by fever, chills, headache, and vomiting. There are then alternating periods of fever and apyrexia lasting for several months. This is followed by pains in the extremities, enlargement of the lymph glands, and anemia. Later the central nervous system becomes involved, producing *sleeping sickness*, when the patients become depressed, tremulous, lethargic, and somnolent, until finally they sleep all the time, become emaciated, and eventually die. The disease may last for years, but it is always

fatal after the nervous system has become involved. It is also known as *African sleeping sickness*, *African lethargy*, and *Congo t.* **American t.**, **Brazilian t.**, Chagas' disease. **Congo t.**, *African t.* **Cruz t.**, Chagas' disease. **Gambian t.**, a form of African trypanosomiasis prevalent in central Africa, caused by *Trypanosoma gambiense* and transmitted to man by the bite of the tsetse fly *Glossina palpalis* and other species of *Glossina*; called also *Gambian sleeping sickness*. **Rhodesian t.**, a virulent form of African trypanosomiasis prevalent in southeastern Africa, which is caused by *Trypanosoma rhodesiense* and transmitted to man by the bite of the tsetse fly *Glossina morsitans* and other species of *Glossina*. Called also *kaozera* and *Rhodesian sleeping sickness*. **South American t.**, Chagas' disease.

trypanosomic (tri-pan''o-so'mik) pertaining to or infected with trypanosomes.

trypanosomicidal (tri-pan''o-so'mi-si'dal) destructive to trypanosomes.

trypanosomicide (tri-pan''o-so'mi-sid) [*trypanosome* + L. *caedere* to kill] 1. destructive to trypanosomes. 2. a substance which destroys trypanosomes.

trypanosomid (tri-pan''o-so-mid) a skin eruption occurring in trypanosomiasis.

trypanosomiasis (tri-pan''o-so-mo'sis) trypanosomiasis.

Trypanozoon (tri-pan''o-zo'on) a subgenus of *Trypanosoma*.

trypanroth (tri'pan-roth) [Ger.] trypan red.

trypanroth (tri-par'o-san) a preparation formed by introducing a halogen radical (e.g., chlorine) into the parafuchsin molecule; used by injection in trypanosomiasis.

tryparsamide (trip-ar'sah-mid) chemical name: monosodium N-(carbamoylmethyl) arsanilate. An antitrypanosomal agent, $C_8H_{10}AsN_2NaO_4 \cdot \frac{1}{2}H_2O$, occurring as a white crystalline powder, used in the treatment of African trypanosomiasis. Called also *tryponarsyl* and *trypotan*.

trypasafrol (tri''pah-saf'rol) one of the safranine group of aniline dyes; believed to be useful in trypanosomiasis.

trypesis (tri-pe'sis) [Gr. *trypēsis*] trephination.

trypochete (tri'po-kēt) a name given to Döhle's inclusion bodies; see under *body*.

trypomastigote (tri''po-mas'ti-gōt) [Gr. *trypanon* borer + *mastix* whip] the morphologic stage in the development of certain hemoflagellates of vertebrate hosts, resembling the typical adult form of *Trypanosoma* and characterized by having a flagellum arising from a posteriorly situated blepharoplast and running forward to form the outer edge of the undulating membrane; it may be free at the anterior end of the body. Called also *trypanosomal stage* or *form*. Cf. *amastigote*, *promastigote*, and *epimastigote*.

tryponarsyl (tri''po-nar'sil) tryparsamide.

trypotan (tri'po-tan) tryparsamide.

trypsa (trip'sās) trypsin.

trypsin (trip'sin) [Gr. *tryein* to rub + *pepsin*] a proteolytic enzyme formed in the intestine by the action of enterokinase on trypsinogen, so named by Willy Kühne, in 1874. It is an endoproteinase, acting on peptide linkages containing the carboxyl group of either lysine or arginine. **crystallized t.** [USP], a purified, crystallized preparation from an extract of the pancreas of the ox, *Bos taurus*, occurring as a white to yellowish white, crystalline or amorphous powder; used topically for its proteolytic effect in the debridement of necrotic wounds and ulcers, abscesses, fistulas, and sinuses, and in the treatment of empyema.

trypsinize (trip'si-nīz) to subject to the action of trypsin.

trypsinogen (trip-sin'o-jen) [*trypsin* + Gr. *gennan* to produce] the crystallizable pre-enzyme occurring in the pancreas, from which trypsin is formed when it comes into contact with enterokinase.

trypso (trip'so-jen) trypsinogen.

Tryptar (trip'tar) trademark for a preparation of crystallized trypsin.

tryptase (trip'tās) any of a class of enzymes which split native proteins to peptides in neutral or near neutral solutions.

tryptic (trip'tik) relating to or produced as a result of digestion by trypsin.

tryptolysis (trip-tol'i-sis) [*tryptone* + Gr. *lysis* dissolution] cleavage of tryptone.

tryptolytic (trip'to-lit'ik) pertaining to the proteolytic properties of trypsin; splitting up of tryptone.

tryptone (trip'tōn) a peptone produced by proteolytic digestion with trypsin.

tryptophan (trip'to-fān) an amino acid, $C_8H_8N \cdot CH_2 \cdot CH \cdot NH_2 \cdot COOH$, or α -amino- β -3-indole propionic acid, existing in proteins, from which it is set free by tryptic digestion; essential for optimal growth in infants and for nitrogen equilibrium in human adults. It is a precursor of serotonin. Adequate levels of tryptophan in the diet may compensate deficiencies of niacin and thus mitigate pellagra. Before the name tryptophan was accepted, *proteinochromagen* was also suggested, both names being derived from the color produced in tests.

tryptophanase (trip/'to-fān-ās) an enzyme that catalyzes the cleavage of tryptophan into indole, pyruvic acid, and ammonia.

tryptophane (trip/'to-fān) an earlier spelling of tryptophan.

tryptophanuria (trip/'to-fān-u're-ah) the presence of excessive amounts of tryptophan in the urine; the symptoms resemble those of pellagra.

T.S. test solution.

TSA tumor-specific antigen.

Tsa (sah) denoting a virus mutant that can effect abortive malignant transformation of a cell but not stable transformation.

tsalsahuatl (tsal/'sa-whaht'li) *Eutrombicula alfreddugesi*.

tsetse (tset/'se) an African fly of the genus *Glossina*.

TSH thyroid-stimulating hormone; see *thyrotropin*.

TSH-RF thyroid-stimulating hormone releasing factor; see *thyrotropin releasing factor*, under *factor*.

TSTA tumor-specific transplantation antigen.

Tsuga (tsoo/'gah) a genus of coniferous trees. **T. canadensis** (L.) Carr. (Pinaceae), the eastern hemlock tree, affords Canada pitch, oil of spruce, and an astringent extract.

tsutsugamushi (soot/'soo-gah-moosh'e) [Japanese "dangerous bug"] scrub typhus.

T.U. toxic unit; *tuberculin unit*. See under *unit*.

Tuamine (too/'ah-min) trademark for preparations of tuaminoheptane.

tuaminoheptane (too-am/'i-no-hep/'tān) [USP] chemical name: 2-heptanamine. An adrenergic, $C_7H_{17}N$, occurring as a volatile, colorless to pale yellow liquid; administered by inhalation to produce vasoconstriction of the nasal mucosa for relief of congestion. **t. sulfate** [USP], the sulfate of tuaminoheptane, ($C_7H_{17}N$) $_2$.H $_2$ SO $_4$, occurring as a white, odorless powder, having the same actions and uses as the base; applied topically to the nasal mucosa.

tuba (too/'bah), pl. *tu'bae* [L. "trumpet"] a tube: an elongated hollow cylindrical organ; [NA] a general term for such a structure. **t. acustica**, *t. auditiva*. **t. auditiva** [NA], **t. auditiva** [Eusta'chii], auditory tube: a channel, about 36 mm. long, lined with mucous membrane, that establishes communication between the tympanic cavity and the nasopharynx and serves to adjust the pressure of air in the cavity to the external pressure. It comprises a pars ossea, located in the temporal bone, and a pars cartilaginea, ending in the nasopharynx. Called also *eustachian tube*. **t. uterina** [NA], **t. uterina** [Fallop'pii], uterine tube: a long slender tube that extends from the upper lateral angle of the uterus to the region of the ovary of the same side; it is attached to the broad ligament by the mesosalpinx, and consists of an ampulla, an infundibulum, an isthmus, two ostia, and a pars uterina. Called also *fallopian tube*.

Tubadil (too/'bah-dil) trademark for a preparation of tubocurarine chloride.

tubae (too/'be) plural of *tuba*.

tubal (too/'bal) pertaining to or occurring in a tube, as a tubal pregnancy.

Tubarine (too/'bah-rin) trademark for a preparation of tubocurarine chloride.

tubatorision (tu/'bah-tor/'shun) torsion or twisting of the uterine tube.

tubba, tubboe (tub/'ah; tub/'o) yaws attacking the soles and palms.

tube (tüb) [L. *tubus*] an elongated hollow cylindrical organ or instrument. **Abbott-Miller t.**, Miller-Abbott t. **Abbott-Rawson t.**, a double barrelled tube through which fluid may be both injected and aspirated; it may be used for lavage or decompression of the stomach. **air t.**, any tubular passage of the respiratory apparatus. **auditory t.**, the channel that establishes communication between the tympanic cavity and the nasopharynx; see *tuba auditiva* [NA]. **Bouchut's t's**, a set of tubes for use in the intubation of the larynx. **Bowman's t's**, tubes formed artificially between the lamellae of the cornea in the process of injection; called also *corneal t's*. **buccal t.**, see *end t.* **Cantor t.**, a mercury-weighted tube for intestinal intubation. **Carrel t.**, a small-bore rubber tube ligated at its distal end, with multiple holes proximal thereto, so designed as to convey antiseptic solution to the entire surface of the wound in Carrel's treatment. **cathode-ray t.**, a vacuum tube in which the cathode rays are accelerated as a beam to form luminous spots on a fluorescent screen. **Celestin's t.**, a plastic tube used to keep the esophagus open in inoperable esophageal carcinoma. **cerebromedullary t.**, neural t. **Chaoul t.**, a low voltage x-ray tube so designed as to permit the anode to be located at 2 cm. from the body, thus permitting intense but very superficial tissue penetration of the ionizing radiation beam. **collecting t.**, tubuli renales recti. **Coolidge t.**, a vacuum tube for the generation of roentgen rays in which the cathode consists of a spiral filament of incandescent tungsten, and the anode (the target) of massive tungsten. **corneal t.**, a tubelike passage sometimes seen between the layers of the cornea. **corneal t's**, Bowman's t's. **Crookes' t.**, an early form of vacuum tube by the use of which the roentgen rays were discovered. **Devine's t.**, a diag-

nostic aid in the study of the small intestine, a tube-within-a-tube arrangement to prevent the obstruction phenomenon caused by a vacuum, by the application of an air vent. **Diamond's t.**, a double-lumen tube used in the study of the small intestine; similar to the Abbot-Rawson tube. **digestive t.**, canalis alimentarius. **discharge t.**, a vessel of insulating material (usually glass) provided with metal electrodes which is exhausted to a low gas pressure and permits the passage of electricity through the residual gas when a moderately high voltage is applied to the electrodes. **drainage t.**, a tube used in surgery to facilitate the escape of fluids. **dressed t.**, a rubber drainage tube with a gauze strip wound around it, the whole covered with gutta-percha. **duodenal t.**, a tube intended to be passed into the duodenum. **Durham's t.**, 1. [Arthur Edward Durham] a jointed tracheostomy tube. 2. [Herbert Edward Durham] a small inverted test tube used in determining bacterial gas production. **empyema t.**, a rubber tube for draining pus in thoracic empyema. **end t.**, an attachment on the buccal surface of a terminal banded molar; often referred to as *buccal tube*. **endo-bronchial t.**, a double-lumen tube inserted into the bronchus of one lung and permitting the complete deflation of other lung; used in anesthesia and thoracic surgery. **endotracheal t.**, an airway catheter inserted in the trachea in endotracheal intubation. **Esmarch's t's**, tubes used in making roll cultures of bacteria. **esophageal t.**, a soft, flexible tube for lavage of the stomach and artificial forced feeding. **eustachian t.**, *tuba auditiva*. **Ewald t.**, a tube of large bore used to evacuate the stomach. **fallopian t.**, *tuba uterina*. **feeding t.**, a tube for introducing fluids of high caloric value into the stomach. **fermentation t.**, a U-shaped tube with one arm closed for determining gas production by bacteria. **Ferrein's t's**, the convoluted uriniferous tubules. **fusion t's**, the pair of tubes used in observing and cultivating the power of fusion in eyes affected with heterophoria. **gas t.**, a roentgen-ray tube which depends for its action on the presence of residual gas; the cathode is not heated and the target is usually connected electrically to the anode. **Geissler's t.**, **Geissler-Pluecker t.**, a discharge tube for showing the luminous effects of discharges through rarefied gases. **granulation t.**, a laryngeal intubation tube with a large head which covers any granulations that may have been formed about the wound. **Guisez's t.**, a self-retaining rubber tube for use in cancer of the esophagus. **Harris t.**, a single-lumen tube utilizing mercury as a weight, used as a diagnostic aid in the study of the small intestine; the construction of the head is exactly the same as in the Miller-Abbott tube. **Hittori t.**, Crookes' t. **horizontal t.**, a metal tube attachment placed in a horizontal position on the buccal surface of each anchor molar tooth to allow for the insertion of the labial arch wire. **hot-cathode t.**, a vacuum tube in which the cathode is electrically heated to incandescence and in which the stream of electrons depends on the temperature of the cathode. **intubation t.**, a breathing tube introduced in the air passage after tracheostomy or laryngostomy. **Killian's t's**, tubes for use in removing foreign bodies from the trachea and esophagus. **Kobelt's t's**, the remains of the tubules of the mesonephros in the paroophoron. **Kuhn's t.**, a flexible tube of metal for use in intratracheal anesthesia. **Leonard t.**, cathode-ray t. **Levin t.**, a gastroduodenal catheter of sufficiently small caliber to permit transnasal passage. **McCullum t.**, an apparatus for keeping a patient dry when there is a large amount of drainage from a sinus. **medullary t.**, neural t. **Mett's t's**, small glass tubes filled with coagulated egg white for testing peptic activity; see under *tests*. **Miescher's t's**, sarcosporidian cysts. **Miller-Abbott t.**, a double-channel intestinal tube with an inflatable balloon at its distal end, for use in the treatment of obstruction of the small intestine; occasionally useful also as a diagnostic aid. **multiple-lumen t.**, a tube containing more than two lumina, used primarily for experimental purposes. Perforations are made into the separate lumina at different levels depending on the location and number of segments of the intestine to be studied. **nasogastric t.**, a tube of soft rubber or plastic inserted through a nostril and into the stomach, for instilling liquid foods or other substances, or for withdrawing gastric contents. **nephrostomy t.**, a tube inserted through the abdominal wall into the pelvis of the kidney, for direct drainage of the urine. **Neuber's t's**, drainage tubes of bone. **neural t.**, the epithelial tube developed from the neural plate and forming the central nervous system of the embryo; called also *medullary t.* and *cerebromedullary t.* **O'Dwyer's t.**, an intubation tube. **Olshesky t.**, a roentgen-ray tube constructed to use only the stronger rays which pass through the target and armoring the rest of the tube. **otopharyngeal t.**, *tuba auditiva*. **ovarian t's**, groups of cells which grow down and are cut off from the much thickened surface layer of the ovary; they differentiate into primary oocytes, each with a follicular layer. Called also *Pflüger's t's* or *Pflüger's cords*. **Paul-Mixter t.**, a large-calibered, flanged drainage tube of glass used for temporary intestinal decompression. **Pflüger's t's**, the ovarian tubes. **pharyngotympanic t.**, *tuba auditiva*. **photomultiplier t.**, a vacuum tube that converts electromagnetic radiation signals into electrical pulses, consisting of a light-sensitive surface that emits electrons when light is incident on it, the electrons then passing through successive stages with

electron multiplication at each stage. **pus t.**, pyosalpinx. **Rainey's t.**, sarcosporidian cysts. **Rehfuß's t.**, a specially designed stomach tube used in making the Rehfuß test. **Roida's t.**, a tube designed for the separation of motile from nonmotile bacteria; the motile organisms make their way through sand, glass-wool and other obstructions. **roll t.**, a test tube in which liquid agar culture medium is placed, the tube then being tilted and rotated so that the inside of the tube becomes coated with the culture medium. **Ruysch's t.**, a very small tubular opening on the nasal septum, just anterior and inferior to the nasopalatine foramen; it is a relic of the fetal Jacobson's organ. **Ryle's t.**, a thin rubber tube with an olive-shaped end used in giving a test meal. **salivary t.**s, the interlobular ducts of the salivary glands. **Schachowa's spiral t.**s, tubuli renales. **Sengstaken-Blakemore t.**, a device used for the tamponade of bleeding esophageal varices, consisting of three tubes: one leading to a balloon which is inflated in the stomach, to retain the instrument in place, and to compress the vessels around the cardia; another leading to a long narrow balloon by which pressure is exerted against the wall of the esophagus; and the third attached to a suction apparatus for aspirating contents of the stomach. **Shiner's t.**, a flexible plastic radiopaque tube for obtaining biopsy material from the jejunum under fluoroscopic control; the jejunal mucosa is drawn by suction into a small aperture in the knife cylinder head at the end of the tube, and a portion is excised. **sieve t.**, the conductive element of phloem. **Souttar's t.**, a metal tube used to keep the esophagus open in inoperable esophageal carcinoma. **sputum t.**, a graduated capillary tube for containing sputum to be rotated in the centrifuge. **stomach t.**, a tube for feeding or for irrigation of the stomach. **T t.**, a self-retaining drainage tube in the shape of a T. **tampon t.**, a piece of stout rubber tubing wound with iodoform gauze, used in plugging the rectum to control oozing and at the same time to allow the escape of gas. **test t.**, a tube of thin glass closed at one end, used for various procedures in chemistry and for observing the growth of bacterial cultures. **thoracostomy t.**, a tube inserted through an opening in the chest wall, for application of suction to the pleural cavity often used to facilitate reexpansion of the lung in spontaneous pneumothorax. **Thunberg t.**, a laboratory tube used extensively in studies of dehydrogenases. **tracheostomy t.**, a curved tube to be inserted into the trachea through the opening made in tracheostomy. **uterine t.**, tuba uterina. **vacuum t.**, a glass tube from which the air has been exhausted to a high degree of vacuum; see *Crookes's t.* and *Geissler's t.* **valve t.**, a vacuum tube used to rectify an alternating current. **Veillon t.**, a piece of glass tubing with a rubber cork at one end and a plug of cotton at the other, used in bacterial culture work. **vertical t.**, an orthodontic attachment usually placed on the lingual surface of the anchor band to allow for the insertion of the lingual arch wire. **Voltolini's t.**, a tube for keeping open an incision in the tympanic membrane. **Wangensteen t.**, a small tube passed through the nose into the stomach and connected with a special suction apparatus to maintain gastric and duodenal decompression; called also *Wangensteen's apparatus*. **x-ray t.**, a glass vacuum bulb containing two electrodes. Electrons are obtained either from gas in the tube or from a heated cathode. When suitable potential is applied, electrons travel at high velocity from cathode to anode, where they are suddenly arrested, giving rise to x-rays.

tubectomy (too-bek'to-me) excision of a portion of the uterine tube.

tuber (too'ber), pl. *tubers* or *tu'bera* [L.] 1. a swelling, protuberance; [NA] a general term for such a structure. See also *tubercle*, *tuberculum*, *tuberositas*, and *tuberosity*. 2. a thickened underground plant stem adapted for food storage, such as is found in the potato. **t. antérieur hypothal'ami**, t. cinereum. **t. calca'nei** [NA], the posteroinferior projection of the calcaneus that forms the heel; called also *tuberosity of calcaneus*. **t. cine'reum** [NA], a layer of gray matter which is part of the hypothalamus; forming a part of the floor of the third ventricle, it lies in front of and between the corpora mamillaria and merges anteriorly into the infundibulum. Called also *tuberculum cinereum* and *gray tubercle*. **t. coch'leae**, promontorium tympani. **eustachian t.**, an eminence on the medial wall of the tympanum, below the vestibular window. **external t. of Henle**, tuberculum mentale mandibulae. **frontal t.**, t. fronta'le [NA], one of the slight rounded prominences on the frontal bone on either side above the eyes, forming the most prominent portions of the forehead; called also *frontal eminence*. **iliopubic t.**, eminentia iliopubica. **t. ischiad'icum** [NA], t. is'chii, ischial tuberosity: a large elongated mass on the inferior part of the posterior margin of the body of the ischium, to which several muscles are attached. **t. maxil'lae** [NA], t. maxilla're, maxillary t., a rounded eminence at the posteroinferior angle of the infratemporal surface of the maxilla; called also *tuberosity of maxilla*. **mental t.**, tuberculum mentale mandibulae. **omental t. of liver**, t. omentale hepatis. **omental t. of pancreas**, t. omentale pancreatis. **t. omenta'le hep'atis** [NA], omental tuber of liver: the rounded prominence on the posteroinferior surface of the left lobe of the liver, just cranial to the lesser curvature of the stomach. **t. omenta'le pan-crea'tis** [NA], omental tuber of pancreas: a rounded prominence

chiefly on the anterior surface of the neck of the pancreas. **papillary t. of liver**, processus papillaris hepatis. **parietal t.**, t. parietale [NA], the somewhat laterally bulging prominence just superior to the superior temporal line on the external surface of the parietal bone. **t. ra'dii**, t. of radius, tuberositas radii. **sciatic t.**, t. ischiadicum. **t. val'vulae cerebel'li**, t. vermis. **t. ver'mis** [NA], the part of the vermis of the cerebellum between the folium vermis and the pyramid; called also *commissura brevis loborum posteriorum inferiorum cerebelli*. **t. zygomat'icum**, tuberculum articulare ossis temporalis.

tubera (too'ber-ah) [L.] plural of *tuber*.

tubercle (too'ber-k'l) 1. any of the small, rounded, granulomatous lesions produced by infection with *Mycobacterium tuberculosis*; it is the characteristic lesion of tuberculosis, and consists of a translucent mass, gray in color, made up of a collection of modified macrophages resembling epithelial cells (*epithelioid cells*), surrounded by a rim of mononuclear cells, principally lymphocytes, and sometimes a center of giant multinucleate cells (*Langhans' giant cells*). Called also *gray t.* 2. a nodule, or small eminence, such as a rough, rounded eminence on a bone; called also *tuberculum* [NA]. 3. (*obs.*) a nodule, especially a solid elevation of the skin, larger in size than a papule. 4. dental t. See also *tuber*, *tuberositas*, and *tuberosity*. **acoustic t.**, area vestibularis. **adductor t. of femur**, tuberculum adductorium femoris. **amygdaloid t. of Schwalbe**, area vestibularis. **anatomical t.**, tuberculosus verrucosus. **t. of anterior scalene muscle**, tuberculum musculi scaleni anterioris. **articular t. of temporal bone**, tuberculum articulare ossis temporalis. **t. of atlas, anterior**, tuberculum anterius atlantis. **t. of atlas, posterior**, tuberculum posterius atlantis. **auricular t.**, tuberculum auriculae. **Babes' t.**s, cellular aggregations around degenerated neurons in the medulla oblongata and the spinal ganglia in cases of rabies and other types of encephalitis. **brachial t. of humerus**, processus supracondylaris humeri. **calcanal t.**, processus lateralis tuberis calcanei. **Carabelli t.**, see under *cusp.* **carotid t. of sixth cervical vertebra**, tuberculum caroticum vertebrae cervicalis VI. **caseous t.**, a yellowish mass of cheesy material, thought to represent a typical lesion of tuberculosis that has undergone degeneration. **caudal t. of liver**, processus caudatus hepatis. **cervical t.**s, two small eminences on the femur, a *superior* on the upper and anterior part of the neck at its junction with the greater trochanter, and an *inferior* at the junction with the lesser trochanter. **t. of cervical vertebrae, anterior**, tuberculum anterius vertebrae cervicium. **t. of cervical vertebrae, posterior**, tuberculum posterius vertebrae cervicium. **Chassaignac's t.**, tuberculum caroticum vertebrae cervicalis VI. **condyloid t.**, an eminence on the condylar process of the mandible for attachment of the lateral ligament of the temporomandibular articulation. **conglomerate t.**, a mass made up of an aggregation of many smaller nodules. **conoid t.**, tuberculum conoideum. **corniculate t.**, tuberculum corniculatum. **t. of crown of tooth**, dental t. **crude t.**, caseous t. **cuneiform t.**, tuberculum cuneiforme. **darwinian t.**, tuberculum auriculae. **deltoid t.**, 1. a prominence on the clavicle for attachment of the deltoid muscle. 2. tuberositas deltoidea humeri. **dental t.**, 1. a small elevation of indiscriminate size on some portion of the tooth crown, produced by extra formation of enamel. 2. tuberculum coroneae dentis. **dorsal t. of radius**, an easily palpable prominence on the distal, dorsal aspect of the radius, which is grooved by the tendon of the extensor pollicis longus muscle; called also *Lister's t.* **epiglottic t.**, tuberculum epiglotticum. **Farre's t.**s, masses beneath the capsule of the liver, felt on palpation in certain cases of hepatic cancer. **fibrous t.**, a tubercle of bacillary origin which contains connective tissue elements. **t. of fibula, posterior**, apex capitis fibulae. **genial t.**, tuberculum mentale mandibulae. **genital t.**, an eminence in front of the cloaca in the early embryo, which becomes the penis or the clitoris. **Ghon t.**, see under *focus*. **gracile t.**, tuberculum nuclei gracilis. **gray t.**, 1. the typical lesion of tuberculosis; see *tubercle* (def. 2). 2. tuberculum cinereum. 3. tuber cinereum. **greater t. of calcaneus**, processus medialis tuberis calcanei. **t. of greater multangular bone**, tuberculum ossis trapezii. **hippocampal t.**, an expansion of the hippocampus at its lower end, separating the fimbria from the gyrus dentatus. **His' t.**, a small prominence on the posteroinferior part of the pinna. **t. of humerus**, capitulum humeri. **t. of humerus, anterior**, of Meckel, tuberculum majus humeri. **t. of humerus, anterior**, of Weber, tuberculum minus humeri. **t. of humerus, external**, tuberculum majus humeri. **t. of humerus, greater**, tuberculum majus humeri. **t. of humerus, internal**, tuberculum minus humeri. **t. of humerus, lesser**, tuberculum minus humeri. **t. of humerus, posterior**, tuberculum majus humeri. **iliopectineal t.**, iliopubic t., eminentia iliopubica. **inferior t. of Humphrey**, processus accessorius vertebrae lumbalis. **infraglenoid t.**, tuberculum infraglenoidale. **intercondylar t.**, eminentia intercondylaris. **intercondylar t.**, lateral, tuberculum intercondylare laterale. **intercondylar t.**, medial, tuberculum intercondylare mediale. **intervenous t.**, tuberculum intervenosum. **intravascular t.**, a tubercle in

the intima of a blood vessel. **jugular t. of occipital bone**, tuberculum jugulare ossis occipitalis. **labial t.**, tuberculum labii superioris. **lacrimal t.**, papilla lacrimalis. **lateral orbital t.**, Whitnall's t. **lateral palpebral t.**, Whitnall's t. **lesser t. of calcaneus**, processus lateralis tuberis calcanei. **Lisfranc's t.**, tuberculum musculi scaleni anterioris. **Lister's t.**, dorsal t. of radius. **Lower's t.**, tuberculum intervenosum. **Luschka's t.**, carina urethralis vaginae. **lymphoid t.**, a lesion of tuberculosis consisting of lymphoid cells. **mamillary t. of hypothalamus**, corpus mamillare. **mamillary t. of vertebrae**, processus mamillaris vertebrae. **marginal t. of zygomatic bone**, tuberculum marginale ossis zygomatici. **mental t.**, tuberculum mentale mandibulae. **mental t.**, external, protuberantia mentalis. **mental t. of mandible**, tuberculum mentale mandibulae. **miliary t.**, one of the many minute tubercles formed in many organs in acute miliary tuberculosis. **Montgomery's t's**, greatly enlarged sebaceous glands (Morgagni's tubercles) observed on the surface of the areola of the mammary gland during pregnancy. **Morgagni's t.**, 1. bulbus olfactorius. 2. one of the small nodules on the surface of the areola of the mammary gland produced by the superficially situated large sebaceous glands. **Müller's t.**, a protrusion into the urogenital sinus caused by the downward-growing mesonephric and paramesonephric ducts. **muscular t. of atlas**, tuberculum anterius atlantis. **naked t.**, an aggregation of large, pale-staining epithelial cells with few or no intermingling small round cells, a characteristic finding in sarcoidosis. **t. of navicular bone**, tuberculum ossis scaphoidei. **necrogenic t's**, the papules of tuberculosis verrucosa cutis. **nuchal t.**, the prominence formed by the spinous process of the seventh cervical vertebra. **t. of nucleus cuneatus**, tuberculum nuclei cuneati. **t. of nucleus gracilis**, tuberculum nuclei gracilis. **obturator t.**, anterior, tuberculum obturatorium anterius. **obturator t.**, posterior, tuberculum obturatorium posterius. **olfactory t.**, bulbus olfactorius. **papillary t.**, processus papillaris hepatis. **pharyngeal t.**, tuberculum pharyngeum. **planar t.**, tuberositas ossis metatarsalis I. **t. of posterior process of talus, lateral**, tuberculum laterale processus posterioris tali. **t. of posterior process of talus, medial**, tuberculum mediale processus posterioris tali. **pterygoid t.**, tuberositas pterygoidea mandibulae. **pubic t. of pubic bone**, tuberculum pubicum ossis pubis. **rabic t's**, Babes' t's. **t. of rib**, tuberculum costae. **t. of Rolando**, tuberculum cinereum, def. 1. **t. of root of zygomata**, tuberculum articulare ossis temporalis. **t. of Santorini**, tuberculum corniculatum. **scalene t.**, tuberculum musculi scaleni anterioris. **t. of scaphoid bone**, tuberculum ossis scaphoidei. **t. of sella turcica**, tuberculum sellae turcicae. **superior t. of Henle**, tuberculum obturatorium posterius. **superior t. of Humphrey**, processus mamillaris vertebrae. **supraglenoid t.**, tuberculum supraglenoidale. **supratragic t.**, tuberculum supratragicum. **t. of thalamus, anterior**, tuberculum anterius thalami. **t. of thalamus, posterior**, pulvinar. **thyroid t.**, inferior, tuberculum thyroideum inferius. **thyroid t.**, superior, tuberculum thyroideum superius. **t. of tibia**, eminentia intercondylaris. **transverse t. of fourth tarsal bone**, tuberositas ossis cuboidei. **t. of trapezium**, tuberculum ossis trapezii. **trochlear t.**, spina trochlearis. **t. of ulna**, tuberositas ulnae. **t. of upper lip**, tuberculum labii superioris. **t's of vertebra**, three elevations (*superior, inferior, and external*) upon the transverse process of the last thoracic vertebra, and represented on the lumbar vertebrae by more or less rudimentary structures. **Whitnall's t.**, a small eminence on the internal aspect of the middle of the orbital surface of the zygomatic bone; called also *lateral orbital* or *palpebral* t. **Wrisberg's t.**, tuberculum cuneiforme. **yellow t.**, caseous t. **t. of zygomata, zygomatic t.**, tuberculum articulare ossis temporalis.

tubercula (too-ber'ku-lah) [L.] plural of *tuberculum*.

tubercular (too-ber'ku-lar) of, pertaining to, or resembling tubercles or nodules. Cf. *tuberculous*.

Tuberculariaceae (too-ber'ku-lar'i-a'se-e) a family of Fungi imperfecti of the order Moniliales, including the genus *Fusarium*.

tuberculase (too-ber'ku-lās) an extract of tubercle bacilli once used for protective inoculation against tuberculosis.

tuberculate, tuberculated (too-ber'ku-lāt'; too-ber'ku-lāt'/ed) covered with tubercles; affected with tubercle.

tuberculation (too-ber'ku-la'shun) the development of tubercles; the becoming affected with tubercles.

tuberculid (too-ber'ku-lid) a papular skin eruption usually attributed to a state of allergy to tuberculosis. **papulonecrotic t.**, **rosacea-like t.**, a grouped, symmetric eruption appearing in successive crops in children and young adults with tuberculosis, and consisting of small papules or nodules which undergo necrosis and heal with scarring; called also *tuberculosis papulonecrotica*.

tuberculigenous (too-ber'ku-lij'ē-nus) [*tubercle* + Gr. *gennan* to produce] causing tuberculosis.

tuberculin (too-ber'ku-lin) a sterile liquid containing the growth products of, or specific substances extracted from, the tubercle bacillus. The form first prepared (Old tuberculin) by

boiling, filtering, and concentrating a bouillon culture of tubercle bacilli, was put forth as a cure for tuberculosis by Koch in 1890 (Koch's lymph paratoid, paratoloidin). In various forms tuberculin is used in the diagnosis of tuberculosis infection, especially in children and cattle, and formerly also in the treatment of tuberculosis. The tuberculin test, as commonly applied, consists in the injection of tuberculin under or into the skin; the injection has no effect in nontuberculous subjects, but causes inflammation at the site of the injection in tuberculous subjects. See *tuberculin test*, under *tests*. **albumose-free (A.F.) t.**, tuberculin free from albumose, used for the subcutaneous tuberculin test. Called also *Tuberculin Albumose Frei (T.A.F.)*. **T. Albumose Frei (T.A.F.)**, albumose-free t. **alkaline t.**, a preparation obtained from tubercle bacilli by extracting with $\frac{1}{10}$ normal soda solution; much the same as the original tuberculin. **autogenous t.**, autotuberculin. **bacillary emulsion (B.E.) t. (T.B.E.)**, tubercle cultures are dried, ground, and suspended (1 gm.) in equal parts of water and glycerol (200 ml.). It differs from New tuberculin in that the tubercle bacilli are not washed nor is the supernatant fluid from the first centrifugalization discarded. **Behring's t.**, 1. tuberculase. 2. tulase. **Béranek's t.**, cultures of tubercle bacilli grown on a nonpeptonized, 5 per cent glycerin bouillon are filtered and the microorganisms are extracted in 1 per cent orthophosphoric acid by long-continued shaking. This extract (basitoxin) is mixed with an equal volume of the filtrate (acidotoxin) for use. **t. bouillon filtrate (B.F.)**, the clear glycerin bouillon in which tubercle cultures have been grown and from which they have been filtered out. It is not heated or concentrated. Called also *Denys' tuberculin*. **Calmette's t.**, purified tuberculin, prepared by precipitating Old tuberculin with alcohol, washing, dissolving in water, and filtering. When instilled in the conjunctiva of persons affected with tuberculosis or typhoid fever it produces a severe local reaction. Called also *tuberculin precipitation (T.P.)*. See also *ophthalmic reaction*, under *reaction*. **t. contagious (T.C.)**, von Behring's name for tuberculin which is said to be taken up by the cells of the body and there transformed into an integral part of those cells; in this form it is called *TX*. **Denys' t.**, t. bouillon filtrate. **Dixon's t.**, a tuberculin prepared by treating living tubercle cultures with ether and extracting in salt solution. **t. filtrate (T.F.)**, a tuberculin preparation made by precipitating and filtering the dissolved precipitate separately. **Hirschfelder's t.**, oxytuberculin. **Klebs' t.**, tuberculocidin. **Klemperer's t.**, a tuberculin prepared from cultures of bovine tuberculosis. **Koch's t.**, see *New t.*, *Old t.* **Maragliano's t.**, a tuberculin containing all the extracts of the tubercle bacillus that are soluble in water. **Maréchal's t.**, a mixture of Old tuberculin and guaiacol. **Moro's t.**, diagnostic t. **New t.**, a suspension of the fragments of tubercle bacilli, freed from all soluble materials and with glycerin added: tubercle bacilli are triturated to a fine consistency and suspended in distilled water or physiological salt solution. Centrifugation results in separation into a translucent supernatant (TO, *tuberculin ober*) and a muddy sediment (TR, *tuberculin rest*). This sediment is dried, again triturated, and suspended and centrifuged. The process is repeated until only an opalescent fluid is obtained. The addition of a sufficient quantity of glycerin to make a 20 per cent solution renders the preparation ready for use. Called also *Koch's t.*, *original t. (T.O.)*, *residue t.*, and *t. residue (T.R.)*. **Old t. (O.T.) [USP]**, a sterile solution of concentrated, soluble products of the growth of tubercle bacilli, adjusted to standard potency by addition of glycerin and isotonic sodium chloride solution, final glycerin content being about 50 per cent. It is used as a dermal reactivity indication in the diagnosis of tuberculosis. Called also *Koch's t.* and *tuberculinum pristinum*. **original t. (T.O.)**, New t. **perlsucht t.**, *Perlsucht T. Original (P.T.O.)*, Spengler's t. **Perlsucht T. Rest (P.T.R.)**, a tuberculin prepared from bacilli of bovine tuberculosis in the same manner as New tuberculin. **t. precipitation (T.P.)**, Calmette's t. **purified t.**, Calmette's t. **purified protein derivative (P.P.D.) of t. [USP]**, a sterile, soluble partially purified product of growth of the tubercle bacillus prepared in a special liquid medium free from protein. It is used as a dermal reactivity indicator in the diagnosis of tuberculosis. **residual t.**, **t. residue (T.R.)**, New t. **Rosenbach's t.**, tuberculin prepared from cultures which have been infected with *Trichophyton holosericum-album*, which reduces the toxicity of the tubercle bacilli. **Ruck's watery extract t.**, tubercle cultures are concentrated in vacuo at 55° C. to one tenth volume and filtered. The filtrate is precipitated with an acid solution of sodium bismuth iodide. Filter, neutralize the filtrate, and filter again. Precipitate the filtrate with enough absolute alcohol to make 90 per cent alcohol, filter, and make a 1 per cent aqueous solution of the dry precipitate. **Seibert's t.**, 1. purified protein derivative of t. 2. a purified tuberculin used intradermally as a test for tuberculosis. **Selter's t.**, vital t. **Spengler's t.**, a preparation from the bacilli of bovine tuberculosis; called also *perlsucht t.* and *Perlsucht Tuberculin Original (P.T.O.)*. **Thamm's t.**, tuberculoalbumin. **vacuum t. (V.T.)**, Old tuberculin reduced in a vacuum to much less than its original volume. **Vaudremer's t.**, tuberculin prepared by macerating it in the ground up mycelia of *Aspergillus fumigatus*, which renders the tuberculin nearly free from toxicity. **vital t.**, a tu-

berculin prepared by triturating moist attenuated human tubercle bacilli; the preparation contains a few living tubercle bacilli of very slight virulence. **t. zymoplastische (TZ)**, the dried residue of the portions of the tubercle bacillus which are soluble in alcohol.

tuberculation (too-ber/'ku-lin-a'shun) tuberculinization.

tuberculinization (too-ber/'ku-lin-'i-za'shun) treatment by use of tuberculin or the application of the tuberculin test.

tuberculinose (too-ber/'ku-lin/'ōs) a modified form of tuberculin.

tuberculinotherapy (too-ber/'ku-lin-'o-ther'ah-pe) the therapeutic use of tuberculin.

tuberculinum (too-ber/'ku-li'num) [L.] tuberculin. **t. pristi-num**, Old tuberculin.

tuberculis (too-ber/'ku-li'tis) [*tubercle* + *-itis*] inflammation of or near a tubercle.

tuberculization (too-ber/'ku-li-za'shun) 1. treatment with tuberculin or its modifications. 2. the formation of or conversion into tubercles.

tuberculoalbumin (too-ber/'ku-lo-al-bu'min) (*obs.*) a preparation very much like tuberculase, but extracted by a different method.

tuberculocele (too-ber/'ku-lo-sē'l') [*tubercle* + Gr. *kēlē* tumor] tuberculous disease of the testis.

tuberculocidal (too-ber/'ku-lo-si'dal) lethal to *Mycobacterium tuberculosis*.

tuberculocide (too-ber/'ku-lo-sid') an agent that is lethal to *Mycobacterium tuberculosis*.

tuberculocidin (too-ber/'ku-lo-si'din) an albumose derived from tuberculin by treating it with platinum chloride. It is used like tuberculin, but is said to be free from the objectionable characters of the latter.

tuberculoderm (too-ber/'ku-lo-derm) any tuberculous condition or disease of the skin.

tuberculofibroid (too-ber/'ku-lo-fi'broid) characterized by a tubercle that has undergone a fibroid degeneration.

tuberculofibrosis (too-ber/'ku-lo-fi-brō'sis) fibroid phthisis.

tuberculoid (too-ber/'ku-lo'id) resembling a tubercle or tuberculosis.

tuberculoidin (too-ber/'ku-loi'din) a form of modified tuberculin cleared of its bacilli by treatment with alcohol.

tuberculoma (too-ber/'ku-lo'mah) a tumor-like mass resulting from enlargement of a caseous tubercle. **t. en plaque**, a flat plaque on the surface of the frontoparietal cortex in tuberculous meningoencephalitis, producing the symptoms of brain tumor.

tuberculumyces (too-ber/'ku-lom'i-sēz) [*tuberculosis* + Gr. *mykēs* fungus] a name for the group of bacteria including the *Mycobacterium tuberculosis* and similar bacteria.

tuberculo-opsonic (too-ber/'ku-lo-op-son'ik) pertaining to the opsonin capable of sensitizing tubercle bacilli.

tuberculoprotein (too-ber/'ku-lo-pro'te-in) protein derived from the bodies of tubercle bacilli.

tuberculosarium (too-ber/'ku-lo-sa're-um) a sanatorium for the tuberculous.

tuberculosilicosis (too-ber/'ku-lo-sil'i-ko'sis) silicosis complicated by pulmonary tuberculosis.

tuberculosis (too-ber/'ku-lo'sis) any of the infectious diseases of man and animals caused by species of *Mycobacterium* and characterized by the formation of tubercles and caseous necrosis in the tissues. The common causative species are *M. tuberculosis*, *M. bovis*, and *M. avium*, but the disease is also caused by several atypical mycobacteria, including *M. kansasii* and others as yet unclassified. Atypical infections, which are clinically and morphologically indistinguishable from the typical disease, do not appear to be directly transmissible from man to man. Tuberculosis varies widely in its manifestations and has a tendency to great chronicity. Any organ may be affected, although in man the lung is the major seat of the disease and the usual portal through which the infection reaches other organs. **acute miliary t.**, an acute form of tuberculosis in which minute tubercles are formed in a number of organs of the body, due to dissemination of the bacilli throughout the body by the blood stream. **adrenal t.**, Addison's disease. **adult t.**, see *postprimary t.* and *primary t.* **aerogenic t.**, inhalation t. **anthracotic t.**, tuberculosis associated with pneumoconiosis of coal workers. **atypical t.**, mycobacteriosis. **avian t.**, a variety of tuberculosis affecting various birds, including chickens and ducks, caused by *Mycobacterium avium*, and characterized by tubercles consisting principally of epithelioid cells. It may be communicated to other animals and man. **basal t.**, tuberculosis situated in the lower part of the affected lung. **t. of bones and joints**, tuberculosis involving the bones and joints, producing strumous arthritis, or white swelling, and cold abscess. **bovine t.**, an infection of cattle caused by *Mycobacterium bovis*, transmissible to man and other animals. **cerebral t.**, tuberculous meningitis. **cestodic t.**, a disease simulating tuberculosis, but due to excessive infestation with cestode parasites. **chicken t.**, avian tuberculosis occurring in chickens. **childhood t.**, primary t. **t. col-**

liquati/va, scrofuloderma. **t. cu'tis**, tuberculosis of the skin, including lupus vulgaris, tuberculosis verrucosa cutis, scrofuloderma, tuberculosis cutis orificialis, papulonecrotic tuberculid, etc. **t. cu'tis colliquati/va**, scrofuloderma. **t. cu'tis indurati/va**, former name for *erythema induratum*. **t. cu'tis lichenoi'des**, lichen scrofulosorum. **t. cu'tis orificia'lis**, a condition occurring in patients with systemic tuberculosis, characterized by the development, about the mucocutaneous junctions and on the skin contiguous to the body orifices, of indolent, round, shallow granulating ulcers covered with thin crusts. **disseminated t.**, acute miliary t. **exudative t.**, the simplest form of pulmonary tuberculosis, frequently the earliest reaction to infection, in which the alveolar spaces and the smaller bronchi become filled with a cellular exudate consisting mainly of large mononuclear cells; called also *tuberculous pneumonia*. **fowl t.**, avian tuberculosis occurring in fowl. **genital t.**, tuberculosis of the genital tract, e.g., tuberculous endometritis. **genitourinary t.**, tuberculosis involving the genitourinary tract, often the result of hemic dissemination of pulmonary tuberculosis. **hematogenous t.**, infection with *Mycobacterium tuberculosis* carried through the blood stream to other organs from the primary site of infection. **hilus t.**, tuberculosis involving the hilus of the lung. **t. indurati/va**, former name for *erythema induratum*. **inhalation t.**, tuberculosis caused by aspiration of the tubercle bacilli into the lungs. **t. of intestines**, tuberculosis involving the intestines, marked by formation of spreading ulcers, especially of the lymphoid tissue; attended by diarrhea, and sometimes resulting in cicatricial stricture. **t. of kidney**, renal t. **t. of larynx**, tuberculosis involving the larynx, producing ulceration of the vocal cords and elsewhere on the mucosa, and commonly attended by hoarseness, cough, pain on swallowing, and hemoptysis. **t. lichenoi'des**, lichen scrofulosorum. **t. of lungs**, infection of the lungs caused by *Mycobacterium tuberculosis*. Characteristically, the course of the untreated disease is as follows: tuberculous pneumonia, formation of tuberculous granulation tissue, caseous necrosis, calcification, and cavity formation. It may spread to other lung segments via the bronchi, or to other organs via the blood or lymph vessels. Symptoms may include weight loss, lassitude and fatigue, night sweats, and wasting, with purulent sputum, hemoptysis, and chest pain. **t. luposa**, lupus vulgaris. **t. of lymph nodes**, lymphoid t., scrofula. **miliary t.**, see *acute miliary t.* **open t.**, 1. tuberculosis in which there are lesions from which the tubercle bacilli are being discharged out of the body. 2. tuberculosis of the lungs with cavitation. **t. orificia'lis**, t. cutis orificialis. **t. papulonecrotica**, papulonecrotic tuberculid. **postprimary t.**, pulmonary tuberculosis, formerly known as the adult type, that is typical of a fresh infection (a reinfection) of the lungs of a person who has had an earlier and probably subclinical attack of tuberculosis; it is distinguished by caseation and cavitation and by healing that results in fibrosis. Called also *reinfection t.* **primary t.**, tuberculosis of the lungs, formerly known as the childhood type, occurring when the individual is first infected with the disease. In children, it results in tuberculous pneumonia and is characterized by the formation of a primary complex, consisting of a parenchymal pulmonary lesion with a corresponding lymph node focus. In adults, it is more likely to be marked by a small subapical focus. **productive t.**, pulmonary tuberculosis in which a new type of tissue—tuberculosis granulation tissue, consisting of epithelioid cells in concentric masses, lymphocytes, and often Langhans giant cells—appears at the site of infection. **pulmonary t.**, t. of lungs. **reinfection t.**, postprimary t. **t. of serous membranes**, tuberculosis involving the pleura, peritoneum, pericardium, and cerebral meninges, producing inflammation of those structures. **t. of skin**, t. cutis. **spinal t.**, t. of spine, osteitis or caries of the vertebrae, usually occurring as a complication of tuberculosis of the lungs; it is marked by stiffness of the vertebral column, pain on motion, tenderness on pressure, prominence of certain of the vertebral spines, and occasionally abdominal pain, abscess formation, and paralysis. Called also *David's disease*, *dorsal phthisis*, *Pott's disease*, *spondylitis tuberculosa*, and *tuberculous spondylitis*. **surgical t.**, tuberculosis which is amenable to treatment by surgical means. **tracheobronchial t.**, productive tuberculous involvement of the bronchi, characterized by wheezing, mucosal redness and edema, granulation tissue, and sometimes ulceration and bronchial stricture due to cicatrization. **t. ulcero'sa**, t. cutis orificialis. **uveoparotid t.**, uveoparotid fever. **t. verruco'sa**, **t. verruco'sa cu'tis**, a condition usually resulting from external inoculation of the tubercle bacilli into the skin, but sometimes initiated by systemic infection, with wartlike papules coalescing to form distinctly verrucous patches with an inflammatory, erythematous border; called also *verruca necrogenica* and *warty tuberculosis*. **warty t.**, t. verrucosa.

tuberculostatic (too-ber/'ku-lo-stat'ik) 1. inhibiting the growth of *Mycobacterium tuberculosis*. 2. an agent that inhibits the growth of *Mycobacterium tuberculosis*.

tuberculous (too-ber/'ku-lus) pertaining to or affected with tuberculosis.

tuberculous (too-ber/'ku-lus) pertaining to or affected with tuberculosis; tuberculous; caused by the *Mycobacterium tuberculosis*. Cf. *tubercular*.

tuberculum (too-ber-'ku-lum), pl. *tuber'cula* [L., dim. of *tuber*] a tubercle, nodule, or small eminence; [NA] general term for such a structure. See also *tubercle*, *tuber*, *tuberositas*, and *tuberosity*. **t. acus'ticum**, area vestibularis. **t. adducto'rium fem'o-ris** [NA], adductor tubercle of femur: a small projection from the upper part of the medial epicondyle of the femur, to which the tendon of the adductor magnus muscle is attached. **t. ante'riusatlan'tis** [NA], anterior tubercle of atlas: the conical eminence on the front of the anterior arch of the atlas. **t. ante'rius thal'ami** [NA], anterior tubercle of thalamus: a distinct enlargement on the dorsal surface of the most rostral part of the thalamus; it contains the anterior nuclear group. **t. ante'riusvertebra'rum cervica'lium** [NA], anterior tubercle of cervical vertebrae: a tubercle on the anterior part of the extremity of each transverse process of the cervical vertebrae. **t. arthrit'icum**, a gouty concretion in a joint. **t. articula're os'sis tempora'lis** [NA], articular tubercle of temporal bone: an enlargement of the inferior border of the zygomatic process of the temporal bone, forming the anterior boundary of the mandibular fossa and part of the anterior root of the zygoma; it gives attachment to the lateral ligament of the temporomandibular articulation. Called also *tubercle of root of zygoma*. **t. auric'ulae** [NA], **t. auric'ulae** [Darwin'i], auricular tubercle: a small projection sometimes found on the edge of the helix, and conjectured by some to be a relic of a simioid ancestry. **t. carot'icum ver'tebrae cervica'lis VI** [NA], carotid tubercle of sixth cervical vertebra: either of the large anterior tubercles of the sixth cervical vertebra. **t. cine'reum**, 1. an elevation of the upper end of the lateral funiculus of the medulla oblongata, produced by the spinal tract of the trigeminal nerve and the inferior cerebellar peduncle. Called also *tubercle of Rolando*, *gray tubercle*, and *eminentia trigemina*. 2. Tuber cinereum. **t. conoi'deum** [NA], conoid tubercle: a prominent elevation on the inferior aspect of the lateral part of the clavicle, to which the conoid part of the coracoclavicular ligament is attached. **t. cornicula'tum** [NA], **t. cornicula'tum** [Santorin'i], corniculate tubercle: a rounded eminence near the posterior end of the aryepiglottic fold, posterior to the cuneiform tubercle, corresponding to the corniculate cartilage. **t. coro'nae den'tis** [NA], tubercle of crown of tooth: any of the projections on the crown of a tooth; called also *dental cusp* and *dental tubercle*. **t. cos'tae** [NA], tubercle of rib: a small eminence on the posterior surface of a rib where the neck and body join; it protrudes inferiorly and posteriorly, and bears on its medial part a surface that articulates with the transverse process of the corresponding vertebra. **t. cunea'tum**, **t. nuclei cuneati**. **t. cuneifo'rme** [NA], **t. cuneifo'rme** [Wrisber'gi], cuneiform tubercle: a rounded eminence in the posterior portion of the aryepiglottic fold, anterior to the corniculate tubercle, corresponding to the cuneiform cartilage; called also *Wrisberg's tubercle*. **t. doloro'sum**, a painful nodule or tubercle, such as one situated in the subcutaneous tissue near a joint, produced by enlargement of the end of a sensory nerve. **t. epiglot'ticum** [NA], epiglottic tubercle: a posterior projection on the inferior part of the posterior surface of the epiglottic cartilage. **t. genia'le** **t. mentale mandibulae**. **t. hypoglos'si**, trigonum nervi hypoglossi. **t. im'par**, a small tubercle in the midline on the floor of the pharynx of the embryo, between the ends of the mandibular and hyoid arches, which is the primordium of the tongue. **t. infraglenoida'le** [NA], infraglenoid tubercle: a roughened area, just below the glenoid cavity of the scapula, that gives origin to the long head of the triceps muscle; called also *tuberositas infraglenoidalis* or *infraglenoid tuberosity*. **t. intercondyla're latera'le** [NA], lateral intercondylar tubercle: a lateral spur projecting upward from the intercondylar eminence at the proximal end of the tibia; called also *t. intercondyloideum laterale*. **t. intercondyla're media'le** [NA], medial intercondylar tubercle: a medial spur projecting upward from the intercondylar eminence at the proximal end of the tibia; called also *t. intercondyloideum mediale*. **t. intercondyloi'deum**, eminentia intercondylaris. **t. intercondyloi'deum latera'le**, **t. intercondylare laterale**. **t. intercondyloi'deum media'le**, **t. intercondylare mediale**. **t. interveno'sum** [NA], **t. interveno'sum** [Low'eri], intervenous tubercle: a more or less distinct ridge across the inner surface of the right atrium between the openings of the venae cavae. **t. jugula're os'sis occipita'lis** [NA], jugular tubercle of occipital bone: a smooth eminence overlying the hypoglossal canal on the superior surface of the lateral part of the occipital bone. **t. la'bii superio'ris** [NA], the central prominence of the upper border between the skin and the mucous membrane of the upper lip, marking the distal termination of the philtrum. Called also *procheilon*, *tubercle of upper lip*, and *labial tubercle*. **t. latera'le proces'sus postero'ris ta'li** [NA], the lateral tubercle or eminence of the posterior process of the talus. **t. Low'eri**, **t. intervenosum**. **t. ma'jus hu'meri** [NA], greater tubercle of humerus: a large flattened prominence at the upper end of the lateral surface of the humerus, just lateral to the highest part of the anatomical neck, giving attachment to the infraspinatus, the supraspinatus, and the teres minor muscles. **t. margina'le os'sis zygomat'ici** [NA], marginal tubercle of zygomatic bone: a process on the superior part of the temporal border of the zygomatic bone to which a strong slip of the temporal

fascia is attached; called also *processus marginalis ossis zygomatici*. **t. media'le proces'sus postero'ris ta'li** [NA], the medial tubercle or eminence of the posterior process of the talus. **t. menta'le mandib'ulae** [NA], mental tubercle of mandible: a more or less distinct prominence on the inferior border of either side of the mental protuberance of the mandible. **t. mi'nus hu'meri** [NA], lesser tubercle of humerus: a distinct prominence at the proximal end of the anterior surface of the humerus, just lateral to the anatomical neck; it gives insertion to the subscapular muscle. **t. mus'culi scale'ni antero'ris** [NA], tubercle of anterior scalene muscle: the tubercle on the cranial surface of the first rib for the insertion of the anterior scalene muscle; called also *t. scaleni* [Lisfranci]. **t. nu'clei cunea'ti** [NA], tubercle of nucleus cuneatus: an enlargement of the fasciculus cuneatus in the medulla oblongata just lateral to the tubercle of the nucleus gracilis, produced by the underlying nucleus cuneatus. **t. nu'clei gra'cilis** [NA], tubercle of nucleus gracilis: an enlargement of the fasciculus gracilis in the medulla oblongata, forming the lower lateral border of the posterior part of the fourth ventricle, produced by the underlying nucleus gracilis. Called also *clava*. **t. obturato'rium ante'rius** [NA], anterior obturator tubercle: a small spur sometimes present on the margin of the obturator foramen, projecting from the superior ramus of the pubis. **t. obturato'rium poste'rius** [NA], posterior obturator tubercle: a small protuberance often present on the margin of the obturator foramen, projecting from the free edge of the acetabular fossa near the junction of the pubis and ischium. **t. os'sis multan'guli majo'ris**, **t. ossis trapezii**. **t. os'sis navicula'ris**, **t. ossis scaphoidei**. **t. os'sis scaphoi'dei** [NA], tubercle of scaphoid bone: a projection on the volar surface of the scaphoid bone of the wrist, giving attachment to the transverse carpal ligament; called also *t. ossis navicularis*. **t. os'sis trape'zii** [NA], tubercle of trapezium: a prominent ridge on the volar surface of the trapezium bone, forming the lateral margin of the groove that transmits the tendon of the flexor carpi radialis muscle; called also *t. ossis multanguli*. **t. pharyn'geum** [NA], pharyngeal tubercle: a midline eminence on the inferior surface of the basilar part of the occipital bone, for attachment of the pharynx (superior constrictor and pharyngeal raphe). **t. poste'riusatlan'tis** [NA], posterior tubercle of atlas: a variable prominence on the posterior surface of the posterior arch of the atlas, which represents a spinous process and gives attachment to the rectus capitis posterior minor muscle. **t. poste'rius thal'ami**, pulvinar. **t. poste'riusvertebra'rum cervica'lium** [NA], posterior tubercle of cervical vertebrae: a tubercle on the posterior part of the extremity of a transverse process of a cervical vertebra. **t. pu'bicum os'sis pu'bis** [NA], pubic tubercle of pubic bone: a prominent tubercle situated at the lateral end of the pubic crest and at the medial end of the superior border of the superior ramus of the pubic bone; it is the anterior medial terminal of the obturator crest and of the pecten of the pubic bone. **t. retroloba're**, His' tubercle. **t. Santori'ni**, **t. corniculatum**. **t. scale'ni** [Lisfranci], **t. musculi scaleni anterioris**. **t. sel'lae os'sis sphenoida'lis**, **t. sellae turcicae**. **t. sel'lae tur'cicae** [NA], tubercle of sella turcica: a transverse ridge on the upper surface of the body of the sphenoid bone; it is in front of the sella turcica, back of the sulcus chiasmatis, and between the anterior clinoid processes. **t. sep'ti**, a tubercle or prominence on the superior anterior part of the nasal septum. **t. supra-glenoida'le** [NA], supraglenoid tubercle: a raised roughened area, just superior to the glenoid cavity of the scapula, that gives attachment to the long head of the biceps muscle of the arm; called also *tuberositas supraglenoidalis scapulae*. **t. supra-tra'gicum** [NA], supratragic tubercle: a small tubercle sometimes seen on the pinna just superior to the tragus. **t. thyreo'i'deum infe'rius**, **t. thyroideum inferius**. **t. thyreo'i'deum supe'rius**, **t. thyroideum superius**. **t. thyroi'deum infe'rius** [NA], inferior thyroid tubercle: a more or less distinct tubercle at the inferior end of the oblique line of the thyroid cartilage; called also *t. thyroideum inferius*. **t. thyroi'deum supe'rius** [NA], superior thyroid tubercle: a more or less distinct tubercle at the superior extremity of the oblique line of the thyroid cartilage; called also *t. thyroideum superius*.

tuberin (too-ber-in) a simple globulin from potatoes.

tuberosis (too-'ber-o'sis) a condition characterized by the development of nodules.

tuberositas (too-'bē-ro's'i-tas), pl. *tuberosita'tes* [L.] tuberosity: an elevation or protuberance; [NA] a general term for such a structure. See also *tuber*, *tubercle*, and *tuberculum*. **t. coraco'i'dea**, see *tuberculum conoideum* and *linea trapezoidea*. **t. cos'tae II**, **t. musculi serrati anterioris**. **t. costa'lis clavic'ulae**, impressio ligamenti costoclavicularis. **t. del-toi'dea hu'meri** deltoid tuberosity of humerus: a rough, triangular elevation, about the middle of the anterolateral border of the shaft of the humerus, for attachment of the deltoid muscle. **t. fem'o'ris exter'na**, epicondylus lateralis femoris. **t. fem'o'ris inter'na**, epicondylus medialis femoris. **t. glu'tea fem'o'ris** [NA], gluteal tuberosity of femur: an elevation on the upper part of the shaft of the femur for attachment of the gluteus maximus muscle. **t. ili'aca** [NA], iliac tuberosity: a roughened area on the sacropelvic surface of the ilium, between the iliac crest

and the auricular surface, for the attachment of muscles and ligaments. **t. infraglenoida/lis**, tuberculum infraglenoidale. **t. masseterica** [NA], masseteric tuberosity: an elongated, raised and roughened area on the lateral side of the angle of the mandible, for the insertion of tendinous bundles of the masseter muscles. **t. mus/culi serrati anterioris** [NA], tuberosity for serratus anterior muscle: a roughened, raised area on the second rib that gives attachment to a slip of the anterior serratus muscle; called also *t. costae II*. **t. os/sis cuboi/dei** [NA], tuberosity of cuboid bone: a transverse ridge on the lower surface of the cuboid bone over which the tendon of the peroneus longus muscle plays. **t. os/sis metatarsa/lis I** [NA], tuberosity of first metatarsal bone: a blunt process projecting downward and laterally from the lower surface of the base of the first metatarsal bone, to which the tendon of the peroneus longus muscle is attached. **t. os/sis metatarsa/lis V** [NA], tuberosity of fifth metatarsal bone: a large conical protuberance projecting backward and laterally from the base of the fifth metatarsal bone, to which the tendon of the peroneus brevis muscle is attached. **t. os/sis navicula/ris** [NA], tuberosity of navicular bone: a rough protuberance on the navicular bone of the foot, projecting downward and medially, and giving attachment to the tendon of the posterior tibial muscle. **t. patella/ris**, *t. tibiae*. **t. phalan/gis dista/lis ma'nus** [NA], distal tuberosity of fingers: a roughened, raised bony mass on the palmar surface of the tip of a distal phalanx of the hand; called also *t. unguicularis manus*. **t. phalan/gis dista/lis pe'dis** [NA], distal tuberosity of toes: a roughened, raised bony mass on the plantar surface of the tip of a distal phalanx of the foot; called also *t. unguicularis pedis*. **t. pterygoi/dea mandib/ulae** [NA], pterygoid tuberosity of mandible: a roughened area on the inner side of the angle of the mandible for the insertion of the internal pterygoid muscle; called also *pterygoid tubercle*. **t. ra'dii** [NA], radial tuberosity: the tuberosity on the anterior inner surface of the neck of the radius, for the insertion of the tendon of the biceps muscle. **t. sacra/lis** [NA], sacral tuberosity: a roughened area on the pars lateralis of the sacrum, on the dorsal surface between the lateral sacral crest and the auricular surface, which gives attachment to the sacroiliac ligaments. **t. supraglenoida/lis scapulae**, tuberculum supraglenoidale. **t. tib/iae** [NA], tuberosity of tibia: a longitudinally elongated, raised and roughened area on the anterior crest of the tibia, located just distal to the intercondylar eminence, and giving attachment to the patellar ligament. **t. tib/iae exter'na**, condylus lateralis tibiae. **t. tib/iae inter'na**, condylus medialis tibiae. **t. ul'nae** [NA], tuberosity of ulna: a large roughened area on the volar surface of the ulna, located just distal to the coronoid process, and giving attachment to the brachialis muscle. **t. unguicula/ris ma'nus**, *t. phalangis distalis manus*. **t. unguicula/ris pe'dis**, *t. phalangis distalis pedis*.

tuberositates (too'ber-os/'i-tah'tēs) [L.] plural of *tuberositas*.

tuberosity (too'bē-ros/'i-te) an elevation or protuberance; called also *tuberositas*. **t. for anterior serratus muscle**, *tuberositas musculi serrati anterioris*. **bicipital t.**, *tuberositas radii*. **t. of calcaneus**, *tuber calcanei*. **t. of clavicle**, *impressio ligamenti costoclavicularis*. **coracoid t.**, see *tuberculum coracoidum* and *linea trapezoidea*. **costal t. of clavicle**, *impressio ligamenti costoclavicularis*. **t. of cuboid bone**, *tuberositas ossis cuboidei*. **deltoid t. of humerus**, *tuberositas deltoidea humeri*. **distal t. of fingers**, *tuberositas phalangis distalis manus*. **distal t. of toes**, *tuberositas phalangis distalis pedis*. **t. of femur, external**, *epicondylus lateralis femoris*. **t. of femur, internal**, *epicondylus medialis femoris*. **t. of femur, lateral**, *epicondylus lateralis femoris*. **t. of femur, medial**, *epicondylus medialis femoris*. **t. of fifth metatarsal bone**, *tuberositas ossis metatarsalis V*. **t. of first carpal bone**, *tuberculum ossis scaphoidei*. **t. of first metatarsal bone**, *tuberositas ossis metatarsalis I*. **t. of fourth tarsal bone**, *tuberositas ossis cuboidei*. **gluteal t. of femur**, *tuberositas glutea femoris*. **greater t. of humerus**, *tuberculum majus humeri*. **t. of greater multangular bone**, *tuberculum ossis trapezii*. **t's of humerus**, the three elevations on the humerus; see *tuberculum majus humeri*, *tuberculum minus humeri*, and *tuberositas deltoidea humeri*. **iliac t.**, *tuberositas iliaca*. **infraglenoid t.**, *tuberculum infraglenoidale*. **ischial t.**, *t. of ischium*, *tuber ischiadicum*. **lesser t. of humerus**, *tuberculum minus humeri*. **malar t.**, the prominence of the zygomatic bone. **masseteric t.**, *tuberositas masseterica*. **t. of maxilla**, *tuber maxillae*. **t. of navicular bone**, *tuberositas ossis navicularis*. **patellar t.**, *tuberositas tibiae*. **pterygoid t. of mandible**, *tuberositas pterygoidea mandibulae*. **t. of pubic bone**, *tuberculum pubicum ossis pubis*. **pyramidal t. of palatine bone**, *processus pyramidalis ossis palatini*. **radial t.**, *t. of radius*, *tuberositas radii*. **sacral t.**, *tuberositas sacralis*. **t. of scaphoid bone**, 1. *tuberculum ossis scaphoidei*. 2. *tuberositas ossis navicularis*. **scapular t. of Henle**, *processus coracoideus scapulae*. **t. of second rib, t. for serratus anterior muscle**, *tuberositas musculi serrati anterioris*. **supraglenoid t.**, *tuberculum supraglenoidale*. **t. of tibia**, *tuberositas tibiae*. **t. of tibia, external**, *condylus lateralis tibiae*. **t. of tibia, internal**, *condylus medialis tibiae*. **t. of trapezium**, *tuber-*

culum ossis trapezii. **t. of ulna**, *tuberositas ulnae*. **ungual t.**, *unguicular t.*, see *tuberositas phalangis distalis manus* and *tuberositas phalangis distalis pedis*.

tuberos (too'ber-us) covered with tubers; knobby. See also *under sclerosis*.

Tubifera (too-bif'er-ah) *Eristalis*.

tubiferous (too-bif'er-us) [L. *tuber* + *ferre* to bear] having tubers; tuberos.

tuboabdominal (too'bo-ab-dom'i-nal) pertaining to the oviduct and the abdomen.

tuboadnexopexy (too'bo-ad-nek'so-pek'se) the operation of suturing the uterine adnexa in a fixed position.

tubocurarine (too'bo-ku-rah'rin) an alkaloid isolated from the bark and stems of *Chondodendron tomentosum* R. & P. (Menispermaceae); it is the active principle of curare (q.v.). **t. chloride** [USP], chemical name: 7,12'-dihydroxy-6,6'-dimethoxy-2,2',2'-trimethyltubocuraranium chloride hydrochloride pentahydrate. A neuromuscular blocking agent, C₃₃H₄₁ClN₂O₈·HCl·5H₂O, occurring as a white or yellowish white to grayish white, crystalline powder; administered intravenously to relax skeletal muscles in surgery, tetanus, and shock therapy, and may be used for diagnosis of myasthenia gravis in certain cases. **dimethyl t. iodide**, *metocurine iodide*.

tuboligamentous (too'bo-lig'ah-men'tus) pertaining to a uterine tube and a broad ligament.

tubo-ovarian (too'bo-o-va're-an) of or pertaining to a uterine tube and ovary.

tubo-ovariotomy (too'bo-o-va're-ot'o-me) salpingo-oophorectomy.

tubo-ovariitis (too'bo-o'vah-ri'tis) salpingo-oophoritis.

tuboperitoneal (too'bo-per'i-to-ne'al) pertaining to a uterine tube and the peritoneum.

tuboplasty (too'bo-plas'te) 1. salpingoplasty. 2. plastic repair of a tube, such as the eustachian tube. **eustachian t.**, plastic repair of the eustachian tube.

tuborrhoea (too'bo-re'ah) [*tube* + Gr. *rhoia* flow] a condition marked by a discharge from the auditory tube.

tubotorsion (too'bo-tor'shun) a twisting of a tube, especially of the auditory tube.

tubotympanal (too'bo-tim'pah-nal) pertaining to the auditory tube and the tympanic cavity.

tubotympanum (too'bo-tim'pah-num) the auditory tube and tympanic cavity considered together.

tubouterine (too'bo-u'ter-in) pertaining to a uterine tube and the uterus.

tubovaginal (too'bo-vaj'i-nal) pertaining to a uterine tube and the vagina.

tubular (too'bu-lar) [L. *tubularis*] shaped like a tube; of or pertaining to a tubule.

tubulature (too'bu-lah-tūr) [L. *tuba* tube] the tube of a receiver or retort.

tubule (too'būl) a small tube; called also *tubulus*. **Albar-ran's t's**, small branching tubules in the cervical part of the prostate gland. **Bellini's t's**, *tubuli renales recti*. **biliferous t.**, any small channel conveying bile. **caroticotympanic t's**, *canaliculi caroticotympanici*. **collecting t's**, channels through which fluids pass from the secreting cells; see *tubuli renales recti*. **connecting t's**, channels connecting other tubules, such as the arching portion of a renal tubule that connects the distal convoluted tubule with the straight tubule. **convoluted t's**, channels which follow a tortuous course; see *tubuli renales contorti* and *tubuli seminiferi contorti*. **convoluted t.**, distal, see *tubuli renales contorti*. **convoluted t.**, proximal, see *tubuli renales contorti*. **dental t's**, *dental t's*, *canaliculi dentales*. **discharging t's**, channels by which a fluid is discharged from the substance of the gland or organ in which it is secreted; see *tubuli renales recti*. **Ferrein's t's**, the portions of the renal tubules making up the pars radiata of the lobules of the renal cortex. **galactophorous t's**, *ductus lactiferi*. **Henle's t's**, the straight ascending and descending portions of a renal tubule forming Henle's loop; called also *straight tubules*. **Kobelt's t's**, 1. the outer series of tubules in the epioophoron. 2. a similar series of tubules in the paradidymis of the male. **lactiferous t's**, *ductus lactiferi*. **mesonephric t's**, the tubules comprising the mesonephros, or temporary kidney of amniotes. **metanephric t's**, the tubules comprising the permanent kidney of amniotes. **Miescher's t's**, *sarcosporidian cyst*. **paraurethral t's**, *ductus paraurethrales*. **pronephric t's**, the tubules comprising the primitive kidney of vertebrates, rudimentary in amniotes. **Raney's t's**, *sarcosporidian cysts*. **renal t's**, *tubuli renales*. **renal t's, convoluted**, *tubuli renales contorti*. **renal t's, straight**, 1. *tubuli renales recti*. 2. see *Henle's t's*. **segmental t's**, the tubules of the mesonephros. **seminiferous t's**, channels in the testis in which the spermatozoa develop and through which they leave the gland; see *tubuli seminiferi contorti* and *tubuli seminiferi recti*. **seminiferous t's, convoluted**, *tubuli seminiferi contorti*. **seminiferous t's, straight**, *tubuli seminiferi recti*.

Skene's t's, ductus paraurethrales. **spiral t's**, channels which follow a spiral course; see *tubuli renales contorti*. **straight t's**, channels which follow a comparatively straight course; see *tubuli renales recti* and *tubuli seminiferi recti*. **sub-tracheal t.**, ductus thyroglossus. **T t's**, the transverse intracellular tubules invaginating from the cell membrane and surrounding the myofibrils of the T system of skeletal and cardiac muscle, serving as a pathway for the spread of electrical excitation within a muscle cell, enabling the nearly simultaneous activation of all myofibrils; in skeletal muscle, a T tubule is the intermediate element of a triad of tubular structures, the other elements being a pair of terminal cisterns. See also *T system*, under *system*; *terminal cistern*, under *cistern*; and *triad of skeletal muscle*. **transverse t.**, T t. **uriniferous t's**, **uriniparous t's**, channels for the passage of urine; see *tubuli renales*. **vertical t's**, the inner set of tubules in the epoophoron.

tubuli (too'bu-li) [L.] plural of *tubulus*.

tubulin (too'bu-lin) the constituent protein of microtubules; thought to be involved in phagocyte motility.

tubulization (too'bu-li-zä'shun) Foramitti's method of treating injured nerves by isolating the nerve stump in an absorbable cylinder which serves as a guide for new growth.

tubuloacinar (too'bu-lo-as'i-nar) composed of tubular acini, as a tubuloacinar gland.

tubulocyst (too'bu-lo-sist) any cystic dilatation of a vestigial canal or functionless duct.

tubuloracemose (too'bu-lo-ras'ë-mös) both tubular and racemose.

tubulorrhexis (too'bu-lo-rek'sis) [*tubule* + Gr. *rhëxis* a breaking] disruption of continuity of kidney tubules, the basement membrane being suddenly interrupted, or disintegrated into fibrils.

tubulosaccular (too'bu-lo-sak'u-lar) both tubular and saccular.

tubulous (too'bu-lus) containing tubules.

tubulus (too'bu-lus), pl. *tu'buli* [L., dim. of *tubus*] a tubule or a small tube; [NA] a general term for such a structure. **t. biliferus**, a channel for conveying bile; see *ductus cysticus*. **tu'buli contor'ti**, convoluted tubules; see *tubuli renales contorti* and *tubuli seminiferi contorti*. **tu'buli rec'ti**, straight tubules; see *tubuli renales recti* and *tubuli seminiferi recti*. **tu'buli rena'les** [NA], renal tubules: the minute, reabsorptive, secretory, and collecting canals, made up of basement membrane lined with epithelium, that form the substance of the kidneys. See also *nephron*. See plate accompanying *kidney*. **tu'buli rena'les contor'ti** [NA], convoluted renal tubules: the convoluted reabsorptive and secretory portions of the renal tubules, found in the renal cortex. The *proximal convoluted tubule* begins at the renal corpuscle and is continuous with the descending portion of Henle's loop; after passing back near the point of origin of the tubule, the ascending portion of the loop is continuous with the *distal convoluted tubule*. **tu'buli rena'les rec'ti** [NA], straight renal tubules: the excretory or collecting portions of the renal tubules, each of which descends from the distal convoluted tubule through the medulla, joining with others to form a common duct that opens at the apex of a renal papilla. **tu'buli seminif'eri contor'ti** [NA], convoluted seminiferous tubules: the numerous delicate, contorted canals within each lobule of the testis, from whose epithelial linings the spermatozoa are formed. **tu'buli seminif'eri rec'ti** [NA], straight seminiferous tubules: the straight terminal portions of the seminiferous tubules, which form the rete testis.

tubus (too'bus), pl. *tu'bi* [L.] tube; used as a general term in anatomical nomenclature. **t. digesto'rius**, canalis alimentarius.

Tuerck see *Türck*.

Tuffier's method, test (te'fe-äz) [Marin Théodore Tuffier, surgeon in Paris, 1857-1929] see under *method* and *tests*.

Tuffnell's treatment (tuf'nelz) [Thomas Joliffe Tuffnell, English surgeon, 1819-1885] see under *treatment*.

tuft (tuft) a small clump or cluster; a coil. **enamel t's**, groups or bunches of poorly calcified enamel rods extending from the dentoenamel junction through about one third the thickness of the enamel. **hair t's**, groups of several hairs from one follicle, consisting of one main hair and some secondary hairs. **malpighian t's**, renal t's, glomeruli renalis. **synovial t's**, villi synoviales.

tuftsin (tuft'sin) a basic tetrapeptide, L-threonyl-L-bisyl-L-propyl-L-arginine, produced in the spleen that stimulates phagocytosis in polymorphonuclear leukocytes and in macrophages.

tugging (tug'ing) a pulling sensation. **tracheal t.**, a pulling sensation in the trachea, due to aneurysm of the arch of the aorta; it is most apparent when the head is extended and a finger is placed on the thyroid cartilage. Called also *Oliver's* or *Porter's sign*.

tularemia (too'lah-re-me-ah) [*Tulare* a district in California, where the disease was first described] a disease of rodents, resembling plague, which is transmitted by the bites of flies, fleas, ticks, and lice, and may be acquired by man through handling of contaminated animal products (leather) or infected animals, or the bites of fleas, ticks, and the deer fly. Caused by *Francisella*

tularensis; the disease is of three types: *ulceroglandular*, in which the primary lesion affects the skin, with associated regional lymph node enlargement; *oculoglandular*, marked by conjunctivitis and preauricular node inflammation; and *pneumonic*, marked by severe pulmonary infection due to inhalation or blood stream dissemination. Meningitis is an uncommon manifestation. All forms exhibit the constitutional signs of fever, chill, headache, and myalgia, which vary greatly in intensity. Called also *deer fly fever*, *Pahvant Valley plague*, *rabbit fever*, *alkali disease*, and *Francis' disease*.

tularine (too'lah-rën) the antigen used in the Foshay skin test for tularemia.

tulase (too'lās) Von Behring's fluid, used by him in the treatment of tuberculosis.

tulle gras (tool-grah') [Fr. "fatty tulle"] a close-meshed net cut into squares and impregnated with soft paraffin, Peruvian balsam, and vegetable oil; used in treating raw surfaces.

Tulpus' valve (tul'pe-us) [Nikolaas Tulpus (Nicolas Tulp), Dutch physician, 1593-1674] valva ileocecalis.

tumefacient (too'me-fa'shent) [L. *tumefaciens*] tending to cause or causing a swelling.

tumefaction (too'me-fak'shun) [L. *tumefactio*] a swelling; the state of being swollen, or the act of swelling; puffiness; edema.

tumentia (too-men'she-ah) [L.] swelling. **vasomotor t.**, irregular partial swelling of the lower limbs, and sometimes of the arms associated with vasomotor changes.

tumescence (too-mes'ens) 1. the condition of being tumid or swollen. 2. a swelling.

tumeur (too-mer') [Fr.] tumor. **t. perlée** (too-mer' per-la') [Fr. "pearly tumor"], cholesteatoma. **t. pileuse** (too-mer' pe-luz') [Fr. "hairy tumor"], trichobezoar.

tumid (too'mid) [L. *tumidus*] swollen or edematous.

tumor (too'mor) [L., from *tumere* to swell] 1. swelling, one of the cardinal signs of inflammation; morbid enlargement. 2. a new growth of tissue in which the multiplication of cells is uncontrolled and progressive; called also *neoplasm*. **Abrikosov's t.**, myoblastoma. **acoustic nerve t.**, a tumor growing from the sheath of the acoustic nerve at the cerebropontine angle. Called also *acoustic neuroma*, *acoustic neurilemoma*, *schwannoma*, and *acoustic neurinoma*. **acute splenic t.**, a swelling resulting from acute splenitis. **adenoid t.**, adenoma. **adenomatoid t.**, a small, circumscribed, benign tumor of the genital tract (the epididymis, tunic of testis, uterine corpus, or uterine tube), composed of small glandlike spaces lined by flattened or cuboidal mesothelium-like cells. **adipose t.**, lipoma. **adrenal rest t.**, lipoid cell t. of ovary. **t. al'bus**, "white swelling"; tuberculosis of a bone or joint. **t. al'bus pyo'genes**, a chronic inflammation of gunshot injuries of the bones and joints marked by great swelling of the capsule of the joint and surrounding soft parts, which become converted into a gelatinous, edematous granulation tissue (A. Tietze). **aniline t.**, cancer appearing in workers in the synthetic aniline dye industry. **benign t.**, one that lacks the properties of invasion and metastasis and that is usually surrounded by a fibrous capsule; its cells also show a lesser degree of anaplasia than those of malignant tumors. **blood t.**, 1. hematoma. 2. aneurysm. **Brenner t.**, a tumor of the ovary whose structure consists of groups of epithelial cells lying in a fibrous connecting tissue stroma. When small the tumor may be solid, resembling fibroma; when large it may appear like a cystadenoma with nodular masses of the tumor (Brenner nodules) in the cyst wall. Called by Brenner *oophoroma folliculare*. **Brooke's t.**, trichoeptelioma. **brown t.**, a giant-cell granuloma produced in and replacing bone, occurring in osteitis fibrosa cystica and due to hyperparathyroidism. **Brown-Pearce t.**, a transplantable anaplastic carcinoma that forms a soft, friable, necrotic, hemorrhagic lesion at the site of inoculation. **Burkitt's t.**, see under *lymphoma*. **Buschke-Löwenstein t.**, a large cauliflower-like mass of warts occurring on the prepuce, especially in uncircumcized males, and also in the perianal region; it tends to penetrate and destroy adjacent tissue. Called also *giant condyloma acuminatum*. **butyroid t.**, a collection of material in the mammary gland closely resembling butter. **carcinoid t. of bronchus**, a highly vascular tumor of the bronchus similar to carcinoid (argentaffinoma) of the gastrointestinal tract. **carotid body t.**, an invariably benign, encapsulated, firm round mass at the bifurcation of the common carotid artery, with nests of large polyhedral cells in alveolar or organoid arrangement; usually asymptomatic, but sometimes causing dizziness and nausea or vomiting. It is a form of chemodectoma. **cartilaginous t.**, a chondroma or an enchondroma. **cavernous t.**, angioma cavernosum. **cellular t.**, a tumor made up chiefly of cells in a homogeneous stroma. **chromaffin-cell t.**, pheochromocytoma. **Codman's t.**, chondroblastoma. **t. col'li**, a tumor in the neck. **colloid t.**, myxoma. **connective-tissue t.**, any tumor developed from some structure of the connective tissue, such as a lipoma, fibroma, glioma, chondroma, or sarcoma. **craniopharyngeal duct t.**, craniopharyngioma. **cystic t.**, one not solid, but more or less hollow. **dermoid t.**, a teratoma which contains fatty cutaneous elements, and sometimes hair, nails, etc.; such tumors are usually benign, but solid

dermoids are more often malignant than cystic ones (dermoid cysts). Called also *teratoid t.* **desmoid t.**, desmoid. **dumb-bell t.**, hourglass t. **eiloid t.**, a skin tumor having the look of a coil of intestine. **embryonal t.**, embryoma. **embryoplastic t.**, one due to the growth of persistent embryo cells. **encysted t.**, a tumor enclosed in a membranous sac. **epithelial t.**, a tumor containing epithelium; an organized tumor. **erectile t.**, hemangioma cavernosum. **Ewing's t.**, a malignant tumor of the bone which always arises in medullary tissue, occurring more often in cylindrical bones, with pain, fever, and leukocytosis as prominent symptoms; called also *Ewing's sarcoma*. **false t.**, one due to extravasations, exudation, echinococcus, or retained sebaceous matter. **fatty t.**, lipoma. **fecal t.**, stercoroma. **fibrocellular t.**, fibroma. **fibroid t.**, fibroma. **fibroplastic t.**, a fibroma or a fibrosarcoma. **fluid t.**, lymphangioma cysticum. **fungating t.**, a tumor with exuberant granulation. **gelatinous t.**, myxoma. **germinal t.**, a tumor of germ cell origin. **giant cell t. of bone**, a bone tumor composed of cellular spindle cell stroma containing scattered multinucleated giant cells resembling osteoclasts; symptoms may include local pain and tenderness, functional disability, and, occasionally, pathologic fractures. The tumors range from benign to frankly malignant lesions. **giant cell t. of tendon sheath**, a benign tumor-like lesion of tendon sheath origin forming a small, yellow, discrete nodule, most commonly of the wrist and fingers, or ankle and toes; the tissue is laden with lipophages and contains multinucleated giant cells. Called also *benign synovioma* and *nodular tenosynovitis*. **glomus t.**, glomangioma. **glomus jugulare t.**, a chemodectoma arising from the chemoreceptors of the glomus jugulare. **granular cell t.**, a benign circumscribed tumor-like lesion of soft tissue, particularly of the tongue, skin, and muscle, composed of large cells having a prominent granular cytoplasm and considered by some to be derived from myoblasts (myoblastoma) and by others from neurogenic elements (granular cell schwannoma); still others regard it as a manifestation of lipid storage cell disease. **granulation t.**, a granuloma. **granulosa t.**, **granulosa cell t.**, an ovarian tumor originating in the cells of the primordial membrana granulosa; it may be associated with excessive production of estrin inducing endometrial hyperplasia with menorrhagia. Called also *folliculoma* and *granulosa cell carcinoma*. **granulosa-theca cell t.**, an ovarian tumor predominantly composed of either granulosa cells (follicular cells) or theca cells, and often associated with excessive production of estrogen, with hyperplasia of the breast and endometrium, and carcinoma of the endometrium. When luteinized, i.e., having cells resembling those of the corpus luteum, it is known as luteoma. **Grawitz's t's**, hypernephroma; the tumors formerly known as adenomas of the kidney, but which Grawitz thought to be an overgrowth of fetal inclusion in the midst of the kidney substance of particles of suprarenal glandular tissue: now considered carcinoma of the renal parenchyma. **Gubler's t.**, a tumor on the back of the wrist, with paralysis of the extensors of the hand, in cases of lead poisoning. **gummy t.**, gumma. **heterologous t.**, one made up of tissue which differs from that in which it grows. **heterotypic t.**, heterologous t. **hilar cell t.**, a rare benign neoplasm of the hilus of the ovary, histologically resembling Leydig cell tumor of the testis; it may cause virilization. **histioid t.**, one which is formed of a single tissue resembling that of the surrounding parts. **homoiotypic t.**, **homologous t.**, a tumor which resembles the surrounding parts in its structure. **Hortega cell t.**, a cellular tumor of the lymphoreticular system arising in the central nervous system. **hourglass t.**, a spinal tumor made up of intradural and extradural masses joined by a narrow pedicle passing through an enlarged intervertebral foramen. **Hürthle cell t.**, a new growth of the thyroid gland composed wholly or predominantly of large cells (Hürthle cells) having abundant granular, eosinophilic cytoplasm. Such tumors are usually benign (Hürthle cell adenoma) but on occasion may be locally invasive or may rarely metastasize (Hürthle cell carcinoma, or malignant Hürthle cell tumor). **infiltrating t.**, a tumor which is not clearly marked off from the surrounding tissue. **innocent t.**, benign t. **iron-hard t.**, Riedel's struma. **islet cell t.**, a tumor of the islets of Langerhans; such tumors may result in hyperinsulinism or in Zollinger-Ellison syndrome. **ivory-like t.**, osteoma durum. **Jensen's t.**, see under *sarcoma*. **Krompecher's t.**, rodent ulcer. **Krukenberg's t.**, a special type of carcinoma of the ovary, usually metastatic from cancer of the gastrointestinal tract, especially of the stomach. It is characterized by areas of mucoid degeneration and the presence of signet-ring-like cells. Called also *carcinoma mucocellulare*. **lacteal t.**, 1. mammary abscess. 2. galactocoele. **Leydig cell t.**, the most common nongerminal tumor of the testis, derived from the Leydig cells of the testis; such tumors are rarely malignant. **t. lie'nis**, enlargement of the spleen less in degree than splenomegaly. **lipoid cell t. of ovary**, a rare, usually benign, ovarian tumor composed of eosinophilic cells or cells with lipid vacuoles, arising from ovarian cells or embryonic rest cells of the adrenals; it causes masculinization. Called also *adrenal rest t.* and *masculinovoblastoma*. **luteinized granulosa-theca cell t.**, luteoma. **Malherbe t.**, pilomatricoma. **malignant t.**, one that has the properties of invasion and metastasis and that

shows a greater degree of anaplasia than do benign tumors. **march t.**, syndesmitis metatarsae. **margaroid t.**, a choles-teatoma. **mast cell t.**, a benign, local aggregation of mast cells forming a nodulous tumor. **melanotic neuroectoder-mal t.**, a benign, rapidly growing, deeply pigmented tumor of the jaw and occasionally of other sites, consisting of an infiltrating mass of cells arranged in an alveolar pattern, and occurring almost exclusively in infants. Its source of origin is in dispute, the various theories giving rise to its several names. Called also *melanoameloblastoma*, *melanotic ameloblastoma*, *pigmented ameloblastoma*, *melanotic progenoma*, and *retinal anlage tumor*. **migrated t.**, **migratory t.**, a tumor arising from a portion of a primary tumor which has become detached from its original location and fixed in some other place or lies free in a cavity. **mixed t.**, a tumor composed of more than one type of neoplastic tissue; especially "a complex embryonal tumor of local origin, which reproduces the normal development of the tissues and organs of the affected part" (Ewing). **mucous t.**, a myxoma. **muscular t.**, a myoma. **Nélaton's t.**, a dermoid tumor of the wall of the abdomen. **neuroepithelial t.**, a highly malignant tumor of peripheral nerves, developed from elements derived from the neural crest and resembling tumors of the central nervous system. **oozing t.**, a rare disease, consisting of a large, flat tumor on one or both labia majora, divided with deep fissures, and discharging a large amount of acrid, offensive fluid. **organoid t.**, a teratoma. **oxyphil cell t.**, Hürthle cell t. **Pancoast's t.**, pulmonary sulcus t. **papillary t.**, a papilloma. **pearl t.**, **pearly t.**, cholesteatoma. **Perlmann's t.**, a benign multiloculated cystic tumor of the kidney, surrounded by a dense fibrous capsule and showing a yellow-blue-gray color on its cut surface. **phantom t.**, an abdominal swelling not due to a structural change, but to a neurosis; it is generally due to gaseous distention of the bowels. **plasma cell t.**, plasmacytoma. **potato t.**, chemodectoma of the carotid body. **pregnancy t.**, a bright red or purplish red, smooth, mushroom-like mass on the gingiva, usually occurring after the third month of pregnancy, and due to a chronic inflammatory response to local irritation. Histopathologically and clinically, it resembles pyogenic granuloma; lesions clinically and histologically identical are also seen in men and nonpregnant women. **pre malignant fibroepithelial t.**, pre malignant fibroepithelioma. **pseudointraligamentous t.**, a kind of ovarian tumor simulating intraligamentous tumors, but in reality adherent to the posterior surface of the broad ligament. **pul-monary sulcus t.**, one at the apex of the lung, extending out-ward to destroy the ribs and vertebrae and invading the brachial plexus; called also *Pancoast's t.* **ranine t.**, ranula. **Rath-ke's t.**, **Rathke's pouch t.**, craniopharyngioma. **Reck-linghausen's t.**, adenoleiomyofibroma of the posterior uterine wall or of the wall of an oviduct. **retinal anlage t.**, melano-tic neuroectodermal tumor. **sacroccocygeal t.**, a form of spina bifida containing teratomatous tissue. **sand t.**, psam-moma. **Schmincke t.**, lymphoepithelioma. **Schwann-cell t.**, a neoplasm of a nerve sheath (Schwann's sheath); schwannoma. **Sertoli cell t.**, androblastoma, def. 1. **Sertoli-Ley-dig cell t.**, arrhenoblastoma. **sheath t.**, a tumor of the sheaths of the brain or peripheral nerves, including meningioma, acoustic nerve tumor, and schwannoma. **Steiner's t's**, Jean-selme's nodules. **stercoral t.**, stercoroma. **superior sul-cus t.**, pulmonary sulcus t. **teratoid t.**, teratoma. **theca cell t.**, a fibroid-like tumor of the ovary containing yellow areas of lipid material derived from theca cells. It may be associated with excessive production of estrogen and have a tendency to cystic degeneration. The tumor is rarely composed entirely of theca cells; commonly both theca and follicular cells (granulosa cells) are found. Called also *thecoma* and *fibroma thecocellulare xanthomatodes*. See also *granulosa-theca cell t.* **transition t.**, one which recurs after removal and then shows malignant characters. **tridermic t.**, a teratoma. **true t.**, a neoplasm. **turban t.**, multiple cutaneous cylindromas of the scalp grouped together so as to cover the entire scalp like a turban. **vari-cose t.**, a swelling, composed of dilated veins. **vascular t.**, 1. a tumor of blood vessel elements; an angioma. 2. any tumor with a copious blood supply. **villous t.**, papilloma. **War-thin's t.**, papillary adenocystoma lymphomatousum. **warty cicatricial t.**, a neoplasm which appears as warty growths in parallel lines on the surface of a scar; it often breaks down and becomes what is known as Marjolin's ulcer. **white t.**, chronic tuberculous arthritis. **Wilms' t.**, a rapidly developing malignant mixed tumor of the kidneys, made up of embryonal elements; it usually affects children before the fifth year, but may occur in the fetus and rarely in later life. Called also *embryonal adenomyo-sarcoma*, *carcinosarcoma*, or *nephroma*, and *nephroblastoma*. **yolk sac t.**, mesonephroma (type 2).

tumoraffin (too'mor-af'in) [*tumor* + *L. affinis* related] having a special affinity for tumor cells; oncotropic.

tumoricidal (too'mor-i-si'dal) destructive to cancer cells.

tumorigenesis (too'mor-i-jen'ē-sis) the production of tumors.

tumorigenic (too'mor-i-jen'ik) giving rise to tumors; said especially of a cell or group of cells capable of producing a tumor. Cf. *oncogenic*.

tumorous (too'mor-us) of the nature of a tumor.

tumultus (too-mul'tus) [L.] excessive organic action or motility.

Tunga (tung'gah) a genus of fleas of the family Hectopsyllidae.
T. pen'etrans, a species widely distributed in the tropical and subtropical regions of America and Africa; called *Dermatophilus penetrans*. See *chigoe*.

tungiasis (tung-gi'ah-sis) infestation of the skin with *Tunga penetrans*. See *chigoe*.

tungstate (tung'stāt) a salt of tungstic acid.

tungsten (tung'sten) [Swed. "heavy stone"] the chemical element of atomic number 74, symbol W, and atomic weight 183.85; used in electric light filaments and in steel alloys to secure hardness.

tunic (too'nik) a covering or coat; see *tunica*. **Bichat's t.**, tunica intima vasorum. **Brücke's t.**, tunica nervea of Brücke. **fibrous t.**, tunica fibrosa. **fibrous t. of eyeball**, tunica fibrosa bulbi. **fibrous t. of liver**, tunica fibrosa hepatis. **mucous t.**, tunica mucosa. **muscular t.**, tunica muscularis. **pharyngeal t.**, pharyngobasilar t., fascia pharyngobasilaris. **proper t.**, tunica propria. **Ruysch's t.**, lamina choriocapillaris. **serous t.**, tunica serosa. **t's of spermatic cord and testis**, tunicae funiculi spermatici et testis.

tunica (too'ni-kah), pl. *tu'nicae* [L.] a covering or coat; [NA] a general term for a membrane or other structure covering or lining a body part or organ. Called also *tunic*. **t. abdomina'lis**, the aponeurosis of the abdominal muscles in certain quadrupeds, as the horse. **t. adna'ta oc'uli**, tunica conjunctiva; sometimes applied specifically to the tunica conjunctiva bulbi. **t. adna'ta tes'tis**, lamina parietalis tunicae vaginalis testis. **t. adventi'tia** [NA], the outer coat of various tubular structures, made up of connective tissue and elastic fibers. **t. adventi'tia duc'tus deferen'tis** [NA], the adventitious coat of the ductus deferens. **t. adventi'tia esoph'agi** [NA], the adventitious coat of the esophagus. **t. adventi'tia tu'bae uteri'nae**, tela subserosa tubae uterinae. **t. adventi'tia ure'teris** [NA], the adventitious coat of the ureter. **t. adventi'tia vaso'rum**, t. externa vasorum. **t. adventi'tia vesic'ulae semina'lis** [NA], the adventitious coat of the seminal vesicle. **t. albugin'ea** [NA], a dense, white, fibrous sheath enclosing a part or organ. **t. albugin'ea cor'poris spongio'si** [NA], the dense, white, fibroelastic sheath that encloses the corpus spongiosum of the penis. **t. albugin'ea corpo'rum cavernoso'rum** [NA], the dense, white, fibroelastic sheath that encloses the corpora cavernosa penis. Its superficial, longitudinal fibers form a tunic surrounding both corpora, and the deep circularly coursing fibers surround them separately, uniting medially to form the septum of the penis. **t. albugin'ea lie'nis**, t. fibrosa lienis. **t. albugin'ea tes'tis** [NA], the dense, white, inelastic tissue immediately covering the testis, beneath the visceral layer of the tunica vaginalis. **t. conjuncti'va** [NA], the thin, transparent mucous membrane lining the eyelids and covering the front surface of the eyeball; called also *conjunctiva*. It comprises the tunica conjunctiva bulbi and the tunica conjunctiva palpebrarum. **t. conjuncti'va bul'bi** [NA], **t. conjuncti'va bul'bi oc'uli**, bulbar conjunctiva: the portion of the tunica conjunctiva covering the cornea and front part of the sclera, appearing white because of the sclera behind it. **t. conjuncti'va palpebra'rum** [NA], palpebral conjunctiva: the portion of the tunica conjunctiva lining the eyelids, appearing red because of its great vascularity. **t. dar'tos** [NA], a layer of smooth muscle fibers situated in the superficial fascia of the scrotum; the deeper fibers help to form the septum of the scrotum; also called *dartos*. **t. elas'tica inter'na**, t. intima vasorum. **t. ex'terna the'cae follic'uli** [NA], the external, fibrous layer of the theca folliculi. **t. exter'na vaso'rum** [NA], **t. exter'na vaso'rum** [adventi'tia], the outer, fibroelastic coat of a blood vessel. **t. fibro'sa** [NA], fibrous tunic or coat: an enveloping fibrous membrane. **t. fibro'sa bul'bi** [NA], fibrous tunic of eyeball: the outer of the three tunics of the eye, comprising the cornea and the sclera; called also *t. fibrosa oculi*. **t. fibro'sa hep'atis** [NA], fibrous tunic of liver: the fibroelastic layer that surrounds the liver beneath the peritoneum; it is continuous at the hepatic portal with the perivascular fibrous capsule. **t. fibro'sa lie'nis** [NA], the fibroelastic coat of the spleen; called also *t. albuginea lienis*. **t. fibro'sa oc'uli**, t. fibrosa bulbi. **t. fibro'sa re'nis**, capsula fibrosa renis. **tu'nicae funic'uli spermatic'i** [NA], the coverings of the spermatic cord; see *tunicae funiculi spermatici et testis*. **tu'nicae funic'uli spermatic'i et tes'tis** [NA], tunics of spermatic cord and testis: the coverings of the spermatic cord and testis, comprising the external spermatic fascia, the cremasteric muscle and fascia, the internal spermatic fascia, and the tunica vaginalis testis. **t. inter'na bul'bi** [NA], the internal nervous tunic of the eye; see *retina*. **t. inter'na the'cae follic'uli** [NA], the inner, vascular layer of secretory cells of the theca folliculi; called also *theca interna* and *internal coat of capsule of graafian follicle*. **t. in'tima vaso'rum** [NA], the inner coat of the blood vessels, made up of endothelial cells surrounded by longitudinal elastic fibers and connective tissue. **t. me'dia vaso'rum** [NA], the middle coat of the blood vessels, made up of transverse elastic and muscle fibers. **t. muco'sa** [NA], mu-

cous tunic or coat: the mucous membrane lining of various tubular structures, comprising the epithelium, basement membrane, lamina propria mucosae, and lamina muscularis mucosae. **t. muco'sa bronchio'rum** [NA], the mucous membrane lining the bronchi. **t. muco'sa ca'vi tym'pani** [NA], the mucous membrane covering the walls and much of the contents of the tympanic cavity; called also *t. mucosa tympanica* and *mucous coat of tympanic cavity*. **t. muco'sa co'li** [NA], the mucous coat of the colon. **t. muco'sa duc'tus deferen'tis** [NA], the mucous coat of the ductus deferens. **t. muco'sa esoph'agi** [NA], the mucous coat of the esophagus. **t. muco'sa intesti'ni rec'ti**, t. mucosa recti. **t. muco'sa intesti'ni ten'uis** [NA], the mucous coat of the small intestine. **t. muco'sa laryn'gis** [NA], the mucous coat of the larynx. **t. muco'sa lin'guae** [NA], the mucous membrane covering the tongue. **t. muco'sa na'si** [NA], the mucous membrane lining the nasal cavity; called also *membrana mucosa nasi*. See also *regio olfactoria* and *regio respiratoria*. **t. muco'sa o'ris** [NA], the tunica mucosa of the mouth. **t. muco'sa pharyn'gis** [NA], the mucous coat of the pharynx. **t. muco'sa rec'ti** [NA], the mucous coat of the rectum; called also *t. mucosa intestini recti*. **t. muco'sa tra'cheae** [NA], the mucous coat of the trachea. **t. muco'sa tu'bae auditi'vae** [NA], the mucous membrane lining the auditory tube. **t. muco'sa tu'bae uteri'nae** [NA], the mucous coat of the uterine tube. **t. muco'sa tympani'ca**, t. mucosa cavi tympani. **t. muco'sa ure'teris** [NA], the mucous coat of the ureter. **t. muco'sa ure'thrae femini'nae** [NA], **t. muco'sa ure'thrae mulie'bris**, the mucous coat of the female urethra. **t. muco'sa u'teri** [NA], the mucous membrane lining the uterus, the thickness and structure of which vary with the phase of the menstrual cycle; called also *endometrium* [NA alternative]. **t. muco'sa vagi'nae** [NA], the mucous coat of the vagina. **t. muco'sa ventric'uli** [NA], the mucous coat of the stomach. **t. muco'sa vesic'ae fel'leae** [NA], the mucous coat of the gallbladder. **t. muco'sa vesic'ae urina'riae** [NA], the mucous coat of the urinary bladder. **t. muco'sa vesic'ulae semina'lis** [NA], the mucous coat of the seminal vesicle. **t. muscula'ris** [NA], muscular tunic or coat: the muscular coat or layer surrounding the tela submucosa in most portions of the digestive, respiratory, urinary, and genital tracts. **t. muscula'ris bronchio'rum** [NA], the muscular coat of the bronchi. **t. muscula'ris cer'vicis u'teri**, the muscular coat of the cervix of the uterus. **t. muscula'ris coli** [NA], the muscular coat of the colon, consisting of layers of longitudinally and circularly coursing fibers. **t. muscula'ris duc'tus deferen'tis** [NA], the muscular coat of the ductus deferens. **t. muscula'ris esoph'agi** [NA], the muscular coat of the esophagus. **t. muscula'ris intesti'ni rec'ti**, t. muscularis recti. **t. muscula'ris intesti'ni ten'uis** [NA], the muscular coat of the small intestine, consisting of an inner circular and an outer longitudinal layer. **t. muscula'ris pharyn'gis** [NA], the muscular coat of the pharynx, consisting primarily of the pharyngeal constrictor muscles. **t. muscula'ris rec'ti** [NA], the muscular coat of the rectum, consisting of an outer longitudinal and an inner circular layer; called also *t. muscularis intestini recti*. **t. muscula'ris tra'cheae** [NA], the muscular coat of the trachea. **t. muscula'ris tu'bae uteri'nae** [NA], the muscular coat of the uterine tube. **t. muscula'ris ure'teris** [NA], the muscular coat of the ureter. **t. muscula'ris ure'thrae femini'nae** [NA], **t. muscula'ris ure'thrae mulie'bris**, the muscular coat of the female urethra. **t. muscula'ris u'teri** [NA], the smooth muscle coat of the uterus, which forms the mass of the organ; called also *myometrium* [NA alternative] and *mesometrium*. **t. muscula'ris vagi'nae** [NA], the muscular coat of the vagina. **t. muscula'ris ventric'uli** [NA], the muscular coat of the stomach, composed of longitudinal, circular, and oblique fibers. **t. muscula'ris vesic'ae fel'leae** [NA], the muscular coat of the gallbladder. **t. muscula'ris vesic'ae urina'riae** [NA], the smooth muscle coat of the urinary bladder. **t. muscula'ris vesic'ulae semina'lis** [NA], the muscular coat of the seminal vesicle. **t. ner'vea of Brücke**, the cerebral layer of the retina, exclusive of the rod and cone layer with its fibers and nuclei. **t. pro'pria** [NA], proper tunic: a general term in anatomical nomenclature for the proper coat or layer of a part, as distinguished from an investing membrane. **t. pro'pria co'rii**, stratum reticulare corii. **t. pro'pria tu'buli tes'tis**, the proper coat of the seminiferous tubules. **t. ruyschia'na**, lamina choriocapillaris. **t. sero'sa** [NA], the membrane lining the external walls of the body cavities and reflected over the surfaces of protruding organs; it consists of mesothelium lying upon a connective tissue layer, and it secretes a watery exudate; called also *serous coat*, *membrane*, or *tunic*. **t. sero'sa co'li** [NA], the serous coat of the colon. **t. sero'sa hep'atis** [NA], the serous coat of the liver. **t. sero'sa intesti'ni ten'uis** [NA], the serous coat of the small intestine. **t. sero'sa lie'nis** [NA], the serous coat of the spleen. **t. sero'sa peritone'i** [NA], the serous coat of the peritoneum. **t. sero'sa tes'tis**, lamina visceralis tunicae vaginalis testis. **t. sero'sa tu'bae uteri'nae** [NA], the serous coat of the uterine tube. **t. sero'sa u'teri** [NA], the serous coat of the uterus; called also *perimetrium* [NA alternative]. **t. sero'sa ventric'uli** [NA],

the serous coat of the stomach. **t. sero'sa vesi/cae fel/leae** [NA], the serous coat of the gallbladder. **t. sero'sa vesi/cae urina/riae** [NA], the serous coat of the urinary bladder. **t. submucosa ure/thrae mulie/bris**, the submucous coat of the female urethra. **tu'nicae tes/tis** [NA], the coverings of the testis; see *tunicae funiculī spermatici et testis*. **t. u'vea**, t. vasculosa bulbi. **t. vagina/lis commu'nis** [tes/tis et funic/uli spermat/ici], fascia spermatica interna. **t. vagina/lis pro'pria tes/tis**, t. vaginalis testis. **t. vagina/lis tes/tis** [NA], the serous membrane covering the front and sides of the testis and epididymis, composed of a visceral and a parietal layer. **t. vasculo'sa**, a vascular coat, or a layer well supplied with blood vessels. **t. vasculo'sa bul/bi** [NA], vascular tunic of the eye: the middle, pigmented, vascular coat of the eyeball, comprising the choroid, the ciliary body, and the iris; called also *uvea* and *uveal tract*. **t. vasculo'sa len'tis**, the vascular envelope which encloses and nourishes the developing lens of the fetus; it consists of the *pupillary membrane* in the region of the pupil, the *capsulopupillary membrane* around the edge of the lens, and the *capsular membrane* at the back of the lens. **t. vasculo'sa oc/uli**, t. vasculosa bulbi.

tunicary (too'nī-ker'e) pertaining to or possessing a tunic or enveloping membrane.

Tunicata (too'nī-ka'tah) [L. "clothed with a tunic"] Urochordata.

tunicate (too'nī-kāt) an animal belonging to the Urochordata (Tunicata); a urochordate.

tunicin (too'nī-sin) a substance resembling cellulose occurring in the body covering of some of the lowest vertebrates, such as the tunicates or ascidians; animal cellulose.

tuning fork (toon'ing fork) a two-tined forklike instrument of steel or aluminum, the tines of which when struck give off a musical note.

tunnel (tun'el) a passageway of varying length, through a solid body, completely enclosed except for the open ends, permitting entrance and exit. **aortico-left ventricular t.**, a congenital communication between the ascending aorta just above the coronary arteries, and the left ventricle. **carpal t.**, the osseofibrous passage for the median nerve and the flexor tendons, formed by the flexor retinaculum and the carpal bones. Called also *canalis carpi* [NA]. **cervical t's**, small tubular canals which are extensions of the clefts in the uterine endocervical mucosa. **Corti's t.**, inner t. **cubital t.**, the opening between the two heads of the flexor carpi ulnaris muscle through which the ulnar nerve enters the forearm. **flexor t.**, carpal t. **inner t.**, a canal extending the length of the cochlea, formed by the pillar cells of the organ of Corti; called also *canal of Corti* and *Corti's t.* **outer t.**, Nuel's space. **tarsal t.**, the osseofibrous passage for the posterior tibial vessels, tibial nerve, and flexor tendons, formed by the flexor retinaculum and tarsal bones.

turacin (too'rah-sin) a red or crimson pigment, a copper salt of uroporphyrin.

turacoporphylin (too'rah-ko-por'fi-rin) a derivative from turacin; nearly identical with hematoporphyrin.

turanose (too'rah-nōs) a reducing disaccharide, C₁₂H₂₂O₁₁, obtained by partially hydrolyzing melazitose.

Turbatrix (tur-ba'triks) a genus of nematodes. **T. aceti**, a minute nematode found in vinegar, where it helps form "mother of vinegar"; it sometimes occurs in the urine of patients who have used vinegar douches. It may also occur in sour paste and fermenting vegetable substances. Formerly called *Anguillula aceti*.

Turbellaria (tur'be-la're-ah) a class of platyhelminths, usually found in fresh or salt water, although some are terrestrial.

turbid (tur'bid) [L. *turba* a tumult] cloudy; showing turbidity.

turbidimeter (tur'bi-dim'ē-ter) an instrument for measuring turbidity.

turbidimetric (tur'bid-i-met'rik) performed by the turbidimeter.

turbidimetry (tur'bi-dim'ē-tre) the measurement of the turbidity of a fluid.

turbidity (tur-bid'i-te) cloudiness; disturbance of solids (sediment) in a solution, so it is not clear.

turbinal (tur'bi-nal) [L. *turbinalis*, from *turbo* a child's top] 1. shaped like a top; turbinate. 2. a turbinate bone.

turbinate (tur'bi-nāt) [L. *turbineus*] 1. shaped like a top. 2. a turbinate bone (concha nasalis). **sphenoid t.**, concha sphenoidalis.

turbinated (tur'bi-nāt'ed) shaped like a top.

turbinectomy (tur'bi-nek'to-me) [*turbinate* + Gr. *ektomē* excision] the surgical removal of a turbinate bone.

turbinotome (tur-bin'o-tōm) a cutting instrument for use in the removal or cutting of a turbinate bone.

turbinotomy (tur'bi-not'o-me) [*turbinate* + Gr. *tomē* a cutting] the surgical cutting of a turbinate bone.

Türk's bundle, cell, column, degeneration, fasciculus (column), trachoma (tērks) [Ludwig Türk, neurologist and laryngologist in Vienna, 1810-1868] see under the nouns.

Turck's zone (turks) [Fenton Benedict Turck, New York physician, 1857-1932] see *zona transformans*.

turgescence (tur-jes'ens) [L. *turgescens* swelling] the distention or swelling of a part.

turgescent (tur-jes'ent) [L. *turgescens*] swelling or beginning to swell.

turgid (tur'jid) [L. *turgidus*] swollen and congested.

turgidization (tur'jid-i-za'shun) the creation of turgor in a tissue by the injection of fluid.

turgometer (tur-gom'ē-ter) [L. *turgor* swelling + *metrum* measure] an instrument for measuring the amount of turgescence.

turgor (tur'gor) [L.] the condition of being turgid; normal or other fullness. **t. vita/lis**, the normal consistency of living tissue.

turista (tu-rēs'tah) [Sp.] Mexican name for traveler's diarrhea.

Türk's cell (irradiation leukocyte) (tērks) [Wilhelm Türk, Austrian physician, 1871-1916] see under *cell*.

turmeric (tur'mer-ik) the rhizome of *Curcuma longa* L. (Zingiberaceae), a plant of India, China, and East Indies. It contains curcumin, an orange-yellow coloring principle, and several aromatic principles that give it a pepper-like and bitter taste; used as a coloring agent, chemical indicator, and condiment (as curry powder).

turmschadel (torm'sha-del) [Gr.] a developmental anomaly in which the skull is high and rounded, due to early synostosis of the three major sutures of the skull.

Turner's sign (tur'nerz) [George Grey Turner, English surgeon, 1877-1951] see under *sign*.

Turner's sulcus (tur'nerz) [William Aldren Turner, British neurologist, born 1864] sulcus intraparietalis.

Turner's syndrome (tur'nerz) [Henry Hubert Turner, American endocrinologist, born 1892] see under *syndrome*.

Turner tooth (hypoplasia) (tur'ner) [Joseph George Turner, British dentist, died 1955] see under *tooth*.

turnera (tur'ner-ah) damiana.

turnsick, turnsickness (turn'sik, turn'sik-nes) gid.

turnsol (turn'sol) litmus.

turpentine (tur'pen-tin) [L. *terebinthina*] the concrete oleoresin obtained from *Pinus palustris* Mill. (Pinaceae) and other species of *Pinus*. It contains a volatile oil, to which its properties are due, and in which form it is generally used; see under *oil*.

turriccephaly (tur'fī-sef'ah-le) oxycephaly.

turunda (tu-run'dah) [L.] 1. a surgeon's tent. 2. a suppository.

Turyn's sign (too'rinz) [Felix Turyn, Warsaw physician, born 1899] see under *sign*.

tus. abbreviation for *L. tus'sis*, a cough.

tusk (tusk) an extremely large tooth projecting beyond the lips.

tussal (tus'al) [L. *tussis* cough] pertaining to a cough.

tussicula (tū-sik'u-lah) [L., dim. of *tussis* cough] a slight cough.

tussicular (tū-sik'u-lar) [L. *tussicula*] of or relating to a cough.

tussiculation (tū-sik'u-la'shun) a short, hacking cough.

tussigenic (tus'fī-jen'ik) [L. *tussis* cough + Gr. *gennan* to produce] causing cough.

tussis (tus'is) [L.] cough. **t. convul'siva**, pertussis.

tussive (tus'iv) pertaining to or due to a cough.

tutamen (tu-ta'men), pl. *tutam'ina* [L.] a protective covering or structure. **tutam'ina oc/uli** ["defenses of the eye"], the appendages of the eye: the eyelids, lashes, etc. (organa oculi accessoria [NA]).

tutamina (tu-tam'i-nah) [L.] plural of *tutamen*.

Tuttle's proctoscope (tut'fz) [Edward Gerry Tuttle, surgeon in New York, 1862-1913] see under *proctoscope*.

Tween (twēn) trademark for preparations of polysorbates, used with a numerical suffix; e.g., *Tween 80* is a trademark for polysorbate 80.

tween-brain (twēn'brān) diencephalon.

twig in anatomy, a final ramification, as of branches of nerves or blood vessels.

twin (twin) one of two offspring produced in the same pregnancy and developed from one ovum (monozygotic) or from two ova (dizygotic) fertilized at the same time. **acardiac t.**, acardius. **allantoidoangiopagous t's**, twins joined by the vessels of the umbilical cord only; called also *omphaloangiopagous t's*. **binovular t's**, dizygotic t's. **conjoined t's**, monozygotic twins ranging from two well-developed individuals joined by a superficial connection of varying extent, usually in the frontal, transverse, or sagittal body plane (*symmetrical* or *equal conjoined t's*) to those in which only a small part of the body is duplicated or one small and incompletely developed component, the parasite, is attached to a much larger and more fully developed one, the autosite (*asymmetrical* or *unequal t's*). Called also *Siamese t's*. **conjoined t's**, **asymmetrical**, see *conjoined t's*. **conjoined t's**, **equal**, see *conjoined t's*. **conjoined t's**, **symmetrical**, see *conjoined t's*. **conjoined t's**, **unequal**, see *conjoined t's*. **dichorial t's**, **dichorionic t's**, dizygotic t's.

dissimilar t's, dizygotic t's. **dizygotic t's**, two offspring developed from two separate ova fertilized at the same time; they may be of the same or different sex, and they have different genomes. Called also *binovular*, *dichorial*, *dichorionic*, *dissimilar*, *false*, *fraternal*, *heterologous*, *hetero-ovular*, *two-egg*, and *unlike t's*. **enzygotic t's**, monozygotic t's. **false t's**, dizygotic t's. **fraternal t's**, dizygotic t's. **heterologous t's**, dizygotic t's. **hetero-ovular t's**, dizygotic t's. **identical t's**, monozygotic t's. **impacted t's**, twins so situated during delivery that the pressure of one against the other prevents simultaneous engagement of both. **monoamniotic t's**, twins developing within a single amniotic cavity; they are always monozygotic. **monochorial t's**, **monochorionic t's**, monozygotic t's. **mono-ovular t's**, **monovular t's**, monozygotic t's. **monozygotic t's**, two offspring developed from one zygote or fertilized ovum, and therefore having identical genomes. Called also *enzygotic*, *identical*, *monochorial*, *monochorionic*, *mono-ovular*, *similar*, *true*, and *uniovular t's*. **omphaloangiopagus t's**, allantoangiopagus t's. **one-egg t's**, monozygotic t's. **Siamese t's**, conjoined t's. **similar t's**, monozygotic t's. **true t's**, monozygotic t's. **two-egg t's**, dizygotic t's. **unequal t's**, twins of which one is incompletely developed. **uniovular t's**, monozygotic t's. **unlike t's**, dizygotic t's.

twinge (twinj) a short, sharp pain.

twinning (twi'ning) 1. the simultaneous production of two (or more) offspring. 2. the production of symmetrical structures or parts by division. **experimental t.**, embryonic duplication produced by purposeful external intervention. **spontaneous t.**, embryonic duplication without external intervention, as occurs in nature.

twinship (twin'ship) the state of being a twin.

Twiston (twis/ton) trademark for preparations of rotoramine tartrate.

twitch (twich) 1. a brief contractile response of a skeletal muscle elicited by a single maximal volley of impulses in the motor neurons supplying it. 2. a noose passed through a perforation in a board, used for compressing a part, as the lip of a horse, during slight operations.

twitching (twich'ing) the occurrence of a single contraction or a series of contractions of a muscle; see *twitch*. **fascicular t.**, repetitive brief contraction of large groups of bundles of muscle fibers. **fibrillar t.**, repetitive brief contraction of single bundles of muscle fibers. **Trousseau's t.**, repetitive brief contraction involving muscles of the face.

Twort-d'Herelle phenomenon (twort-dë-rel') [Frederick William Twort, British bacteriologist, 1877-1950; Felix Hubert d'Herelle of the Pasteur Institute, Paris, 1873-1949] see under *phenomenon*.

TX a symbol for a derivative of contagious tuberculin (TC.); see under *tuberculin*.

tybamate (ti'bah-mât) chemical name: butylcarbamic acid 2-[[[aminocarbonyl]oxy]methyl]-2-methylpentyl ester. A minor tranquilizer, $C_{13}H_{28}N_2O_4$, occurring as a clear, viscous liquid; administered orally.

tychastics (ti-kas'tiks) [Gr. *tychē* chance, accident] the science of industrial accidents.

tylectomy (ti-lek'to-me) [Gr. *tylos* knot + *ektomē* excision] resection of the local lesion only, in carcinoma of the breast; partial mastectomy.

Tylenol (ti'lë-nol) trademark for preparations of acetaminophen.

tylion (ti'lë-on) [Gr. *tylion* cushion] the point on the anterior edge of the optic groove in the median line.

tyloma (ti-lo'mah) [Gr. *tylōma*] a callus or callosity.

Tylophora asthmatica Wight et Arn. (ti-lo'fo-rah az-mat'i-kah) [Gr. *tylos* knot + *pherein* to bear] an asclepiadaceous plant of South Asia; it is the source of tylophorine.

tylophorine (ti-lo'fo-rin) chemical name: 9,11,12,13,13a,14-hexahydro-2,3,6,7-tetramethoxydibenzof[*f,h*]pyrrolo[1,2-*b*]isoquinoline. A crystalline alkaloid, $C_{24}H_{27}O_4N$, from *Tylophora asthmatica* Wight et Arn. (Asclepiadaceae); it is emetic, and is useful in dysentery and asthma.

tylosis (ti-lo'sis) [Gr. *tylōs* a knob or callus] the formation of a callus or callosity. **t. ciliaris**, thickening of the eyelids. **t. linguae**, leukoplakia buccalis. **t. palma'ris et planta'ris**, keratosis palmaris et plantaris.

tylotic (ti-lot'ik) pertaining to or affected with tylosis.

tyloxapol (ti-loks'ah-pöl) [USP] chemical name: 4-(1,1,3,3-tetramethylbutyl)phenol polymer with formaldehyde and oxirane. A nonionic liquid polymer of the alkyl aryl polyether alcohol type; used as a surfactant to aid liquefaction and removal of mucopurulent bronchopulmonary secretions, administered by inhalation through a nebulizer or with a stream of oxygen.

tympanal (tim'pah-nal) pertaining to the tympanic cavity or to the tympanic membrane.

tympanectomy (tim'pah-nek'to-me) [*tympanum* + Gr. *ektomē* excision] excision of the tympanic membrane.

tympania (tim-pan'e-ah) tympanites.

tympanic (tim-pan'ik) [L. *tympanicus*] 1. of or pertaining to the tympanum of the tympanic membrane. 2. bell-like; resonant.

tympanicity (tim'pah-nis'i-te) a tympanic quality.

tympanion (tim-pan'e-on) [Gr.] a point at either end of the vertical diameter of the anulus tympanicus. **lower t.**, the lowest point on the anulus tympanicus. **upper t.**, the highest point on the anulus tympanicus.

tympanism (tim'pah-nizm) [Gr. *tympanon* drum] distention with gas; tympanites.

tympanites (tim'pah-ni'tēz) [Gr. *tympanitēs*, from *tympanon* drum] distention of the abdomen, due to the presence of gas or air in the intestine or in the peritoneal cavity, as in peritonitis and typhoid fever. **false t.**, pseudotympanites. **uterine t.**, phytometra.

tympanitic (tim'pah-nit'ik) 1. pertaining to or affected with tympanites. 2. bell-like, or tympanic.

tympanitis (tim'pah-ni'tis) otitis media.

tympanoacryloplasty (tim'pah-no-ah-kril'o-plas'te) surgical obliteration of the mastoid cavity by instillation of an acrylic compound.

tympanocentesis (tim'pah-no-sen-te'sis) surgical puncture of the tympanic membrane (drumhead) or tympanum (middle ear).

tympanoeustachian (tim'pah-no-u-sta'ke-an) pertaining to the tympanic cavity and auditory tube.

tympanogenic (tim'pah-no-jen'ik) [*tympanum* + Gr. *gennan* to produce] arising from the tympanum or middle ear.

tympanogram (tim-pan'o-gram'') [*tympanum* + Gr. *metron* measure] a graphic representation of the relative compliance and impedance of the tympanic membrane and ossicles of the middle ear obtained by tympanometry.

tympanohyal (tim'pah-no-hi'al) 1. pertaining to the tympanum and the hyoid arch. 2. a small bone or cartilage at the base of the styloid process; in early life it becomes a part of the temporal bone.

tympanolabyrinthopexy (tim'pah-no-lab'f-i-rin'tho-pek'se) Sourdille's operation of uniting a neotympanic system to a labyrinthine fistula for the cure of progressive hearing loss from otosclerosis.

tympanomalleal (tim'pah-no-mal'e-al) pertaining to the tympanic membrane and the malleus.

tympanomandibular (tim'pah-no-man-dib'u-lar) pertaining to the middle ear and the mandible.

tympanomastoiditis (tim'pah-no-mas'toi-di'tis) inflammation of the middle ear and the pneumatic cells of the mastoid process.

tympanometric (tim'pan-o-met'rik) pertaining to tympanometry.

tympanometry (tim'pah-nom'ë-tre) indirect measurement of the compliance (mobility) and impedance of the tympanic membrane and ossicles of the middle ear; it is done by subjecting the external acoustic meatus to positive, normal, and negative air pressure and monitoring the resultant sound energy flow.

tympanoplastic (tim'pah-no-plas'tik) relating to tympanoplasty.

tympanoplasty (tim'pah-no-plas'te) [*tympanum* + Gr. *plassein* to form] surgical reconstruction of the hearing mechanism of the middle ear, with restoration of the drum membrane to protect the round window from sound pressure, and establishment of ossicular continuity between the tympanic membrane and the oval window. See also *myringoplasty*.

tympanosclerosis (tim'pah-no-sklë-ro'sis) a condition characterized by the presence of masses of hard, dense connective tissue around the auditory ossicles in the tympanic cavity.

tympanosquamosal (tim'pah-no-skwah-mo'sal) pertaining to the pars tympanica and pars squamosa of the temporal bone.

tympanostapedial (tim'pah-no-stä-pe'de-al) pertaining to the tympanum and the stapes.

tympanosympathectomy (tim'pah-no-sim'pah-thek'to-me) the operation of excising the tympanic plexus for the relief of tinnitus aurium.

tympanotemporal (tim'pah-no-tem'po-ral) pertaining to the tympanum and the region over the temporal bone or region.

tympanotomy (tim'pah-not'o-me) [*tympanum* + Gr. *tomē* a cutting] surgical puncture of the membrana tympani; myringotomy.

tympanous (tim'pah-nus) pertaining to or marked by tympanites; distended with gas.

tympanum (tim'pah-num) [L.; Gr. *tympanon* drum] the cavity of the middle ear, located just medial to the tympanic membrane, and containing the auditory ossicles and connecting with the mastoid cells and auditory tube. Called also *auris media* [NA].

tympany (tim'pah-ne) [Gr. *tympanias*] 1. tympanites. 2. a tympanic, or bell-like, percussion note. **bell t.**, a modified tympanitic note heard on percussion of the chest in some cases of pneumothorax. **Skoda's t.**, **skodaic t.**, skodaic resonance. **t. of the stomach**, a kind of indigestion in cattle and sheep.

marked by an abnormal collection of gas in the first stomach; called also *bloat*.

Tyndall light, phenomenon (effect) (tin'dal) [John Tyndall, British physicist, 1820-1893] see under *light* and *phenomenon*.

tyndallization (tyn'dal-i-za'shun) [John Tyndall] fractional sterilization.

type (tip) [L. *typus*; Gr. *typos* mark] the general or prevailing character of any particular case of disease, person, substance, etc. See also under *habit* and *habitus*. Cf. *constitution* and *diathesis*. **allotropic t.**, a personality which tends to be preoccupied with what others do or think or mean. **amyostatic-kinetic t.**, a type of epidemic encephalitis marked by apathy, rigidity, akinesis, slowing of movement and sometimes tremor. **apoplectic t.**, see *habitus apoplecticus*. **asthenic t.**, a type of physical constitution: slender, flat in front, long chested, poor muscular development. **athletic t.**, a type of physical constitution, marked by broad shoulders, deep chest, flat abdomen, thick neck, and good muscular development. **Aztec t., bird's head t.**, see *microcephalic idiocy*, under *idiocy*. **blood t's**, see *blood group*, under B. **body t.**, the general character of the body structure or constitution. See *Kretschmer's types* and *ectomorphy*, *endomorphy*, and *mesomorphy*. **buffalo t.**, obesity confined to the neck, head, and trunk; seen in Cushing's syndrome (def. 1). **Charcot-Marie t., Charcot-Marie-Tooth t.**, see *progressive neuropathic (peroneal) muscular atrophy*, under *atrophy*. **cycloid t.**, see *syntonic*. **Dejerine t.**, amyotrophic lateral sclerosis. **Dejerine-Landouzy t.**, Landouzy-Dejerine dystrophy. **Duchenne's t.**, pseudohypertrophic muscular dystrophy. **Duchenne-Aran t.**, spinal muscular atrophy. **Duchenne-Landouzy t.**, Landouzy-Dejerine dystrophy. **dysplastic t.**, any body type which differs from the asthenic, the athletic, and the pyknic types. **Eichhorst's t.**, see under *atrophy*. **Erb-Zimmerlin t.**, the juvenile scapular type of primary muscular dystrophy. **Fazio-Londe t.**, the bulbofacial type of familial infantile progressive spinal muscular atrophy. **Hutchison t.**, neuroblastoma with cranial metastases. **Kalmuck t., Kalmuk t.**, Down's syndrome. **koinotropic t.**, the socially adjusted type; the "good mixer." **Kretschmer t's**, types of physique related to personality: the *asthenic* (leptosomic) is schizoid; the *pyknic* is syntonic. **Landouzy's t.**, **Landouzy-Dejerine t.**, Landouzy-Dejerine dystrophy. **leg t.**, progressive hereditary muscular atrophy. **Leichtenstern's t.**, hemorrhagic encephalitis. **leptosomic t.**, asthenic t. **Levi-Lorain t.**, hypophyseal infantilism. **Leyden-Möbius t.**, limb-girdle muscular dystrophy. **Lorain t.**, arrested physical development (infantilism) of pituitary causation. **Nothnagel's t.**, see under *acroparesthesia*. **organic reaction t.**, a type of psychosis due to organic disease of the brain. **overactive t.**, a mental make-up characterized by mental and physical aggressiveness and activity, talkativeness and a tendency to exaltation. **Pepper's t.**, see under *syndrome*. **phage t.**, an intraspecies type of bacterium demonstrated by phage typing (see under *typing*); called also *lysotype* and *phagotype*. **phthioid t.**, a body type characterized by a flat, narrow chest. **phthisic t.**, habitus phthisicus. **Putnam's t.**, subacute combined degeneration of spinal cord; see under *degeneration*. **pyknic t.**, a physical type marked by rounded body, large chest, thick shoulders, broad head, and short neck. **Raymond's t. of apoplexy**, see under *apoplexy*. **Remak's t.**, see under *paralysis*. **Runeberg's t.**, see under *anemia*. **scapulohumeral t.**, progressive spinal muscular atrophy beginning in the shoulder. **schizoid t.**, see *schizoid*, def. 1. **Schultze's t.**, see under *acroparesthesia*. **seclusive t.**, a mental make-up characterized by quietness, reserve, shyness, secretiveness, and aversion to social contacts. **Séglas t.**, the psychomotor type of *paranoia*. **Simmerlin t.**, Leyden-Möbius dystrophy. **sphenic t.**, a type of physical constitution characterized by muscular strength. **Strümpell's t.**, see under *disease*, def. 1. **suspicious t.**, a mental make-up characterized by abnormal mistrustfulness and suspicion. **sympatheticotonic t.**, a type of physical constitution characterized by sympathicotonia. **syntonic t.**, see *syntonic*. **test t.**, see *test type*. **Tooth's t.**, progressive neuropathic (peroneal) muscular atrophy. **unstable t.**, a mental make-up characterized by emotional changeableness. **vagotonic t.**, a physical type characteristic of deficient suprarenal activity; there are slow pulse, low blood pressure, localized sweating, high sugar tolerance, and oculocardiac reflex. **vesanic t.**, psychosis due to primary psychiatric disorder and not to any external cause, as injury, poisoning, or disease of some other organ; it includes mania, melancholia, etc. **visual t.**, an individual who depends mainly on sight and whose imagery is mostly visual. **Werdnig-Hoffmann t.**, see under *paralysis*. **Wernicke-Mann t.**, see under *hemiplegia*. **wild t.**, in genetics, the standard phenotype for any experimental organism; also a gene that determines a standard phenotypic trait. **Zimmerlin's t.**, see under *atrophy*.

typembryo (tip-em'bre-o) an embryo in that stage of development at which the characteristics of the type to which it belongs may be seen.

Typhaceae (ti-fa'se-e) a name once proposed for the family in-

cluding the causative organism of typhoid fever (*Salmonella typhosa*) and related forms.

typhemia (ti-fe'me-ah) [*typhus* + Gr. *haima* blood + *-ia*] the presence of typhoid bacilli in the blood.

typhia (tif'e-ah) typhoid fever.

typhic (ti'fik) pertaining to typhus or to typhoid fever.

typhlectasis (tif-lek'tah-sis) [Gr. *typhlon* cecum + *ektasis* distention] distention of the cecum.

typhlectomy (tif-lek'to-me) cecectomy.

typhlenteritis (tif'len-ter-i'tis) [Gr. *typhlon* cecum + Gr. *enteron* intestine] cecitis.

typhlitis (tif-li'tis) [Gr. *typhlon* cecum + *-itis*] inflammation of the cecum; the term was formerly used for the condition now called *appendicitis*.

typhlo- 1. [Gr. *typhlon* cecum] a combining form denoting relationship to the cecum. 2. [Gr. *typhlos* blind] a combining form denoting relationship to blindness.

typhlocele (tif'lo-sel) cecocele.

Typhlocoelum (tif'lo-se'lum) a genus of trematode parasites.

T. cucumeri'num, a trematode parasitic in the trachea, esophagus, and thoracic cavity of chicks in Brazil and certain ducks and wild aquatic birds in Madagascar.

typhlocolitis (tif'lo-ko-li'tis) [*typhlo*-(1) + *colitis*] colitis in the region of the cecum.

typhlodididitis (tif'lo-dik'li-di'tis) [*typhlo*-(1) + Gr. *diklis* door + *-itis*] inflammation of the ileocecal valve.

typhloempyema (tif'lo-em'pi-e'mah) [*typhlo*-(1) + *empyema*] appendicular abscess.

typhloenteritis (tif'lo-en'ter-i'tis) cecitis.

typhlohepatitis (tif'lo-hep'ah-ti'tis) histomoniasis of turkeys.

typhlolexia (tif'lo-lek'se-ah) [*typhlo*-(2) + Gr. *lexis* speech + *-ia*] alexia.

typhlolithiasis (tif'lo-li-thi'ah-sis) [*typhlo*-(1) + Gr. *lithos* stone + *-ia*] the presence of calculi in the cecum.

typhlogy (tif-lol'o-je) [*typhlo*-(2) + *-logy*] the sum of what is known in regard to blindness.

typhlomegaly (tif'lo-meg'ah-le) [*typhlo*-(1) + Gr. *megas* large] abnormal enlargement of the cecum.

typhlon (tif'lon) [Gr.] the cecum.

typhloplexia (tif'lo-pek'se-ah) typhlopepy.

typhlopepy (tif'lo-pek'se) [*typhlo*-(1) + Gr. *pēxis* fixation] operative suspension and fixation of the cecum.

typhloptosis (tif'lo-to'sis) [*typhlo*-(1) + Gr. *ptōsis* falling] ceceoptosis.

typhlorrhaphy (tif-lor'ah-fe) cecorrhaphy.

typhlosis (tif-lo'sis) [Gr. *typhlōsis* a making blind] blindness.

typhlosthenosis (tif'lo-stē-no'sis) [*typhlo*-(1) + Gr. *stenōsis* narrowing] contraction of the cecum.

typhlostomy (tif-los'to-me) [*typhlo*-(1) + Gr. *stomoun* to provide with an opening, or mouth] cecostomy.

typhloteritis (tif'lo-ter-i'tis) cecitis.

typhlotomy (tif-lot'o-me) [*typhlo*-(1) + Gr. *tomē* a cutting] cecotomy.

typhloureterostomy (tif'lo-u-re'ter-os'to-me) [*typhlo*-(1) + Gr. *ourēter* ureter + *stomoun* to provide with an opening, or mouth] anastomosis of the ureter to the cecum.

typhobacillosis (ti'fo-bas'i-lo'sis) [*typhus* + *bacillus* + *-osis*] a term formerly used to designate the symptoms due to poisoning by the toxins of *Salmonella typhosa*. **t. tuberculo'sa**, a condition due to tuberculous infection and exhibiting the symptoms of typhoid fever.

typhobacterin (ti'fo-bak'ter-in) typhoid vaccine.

typhoid (ti'foid) [Gr. *typhōdes* like smoke; delirious] 1. resembling typhus. 2. typhoid fever. **bilious t.**, leptospiral jaundice.

fowl t., an acute infectious disease of fowl caused by *Salmonella gallinarum*, marked by drowsiness, anorexia, extreme weakness, and usually diarrhea, finally ending in death in four days to two weeks after onset. Called also *Klein's disease*.

Manchurian t., a disease seen in Manchuria during the Russo-Japanese War, distinct from typhoid, and resembling in its symptoms Brill's disease. **pellagra t.**, pellagra marked by moderate fever with mild delirium. **provocation t.**, the systemic reaction to the endotoxin of killed typhoid bacilli in typhoid vaccine. **subcontinuous t.**, a form of malarial disease simulating typhoid fever, as typhomalarial fever.

typhoidal (ti-foid'al) resembling typhoid fever.

typhoidin (ti'foid-in) a ten-day culture of a single strain of *Salmonella typhosa* on glycerin broth evaporated to one-tenth volume (Gay and Force, 1914). It is also used in the cutaneous reaction for typhoid fever. See *typhoidin test*, under *tests*.

typhomalarial (ti'fo-mah-la're-al) of malarial origin, but with typhoid symptoms; see under *fever*.

Typhonium trilobatum (L.) Schott. (Araceae) (ti-fo'ne-um tri'lo-ba'tum) [L.] an Asiatic plant, highly valued in oriental practice as a polychrest remedy.

typhopaludism (ti'fo-pal'u-dizm) typhomalarial fever.

typhopneumonia (ti'fo-nu-mo'ne-ah) pulmonary involvement during the course of infection with *Salmonella typhosa*.

typhous (ti'fus) pertaining to or resembling typhus.

typhus (ti'fus) [Gr. *typhos* stupor arising from fever] any of a group of related arthropod-borne infectious diseases caused by species of *Rickettsia* and marked by malaise, severe headache, sustained high fever, and a macular or maculopapular eruption which appears from the third to the seventh day. Called also *typhus fever*. In English-speaking countries, often used alone to refer to epidemic t., whereas in several European languages, it refers to typhoid fever. **amarillic t.**, yellow fever. **Australian tick t.**, North Queensland tick t. **benign t.**, Brill's disease. **canine t.**, Stuttgart disease. **classic t.**, epidemic t. **collapsing t.**, an infectious typhoid fever occurring in Korea. **endemic t.**, murine t. **epidemic t.**, the classic form of typhus, caused by *Rickettsia prowazekii*, which is transmitted from man to man by the louse *Pediculus humanus*. After an incubation of 10 days to 2 weeks, the onset is usually abrupt, with severe headache, generalized aches and pains, and shaking chills. After a few days there is fever, lasting 10 to 14 days. A macular or maculopapular rash that becomes petechial appears about the fifth day, beginning on the back and covering the body except the face, palms, and soles; it fades with the fever. In the second week there may be delirium and stupor, progressing to coma and ending in death in 20 per cent of untreated cases. **European t.**, epidemic t. **exanthematic t.**, epidemic t. **exanthematic t. of São Paulo**, Rocky Mountain spotted fever. **t. exanthematicus**, **t. exanthematicus**, **exanthematic t.**, epidemic t. **flea t.**, **flea-borne t.**, murine t. **Gubler-Robin t.**, the renal form of typhus. **Indian tick t.**, a rickettsial disease of India believed to be identical with boutonneuse fever. **K T t.**, rural t. **Kenya t.**, a rickettsial disease occurring in Kenya, believed to be identical with boutonneuse fever, except that tache noir is absent; it is transmitted by *Rhipicephalus sanguineus*, *R. simus*, *Haemaphysalis haebreum*, and the larvae of *Amblyomma leachi*. Called also *Kenya fever*. **louse t.**, **louse-borne t.**, epidemic t. **Manchurian t.**, murine t. **Mexican t.**, murine t. **mite-borne t.**, scrub t. **Moscow t.**, murine t. **mouse t.**, an epizootic disease of mice caused by *Salmonella typhimurium*. **murine t.**, an infectious disease clinically similar to epidemic typhus, but caused by *Rickettsia typhi*, which is transmitted from rat to man by the rat flea, *Xenopsylla cheopis*, and by the rat louse, *Polyplax spinulosa*; called also *endemic*, *flea-borne*, or *rat t.* It is also known by various names according to the region in which it occurs, e.g., *Mexican t.*, *Manchurian t.*, *Moscow t.*, *Congolian red fever*, etc. **North Asian tick t.**, Siberian tick t. **North Queensland tick t.**, a nonfatal febrile disease occurring in Australia, caused by *Rickettsia australis*, and characterized by headache, conjunctival injection, and an initial lesion somewhat resembling a cigarette burn; the vector may be the tick *Ixodes holocyclus*. Called also *Australian tick t.* and *Queensland tick t.* **petechial t.**, epidemic t. **Queensland tick t.**, North Queensland tick t. **rat t.**, murine t. **recrudescence t.**, Brill's disease. **rural t.**, a form of scrub typhus seen mostly in outdoor workers in Malaya. **São Paulo t.**, Rocky Mountain spotted fever. **scrub t.**, a self-limited, febrile disease of two weeks' duration, caused by *Rickettsia tsutsugamushi*, transmitted by larval mites of the genus *Trombicula*, especially *T. akamushi* (in Japan) and *T. deliensis* (outside Japan); it is characterized by sudden onset of fever with a primary skin lesion (tache noir, or eschar), and development of a rash about the fifth day. Called also *mite-borne t.* and *tsutsugamushi disease*. Known also by various names according to the region in which it is found, e.g., *Kedani fever* and *Japanese flood fever* in Japan, *Sumatran mite fever* in Sumatra, and *rural t.* in Malaya. **shop t.**, urban t. **Siberian tick t.**, a relatively mild, acutely febrile, spotted fever, characterized by headache, malaise, conjunctival injection, a maculopapular rash, and a primary ulcerative lesion at the site of the tick bite; it occurs in north, central, and east Asia. The causative agent is *Rickettsia siberica*, which is transmitted by ticks of the genera *Dermacentor* and *Haemaphysalis*. Called also *North Asian tick t.* **tick t.**, **tickborne t.**, Rocky Mountain spotted fever; also, any tickborne infectious disease (see *tick fever*, under *fever*). **Toulon t.**, murine t. **tropical t.**, scrub t. **urban t.**, a mild form of murine typhus, usually observed in indoor workers in Malaya and the Mediterranean regions; called also *shop t.*

typical (tip'i-kal) [Gr. *typikos*] presenting the distinctive features of any type.

typing (tip'ing) in transplantation immunology, a method of measuring the degree of organ, solid tissue, or blood compatibility between two individuals, in which specific histocompatibility antigens (e.g., those present on leukocytes or erythrocytes) are detected by means of suitable isoimmune antisera. **t. of blood**, classification of the blood with reference to various erythrocytic membrane antigens. See *blood type*. **phage t.**, characterization of bacteria, extending to strain differences, by demonstration of susceptibility to one or more (a spectrum) races of bacteriophage; widely applied to staphylococci, typhoid bacilli, etc., for epidemiological purposes. **tissue t.**, see *typing*.

typodont (ti'po-dont) a model of a tooth.

typology (ti-pol'o-je) the study of types; the science of classifying, as bacteria according to type.

typoscope (ti'po-sköp) [Gr. *typos* type + *skopein* to examine] an instrument to aid amblyopia and cataract patients in reading.

typus (ti'pus) [L.] type. **t. degenerati'vus amstelodamen'sis**, de Lange's syndrome.

Tyr tyrosine.

tyramine (ti'rah-mën) a decarboxylation product of tyrosine, which may be converted to cresol and phenol; closely related structurally to epinephrine and norepinephrine, it has a similar but weaker action. It is found in decayed animal tissue, ripe cheese, and ergot.

tyrannism (tir'ah-nizm) [Gr. *tyrrhanos* tyrant] morbid cruelty.

tyrein (ti're-in) the coagulated casein of milk.

tyresin (ti-re'sin) a principle derivable from the venom of serpents and from the juice of mushrooms; it was thought to be an antidote for snake poisoning.

tyro- (ti'ro) [Gr. *tyros* cheese] a combining form denoting relationship to cheese.

tyrocidin (ti'ro-si'din) tyrocidine.

tyrocidine (ti'ro-si'din) a crystalline polypeptide antibiotic substance which is the major component of tyrothricin.

Tyrode's solution (ti'röd-z) [Maurice Vejux *Tyrode*, American pharmacologist, 1878-1930] see under *solution*.

tyrogenous (ti-roj'ë-nus) [tyro- + Gr. *gennan* to produce] originating in cheese.

Tyroglyphus (ti-rogl'i-fus) [tyro- + Gr. *glyphein* to carve] *Tyrophagus*. **T. castella'ni**, *Tyrophagus castellani*. **T. fari'nae**, *Tyrophagus farinae*. **T. lon'gior**, *Tyrophagus longior*. **T. si'ro**, *Acarus siro*.

tyroid (ti'roid) [tyro- + Gr. *eidōs* form] caseous; resembling cheese.

tyroma (ti-ro'mah) a caseous tumor; a new growth or nodule of cheesy material.

tyromatosis (ti'ro-mah-to'sis) a condition characterized by caseous degeneration.

tyropanoate sodium (ti'ro-pah-no'ät) chemical name: α -ethyl-2,4,6-triiodo-3-[(1-oxobutyl)amino]benzene propanoic acid monosodium salt; a diagnostic radiopaque medium for use in cholecystography, $C_{15}H_{17}I_3NNaO_3$.

Tyrophagus (ti-rof'ah-gus) a genus of pale, soft-bodied mites, the meal mites; called also *Tyroglyphus*. **T. castella'ni**, the copra mite, the species that causes copra itch. **T. fari'nae**, the flour mite, found in flour mills and granaries. **T. lon'gior**, the cheese mite, which has been reported from both the urinary and digestive tracts and may be found in the stools. **T. si'ro**, *Acarus siro*.

tyrosamine (ti-rös'ah-mën) tyramine.

tyrosinase (ti-ro'sin-äs) an oxidizing enzyme in animal and plant tissues which catalyzes the oxidation of tyrosine and other phenolic compounds into black pigments.

tyrosine (ti-ro'sin) a crystallizable amino acid, *p*-hydroxyphenylalanine, $C_9H_{11}O_3N$, found in most proteins and synthesized metabolically from phenylalanine; it is a precursor of thyroid hormones, catecholamines, and melanin. Sometimes called *oxyphenylaminopropionic acid*.

tyrosinemia (ti'ro-si-ne'me-ah) a disorder of tyrosine metabolism marked by an excess of tyrosine in the blood and by tyrosyluria. It occurs in two forms: *transient* or *neonatal tyrosinemia*, a benign condition of the newborn, especially of the premature, which responds to ascorbic acid, and *hereditary tyrosinemia*, which results in liver failure or severe nodular cirrhosis, with renal tubular involvement similar to Fanconi's syndrome, hypoglycemia, rickets, darkening of the skin, and slight mental retardation; it is transmitted as an autosomal recessive trait.

tyrosinosis (ti'ro-si-no'sis) a condition characterized by a faulty metabolism of tyrosine in which an intermediate product, parahydroxyphenyl pyruvic acid, appears in the urine and gives it an abnormal reducing power.

tyrosinuria (ti'ro-si-nu're-ah) [tyrosine + Gr. *ouron* urine + *-ia*] the presence of tyrosine in urine, as in tyrosinemia.

tyrosin (ti-ro'sis) caseation, def. 2.

tyrosyluria (ti'ro-sil-u're-ah) the increased urinary excretion of para-hydroxyphenyl compounds derived from tyrosine, as in tyrosinemia.

tyrothricin (ti'ro-thri'sin) [NF] an antibiotic substance isolated from the soil bacillus *Bacillus brevis*, occurring as a white, grayish white, or brownish white powder, consisting principally of two polypeptides: gramicidin and tyrocidine. It is used as a topical antibacterial.

Tyrothrix (ti'ro-thriks) [tyro- + Gr. *thrix* hair] a genus name once given to certain microorganisms later included in the genera *Lactobacillus*, *Bacillus*, or *Clostridium*.

tyrotoxin (ti'ro-tok'si-kon) chemical name: benzene-

diazonium hydroxide. A poisonous crystalline compound, $C_6H_5N_2$ ·(NOH), sometimes occurring in stale milk, cheese, and ice cream.

tyrotoxicosis (ti'ro-tok'si-ko'sis) a morbid condition resulting from ingestion of tyrotoxin; marked by vertigo, headache, vomiting, chills, muscular cramps, purging, prostration, and death. Called also *cheese poisoning*.

tyrotoxism (ti'ro-toks'izm) poisoning resulting from ingestion of contaminated cheese; see *tyrotoxicosis*.

Tyrrell's fascia, hook (tir'elz) [Frederick Tyrrell, English anatomist, 1793–1843] see *septum rectovesicale*, and see under *hook*.

Tyson's crypts, glands (ti'sunz) [Edward Tyson, English physician and anatomist, 1650–1708] glandulae preputiales.

tysonian (ti-so'ne-an) named for Edward Tyson.

U

U chemical symbol for *uranium*.

U. unit.

²³⁵**U** an isotope of uranium of mass number 235.

uarthritis (u'ar-thri'tis) gout due to excess of uric acid in the system.

uberous (u'ber-us) prolific.

uberty (u'ber-te) [L. *ubertas* fruitfulness] fertility.

ubiquinol (u-bik'wi-nol) the form of ubiquinone when reduced by two electrons.

ubiquinone (u-bik'wi-nōn) coenzyme Q.

udder (ud'er) the mammary organ of cattle and certain other mammals; within the large baglike envelope are two or more glands, each having a teat.

UDP uridine diphosphate.

UDPG uridine diphosphoglucose.

UDP-galactose uridine diphosphogalactose.

UDP-glucose uridine diphosphoglucose.

UDP-glucuronate uridine diphosphoglucuronate.

Udránszky's test (oo-dran'skēz) [László Udránszky, Budapest physiologist, 1862–1914] see under *tests*.

udruj (ud'ruj) an East Indian medicinal gum.

UFA unesterified fatty acids.

Uffelmann's test (reagent) (oof'el-mahnz) [Jules Uffelmann, German physician, 1837–1894] see under *tests*.

Uhlenhuth's test (oo'len-hootz) [Paul Theodore Uhlenhuth, German bacteriologist, 1870–1957] serum test.

Uhthoff's sign (oof'hofs) [Wilhelm Uhthoff, ophthalmologist in Breslau, 1853–1927] see under *sign*.

uixi (wik'se) the *Myristica platysperma*, a medicinal plant of South America.

Ulacort (u'lah-kort) trademark for preparations of prednisolone.

ulaganactesis (u-lag'an-ak-te'sis) [Gr. *oulon* gum + *anganaktēsis* irritation] irritation or itching of the gums.

ulalgia (u-lal'je-ah) [Gr. *oulon* gum + *algos* pain + *-ia*] gingivalgia.

ulatrophia (u'lah-tro'fe-ah) ulatrophly.

ulatrophly (u-lat'ro-fe) [Gr. *oulon* gum + *atrophy*] shrinkage of the gums; gum recession; a form of pericementoclasia marked by a decrease in the bulk of the marginal and cemental gingiva with exposure of the cementum. **afunctional u.**, ulatrophly due to congenital malocclusion. **atrophic u.**, ischemic u. **calcic u.**, ulatrophly that is caused by the presence of salivary concretions. **ischemic u.**, ulatrophly due to atrophy of the gum from deficient vascular nourishment. **traumatic u.**, ulatrophly due to excessive strain, as from nail biting, etc.

ulcer (ul'ser) [L. *ulcus*; Gr. *helkōsis*] a local defect, or excavation, of the surface of an organ or tissue, which is produced by the sloughing of inflammatory necrotic tissue. **Aden u.**, a form of cutaneous leishmaniasis. **Allingham's u.**, fissure in ano. **amebic u.**, the ulcerous lesion of amebiasis cutis. **amputating u.**, ulceration which encircles a part and destroys the tissues to the bone. **anastomotic u.**, ulcer at the anastomotic site occurring as a complication after gastroenterostomy performed for duodenal ulcer. **Annam u.**, **annamite u.**, an obstinate endemic sore of Indochina, probably cutaneous leishmaniasis; called also *Cochin-China u.* **annular u.**, ring u. **aphthous u.**, the ulcerative lesion of aphthous stomatitis. **atheromatous u.**, a loss of intima over an atheroma, often giving rise to thrombus formation and/or emboli. **atonic u.**, a chronic ulcer with unhealthy granulations. **Barrett's u.**, chronic peptic ulcer of the esophagus, usually associated with heterotopic gastric mucosa and stricture formation; it is usually a late complication of peptic esophagitis. **Bouveret's u.**, an ulcer occurring in typhoid fever in the fauces just above and to the outer side of the tonsil.

tysonitis (ti'son-i'tis) inflammation of Tyson's glands.

tyvelose (ti'vel-ōs) an unusual sugar found to be a polysaccharide somatic antigen of *Salmonella* species.

Tyzine (ti'zēn) trademark for preparations of tetrahydrozoline hydrochloride.

Tyzzeria (ti-ze're-ah) a genus of coccidia the oocysts of which contain eight naked sporozoites. *T. pernicio'sa* is highly pathogenic in the domestic duck, being parasitic in the small intestine.

TZ tuberculin zymoplastiche; see under *tuberculin*.

Tzanck cell, test (tsank) [Arnault Tzanck, Russian dermatologist in Paris, 1886–1954] see under *cell* and *tests*.

tzetze (set'se) tsetse. **Metrazol shock t.**, see under *therapy*.

Buruli u. [named for the *Buruli* district of Uganda], necrotizing ulcer of the skin and subcutaneous tissue affecting especially the extremities, caused by *Mycobacterium ulcerans*; it occurs in Australia, Africa, and Mexico. Called also *mycobacterial u.* **catarrhal corneal u.**, an ulcer near the corneal limbus occurring in catarrhal conjunctivitis. **chancroidal u.**, chancroid. **chicle u.**, **chiclero u.**, an endemic, zoonotic forest disease, a form of cutaneous leishmaniasis of the New World, found chiefly in Central America and Yucatan, affecting forest workers, e.g., chicle workers, and caused by *Leishmania mexicana*, transmitted by *Lutzomyia flaviscutellata*. It is characterized by a pruriginous papule that ulcerates after one or two months and usually heals within six months, with the exception of ulcers on the pinna of the ear, which may last many years and destroy the cartilage. Called also *Mexican cutaneous leishmaniasis*. **chrome u.**, an ulcer produced by chromium or its salts; seen in tanners and others working in chromium. **Cochin-China u.**, **annamite u.** **concealed u.**, destructive inflammation affecting some internal tissue. **corrosive u.**, gangrenous stomatitis. **Crombie's u.**, ulcer of the gum in sprue. **Cruveilhier's u.**, simple gastric ulcer. **Curling's u.**, acute ulceration of the stomach or duodenum following a severe burn upon the surface of the body. **Cushing's u.**, a peptic ulcer associated with manifest or occult lesions of the central nervous system. **Cushing-Rokitansky u.**, Rokitansky-Cushing u. **cystoscopic u.**, ulcer of the bladder due to injury by the cystoscope. **decubital u.**, **decubitus u.**, an ulceration caused by prolonged pressure in a patient allowed to lie too still in bed for a long period of time; called also *decubitus*, *bed sore*, and *pressure sore*. **dendritic u.**, **dendritic u.**, ulcer of the cornea branching in various directions, usually caused by herpes simplex infection. **dental u.**, a lesion on the oral mucosa, resulting from trauma inflicted by the teeth, as by biting, or from irritation by a sharp or broken tooth. **diabetic u.**, an ulcer, usually of the lower extremities, associated with diabetes mellitus. **diphtheritic u.**, one the surface of which is partly or entirely covered by a dirty grayish membrane; it is sometimes, but not always, produced by diphtheria of the skin. **duodenal u.**, a peptic ulcer situated in the duodenum. **elusive u.**, Hunner's u. **endemic u.**, any form of ulcer prevailing in special districts or regions, as those of cutaneous leishmaniasis. **Fenwick-Hunner u.**, Hunner's u. **fistulous u.**, the ulcerated superficial end of a fistula. **flask u.**, an ulcer of the intestine in amebic dysentery. **follicular u.**, a small ulcer on the mucous membrane having its origin in a lymph follicle. **Gaboon u.**, a variety of cutaneous leishmaniasis occurring in the Republic of Congo, Africa. **gastric u.**, an ulcer of the gastric mucosa. **giant peptic u's**, very large, uncommon, peptic ulcers with characteristic clinical and radiological manifestations. **girdle u.**, a tuberculous ulcer that spreads along the wall of the intestine in an encircling manner. **gouty u.**, a superficial ulcer occurring over a gouty joint. **gummatous u.**, a broken-down superficial gumma. **gwaliar u.**, cutaneous leishmaniasis. **Hunner's u.**, a lesion occurring in chronic interstitial cystitis, involving all the layers of the bladder wall, and appearing as a small brownish red patch on the mucosa; it tends to heal superficially and is notoriously difficult to detect. **hypopyon u.**, a corneal ulcer accompanied by hypopyon. **Jacob's u.**, rodent ulcer, especially that of an eyelid. **Jeddah u.**, cutaneous leishmaniasis. **jejunal u.**, an ulcer of the jejunum; such an ulcer developing after gastroenterostomy is called *secondary jejunal u.* **kissing u's**, ulcers on directly opposing surfaces of the stomach, as on opposite sides of the lesser curvature. **Kocher's dilatation u.**, ulceration occurring in a greatly distended intestine or in the course of ileus. **Lahore u.**, tropical u. **Lipschütz u.**, **ulcus vulvae acutum**. **lupoid u.**, a skin ulcer that simulates or resembles lupus. **Malabar u.**, tropical u., def. 1. **Mann-Williamson u.**, progressive peptic ulcer produced in experimental animals by the performance of gastric resection or gastroenterostomy. **marginal u.**, a gastric ulcer in the jejunal mucosa near the site of a gastrojejunal anastomosis; called also *stoma u.* **Marjolin's u.**, an ulcer seated upon an

old cicatrix; it may degenerate into a squamous cell carcinoma with a propensity for metastasis. **Meleney's u's**, deep, undermining, extremely painful, spreading ulcers associated with wounds, caused by microaerophilic nonhemolytic streptococci; they have an outer, bright red zone, a middle, dusky purple zone, and a central gangrenous zone. **Mooren's u.**, chronic serpiginous ulceration, usually bilateral, of the marginal cornea, seen in elderly individuals; it is of unknown etiology. **Mozambique u.**, an endemic ulcer of East Africa, apparently a form of cutaneous leishmaniasis. **mycobacterial u.**, Buruli u. **mycotic u.**, a noduloulcerative lesion due to a fungal infection. **neurogenic u.**, **neurotrophic u.**, an ulcer caused by nervous disease or by psychic factors. **Parrot's u.**, the ulceration seen in thrush. **Pendinski u.**, cutaneous leishmaniasis. **penetrating u.**, an ulcerative lesion which involves also the wall or substance of an adjacent organ. **Penjdeh u.**, cutaneous leishmaniasis. **peptic u.**, an ulceration of the mucous membrane of the esophagus, stomach, or duodenum, caused by the action of the acid gastric juice. **perambulating u.**, phagedenic u. **perforating u.**, an ulcer which involves the entire thickness of an organ, as the foot, or the wall of the stomach or intestine, creating an opening on both surfaces. **Persian u.**, cutaneous leishmaniasis. **phagedenic u.**, one which spreads rapidly and destructively, eating away the tissues, and marked by sloughing particles in the discharge; called also *perambulating u.* and *sloughing u.* **Plaut's u.**, necrotizing ulcerative gingivitis. **pneumococcus u.**, **ulcus serpens corneae**. **pudendal u.**, granuloma inguinale. **ring u.**, fusion of foci of ulceration in the cornea to form a peripheral ring of ulceration. **rodent u.**, ulcerating basal cell carcinoma of the skin. **Rokitansky-Cushing u's**, an occasional ulcerative accompaniment of severe lesions of the central nervous system, affecting the lower third of the esophagus, the fundus of the stomach, or the duodenum. **round u.**, a peptic ulcer of the stomach. **Saemisch's u.**, **ulcus serpens corneae**. **scorbutic u.**, one due to scurvy. **sea anemone u.**, an intestinal ulcer in amebiasis, with a deep crater and partly necrotic undermined edges which are raised above the level of the surrounding mucosa. **secondary jejunal u.**, see *jejunal u.* **serpiginous corneal u.**, **ulcus serpens corneae**. **simple u.**, a mild form of ulcer which is neither of septic origin nor the expression of a general disease. **sloughing u.**, phagedenic u. **soft u.**, chancreoid. **stasis u.**, ulceration on the ankle due to venous stasis or insufficiency. **stercoraceous u.**, **stercoral u.**, **stercoral u.**, an ulcer caused by the pressure of impacted feces; also a fistulous ulcer through which fecal matter escapes. **stoma u.**, **stomal u.**, marginal u. **stress u.**, peptic ulcer, usually gastric, resulting from stress; possible predisposing factors include changes in the microcirculation of the gastric mucosa, increased permeability of the gastric mucosa barrier to H⁺, and impaired cell proliferation. **sublingual u.**, an ulcer on the frenum of the tongue, caused by irritation of the lower incisor teeth; also, an ulcer on the ventral surface of the tongue or floor of the mouth. **submucous u.**, Hunner's u.; so called because of the tendency of the lesion to heal superficially. **symptomatic u.**, an ulcer that indicates some general disease. **Syriac u.**, diphtheria. **Syrian u.**, 1. diphtheria. 2. Aleppo boil, or cutaneous leishmaniasis. **tanner's u.**, chrome u. **Tashkent u.**, one of the crusted ulcers that are developed in sartin disease, an endemic affection occurring in Tashkent, a city in the southwestern part of the Siberia. **traumatic u.**, one due to a local injury. **trophic u.**, an ulcer due to imperfect nutrition of the part. **trophoneurotic u.**, ulcer due to denervation. **tropical u.**, a chronic sloughing ulcer, usually on the lower extremities, of unknown causation, occurring in tropical regions. Spirochetes and fusiform bacilli are often present in the developing lesion. Protein and vitamin deficiency, with lowered resistance, may be important in the etiology. Called also *ulcus tropicum*, *Malabar ulcer*, *Cochin sore*, and *Naga sore*. Many other terms of only geographical significance have been applied to tropical ulcer. **Turkestan u.**, sartin disease; probably cutaneous leishmaniasis. **varicose u.**, one that is due to varicose veins, as a stasis ulcer. **venereal u.**, a disease marked by the formation of ulcers about the vulvae of women who have not been exposed to venereal disease; the ulcers resemble chancre or chancreoid. **Yemen u.**, cutaneous leishmaniasis. **Zambesi u.**, an ulcer endemic among laborers of the Zambesi valley; it occurs on the leg or foot and is not attended with constitutional symptoms. It is caused by the larva of a dipterous fly which burrows into the subcutaneous tissue.

ulcera (ul'ser-ah) [L.] plural of *ulcus*.

ulcerate (ul'sē-rāt) [L. *ulcerare*, *ulceratus*] to become affected with ulceration.

ulceration (ul'sē-ra'shun) [L. *ulceratio*] 1. the formation or development of an ulcer. 2. an ulcer. **u. of Daguet**, ulceration of the uvula and other parts of the throat, seen in typhoid fever.

ulcerative (ul'ser-a'tiv) pertaining to or characterized by ulceration.

ulcerogangrenous (ul'ser-o-gang'grē-nus) characterized by both ulceration and gangrene; pertaining to a gangrenous ulcer.

ulcerogenic (ul'ser-o-jen'ik) causing ulceration; leading to the production of ulcers.

ulcerogranuloma (ul'ser-o-gran'u-lo'mah) a granuloma developing on an ulcer.

ulceromembranous (ul'ser-o-mem'brah-nus) characterized by ulceration and by a membranous exudation.

ulcerous (ul'ser-us) [L. *ulcerosus*] 1. of the nature of an ulcer. 2. affected with ulceration.

ulcus (ul'kus), pl. *ul'cera* [L.] ulcer. **u. am'bulans**, phagedenic ulcer. **u. cancro'sum**, rodent ulcer. **u. ex'edens**, rodent ulcer. **u. interdigita'le**, keratolysis of the horny layer of the skin between the toes, a disease similar to cracked heel. **u. mol'le**, **u. mol'le cu'tis** (obs.), chancreoid. **u. pen'n'etrans**, one that penetrates not into the peritoneal cavity but into an abutting organ. **u. ro'dens**, rodent ulcer. **u. scorbu'ticum** (obs.), scorbutic ulcer. **u. ser'pens cor'neae**, an ulcer of the cornea; a creeping central suppurative ulcer of the cornea due usually to pneumococcus. Called also *pneumococcus ulcer*. **u. sim'plex vesi'cae**, Hunner's ulcer. **u. tro'pi-cum**, tropical ulcer, def. 1. **u. ventric'uli**, gastric ulcer. **u. vul'vae acu'tum**, a nonvenereal rapidly growing lesion of the vulva. The etiology is uncertain, but *Bacillus crassus*, a normally nonpathogenic species sometimes found in vaginal cultures, has been implicated. Called also *Lipschütz disease* or *ulcer*.

uldazepam (ul-da'zah-pam) chemical name: 7-chloro-5-(2-chlorophenyl)-N-(2-propenyl)-3H-1,4-benzodiazepam-2-amine; a tranquilizer, C₁₈H₁₅Cl₂N₃O.

ule- see *ulo-*.

ulectomy (u-lek'to-me) 1. [Gr. *oulē* scar + Gr. *ektomē* excision] excision of scar tissue, i.e., in secondary iridectomy. 2. [Gr. *oulon* gum + *ektomē* excision] excision of the gingiva; gingivectomy.

ulegyria (u'le-jī're-ah) [Gr. *oulē* scar + *gyrus* + *-ia*] a condition in which the cerebral gyri are narrow and distorted by scars, resulting from lesions existing in fetal life or early infancy.

ulemorrhagia (u'lem-o-ra'je-ah) [Gr. *oulon* gum + *rhegnynai* to burst forth] bleeding or hemorrhage from the gingivae.

ulerythema (u'ler-i-the'mah) [Gr. *oulē* scar + *erythēma* redness] an erythematous disease of the skin characterized by the formation of cicatrices and by atrophy. **u. ophryo'genes**, keratosis pilaris affecting the follicles of the eyebrow hairs of young men, associated with erythema, and leading to scarring and atrophy; it is transmitted as an autosomal dominant trait.

Ulex europaeus L. (Leguminosae) (u'leks u-ro'pe-us) a leguminous shrub, common gorse or furze, which is a source of cytosine (ulexine).

ulexine (u-leks'en) cytosine.

uliginous (u-lij'i-nus) [L. *uliginosus* moist] muddy or slimy.

ulitis (u-li'tis) [Gr. *oulon* gum + *-itis*] inflammation of the gums; gingivitis. **aphthous u.**, ulitis combined with aphthae. **fungus u.**, ulitis due to presence of a fungus. **interstitial u.**, inflammation of the connective tissue of the gums around the teeth. **mercurial u.**, ulitis due to mercurialism. **scorbutic u.**, ulitis due to scurvy. **ulcerative u.**, ulitis with ulceration.

ullem (ul'em) a kind of dyspepsia occurring in Lapland.

Ullmann's line (ul'manz) [Emerich Ullmann, Hungarian surgeon, 1861-1937] see under *line*.

Ulmus (ul'mus) [L. "elm"] a genus of ulmaceous trees; the elms. **U. ful'va Michx.**, the slippery elm, the inner bark of which is mucilaginous and demulcent.

ulna (ul'nah), pl. *ul'nae* [L. "the arm"] [NA] the inner and larger bone of the forearm, on the side opposite that of the thumb; it articulates with the humerus and with the head of the radius at its proximal end; with the radius and bones of the carpus at the distal end. See Plate XLIV.

ulnad (ul'nad) toward the ulna.

ulnar (ul'nar) [L. *ulnaris*] pertaining to the ulna or to the ulnar (medial) aspect of the arm as compared to the radial (lateral) aspect.

ulnare (ul-na're) [L.] os triquetrum.

ulnaris (ul-na'ris) ulnar; in official anatomical nomenclature, designating relationship to the ulna.

ulnen (ul'nen) pertaining to the ulna alone.

ulnocarpal (ul'no-kar'pal) pertaining to the ulna and carpus.

ulnoradial (ul'no-ra'de-al) pertaining to the ulna and radius.

ULO trademark for a preparation of chlophedianol hydrochloride.

ulo- 1. [Gr. *oulē* scar] a combining form denoting relationship to a scar, or cicatrix. 2. [Gr. *oulon* gum] a combining form denoting relationship to the gingivae.

ulocace (u-lok'ah-se) [*ulo*-(2) + Gr. *kakē* badness] ulceration of the gingivae.

ulocarcinoma (u'lo-kar'si-no'mah) [*ulo*-(2) + *carcinoma*] carcinoma of the gums.

uloglossitis (u'lo-glos-si'tis) [*ulo*-(2) + Gr. *glōssa* tongue + *-itis*] inflammation of the gums and the tongue.

uloncus (u-long'kus) [*ulo*-(2) + Gr. *onkos* mass, tumor] a swelling or tumor of the gums.

ulorrhagia (u'lō-ra'je-ah) [*ulo*-(2) + Gr. *rhēgnynai* to burst forth] a sudden or free discharge of blood from the gums.

ulorrhea (u'lō-re'ah) [*ulo*-(2) + Gr. *rhoia* flow] an oozing of blood from the gums.

ulotomy (u-lot'o-me) 1. [Gr. *oulē* scar + *tomē* a cutting] the cutting or division of scar tissue. 2. [Gr. *oulon* gum + *tomē* a cutting] incision of the gingivae.

ulotripsis (u'lō-trip'sis) [*ulo*-(2) + Gr. *tripsis* rubbing] gum re-vitalization by massage.

ultimate (ul'ti-māt) [L. *ultimus* last] the last or farthest; final or most remote.

ultimisternal (ul'tī-mī-ster'nal) pertaining to the xiphoid process.

ultimum moriens (ul'ti-mum mo're-enz) [L. "last to die"] 1. the right atrium; said to be the last part of the body to cease moving in death. 2. the upper part of the trapezius muscle.

ult. praes. abbreviation for L. *ul'timum praescriptus*, last prescribed.

ultra- [L. "beyond"] a prefix denoting excess, or beyond.

ultrabrachycephalic (ul'trah-brak'e-sē-fal'ik) having a cephalic index of more than 90.

ultracentrifugation (ul'trah-sen-trif'u-ga'shun) subjection to the action of an ultracentrifuge.

ultracentrifuge (ul'trah-sen-trif'ūj) a centrifuge with an exceedingly high rate of rotation which will separate and sediment the molecules of a substance.

ultradian (ul-tra'de-an) [*ultra-* + L. *dies* day] pertaining to a period of less than 24 hours; applied to the rhythmic repetition of certain phenomena in living organisms occurring in cycles of less than a day (*ultradian rhythm*). Cf. *circadian* and *infradian*.

ultradolichocephalic (ul'trah-dol'i-ko-sē-fal'ik) extremely dolichocephalic; having a cephalic index of not more than 64.

ultrafilter (ul'trah-fil'ter) an apparatus for performing ultrafiltration; a semipermeable membrane.

ultrafiltrate (ul'trah-fil'trāt) the liquid that has passed through an ultrafilter.

ultrafiltration (ul'trah-fil-tra'shun) filtration through filters with minute pores, thus allowing the separation of extremely minute particles. Ultrafiltration occurs naturally, as in the filtration of plasma at the capillary membrane, and it is performed in the laboratory, especially to separate a substance in colloidal solution from its dispersion medium, and usually under pressure in order to accelerate the process.

ultragaseous (ul'trah-gas'e-us) having the properties of gas at one millionth of atmospheric pressure; see *radiant matter*, under *matter*.

ultramicrochemistry (ul'trah-mi'kro-kem'is-tre) the chemical study of materials in extremely minute quantities.

ultramicroon (ul'trah-mi'kron) an individual element of the dispersed phase of a colloid.

ultramicropipet (ul'trah-mi'kro-pi-pet') a pipet designed to handle extremely small quantities of liquid (0.002 to 0.005 ml.).

ultramicroscope (ul'trah-mi'kro-skōp) a special darkfield microscope for the examination of particles of colloidal size. See *darkfield illumination*, under *illumination*, and *darkfield microscope*, under *microscope*.

ultramicroscopic (ul'trah-mi'kro-skop'ik) 1. pertaining to the ultramicroscope. 2. too small to be seen with an ordinary microscope.

ultramicroscopy (ul'trah-mi-kros'ko-pe) the employment of the ultramicroscope.

ultramicrotome (ul'trah-mi'kro-tōm) an instrument for making very thin tissue sections for electron microscopy.

Ultran (ul'tran) trademark for preparations of phenaglycodol.

ultraphagocytosis (ul'trah-fag'o-si-to'sis) ingestion of particles of submicroscopic dimensions.

ultraprophylaxis (ul'trah-pro'fi-lak'sis) prophylaxis directed toward the prevention of diseased or abnormal children by regulation of the marriage of the unfit.

ultraquinine (ul'trah-kwin'in) an alkaloid from cuprea bark.

ultra-red (ul'trah-red') infrared.

ultrasonic (ul'trah-son'ik) [*ultra-* + L. *sonus* sound] pertaining to mechanical radiant energy having a frequency beyond the upper limit of perception by the human ear, that is, beyond about 20,000 Hz (cycles per second); see *ultrasonics*.

ultrasonics (ul'trah-son'iks) that part of the science of acoustics dealing with the frequency range beyond the upper limit of perception by the human ear (beyond 20 kilocycles per second), but usually restricted to frequencies above 500 kilocycles per second. Ultrasonic radiation is injurious to tissues because of its thermal effects when absorbed by living matter, but in controlled doses it is used therapeutically to selectively break down pathologic tissues, as in treatment of arthritis and lesions of the nervous system, and also as a diagnostic aid by visually displaying echoes received from irradiated tissues, as in echocardiography and echoencephalography.

ultrasonogram (ul'trah-son'o-gram) the record obtained by ultrasonography.

ultrasonographic (ul'trah-son'o-graf'ik) pertaining to or accomplished by ultrasonography; called also *sonographic*.

ultrasonography (ul'trah-son-og'rah-fe) the visualization of deep structures of the body by recording the reflections of (echoes of) pulses of ultrasonic waves directed into the tissues. Diagnostic ultrasonography, as in echocardiography and echoencephalography, utilizes a frequency range of 1 million to 10 million hertz (cycles per second), or 1 to 10 MHz. Such sound waves are transmissible only in liquids and solids. Called also *echography* and *sonography*. **Doppler u.**, that in which measurement and a visual record are made of the shift in frequency of a continuous ultrasonic wave proportional to the blood-flow velocity in underlying vessels; used in diagnosis of extracranial occlusive vascular disease. It is also used in detection of the fetal heart beat or of the velocity of movement of a structure such as the beating heart. **gray-scale u.**, a B-scan technique in which a television video-scan converter amplifies and processes echoes according to their strength into a visual display ranging from white for the strongest echoes to varying shades of gray.

ultrasonometry (ul'trah-so-nom'ē-tre) the measurement of certain physical properties of biologic fluids by means of ultrasound.

ultrasound (ul'trah-sownd) mechanical radiant energy (see *sound*), with a frequency greater than 20,000 cycles per second; see *ultrasonics*.

ultrastructure (ul'trah-struk'chur) the arrangement of the smallest elements making up a body; the structure beyond the resolution power of the light microscope, i.e., the structure visible only under the ultramicroscope and electron microscope. Called also *fine structure*.

ultratoxon (ul'trah-tok'son) a toxon of the lowest degree of toxicity.

ultraviolet (ul'trah-vi'o-let) beyond the violet end of the spectrum; said of electromagnetic rays or radiation between the violet rays and the roentgen rays, that is, with wavelengths between 4 and 400 nm. These rays have powerful actinic and chemical properties, inducing sunburn and tanning of the skin and producing ergocalciferol (vitamin D₂) by their action on ergosterol in the skin. **far u.**, ultraviolet radiation of shortest wavelength, between 200 and 300 nm. **near u.**, that portion of the ultraviolet near the visible spectrum, that is, with wavelengths between 300 and 400 nm.

ultravirus (ul'trah-vi'rus) (*obs.*) an extremely small pathogenic agent; see *filterable virus*, under *virus*.

ultravisible (ul'trah-viz'i-b'l) ultramicroscopic.

ultramotivty (ul'tro-mo-tiv'i-te) ability to move spontaneously.

Ultzmann's test (ooltz'mahnz) [Robert *Ultzmann*, German urologist, 1842-1889] see under *tests*.

ululation (ul'u-la'shun) [L. *ululare* to howl] the loud crying or wailing of hysterical patients.

umbauzonen (um'bou-zo'nen) [Ger., "rebuilding zones"] Looser's transformation zones; see under *zone*.

umbelliferone (um'bel-li'fer-on) 7-hydroxycoumarin, a substance present in many plants, particularly those of the Umbelliferae family; used to absorb ultraviolet rays in sunscreen creams and lotions.

umber (um'ber) a natural earth containing chiefly manganese, iron oxide, and silica; used as a pigment.

Umbert's test (um'berz) [Friedrich *Umbert*, German physician, 1871-1946] see under *tests*.

umbilectomy (um'bi-lek'to-me) [*umbilicus* + Gr. *ektomē* excision] excision of the umbilicus.

umbilical (um-bil'i-kal) [L. *umbilicalis*] pertaining to the umbilicus.

umbilicate (um-bil'i-kāt) [L. *umbilicatus*] shaped like or resembling the umbilicus.

umbilicated (um-bil'i-kāt'ed) marked by depressed areas resembling the umbilicus.

umbilication (um'bil-i-ka'shun) a pit or depression resembling the umbilicus.

umbilicus (um-bil'i-kus, um'bi-li'kus) [L.] [NA] the navel: the cicatrix marking the site of attachment of the umbilical cord in the fetus. **amniotic u.**, the oval aperture formed by converging amnion folds. **decidual u.**, a small cicatricial mark over the human blastocyst shortly after its migration through the uterine epithelium into the stroma, marking the place of the closure of the decidua capsularis. **posterior u.**, pilonidal sinus.

umbo (um'bo), pl. *umbo's* [L. "a boss"] a round projection; the projecting center of any rounded surface. **u. membra'nae tym'pani** [NA], **u. of tympanic membrane**, the slight projection at the center of the outer surface of the tympanic membrane, corresponding to the point of attachment of the tip of the manubrium of the malleus.

umbonate (um'bo-nāt) [L. *umbo* a knob] knoblike; button-like; having a button-like, raised center.

umbrascopy (um-bras'ko-pe) [L. *umbra* shade + Gr. *skopein* to examine] skiascopy.

UMP uridine monophosphate.

unazotized (un-a'zo-tizd) containing no nitrogen.

unbalance (un-bal'ans) lack or loss of normal balance.

uncal (ung'kal) of or pertaining to the uncus.

Uncaria (un-ka're-ah) [L.] a genus of rubiaceous shrubs native to Asia. **U. gambier**, **U. gambir** [Hunter] Roxb., Rubiaceae, a species of southeastern Asia, which is the source of gambir and catechin.

uncarthrosis (unk'ar-thro'sis) bone disease involving the uncinat processes of vertebrae.

uncia (un'se-ah) [L.] 1. ounce. 2. inch.

unciform (un'si-form) [L. *uncus* hook + *forma* form] shaped like a hook, as the unciform bone.

unciforme (un'si-for'me) [L.] hooked; see *os hamatum*.

uncinal (un'si-nal) uncinat.

Uncinaria (un'si-na're-ah) [L. *uncus* hook] a genus of nematode worms of the family Ancylostomidae. **U. americana**, *Necator americanus*. **U. duodenalis**, *Ancylostoma duodenale*. **U. stenocephala**, a hookworm commonly causing hookworm disease in dogs; also parasitic in foxes, cats, and other carnivores.

uncinariasis (un'sin-ah-ri'ah-sis) the state of being infected with worms of the genus *Uncinaria*. See *hookworm disease*, under *disease*.

uncinariatic (un'si-na're-at'ik) pertaining to or exhibiting uncinariasis (hookworm disease).

uncinate (un'si-nāt) 1. hooked or barbed, as the uncinat bone. 2. relating to or affecting the uncinat gyrus, as in uncinat epilepsy.

uncinatum (un'si-na'tum) [L.] hooked; see *os hamatum*.

uncipressure (un'si-presh'ur) [L. *uncus* hook + *pressura* pressure] pressure with a hook to control hemorrhage.

uncomplemented (un-kom'ple-ment'ed) not joined with complement, and therefore not active.

unconscious (un-kon'shus) 1. insensible; incapable of responding to sensory stimuli and of having subjective experiences. 2. in freudian terminology, that part of mental activity which includes primitive or repressed wishes. Since these are concealed from consciousness by the psychic censor, the subject cannot know of them unless they are revealed to him through some psychotherapeutic procedure or as a result of severe emotional strain. Cf. *dissociation*. **collective u.**, in jungian psychology, the elements of the unconscious that are theoretically common to all mankind.

unco-ossified (un'ko-os'fi-fid) not united into one bone.

uncotomy (ung-kot'o-me) [*uncus* + Gr. *tomē* a cutting] the production of a circumscribed lesion in the uncus in the treatment of psychotic states.

uncovertebral (un'ko-ver'tē-bral) pertaining to or affecting the uncinat processes of a vertebra.

unction (ungk'shun) [L. *unctio*] 1. an ointment. 2. the application of an ointment or salve; inunction.

unctuous (ungk'chu-us) greasy or oily; oleaginous.

uncus (ung'kus) [L. "hook"] [NA] the medially curved anterior end of the parahippocampal gyrus; called also *u. gyri fornicati*. *u. gyri hippocampi*, and *u. gyri parahippocampalis*. **u. of hamate bone**, hamulus ossis hamati.

undecane (un'de-kān) a colorless petroleum hydrocarbon, CH₃-(CH₂)₉CH₃.

undercut (un'der-kut) 1. that portion of a tooth which lies between the survey line (height of contour) and the gingivae. 2. the contour of a cross-section of a residual ridge or dental arch which would prevent the insertion of a denture. 3. the contour of flasking stone which interlocks in such a way as to prevent the separation of the parts.

underhorn (un'der-horn) cornu inferius ventriculi lateralis.

undernutrition (un'der-nu-trish'un) improper nutrition due to inadequate food supply or to failure to ingest, assimilate, or utilize any or all of the necessary food elements.

understain (un'der-stān) to stain less deeply than usual.

undertoe (un'der-to) a condition in which the great toe is displaced under the others.

Underwood's disease (un'der-woodz) [Michael Underwood, London obstetrician and pediatrician, 1737-1820] sclerema.

undifferentiation (un'dif-er-en'she-a'shun) absence of normal differentiation; anaplasia.

undine (un'din) a small glass flask for irrigating the eye.

undinism (un'din-izm) [*Undine* a water nymph, from L. *unda* wave] the association of sexual ideas with water, including urine and urination.

undulant (un'du-lant) [L. *unda* wave] characterized by wave-like fluctuations; see also *under fever*.

undulation (un'du-la'shun) [L. *undulatio*] a wavelike motion

in any medium; a vibration. **jugular u.**, venous pulse. **respiratory u.**, the variation of the blood pressure curve due to respiration.

ung. abbreviation for L. *unguentum*, ointment.

ungual (ung'gwal) [L. *unguis* nail] pertaining to the nails.

unguent (ung'gwent) [L. *unguentum*] an ointment, salve, or cerate.

unguentum (ung-gwen'tum) [L.] ointment. **u. ac'idi bo'rici**, boric acid ointment. **u. ac'idi undecylen'ici compos'itum**, compound undecylenic acid ointment. **u. aeth'yli aminobenzoa'tis**, benzocaine ointment. **u. al'bum**, white ointment. **u. a'quae ro'sae**, rose water ointment. **u. a'quae ro'sae petrola'tum**, petrolatum rose water ointment. **u. belladon'nae**, belladonna ointment. **u. calami'nae**, calamine ointment. **u. epinephri'nae bitartra'tis ophthal'micum**, epinephrine bitartrate ophthalmic ointment. **u. fla'vum**, yellow ointment. **u. glycol'is polyethyle'ni**, polyethylene glycol ointment. **u. hydrar'gyri biochlo'ridi**, mercury bichloride ointment. **u. hydrar'gyri chlori'di mi'tis**, calomel ointment. **u. hydrar'gyri mi'te**, mild mercurial ointment. **u. hydrar'gyri ox'idi fla'vi**, yellow mercuric oxide ophthalmic ointment. **u. hydrophil'icum**, hydrophilic ointment. **u. ichthammol'is**, ichthammol ointment. **u. menthol'is compos'itum**, compound menthol ointment. **u. nitrofurazo'ni**, nitrofurazone ointment. **u. pi'cis carbo'nis**, coal tar ointment. **u. pi'cis pi'ni**, pine tar ointment. **u. resorcinol'is compos'itum**, compound resorcinol ointment. **u. sulfacetami'di so'dici**, sodium sulfacetamide ointment. **u. sulfu'ris**, sulfur ointment. **u. zin'ci ox'idi**, zinc oxide ointment.

unguiculate (ung-gwik'u-lāt) provided with claws or nails; resembling a claw.

unguiculus (ung-gwik'u-lus) [L., dim. of *unguis*] a small nail or claw.

unguis (ung'gwis), pl. *un'gues* [L.] 1. [NA] the horny cutaneous plate on the dorsal surface of the distal end of the terminal phalanx of a finger or toe, made up of flattened epithelial scales developed from the stratum lucidum of the skin. Called also *nail* (q.v.). 2. a collection of pus in the cornea; an onyx. 3. a nail-like part or structure. **u. incarna'tus**, ingrown nail; see under *nail*. **u. ventric'uli latera'lis cer'ebri**, calcar avis.

ungula (ung'gu-lah) [L. "hoof," "claw," "talón"] the hoof of an animal.

ungulate (ung'gu-lāt) [L. *ungula* hoof] a hoofed mammal.

unguligrade (ung'gu-lī-grād'') [L. *ungula* hoof + *gradi* to walk] walking or running on the tips of one or two digits of each limb, a characteristic of certain quadrupeds known as ungulates.

uni- [L. *unus* one] a prefix meaning *one*.

uniarticular (u'ne-ar-tik'u-lar) [*uni-* + L. *articulus* joint] pertaining to a single joint.

uniaural (u'ne-aw'ral) monaural.

uniaxial (u'ne-ak'se-al) [*uni-* + L. *axis* axis] 1. having but one axis. 2. developing in an axial direction only, as, *uniaxial* organism.

unibasal (u'nī-ba'sal) [*uni-* + L. *basis* base] having only one base.

unicameral (u'nī-kam'er-al) [*uni-* + L. *camera* chamber] having only one cavity or compartment.

unicellular (u'nī-sel'u-lar) [*uni-* + L. *cellula* cell] made up of but a single cell, as the bacteria.

unicentral (u'nī-sen'tral) [*uni-* + L. *centrum* center] pertaining to or having a single center.

unicentric (u'nī-sen'trik) unicentral.

uniceps (u'nī-seps) [*uni-* + L. *caput* head] having one head or origin; said of a muscle.

uniceptor (u'nī-sep'tor) a ceptor with a single combining group; see *Ehrlich's side-chain theory*, under *theory*.

unicism (u'nī-sizm) [L. *unicus* single] the obsolete opinion that there is but one kind of venereal virus.

unicornous (u'nī-kor'nus) [L. *unicornis*] having only one horn or cornu.

unicuspid (u'nī-kus'pid) a tooth with only one cusp.

unicuspidate (u'nī-kus'pī-dāt) having only one cusp.

unidirectional (u'nī-di-rek'shun-al) flowing in only one direction.

uniflagellate (u'nī-flaj'ē-lāt) having one flagellum.

unifocal (u'nī-fo'kal) arising from or pertaining to a single focus.

uniforate (u'nī-fo'rāt) [*uni-* + L. *foratus* pierced] having only one opening.

unigeminal (u'nī-jem'i-nal) [*uni-* + L. *geminus* twin] pertaining to or affecting one twin of a pair.

unigerminal (u'nī-je'r'mī-nal) 1. pertaining to a single germ or ovum. 2. monozygotic.

uniglandular (u'nī-glan'du-lar) pertaining to or affecting only one gland.

unigravida (u'nī-grav'i-dah) primigravida.

unilaminar (u'nī-lam'i-nar) having only one layer or lamina.

unilateral (u'nī-lat'er-al) [*uni* + *L. latus* side] affecting but one side.

unilobar (u'nī-lo'bar) having only one lobe; consisting of a single lobe.

unilocular (u'nī-lok'u-lar) [*uni* + *L. locus*] having but one locus or compartment.

unimodal (u'nī-mo'dal) having only one mode.

uninephrectomized (u-ne-nē-frek'to-mīzd) having one kidney removed by excision.

uninuclear (u'nī-nu'kle-ar) pertaining to a single nucleus; mononuclear.

uninucleated (u'nī-nu'kle-āt'ed) having but one nucleus; mononuclear; mononucleate.

uniocular (u'ne-ok'u-lar) [*uni* + *L. oculus* eye] pertaining to or affecting but one eye.

union (ūn'yun) [*L. unio*] the process of healing; the renewal of continuity in a broken bone or between the edges of a wound. See *healing*. **faulty u.**, an ununited fracture. **primary u.**, healing by first intention. **vicious u.**, union of the ends of a fractured bone so as to produce deformity.

uniovular (u'ne-ov'u-lar) [*uni* + *L. ovum* egg] monozygotic; monovular.

unipara (u-nip'ah-rah) primipara.

uniparental (u'nī-pah-ren'tal) pertaining to one of the parents only.

uniparous (u-nip'ah-rus) [*uni* + *L. parere* to bring forth, produce] 1. producing only one ovum or offspring at one time. 2. primiparous.

Unipen (u'nī-pen) trademark for preparations of nafcillin sodium.

unipolar (u'nī-po'lar) [*uni* + *L. polus* pole] having but a single pole or process, as a nerve cell.

unipotency (u'nī-po'ten-se) [*L. unus* one + *potentia* power] the ability of a part to develop in one manner only, or of a cell to develop into only one type of cell.

unipotent (u-nip'o-tent) unipotentia.

unipotential (u'nī-po'ten'shal) [*uni* + *L. potens* able] capable in one way only; said of cells which have had their fates determined and can give rise to cells of one order only. Cf. *totipotential*.

unirritable (un-ir'i-tah-b'l) not irritable; not capable of being stimulated.

unisepate (u'ne-sep'tāt) having only one septum.

unisexual (u'nī-seks'u-al) [*uni* + *L. sexus* sex] of only one sex; having the sexual organs of one sex only.

unit (u'nit) [*L. unus* one] 1. a single thing. 2. a quantity assumed as a standard of measurement. 3. a gene. **alexinic u.**, the smallest quantity of alexinic serum required to lyse a given amount of red blood cells in the presence of an excess of hemolytic serum. **Allen-Doisy u.**, see *mouse u.* and *rat u.* **amboceptor u.**, the least quantity of amboceptor with which a definite amount of red blood cells will be lysed by an excess of complement. **American Drug Manufacturers' Association u.**, one tenth of the Steenbock unit. **Angström u.**, the unit of wavelength of electromagnetic and corpuscular radiations, equal to 10^{-7} mm. Called also *angstrom*. Abbreviated Å, Å., or Å.U. **Ans-bacher u.**, a unit of vitamin K dosage. **antigen u.**, the least quantity of antigen which will fix one unit of complement so as to prevent hemolysis. **antitoxic u.**, a unit for expressing the strength of an antitoxin. The unit of diphtheria antitoxin is approximately the amount of antitoxin which will preserve the life of a guinea pig weighing 250 gm. for at least four days after it is injected subcutaneously with a mixture of 100 times the minimum lethal dose of diphtheria toxin. Practically, it is the equivalent of a standard unit preserved in Washington. The unit of tetanus antitoxin is approximately ten times the amount of tetanus antitoxin which will preserve the life of a guinea pig weighing 350 gm. for at least ninety-six hours after injection of a mixture with 100 minimum lethal doses of tetanus toxin. The U.S. Public Health Service unit for scarlet fever antitoxin neutralizes 50 skin test doses of scarlet fever toxin. Abbreviated A.E. (Ger. *antitoxineinheit*). **atomic mass u.**, the unit mass equal to $\frac{1}{16}$ the mass of the nuclide of carbon-12, equivalent to 1.657×10^{-24} gm.; abbreviated amu. Called also *atomic weight u.* and *dalton*. **atomic weight u.**, atomic mass u. **avena u.**, the amount of auxin which applied to one side of the tip of an oat sprout will cause a curvature of 10 degrees. **Behnken's u.**, a unit of roentgen-ray exposure, being that quantity which, when applied in 1 cc. of air at 18° C. and 760 mm. Hg of pressure, engenders sufficient electric conductivity to equal one electrostatic unit, as measured by the saturation current. **Bodansky u.**, the quantity of phosphatase in 100 ml. of serum required to liberate 1 mg. of phosphorus as phosphate ion from sodium β -glycerophosphate in 1 hour at 37° C. and under other standardized conditions.

British thermal u., the amount of heat necessary to raise the temperature of 1 pound of water from 39° F. to 40° F., abbreviated B.T.U. **cat u.**, that amount of digitalis calculated per kilogram of weight of a cat which is just sufficient to kill when slowly and continuously injected into the vein (Hatcher). **C. G. S. u.**, any unit in the centimeter-gram-second system. **Clauberg's u.**, a unit of progesterone which is essentially one half of a Corner-Allen unit. **clinical u.**, a unit of estrogenic activity equal to approximately one sixth of the international unit. **Collip u.**, a unit of dosage of parathyroid extract: it is one one-hundredth of the amount required to increase by 5 mg. the quantity of calcium in 100 ml. of blood at the end of fifteen hours in a dog of 20 kg. weight. **complement u.**, the least quantity of complement which will hemolyze a definite amount of red blood cells in the presence of an amboceptor unit. **Corner-Allen u.**, a unit of progesterone dosage. **coronary care u.**, a specially designed and equipped hospital area containing a small number of private rooms, with all facilities necessary for constant observation and possible emergency treatment of patients with severe heart disease. **u. of current**, see *ampere*. **dental u.**, 1. a single tooth. 2. a piece of dental equipment providing several services (electrical, air, gas, etc.). **digitalis u.**, any of several units once used in bioassay of digitalis preparations and named according to the animal in which it was determined, as cat unit, etc. **electromagnetic u's**, that system of units based on the fundamental definition of a unit magnetic pole as one which will repel an exactly similar pole with a force of one dyne when the poles are 1 cm. apart. **electrostatic u's**, that system of units based on the fundamental definition of a unit charge as one which will repel an equal and like charge with a force of one dyne when the two charges are 1 cm. apart in a vacuum. Abbreviated E.S.E. (Ger., *elektrostatische einheit*) and *e.s.u.* **enzyme u.**, that amount of an enzyme which will catalyze the transformation of 1 micromole of substrate (or of 1 microequivalent of the substrate group when more than one bond is attacked, as in polysaccharides) per minute under standard conditions of temperature (30° C.), optimal pH, and optimal substrate concentration. **Felton's u.**, a mouse protective unit of antipneumococcal serum; it is that quantity of antibody capable of protecting a white Swiss mouse against one million fatal doses of a standard pneumococcus culture of the corresponding type. Frequently, it is considered to be the equivalent of the National Institutes of Health control serum (P-11). **Florey u.** (obs.), Oxford u. **u. of force**, see *dyne*. **Hampson u.**, a unit of roentgen-ray exposure; it is one quarter of the erythema dose. **Hanson u.**, a unit of parathyroid extract, being one one-hundredth of the amount required to increase by 1 mg. the amount of calcium in the blood serum of a parathyroidectomized dog weighing 15 kg. **u. of heat**, the quantity of heat required to raise the temperature of a kilogram of water 1° C. See *calorie* and *British thermal u.* **hemolytic u.**, the amount of inactivated immune serum which, in the presence of complement, will completely hemolyze 1 ml. of a 5 per cent suspension of washed red blood cells. **hemorrhagin u.**, the amount of snake venom necessary to produce hemorrhages in the vascular network of a three-day-old chick embryo. **Holzknicht u.**, a unit of roentgen-ray exposure equal to one-fifth the erythema dose. Abbreviated H. **intensive care u.**, a hospital unit in which are concentrated special equipment and skilled personnel for the care of seriously ill patients requiring immediate and continuous attention; abbreviated ICU. **International u.**, a unit of biological material, as of enzymes, hormones, vitamins, etc., established by the International Conference for the Unification of Formulas. **international u. of estrogenic activity**, the estrus-producing activity represented in 0.1 microgram of the international standard estrone. **international u. of gonadotrophic activity**, the specific gonadotrophic activity of 0.1 mg. of the standard material preserved at and distributed from the National Institute for Medical Research, Hampstead, London. It is derived from pregnancy urine and it is approximately the amount required to produce cornification of the vaginal epithelium of the immature rat. **international insulin u.**, one twenty-second of a milligram of the pure crystalline product now adopted as the standard. **international u. of male hormone**, the androgenic activity represented in 0.1 mg. of crystalline androsterone. **international u. of penicillin**, the specific penicillin activity contained in 0.6 microgram of the international standard sodium salt of II or G penicillin. **international u. of vitamin A**, activity equivalent to 0.6 micrograms of pure beta-carotene. **international u. of vitamin D**, the activity of 1 mg. of the international standard solution of irradiated ergosterol (1 mg. in 10 ml. of olive oil). One mg. given daily to rachitic rats for eight consecutive days should produce a wide calcium line. **Kienböck u.**, a unit of roentgen-ray exposure equal to 0.1 erythema dose; symbol X. **King u.**, **King-Armstrong u.**, the amount of phosphatase which, when allowed to act upon an excess of disodium phenylphosphate at a pH of 9 for 30 minutes at 37.5° C., will liberate 1 mg. of phenol. **Lf u.**, that amount of diphtheria toxin or toxoid which gives the most rapid flocculation with one standard unit of diphtheria antitoxin when mixed and incubated *in vitro*. **light u.**, see *footcandle*. **Mache u.**, a German unit for expressing the concentration of radium emanation in solution; it is equivalent to 3.64 eman. Abbreviated Mu.

map u., the relative distance between loci on a chromosome as determined by the recombination frequency; called also *map distance*. **morgan u.**, see *morgan*. **motor u.**, the unit of motor activity formed by a motor nerve cell and its many innervated muscle fibers. **mouse u.**, the least amount of estrus-producing hormone (estrogen) which will cause in a spayed mouse a characteristic change in the vaginal epithelium. Abbreviated m.u. **Noon pollen u.**, the activity present in the saline extract from one millionth of a grain of pollen. **Oxford u.**, that amount of penicillin which, when dissolved in 50 ml. of meat extract broth, just inhibits completely a test strain of *Staphylococcus aureus*. **pepsin u.**, a unit for measuring the proportion of pepsin in the gastric juice. **peripheral resistance u.**, the unit of resistance to blood flow in a vessel, being the resistance encountered when the pressure gradient between two points in a vessel is 1 mm. Hg and the blood flow is 1 ml. per second. **physiologic u.**, see *micelle*. **pilosebaceous u.**, the hair follicle and the associated apocrine gland. **quantum u.**, see *Planck's constant*, under *constant*. **rat u.**, the highest dilution of an estrus-producing hormone (estrogen) which when given to a mature spayed rat in three injections at four-hour intervals during the first day will produce cornification and desquamation of the vaginal epithelium. Abbreviated R.U. **u. of resistance**, see *ohm*. **Sherman u.** (for vitamin A), see *Sherman-Munsell u. of vitamin A*. **Sherman-Bourquin u. of vitamin B₂**, that amount of riboflavin which fed daily to a standard test rat for eight weeks will give a gain of 3 gm. a week. **Sherman-Munsell u. of vitamin A**, that amount of vitamin A which when fed daily just suffices to support a rate of gain of 3 gm. per week for eight weeks in a standard rat previously depleted of vitamin A. **SI u.**, any of the units of the *Système International d'Unités*, or International System of Units, adopted in 1960 at the Eleventh General Conference of Weights and Measures. SI units comprise the basic units *meter* (length), *kilogram* (mass), *second* (time), *ampere* (electric current), *kelvin* (temperature [absolute]), *candela* (luminous intensity), and *mole* (amount of substance); supplementary units *radian* (plane angle) and *steradian* (solid angle); and derived units, which are stated in terms of the basic units, *newton* (force), *pascal* (pressure), *joule* (energy), *watt* (power), *volt* (electric potential), *coulomb* (electric charge), *farad* (capacitance), *ohm* (electric resistance), *siemens* (electric conductance), *weber* (magnetic flux), *tesla* (magnetic flux density), *henry* (inductance), *hertz* (frequency), and *degree Celsius* (temperature). For multiples and submultiples of these units formed by the use of prefixes, see table under *metric* and *Tables of Weights and Measures*, under *weight*. **skin test u.**, that amount of scarlet fever toxin which when injected intradermally gives a positive reaction in susceptible persons and no reaction in unsusceptible or immune persons. A positive reaction is a faint to bright red area measuring as much as 10 mm. in one diameter. Abbreviated S.T.U. **Somogyi u.**, that amount of amylase which will destroy 1.5 mg. of starch in 8 minutes at 37° C. The normal range of the value in blood serum is considered by some to be between 80 and 200 units per 100 ml. **specific smell u.**, the smallest amount in substance in grams per liter which can be detected by smell. **spermatoocyte u.**, the smallest amount of tuberculin which will destroy spermatogenesis when injected into the testicle of a guinea pig. **Steenbock u. of vitamin D**, the total amount of vitamin D which will produce a narrow line of calcium deposit in the rachitic metaphyses of the distal ends of the radii and ulnae of standard rachitic rats within ten days. **sudanophobic u.**, the smallest amount of corticotrophic hormone which will cause the disappearance of the sudanophobic zone in at least two or three hypophysectomized rats when they are injected morning and evening on eight consecutive days. **Svedberg u.**, a unit of time (10^{-13} seconds) and velocity used in measuring the sedimentation constant of a colloid solution. **Thayer-Doisy u.**, a unit of vitamin K activity, being equivalent to the activity of 1 μ g. of pure vitamin K₁. **toxic u.**, **toxin u.**, the smallest dose of toxin which will kill a guinea pig weighing about 250 gm. in three to four days. **tuberculin u.**, 0.00002 mg. of purified protein derivative (P.P.D.) in 0.1 ml. of tuberculin solution, corresponding in potency to a 1:10,000 solution of Old tuberculin. **turbidity reducing u.**, the amount of hyaluronidase which is just sufficient to reduce the turbidity produced by 0.2 mg. of hyaluronate to that produced by 0.1 mg. after addition of acidified horse serum. **uranium u.**, a unit for measuring radioactivity, the activity of uranium being considered as 1. **urotoxic u.**, the smallest quantity of urotoxin which will kill an animal weighing 1 gm. **U.S.P. u.**, one used in the United States Pharmacopeia in expressing the potency of antibiotic, pharmacodynamic, and endocrine preparations, as well as most of the sera, toxins, vaccines, and related products, corresponding to units established internationally, by the Food and Drug Administration, or by the National Institutes of Health. **vitamin A u.**, see *international u. of vitamin A*, and *Sherman-Munsell u. of vitamin A*. **u. of vitamin B₁**, the antineuritic activity of 3 micrograms of the international standard preparation deposited at the National Institute for Medical Research, Hampstead. **vitamin D u.**, see *international u. of vitamin D*, *Steenbock u. of vitamin D*, and *American Drug Manufacturers' Association u. of vitamin D*. **vitamin G u.**, see *Sherman-Bourquin u. of vitamin B₂*. **Voegtlin u.**, the

amount of contraction produced in the isolated guinea-pig uterus by 0.5 mg. of the standard powdered preparation of the posterior pituitary. **x-ray u.**, Kienböck u.

unitage (u'nit-ij) a statement of the unit quantity in any system of measurement.

unitary (u'ni-ter'e) [L. *unitas* oneness] composed of or pertaining to a single unit.

United States Pharmacopeia see *U.S.P.*

Unitensen (u'nī-ten'sen) trademark for a preparation of cryptenamine acetates or cryptenamine tannates.

uniterminal (u'nī-ter'mī-nal) monoterminial.

univalence (u'nī-va'lens) the state or condition of being univalent.

univalent (u'nī-va'lent) [*uni-* + L. *valere* to be strong] having a valence of one; replacing or combining with one atom of hydrogen or its equivalent.

univitelline (u'nī-vi-tel'in) pertaining to or derived from a single ovum.

unmedullated (un-med'u-lāt'ed) not possessing a medulla or myelin sheath; said of a nerve fiber.

unmyelinated (un-mī'ē-li-nāt'ed) not possessing a myelin sheath; said of a nerve fiber.

Unna's boot, etc. (oo'nahz) [Paul Gerson *Unna*, dermatologist in Hamburg, 1850-1929] see under *boot*, *cell*, *dermatosis*, *layer*, and *Table of Stains*.

Unna-Pappenheim stain (oo'nah-pahp'en-him) [Paul Gerson *Unna*; *Artur Pappenheim*, German physician, 1870-1916] see *Table of Stains*.

unorganized (un-or'gan-izd) not developed into an organic structure; not having organs.

unorientation (un'o-re-en-tā'shun) extreme disorder of memory in which the person loses the ideas of place and time; disorientation.

unphysiologic (un'fiz-e-o-loj'ik) not physiologic in character.

unrest (un-rest') a state of uneasiness, or restlessness. **peristaltic u.**, a state of disturbed peristalsis of the stomach or intestine.

unsaturated (un-sat'u-rāt'ed) not saturated; applied to (1) a chemical compound in which two or more atoms are united by double or triple bonds. These bonds have two or three pairs of shared electrons characterized by pi-electrons (π -electrons) with orbital overlap. Such compounds may still add atoms or groups to the unsaturated bonding atoms up to a limit of bonding power or saturation. Most commonly refers to carbon-carbon bonds, as in unsaturated fatty acids. (2) a solution in which more solute may still be dissolved under stated conditions.

Unschuld's sign (oon'shouldz) [Paul *Unschuld*, German internist, born 1835] see under *sign*.

unsex (un-seks') to deprive of the sex glands, or gonads.

unstriated (un-stri'āt-ed) having no striations or striae; see under *muscle*.

Unverricht's disease (syndrome) (oon'fer-ikts) [Heinrich *Unverricht*, German physician, 1853-1912] myoclonus epilepsy.

upsiloid (up'sī-loid) [Gr. υ + *eidos* form] shaped like the Greek upsilon (υ or Υ); see *hyoid* (def. 1) and *hypsiloid*.

uptake (up'tāk) absorption and incorporation of a substance by living tissue, as of iodine by the thyroid gland.

ur- see *uro-*.

urachal (u'rah-kal) pertaining to the urachus.

urachovesical (u'rah-ko-ves'ī-kal) pertaining to the urachus and the bladder.

urachus (u'rah-kus) [Gr. *ourachos*] [NA] a canal in the fetus that connects the bladder with the allantois; it persists throughout life as a cord (the median umbilical ligament) into which a patent canal may extend for part of the distance to the umbilicus.

uracil (u'rah-sil) a pyrimidine component, ($C_4H_4O_2N_2$), found in nucleic acid. **5-methyl u.**, see *thymine*.

uracrasia (u'rah-kra'se-ah) [*ur-* + Gr. *akrasia* bad mixture] a disordered state of the urine.

uracratia (u'rah-kra'she-ah) [*ur-* + Gr. *akrateia* lack of self control] urinary incontinence.

uragogue (u'rah-gog) [*ur-* + Gr. *agōgos* leading] 1. increasing urinary volume flow; diuretic. 2. an agent that increases production of urine.

uramil (u'rah-mil) a white crystalline pyrimidine derivative, $CO(NH.CO_2)CH.NH_2$, dialuramide, or 5-aminobarbituric acid, obtainable from uric acid, alloxantin, and other substances.

uranianism (u-ra'ne-an-izm) uranism.

uranidin (u-ran'ī-din) any one of a group of yellow animal pigments found in sponges, corals, medusae, and worms.

uranin (u'rah-nin) the sodium or potassium salt of fluorescein; see *sodium fluorescein*.

uranisco- [Gr. *ouraniskos*, the roof of the mouth] a combining form denoting relationship to the palate; see also *urano-*.

uranischochasma (u'rah-nis''ko-kaz'mah) [*uranisco-* + Gr. *chasma* cleft] cleft palate.

uraniscotalia (u'rah-nis''ko-la'le-ah) [*uranisco-* + Gr. *lalia* talking] a speech defect due to cleft palate.

uraniscoplasty (u'rah-nis''ko-plas'te) palatoplasty.

uraniscorrhaphy (u'rah-nis-kor'ah-fe) [*uranisco-* + Gr. *rhaphe* seam] staphylorrhaphy.

uraniscus (u'rah-nis'kus) [Gr. *ouraniskos*, dim. of *ouranos*] the palate.

uranism (u'rah-nizm) [Gr. *ourania* the heavenly one, one of the epithets of Aphrodite, or Venus, as the patroness of homosexuals] homosexuality.

uranium (u-ra'ne-um) [L. *Uranus* a planet] a hard and heavy radioactive metallic element; symbol, U; atomic number, 92; atomic weight, 238.03; specific gravity, 18.68. Some of its compounds are medicinal. Naturally occurring uranium is composed of three isotopes of mass numbers 234, 235, and 238, respectively. Uranium 235 separated from U 238 undergoes fission with slow neutrons, giving up neutrons which can join the nucleus of U 238 to form neptunium, which in turn decays by beta particle emission to form plutonium. Cf. *neptunium* and *plutonium*.

urano- [Gr. *ouranos* the roof of the mouth, also the vault of heaven, or sky] a combining form denoting relationship to the palate; sometimes used in reference to the sky, or heaven.

uranoplastic (u'rah-no-plas'tik) pertaining to uranoplasty (palatoplasty).

uranoplasty (u'rah-no-plas'te) [*urano-* + Gr. *plassein* to mold] palatoplasty.

uranoplegia (u'rah-no-ple'je-ah) [*urano-* + Gr. *plēge* stroke + *-ia*] palatoplegia.

uranorrhaphy (u'rah-nor'ah-fe) [*urano-* + Gr. *rhaphe* seam] staphylorrhaphy.

uranoschisis (u'rah-nos'ki-sis) [*urano-* + Gr. *schisis* fissure] fissure of the palate; cleft palate.

uranoschism (u-ran'o-skizm) [*urano-* + Gr. *schisma* cleft] fissure of the palate; cleft palate.

uranostaphyloplasty (u'rah-no-staf'i-lo-plas'te) an operation for repairing a defect of both the soft and hard palates; palatoplasty.

uranostaphylorrhaphy (u'rah-no-staf'i-lor'ah-fe) [*urano-* + Gr. *staphylē* uvula + *rhaphe* suture] surgical palatorrhaphy.

uranostaphyloschisis (u'rah-no-staf'i-lo-s'ki-sis) fissure of both the hard and the soft palate.

uranosteoplasty (u'rah-nos'te-o-plas'te) palatoplasty.

Uranotaenia (u'rah-no-te'ne-ah) a genus of culicine mosquitoes.

U. sappari'nus, a species occurring in the eastern United States.

uranyl (u'rah-nil) the UO^{++} ion, as in uranyl sulfate, UO_2SO_4 .

u. acetate, a yellow crystalline compound, $UO_2(C_2H_3O_2)_2 \cdot 2H_2O$, used in coryza.

urapostema (u'rah-pos-te'mah) [*ur-* + Gr. *apostēma* abscess] an abscess which contains urine.

urarthrititis (u'rar-thri'tis) gouty arthritis.

urase (u'rās) urease.

urasin (u-ras'in) an enzyme derivable from urea by the action of various bacteria.

urate (u'rāt) [L. *uras*] any salt of uric acid. Urates, especially that of sodium, are constituents of the urine, the blood, and of tophi, or calcareous concretions. **monosodium u.**, the urate ion form in which uric acid usually exists (in the serum) at the normal pH of body fluids.

uratemia (u'rah-te'me-ah) [*urate* + Gr. *haima* blood + *-ia*] the presence of urates in the blood.

uratic (u-rat'ik) pertaining to urates or to gout.

urathistechia (u'rah-to-his-tek'e-ah) [*urate* + Gr. *histos* tissue + *echein* to hold] the presence of an excessive amount of urate, urea, or uric acid in a tissue.

uratoma (u'rah-to'mah) a tophus or concretion made up of urates.

uratosiis (u'rah-to'sis) the deposition of crystalline urates in the tissues.

uraturia (u'rah-tu're-ah) [*urate* + Gr. *ouron* urine + *-ia*] the presence of an excess of urates in the urine; lithuria.

urazin, **urazine** (u'rah-zin) diurea.

urazole (u'rah-zōl) a crystalline compound, 1,2,4-triazolidine-3,5-dione, $(NH \cdot CO)_2NH$, formed by heating urea or biuret with hydrazine sulfate.

Urbach-Oppenheimer disease (ur'bak op'en-him) [Erich Urbach, Philadelphia dermatologist, 1893-1946; Maurice Oppenheimer, Chicago dermatologist, 1876-1949] necrobiosis lipidica diabetiformis.

urceiform (ur-se'i-form) [L. *urceus* pitcher + *forma* shape] pitcher-shaped.

urceolate (ur-se'o-lāt) urceiform.

ur-defense (ur'de-fens') [Ger. *Ur* ultimate, transcendent + *de-*

fense] a belief essential to the psychological integrity of the individual. Such beliefs include faith in personal survival, in religious, philosophic, or scientific systems, and in human succorance.

urea (u-re'ah) 1. the diamide of carbonic acid, $NH_2CO \cdot NH_2$, a white, crystallizable substance found in the urine, blood, and lymph. It is the chief nitrogenous constituent of the urine, and the chief nitrogenous end-product of the metabolism of proteins. It is formed in the liver from amino acids and from compounds of ammonia. See also *carbamide*, and see *urea cycle*, under *cycle*. 2. [USP] a preparation containing between 99.0 and 100.5 per cent of the labeled amount of urea, occurring as colorless to white, prismatic crystals or white, crystalline powder, used as an osmotic diuretic mainly to reduce intracranial and intraocular pressure, administered by intravenous infusion. Urea is also used in topical preparations, containing 2 or 10 per cent urea, to moisturize, soften, and smooth dry, rough skin. **diethyl malonyl u.**, barbituric acid. **malonyl u.**, barbituric acid. **mesoxalyl u.**, alloxan. **u. nitrogen**, the nitrogen component of urea. The concentration of urea nitrogen in the blood (*blood urea nitrogen*, BUN) is measured in the determination of kidney function; elevated levels of blood urea nitrogen indicate a disorder of kidney function. **u. quinate**, **u. salicylate**, urea compounds once used in gouty conditions. **u. stibamine**, a mixture of different antimony compounds, used as an antileishmanial, administered intravenously.

ureagenetic (u-re'ah-jē-net'ik) [*urea* + Gr. *gennan* to produce] forming or producing urea.

ureal (u're-al) pertaining to urea.

ureametry (u're-am'ē-tre) the measurement of the urea present in the urine.

Ureaphil (u-re'ah-fil) trademark for a preparation of urea.

Ureaplasma urealyticum (u-re'ah-plaz'ma u-re'ah-lit'i-kum) a species of nonmotile pleomorphic, gram-negative bacteria, lacking a cell wall, and forming very small granular colonies, 15-25 μm . in diameter; they are associated with nonspecific urethritis in males and genital tract infections in females. Called also *T-mycoplasma*.

ureapoiiesis (u-re'ah-poi-e'sis) [*urea* + Gr. *poiein* to make] the formation of urea.

urease (u're-ās) a colorless, crystalline globulin first extracted by Takeuchi from soy bean. It is also found in mucous urine passed during inflammation of the bladder. It is an enzyme elaborated by various microorganisms, and is capable of causing the change of urea into carbon dioxide and ammonia and of hippuric acid into benzoic acid and glycocholic acid. It was the first enzyme prepared in the crystalline state (Jesse Sumner). Called also *urea enzyme*.

urechysis (u-rek'i-sis) [*uro-* + Gr. *ekchysis* a pouring out] the effusion of urine into the cellular tissue.

Urechites (u-rek'i-tēz) a genus of plants. **U. suberec'ta**, Savannah flower, an apocynaceous plant of tropical America with poisonous and antipyretic leaves.

urechitin (u-rek'i-tin) a poisonous glycoside, $C_{28}H_{42}O_8 + xH_2O$, from *Urechites suberec'ta*.

urechitoxin (u-rek'i-tok'sin) a poisonous glycoside, $C_{13}H_{20}O_5$, from *Urechites suberec'ta*.

Urecholine (u're-ko'lin) trademark for a preparation of bethanechol chloride.

uredema (u'rē-de'mah) [*uro-* + Gr. *oidēma* swelling] a puffy condition of the tissues caused by infiltration of extravasated urine.

uredofos (u-re'do-fos) chemical name: [[[(2-[[[(4-methylphenyl)sulfonyl]amino]carbonyl]amino]phenyl]amino]thioxomethyl]phosphoramidic acid diethyl ester; a veterinary anthelmintic, $C_{18}H_{25}N_4O_6P_2$.

ureide (u're-id) a compound of urea and an acid or aldehyde formed by the elimination of water. Those from one molecule of urea, as alloxan, are monoureides; those derived from two, as uric acid, are diureides.

urein (u-re'in) a yellowish, oily substance isolated from the urine, and said to be the principal organic constituent and the true cause of uremia. It has a specific gravity of 1.27, and mixes freely with water and alcohol.

urelcosis (u'rel-ko'sis) [*uro-* + Gr. *helkōsis* ulceration] 1. ulceration of the urinary passages. 2. an ulcer due to derangement of the urinary apparatus.

uremia (u-re'me-ah) [Gr. *ouron* urine + *haima* blood + *-ia*] the retention of excessive by-products of protein metabolism in the blood, and the toxic condition produced thereby. It is marked by nausea, vomiting, headache, vertigo, dimness of vision, coma or convulsions, and an azotemic odor of the breath. It is due to nephron function inadequate to excrete urea and other products of protein metabolism. **azotemic u.**, retention u. **convulsive u.**, uremia in which the symptoms are due to spasm of the cerebral arteries or to increase of intracranial tension. **eclamptic u.**, convulsive u. **extrarenal u.**, **prerenal u.**, uremia due to inhibition of renal function by disorders not related to the urinary tract. **puerperal u.**, uremic poisoning follow-

- ing childbirth. **retention u.**, uremia due to the retention of urinary nitrogenous substances in the blood.
- uremic** (u-re-'mik) pertaining to or characterized by uremia.
- uremigenic** (u-re-'mī-jen'ik) 1. caused by or due to uremia. 2. causing uremia.
- ureo-** for other words beginning thus, see those beginning *urea-*.
- ureolysis** (u-re-'ol'i-sis) [*urea* + Gr. *lysis* a loosing, setting free] the decomposition of urea to carbon dioxide and ammonia.
- ureolytic** (u-re-'ol'i'tik) pertaining to, characterized by, or promoting ureolysis.
- ureometry** (u-re-'om'ē-tre) ureametry.
- ureotelic** (u-re-'o-tel'ik) [*urea* + Gr. *telikos* belonging to the completion, or end] having urea as the chief excretory product of nitrogen metabolism.
- uresiesthesia** (u-re-'se-es-the'sis) [*uresis* + Gr. *aisthēsis* perception + *-ia*] the normal impulse to pass the urine.
- uresis** (u-re'sis) [Gr. *ourēsis*] the passage of urine; urination. Sometimes used as a word termination denoting excretion in the urine of the substance indicated by the stem to which it is affixed, as chloruresis, cupruresis, saluresis.
- uret** (u'ret) the chemical group CH_2NO .
- uretal** (u-re'tal) ureteral.
- ureter** (u-re'ter) [Gr. *ourētēr*] [NA] the fibromuscular tube which conveys the urine from the kidney to the bladder. It begins with the pelvis of the kidney, a funnel-like dilatation, and empties into the base of the bladder, being 16 to 18 inches long. It is divided into a pars abdominalis and a pars pelvina. See Plate accompanying *urogenital system*, under *system*. **circumcaval u.**, postcaval u., **ectopic u.**, a ureter which opens elsewhere than in the bladder wall, usually arising from the upper segment of a double kidney, and, in the female, opening in the vestibule, terminal urethra, vagina, cervix, or uterine cavity; in the male it invariably enters the genital or urinary tract above the level of the external sphincter. **postcaval u.**, a congenital anomaly in which the right ureter passes behind the inferior vena cava and curves round this vessel to regain its anterior position as it descends to the bladder; called also *circumcaval u.* and *retrocaval u.* **retrocaval u.**, postcaval u. **retroiliac u.**, a congenital anomaly in which a ureter passes behind the iliac artery.
- ureteral** (u-re'ter-al) pertaining to or used upon the ureter.
- ureteralgia** (u're-ter-al'je-ah) pain in the ureter; neuralgia of the ureter.
- ureterectasia** (u-re'ter-ek-ta'se-ah) ureterectasis.
- ureterectasis** (u-re'ter-ek'tah-sis) [*ureter* + Gr. *ektasis* distention] distention of the ureter.
- ureterectomy** (u're-ter-ek'to-me) [*ureter* + Gr. *ektomē* excision] the surgical removal of a ureter or of a part of it.
- ureteric** (u'rē-ter'ik) ureteral.
- ureteritis** (u're-ter-i'tis) inflammation of a ureter. **u. cystica**, ureteritis characterized by the formation of multiple submucosal cysts. **u. glandularis**, ureteritis characterized by the conversion of transitional mucosa into cylindrical epithelium, with formation of glandular acini.
- uretero-** [Gr. *ourētēr* the duct which conveys urine from the kidney to the bladder] a combining form denoting relationship to the ureter.
- ureterocele** (u-re'ter-o-sē'l') [*uretero-* + Gr. *kēlē* hernia] sacculatation of the terminal portion of the ureter into the bladder, as a result of stenosis of the ureteral meatus. **ectopic u.**, one which is located distal to the trigone of the bladder and which may extend into the urethra.
- ureterocelelectomy** (u-re'ter-o-se-lek'to-me) excision of a ureterocele.
- ureterocervical** (u-re'ter-o-ser'vī-kal) pertaining to a ureter and to the cervix uteri.
- ureterocolostomy** (u-re'ter-o-ko-lost'o-me) [*uretero-* + Gr. *kōlon* colon + *stomoun* to provide with an opening, or mouth] transplantation of the bladder end of a ureter into the colon.
- ureterocutaneostomy** (u-re'ter-o-ku-ta'-ne-os'to-me) surgical creation of an opening of the ureter on the skin, permitting drainage of urine directly to the exterior of the body.
- ureterocystanastomosis** (u-re'ter-o-sis'tah-nas'to-mo'sis) ureteroneocystostomy.
- ureterocystoneostomy** (u-re'ter-o-sis'to-ne-os'to-me) [*uretero-* + Gr. *kystis* bladder + *neos* new + *stomoun* to provide with an opening, or mouth] ureteroneocystostomy.
- ureterocystoscope** (u-re'ter-o-sis'to-skōp) [*uretero-* + *cystoscope*] a cystoscope with an arrangement for catheterizing the ureters.
- ureterocystostomy** (u-re'ter-o-sis-tos'to-me) [*uretero-* + Gr. *kystis* bladder + *stomoun* to provide with an opening, or mouth] ureteroneocystostomy.
- ureterodialysis** (u-re'ter-o-di-al'i-sis) [*uretero-* + Gr. *dialysis* separation] rupture of a ureter.
- ureteroduodenal** (u-re'ter-o-du'o-de'nal) pertaining to or communicating with a ureter and the duodenum, as a ureteroduodenal fistula.
- ureteroenteric** (u-re'ter-o-en-ter'ik) pertaining to or connecting the ureter and the intestine.
- ureteroenteroanastomosis** (u-re'ter-o-en'ter-o-ah-nas'to-mo'sis) ureteroenterostomy.
- ureteroenterostomy** (u-re'ter-o-en'ter-os'to-me) [*uretero-* + Gr. *enteron* bowel + *stomoun* to provide with an opening, or mouth] the operation of forming an anastomosis between a ureter and the intestine.
- ureterogram** (u-re'ter-o-gram) a radiograph of the ureter.
- ureterography** (u-re'ter-og'rah-fe) [*uretero-* + Gr. *graphein* to write] radiography of the ureter after injection of an opaque medium into the ureter.
- ureteroheminephrectomy** (u-re'ter-o-hem'ī-nē-frek'to-me) excision of the diseased portion of a reduplicated kidney and its ureter.
- ureteroileostomy** (u-re'ter-o-il'ē-os'to-me) anastomosis of the ureters to an isolated loop of the ileum, drained through a stoma on the abdominal wall.
- ureterointestinal** (u-re'ter-o-in-tes'tī-nal) pertaining to or connecting the ureter and intestine.
- ureterolith** (u-re'ter-o-lith') [*uretero-* + Gr. *lithos* stone] a calculus lodged or formed in a ureter.
- ureterolithiasis** (u-re'ter-o-lī-thi'ah-sis) the formation of a calculus in the ureter.
- ureterolithotomy** (u-re'ter-o-lī-thot'o-me) [*uretero-* + Gr. *lithos* stone + *tomē* a cutting] the removal of a calculus from the ureter by incision.
- ureterolysis** (u-re'ter-ol'i-sis) [*uretero-* + Gr. *lysis* dissolution] 1. rupture of the ureter. 2. paralysis of the ureter. 3. the operation of freeing the ureter from adhesions.
- ureteromeatotomy** (u-re'ter-o-me'ah-tot'o-me) incision of the opening of the ureter in the bladder wall.
- ureteroneocystostomy** (u-re'ter-o-ne'o-sis-tos'to-me) [*uretero-* + Gr. *neos* new + *kystis* bladder + *stomoun* to provide with an opening, or mouth] surgical transplantation of the ureter to a different site in the bladder.
- ureteroneopyelostomy** (u-re'ter-o-ne'o-pi'ē-lost'o-me) [*uretero-* + Gr. *neos* new + *pyelos* pelvis + *stomoun* to provide with an opening, or mouth] an operation for cutting out a stricture of the ureter and inserting the upper end of the lower segment of the ureter through a new aperture into the pelvis of the kidney.
- ureteronephrectomy** (u-re'ter-o-nē-frek'to-me) [*uretero-* + Gr. *nephros* kidney + *ektomē* excision] extirpation of a kidney and its ureter.
- ureteropathy** (u-re'ter-op'ah-the) [*uretero-* + Gr. *pathos* disease] any disease of the ureter.
- ureteropelvic** (u-re'ter-o-pel'vik) pertaining to or affecting the ureter and the renal pelvis.
- ureteropelviectomy** (u-re'ter-o-pel've-o-ne-os'to-me) ureteroneopyelostomy.
- ureteropelvioplasty** (u-re'ter-o-pel've-o-plas'te) surgical reconstruction of the junction of the ureter and renal pelvis. **Culp u.**, ureteropelvioplasty in which a spiral pelvic flap is turned down and incorporated into the adjacent ureter. **Foley Y-type u.**, an operation for correction of obstructive, congenital high insertion of the ureter into the renal pelvis. **Scardino u.**, ureteropelvioplasty in which a vertical pelvic flap is turned down and incorporated into the adjacent ureter.
- ureterophlegma** (u-re'ter-o-fleg'mah) [*uretero-* + Gr. *phlegma* phlegm] the presence of mucus in the ureter.
- ureteroplasty** (u-re'ter-o-plas'te) [*uretero-* + Gr. *plassein* to form] plastic operation upon the ureter for widening a stricture.
- ureteroproctostomy** (u-re'ter-o-prok-tos'to-me) [*uretero-* + Gr. *prōktos* anus + *stomoun* to provide with an opening, or mouth] the operation of forming an anastomosis between the ureter and the lower rectum.
- ureteropyelitis** (u-re'ter-o-pi'ē-li'tis) [*uretero-* + Gr. *pyelos* pelvis] inflammation of a ureter and of the pelvis of a kidney.
- ureteropyelography** (u-re'ter-o-pi'ē-log'rah-fe) roentgenography of the ureter and pelvis of the kidney.
- ureteropyeloneostomy** (u-re'ter-o-pi'ē-lo-ne-os'to-me) [*uretero-* + Gr. *pyelos* pelvis + *neos* new + *stomoun* to provide with an opening, or mouth] surgical formation of a new passage from the pelvis of a kidney to the ureter.
- ureteropyelonephritis** (u-re'ter-o-pi'ē-lo-nē-fri'tis) [*uretero-* + Gr. *pyelos* pelvis + *nephros* kidney + *-itis*] inflammation of the ureter and the pelvis of the kidney.
- ureteropyelonephrostomy** (u-re'ter-o-pi'ē-lo-nē-fros'to-me) operative anastomosis of the ureter and the pelvis of the kidney.
- ureteropyeloplasty** (u-re'ter-o-pi'ē-lo-plas'te) any plastic operation on the ureter and renal pelvis.
- ureteropyelostomy** (u-re'ter-o-pi'ē-lost'o-me) ureteropyeloneostomy.
- ureteropyosis** (u-re'ter-o-pi'o'sis) [*uretero-* + Gr. *pyon* pus + *-osis*] suppurative inflammation of the ureter.

ureterorectal (u-re''ter-o-rek'tal) pertaining to or communicating with a ureter and the rectum, as a ureterorectal fistula.

ureterorectoneostomy (u-re''ter-o-rek''to-ne-os'to-me) ureteroproctostomy.

ureterorectostomy (u-re''ter-o-rek-tos'to-me) ureteroproctostomy.

ureterorenoscopy (u-re''ter-o-re'no-skōp) a fiberoptic endoscope used in ureterorenoscopy.

ureterorenoscopy (u-re''ter-o-re-nos'ko-pe) visual inspection of the interior of the ureter and kidney by means of a fiberoptic endoscope for such purposes as biopsy, removal or crushing of stones, etc.

ureterorrhagia (u-re''ter-o-ra'je-ah) [*uretero-* + Gr. *rhēgnynai* to burst forth] a discharge of blood from the ureter.

ureterorrhaphy (u're-ter-or'ah-fe) [*uretero-* + Gr. *rhaphe* suture] the operation of suturing the ureter for fistula.

ureterosigmoidostomy (u-re''ter-o-sig'moi-dos'to-me) the operation of implanting the ureter into the sigmoid flexure.

ureterostegnosis (u-re''ter-o-steg-no'sis) [*uretero-* + Gr. *stegnōsis* contraction] ureterostenosis.

ureterostenoma (u-re''ter-o-stē-no'mah) [*uretero-* + Gr. *stenōma* stricture] ureterostenosis.

ureterostenosis (u-re''ter-o-stē-no'sis) [*uretero-* + Gr. *stenōsis* narrowing] stricture of the ureter.

ureterostoma (u're-ter-os'to-mah) [*uretero-* + Gr. *stoma* mouth] 1. the vesical orifice of the ureter (ostium ureteris [NA]). 2. a ureteral fistula.

ureterostomosis (u-re''ter-o-sto-mo'sis) ureterostomy.

ureterostomy (u're-ter-os'to-me) [*uretero-* + Gr. *stomoun* to provide with an opening, or mouth] surgical formation of a permanent fistula through which a ureter may discharge its contents.

cutaneous u., the operation of bringing the ureter to the skin through an incision in the iliac region; ureterocutaneostomy.

ureterotomy (u're-ter-ot'o-me) [*uretero-* + Gr. *tomē* a cutting] surgical incision of a ureter.

ureterotrigonoenterostomy (u-re''ter-o-tri-go'no-en'ter-os'to-me) implantation into the intestine of the ureter with the part of the bladder wall surrounding its termination.

ureterotrigonosigmoidostomy (u-re''ter-o-tri-go'no-sig'moi-dos'to-me) implantation into the sigmoid flexure of the ureter with the part of the bladder wall surrounding its termination.

ureterouteral (u-re''ter-o-u-re'ter-al) connecting two parts of the ureter.

ureterouterostomy (u-re''ter-o-u-re'ter-os'to-me) end-to-end anastomosis of the two portions of a transected ureter; see also *transureterouterostomy*.

ureterouterine (u-re''ter-o-u'ter-in) pertaining to or communicating with a ureter and the uterus.

ureterovaginal (u-re''ter-o-vaj'i-nal) pertaining to or communicating with a ureter and the vagina.

ureterovesical (u-re''ter-o-ves'i-kal) pertaining to a ureter and the bladder.

ureterovesicoplasty (u-re''ter-o-ves'i-ko-plas'te) plastic repair of the ureterovesical junction for correction of ureterovesical reflux or obstruction.

ureterovesicostomy (u-re''ter-o-ves'i-kos'to-me) the operation of reimplanting the ureter at a different site in the bladder wall.

urethan (u'rē-than) [NF] chemical name: carbamic acid ethyl ester. An antineoplastic, $C_3H_7NO_2$, occurring as white crystals or white, granular powder; it has been used in the treatment of myeloid and lymphatic leukemia and plasma cell myeloma, but has been replaced largely by superior drugs.

urethane (u'rē-thān) urethan.

urethra (u-re'thrah) [Gr. *ourēthra*] the membranous canal conveying urine from the bladder to the exterior of the body. See Plate accompanying *urogenital system*, under *system*. **anterior u.**, the portion of the male urethra extending from the bulb to the meatus on the summit of the glans penis, tunneling the corpus spongiosum; it consists of three parts, the bulbous, the pendulous, and the most distal, glandular part. **double u.**, congenital complete or partial reduplication of the urethra; the urethral openings may be side by side or one above the other. **female u.**, **u. femini'na** [NA], a canal, about 3.7 cm. long, extending from the neck of the bladder, running above the anterior vaginal wall and piercing the urogenital diaphragm, to reach the urinary meatus; called also *u. muliebris*. **male u.**, **u. masculi'na** [NA], a canal extending from the neck of the bladder to the urinary meatus, measuring about 20 cm. in length, and presenting a double curve when the penis is flaccid; it is divided into a *pars prostatica*, *pars membranacea*, and *pars spongiosa*. Called also *u. virilis*. **u. mulie'bris**, *u. feminina*. **posterior u.**, the portion of the male urethra, extending from the bladder to the bulb, and consisting of the membranous and prostatic parts. **u. viri'lis**, *u. masculina*.

urethral (u-re'thral) pertaining to the urethra.

urethralgia (u'rē-thral'je-ah) pain in the urethra.

urethrascope (u-re'thrah-skōp) urethroscope.

urethratresia (u-re'thrah-tre'ze-ah) imperforation of the urethra.

urethrectomy (u'rē-threk'to-me) [*urethra* + Gr. *ektomē* excision] the surgical removal of the urethra or a part of it.

urethremphraxis (u'rē-threm-frak'sis) [*urethra* + Gr. *emphraxis* stoppage] obstruction of the urethra.

urethreurynter (u-rēth'roo-rin'ter) [*urethra* + Gr. *eurynein* to make wide] an instrument for dilating the urethra.

urethrism (u'rē-thrizm) [L. *urethrismus*] irritability or chronic spasm of the urethra.

urethritis (u'rē-thri'tis) inflammation of the urethra. **u. cys'tica**, inflammation of the urethra, with the formation of multiple submucosal cysts. **u. glandula'ris**, inflammation of the urethra, with conversion of transitional mucosal into cylindrical epithelium, with formation of glandular acini. **gonococcal u.**, **gonorrheal u.**, gonorrhea in the male. **gouty u.**, urethritis due to gout. **u. granulo'sa**, urethritis in which the anterior urethra is filled with granulations. **nongonococcal u.**, **nonspecific u.**, urethritis without evidence of gonococcal infection, as, for example, that caused by *Chlamydia trachomatis*; called also *simple u.* **u. orifi'cii exter'ni**, inflammation and ulceration of the external urethral meatus. **u. petrif'icans**, urethritis with the formation of calcareous matter in the urethral wall. **prophylactic u.**, a mild urethritis that sometimes follows irrigations used to prevent venereal infections. **simple u.**, nongonococcal u. **specific u.**, that due to infection with the gonococcus. **u. vene'rea**, gonorrhea.

urethro- [Gr. *ourēthra* the tube by which urine is discharged from the bladder] a combining form denoting relationship to the urethra.

urethroblennorrhea (u-re'thro-blen'o-re'ah) a purulent discharge from the urethra.

urethrobular (u-re'thro-bul'bar) pertaining to the urethra and the bulbous penis.

urethrocele (u-re'thro-sēl) [*urethro-* + Gr. *kēlē* tumor] 1. prolapse of the female urethra through the meatus urinarius. 2. a diverticulum of the urethral walls encroaching upon the vaginal canal.

urethrocystitis (u-re'thro-sis-ti'tis) inflammation of the urethra and bladder.

urethrocystogram (u-re'thro-sis'to-gram) a roentgenogram of the urethra and bladder.

urethrocystography (u-re'thro-sis-tog'rah-fe) [*urethro-* + Gr. *kystis* bladder + *graphein* to write] roentgenography of the urethra and bladder after the injection of a contrast medium.

urethrocystopexy (u-re'thro-sis'to-pek'se) [*urethro-* + Gr. *kystis* bladder + *pēxis* fixation] surgical fixation of the urethrovaginal junction, and the area of the bladder just above it, to the back of the pubic bones, for relief of stress incontinence.

urethrodynia (u-re'thro-din'e-ah) [*urethro-* + Gr. *odynē* pain] pain in the urethra; urethralgia.

urethrograph (u-re'thro-graf) an instrument for recording graphically the caliber of the urethra.

urethrography (u'rē-throg'rah-fe) roentgenography of the urethra after the injection of an opaque medium.

urethrometer (u'rē-throm'ē-ter) [*urethro-* + Gr. *metron* measure] an instrument for measuring the urethra.

urethrometry (u'rē-throm'ē-tre) 1. determination of the resistance of various segments of the urethra to retrograde flow of fluid. 2. measurement of the urethra.

urethropenile (u-re'thro-pe'nīl) pertaining to the urethra and the penis.

urethroperineal (u-re'thro-per'i-ne'al) pertaining to or communicating with the urethra and the perineum.

urethroperineoscrotal (u-re'thro-per-in'e-o-skro'tal) pertaining to the urethra, perineum, and scrotum.

urethropexy (u-re'thro-pek'se) [*urethro-* + Gr. *pēxis* fixation] surgical fixation of the urethra to the overlying symphysis pubis and fascia of the rectus abdominis muscle, in correction of stress incontinence in the female.

urethrophraxis (u-re'thro-frak'sis) [*urethro-* + Gr. *phrassein* to stop up] obstruction of the urethra.

urethrophyma (u-re'thro-fi'mah) [*urethro-* + Gr. *phyma* growth] a tumor or growth in the urethra.

urethroplasty (u-re'thro-plas'te) [*urethro-* + Gr. *plassein* to form] plastic surgery of the urethra; operative repair of a wound or defect in the urethra.

urethrostatic (u-re'thro-pros-tat'ik) pertaining to the urethra and the prostate.

urethrorrectal (u-re'thro-rek'tal) pertaining to or communicating with the urethra and the rectum.

urethrorrhagia (u-re'thro-ra'je-ah) [*urethro-* + Gr. *rhēgnynai* to burst forth] a flow of blood from the urethra.

urethrorrhaphy (u'rē-thror'ah-fe) [*urethro-* + Gr. *rhaphe* seam]

saturation of the urethra; the closing of a urethral fistula by suture.

urethrorrhea (u-re''thro-re'ah) [*urethro-* + Gr. *rhoia* flow] an abnormal discharge from the urethra.

urethroscope (u-re''thro-skōp) [*urethro-* + Gr. *skopein* to examine] an instrument for viewing the interior of the urethra.

urethroscopic (u-re''thro-skop'ik) pertaining to the urethroscope or urethroscopy.

urethroscopy (u'rē-thros'ko-pe) [*urethro-* + Gr. *skopein* to examine] visual inspection of the interior of the urethra.

urethroscrotal (u-re''thro-skro'tal) pertaining to or communicating with the urethra and scrotum, as a urethroscrotal fistula.

urethrosperm (u-re''thro-spazm) [*urethro-* + Gr. *spasmos* spasm] spasm of the muscular tissue of the urethra.

urethrostaxis (u-re''thro-stak'sis) [*urethro-* + Gr. *staxis* dropping] oozing of blood from the urethra.

urethrostenosis (u-re''thro-stē-no'sis) [*urethro-* + Gr. *stenōsis* stricture] stricture or stenosis of the urethra.

urethrostomy (u'rē-thros'to-me) [*urethro-* + Gr. *stomōn* to provide with an opening, or mouth] surgical formation of a permanent opening of the urethra at the perineal surface.

urethrotome (u-re''thro-tōm) an instrument for cutting a urethral stricture. **Maisonneuve's u.**, a urethrotome in which the knife is concealed until it reaches the stricture, when the knife may be exposed.

urethrotomy (u'rē-throt'o-me) [*urethro-* + Gr. *tomē* a cutting] a cutting operation for curing a stricture of the urethra. It may be performed either externally or internally. *External urethrotomy* (perineal section) consists in opening the urethra from the outside. *Internal urethrotomy* may be performed in two ways, viz.: Incising from before backward, as with the instrument of Maisonneuve; incising from behind forward, as with the urethrotome of S. W. Gross.

urethrotigonitis (u-re''thro-tri'go-ni'tis) inflammation of the urethra and trigone of the bladder.

urethrovaginal (u-re''thro-vaj'i-nal) pertaining to or communicating with the urethra and the vagina.

urethrovaginal (u-re''thro-ves'i-kal) pertaining to or communicating with the urethra and the bladder.

uretic (u-ret'ik) [L. *ureticus*; Gr. *ourētikos*] 1. pertaining to the urine. 2. diuretic.

Urevert (u're-vert) trademark for a preparation of urea.

Urex (u'reks) trademark for a preparation of methenamine hippurate.

urgency (ur'jen-se) the sudden compelling urge to urinate.

Urginea (ur-jin'e-ah) [L.] a genus of liliaceous plants. *U. maritima* (L.) Baker, the Mediterranean or white variety, and *U. indica* Kunth., the Indian variety, afford squill (q.v.).

urhidrosis (ur'hid-ro'sis) [*ur-* + Gr. *hidrōs* sweat] the presence in the sweat of urinous materials, such as uric acid, urea, etc.

u. crystal'ina, a form in which crystals of uric acid are deposited upon the skin.

-uria [Gr. *ouron* urine + *-ia* state] a word termination denoting a characteristic or constituent of the urine, indicated by the stem to which it is affixed, as oliguria, proteinuria.

urian (u're-an) urochrome.

uric (u'rik) [Gr. *ourikos*] of or pertaining to the urine; see also under acid.

uricacidemia (u'rik-as'i-de'me-ah) [*uric* acid + Gr. *haima* blood + *-ia*] the accumulation of uric acid in the blood; see *lithemia*.

uricaciduria (u'rik-as'i-du're-ah) [*uric* acid + Gr. *ouron* urine + *-ia*] presence in the urine of an excess of uric acid, and the morbid state produced thereby; see *lithuria*.

uricase (u'ri-kās) an enzyme found in most mammals except man, which catalyzes the complicated transformation of uric acid into allantoin.

uricemia (u'ri-se'me-ah) uricacidemia.

uricocholia (u'ri-ko-ko'le-ah) [*uric* acid + Gr. *cholē* bile] the presence of uric acid in the bile.

uricolysis (u'ri-kol'i-sis) [*uric* acid + Gr. *lysis* dissolution] the cleavage of uric acid or of urates.

uricolytic (u'ri-ko-lit'ik) pertaining to, characterized by, or promoting uricolysis.

uricometer (u'ri-kom'ē-ter) [*uric* acid + Gr. *metron* measure] an instrument for measuring the amount of uric acid in the urine. **Ruhemann's u.**, one based on the principle that uric acid will absorb iodine.

uricopoiesis (u'ri-ko-poi-e'sis) the formation of uric acid.

uricosuria (u'ri-ko-su're-ah) the excretion of uric acid in the urine.

uricosuric (u'ri-ko-su'rik) 1. pertaining to, characterized by, or promoting uricosuria. 2. an agent that promotes uricosuria.

uricotelic (u'ri-ko-tel'ik) [*uric* acid + Gr. *telikos* belonging to the completion, or end] having uric acid as the chief excretory product of nitrogen metabolism, as in reptiles and birds.

uricotelism (u'ri-ko-te'lizm) the excretion of uric acid as the end product of nitrogen metabolism, as in reptiles and birds.

uricoidase (u'ri-kok'si-dās) an enzyme that oxidizes uric acid.

Uricult (u'ri-kult) trademark for a bacterial culture device, consisting of a glass slide in a sterile plastic container. On one face of the slide a 13 sq. cm. area is coated with MacConkey's medium, on the other a similar area is coated with nutrient agar. The slide is dipped into freshly voided urine, removed, and replaced in the container, where growth takes place.

uridine (u'ri-dēn, u'ri-din) a nucleoside (pentoside) from nucleic acid; on hydrolysis it yields uracil and ribose. **u. diphosphate**, a nucleotide containing uridine, which participates in glycogen metabolism and in some processes of nucleic acid synthesis; abbreviated UDP. **u. diphosphate galactose**, **u. diphosphogalactose**, a nucleotide derivative of galactose formed from galactose-1-phosphate and UTP; abbreviated UDP-galactose. **u. diphosphate glucose**, **u. diphosphoglucose**, a nucleotide derivative of glucose, formed from glucose-1-phosphate; it is an intermediate in the formation of glycogen and galactose and a source of several precursors of heteropolysaccharides. Abbreviated UDP-glucose. **u. diphosphoglucuronate**, a nucleotide formed by the oxidation of UDP-glucose; it serves in the synthesis of mucopolysaccharides. Abbreviated UDP-glucuronate. **u. monophosphate** (UMP), uridylic acid. **u. triphosphate**, a triphosphate which reacts with glucose-1-phosphate to form UDP-glucose and inorganic pyrophosphate, a step in tissue glycogen storage; abbreviated UTP.

uridrosis (u'ri-dro'sis) urhidrosis.

uriesthesis (u're-es'the-sis) uresiesthesis.

urina (u-ri'nah) [L.] urine. **u. chy'li**, **u. ci'bi** ["urine of food"], the urine secreted after a full meal. **u. cruen'ta**, bloody urine; see *hematuria*. **u. galacto'des**, milky urine. **u. jumento'sa**, cloudy urine. **u. po'tus** ["urine of drink"], urine secreted after copious drinking. **u. san'guinis** ["urine of the blood"], urine passed after a night's rest, and so not influenced by food or drink.

urinable (u'rin-ah-b'l) capable of being excreted in the urine.

urinaccelerator (u'rin-ak-sel'er-a'tor) musculus bulbospongiosus.

urinacidometer (u'rin-as'i-dom'ē-ter) an instrument for estimating the pH of urine.

urinaemia (u'ri-ne'me-ah) uremia.

urinal (u'ri-nal) [L. *urinalis* urinary] a vessel or other receptacle for urine.

urinalysis (u'ri-nal'i-sis) physical, chemical, or microscopic analysis or examination of urine.

urinary (u'ri-ner'e) pertaining to the urine; containing or secreting urine.

urinate (u'ri-nāt) to void or discharge urine.

urination (u'ri-na'shun) the discharge or passage of urine.

precipitant u., a sudden and strong desire to urinate. **stuttering u.**, an intermittent flow of urine, due to vesical spasm.

urivative (u'ri-na'tiv) diuretic.

urine (u'rin) [L. *urina*; Gr. *ouron*] the fluid excreted by the kidneys, passed through the ureters, stored in the bladder, and discharged through the urethra. Urine, in health, has an amber color, a slight acid reaction, a peculiar odor, and a bitter, saline taste. The average quantity excreted under ordinary dietary conditions in twenty-four hours is about 1000 to 2000 ml. Specific gravity, about 1.024, varying from 1.005 to 1.030. One thousand parts of healthy urine contain about 960 parts of water and 40 parts of solutes, which consist chiefly of urea, 23 parts; sodium chloride, 11 parts; phosphoric acid, 2.3 parts; sulfuric acid, 1.3 parts; uric acid, 0.5 part; also hippuric acid, leukomaines, urobilin, and certain organic salts. The abnormal matters found in the urine in various conditions include ketone bodies, proteins, proteoses, bile, blood, cystine, glucose, hemoglobin, fat, pus, spermatozoa, epithelial cells, mucous casts, and crystals of sulfanilamide derivatives (crystalluria). **Bence Jones u.**, see *Bence Jones protein*, under *protein*. **black u.**, urine colored black by melanin (melanuria), or by derivatives of homogentisic acid (ochronosis). **chylous u.**, urine of a milky color from the presence of chyle or fat; chyluria. **cloudy u.**, urine having a cloudy appearance, usually due to phosphaturia or uraturia, but may be caused by pyuria; called also *nebulous u.* and *urina jumentosa*. **crude u.**, light-colored, watery urine, which deposits little sediment. **diabetic u.**, that which contains an excess of glucose. **dyspeptic u.**, the urine in dyspepsia, frequently containing calcium oxalate crystals. **febrile u.**, strong, odorous, high-colored, concentrated urine, such as is secreted in fever. **gouty u.**, scanty, high-colored urine containing large quantities of urates. **milky u.**, urine having a milky appearance, which may be due to chyluria or pyuria; called also *urina galactodes*. **nebulous u.**, cloudy u. **residual u.**, the urine that remains in the bladder after urination in disease of the bladder and hypertrophy of the prostate.

urinemia (u'rī-ne'me-ah) [*urine* + Gr. *haima* blood + *-ia*] uremia.

urine-mucoid (u'rīn-mu'koid) a mucin-like substance found in the urine.

urinidrosis (u'rīn-ī-dro'sis) urhidrosis.

uriniferous (u'rī-nif'er-us) [*urine* + L. *ferre* to bear] transporting or conveying the urine.

urinific (u'rī-nif'ik) uriniparous.

uriniparous (u'rī-nip'ah-rus) [*urine* + L. *parere* to produce] producing or elaborating urine.

urino- [L. *urina*] a combining form denoting relationship to urine; see also *uro-*.

urinocryoscopy (u-rī'no-kri-os'ko-pe) cryoscopy of the urine.

urinogenital (u'rī-no-jen'i-tal) genitourinary; urogenital.

urinogenous (u'rī-noj'ē-nus) of urinary origin.

urinoglucometer (u'rī-no-gloo'ko-som'ē-ter) an instrument for measuring the glucose in the urine.

urinologist (u'rī-nol'o-jist) urologist.

urinology (u'rī-nol'o-je) urology.

urinoma (u'rī-no'mah) a cyst containing urine.

urinometer (u'rī-nom'ē-ter) [*urino-* + Gr. *metron* measure] an instrument for determining the specific gravity of the urine.

urinometry (u'rī-nom'ē-tre) the ascertainment of the specific gravity of the urine.

urinophilous (u'rī-nof'i-lus) [*urino-* + Gr. *philein* to love] having an affinity for urine, as a microorganism which grows best in urine, or an organism (such as a certain South American fish) which invades the urinary meatus of bathers.

urinosecopy (u'rī-nos'ko-pe) uroscopy.

urinosexual (u'rī-no-seks'u-al) genitourinary; urogenital.

urinous (u'rī-nus) pertaining to the urine; containing elements commonly excreted in the urine.

uriposia (u'rī-po'ze-ah) [*urine* + Gr. *posis* drinking + *-ia*] the drinking of urine.

urishiol (u-rish'e-ol) an extremely allergenically active mixture of catechol derivatives forming the major constituent of the irritant resin of poison ivy and other members of Anacardiaceae.

Urispas (u'rī-spaz) trademark for a preparation of flavoxate hydrochloride.

Uritone (u'rī-tōn) trademark for preparations of methenamine.

urningism (oor'ning-izm) uranism (homosexuality).

urnism (oorn'izm) uranism (homosexuality).

uro-, ur-, urono- [Gr. *ouron* urine] combining forms denoting relationship to urine, the urinary tract, or urination.

uroacidimeter (u'ro-as'i-dim'ē-ter) an instrument for measuring the acidity of the urine.

uroammoniac (u'ro-ah-mo'ne-ak) containing uric acid and ammonia.

uroanthelone (u'ro-an'thē-lōn) urogastrone.

uroazotometer (u'ro-az'o-tom'ē-ter) an apparatus for measuring the nitrogenous matter of the urine.

urobilin (u'ro-bi'lin) [*uro-* + L. *bilis* bile] an amorphous, brownish pigment, $C_{55}H_{44}O_6N_4$, an oxidized form of urobilinogen, found in the feces and sometimes in urine left standing in the air.

urobilinemia (u'ro-bil'i-ne'me-ah) [*urobilin* + Gr. *haima* blood + *-ia*] the presence of urobilin in the blood.

urobilinogen (u'ro-bi-lin'o-jen) [*urobilin* + Gr. *gennan* to produce] a colorless compound formed in the intestines by the reduction of bilirubin. Some is excreted in the feces, where by oxidation it becomes urobilin; some is reabsorbed, and re-excreted in the bile as bilirubin, or at times in the urine, where it may be later oxidized to urobilin.

urobilinogenemia (u'ro-bi-lin'o-jē-ne'me-ah) the presence of urobilinogen in the blood.

urobilinogenuria (u'ro-bi-lin'o-jē-nu're-ah) the presence of urobilinogen in the urine.

urobilinoid (u'ro-bil'i-noid) resembling urobilin.

urobilinoiden (u'ro-bil'i-noi'din) a reduction product of hematin, resembling urobilin, sometimes found in the urine.

urobilinuria (u'ro-bil'i-nu're-ah) [*urobilin* + Gr. *ouron* urine + *-ia*] the presence of an excess of urobilin in the urine, as in cirrhosis of the liver.

urocanase (u'ro-ka'nās) an enzyme that catalyzes the conversion of urocanate to imidazolone propionate in the metabolism of histidine.

urocanate (u'ro-kan'āt) the dissociated form of urocanic acid, an intermediate product in histidine metabolism.

urocele (u'ro-sēl) [*uro-* + Gr. *kelē* hernia] distention of the scrotum with extravasated urine.

urocheras (u-rok'er-as) [*uro-* + Gr. *cheras* gravel] uropusamus.

urochezia (u'ro-ke'ze-ah) [*uro-* + Gr. *chezein* to defecate + *-ia*] the discharge of urine in the feces.

Urochordata (u'ro-kor'da-tah) [Gr. *oura* tail + L. *chorda* string] a subphylum of chordates intermediate between the invertebrates and true vertebrates, including the sea squirts and their allies, the members of which have a saclike body and a leathery tunic; the notochord is present only during the larval stage. Called also *Tunicata*.

urochordate (u-ro-kor'dāt) any member of the Urochordata; a tunicate.

urochrome (u'ro-krōm) [*uro-* + Gr. *chrōma* color] a yellow, amorphous pigment of the urine, which gives the urine its yellow color.

urochromogen (u'ro-kro'mo-gen) a low oxidation product found in the urine, which on further oxidation becomes urochrome.

urocinetic (u'ro-si-net'ik) urokinetic.

uroclepsia (u'ro-klep'se-ah) [*uro-* + Gr. *kleptein* to steal] the unconscious escape of urine.

urocoproporphyrria (u'ro-kop'ro-por-fir'e-ah) porphyria cutanea tarda symptomatica.

urocrisia (u'ro-kriz'e-ah) [*uro-* + Gr. *krinein* to judge] diagnosis by observing or examining the urine.

urocriterion (u'ro-kri-te're-on) [*uro-* + Gr. *kriterion* test] an indication of disease observed in examination of the urine.

urocyanin (u-ro-si'ah-nin) [*uro-* + Gr. *kyanos* blue] uroglauca.

urocyanogen (u'ro-si-an'o-jen) [*uro-* + Gr. *kyanos* blue + *gennan* to produce] a blue pigment of the urine, especially of that of cholera patients.

urocyanosis (u'ro-si'ah-no'sis) [*uro-* + Gr. *kyanos* blue] indicanuria.

urocyst (u'ro-sist) [*uro-* + Gr. *kystis* bladder] the urinary bladder (vesica urinaria [NA]).

urocystic (u'ro-sis'tik) pertaining to the urinary bladder.

Urocystis (u'ro-sis'tis) a genus of basidiomycetous fungi of the order Ustilaginales, family Tilletiaceae. **U. tritici**, a fungus which causes flag smut of wheat in Australia, China, and southern Asia.

urocystitis (u'ro-sis'tis) [L.] the urinary bladder.

urocystitis (u'ro-sis-ti'tis) inflammation of the urinary bladder.

urodeum (u'ro-de'um) [*uro-* + Gr. *hodaio* on the way] the portion of the cloaca into which the ureters and genital ducts empty.

urodialysis (u'ro-di-al'i-sis) [*uro-* + Gr. *dialysis* cessation] partial or complete suppression of the urine.

urodochium (u'ro-do'ke-um, u'ro-do-ki'um) [*uro-* + Gr. *docheion* holder] a urinal.

urodynamic (u'ro-di-nam'ik) pertaining to the flow and motion of liquids in the urinary tract.

urodynamics (u'ro-di-nam'iks) the dynamics of the propulsion and flow of urine in the urinary tract.

urodynia (u'ro-din'e-ah) [*uro-* + Gr. *odynē* pain + *-ia*] pain accompanying urination.

uroedema (u'ro-ē-de'mah') edema due to infiltration of urine.

uroenterone (u'ro-en'ter-ōn) urogastrone.

uroerythrin (u'ro-er'i-thrin) [*uro-* + Gr. *erythros* red] a dark reddish coloring matter found in the urine; it gives the red color seen in deposits of urates. Called also *purpurin*.

uroflavin (u'ro-fla'vin) a fluorescent compound closely related to riboflavin, excreted in the urine.

uroflometer, uroflowmeter (u'ro-flō-me-ter) a device for the continuous recording of urine flow in milliliters per second, consisting of a cylinder placed on a transducer that weighs the urine entering the cylinder and records it on a time scale.

urofusin (u'ro-fus'in) [*uro-* + L. *fuscus* tawny] a pigment of the urine which is the precursor of hematoporphyrin.

urofuscohematin (u'ro-fus'ko-hem'ah-tin) a red-brown pigment from the urine in certain diseases.

urogaster (u'ro-gas'ter) [*uro-* + Gr. *gaster* stomach] the urinary intestine; a part of the allantoic cavity of the embryo.

urogastrone (u'ro-gas'trōn) a polypeptide secreted by the salivary glands and by Brunner's glands, which is a potent inhibitor of gastric acid secretion; it is obtainable from the normal and pregnancy urine of man and other mammals; called also *anthelone U*.

urogenital (u'ro-jen'i-tal) pertaining to the urinary and genital apparatus; genitourinary. See under *system*.

urogenous (u-roj'ē-nus) [*uro-* + Gr. *gennan* to produce] producing urine; also produced from or in the urine.

uroglauca (u'ro-glaw'sin) [*uro-* + Gr. *glaukos* green] indigo blue occurring in the urine; it is due to oxidation of a colorless chromogen in the urine, and is seen in conditions such as scarlet fever.

Uroglena (u'ro-gle'nah) a genus of free-swimming, colonial, flagellate protozoa, of the order Chrysomonadina, family Ochro-

monadidae, which sometimes impart a fishy odor to a water supply.

Uroglennopsis (u'ro-gle-nop/sis) a genus of free-swimming, colonial, flagellate protozoa of the order Chrysomonadina, family Ochromonadidae, similar to *Uroglena* but without the connecting processes between individuals seen in the latter genus.

urogram (u'ro-gram) a roentgenogram of part of the urinary tract.

urography (u-rog'rah-fe) roentgenography of a part of the urinary tract which has been rendered opaque by some opaque medium. **ascending u.**, retrograde u. **cystoscopic u.**, retrograde u. **descending u.**, **excretion u.**, **excretory u.**, **intravenous u.**, roentgen examination of the urinary tract after the intravenous injection of an opaque medium that is rapidly excreted in the urine. **oral u.**, urography in which the opaque medium is given by the mouth. **retrograde u.**, urography in which the contrast medium is injected into the bladder through the urethra.

urogravimeter (u'ro-grah-vim'ē-ter) [uro- + L. *gravis* heavy + *metrum* measure] urinometer.

urohematin (u'ro-hem'ah-tin) the coloring matter or pigments of the urine; regarded as identical with heme.

urohematonephrosis (u'ro-hem'ah-to-ne-fro/sis) distention of the kidney with urine and blood.

urohematoporphyrin (u'ro-hem'ah-to-por'fi-rin) hemato-porphyrin derived from the urine.

urohypertensin (u'ro-hi-per-ten'sin) a mixture of bases obtained from the urine which acts as a pressor substance.

urokinase (u'ro-ki'nās) an enzyme found in the urine of mammals, including man, and of other vertebrates; it is elaborated by the parenchymal cells of the human kidney and functions as a plasminogen activator. It is used as a thrombolytic (fibrinolytic) agent.

urokinetic (u'ro-ki-net'ik) [uro- + Gr. *kinēsis* movement] caused by a reflex from the urinary organs; said of a form of dyspepsia.

urokymography (u'ro-ki-mog'rah-fe) kymography applied to study of the urogenital system.

urolagnia (u'ro-lag'ne-ah) [uro- + Gr. *lagneia* lust] a form of paraphilia in which sexual excitement is associated with the sight or thought of urine or urination.

urolith (u'ro-lith) [uro- + Gr. *lithos* stone] a urinary calculus or stone.

urolithiasis (u'ro-li-thi'ah-sis) 1. the formation of urinary calculi. 2. the diseased condition associated with the presence of urinary calculi.

urolithic (u'ro-lith'ik) pertaining to urinary calculi.

urolithology (u'ro-li-thol'o-je) the sum of knowledge regarding urinary calculi.

urologic, urological (u'ro-loj'ik; u'ro-loj'i-kal) pertaining to urology.

urologist (u-rolo'j-ist) a physician who specializes in urology.

urology (u-rolo'je) that branch of medicine which concerns itself with the urinary tract in both male and female, and with the genital organs in the male.

urolutein (u'ro-lu'te-in) [uro- + L. *luteus* yellow] a yellow pigment of the urine.

uromancy (u'ro-man'se) [uro- + Gr. *manteia* a divination] prognosis based on examination of urine.

uromantia (u'ro-man'she-ah) uromancy.

uromelanin (u'ro-mel'ah-nin) [uro- + Gr. *melas* black] a black pigment, $C_{14}H_{13}N_7O_{10}$, sometimes found in urine; it results from the decomposition of urochrome.

uromelus (u-rom'e-lus) [Gr. *oura* tail + *melos* limb] a monster with fused legs and a single foot.

urometer (u-rom'ē-ter) [uro- + Gr. *metron* measure] urinometer.

urometric (u'ro-met'rik) pertaining to urometry.

urometry (u-rom'ē-tre) the measurement and recording of pressure changes caused by contraction of the ureter during ureteral peristalsis.

uromucoid (u'ro-mu'koid) an insoluble mucoprotein found in urine.

uronate (u'ro-nāt) a sugar in which the terminal alcohol group is oxidized to a carboxylate group.

uroncus (u-rong'kus) [uro- + Gr. *onkos* mass] a swelling containing urine.

Uronema caudatum (u'ro-ne'mah kaw-da'tum) a species of ciliate protozoa found in the feces; it is believed to be a free-living coprozoic contaminant.

uronephrosis (u'ro-nē-fro/sis) abnormal distention of the pelvis and tubules of the kidney with urine.

urono- see *uro-*.

uronology (u'ro-nol'o-je) urology.

urononcometry (u'ron-on-kom'ē-tre) [urono- + Gr. *onkos* mass

+ *metron* measure] the measurement of the quantity of urine excreted in twenty-four hours.

uronophile (u-ron'o-fil) [urono- + Gr. *philein* to love] growing in a medium containing urine; said of a microorganism.

uronoscopy (u'ro-nos'ko-pe) examination of the urine.

uropathogen (u'ro-path'o-jen) a microorganism which causes diseases of the urinary tract.

uropathy (u-ro-p'ah-the) [uro- + Gr. *pathos* disease] any pathologic change in the urinary tract. **obstructive u.**, any pathologic change in the urinary tract due to obstruction.

uropenia (u'ro-pe'ne-ah) [uro- + Gr. *penia* poverty] deficiency of urine or urinary secretion.

uropepsin (u'ro-pep'sin) a pepsin-like enzyme occurring in the urine.

uropepsinogen (u'ro-pep-sin'o-jen) pepsinogen occurring in the urine.

urophanic (u'ro-fan'ik) [uro- + Gr. *phainein* to show] appearing in the urine.

urophein (u'ro-fe'in) [uro- + Gr. *phaios* gray] an odoriferous gray pigment of the urine.

urophobia (u'ro-fō-be-ah) fear of passing the urine.

urophosphometer (u'ro-fos-fom'ē-ter) an instrument for measuring the quantity of phosphorus in the urine.

uropittin (u'ro-pit'in) [uro- + Gr. *pitta* pitch] a resinous product, $C_8H_{10}N_2O_3$, of the decomposition of urochrome.

uropiania (u'ro-pla'ne-ah) [uro- + Gr. *planē* wandering + *-ia*] the presence of urine in, or its discharge from, organs not of the urogenital tract.

uropoiesis (u'ro-poi-e'sis) [uro- + Gr. *poiein* to make] the production of the urine.

uropoietic (u'ro-poi-et'ik) pertaining to or concerned in the production of the urine.

uroporphyria (u'ro-por-fir'e-ah) porphyria in which there is excessive excretion of uroporphyrin. **erythropoietic u.**, congenital erythropoietic porphyria.

uroporphyrin (u'ro-por'fi-rin) one of a group of porphyrins, $C_{40}H_{36}O_{16}N_4$, produced during biosynthesis of natural porphyrins. Their pyrrole groups, linked by methyne bridges, each have an acetate and propionate side chain. Urinary levels, normally low, are increased in porphyria. Uroporphyrin I differs from uroporphyrin III in having the acetate and propionate side chains interchanged at one of the pyrrole rings.

uroporphyrinogen (u'ro-por'fi-rin'o-jen) one of a group of porphyrins, precursors of uroporphyrins and of coproporphyrinogens. They are formed by the enzymatically catalyzed condensation of four porphobilinogen molecules, uroporphyrinogen I differing from uroporphyrinogen III in having one of the porphobilinogen residues reversed. Uroporphyrinogen III is also an intermediate in the biosynthesis of heme.

uropsammus (u'ro-sam'us) [uro- + Gr. *psammos* sand] sediment or gravel in the urine.

uropterin (u-ropt'er-in) a pigment, identical with xanthopterin, isolated from human urine; see *pterin*.

uropyonephrosis (u'ro-pi'o-nē-fro/sis) the presence of urine and pus in the pelvis of the kidney.

uropoureter (u'ro-pi'o-u-re'ter) [uro- + Gr. *pyon* pus + *oureter* ureter] a collection of urine and pus in the ureter.

uroradiology (u'ro-ra'de-ol'o-je) radiology of the urinary tract.

urorhythmography (u'ro-rith-mog'rah-fe) [uro- + Gr. *rhythmos* rhythm + *graphein* to write] graphic registration of the ejaculation of the urine from the ureteral orifices.

urorosein (u'ro-ro'ze-in) urorrhodin.

uroroseinogen (u'ro-ro'se-in'o-jen) urorrhodinogen.

urorrhagia (u'ro-ra'je-ah) [uro- + Gr. *rhēgnynai* to burst forth] an excessive flow of urine; diabetes.

urorhea (u'ro-re'ah) [uro- + Gr. *rhoia* flow] an involuntary discharge of urine; enuresis.

urorrhodin (u'ro-ro'din) [uro- + Gr. *rhodon* rose] a rose-colored pigment found in the urine in typhoid fever, nephritis, pulmonary tuberculosis, and other diseases. See under *tests*.

urorrhodinogen (u'ro-ro-din'o-jen) [urorrhodin + Gr. *gennan* to produce] a chromogen in the urine which, on decomposition, yields urorrhodin.

urorubin (u'ro-roo'bin) [uro- + L. *ruber* red] a red pigment derivable from the urine by the action of hydrochloric acid.

urorubinogen (u'ro-roo-bin'o-jen) a chromogen from which urorubin is derived.

urorubrohematin (u'ro-roo'bro-hem'ah-tin) [uro- + L. *ruber* red + *hematin*] a red pigment rarely found in the urine in certain constitutional diseases, as leprosy.

urosaccharometry (u'ro-sak'ah-rom'ē-tre) the measurement or estimation of sugar in the urine.

urosacin (u-ro'sa-sin) urorrhodin.

uroscheocele (u-roš'ke-o-sēl'') [*uro-* + Gr. *oscheon* scrotum + *kēle* tumor] urocele.

uroschesis (u-roš'kē-sis) [*uro-* + Gr. *schesis* holding] retention of the urine.

uroscopic (u'ro-skop'ik) pertaining to uroscopy.

uroscopy (u-roš'ko-pe) [*uro-* + Gr. *skopein* to examine] diagnostic examination of the urine.

urosemiology (u'ro-se'me-ol'o-je) diagnostic study of the urine.

urosepsin (u'ro-sep'sin) a septic poison arising from urine in the tissues.

urosepsis (u'ro-sep'sis) [*uro-* + Gr. *sēpsis* decay] septic poisoning from the absorption and decomposition of urinary substances in the tissues.

uroseptic (u'ro-sep'tik) pertaining to or marked by urosepsis.

urosis (u-ro'sis) any disease of the urinary apparatus.

urospectrin (u'ro-spek'trin) [*uro-* + L. *spectrum* image] one of the pigments of normal urine; a substance obtainable from certain specimens of urine, allied to hematoporphyrin.

urostalagmometry (u'ro-stal'ag-mom'ē-tre) the use of the stalagmometer in the study of the urine.

urostealth (u'ro-ste'ah-lith) [*uro-* + Gr. *stear* fat + *lithos* stone] a fatty constituent of certain urinary calculi; a urinary calculus having fatty constituents.

urothelial (u'ro-the'le-al) pertaining to the urothelium.

urothelium (u'ro-the'le-um) the epithelium of the urinary bladder.

urotoxia (u'ro-tok'se-ah) [*uro-* + Gr. *toxikon* poison] 1. the toxicity of the urine. 2. the toxic substances of the urine. 3. the unit of the toxicity of the urine or a quantity sufficient to kill 1 kg. of living substance.

urotoxic (u'ro-tok'sik) pertaining to the toxic materials of the urine.

urotoxicity (u'ro-toks-is'ti-te) the toxic quality of the urine.

urotoxin (u'ro-tok'sin) the toxic or poisonous constituents of the urine.

urotoxy (u'ro-tok'se) urotoxia.

Urotropin (u-rot'ro-pin) trademark for a preparation of methenamine.

uroreter (u'ro-u-re'ter) distention of the ureter with urine.

uroxanthin (u'ro-zan'thin) [*uro-* + Gr. *xanthos* yellow] a yellow pigment of normal urine convertible into indigo blue.

uroxin (u-rok'sin) alloxantin.

urhodin (u-ro'din) urorhodin.

ursone (ur'sōn) ursolic acid; a crystallizable triterpene, C₃₀H₄₈O₈, from waxlike coatings of fruits (e.g., apples and pears) and leaves (e.g., rhododendron and uva ursi).

Urtica (ur-ti'kah) [L.] a genus of plants, including the true or typical nettles; plants covered with stinging hairs and secreting a poisonous fluid. **U. dio'ica**, a stinging nettle of temperate regions having stimulant, diuretic, and hemostatic properties.

urtica (ur-ti'kah), pl. *urti'cae* [L., "a stinging nettle"] (obs.) a wheal or pomphus.

urticant (ur'ti-kant) causing an itching or stinging sensation, or creating a wheal, or both.

urticaria (ur'ti-ka're-ah) [L. *urtica* stinging nettle + *-ia*] a vascular reaction of the skin marked by the transient appearance of smooth, slightly elevated patches (wheals) which are redder or paler than the surrounding skin and often attended by severe itching. The eruption rarely lasts longer than two days, but may exist in a chronic form. Certain foods (e.g., shellfish), drugs (e.g., penicillin), infection, or emotional stress may be the exciting cause. Called also *hives*. **acute u.**, the sudden appearance of extensive wheals of relatively brief duration, as after insect bites or administration of drugs. **u. bullo'sa**, a rare form of urticaria characterized by the appearance of bullae. **cholinergic u.**, urticaria often associated with sweating, characterized by minute, pruritic, pale, punctate papules surrounded by areas of erythema, and produced by the action of acetylcholine or mast cells; it occurs in susceptible persons under conditions of exertion, emotional stress, or in increased environmental heat. **chronic u.**, urticaria in recurrent episodes over weeks or months; called also *recurrent u.* **cold u.**, edema and whealing of body areas exposed to the cold, a hypersensitivity reaction mediated by histamine. **endemic u.**, **u. endem'ica**, a very rare variety caused by certain species of caterpillar, and occurring as an endemic. **epidemic u.**, **u. epidem'ica**, a severe and very rare form ascribed to caterpillar poisoning. **u. facti'tia** (obs.), dermatographism. **giant u.**, **u. gigan'tea**, angioneurotic edema. **heat u.**, generalized urticaria associated with cramps, weakness, flushing, and collapse, probably mediated by acetylcholine. **u. hemorrhag'ica**, purpura with urticaria. **heredofamilial u.**, urticaria associated with chills and fever during adolescence, followed years later by deafness, arthralgia, and nephropathy. **u. medicamento'sa**, urticaria caused by the use of a drug. **u. multifor'mis endem'ica**, harara. **popular u.**, **u. papulo'sa**, a condition occurring in temperate

parts of the world, usually seen in children, caused by the bites of fleas, bedbugs, and other insects, and representing a stage in the development of hypersensitization to them. **peptone u.**, urticaria attributed to overeating; the peptones, being absorbed before they are sufficiently digested, affect capillary permeability, producing hives. **u. photogen'ica**, solar u. **u. pigmento'sa**, mastocytosis manifested as persistent pink to brown macules or soft plaques of various size, the irritation of which results in localized pruritus and urtication (Darier's sign). **u. pigmento'sa, juvenile**, urticaria pigmentosa present at birth or occurring in the first few weeks of life. It may take the form of a single tumor or nodule (solitary mastocytoma), often on the back of the hand, or it may appear as a disseminated eruption of yellowish brown to yellowish red macules, plaques, or bullae. It usually disappears before puberty but may, rarely, continue into adulthood. **pressure u.**, that caused by prolonged pressure on the skin, as in sitting on a hard chair, but appearing after a latent period of many hours. **recurrent u.**, chronic u. **solar u.**, **u. sola'ris**, a rare form of urticaria produced by exposure to sunlight; called also *photogenic u.* **u. subcuta'nea, subcutaneous u.**, a form manifested as subcutaneous edema instead of surface wheals; see also *angioneurotic edema*, under *edema*.

urticarial (ur'ti-ka're-al) pertaining to, characterized by, or of the nature of urticaria.

urticariogenic (ur'ti-ka're-o-jen'ik) causing urticaria.

urticarious (ur'ti-ka're-us) urticarial.

urticate (ur'ti-kāt) 1. marked by the presence of wheals. 2. to perform urtication.

urtication (ur'ti-ka'shun) [L. *urtica* a stinging nettle] 1. the development or formation of urticaria. 2. a burning sensation as of stinging with nettles. 3. (obs.) the flogging of a part with green nettles for their revulsive or stimulant effect.

urushiol (u-roo'she-ol) the chief constituent of the irritant oil of *Rhus* (*Toxicodendron*) *radicans* L. (poison ivy), *R. diversiloba* L. (poison oak), *R. vernix* L., and related plants, consisting of a mixture of several oleoresins.

USAN (u'san) acronym for *United States Adopted Names*, a nonproprietary designation for any compound used as a drug, established by negotiation between the manufacturer of the compound and a nomenclature committee known as the USAN Council, which is sponsored jointly by the American Medical Association, the American Pharmaceutical Association, and The United States Pharmacopeial Convention. A liaison representative of the United States Food and Drug Administration sits on the USAN Council. The term is currently limited to names adopted by the Council since June, 1961. These names will appear as the monograph titles in the official compendia, U.S.P. and N.F., when and if the respective drugs are admitted to either compendium.

Uschinsky's culture medium (us-chin'skēz) [Nikolaus Uschinsky, Leningrad bacteriologist, 1863-1934] see *asparagin culture medium* (def. 2) and *protein-free culture medium*, under *culture medium*.

U.S.M.H. United States Marine Hospital.

Usnea barbata (us'ne-ah bar-ba'tah) a large lichen growing on forest trees; also its homeopathic preparation. The active ingredients include usnic acid (usnein), C₁₈H₁₆O₇, which has antibacterial activity. The crude plant is used as a dressing for wounds.

usnein (us'ne-in) usnic acid.

U.S.P. the United States Pharmacopeia, a legally recognized compendium of standards for drugs, published by The United States Pharmacopeial Convention, Inc., and revised periodically. It includes also assays and tests for the determination of strength, quality, and purity.

U.S.P.H.S. United States Public Health Service.

Ustilaginales (us'ti-laj'i-na'lēz) an order of basidiomycetous fungi of the subclass Heterobasidiomycetidae, which includes the family Tilletiaceae.

ustilaginism (us'ti-laj'i-nizm) a condition resembling ergotism caused by eating maize containing *Ustilago maydis*.

Ustilago (us'ti-la'go) [L.] a genus of basidiomycetous fungi of the order Ustilaginales, family Ustilaginaceae, called smuts, parasitic on plants. **U. hypody'tes**, a smut fungus on various grasses thought to be a cause of friente. **U. may'dis**, a fungus causing corn smut; the ingestion of infected seeds causes ustilaginism, a condition similar to ergotism.

ustion (us'chun) [L. *ustio*] burning with the actual cautery.

ustulation (us'tu-la'shun) [L. *ustulare* to scorch] the drying of a moist drug by heat.

ustus (us'tus) [L.] burnt; calcined.

usustatus (u-su'sta-tus) [L. *usus* use + *status* position] the ordinary erect or standing posture usual to an animal.

uta (oo'tah) a form of cutaneous leishmaniasis of the New World occurring in the Peruvian Andes, caused by *Leishmania peruviana* (considered by some to be a subspecies of *L. brasiliensis*), transmitted by *Lutzomyia verrucarum* and *L. peruensis*, and characterized by single or few skin lesions.

Ut dict. abbreviation for L. *ut dic'tum*, as directed.

Utend. abbreviation for *L. uter'dus*, to be used.

uteralgia (u'ter-al'je-ah) metralgia or metrodynia.

uteri (u'ter-i) [L.] plural and genitive of *uterus*.

uterine (u'ter-in) [L. *uterinus*] of or pertaining to the uterus.

uterobdominal (u'ter-o-ab-dom'i-nal) pertaining to the uterus and the abdomen.

uterocervical (u'ter-o-ser'vi-kal) pertaining to the uterus and the cervix uteri.

uterodynia (u'ter-o-din'e-ah) metralgia or metrodynia.

uterofixation (u'ter-o-fik-sa'shun) hysteropexy.

uterogenic (u'ter-o-jen'ik) formed in the uterus.

uterogestation (u'ter-o-jes-ta'shun) [*uterus* + *L. gestatio* a carrying] 1. uterine pregnancy; any pregnancy which is not extra-uterine. 2. the full period of time of normal pregnancy.

uteroglobulin (u'ter-o-glob'u-lin) blastokinin.

uterography (u'ter-og'rah-fe) hysterography.

uterolith (u'ter-o-lith') [*uterus* + *Gr. lithos* stone] a hysterolith.

uterometer (u'ter-om'ē-ter) an instrument for measuring the uterus.

uterometry (u'ter-om'ē-tre) measurement of the uterus.

utero-ovarian (u'ter-o-o-va're-an) pertaining to the uterus and ovary.

uteropexy (u'ter-o-pek'se) hysteropexy.

uteroplacental (u'ter-o-plah-sen'tal) pertaining to the uterus and the placenta.

uteroplasty (u'ter-o-plas'te) any plastic operation on the uterus.

uterorectal (u'ter-o-rek'tal) pertaining to the uterus and rectum, or communicating with the uterine cavity and rectum, as a uterorectal fistula.

uterosacral (u'ter-o-sa'kral) pertaining to the uterus and the sacrum.

uterosalpingography (u'ter-o-sal'ping-gog'rah-fe) hysterosalpingography.

uterosclerosis (u'ter-o-sklē-ro'sis) sclerosis of the uterus.

uteroscope (u'ter-o-skōp') [*uterus* + *Gr. skopein* to examine] hysteroscope.

uterothermometry (u'ter-o-ther-mom'ē-tre) the measurement of the temperature in the uterus.

uterotomy (u'ter-ot'o-me) hysterotomy.

uterotonic (u'ter-o-ton'ik) 1. giving muscular tone to the uterus. 2. an agent that increases the tonus of the uterine muscle.

uterotropic (u'ter-o-trop'ik) having a special affinity for or exerting its principal influence upon the uterus.

uterotubal (u'ter-o-tu'bal) pertaining to the uterus and the oviducts.

uterotubography (u'ter-o-tu-bog'rah-fe) hysterosalpingography.

uterovaginal (u'ter-o-vaj'i-nal) pertaining to the uterus and the vagina.

uteroventral (u'ter-o-ven'tral) pertaining to the uterus and the cavity of the abdomen.

uteroverdin (u'ter-o-ver'din) a term once applied to biliverdin when occurring in the placenta or in the eggs of some birds.

uterovesical (u'ter-o-ves'i-kal) pertaining to the uterus and the bladder.

uterus (u'ter-us), pl. *uteri* [L.; *Gr. hystera*] the hollow muscular organ in female mammals in which the fertilized ovum normally becomes embedded and in which the developing embryo and fetus is nourished. In the nonpregnant human [NA], it is a pear-shaped structure, about 3 inches in length, consisting of a body, fundus, isthmus, and cervix. Its cavity opens into the vagina below, and into the uterine tube on either side above. It is supported by direct attachment to the vagina and by indirect attachment to various other nearby pelvic structures. **u. acol'lis**, a uterus in which the vaginal portion is absent. **u. arcua'tus**, a uterus with a depressed fundus. **u. bicamera'tus vetula'rum**, a uterus in which the cervical orifices are closed by adhesions, resulting in distention of the cervix and corpus uteri. **u. bicor'nis**, a uterus which has two horns, or cornua. **u. bicor'nis bicol'lis**, a uterus with two horns and two cervices. **u. bicor'nis unicol'lis**, a uterus with two horns and a single cervix. **u. bif'oris**, a uterus in which the external os is divided by a septum. **u. bilocula'ris**, a uterus the cavity of which is divided into two parts by a partition. **u. biparti'tus**, *u. bilocularis*. **cochleate u.**, a small adult uterus with a conical cervix and body which is small, globular, and acutely flexed. **u. cordifor'mis**, a heart-shaped uterus. **Couvelaire u.**, see *uteroplacental apoplexy*, under *apoplexy*. **u. didel'phys**, either of two distinct uteri occurring side by side in the same individual. **duplex u.**, *u. du'plex*, a double uterus; normal in marsupial mammals, and rarely seen in the human subject. **fetal u.**, a uterus in which the cervical canal is longer than the cavity of the corpus. **gravid u.**, the pregnant uterus. **u. incudifor'mis**, a uterus

bicornis which is broad between the two horns. **infantile u.**, pubescent u. **u. masculi'nus**, utriculus prostaticus. **u. parvicol'lis**, a uterus in which the cervical portion is very small, but the corpus is of normal size. **u. planifunda'tis**, *u. incudiformis*. **pubescent u.**, one which is adult in type but is undeveloped; called also *infantile u.* **ribbon u.**, an aplastic uterus found as a transverse ribbon of fibromuscular tissue between the blind ends of the uterine tubes and the bladder. **u. rudimenta'rius**, a hypoplastic uterus measuring 1 to 3 cm. in length; affected women are amenorrheic and sterile. **saddle-shaped u.**, *u. arcuatus*. **u. sep'tus**, *u. bilocularis*. **u. simplex**, one that is single throughout its length, as in the human. **u. subsep'tus**, *u. bicornis*. **u. triangula'ris**, *u. incudiformis*. **u. unicor'nis**, one with only one cornu, one lateral half being undeveloped or imperfectly developed.

Utibid (u'ti-bid) trademark for a preparation of oxolinic acid.

Uticillin VK (u'ti-sil'in) trademark for a preparation of penicillin V potassium.

UTP uridine triphosphate.

utricle (u'tre-k'l) [L. *utriculus*] 1. any small sac. 2. the larger of the two divisions of the membranous labyrinth; see *utriculus*, def. 2. **prostatic u.**, **urethral u.**, utriculus prostaticus.

utricular (u-trik'u-lar) 1. pertaining to a utricle. 2. resembling a bladder.

utriculi (u-trik'u-li) [L.] plural of *utriculus*.

utriculitis (u-trik'u-li'tis) inflammation of the prostatic utricle or of the utricle of the ear.

utriculosaccular (u-trik'u-lo-sak'u-lar) pertaining to the utricle and saccule of the labyrinth.

utriculus (u-trik'u-lus), pl. *utriculi* [L., dim. of *uter*] 1. a small sac. 2. [NA] the larger of the two divisions of the membranous labyrinth, located in the posterosuperior region of the vestibule. It is the major organ of the vestibular system, which gives information about position and movements of the head. Called also *utricle* and *utriculus vestibuli*. **u. masculi'nus**, *u. prostaticus*. **u. prostat'icus** [NA], prostatic utricle: the remains of the lower part of the paramesonephric duct in the male; it is a small blind pouch arising in the prostatic substance and opening onto the seminal colliculus. **u. vestib'uli**, utriculus (def. 2).

utriform (u'tri-form) having the shape of a bottle.

uva (u'vah), pl. *u'vae* [L. "grape"] the raisin; the dried fruit of *Vitis vinifera* L. (Vitaceae), grape vine. **u. ur'si** L. (Ericaceae) [L. "bear's grapes"], the leaves of *Arctostaphylos uva-ursi*, or bearberry, a trailing ericaceous shrub; used medicinally as astringent, diuretic tea.

Uval (u'val) trademark for preparations of sulisobenzonate.

uvea (u've-ah) the vascular middle coat of the eye, comprising the iris, ciliary body, and choroid (tunica vasculosa bulbi [NA]).

uveal (u've-al) pertaining to the uvea.

uveitic (u've-it'ik) pertaining to uveitis.

uveitis (u've-i'tis) [*uvea* + *-itis*] inflammation of the uvea. **anterior u.**, uveitis involving the structures of the iris and/or ciliary body; iridocyclitis. **Förster's u.**, syphilitic involvement of the entire uvea. **granulomatous u.**, uveitis of any part of the uveal tract but particularly the posterior portion, characterized by nodular collections of epithelioid cells and giant cells surrounded by lymphocytes. **heterochromic u.**, see under *iridocyclitis*. **lens-induced u.**, an acute intraocular inflammation resulting from the escape of lens matter through an opening in the lens capsule; called also *phacogenic u.* See also *phacolytic u.* **nongranulomatous u.**, inflammation of the anterior portion of the uveal tract (iris and ciliary body). **phacolytic u.**, uveitis secondary to leakage of lens material into the aqueous from a hypermature cataract. **phacotoxic u.**, lens-induced u. **posterior u.**, uveitis involving the posterior segment of the eye, including choroiditis and chorioretinitis. **sympathetic u.**, see under *ophthalmia*. **toxoplasmic u.**, chorioretinitis as a complication of toxoplasmosis. **tuberculous u.**, granulomatous uveitis due to infection with the tubercle bacillus, usually a severe caseating granulomatous chorioretinitis.

uveolabyrinthitis (u've-o-lah'bi-rin-thi'tis) uveitis associated with labyrinthitis.

uveomeningitis (u've-o-men'in-ji'tis) a disorder characterized by lesions of the uvea accompanied by meningeal signs; see *Harada's disease* and *Vogt-Koyanagi syndrome*.

uveoneuraxitis (u've-o-nu'raks-i'tis) uveitis associated with involvement of the optic nerve.

uveoparotid (u've-o-pah-rot'id) affecting the uvea and the parotid gland; see under *fever*.

uveoparotitis (u've-o-par'o-ti'tis) uveoparotid fever.

uveoscleritis (u've-o-skle-ri'tis) scleritis resulting from an extension of the inflammation from the uvea to the sclera.

uviform (u'vi-form) [L. *uva* grape + *forma* form] having the form of a grape.

uviofast (u've-o-fast') uvioresistant.

uvioleze (u've-o-liz) to subject to the action of ultraviolet rays.

uviometer (u'və-om'ē-ter) an instrument for measuring ultraviolet emanation.

uvioresistant (u'və-o-re-zis'tant) resistant to or not affected by ultraviolet rays.

uviosensitive (u'və-o-sen'si-tiv) sensitive to ultraviolet rays.

uvula (u'vu-lah), pl. *u'vulae* [L. "little grape"] a pendent, fleshy mass; used as a general term in anatomical terminology. Usually used alone to designate the *uvula palatina*. **bifid u.**, a split uvula. **u. of bladder**, *u. vesicae*. **u. cerebel/li**, *u. of cerebellum*, *u. vermis*. **u. fis/sa**, a forked or split uvula. **Lieutaud's u.**, *u. vesicae*. **u. palati'na** [NA], **palatine u.**, the small, fleshy mass hanging from the soft palate above the root of the tongue, composed of the levator and tensor palati muscles and the muscle of the uvula, connective tissue, and mucous membrane. **u. ver'mis** [NA], the part of the vermis of the cerebellum between the pyramis and the nodulus; called also *u. of cerebellum*. **u. vesi'cae** [NA], a rounded elevation at the neck of the bladder, formed by convergence of many fibers of the trigonal muscle as they pass through the encircling musculus sphincter vesicae to terminate in the urethra. Called also *u. of bladder*.

uvulaptosis (u'vu-lap-to'sis) uvuloptosis.

uvular (u'vu-lar) pertaining to the uvula; staphyline.

uvularis (u'vu-la'ris) [L.] uvular.

uvulatome (u'vu-lah-tōm) uvulotome.

uvulatomy (u'vu-lat'o-me) uvulotomy.

uvulectomy (u'vu-lek'to-me) [*uvula* + Gr. *ektomē* excision] excision of the uvula; cionectomy.

uvulitis (u'vu-li'tis) [*uvula* + -itis] inflammation of the uvula; staphylitis.

uvuloptosis (u'vu-lop-to'sis) [*uvula* + Gr. *ptōsis* falling] falling of the palate: a relaxed and pendulous condition of the palate; staphyloptosis.

uvulotome (u'vu-lo-tōm) an instrument for cutting the uvula; staphylotome.

uvulotomy (u'vu-lot'o-me) [*uvula* + Gr. *tomē* a cutting] the operation of cutting off the uvula or a part of it.

uzara (u-zah'rah) the dried root of a species of *Gomphocarpus* (Asclepiadaceae), an African plant; used by certain natives in diarrhea and dysentery. It is the source of uzarin.

uzarin (u-zar'in) a constituent of uzara, C₃₅H₅₄O₁₄, which has antidiarrheal properties.

V

V chemical symbol for vanadium.

V. *Vibrio*; vision; visual acuity.

v. abbreviation for *L. vena* vein, and for *volt*.

V_T symbol for *tidal volume* (in pulmonary ventilation).

VA visual acuity.

V.A. Veterans Administration.

vaccigenous (vak-sij'ē-nus) [*vaccine* + Gr. *gennan* to produce] producing vaccine.

vaccin (vak'sin) vaccine.

vaccina (vak-si'nah) vaccinia.

vaccinable (vak-sin'ah-b'l) susceptible of being successfully vaccinated.

vaccinal (vak'si-nal) [L. *vaccinus*] 1. pertaining to vaccinia, to vaccine, or to vaccination. 2. having protective qualities when used by way of inoculation.

vaccinate (vak'si-nāt) to inoculate with vaccine for the purpose of producing immunity.

vaccination (vak'si-na'shun) [L. *vacca* cow] the introduction of vaccine into the body for the purpose of inducing immunity. Coined originally to apply to the injection of smallpox vaccine, the term has come to mean any immunizing procedure in which vaccine is injected. **smallpox v.**, the application of smallpox vaccine upon the denuded or scarified skin, to produce immunity to smallpox.

vaccinationist (vak'si-na'shun-ist) one who defends the practice of vaccination.

vaccinator (vak'si-na'tor) 1. one who vaccinates. 2. an instrument for use in vaccination.

vaccine (vak'sēn) {L. *vaccinus*} a suspension of attenuated or killed microorganisms (bacteria, viruses, or rickettsiae), administered for the prevention, amelioration, or treatment of infectious diseases. **anthrax v.**, anthrax cultures attenuated by growing them at 42° C. for varying lengths of time and injected into horses, cattle, sheep, and goats to protect them against anthrax. It is a triple vaccine: No. 1 is the weakest and is given first; Nos. 2 and 3 are progressively stronger and are given after intervals of twelve days. **antirabic v.**, rabies v. **antityphoid v.**, typhoid v. **attenuated v.**, a vaccine prepared from live microorganisms or viruses cultured under adverse conditions leading to loss of their virulence but retention of their ability to induce protective immunity. **autogenous v.**, a vaccine prepared from microorganisms which have been freshly isolated from the lesion of the patient who is to be treated with it. **avian embryo v.**, a vaccine prepared from embryonate avian eggs infected with inactivated fixed virus. **bacterial v.**, a standardized suspension of attenuated or killed bacteria which is injected subcutaneously, intramuscularly or intradermally, to increase the patient's immunity to the organisms injected, or sometimes for pyrogenetic effects in treatment of certain noninfectious diseases. **BCG v.** (bacille Calmette-Guérin) [USP], a preparation used as an active immunizing agent against tuberculosis, consisting of a dried, living culture of the Calmette-Guérin strain of *Mycobacterium bovis*, which is grown on a suitable medium from a seed strain of known history that has been maintained to preserve its capacity for conferring immunity. It is usually administered intradermally, but may also be given by multiple punctures with a special instrument, or by scarification through a suspension, applied to the skin. Called also *Calmette's v.* and *tuberculosis v.* **brucellosis v.**, a vaccine made from an avirulent variant of

Brucella abortus, said to reduce the incidence of bovine brucellosis. **Calmette's v.**, BCG v. **caprized v.**, a vaccine prepared from microorganisms that have been attenuated by passage in goats. **cholera v.** [USP], a sterile suspension, in isotonic sodium chloride solution or other suitable diluent, of killed cholera vibrios (*Vibrio cholerae*), prepared from equal portions of suspensions of cholera vibrios of the Inaba and Ogawa strains, and containing, at the time of manufacture, 8 billion cholera vibrios in each milliliter. Used as an active immunizing agent against cholera, it is administered subcutaneously or intramuscularly. **Cox v.**, typhus v. **crystal violet v.**, a vaccine prepared from the virus of hog cholera in pig's blood, attenuated by exposure to the dyestuff crystal violet; used for immunizing young pigs against hog cholera. **diphtheria v.**, see under *toxoid*. **diphtheria and tetanus toxoids and pertussis v.** [USP], a sterile suspension of killed *Bordetella pertussis* in a mixture of diphtheria toxoid and tetanus toxoid, the components being combined in such proportions as to yield a mixture that meets the antigenic and other requirements of each separate component; used as an active immunizing agent, administered subcutaneously. **diphtheria and tetanus toxoids and pertussis v. adsorbed** [USP], a sterile suspension of the precipitate obtained by treating a mixture of diphtheria toxoid, tetanus toxoid, and pertussis vaccine with alum, aluminum hydroxide, or aluminum phosphate, the components being combined in such proportions as to yield a mixture containing an immunizing dose of each in the total dosage prescribed on the label; used as an active immunizing agent, administered intramuscularly. **duck embryo v.**, vaccine prepared from embryonate duck eggs infected with inactivated fixed virus. **glycerinated v.**, vaccine material purified by treatment with glycerin. **heterologous v.**, a vaccine that confers protective immunity against a pathogen not present in the vaccine, because it contains microorganisms that possess cross-reacting antigens which they share in common with that pathogen. For example, vaccinia virus protects against smallpox. Called also *heterotypic v.* **heterotypic v.**, heterologous v. **hydrophobia v.**, rabies v. **inactivated v.**, a vaccine containing nonreplicating microorganisms or viruses which are noninfectious but which retain their protective antigens. Viral vaccines are usually inactivated by agents such as formalin, phenol, or β-propiolactone; bacterial vaccines by heat, acetone, ultraviolet rays, formaldehyde, or phenol. **influenza virus v.** [USP], a sterile, aqueous suspension of suitably inactivated influenza virus prepared from the extraembryonic fluid of influenza virus-infected chick embryo; it may contain an adsorbent, such as aluminum phosphate or protamine. It is an active immunizing agent, administered intramuscularly or subcutaneously. **live v.**, a vaccine prepared from live microorganisms or viruses that have been attenuated but that retain their immunogenic properties. **measles virus v., inactivated**, an aqueous suspension of suitable measles virus grown on either chicken embryo or monkey renal tissue cultures and inactivated by a suitable method; it has been administered intramuscularly as an active immunizing agent but the live attenuated measles virus vaccine is usually preferred. **measles virus v., live attenuated** [USP], a bacterially sterile preparation of live virus derived from a strain of measles virus suitable for human immunization, grown on cultures of either chicken embryo or canine renal tissue cultures; used as an active immunizing agent, administered subcutaneously. **measles and rubella virus v., live** [USP], a bacterially sterile preparation of a combination of live measles and rubella viruses found suitable for human immuniza-

tion; the measles virus is grown on cultures of chicken embryo tissue and the rubella virus on cultures of duck embryo tissue. Used as an active immunizing agent, administered subcutaneously. **measles, mumps, and rubella virus v., live** [USP], a bacterially sterile preparation of a combination of the live measles, mumps, and rubella vaccines found suitable for human immunization, grown on cultures of either chicken or duck embryo tissue; used as an active immunizing agent, administered subcutaneously. **mixed v., polyvalent v. mumps virus v., inactivated** [NF], a sterile suspension of killed mumps virus, prepared from the extraembryonic fluid of the virus-infected chick embryo tissue and concentrated and purified by differential centrifugation; used as an immunizing agent, administered subcutaneously. **mumps virus v., live** [USP], a bacterially sterile preparation of live virus derived from a strain of mumps virus suitable for human immunization, grown on chicken-embryo tissue culture; used as an active immunizing agent, administered subcutaneously. **pertussis v.** [USP], a sterile bacterial fraction or suspension, in an isotonic sodium chloride solution or other suitable diluent, of killed pertussis bacilli (*Bordetella pertussis*) of a strain or strains selected for high antigenic efficiency; used as an active immunizing agent, administered subcutaneously. **pertussis v. adsorbed** [USP], a sterile bacterial fraction or suspension, in a suitable diluent, of killed pertussis bacilli (*Bordetella pertussis*) of a strain or strains selected for high antigenic efficiency and precipitated or adsorbed by the addition of aluminum hydroxide or aluminum phosphate, and resuspended; used as an active immunizing agent, administered intramuscularly. **plague v.** [USP], a sterile suspension, in an isotonic sodium chloride solution or other suitable diluent, of killed plague bacilli (*Pasteurella pestis*) of a strain selected for high antigenic efficiency, and containing approximately 2 billion plague bacilli in each milliliter; used as an active immunizing agent, administered subcutaneously. Called also *vaccinum pestis*. **poliomyelitis v., polymyelitis v. inactivated** [USP], a sterile suspension of inactivated poliovirus of Types 1, 2, and 3, which are grown separately in primary cultures of monkey kidney tissue, and after inactivation are combined in suitable proportions; used as an active immunizing agent, administered intramuscularly and subcutaneously. Called also *Salk v.* See also *poliovirus v. live oral*. **poliovirus v. live oral** [USP], a preparation of one or a combination of the three types of live, attenuated polioviruses, grown separately in primary cultures of monkey kidney tissue; used as an active immunizing agent against poliomyelitis, it is administered orally. Called also *Sabin oral v.* **polyvalent v.,** a vaccine prepared from cultures or antigens of more than one strain or species. **rabies v.** [USP], a sterile preparation, in liquid or in dried form, of killed fixed virus of rabies, obtained from brain tissue of rabbits or from duck embryos, which have been infected with fixed rabies virus. It is used as an active immunizing agent in patients infected or contaminated with rabies virus, being administered subcutaneously daily for a minimum of 14 days. Called also *antirabies v.* and *hydrophobia v.* See also *Semple v.* **replicative v.,** any vaccine containing organisms that are able to reproduce, including live and attenuated viruses and bacteria. **Rocky Mountain spotted fever v.** [USP], a sterile, aqueous suspension of inactivated *Rickettsia rickettsii*, prepared by growing the virus in the embryonic tissues of the domestic fowl, *Gallus domesticus*; used as an active immunizing agent, administered subcutaneously. **rubella virus v., live** [USP], a bacterially sterile preparation of live rubella virus found suitable for human immunization, grown on cultures of either duck embryo tissue or rabbit kidney tissue; used as an active immunizing agent, administered subcutaneously. **rubella and mumps virus v., live** [USP], a bacterially sterile preparation of a combination of live rubella and mumps viruses found suitable for human immunization; the rubella virus is grown on cultures of duck embryo tissue, and the mumps virus on chicken embryo tissue. Used as an active immunizing agent, administered subcutaneously. **Sabin's oral v.,** see *poliovirus v. live oral*. **Salk v.,** poliomyelitis v. inactivated. **Sauer's v.,** a pertussis vaccine prepared from freshly isolated strains of *Bordetella pertussis*; used in immunizing children against whooping cough. **Semple v.,** an antirabies vaccine prepared from 4 per cent inoculated rabbit brain treated with 0.5 per cent phenol. **sensitized v.,** a vaccine consisting of bacteria which have been immersed in their specific immune serum. Such a vaccine is believed to cause no negative phase, but only a slight local reaction and to facilitate the antibody formation. **smallpox v.** [USP], the living virus of vaccinia (cowpox) that has been grown in the skin of a vaccinated bovine calf or in the membranes of the chick embryo, and is available in liquid or dried form. It is used as an active immunizing agent against smallpox, being administered by multiple punctures, with a special instrument, through a suspension applied to the skin. Called also *vaccinum vaccinia* and *vaccinum variolae*. **Sobornheim's v.,** a vaccine consisting of virulent *Bacillus anthracis* mixed with antiserum; used for immunization of cattle against anthrax. **Spencer-Parker v.,** a vaccine for Rocky Mountain spotted fever, prepared from ground infected ticks. **staphylococcus v.,** a bacterial vaccine prepared from one or more strains of staphylococci. **streptococcus v.,** a bacterial vaccine made from cultures of streptococci. **TAB v.,** typhoid and paraty-

phoid v. **triple v.,** a vaccine prepared from the cultures of three different species of organisms. **tuberculosis v.,** BCG v. **typhoid v.** [USP], a sterile suspension, in buffered isotonic sodium chloride solution or other suitable diluent, of killed typhoid bacilli (*Salmonella typhosa*) of a strain selected for high antigenic efficiency, and containing approximately 1 billion typhoid bacilli in each milliliter; used as an active immunizing agent, administered subcutaneously. Called also *antityphoid v., typhobacterin, vaccinum antityphicum, and vaccinum typhosum*. **typhoid and paratyphoid v.,** a sterile suspension in buffered, isotonic sodium chloride solution or other suitable diluent, of killed typhoid bacilli (*Salmonella typhosa*) of a strain selected for high antigenic efficiency, killed paratyphoid A bacilli (*S. paratyphi A*), and killed paratyphoid B bacilli (*S. paratyphi B*), which contains, in each milliliter, approximately 1 billion typhoid bacilli and 250 million of each type of the paratyphoid bacilli. It is an active immunizing agent against typhoid fever and paratyphoid fevers, administered subcutaneously. Called also *TAB v., typhoparatyphoid v., typhosum et paratyphosum, and vaccinum typhoparatyphoid v.,* typhoid and paratyphoid v. **typhus v.** [USP], a sterile suspension of the killed rickettsial organisms of a strain or strains of epidemic typhus rickettsiae (*Rickettsia prowazeki*) selected for antigenic efficiency, consisting of refined material derived from an aqueous suspension of infected yolk sac membrane of chick embryos, and rickettsiae killed by a chemical agent; used as an active immunizing agent, administered subcutaneously. Called also *Cox v.* **univalent v.,** a vaccine containing only one variety of organism in pure culture. **Weigl v.,** a typhus fever vaccine prepared by inoculating lice per rectum with rickettsiae and then emulsifying the intestines of the lice in phenolized solution of sodium chloride. **yellow fever v.** [USP], an attenuated strain of living yellow fever virus selected for high antigenic activity and safety. It is prepared by culturing of the virus in the live chick embryo, from which a suspension is prepared, processed, dried from the frozen state, and sealed under dry nitrogen; used as an active immunizing agent, administered subcutaneously.

vaccinia (vak-sin'e-ah) [L., from *vacca* cow] a viral disease of cattle; see *cowpox*. In humans, a localized pustular eruption produced by inoculation of the vaccinia virus, used to produce antibody against smallpox. It is also transmissible by contact with a vaccinated person or with infected cows. It is occasionally associated with local and systemic complications due to the virus, to secondary infection by bacteria, and to postinfectious meningo-encephalitis. **v. gangrenosa**, generalized vaccinia characterized by failure to develop antibodies against the virus (due to agammaglobulinemia), as a result of which there is spreading necrosis at the inoculation site and metastasis of lesions throughout the body; called also *progressive v.* **generalized v.,** a benign systemic infection sometimes occurring after smallpox vaccination, not to be confused with eczema vaccinatum, with appearance of the virus in the blood and a widespread papular rash, which later vesiculates but leaves no scars; called also *vaccinia* and *vacciniola*. See also *v. gangrenosa*. **progressive v., v. gangrenosa.**

vaccinal (vak-sin'e-al) pertaining to or characteristic of vaccinia (cowpox).

vacciniculturist (vak'si-ni-kul'tur-ist) one who raises heifers and uses them for the production of vaccine.

vaccinid (vak'si-nid) generalized vaccinia.

vaccinifer (vak-sin'i-fer) [*vaccine* + L. *ferre* to carry] the source (individual organism) from which smallpox vaccine is derived.

vacciniform (vak-sin'i-form) resembling vaccinia (cowpox).

vaccinin (vak'si-nin) the inoculable principle by which vaccinia is transmitted.

vacciniola (vak'si-ne-o'lah) [L., dim. of *vaccinia*] generalized vaccinia.

vaccination (vak'sin-i-za'shun) vaccination persistently repeated until the virus has no perceptible effect.

vaccinogen (vak-sin'o-jen) a source from which vaccine is derived.

vaccinogenous (vak'si-noj'ē-nus) producing vaccine.

vaccinostyle (vak-sin'o-stil) a small lance used in vaccination.

vaccinotherapy (vak'si-no-ther'ah-pe) therapeutic use of vaccines.

vaccinum (vak-si-num) [L.] vaccine. **v. antityph'icum,** typhoid vaccine. **v. pertus'sis,** pertussis vaccine. **v. pes'tis,** plague vaccine. **v. typho'sum,** typhoid vaccine. **v. typho'sum et paratypho'sum,** typhoid and paratyphoid vaccine. **v. vaccin'iae, v. vari'olae,** smallpox vaccine.

VACTERL an acronym for vertebral, anal, cardiac, tracheal, esophageal, renal, and limb; used to designate a pattern of congenital anomalies.

vacuolar (vak'u-o'lar) pertaining to a vacuole; characterized by the presence of vacuoles.

vacuolate (vak'u-o-lāt') to form small spaces, or vacuoles.

vacuolated (vak'u-o-lāt'ed) pertaining to or characterized by vacuoles.

vacuolation (vak''u-o-la'shun) the process of forming vacuoles; the condition of being vacuolated.

vacuole (vak''u-öl) [L. *vacuus* empty + *-ole* diminutive ending] any small space or cavity formed in the protoplasm of a cell. **autophagic v.**, autophagosome. **condensing v's**, membrane-bound spherical vacuoles in the Golgi complex of secretory cells, which contain secretory product in varying degrees of condensation and which mature, pass to the cell surface as secretory granules or droplets, and discharge their contents. **contractile v.**, a small cavity containing watery fluid, seen in the protoplasm of certain unicellular organisms; it gradually increases in size and then collapses. Its function is thought to be respiratory or excretory. **digestive v.**, secondary lysosome. **food v.**, a small cavity in protozoa containing ingested food particles. **heterophagic v.**, heterophagosome. **plasmocrine v.**, a small cavity containing crystalloids in a secretory cell. **rhagiocrine v.**, a small cavity containing colloids in a secretory cell. **water v.**, a small drop of water within the protoplasm of a cell.

vacuolization (vak''u-o-li-za'shun) vacuolation.

vacuome (vak''u-öm) the system of vacuoles in a cell which stain with neutral red.

vacuum (vak''u-um) [L.] a space devoid of air or of other gas; a space from which the air has been exhausted. **high v.**, a vacuum in which the attenuation is extreme. **torricellian v.**, the vacuum in a barometric tube.

vadum (va'dum) [L. "a shallow"] an occasional elevation from the bottom of a cerebral sulcus, rendering the sulcus more or less shallow.

vagal (va'gal) pertaining to the vagus nerve.

vagi (va'ji) [L.] plural of *vagus*.

vagina (vah-ji'nah), pl. *vagi'nae* [L.] 1. a sheath, or sheathlike structure; used as a general term in anatomical nomenclature. 2. [NA] the canal in the female, extending from the vulva to the cervix uteri, which receives the penis in copulation. **v. bul'bi** [NA], connective tissue that forms the capsule enclosing the posterior part of the eyeball, extending anteriorly to the conjunctival fornix, and continuous with the muscular fascia of the eye; called also *fascia bulbi* [Tenon], *bulbar fascia*, *sheath of eyeball*, and *Tenon's capsule*. **v. carot'ica fas'ciae cervica'lis** [NA], the portion of the cervical fascia that encloses the carotid vessels and vagus nerve. **v. cor'dis**, pericardium. **v. exter'na ner'vi op'tici** [NA], the thick outer sheath of the optic nerve, continuous with the dura mater and connecting it with the sclera; called also *external or fibrous sheath of optic nerve*. **v. fem'oris**, fascia lata femoris. **vagi'nae fibro'sae digito'rum ma'nus** [NA], strong fibrous, semicylindrical sheaths investing the grooved palmar surface of the proximal and middle phalanges of the fingers; called also *ligamenta vaginalia digitorum manus* and *fibrous sheaths of fingers*. **vagi'nae fibro'sae digito'rum pe'dis** [NA], more or less complete fascial sheaths surrounding the phalanges of the toes, for attachment of the tendons and their synovial membranes; called also *ligamenta vaginalia digitorum pedis* and *fibrous sheaths of toes*. **v. fibro'sa ten'dinis** [NA], the fibrous sheath of a tendon, usually confining it to an osseous groove. **v. inter'na ner'vi op'tici** [NA], the inner sheath of the optic nerve, continuous with the pia mater; called also *internal sheath of optic nerve*. **v. mas'culi'na**, utriculus prostaticus. **vagi'nae muco'sae**, vaginae synoviales. **v. muco'sa intertubercula'ris**, v. synovialis intertubercularis. **v. muco'sa ten'dinis**, v. synovialis tendinis. **vagi'nae muco'sae ten'dinum digito'rum pe'dis**, vaginae synoviales digitorum pedis. **vagi'nae muco'sae ten'dinum flexo'rum ma'nus**, vaginae synoviales digitorum manus. **v. mulie'bris**, the organ of copulation in the female; see *vagina*, def. 2. **v. mus'culi rec'ti abdo'minis** [NA], a sheath formed by the aponeuroses of other abdominal muscles, within which the rectus abdominis can move. **vagi'nae ner'vi op'tici**, the internal and external meningeal sheaths of the optic nerve within the orbit, continuous with the meninges of the brain. See *v. externa nervi optici* and *v. interna nervi optici*. Called also *sheaths of optic nerve*. **v. oc'uli**, *v. bulbi*. **v. pi'li**, folliculus pili. **v. proces'sus styloi'dei**, a ridge on the lower surface of the temporal bone, partly enclosing the base of the styloid process; called also *sheath of styloid process*. **vagi'nae synovia'les** [NA], double-layered, fluid-filled sheaths such as those that usually surround tendons running in osseofibrous tunnels. **v. synovia'lis commu'nis musculo'rum flexo'rum** [NA], the common synovial sheath for the flexor tendons as they pass through osseofibrous canals of the fingers; called also *v. tendinum musculorum flexorum communium manus*. **vagi'nae synovia'les digito'rum ma'nus** [NA], the synovial sheaths of the tendons of the fingers; called also *vaginae mucosae tendinum flexorum manus*. **v. synovia'lis intertubercula'ris** [NA], the synovial membrane that surrounds the long head of the biceps brachii muscle as it passes through the intertubercular sulcus; called also *v. mucosa intertubercularis* and *synovial sheath of intertubercular groove*. **v. synovia'lis musculo'rum fibula'rium commu'nis**, NA alternative for *v. synovialis musculorum peroneorum communis*. **v. synovia'lis mus'culi obli'qui superio'ris** [NA],

the synovial sheath of the superior oblique muscle, particularly where its tendon passes through the trochlea; called also *bursa musculi trochlearis*. **v. synovia'lis musculo'rum peroneo'rum commu'nis** [NA], the double tendon sheath for the peroneus longus and peroneus brevis muscles; called also *v. tendinum musculorum peroneorum communis*. **v. synovia'lis ten'dinis** [NA], a double-layered, fibrous sheath usually found surrounding a tendon running in an osseofibrous canal, with synovial fluid present between the layers; called also *v. mucosa tendinis* and *synovial sheath of tendon*. **vagi'nae synovia'les ten'dinum digito'rum ma'nus** [NA], the tendon sheaths of the long and short flexors of the fingers; called also *vaginae tendinum digitales manus*. **vagi'nae synovia'les ten'dinum digito'rum pe'dis** [NA], the synovial sheaths of the tendons of the toes; called also *vaginae mucosae tendinum digitorum pedis*. **v. synovia'lis ten'dinis mus'culi flexo'ris car'pi radia'lis** [NA], the tendon sheath of the flexor carpi radialis muscle; called also *bursa musculi flexoris carpi radialis*. **v. synovia'lis ten'dinis mus'culi flexo'ris hal'lucis lon'gi** [NA], the tendon sheath of the flexor hallucis longus muscle, extending from the medial malleolus to where it crosses the tendon of the flexor digitorum longus; called also *v. tendinis musculi flexoris hallucis longi*. **v. synovia'lis ten'dinis mus'culi tibia'lis postero'ris** [NA], the tendon sheath of the tibialis posterior muscle, beginning at the medial malleolus and extending into the foot; called also *v. tendinis musculi tibialis posterioris*. **v. synovia'lis troch'leae**, bursa synovialis trochlearis. **vagi'nae ten'dinum digita'les ma'nus**, vaginae synoviales tendinum digitorum manus. **vagi'nae ten'dinum digito'rum pe'dis** [NA], the tendon sheaths of the long and short flexor muscles of the toes, beginning at the heads of the metatarsal bones. **v. ten'dinum musculo'rum abducto'ris lon'gi et extenso'ris bre'vis pol'licis** [NA], the tendon sheath of the long abductor and short extensor muscles of the thumb. **v. ten'dinum musculo'rum extenso'rum car'pi radia'lium** [NA], the tendon sheath of the short and long extensor carpi radialis muscles. **v. ten'dinis mus'culi extenso'ris car'pi ulna'ris** [NA], the tendon sheath of the extensor carpi ulnaris muscle. **v. ten'dinum musculo'rum extenso'ris digito'rum commu'nis et extenso'ris in'dicis**, v. tendinum musculorum extensoris digitorum et extensoris indicis. **v. ten'dinum musculo'rum extenso'ris digito'rum et extenso'ris in'dicis** [NA], the tendon sheath of the extensor digitorum and extensor indicis muscles. **v. ten'dinis mus'culi extenso'ris dig'iti min'mimi** [NA], the tendon sheath of the extensor digiti minimi muscle. **vagi'nae ten'dinum mus'culi extenso'ris digito'rum pe'dis lon'gi** [NA], the tendon sheaths of the extensor digitorum longus muscle, running from the cruciate ligament to the intermediate cuneiform bone. **v. ten'dinis mus'culi extenso'ris hal'lucis lon'gi** [NA], the tendon sheath of the extensor hallucis longus muscle, extending from the cruciate ligament to the dorsal fascia of the foot. **v. ten'dinis mus'culi extenso'ris pol'licis lon'gi** [NA], the sheath of the extensor pollicis longus tendon. **v. ten'dinis mus'culi fibula'ris lon'gi planta'ris**, NA alternative for *v. tendinis musculi peronei longi plantaris*. **v. ten'dinum musculo'rum flexo'rum commu'nium ma'nus**, v. synovialis communis musculorum flexorum. **vagi'nae ten'dinum mus'culi flexo'ris digito'rum pe'dis lon'gi** [NA], the tendon sheaths of the flexor digitorum longus muscle, extending from the medial malleolus to below the navicular bone. **v. ten'dinis mus'culi flexo'ris hal'lucis lon'gi**, v. synovialis tendinis musculi flexoris hallucis longi. **v. ten'dinis mus'culi flexo'ris pol'licis lon'gi** [NA], the tendon sheath for the long flexor muscle of the thumb in the wrist and palm. **v. ten'dinum musculo'rum peroneo'rum commu'nis**, v. synovialis musculorum peroneorum communis. **v. ten'dinis mus'culi perone'i lon'gi planta'ris** [NA], the tendon sheath of the peroneus longus muscle, beginning in the peroneal groove of the cuboid bone. **v. ten'dinis mus'culi tibia'lis antero'ris** [NA], the tendon sheath of the tibialis anterior muscle, extending from the transverse crural ligament to the talonavicular joint. **v. ten'dinis mus'culi tibia'lis postero'ris**, v. synovialis tendinis musculi tibialis posterioris. **v. vaso'rum** [NA], a fibrous sheath that encloses certain arteries, sometimes along with their veins and nerves.

vaginae (vah-ji'ne) plural of *vagina*.

vaginal (vaj'i-nal) 1. of the nature of a sheath; ensheathing. 2. pertaining to the vagina. 3. pertaining to the tunica vaginalis testis.

vaginalectomy (vaj'i-nah-lek'to-me) vaginectomy.

vaginalitis (vaj'i-nah-li'tis) inflammation of the tunica vaginalis testis. **plastic v.**, pachyvaginalitis.

vaginapexy (vaj'i-nah-pek'se) colpoexy.

vaginate (vaj'i-nät) [L. *vaginatus* sheathed] provided with a sheath.

vaginectomy (vaj'i-nek'to-me) 1. resection of the tunica vaginalis testis. 2. excision of the vagina.

vaginiperineotomy (vaj'i-ni-per'i-ne-o'to-me) paravaginal incision.

vaginismus (vaj'i-niz'mus) [L.] painful spasm of the vagina due to local hyperesthesia; it is distinguished as *superficial* and *deep*, according as the seat is at the entrance of the vagina, or probably in the bulbocavernosus muscle, or in the levator ani muscle. **mental v.**, extreme aversion to coitus on the part of a woman, attended with contraction of the muscles when the act is attempted. **perineal v.**, spasm of the perineal muscles. **posterior v.**, vaginismus caused by spasm of the levator ani muscle. **vulvar v.**, vaginismus caused by spasm of the constrictor vaginae muscle.

vaginitis (vaj'i-ni'tis) 1. inflammation of the vagina; it is marked by pain and by a purulent discharge. See also *colpitis*. 2. inflammation of a sheath. **v. adhaesi/va, adhesive v.**, see *atrophic v.* **atrophic v.**, vaginitis occurring in postmenopausal women and associated with estrogen deficiency. The common types are: *senile vulvovaginitis*, in which there is intense itching around the vagina, often with burning, almost complete lack of vaginal secretions, and evidence of tissue atrophy; and *senile vaginitis* or *adhesive vaginitis*, marked by the formation of superficial erosions, which often adhere to opposed surfaces, sometimes causing obliteration of the vaginal canal. **desquamative inflammatory v.**, vaginitis of unknown etiology, resembling atrophic vaginitis clinically and microscopically, but occurring in the absence of estrogen deficiency, and characterized chiefly by recrudescence reddened superficial ulcerations. **diphtheritic v.**, diphtheritic inflammation of the vagina. **v. emphysemato'sa, emphysematous v.**, inflammation of the vagina and adjacent cervix, characterized by numerous, asymptomatic, gas-filled cystlike lesions; the gas filling the lesions has been shown to have a carbon dioxide content. **granular v.**, the most common variety, in which the papillae are enlarged and infiltrated with small cells. **senile v.**, see *atrophic v.* **v. tes'tis**, perididymitis. **trichomonas v.**, vaginitis produced by *Trichomonas*.

vaginoabdominal (vaj'i-no-ab-dom'i-nal) pertaining to the vagina and the abdomen.

vaginocele (vaj'i-no-sē'l') [L. *vagina* sheath + Gr. *kēlē* tumor] 1. colpocele (def. 1). 2. colpoptosis.

vaginocutaneous (vaj'i-no-ku-ta-ne-us) pertaining to the vagina and skin, or communicating with the vagina and the cutaneous surface of the body, as a vaginocutaneous fistula.

vaginodynia (vaj'i-no-din'e-ah) [L. *vagina* sheath + Gr. *odynē* pain + *-ia*] pain in the vagina; colpodynia.

vaginofixation (vaj'i-no-fiks-a'shun) colpoexy; suturing of the fundus of the uterus to the abdominal wall in cases of retroflexion. Called also *vaginal hysteropexy*.

vaginogram (vah-ji'no-gram) a roentgenogram of the vagina.

vaginography (vaj'i-nog'rah-fe) roentgenography of the vagina.

vaginolabial (vaj'i-no-la'be-al) pertaining to the vagina and the labia.

vaginometer (vaj'i-nom'ē-ter) [*vagina* + Gr. *metron* measure] an instrument for measuring the length and diameter of the vagina.

vaginomycosis (vaj'i-no-mi-ko'sis) [*vagina* + Gr. *mykēs* fungus] fungal disease of the vagina.

vaginopathy (vaj'i-nop'ah-the) [*vagina* + Gr. *pathos* disease] any disease of the vagina.

vaginoperineal (vaj'i-no-per'i-ne'al) pertaining to the vagina and perineum.

vaginoperineorrhaphy (vaj'i-no-per'i-ne-or'ah-fe) colpo-perineorrhaphy.

vaginoperineotomy (vaj'i-no-per'i-ne-ot'o-me) paravaginal incision.

vaginoperitoneal (vaj'i-no-per'i-to-ne'al) pertaining to the vagina and peritoneum.

vaginopexy (vah-ji'no-pek'se) [*vagina* + Gr. *pēxis* fixation] the operation of suturing the vagina to the abdominal wall in cases of vaginal relaxation.

vaginoplasty (vah-ji'no-plas'te) [*vagina* + Gr. *plassein* to form] colpo-plasty.

vaginoscope (vaj'i-no-skōp) [*vagina* + Gr. *skopein* to examine] a vaginal speculum; colposcope.

vaginoscopy (vaj'i-nos'ko-pe) [*vagina* + Gr. *skopein* to examine] inspection of the vagina; colposcopy.

vaginotomy (vaj'i-not'o-me) [*vagina* + Gr. *tomē* a cutting] col-potomy.

vagino-vesical (vaj'i-no-ves'i-kal) pertaining to the vagina and bladder.

vaginovulvar (vaj'i-no-vul'var) vulvovaginal.

vagitus (vah-ji'tus) [L.] the cry of an infant. **v. uteri/nus**, the crying of a child in the uterus. **v. vagina'lis**, the crying of a child while its head is still within the vagina.

vagoaccessorius (va'go-ak'ses-so're-us) [L.] the vagus nerve and the cranial root of the accessory nerves regarded as together forming one nerve.

vagoglossopharyngeal (va'go-glos'o-fah-rin'je-al) pertaining to the vagus and glossopharyngeal nerves.

vagogram (va'go-gram) [*vagus* + Gr. *gramma* mark] a tracing showing the electrical variations of the vagus nerve; called also *electrovagogram*.

vagolysis (va-gol'i-sis) [*vagus* + Gr. *lysis* dissolution] surgical lysis of the vagus nerve.

vagolytic (va'go-lit'ik) having an effect resembling that produced by interruption of impulses transmitted by the vagus nerve; parasympatholytic.

vagomimetic (va'go-mi-met'ik) having an effect which resembles that produced by vagal stimulation.

vagosplanchnic (va'go-splank'nik) vagosympathetic.

vagosympathetic (va'go-sim'pah-thet'ik) pertaining to both the vagus and sympathetic innervation.

vagotomy (va-got'o-me) [*vagus* + Gr. *tomē* a cutting] interruption of the impulses carried by the vagus nerve or nerves; so called because it was first performed by surgical methods. **bilateral v.**, transection of the right and left vagus nerves. **complete v.**, transection of all vagal secretory fibers sufficient to prevent increased flow or acidity of gastric secretion in insulin hypoglycemia. **highly selective v.**, division of only those vagal fibers supplying the acid-secreting glands of the stomach, with preservation of those supplying the antrum as well as the hepatic and celiac branches. **medical v.**, interruption of the impulses carried by the vagus nerve by administration of suitable drugs; vagus block.

parietal cell v., selective severing of the vagus nerve fibers supplying the proximal two-thirds (parietal area) of the stomach; done for duodenal ulcer. **selective v.**, division of the vagal fibers to the stomach with preservation of the hepatic and celiac branches. **surgical v.**, transection of the vagus nerve by surgical means. **truncal v.**, surgical division of the two main trunks of the abdominal vagus nerve.

vagotonia (va'go-to'ne-ah) [*vagus* + Gr. *tonos* tension + *-ia*] hyperexcitability of the vagus nerve; a condition in which the vagus nerve dominates in the general functioning of the body organs. It is marked by vasomotor instability, constipation, sweating, and involuntary motor spasms with pain.

vagotonic (va'go-ton'ik) pertaining to or characterized by vagotonia.

vagotonin (va-got'o-nin) a preparation of hormone from the pancreas which increases vagal tone, slows the heart, and increases the store of glycogen in the liver.

vagotomy (va-got'o-ne) vagotonia.

vagotrope (va'go-trōp) vagotropic.

vagotropic (va'go-trop'ik) having an effect on the vagus nerve.

vagotropism (va-got'ro-pizm) [*vagus* + Gr. *tropos* a turning] affinity of a drug or poison for the vagus nerve.

vagovagal (va'go-va'gal) arising as a result of afferent and efferent impulses which are both mediated through the vagus nerve.

vagrant (va'grant) [L. *vagrans*, from *vagare* to wander] 1. wandering; moving from one place to another. 2. a vagabond.

vagus (va'gus), pl. *va'gi* [L. "wandering"] designating the tenth cranial nerve; see *nervus vagus*.

vagusstoff (va'gus-stof) [*vagus* + Ger. *Stoff* stuff, substance] a substance liberated by the vagus nerve endings that inhibits cardiac activity; it is identical to acetylcholine.

Vahlkampfia (vahl-kamp'fe-ah) a genus of amebae of the order Amoebida, class Rhizopodia, having a single nucleus and one broad pseudopodium. *V. limax* is found in fresh water, *V. patuxent* in the alimentary canal of oysters.

Val valine.

Valadol (val'ah-dol) trademark for preparations of acetaminophen.

valamin (val'ah-min) the valerian ester of amylene hydrate, (CH₃)₂·C₂H₅·CO·O·C₅H₉, formerly used as a hypnotic and sedative.

valence (va'lens) [L. *valentia* strength] the numerical measure of the capacity to combine. In chemistry it is an expression of the number of atoms of hydrogen (or its equivalent) which one atom of a chemical element can hold in combination, if negative, or displace in a reaction, if positive. An element is characterized as univalent or monovalent, bivalent or divalent, trivalent or trivalent, multivalent or polyvalent, according to its valence—one, two, three, many, etc. Valence is determined by the number of electrons in the outer (or valence) shell of an atom. In immunology, it is an expression of the number of antigenic determinants with which one molecule of a given antibody can combine. Most antibody molecules possess two combining sites (i.e., two antigen-binding sites) and are said to be divalent, i.e., those belonging to the IgG, IgA, and IgE immunoglobulin classes. The valence of the IgM molecule is frequently found to be 5, although theoretically it should possess 10 combining sites. In like manner, the valence of an antigen may be expressed as the number of antibody combining sites (i.e., antigen-binding sites) with which it can unite. Most large antigen molecules are multivalent, or polyvalent. Also an expression of the number of different organisms or antigens in

a vaccine. **biologic v.**, the combining power of molecules of homologous antigen and antibody; see *valence*.

valency (val'en-se) [L. *valentia*] 1. strength; ability. 2. valence.

Valentin's corpuscles, ganglion (pseudoganglion) (val'en-tēnz) [Gabriel Gustav *Valentin*, German physician, 1810–1883] see under *corpuscle*, and see *intumescentia tympanica*.

Valentine's position (val'en-tinz) [Ferdinand C. *Valentine*, surgeon in New York, 1851–1909] see under *position*.

n-valeraldehyde (vah-ler-al'dē-hid) an aldehyde, $C_6H_{10}O$, which has narcotic properties and is a mild irritant; called also *amylic aldehyde* and *valeric aldehyde*.

valerian (va-le're-an) [L. *valeriana*] any plant of the genus *Valeriana*. The dried roots and rhizome of *V. officinalis* L. (Valerianaceae) of Europe are antispasmodic and nerve stimulant and have been used in nervousness and hysteria. **Greek v.**, the European plant *Polemonium caeruleum* L. (Polemoniaceae), or Jacob's ladder, used as a topical application to ulcers.

valetamate bromide (val-eth'ah-māt) chemical name: *N,N*-diethyl-*N*-methyl-2-[(3-methyl-1-oxo-2-phenylpentyl)oxy]-ethanaminium bromide. A quaternary ammonium anticholinergic, $C_{15}H_{22}BrNO_2$, occurring as a white, crystalline powder; used as an antispasmodic in the treatment of hypermotility and spasm of the gastrointestinal, genitourinary, and biliary tracts, administered orally, intramuscularly, or intravenously.

valetudinarian (val'e-tu'di-na're-an) [L. *valetudinarius* sickly] an invalid; a feeble person.

valetudinarianism (val'e-tu'di-na're-an-izm) an infirm or feeble habit of body.

valgus (val'gus) [L.] bent outward, twisted; denoting a deformity in which the angulation of the part is away from the midline of the body, as in *talipes valgus*. The term valgus is an adjective and should be used only in connection with the noun it describes, as *talipes valgus*, *genu valgum*, *coxa valgus*, etc. Cf. *varus*.

valine (val'in) an essential amino acid, alpha-aminoisovaleric acid, $(CH_3)_2 \cdot CH \cdot CH(NH_2) \cdot COOH$, produced by the digestion or hydrolytic decomposition of proteins; it is essential for optimal growth in infants and for nitrogen equilibrium in human adults. Called also *2-aminoisovaleric acid* and *isopropyl-aminoacetic acid*.

valinemia (val'i-ne'me-ah) hypervalinemia.

Valisone (val'i-sōn) trademark for preparations of betamethasone valerate.

Valium (val'e-um) trademark for a preparation of diazepam.

vallate (val'āt) [L. *vallatus* walled] having a wall or rim; cup-shaped.

vallecula (vah-lek'u-lah), pl. *valleculae* [dim. of L. *valles* a hollow] a depression or furrow; used as a general term in anatomical nomenclature. Sometimes used alone to designate the *vallecula epiglottica*. — **v. cerebel'li** [NA], the longitudinal hollow on the inferior surface of the cerebellum, between the hemispheres, in which the medulla oblongata rests. **v. epiglot'tica**, a depression between the lateral and median glossoepiglottic folds on each side. **v. ova'ta**, fossa vesicae felleae. **v. for petrosal ganglion**, fossula petrosa. **v. syl'vii**, fossa lateralis cerebri. **v. un'guis**, sulcus matricis unguis.

vallecular (vah-lek'u-lar) pertaining to or affecting a vallecula.

Valleix's points (vahl-lāz') [François Louis Isidore *Valleix*, French physician, 1807–1855] see under *point*.

Vallestril (val-les'tril) trademark for a preparation of methallenestril.

valley (val'e) a small hollow. **v. of cerebellum**, *vallecula cerebelli*.

Valli-Ritter law (val'e-rit'er) [Eusebio *Valli*, Italian physiologist, 1755–1816; Johann Wilhelm *Ritter*, German physicist, 1776–1810] see *Ritter-Valli law*, under *law*.

vallicepobufagin (vah-lis'ē-po-bu'fah-jin) a cardiac poison, $C_{26}H_{36}O_5$, from the skin glands of the toad, *Bufo valliceps*.

vallis (val'is) [L. "valley"] vallecula cerebelli.

vallum (val'um), pl. *val'la* [L. "a fortification"] a mound, or wall. **v. un'guis** [NA], the fold of skin overlapping the sides and the proximal end of a nail; called also *wall of nail*.

Valmid (val'mid) trademark for a preparation of ethinamate.

valnoctamide (val-nok'tah-mid) chemical name: 2-ethyl-3-methylvaleramide; a tranquilizer, $C_8H_{11}NO$.

Valpin (val'pin) trademark for preparations of anisotropine methylbromide.

valproate sodium (val-pro'āt) chemical name: 2-propylpentanoic acid sodium salt. It is the sodium salt, $C_8H_{15}NaO_2$, of valproic acid, a simple eight-carbon branched-chain fatty acid and is used as an antiepileptic especially for control of absence seizures.

Valsalva's ligaments, maneuver (experiment), sinus, zone (val-sal'vahz) [Antonio Maria *Valsalva*, an Italian anatomist, 1666–1723] see under *maneuver*, and see *ligamenta auricularia*, *lamina basilaris ductus cochlearis*, and *sinus aortae*.

Valsuani's disease (val'su-an'ēz) [Emilio *Valsuani*, Italian gynecologist of 19th Century] see under *disease*.

value (val'u) a measure of worth or efficiency; a quantitative measurement of the activity, concentration, etc., of specific substances (see *normal v's*). **acetyl v.**, acetyl number. **acid v.**, acid number. **buffer v.**, a numerical expression of the degree of change in pH of a solution in response to the addition of acid or alkali. **cryocrit v.**, the per cent volume of sedimented cryoglobulin after cold centrifugation of serum kept at 4° to 5° C. **fuel v.**, the potential heat energy of the food. **Hehner's v.**, the percentage of insoluble (nonvolatile) fatty acids that are yielded by a saponified fat. **liminal v.**, that intensity of a stimulus which produces a just noticeable impression. **mean clinical v.**, see *MCV*. **normal v's**, the range in concentration of specific substances found in normal healthy tissues, secretions, etc. **saponification v.**, saponification number. **threshold v.**, liminal v. **valence v.**, the number obtained by multiplying the lowering of the freezing point in degrees by the amount of urine in milliliters.

valva (val'vah), pl. *val'vae* [sing. of L. *valvae* folding doors] [NA] a valve: a membranous fold in a canal or passage, which prevents the reflux of the contents passing through it. **v. aor'tae** [NA], aortic valve: a valve composed of three semilunar cusps or segments (posterior, right, and left), guarding the aortic orifice in the left ventricle of the heart; it prevents backflow into the left ventricle. Called also *valvulae semilunares aortae* and *semilunar valve*. **v. atrioventricula'ris dex'tra** [NA], right atrioventricular valve: the valve between the right atrium and right ventricle of the heart; it usually has three cusps (anterior, posterior, and septal), but additional small cusps may be present. Called also *valvula tricuspidalis* or *tricuspid valve*. **v. atrioventricula'ris sinis'tra** [NA], left atrioventricular valve: the valve between the left atrium and left ventricle of the heart; it usually has two cusps (anterior and posterior), but additional small cusps may be present. Called also *valvula bicuspidalis* [mitralis] and *bicuspid* or *mitral valve*. **v. ileoceca'lis** [NA], ileocecal valve: a functional valve at junction of the ileum and cecum, consisting of circular muscle of the terminal ileum. The ileocecal opening has two folds, one above and one below, which project into the cecum. Called also *valvula coli*. **v. mitra'lis**, NA alternative for *v. atrioventricularis sinistra*. **v. tricuspid'a'lis**, NA alternative for *v. atrioventricularis dextra*. **v. trun'ci pulmona'lis** [NA], valve of pulmonary trunk: a valve composed of three semilunar segments (anterior, right, and left), guarding the pulmonary orifice in the right ventricle of the heart; it prevents backflow of blood into the right ventricle. Called also *pulmonary valve*, *semilunar valve*, and *valvulae semilunares arteriae pulmonalis*.

valval, valvar (val'val; val'var) pertaining to a valve.

valvate (val'vāt) pertaining to or having valves.

valve (valv) a membranous fold in a canal or passage, which prevents the reflux of the contents passing through it; see also *valva* and *valvula*. **anal v's**, valvulae anales. **v. of aorta**, **aortic v.**, valva aortae. **artificial v.**, a man-made cardiac valve. **atrioventricular v.**, left, valva atrioventricularis sinistra. **atrioventricular v., right**, valva atrioventricularis dextra. **auriculoventricular v., left**, valva atrioventricularis sinistra. **auriculoventricular v., right**, valva atrioventricularis dextra. **Ball's v's**, valvulae anales. **ball-type v.**, an artificial cardiac valve that contains a small free-floating ball that prevents the reflux of blood during diastole; for various types, see under *prosthesis*. **Bauer v.**, a piece of unglazed porcelain fused into the wall of a gas tube by means of which air can be admitted as needed. **Bauhin's v.**, valva ileocecalis. **Béraud's v.**, a fold of mucous membrane sometimes found at the junction of the lacrimal sac and the nasolacrimal duct; called also *Arnold's fold* and *Krause's valve*. **Bianchi's v.**, the lower termination of the nasolacrimal duct. **bicuspid v.**, valva atrioventricularis sinistra. **Bochdalek's v.**, a fold within the lacrimal duct near the punctum lacrimale. **cardiac v's**, valves that control the flow of blood through and from the heart; they are the atrioventricular, aortic, and pulmonary trunk valves. **cardiac v's, artificial**, see under *prosthesis*. **caval v.**, valvula venae cavae inferioris. **v. of colon**, valva ileocecalis. **coronary v., v. of coronary sinus**, valvula sinus coronarii. **eustachian v.**, valvula venae cavae inferioris. **fallopian v.**, valva ileocecalis. **flair v.**, a cardiac valve having a cusp that has lost its normal support (as in ruptured chordae tendinae) and flutters in the blood stream. **Foltz's v.**, a fold of membrane at the lacrimal canaliculus. **v. of foramen ovale**, 1. valvula foraminis ovalis. 2. the septum primum of the fetal heart. **Gerlach's v.**, valvula processus vermiformis. **Guérin's v.**, valvula fossae navicularis. **Hasner's v.**, plica lacrimalis. **heart v's**, cardiac v's. **heart v., artificial**, see under *prosthesis*. **Heister's v.**, plica spiralis. **Hoboken's v's**, foldlike thickenings of the media of the umbilical arteries which protrude into the lumen of the arteries. **Houston's v's**, plicae transversales recti. **Huschke's v.**, plica lacrimalis. **hymenal v. of male urethra**, valvula fossae navicularis. **ileocecal v., ileocolic v.**, valva ileocecalis. **v. of inferior vena cava**, valvula venae cavae inferioris. **interauricular v.**, 1. limbus fossae ovalis. 2. valvula foraminis ovalis (def. 1). **Kerckring's v's**, plicae circulares. **Kohlrausch's v's**, plicae transversales recti. **Krause's v.**, Béraud's v.

lymphatic v., *valvula lymphaticum*. **v. of Macalister**, *valva ileocecalis*. **Mercier's v.**, interureteric ridge (*plica interureterica* [NA]). **mitral v.**, *valva atrioventricularis sinistra*. **Morgagni's v's**, *valvulae anales*. **v. of navicular fossa**, *valvula fossae navicularis*. **O'Beirne's v.**, see under *sphincter*. **pulmonary v.**, **pulmonary trunk v.**, **v. of pulmonary trunk**, *valva trunci pulmonalis*. **pyloric v.**, *valvula pylori*. **Rosenmüller's v.**, *plica lacrimalis*. **semilunar v.**, a valve having semilunar cusps, i.e., the aortic valve and the pulmonary valve. The term is sometimes used to designate the semilunar cusps composing these valves; see entries beginning *valvula semilunaris*. **semilunar v's of colon**, *plicae semilunares coli*. **semilunar v's of Morgagni**, *sinus anales*. **sigmoid v's of colon**, *plicae semilunares coli*. **spiral v. of cystic duct**, **spiral v. of Heister**, *plica spiralis*. **v. of Sylvius**, *valvula venae cavae inferioris*. **Taillefer's v.**, a fold of the mucous membrane of the nasolacrimal duct near the middle of its course. **Tarinus' v.**, *velum medullare inferius*. **thebesian v.**, *valvula sinus coronarii*. **tricuspid v.**, *valva atrioventricularis dextra*. **v. of Tulpus**, *valva ileocecalis*. **ureteral v.**, a congenital transverse fold across the lumen of the ureter, composed of redundant mucosa prominent by circular muscle fibers; it usually disappears in time but may rarely cause urinary obstruction. Pathological valves or kinks also occur. **v. of Varolius**, *valva ileocecalis*. **v. of veins**, *valvula venosa*. **v. of vermiform appendix**, *valvula processus vermiformis*. **v. of Vieussens**, **Willis' v.**, *velum medullare superius*.

valved (valvd) having valves; opening by valves.

valviform (val'vī-form) [L. *valva* valve + *forma* shape] shaped like a valve.

valvotome (val'vo-tōm) a surgical instrument for incising a heart valve.

valvotomy (val-vot'o-me) [L. *valva* valve + Gr. *tomē* a cutting] incision of a valve, such as a valve of the heart. **mitral v.**, dilation of the left atrioventricular (mitral) valve, the commissures being split and extended with the finger, with or without the aid of a knife or a mechanical dilator. **pulmonary v.**, transventricular closed v. **transventricular closed v.**, incision into the ventricle with a valvotome and dilation of the pulmonary valve, performed to avoid total extracorporeal circulation in young infants with pulmonary stenosis; called also *Brock's operation*.

valvula (val'vu-lah), pl. *val'vulae* [L., dim of *valva*] a small valve; once used in official nomenclature as a general term to designate a valve, such as in the heart, but in NA restricted to designation of a cusp of the aortic valve or of the valve of the pulmonary trunk, or the valves of the anus, foramen ovale, navicular fossa, coronary sinus, inferior vena cava, or of the lymphatic vessels and veins. **val'vulae anales** [NA], anal valves: archlike folds of mucous membrane connecting the caudal ends of the anal columns. **v. bispicipida/lis** [mitra/lis], *valva atrioventricularis sinistra*. **v. co/li**, *valva ileocecalis*. **val'vulae conniven'tes** [L. "closing valves"], *plicae circulares*. **v. foraminis ova/lis**, 1. [NA] valve of foramen ovale: in the adult, a crescentic ridge on the left side of the interatrial septum, representing the edge of what was the septum primum before fusion of the septum; called also *falx septi* [NA alternative]. 2. the septum primum of the fetal heart. **v. fos/sae navicular'ris** [NA], valve of navicular fossa: a fold of mucous membrane occasionally occurring in the roof of the fossa navicularis of the urethra. **v. ileocol'ica**, *valva ileocecalis*. **v. lymphat'icum** [NA], a lymphatic valve: any of the usually doubled cusps in the collecting lymphatic vessels, serving to ensure flow in only one direction. **v. mitra/lis**, *valva atrioventricularis sinistra*. **v. proces'sus vermifor'mis**, an inconstant fold of mucous membrane at the opening into the cecum of the canal of the vermiform appendix. **v. pylo'ri**, pyloric valve: a prominent circular fold of mucous membrane at the pyloric orifice of the stomach; called also *Haller's circle*. **v. semiluna'ris**, a semilunar cusp. **v. semiluna'ris ante'rior arte'riae pulmona'lis**, *v. semilunaris anterior trunci pulmonalis*. **v. semiluna'ris ante'rior trun'ci pulmona'lis** [NA], the anterior cusp of the valve of the pulmonary trunk. **val'vulae semiluna'res aor'tae**, *valva aortae*. **val'vulae semiluna'res arte'riae pulmona'lis**, *valva trunci pulmonalis*. **v. semiluna'ris dex'tra aor'tae** [NA], the right cusp of the aortic valve. **v. semiluna'ris dex'tra arte'riae pulmona'lis**, *v. semilunaris dextra trunci pulmonalis*. **v. semiluna'ris dex'tra trun'ci pulmona'lis** [NA], the right cusp of the valve of the pulmonary trunk. **v. semiluna'ris poste'rior aor'tae** [NA], the posterior cusp of the aortic valve. **v. semiluna'ris sinis'tra aor'tae** [NA], the left cusp of the aortic valve. **v. semiluna'ris sinis'tra arte'riae pulmona'lis**, *v. semilunaris sinistra trunci pulmonalis*. **v. semiluna'ris sinis'tra trun'ci pulmona'lis** [NA], the left cusp of the valve of the pulmonary trunk. **v. si'nus corona'rii** [NA], **v. si'nus corona'rii** [Thebe'sii], valve of coronary sinus: a fold of endocardium along the right margin of the opening of the coronary sinus into the right atrium of the heart. **v. spira'lis** [Heis'teri], *plica spiralis*. **v. tricus-pida/lis**, *valva atrioventricularis dextra*. **v. ve'nae ca'vae**

inferio'ris [NA], **v. ve'nae ca'vae inferio'ris** [Eusta'chii], valve of inferior vena cava: the variably-sized crescentic fold of endocardial and subendocardial tissue that is attached to the anterior margin of the opening of the inferior vena cava into the right atrium of the heart. **v. veno'sa** [NA], valve of veins: any of the small cusps or fold of the tunica intima found in many veins, serving to prevent the backflow of blood. **v. vestib'uli**, either of the two thin folds bordering the opening of the sinus reuniens into the right atrium of the embryonic heart; they develop into the valves of the inferior vena cava and coronary sinus.

valvulae (val'vu-le) [L.] plural of *valvula*.

valvular (val'vu-lar) pertaining to, affecting, or of the nature of a valve.

valvulitis (val'vu-li'tis) inflammation of a valve or valvula, especially a valve of the heart. **rheumatic v.**, involvement of a cardiac valve by the rheumatic process; endocarditis.

valvuloplasty (val'vu-lo-plas'te) plastic operation on a valve.

valvulotome (val'vu-lo-tōm) an instrument for cutting a valve.

valvulotomy (val'vu-lot'o-me) valvotomy.

valylene (val'i-lēn) a hydrocarbon, C₈H₈.

vampire (vam'pīr) a neotropical bat belonging to the genera *Desmodus*, *Diaemus*, or *Diphylla*.

vanadate (van'ah-dāt) any salt of vanadic acid.

vanadium (vah-na'de-um) [*Vanadis*, a Norse deity] a rare, gray, metallic element; symbol, V; atomic number, 23; atomic weight, 50.942. Its salts have been used in treating various diseases. See also *vanadiumism*.

vanadiumism (vah-na'de-um-izm) a chronic intoxication caused by absorption of vanadium compounds, usually via the lungs; symptoms include irritation of the respiratory tract, pneumonitis, conjunctivitis, and anemia.

van Buren's disease (van-bu'renz) [William Holme van Buren, American surgeon, 1819-1883] Peyronie's disease.

Vancocin (van'ko-sin) trademark for a preparation of vancomycin hydrochloride.

vancomycin hydrochloride (van'ko-mi'sin) [USP] an antibiotic produced by the soil bacillus *Streptomyces orientalis*, which is highly effective against cocci, especially staphylococci, and other gram-positive bacteria, occurring as a tan to brown, free-flowing powder; used in the treatment of severe staphylococcal infections resistant to other antibiotics, administered intravenously or by intravenous infusion.

van Deen's test (van dēnz) [Izaak Abramson van Deen, Dutch physician, 1804-1869] see *Deen's test*, under *tests*.

Van de Graaff machine (van de grahf) [Robert Jemison Van de Graaff, American physicist, 1901-1967] see under *machine*.

van den Bergh's disease, test (van den bergz') [A. A. Hijmans (Hymans) van den Bergh, Dutch physician, 1869-1943] see *enterogenous cyanosis*, under *cyanosis*, and see under *tests*.

van der Velden's test (van der vel'denz) [Reinhardt van der Velden, German physician, 1851-1903] *Maly's test*.

van Gehuchten's cells, method (van-ga-hook'tenz) [Arthur van Gehuchten, Belgian anatomist, 1861-1914] see *Golgi type II neurons*, under *neuron*, and see under *method*.

Vanghetti's prosthesis (vahn-get'ēz) [Giuliano Vanghetti, Italian surgeon, 1861-1940] see under *prosthesis*.

van Gieson's stain (van-ge'sonz) [Ira van Gieson, New York neuropathologist, 1865-1913] see *Table of Stains*.

van Helmont's mirror (van hel'monts) [Johannes Baptista van Helmont, Belgian physician, 1577-1644] the central tendon of the diaphragm (*centrum tendineum* [NA]).

van Hook's operation (van hooks') [Weller van Hook, Chicago surgeon, 1862-1933] ureteroureterostomy.

van Hoorne's canal (van hornz) [Jean van Hoorne, Dutch anatomist, 1621-1670] the thoracic duct (*ductus thoracicus* [NA]).

Vanilla (vah-nil'ah) [L.] a genus of climbing orchidaceous plants of hot climates. The fruit of *V. planifolia* Andr. (Orchidaceae), of Mexico, are the vanilla beans, which contain vanilla and are used as a flavor and a mild stimulant; said to be aphrodisiac.

vanilla (vah-nil'ah) [NF] the cured, full-grown, unripe fruit of *Vanilla planifolia* Andr. (Mexican or Bourbon v.) or of *V. tahitensis* Moor. (Tahiti v.), used in medicine as a flavoring agent, usually in the form of a tincture.

vanillal (vah-nil'lal) ethyl vanillin.

vanillin (van'i-lin, vah-nil'in) [NF] chemical name: 4-hydroxy-3-methoxybenzaldehyde. A constituent of vanilla and other plants, which also may be prepared synthetically, C₈H₈O₃, occurring as fine fluffy white to yellow crystals, usually needle-like; used as a flavor in pharmaceutical preparations. **ethyl v.** [NF], chemical name: 3-ethoxy-4-hydroxybenzaldehyde. Fine white or slightly yellowish crystals, C₈H₁₀O₃; used as a flavor in pharmaceutical preparations.

vanillism (vah-nil'izm) symptoms of dermatitis, coryza, and malaise seen in those handling raw vanilla and caused by the mite *Acarus siro*.

Vanogel (van'o-jel) trademark for an aqueous suspension of aluminum hydroxide gel.

Van Slyke's formula, etc. (van-sliks') [Donald Dexter *Van Slyke*, American biochemist, born 1883] see under *formula*, *method*, and *tests*.

Van Slyke-Cullen method (test) (van-slik'-kul'en) [Donald D. *Van Slyke*; Glenn Ernest *Cullen*, American biochemist, born 1890] see under *method*.

Van Slyke-Fitz method (van-slik'-fitz) [Donald D. *Van Slyke*; Reginald *Fitz*, American physician, 1885–1953] see under *method*.

van't Hoff's law, rule (vant hofs) [Jacobus Hendricus *van't Hoff*, Dutch chemist, 1852–1911; winner of the Nobel prize for chemistry in 1901] see under *law* and *rule*.

Vanzetti's sign (vahn-tset'éz) [Tito *Vanzetti*, Italian surgeon, 1809–1888] see under *sign*.

vapocauterization (va'po-kaw''ter-i-za'shun) cauterization by means of steam or other hot vapor.

vapor (va'por), pl. *vapo'res*, *va'pors* [L.] steam, gas, or exhalation.

vaporarium (va'po-rār'e-um) [L.] an establishment or apparatus for treating certain diseases by the use of vapors.

vaporium (va-po're-um) [L.] vaporarium.

vaporization (va'por-i-za'shun) 1. the conversion of a solid or liquid into a vapor without chemical change; distillation. 2. treatment by vapors.

vaporize (va'por-iz) to convert into vapor or to be transformed into vapor.

vaporizer (va'por-i'zer) a device for producing an aerosol or mist, as from a solution containing a medication to ease breathing.

vapors (va'porz) an old term for hypochondriasis or hysterical depression.

vapotherapy (va'po-ther'ah-pe) the therapeutic use of vapor, steam, or spray.

Vaquez's disease (vak-āz') [Louis Henri *Vaquez*, French physician, 1860–1936] polycythemia vera.

var. variety.

variability (var'e-ah-bil'i-te) the state of being variable.

variable (va're-ah-b'l) [L. *variare* to change] 1. changing from time to time. 2. a quantity or value subject to change; in statistics, one of the separate numerical values from which a curve of variability can be constructed.

variant (vār'e-ant) 1. something that differs in some characteristic from the class to which it belongs, as a variant of a disease, trait, species, etc. 2. exhibiting such variation. **L-phase v.**, a bacterial variant that has a defective cell wall but can multiply on hypertonic medium; called also *L-form*.

variate (va're-āt) variable.

variation (va're-a'shun) in genetics, deviation in characters in an individual from those typical of the group to which it belongs; also, deviation in characters of the offspring from those of its parents. **continuous v.**, a series of small variations. **impressed v.**, a variation which occurs in response to a particular environmental stimulus. **inborn v.**, one which arises from changes in the germ cells and not from the somatic cells. **isotypic v.**, in immunology, the variability in the structure of antigens present in all members of a single species, e.g., antigenic differences in classes of immunoglobulins. **meristic v.**, variation in the number of parts in the offspring. **quasicontinuous v.**, variation in which the underlying distribution of variability is continuous but a threshold effect makes it appear discontinuous.

varication (var'i-ka'shun) 1. the formation of a varix. 2. a varicose condition; a varicosity.

variceal (var'i-se'al) pertaining to or caused by a varix.

varicella (var'i-sel'ah) [L.] chickenpox. **v. gangrenosa**, a rare form of chickenpox in which the eruption leads to a gangrenous ulceration, occurring mainly in children with leukemia or other severe underlying disease. **v. inocula'ta**, the inoculation of children with a virus from a fresh clear vesicle of chickenpox; usually no general symptoms develop. **pustular v.**, **v. pustulo'sa**, chickenpox in which the eruption develops into furuncles. **vaccination v.**, **v. inocula'ta**.

varicellation (var'i-sel-la'shun) prophylactic inoculation with the virus of varicella.

varicelliform (var'i-sel'i-form) resembling varicella.

varicellization (var'i-sel-i-za'shun) varicellation.

varicelloid (var'i-sel'oid) [*varicella* + Gr. *eidos* form] resembling varicella.

varices (vār'i-sēz) [L.] plural of *varix*.

variciform (var-is'i-form) [*varix* + L. *forma* form] resembling a varix; varicose

varico- [L. *varix* a varicose vein] a combining form denoting relationship to a varix, or meaning twisted and swollen.

varicoblepharon (var'i-ko-blef'ah-ron) [*varico-* + Gr. *blepharon* eyelid] a varicose swelling of the eyelid.

varicocele (var'i-ko-sēl') [*varico-* + Gr. *kelē* tumor] a varicose condition of the veins of the pampiniform plexus, forming a swelling that feels like a "bag of worms," appearing bluish through the skin of the scrotum, and accompanied by a constant pulling, dragging, or dull pain in the scrotum. **ovarian v.**, **pelvic v.**, a varicose condition of the veins of the broad ligament. **utero-ovarian v.**, a varicose condition of the veins of the pampiniform plexus of the female.

varicocelelectomy (var'i-ko-sē-lek'to-me) [*varicocele* + Gr. *ektomē* excision] the excision of a part of the scrotum and the enlarged veins for varicocele.

varicography (var'i-kog'rah-fe) [*varico-* + Gr. *graphein* to write] roentgenological visualization of varicose veins.

varicoid (var'i-koid) [*varico-* + Gr. *eidos* form] resembling a varix.

varicole (var'i-kōl) varicocele.

varicomphalus (var'i-kom'fah-lus) [*varico-* + Gr. *omphalos* navel] a varicose tumor at the umbilicus.

varicophlebitis (var'i-ko-fle-bi'tis) varicose veins with inflammation.

varicose (var'i-kōs) [L. *varicosus*] of the nature of or pertaining to a varix; unnaturally and permanently distended: said of a vein; variciform.

varicosis (var'i-ko'sis) [L.] a varicose condition of the veins of any part.

varicosity (var'i-kos'i-te) 1. a varicose condition; the quality or fact of being varicose; varication. 2. a varix or varicose vein.

varicotomy (var'i-ko'to-me) [*varico-* + Gr. *tomē* a cutting] the excision of a varix or of a varicose vein.

varicula (vah-rik'u-lah) [L.] a varix of the conjunctiva.

Varidase (var'i-dās) trademark for preparations of streptokinase-streptodornase.

variety (vah-ri'ē-te) in taxonomy, a subcategory of a species.

variola (vah-ri'o-lah) [L.] smallpox. **v. capri'na**, goatpox. **v. crystal'ina**, chickenpox. **v. hemorrhag'ica**, hemorrhagic smallpox. **v. inser'ta**, smallpox acquired by inoculation. **v. ma'jor**, a severe form of smallpox, such as hemorrhagic smallpox or malignant smallpox, characterized by a case fatality rate of 25 to 40 per cent. **v. milia'ris**, smallpox with an eruption of small vesicles. **v. mi'nor**, a mild form of smallpox, caused by a virus slightly less virulent for the chick embryo than the virus causing variola major, and distinguished from the latter condition by its much lower fatality rate. **v. mitiga'ta**, **v. minor**. **v. pemphigo'sa**, smallpox with an eruption of large blebs. **v. siliquo'sa**, smallpox in which the contents of the pustules become absorbed, leaving the walls empty. **v. ve'ra**, simple and unmodified smallpox. **v. verruco'sa**, a variety of smallpox in which the eruption does not pass beyond the papular stage.

variolar (vah-ri'o-lar) pertaining to smallpox.

Variolaria amara (va're-o-la're-ah ah-ma'rah) a febrifugal and anthelmintic lichen of the Old World, which is a source of litmus.

variolate (va're-o-lāt) 1. having the nature or appearance of smallpox. 2. to inoculate with smallpox virus.

variolation (va're-o-la'shun) deliberate inoculation with the virus of unmodified smallpox to produce immunity to the naturally occurring disease. As practiced in the Orient in ancient times, the dried crusts of smallpox lesions were applied to the skin or nasal mucous membranes, or were ingested. The method employed in Europe in the eighteenth century consisted in subcutaneous injection of material from the lesions. Variolation is now used only experimentally in animals. **bovine v.**, inoculation of a calf with smallpox.

variolic (var'e-ol'ik) variolar.

varioliform (va're-o-li'form) resembling smallpox.

variolization (va're-o-li-za'shun) variolation.

varioloïd (va're-o-loïd') a modified and mild form of smallpox occurring in a patient who has had a previous attack or has been vaccinated.

varioloïus (vah-ri'o-lus) pertaining to or of the nature of smallpox.

varioloïvaccine (vah-ri'o-lo-vak'sēn) 1. pertaining to vaccine or bovine variola. 2. a virus obtained by vaccinating the heifer with the virus of smallpox.

varioloïvaccinia (vah-ri'o-lo-vak-sin'e-ah) cowpox in the heifer caused by inoculation with smallpox.

varistor (va-ris'tor) a voltage-variable resistor; a resistor, usually a semiconductor, designed to change its resistance with the voltage applied across it.

varix (vār'iks), pl. *var'ices* [L.] an enlarged and tortuous vein, artery, or lymphatic vessel. **anastomotic v.**, a varix composed of intercommunicating channels. **aneurysmal v.**, an-

eurysmoid v., a markedly dilated tortuous vessel; sometimes used to denote a form of arteriovenous aneurysm in which the blood flows directly into a neighboring vein without the intervention of a connecting sac. Called also *Pott's aneurysm*. **arterial v.**, a racemose aneurysm or varicose artery. **cirsoid v.**, racemose aneurysm. **esophageal v.**, varicosities of the branches of the azygos vein which anastomose with tributaries of the portal vein in the lower esophagus, occurring in patients with portal hypertension. **lymph v.**, **v. lymphaticus**, a soft, lobulated swelling of a lymph node, resulting from obstruction and dilatation of the lymphatic vessels. **papillary varices**, Cayenne pepper spots.

varnish (var'nish) a solution of rosin, of resin, or of several resins in a suitable solvent or solvents, applied in a thin layer to form a hard, smooth surface; sometimes used in dentistry as a protective film for the dental pulp.

varolian (vah-ro'le-an) 1. described by or named for Costanzo Varolius (Varoli, Varolio), Italian anatomist and surgeon, 1543–1575. 2. pertaining to the pons.

Varolius' bridge, valve (vah-ro'le-us) [Costanzo Varolius (Varoli, Varolio), Italian anatomist, 1543–1575] see *pons* (def. 2) and *valva ileocecalis*.

varus (va'rus) [L.] bent inward; denoting a deformity in which the angulation of the part is toward the midline of the body, as talipes varus. The term varus is an adjective and should be used only in connection with the noun it describes, as talipes varus, genu varum, coxa vara, etc. Cf. *valgus*.

vas (vas), pl. *va'sa* [L.] a vessel: any canal for carrying a fluid; [NA] a general term for such channels, especially those carrying blood, lymph, or spermatozoa. **v. aberrans**, 1. a blind tubule sometimes connected with the epididymis; it is a vestigial mesonephric tubule. 2. any anomalous or unusual vessel. **v. aberrans of Roth**, see *ductuli aberrantes*. **va'sa aberran'tis hep'atis**, numerous vessels found in the inconstant fibrous appendix and in the capsule of the liver. **v. afferens glomeruli** [NA], afferent vessel (or arteriole) of glomerulus: a branch of an interlobular artery that goes to a renal glomerulus. **va'sa afferen'tia**, vessels that convey fluid to a structure or part. **va'sa afferen'tia lymphoglan'dulae**, *vasa afferentia nodi lymphatici*. **va'sa afferen'tia no'di lymphat'ici** [NA], afferent vessels of lymph node: lymphatic vessels that carry lymph to a lymph node, entering through the capsule. **v. anastomot'icum** [NA], anastomotic vessel: a vessel that serves to interconnect other vessels; such communications are present in the palm of the hand, sole of the foot, base of the brain, and other regions. **va'sa au'ris inter'nae** [NA], vessels of the internal ear. **va'sa bre'via**, arteriae gastricae breves. **v. capilla're** [NA], a capillary: any of the minute vessels connecting the arterioles and the venules, forming networks found in nearly all parts of the body. Their walls act as semipermeable membranes for the interchange of various substances between the blood and tissue fluid. See also *continuous capillaries* and *fenestrated capillaries*, under *capillary*. **v. collatera'le** [NA], collateral vessel: a vessel that parallels another vessel, nerve, or other structure. **v. deferens**, ductus deferens. **v. efferens glomeruli** [NA], efferent vessel (or arteriole) of glomerulus: an arteriole that arises from a renal glomerulus, breaking up into capillaries to supply renal tubules. **va'sa efferen'tia**, efferent vessels: vessels that convey fluid away from a structure or part; see *vasa efferentia nodi lymphatici* and *ductuli efferentes testis*. **va'sa efferen'tia lymphoglan'dulae**, *vasa efferentia nodi lymphatici*. **va'sa efferen'tia no'di lymphat'ici** [NA], efferent vessels of lymph node: lymphatic vessels that carry lymph away from a lymph node, emerging at the hilus. **v. epididym'idis**, ductus epididymidis. **va'sa intesti'ni ten'uis**, arteriae intestinales. **v. lymphat'icum** [NA], a vessel that conveys lymph; pl. *va'sa lymphat'ica* [NA], lymphatic vessels: the capillaries, collecting vessels, and trunks which collect lymph from the tissues and through which the lymph passes to reach the blood stream. **va'sa lymphat'ica profun'da** [NA], deep lymphatic vessels: lymphatic vessels that accompany the deeply placed blood vessels. **va'sa lymphat'ica superficia'lia** [NA], superficial lymphatic vessels: lymphatic vessels located under the skin and superficial fascia, in the submucous areolar tissue of the digestive, respiratory, and genitourinary tracts, and in the subserous tissue of the walls of the abdomen and thorax. **va'sa nervo'rum**, blood vessels supplying the nerves. **va'sa nutri'tia**, see *vasa vasorum*. **va'sa prae'via**, presentation, in front of the fetal head during labor, of the blood vessels of the umbilical cord where they enter the placenta. **v. prom'inens duc'tus cochlea'ris** [NA], a small vessel often seen deep to the spiral prominence in the cochlear duct. **va'sa pro'pria of Jungbluth**, vessels situated beneath the amnion of the early embryo. **va'sa rec'ta** [L. "straight vessels"], arteriolae rectae renis. **va'sa sanguin'ea integumen'ti commu'nis**, the blood vessels of the skin, or common integument. **va'sa sanguin'ea ret'inae** [NA], the blood vessels of the retina, including all the arterioles, derived from the central artery of the retina, and the venules, which return blood to the central vein. **v. spira'le** [NA], a prominent vessel in the basilar membrane near the osseous spiral

lamina. **va'sa vaso'rum** [NA], the small nutrient arteries and the veins in the walls of the larger blood vessels. **va'sa vortico'sa**, venae vorticosae.

vasa (va'sah) [L.] plural of *vas*.

Vasal (vas'al) trademark for a preparation of papaverine hydrochloride.

vasal (va'sal) pertaining to a vas or to a vessel.

vasalgia (vah-sal'je-ah) pain in vessels.

vasalium (vah-sa'le-um) true vascular tissue, such as is found in closed or vascular organs.

vascular (vas'ku-lar) pertaining to blood vessels or indicative of a copious blood supply.

vascularity (vas'ku-lar'i-te) the condition of being vascular.

vascularization (vas'ku-lar-i-za'shun) the process of becoming vascular, or the natural or surgically induced development of vessels in a tissue.

vascularize (vas'ku-lar'iz) to supply with vessels.

vasculature (vas'ku-lah-tūr) the vascular system of the body or any part of it.

vasculitic (vas'ku-lit'ik) pertaining to vasculitis.

vasculitis (vas'ku-li'tis) [L. *vasculum* vessel + *-itis*] inflammation of a vessel; angitis. **allergic cutaneous v.**, see under *angitis*. **livedo v.**, segmented hyalinizing v. **necrotizing v.**, polyarteritis. **nodular v.**, allergic cutaneous angitis. **segmented hyalinizing v.**, chronic relapsing vasculitis of the lower legs, the lesions being nodular or purpuric, or both, at the onset and later becoming superficially ulcerated, resulting in scars; histologically, endothelial proliferations, hyaline degeneration, and thrombosis are seen in the mid and lower dermis. It usually affects middle-aged persons with circulatory difficulties. Called also *livedo v.*

vasculogenesis (vas'ku-lo-jen'ē-sis) [L. *vasculum* vessel + Gr. *genesis* production] the development of the vascular system.

vasculogenic (vas'ku-lo-jen'ik) inducing vascularization.

vasculolymphatic (vas'ku-lo-lim-fat'ik) pertaining to blood or lymph vessels.

vasculomotor (vas'ku-lo-mo'tor) vasomotor.

vasculopathy (vas'ku-lo-pah-the) any disorder of blood vessels.

vasculotoxic (vas'ku-lo-tox'ik) pertaining to or characterized by a deleterious or toxic effect on the vessels of the body.

vasculum (vas'ku-lum), pl. *vas'cula* [L., dim. of *vas*] a small vessel. **v. aberrans**, *vas aberrans*.

vasectomized (vas-ek'to-mizd) deprived of the ductus deferens (*vasa deferentia*) by surgical means.

vasectomy (vah-sek'to-me) [*vas* + Gr. *ektomē* excision] surgical removal of the ductus (*vas*) deferens, or of a portion of it; done in association with prostatectomy, or to induce infertility. **cross-over v.**, vasectomy in which the right and the left vas deferens are transected, the lower portion of each (the portions still attached to the epididymis) then being tied together. The technique prevents recanalization while allowing surgical reconstruction.

vasifactive (vas'i-fak'tiv) [*vas* + L. *facere* to make] vasoformative.

vasiform (vas'i-form) [*vas* + L. *forma* form] having the appearance of a vessel.

vasitis (vah-si'tis) inflammation of the ductus (*vas*) deferens.

vaso- (vas'o) [L. *vas* vessel] a combining form denoting relationship to a vessel or to a duct.

vasoactive (vas'o-ak'tiv) exerting an effect upon the caliber of blood vessels.

vasoconstriction (vas'o-kon-strik'shun) the diminution of the caliber of vessels, especially constriction of arterioles leading to decreased blood flow to a part.

vasoconstrictive (vas'o-kon-strik'tiv) pertaining to, characterized by, or producing vasoconstriction.

vasoconstrictor (vas'o-kon-strik'tor) 1. causing constriction of the blood vessels. 2. an agent (motor nerve or chemical compound) that causes constriction of the blood vessels.

vasocorona (vas'o-ko-ro'nah) [*vaso-* + L. *corona* crown] the arterial vessels which pass radially from the spinal cord to its periphery.

vasodentin (vas'o-den'tin) [*vaso-* + L. *dens* tooth] dentin provided with blood vessels, as in the teeth of some fishes.

vasodepression (vas'o-de-presh'un) decrease in vascular resistance with hypotension.

vasodepressor (vas'o-de-pres'sor) 1. having the effect of lowering the blood pressure through reduction in peripheral resistance. 2. an agent that causes vasodepression.

Vasodilan (vas'o-di-lan) trademark for preparations of isoxsuprine hydrochloride.

vasodilatation (vas'o-di-lah-ta'shun) a state of increased caliber of the blood vessels.

vasodilatin (vas'o-di-la'tin) (*obs.*) a substance obtained from

- tissue extracts, causing vasodilation and stimulating gastric secretion; possibly identical with *histamine*.
- vasodilation** (vas/o-di-lā'shun) dilation of a vessel, especially dilation of arterioles leading to increased blood flow to a part.
- reflex v.**, vasodilation occurring as a reflex response to stimuli applied elsewhere, or subsequent to an initial vasoconstrictive response.
- vasodilative** (vas/o-di-lā-tiv) pertaining to, characterized by, or producing vasodilation.
- vasodilator** (vas/o-di-lāt'or) 1. causing dilation of the blood vessels. 2. an agent (motor nerve or chemical compound) that causes dilation of the blood vessels.
- vasoepididymography** (vas/o-ep/i-did'i-mog'rah-fe) radiography of the vas deferens and epididymis after injection of a contrast medium.
- vasoepididymostomy** (vas/o-ep/i-did-i-mos'to-me) operative formation of a communication between the ductus (vas) deferens and the epididymis.
- vasofactive** (vas/o-fak'tiv) vasoformative.
- vasoformative** (vas/o-for'mah-tiv) pertaining to or promoting the formation of blood vessels.
- vasoganglion** (vas/o-gang'gle-on) any vascular ganglion or rete.
- vasography** (vah-sog'rah-fe) [*vaso-* + Gr. *graphein* to write] roentgenography of the blood vessels.
- vasohypertonic** (vas/o-hi'per-ton'ik) vasoconstrictor.
- vasohypotonic** (vas/o-hi'po-ton'ik) vasodilator.
- vasoinert** (vas/o-in-ert') exerting no effect on the caliber of blood vessels.
- vasoinhibitor** (vas/o-in-hib'i-tor) an agent that inhibits the action of the vasomotor nerves.
- vasoinhibitory** (vas/o-in-hib'i-tor-e) hindering the action of the vasomotor nerves.
- vasoligation** (vas/o-li-ga'shun) ligation of the ductus (vas) deferens.
- vasoligature** (vas/o-lig'ah-tūr) vasoligation.
- vasomotion** (vas/o-mo'shun) [*vaso-* + L. *motio* movement] change in the caliber of a vessel, especially of a blood vessel.
- vasomotor** (vas/o-mo'tor) [*vaso-* + L. *motor* mover] 1. affecting the caliber of a vessel, especially of a blood vessel. 2. any element or agent that affects the caliber of a blood vessel.
- vasomotorial** (vas/o-mo-to're-al) 1. pertaining to the vasomotorium. 2. pertaining to the change in caliber of a blood vessel.
- vasomotoricity** (vas/o-mo-tor-is'i-te) the power of producing change in the caliber of blood vessels.
- vasomotorium** (vas/o-mo-to're-um) the vasomotor system of the body, i.e., the part of the nervous system that controls the caliber of blood vessels.
- vasomotory** (vas/o-mo'tor-e) affecting the caliber of a vessel, especially a blood vessel.
- vasoneuropathy** (vas/o-nu-rop'ah-the) a combined vascular and neurologic defect, the lesions being caused by simultaneous action of both the vascular and the nervous system, or by the interaction of the two systems.
- vasoneurosis** (vas/o-nu-ro'sis) angioneuropathy.
- vaso-orchidostomy** (vas/o-or'kid-os'to-me) the operation of suturing tubules of the epididymis to the ductus (vas) deferens.
- vasoparesis** (vas/o-pah-re'sis) [*vaso-* + Gr. *paresis* relaxation] partial paralysis of vasomotor nerves.
- vasopermeability** (vas/o-per'me-ah-bil'i-te) the permeability of a blood vessel; the extent to which a blood vessel is permeable.
- vasopressin** (vas/o-pres'in) 1. one of two octapeptide hormones formed by the neuronal cells of the hypothalamic nuclei and stored in the posterior lobe of the pituitary gland (neurohypophysis), the other being oxytocin. It stimulates the contraction of the muscular tissue of the capillaries and arterioles, raising the blood pressure. It stimulates contraction of the intestinal musculature and increases peristalsis, and also exerts some influence on the uterus. It also has a specific effect on the epithelial cells of the distal portion of the uriniferous tubule, stimulating resorption of water independently of solutes, resulting in concentration of urine. Its rate of secretion is regulated chiefly by the osmolarity of the plasma. 2. [USP], a pharmaceutical preparation of the same principle, prepared synthetically or obtained from the posterior pituitary of healthy domestic animals used for food by man; used mainly as an antidiuretic in the treatment of acute or chronic diabetes insipidus, administered intramuscularly or subcutaneously or by nasal inhalation or topical application to the nasal mucosa. It is also administered intramuscularly as a test of renal function, and may be used to stimulate smooth muscle tissue, especially to induce vasoconstriction in the presence of hemorrhage. Called also *antidiuretic hormone (ADH)* and *beta-hypophamine*.
- vasopressor** (vas/o-pres'or) 1. stimulating contraction of the muscular tissue of the capillaries and arteries. 2. an agent that stimulates contraction of the muscular tissue of the capillaries and arteries.
- vasopuncture** (vas/o-punk'tūr) puncture of the ductus (vas) deferens.
- vasoreflex** (vas/o-re'flex) a reflex of a blood vessel.
- vasorelaxation** (vas/o-re-lak-sa'shun) decrease of vascular pressure.
- vasoresection** (vas/o-re-sek'shun) resection of the ductus (vas) deferens.
- vasorrhaphy** (vas-or'ah-fe) suture of the ductus (vas) deferens.
- vasosection** (vas/o-sek'shun) [*vaso-* + L. *sectio* a cutting] the severing of a vessel or vessels, especially of the ductus deferens (vasa deferentia).
- vasosensory** (vas/o-sen'so-re) supplying sensory filaments to the vessels.
- vasospasm** (vas/o-spazm) spasm of the blood vessels, resulting in decrease in their caliber.
- vasospasmolytic** (vas/o-spaz'mo-lit'ik) arresting spasm of the vessels.
- vasospastic** (vas/o-spas'tik) producing or affected by vasospasm.
- vasostimulant** (vas/o-stim'u-lant) stimulating or arousing vasomotor action.
- vasostomy** (vah-sos'to-me) [*vas* deferens + Gr. *stomoun* to provide with an opening, or mouth] the operation of forming an opening into the ductus (vas) deferens.
- vasotocin** (vas/o-to'sin) a nonapeptide hormone having the properties of both vasopressin and oxytocin, occurring in birds, amphibians, and fishes.
- vasotomy** (vah-sot'o-me) [*vaso-* + Gr. *tomē* a cutting] incision into or cutting of the ductus (vas) deferens; called also *Belfield's operation*.
- vasotonia** (vas/o-to'ne-ah) [*vaso-* + Gr. *tonos* tone + *-ia*] tone or tension of the vessels; called also *angiotonia*.
- vasotonic** (vas/o-ton'ic) pertaining to, characterized by, or promoting vasotonia.
- vasotribe** (vas/o-trib) angiotribe.
- vasotripsy** (vas/o-trip'se) angiotripsy.
- vasotrophic** (vas/o-trof'ik) [*vaso-* + Gr. *trophē* nutrition] affecting nutrition through the alteration of the caliber of the blood vessels.
- vasotropic** (vas/o-trop'ik) tending to act on blood vessels.
- vasovagal** (vas/o-va'gal) vascular and vagal; see *vasovagal attack*, under *attack*.
- vasovasostomy** (vas/o-vah-sos'to-me) anastomosis of the ends of the severed ductus (vas) deferens; done to restore fertility in vasectomized males.
- vasovesiculectomy** (vas/o-ve-sik'u-lek'to-me) excision of the ductus (vas) deferens and seminal vesicles.
- vasovesiculitis** (vas/o-ve-sik'u-li'tis) inflammation of the ductus deferens (vasa deferentia) and seminal vesicles.
- Vasoxyl** (vas-ok'sil) trademark for preparations of methoxamine hydrochloride.
- vastus** (vas'tus) [L.] great or vast; description of muscles, as *musculus vastus lateralis*.
- VATER** an acronym for vertebral defects, imperforate anus, tracheoesophageal fistula, and radial and renal dysplasia, which together form a nonrandom association of congenital defects.
- Vater's ampulla, corpuscles, papilla** (fah'terz) [Abraham Vater, German anatomist, 1684–1751] see *ampulla hepatopancreatica*, *corpuscula lamellosa*, and *papilla duodeni major*.
- Vater-Pacini corpuscles** (fah'ter-pa-se'ne) [Abraham Vater; Filippo Pacini, Italian anatomist, 1812–1883] *corpuscula lamellosa*.
- Vateria** (vah-te're-ah) [named for A. Vater] a genus of Asian trees of the family Dipterocarpaceae. **V. indica** L., an East Indian tree which affords Indian copal, piny varnish, white dammar, or Indian anime; used as a varnish, candle-stuff, and medicine.
- Vaughan-Novy's test** [Victor Clarence Vaughan, American pathologist, 1851–1929; Frederick George Novy, American bacteriologist, 1864–1957] see under *tests*.
- vault** (vawlt) a domelike or archlike structure. In dentistry, the longest palatal border obtainable through a coronal section of the maxilla; the shape of the palatal arch posteriorly. **v. of pharynx**, fornix pharyngis.
- VC** vital capacity.
- VCG** vectorcardiogram.
- V-Cillin** (ve-sil'in) trademark for preparations of penicillin V.
- V.D.** venereal disease.
- VDEL** Venereal Disease Experimental Laboratory.
- V.D.G.** venereal disease—gonorrhea.
- V.D.H.** valvular disease of the heart.
- VDRL** Venereal Disease Research Laboratories; see also under *antigen* and *test*.
- V.D.S.** venereal disease—syphilis.

vecordia (ve-kor'de-ah) [L. *vecors* without reason] an old term for a concept of partial insanity. Cf. *vesania*.

vection (vek'shun) [L. *vectio* a carrying] the carrying of disease germs from an infected person to a well person. It is *circumferential*, *indirect*, or *mediate* when pathogens are carried by an intermediate host; *direct*, *immediate*, and *radial* when transferred directly from one person to another.

vectis (vek'tis) [L. from *vehere* to carry] a curved lever for making traction upon the fetal head in labor.

vector (vek'tor) [L. "one who carries," from *vehere* to carry] 1. a carrier, especially the animal (usually an arthropod) which transfers an infective agent from one host to another. 2. a quantity possessing magnitude, direction, and sense (positivity or negativity), and commonly represented by a straight line resembling an arrow: the length of the line denotes magnitude, the arrowhead denotes sense, and the position of the line with respect to an axis of reference denotes direction. **biological v.**, an arthropod vector in whose body the infecting organism develops or multiplies before becoming infective to the recipient individual. **mechanical v.**, an arthropod vector which transmits an infective organism from one host to another but which is not essential to the life cycle of the parasite. **spatial v.**, one representing a three-dimensional force; see *vectorcardiography*.

vectorcardiogram (vek'tor-kar'de-o-gram) the record, usually a photograph, of the loop formed on the oscilloscope in vectorcardiography, the inscribed loop representing the ends of the instantaneous vectors.

vectorcardiograph (vek'tor-kar'de-o-graf) the instrument used in vectorcardiography.

vectorcardiography (vek'tor-kar'de-o-graf-ee) the registration, usually by formation of a loop display on an oscilloscope, of the direction and magnitude (vector) of the moment-to-moment electromotive forces of the heart during one complete cycle, as transmitted by electrocardiographic leads. **spatial v.**, that in which the potential vectors of cardiac excitation are projected upon three mutually perpendicular coordinates, which are usually designated X, Y, and Z, where X is the transverse (right or left), Y the vertical (up or down), and Z the sagittal (anterior or posterior).

vectorial (vek-to're-al) pertaining to a vector.

vectorscope (vek'tor-sköp) a device utilized in viewing vectorcardiograms.

Vectrin (vek'trin) trademark for preparations of minocycline hydrochloride.

Vedder's culture medium (agar), sign (ved'erz) [Col. Edward Bright Vedder, U.S. Army Surgeon, retired, 1878-1952] see under *culture medium*, and see under *sign*.

VEE Venezuelan equine encephalomyelitis.

Veetids (ve'tidz) trademark for a preparation of penicillin V potassium.

vegan (vej'an) an extreme vegetarian who excludes all animal protein from his diet.

veganism (vej'ah-nizm) strict limitation to a vegetable diet, with exclusion of all protein of animal origin.

vegetable (vej'e-tah-b'l) [L. *vegetabilis* quickening] 1. pertaining to or derived from plants. 2. any plant or species of plant, especially one cultivated as a source of food.

vegetal (vej'e-tal) 1. pertaining to plants or to a plant. 2. vegetative.

vegetality (vej'e-tal'i-te) the aggregate of phenomena that are common to plants.

vegetarian (vej'e-tär'e-an) one whose food is exclusively of vegetable origin.

vegetarianism (vej'e-tär'e-ah-nizm) restriction of the diet to food substances of vegetable origin.

vegetation (vej'e-ta'shun) [L. *vegetatio*] any plantlike fungoid neoplasm or growth; a luxuriant fungus-like growth of pathologic tissue. **adenoid v.**, fungus-like growths of lymphoid tissue in the nasopharynx. **bacterial v's**, irregular excrescences on the cardiac valves or endocardium formed by bacteria. **dendritic v.**, 1. the shaggy appearance of a villous cancer. 2. the arachnoid tufts and villous neoplasms on the pleura and other serous membranes. **verrucous v's**, small irregular excrescences on the cardiac valves.

vegetative (vej'e-ta'tiv) 1. concerned with growth and with nutrition. 2. functioning involuntarily or unconsciously, as the vegetative nervous system; see under *system*. 3. resting; denoting the portion of a cell cycle during which the cell is not involved in replication. 4. of, pertaining to, or characteristic of plants. 5. of or pertaining to asexual reproduction, as by budding or fission.

vegetoanimal (vej'e-to-an'i-mal) common to plants and animals.

vehicle (ve'i-k'l) [L. *vehiculum*] 1. an excipient. 2. any medium through which an impulse is propagated.

veil (vāl) 1. a covering structure; see *velum*. 2. a caul or piece of the amniotic sac occasionally covering the face of a newborn child. 3. a slight huskiness in the voice of a singer. **Fick's v.**, see under *phenomenon*. **Hottentot v.**, see under *apron*. **Jackson's v.**, see under *membrane*. **posterior v. of soft palate**, palatum molle. **Sattler's v.**, see *Fick's phenomenon*.

Veillon tube (va-yaw') [Adrien Veillon, Paris bacteriologist, 1864-1931] see under *tube*.

Veillonella (va'yon-el'ah) [Adrien Veillon] a genus of microorganisms of the family Neisseriaceae, order Eubacteriales, made up of minute (0.3-0.4 μ) obligate anaerobic cocci, found as nonpathogenic parasites in the mouth, intestines, and urogenital and respiratory tracts of man and other animals. Six species have been named, *V. alcales'cens*, *V. discoi'des*, *V. orbic'ulus*, *V. par'vula*, *V. reni'formis*, and *V. vulvovaginit'idis*.

vein (vân) [L. *vena*] a vessel through which blood passes from various organs or parts back to the heart. Called also *vena* [NA]. All veins except the pulmonary veins carry blood low in oxygen. Veins, like arteries, have three coats, an *inner*, *middle*, and *outer*, but the coats are not so thick, and they collapse when the vessel is cut. Many veins have *valves* formed of reduplications of their lining membrane, which prevent the backward flow of blood away from the heart. See Plates accompanying the *Table of Venae*, under *vena*. **accompanying v.**, *vena comitans*. **accom-**

The three coats of a vein.

panying v. of hypoglossal nerve, *vena comitans nervi hypoglossi*. **adrenal v's**, *venae suprarenales*. **afferent v's**, veins that carry blood to an organ. **allantoic v's**, paired vessels that accompany the allantois, growing out from the primitive hindgut and entering the body stalk of the early embryo; they fuse later into one vessel, the umbilical vein. **anastomotic v., inferior**, *vena anastomotica inferior*. **anastomotic v., superior**, *vena anastomotica superior*. **angular v.**, *vena angularis*. **anonymous v's**, *venae brachiocephalicae* [dextra et sinistra]. **antebrachial v., median**, *vena mediana antebrachii*. **appendicular v.**, *vena appendicularis*. **v. of aqueduct of vestibule**, *vena aqueductus vestibuli*. **aqueous v's**, microscopic, blood vessel-like pathways on the surface of the eye, containing aqueous humor or diluted blood and connecting the sinus venosus sclerae (Schlemm's canal) with conjunctival or subconjunctival veins. Called also *Ascher's v's*. **arciform v's**, *venae arcuatae renis*. **arterial v.**, *truncus pulmonalis*. **arterial v. of Soemmering**, *vena portae*. **ascending v's of Rosenthal**, *venae cerebri inferiores*. **Ascher's v's**, aqueous v's. **auditory v's**, internal, *venae labyrinthi*. **auricular v's**, anterior, *venae auriculares anteriores*. **auricular v., posterior**, *vena auricularis posterior*. **axillary v.**, *vena axillaris*. **azygos v.**, *vena azygos*. **azygos v., left**, *vena hemiazygos*. **azygos v., lesser superior**, *vena hemiazygos accessoria*. **basal v.**, *vena basalis*. **basilic v.**, *vena basilica*. **basilic v., median**, *vena mediana basilica*. **basivertebral v's**, *venae basivertebrales*. **brachial v's**, *venae brachiales*. **brachiocephalic v's**, *venae brachiocephalicae* [dextra et sinistra]. **Breschet's v's**, *venae diploicae*. **bronchial v's**, *venae bronchiales*. **Browning's v.**, the upper portion of the inferior anastomotic vein. **v. of bulb of penis**, *vena bulbi penis*. **v. of bulb of vestibule**, *vena bulbi vestibuli*. **Burow's v.**, a vessel formed by the two inferior epigastric veins and a branch from the bladder; it joins the portal vein. **v. of canaliculus of cochlea**, *vena canaliculi cochleae*. **cardiac v's**, *venae cordis*. **cardiac v's**, anterior, *venae cordis anteriores*. **cardiac v., great**, *vena cordis magna*. **cardiac v., middle**, *vena cordis media*.

VEINS OF THE HEAD AND NECK

(Modified from Jones and Shepard)

SUPERFICIAL VEINS OF THE EXTREMITIES

cardiac v., small, vena cordis parva. **cardiac v's, small-est**, venae cordis minimae. **cardinal v's**, embryonic vessels that include the precardinal and postcardinal veins and the ducts of Cuvier (common cardinal veins). **carotid v., external**, vena retromandibularis. **cavernous v's of penis**, venae cavernosae penis. **central v.**, a vein that occupies the axis of an organ. **central v's of hepatic lobules**, central v's of liver, venae centrales hepatis. **central v. of retina**, vena centralis retinae. **central v. of suprarenal gland**, vena centralis glandulae suprarenalis. **cephalic v.**, vena cephalica. **cephalic v., accessory**, vena cephalica accessoria. **cephalic v., median**, vena mediana cephalica. **cerebellar v's, inferior**, venae cerebelli inferiores. **cerebellar v's, superior**, venae cerebelli superiores. **cerebral v's**, venae cerebri. **cerebral v., anterior**, vena cerebri anterior. **cerebral v., great**, vena cerebri magna. **cerebral v's, inferior**, venae cerebri inferiores. **cerebral v's, internal**, venae cerebri internae. **cerebral v., middle, deep**, vena cerebri media profunda. **cerebral v., middle, superficial**, vena cerebri media superficialis. **cerebral v's, superior**, venae cerebri superiores. **cervical v., deep**, vena cervicalis profunda. **cervical v's, transverse**, venae transversae colli. **choroid v.**, vena choroidea. **ciliary v's**, venae ciliares. **circumflex femoral v's, lateral**, venae circumflexae femoris laterales. **circumflex femoral v's, medial**, venae circumflexae femoris mediales. **circumflex iliac v., deep**, vena circumflexa ilium profunda. **circumflex iliac v., superficial**, vena circumflexa ilium superficialis. **v. of cochlear canal**, vena canaliculi cochleae. **colic v., left**, vena colica sinistra. **colic v., middle**, vena colica media. **colic v., right**, vena colica dextra. **conjunctival v's**, venae conjunctivales. **coronary v., left**, vena cordis magna. **costoaxillary v's**, venae costoaxillares. **cubital v., median**, vena mediana cubiti. **cutaneous v.**, vena cutanea. **cutaneous v., ulnar**, vena basilica. **cystic v.**, vena cystica. **deep v's of clitoris**, venae profundae clitoridis. **deep v's of penis**, venae profundae penis. **deep v. of thigh**, vena profunda femoris. **deep v. of tongue**, vena profunda linguae. **digital v's, palmar**, venae digitales palmares. **digital v's, plantar**, venae digitales plantares. **digital v's of foot, common**, venae digitales communes pedis. **digital v's of foot, dorsal**, venae digitales dorsales pedis. **diploic v's**, venae diploicae. **diploic v., frontal**, vena diploica frontalis. **diploic v., occipital**, vena diploica occipitalis. **diploic v., temporal, anterior**, vena diploica temporalis anterior. **diploic v., temporal, posterior**, vena diploica temporalis posterior. **dorsal v. of clitoris, deep**, vena dorsalis clitoridis. **dorsal v's of clitoris, superficial**, venae dorsales clitoridis superficiales. **dorsal v. of penis, deep**, vena dorsalis penis. **dorsal v's of penis, superficial**, venae dorsales penis superficiales. **dorsal v's of tongue**, venae dorsales linguae. **dorsispinal v's**, see *plexus venosi vertebrales externi* [anterior et posterior]. **duodenal v's**, venae duodenales. **emissary v.**, one passing through a foramen of the skull and draining blood from a cerebral sinus into a vessel outside the skull; called also *vena emissaria* [NA]. **emissary v., condylar**, vena emissaria condylaris. **emissary v., mastoid**, vena emissaria mastoidea. **emissary v., occipital**, vena emissaria occipitalis. **emissary v., parietal**, vena emissaria parietalis. **emulgent v.**, the portion of the left spermatic vein near its termination in the left renal vein. **epigastric v., inferior**, vena epigastrica inferior. **epigastric v., superficial**, vena epigastrica superficialis. **epigastric v's, superior**, venae epigastricae superiores. **episclearal v's**, venae episclerales. **esophageal v's**, venae esophageae. **ethmoidal v's**, venae ethmoidales. **facial v., vena facialis**. **facial v., anterior**, vena faciei profunda. **facial v., posterior**, vena retromandibularis. **facial v., transverse**, vena transversa faciei. **femoral v.**, vena femoralis. **femoral v., deep**, vena profunda femoris. **femoropopliteal v.**, vena femoropoplitea. **fibular v's**, venae peroneae. **frontal v's**, venae supratrochleares. **Galen's v's**, 1. vena cerebri interna. 2. vena cerebri magna. **gastric v., left**, vena gastrica sinistra. **gastric v., right**, vena gastrica dextra. **gastric v's, short**, venae gastricae breves. **gastroepiploic v., left**, vena gastroepiploica sinistra. **gastroepiploic v., right**, vena gastroepiploica dextra. **genicular v's**, venae genus. **gluteal v's, inferior**, venae gluteae inferiores. **gluteal v's, superior**, venae gluteae superiores. **hemiazgygos v.**, vena hemiazgygos. **hemiazgygos v., accessory**, vena hemiazgygos accessoria. **hemorrhoidal v's, inferior**, venae rectales inferiores. **hemorrhoidal v's, middle**, venae rectales mediae. **hemorrhoidal v., superior**, vena rectalis superior. **hepatic v's**, venae hepaticae. **hypogastric v.**, vena iliaca interna. **hypophyseoportal v's**, a system of venules connecting capillaries in the hypothalamus with sinusoidal capillaries in the anterior lobe of the hypophysis. **ileal v's**, veins draining blood from the ileum; see *venae jejunaes et ilei*. **ileocolic v.**, vena ileocolica. **iliac v., common**, vena iliaca communis. **iliac v., external**, vena iliaca externa. **iliac v., internal**, vena iliaca interna. **iliolumbar v.**, vena iliolumbalis. **innomi-**

nate v's, venae brachiocephalicae [dextra et sinistra]. **intercapital v's**, venae intercapitales. **intercapitular v's of foot**, venae intercapitulares pedis. **intercapitular v's of hand**, venae intercapitales. **intercostal v's, anterior**, venae intercostales anteriores. **intercostal v., highest**, vena intercostalis suprema. **intercostal v's, posterior, IV-XI**, venae intercostales posteriores [IV-XI]. **intercostal v., superior, left**, vena intercostalis superior sinistra. **intercostal v., superior, right**, vena intercostalis superior dextra. **interlobar v's of kidney**, venae interlobares renis. **interlobular v's of liver**, venae interlobulares hepatis. **interosseous v's of foot, dorsal**, venae metatarsae dorsales. **interosseous metacarpal v's, dorsal**, venae metacarpeae dorsales. **intervertebral v.**, vena intervertebralis. **jejunal v's**, veins that drain blood from the jejunum; see *venae jejunaes et ilei*. **jugular v., anterior**, vena jugularis anterior. **jugular v., anterior horizontal**, arcus venosus juguli. **jugular v., external**, vena jugularis externa. **jugular v., internal**, vena jugularis interna. **v's of kidney**, venae renis. **Kohlrusch v's**, superficial veins passing from the under surface of the penis to the dorsal vein. **Krukenberg's v's**, venae centrales hepatis. **Kuhnt's postcentral v.**, a vein branching from the vena centralis retina, extending posteriorly from the center of the optic nerve, and draining into the canalis opticus. **Labbe's v.**, vena anastomotica inferior. **labial v's, anterior**, venae labiales anteriores. **labial v's, inferior**, venae labiales inferiores. **labial v's, posterior**, venae labiales posteriores. **labial v., superior**, vena labialis superior. **v's of labyrinth**, venae labyrinthi. **lacrimal v.**, vena lacrimalis. **laryngeal v., inferior**, vena laryngea inferior. **laryngeal v., superior**, vena laryngea superior. **lingual v.**, vena lingualis. **lingual v., deep**, vena profunda linguae. **lingual v's, dorsal**, venae dorsales linguae. **lumbar v's I and II**, venae lumbales [I et II]. **lumbar v's III and IV**, venae lumbales [III et IV]. **lumbar v., ascending**, vena lumbalis ascendens. **mammary v's, external**, venae costoaxillares. **mammary v., internal**, see *venae thoracicae internae*. **v. of Marshall, Marshall's oblique v.**, vena obliqua atrii sinistri. **masseteric v's**, venae massetericae. **maxillary v's**, venae maxillares. **median v. of elbow**, vena mediana cubiti. **median v. of forearm**, vena mediana antebrachii. **median v. of neck**, vena mediana colli. **mediastinal v's**, venae mediastinales. **meningeal v's**, venae meningae. **meningeal v's, middle**, venae meningae mediae. **mesenteric v., inferior**, vena mesenterica inferior. **mesenteric v., superior**, vena mesenterica superior. **metacarpal v's, dorsal**, venae metacarpeae dorsales. **metacarpal v's, palmar**, venae metacarpeae palmares. **metatarsal v's, dorsal**, venae metatarsae dorsales. **metatarsal v's, plantar**, venae metatarsae plantares. **muscular v's**, venae musculares. **musculophrenic v's**, venae musculophrenicae. **nasal v's, external**, venae nasales externae. **nasofrontal v.**, vena nasofrontalis. **oblique v. of left atrium**, vena obliqua atrii sinistri. **obturator v's**, venae obturatoriae. **occipital v.**, vena occipitalis. **oesophageal v's**, venae esophageae. **omphalomesenteric v's**, vitelline v's. **ophthalmic v., inferior**, vena ophthalmica inferior. **ophthalmic v., superior**, vena ophthalmica superior. **ophthalmomeningeal v.**, vena ophthalmomeningea. **ovarian v., left**, vena ovarica sinistra. **ovarian v., right**, vena ovarica dextra. **palatine v., external**, vena palatina externa. **palpebral v's**, venae palpebrales. **palpebral v's, inferior**, venae palpebrales inferiores. **palpebral v's, superior**, venae palpebrales superiores. **pancreatic v's**, venae pancreaticae. **pancreaticoduodenal v's**, venae pancreaticoduodenales. **paraumbilical v's**, venae paraumbilicales. **parietal v. of Santorini**, vena emissaria parietalis. **parotid v's**, venae parotideae. **parotid v's, anterior**, rami parotidei venae facialis. **parotid v's, posterior**, venae parotideae. **paraumbilical v's**, venae paraumbilicales. **perforating v's**, venae perforantes. **pericardiac v's**, venae pericardiacae. **pericardiacophrenic v's**, venae pericardiacophrenicae. **peroneal v's**, venae peroneae. **pharyngeal v's**, venae pharyngeae. **phrenic v's, inferior**, venae phrenicae inferiores. **phrenic v's, superior**, venae pericardiacophrenicae. **popliteal v.**, vena poplitea. **portal v.**, vena portae. **postcardinal v's**, paired vessels in the embryo caudal to the heart. **posterior v. of left ventricle**, vena posterior ventriculi sinistri cordis. **precordial v's**, paired venous trunks in the embryo cranial to the heart. **prepyloric v.**, vena prepylorica. **primary head v's**, vessels alongside the embryonic brain that continue into the precardinal veins. **v. of pterygoid canal**, vena canalis pterygoidei. **pudendal v's, external**, venae pudendae externae. **pudendal v., internal**, vena pudenda interna. **pulmonary v's**, venae pulmonales. **pulmonary v., inferior, left**, vena pulmonalis inferior sinistra. **pulmonary v., inferior, right**, vena pulmonalis inferior dextra. **pulmonary v., superior, left**, vena pulmonalis superior sinistra. **pulmonary v., superior, right**, vena pulmonalis superior dextra. **pulp v's**, vessels draining the venous sinuses of the spleen. **pyloric**

v., vena gastrica dextra. **radial v's**, venae radiales. **radial v.**, external, of Soemmering, vena cephalica accessoria. **ranine v.**, vena sublingualis. **rectal v's**, inferior, venae rectales inferiores. **rectal v's**, middle, venae rectales mediae. **rectal v.**, superior, vena rectalis superior. **renal v's**, venae renales. **retromandibular v.**, vena retromandibularis. **Retzius's v's**, veins from the walls of the intestine to the branches of the inferior vena cava. **Rosenthal's v.**, vena basalis. **Ruysch's v's**, venae vorticosae. **sacral v's**, lateral, venae sacrales laterales. **sacral v.**, middle, vena sacralis mediana. **salvatella v.**, a small vein of the little finger and dorsum of the hand. **saphenous v.**, accessory, vena saphena accessoria. **saphenous v.**, great, vena saphena magna. **saphenous v.**, small, vena saphena parva. **v's of Sappey**, venae paraumbilicales. **scrotal v's**, anterior, venae scrotales anteriores. **scrotal v's**, posterior, venae scrotales posteriores. **v. of septum pellucidum**, vena septi pellucidi. **sigmoid v's**, venae sigmoideae. **small v. of heart**, vena cordis parva. **spermatic v.**, vena spermatica. **spinal v's**, venae spinales. **spiral v. of modiolus**, vena spiralis modiolus. **splenic v.**, vena lienalis. **stellate v's of kidney**, venulae stellatae renis. **Stensen's v's**, venae vorticosae. **sternocleidomastoid v.**, vena sternocleidomastoidea. **striate v.**, vena striata. **stylomastoid v.**, vena stylomastoidea. **subcardinal v's**, paired vessels in the embryo, replacing the postcardinal veins and persisting to some degree as definitive vessels. **subclavian v.**, vena subclavia. **subcostal v.**, vena subcostalis. **subcutaneous v's of abdomen**, venae subcutaneae abdominis. **sublingual v.**, vena sublingualis. **sublobular v's**, tributaries of the hepatic veins that receive the central veins of hepatic lobules. **submental v.**, vena submental. **supracardinal v's**, paired vessels in the embryo, developing later than the subcardinal veins and persisting chiefly as the lower segment of the inferior vena cava. **supraorbital v.**, vena supraorbitalis. **suprarenal v.**, left, vena suprarenalis sinistra. **suprarenal v.**, right, vena suprarenalis dextra. **suprascapular v.**, vena suprascapularis. **supratrochlear v's**, venae supratrochleares. **sylvian v.**, v. of sylvian fossa, vena cerebri media superficialis. **temporal v's**, deep, venae temporales profundae. **temporal v.**, middle, vena temporalis media. **temporal v's**, superficial, venae temporales superficiales. **temporomandibular articular v's**, venae articulares temporomandibulares. **terminal v.**, vena thalamostriata. **testicular v.**, left, vena testicularis sinistra. **testicular v.**, right, vena testicularis dextra. **thalamostriate v.**, vena thalamostriata. **thebesian v's**, v's of Thebesius, venae cordis mininae. **thoracic v's**, internal, venae thoracicae internae. **thoracic v.**, lateral, vena thoracica lateralis. **thoracoacromial v.**, vena thoracoacromialis. **thoracoepigastric v's**, venae thoracoepigastricae. **thymic v's**, venae thymicae. **thyroid v.**, inferior, vena thyroidea inferior. **thyroid v's**, middle, venae thyroideae mediae. **thyroid v.**, superior, vena thyroidea superior. **tibial v's**, anterior, venae tibiales anteriores. **tibial v's**, posterior, venae tibiales posteriores. **trabecular v's**, vessels coursing in splenic trabeculae, formed by tributary pulp veins. **tracheal v's**, venae tracheales. **transverse v. of face**, vena transversa faciei. **transverse v's of neck**, venae transversae colli. **Trolard's v.**, vena anastomotica superior. **tympenic v's**, venae tympanicae. **ulnar v's**, venae ulnares. **umbilical v.**, vena umbilicalis. **umbilical v.**, left, vena umbilicalis sinistra. **uterine v's**, venae uterinae. **varicose v.**, a dilated tortuous vein, usually in the subcutaneous tissues of the leg; incompetency of the venous valves is associated. **vertebral v.**, vena vertebralis. **vertebral v.**, accessory, vena vertebralis accessoria. **vertebral v.**, anterior, vena vertebralis anterior. **vertebral v's**, superficial, v's of vertebral column, external, see *plexus venosi vertebrales externi* [anterior et posterior]. **vesalian v.**, an emissary vein connecting the cavernous sinus with the pterygoid venous plexus, sometimes passing through an opening in the great wing of the sphenoid bone. **vesical v's**, venae vesicales. **vestibular v's**, venae vestibulares. **vidian v's**, venae canalis pterygoidei. **v's of Vieussens**, venae cordis anteriores. **vitelline v's**, veins that return the blood from the yolk sac to the primitive heart of the early embryo. **vorticoe v's**, venae vorticosae.

Veinamine (vân'ah-mên) trademark for a crystalline amino acid solution for intravenous administration, containing a mixture of essential and nonessential amino acids but no peptides.

vela (ve'lah) [L.] plural of *velum*.

Velacycline (vel'ah-si'klên) trademark for preparations of ro-litetracycline.

velamen (ve-la'men), pl. *vela'mina* [L. "a covering"] a membrane, velum, meninx, or tegument. **v. vul'vae**, Hottentot apron.

velamenta (vel'ah-men'tah) [L.] plural of *velamentum*.

velamentous (vel'ah-men'tus) [L. *velamen* veil] membranous and pendent; like a veil.

velamentum (vel'ah-men'tum), pl. *velamen'ta* [L.] any covering, velum, or envelope. **velamen'ta cer'ebri**, the meninges.

velar (ve'lar) pertaining to a velum, especially to the velum palatinum (palatum molle).

Velban (vel'ban) trademark for a preparation of vinblastine sulfate.

veliform (vel'i-form) velamentous.

Vella's fistula (ve'lahz) [Luigi Vella, Italian physiologist, 1825-1886] see under *fistula*.

vellosine (vel-lo'sin) a poisonous alkaloid occurring in yellow crystals, $C_{25}H_{28}N_2O_4$, from the bark of *Geissospermum laeve* (*vellosii*).

vellus (vel'us) [L. "fleece"] the fine hair which succeeds the lanugo over most of the body. **v. oli'vae**, a narrow band of tangential fibers surrounding the olive.

velonioskiascopy (ve'lo-no-ski-as'ko-pe) skiascopy of shadows made by the movement of a needle held before the patient's pupil.

velopharyngeal (vel'o-fah-rin'je-al) pertaining to the soft palate (velum palatinum) and pharynx; see also under *insufficiency* and *portal*.

Velosef (vel'o-sef) trademark for preparations of cephadrine.

velosynthesis (vel'o-sin'thë-sis) [L. *velum* veil + Gr. *synthesis* a putting together] staphyloorrhaphy.

Velpeau's bandage, deformity, hernia (vel-pöz') [Alfred Armand Louis Marie Velpeau, surgeon in Paris, 1795-1867] see under *bandage* and *hernia*, and see *silver fork fracture*, under *fracture*.

velum (ve'lum), pl. *ve'la* [L.] a covering; [NA] a general term for a veil or veil-like structure. **artificial v.**, a prosthetic appliance used in correction of a cleft of the soft palate. **Baker's v.**, an obturator used in cleft palate. **v. interpositum cer'ebri**, tela choroidea ventriculi tertii. **v. interpositum rhombenceph'ali**, v. medullare superius. **v. medulla're ante'rius**, v. medullare superius. **v. medulla're infe'rius** [NA], **v. medulla're poste'rius**, inferior medullary velum: a thin layer of white substance that forms part of the roof of the fourth ventricle below the fastigium; it is continuous above with the nodulus, on the sides with the pedunculus flocculi and the teniae, and ventrally it is fused with the choroid plexus. **v. medulla're supe'rius** [NA], superior medullary velum: a thin layer of white substance that forms the anterior portion of the roof of the fourth ventricle, extending from the tectal lamina in front to the fastigium behind, and between the superior cerebellar peduncles on the sides; called also *v. medullare anterius*. **medullary v.**, anterior, v. medullare superius. **medullary v.**, inferior, medullary v., posterior, v. medullare inferius. **medullary v.**, superior, v. medullare superius. **nursing v.**, a suitable piece of soft rubber, attached to a handle, that may be held in an infant's mouth to enable it to nurse in spite of a cleft palate. **v. pala'ti**, palatum molle. **v. palati'num**, NA alternative for *palatum molle*. **v. pen'dulum pala'ti**, palatum palati. **v. semiluna're**, v. medullare inferius. **v. of Tarinus**, v. medullare inferius. **v. transver'sum**, a transverse fold of the tela choroidea marking the boundary between the diencephalon and the telencephalon in the embryonic brain.

vena (ve'nah), pl. *ve'nae* [L.] [NA] vein: a vessel that conveys blood to or toward the heart, or from the heart itself to the right atrium. See *vein*. For names and description of specific veins, see *Table of Venae* and accompanying Plates.

TABLE OF VENAE

Descriptions of veins are given on NA terms, and include anglicized names of specific veins.

ve'nae advehent'es, channels in the early embryo that convey blood to the sinusoids of the liver and later become the portal vein.

v. anastomot'ica infe'rior [NA], inferior anastomototic vein: a vein that interconnects the superficial middle cerebral vein and the transverse sinus.

v. anastomot'ica supe'rior [NA], superior anastomototic vein: a vein that interconnects the superficial middle cerebral vein and the superior sagittal sinus.

v. angula'ris [NA], angular vein: a short vein between the eye and the root of the nose; it is formed by union of the supratrochlear and supraorbital veins and continues inferiorly as the facial vein.

ve'nae anon'ymae [dex'tra et sinis'tra], venae brachiocephalicae [dextra et sinistra].

v. appendicula'ris [NA], appendicular vein: the vena comitans of the appendicular artery; it unites with the anterior and posterior cecal veins to form the ileocolic vein.

v. aqueduc/tus vestib/uli [NA], vein of aqueduct of vestibule: a small vein from the internal ear that passes through the aqueduct of the vestibule and empties into the superior petrosal sinus.

ve'nae arcifor/mes re'nis, *venae arcuatae renis*.

ve'nae arcua'tae re'nis [NA], arcuate veins of kidney: a series of complete arches across the bases of the pyramids of the kidneys; they are formed by union of the interlobular veins and the venulae rectae and drain into the interlobar veins. Called also *venae arciformes renis*.

ve'nae articula/res mandib/ulae, *venae articulares temporomandibulares*.

ve'nae articula/res temporomandibula/res [NA], temporomandibular articular veins: small vessels that drain the plexus around the temporomandibular articulation into the retromandibular vein; called also *venae articulares mandibulae*.

ve'nae auditi/vae inter'nae, *venae labyrinthi*.

ve'nae auricula/res anterio/res [NA], anterior auricular veins: branches from the anterior part of the pinna that enter the superficial temporal vein.

v. auricula'ris poste'rior [NA], posterior auricular vein: a vein that begins in a plexus on the side of the head, passes down behind the pinna, and joins with the retromandibular vein to form the external jugular vein.

v. axilla'ris [NA], axillary vein; the venous trunk of the upper member; it begins at the lower border of the *teres major* muscle by junction of the basilic and brachial veins, and at the lateral border of the first rib is continuous with the subclavian vein.

v. az'ygos [NA], azygos vein: an intercepting trunk for the right intercostal veins as well as a connecting branch between the superior and inferior *venae cavae*; it arises from the ascending lumbar vein, passes up in front of and on the right side of the vertebrae, and empties into the superior vena cava.

v. basa'lis [NA], basal vein: a vein that arises at the anterior perforated substance, passes backward and around the cerebral peduncle, and empties into the internal cerebral vein; called also *v. basalis* [Rosenthal].

v. basa'lis [Rosenthal], *v. basalis*.

v. basil'ica [NA], basilic vein: the superficial vein that arises from the ulnar side of the dorsal rete of the hand, passes up the forearm, and joins with the brachial veins to form the axillary vein.

ve'nae basivertebra/les [NA], basivertebral veins: venous sinuses in the cancellous tissue of the bodies of the vertebrae, which communicate with the plexus of veins on the anterior surface of the vertebrae and with the anterior internal vertebral plexus.

ve'nae brachia/les [NA], brachial veins: the *venae comitantes* of the brachial artery, which join with the basilic vein to form the axillary vein.

ve'nae brachiocephal'icae [dex'tra et sinis'tra] [NA], brachiocephalic veins: the two veins that drain blood from the head, neck, and upper extremities, and unite to form the superior vena cava. Each is formed at the root of the neck by union of the ipsilateral internal jugular and subclavian veins. The right vein (*v. brachiocephalica dextra*) passes almost vertically downward in front of the brachiocephalic artery, and the left vein (*v. brachiocephalica sinistra*) passes from left to right behind the upper part of the sternum. Each vein receives the vertebral, deep cervical, deep thyroid, and internal thoracic veins. The left vein also receives intercostal, thymic, tracheal, esophageal, phrenic, mediastinal, and pericardiac branches, as well as the thoracic duct. The right vein receives the right lymphatic duct. Called also *venae anonymae* [dextra et sinistra].

ve'nae bronchia/les [NA], bronchial veins: vessels that drain blood from the larger subdivisions of the bronchi into the azygos vein on the left, and into the hemiazygos or the superior intercostal vein on the right.

ve'nae bronchia/les anterio/res, ve'nae bronchia/les posterio/res, see *venae bronchiales*.

v. bul'bi pe'nis [NA], vein of bulb of penis: a vein draining blood from the bulb of the penis into the internal pudendal vein.

v. bul'bi vestib/uli [NA], vein of bulb of vestibule: a vein draining blood from the bulb of the vestibule of the vagina into the internal pudendal vein.

v. canalic/uli coch'leae [NA], vein of cochlear canal: a vein that arises in the cochlea and empties into the superior bulb of the internal jugular vein.

v. cana'lis pterygoi/dei [NA], vein of pterygoid canal: one of the veins that pass through the pterygoid canal and empty into the pterygoid plexus; called also *v. canalis pterygoidei* [Vidii].

v. cana'lis pterygoi/dei [Vidii], *v. canalis pterygoidei*.

ve'nae ca'vae, the vena cava inferior and superior.

v. ca'va infe'rior [NA], inferior vena cava: the venous trunk for the lower extremities and for the pelvic and abdominal viscera; it begins at the level of the fifth lumbar vertebra by union of the common iliac veins, passes upward on the right of the aorta, and empties into the right atrium of the heart.

v. ca'va supe'rior [NA], superior vena cava: the venous trunk draining blood from the head, neck, upper extremities, and chest; it begins by union of the two brachiocephalic veins, passes directly downward, and empties into the right atrium of the heart.

v. cava superior, persistent left, a developmental anomaly in which the left superior vena cava persists into postnatal life, usually draining into the left atrium; it is due to failure of the upper part of the left anterior cardinal vein to become obliterated. It may

be an isolated anomaly or accompany other cardiovascular defects, such as tetralogy of Fallot.

ve'nae caverno'sae pe'nis [NA], cavernous veins of penis: veins that return the blood from the corpora cavernosa to the deep veins and the dorsal vein of the penis.

v. centra'lis glan'dulae suprarena'lis [NA], central vein of suprarenal gland: the large single vein into which the various veins within the substance of the gland empty, and which continues at the hilus as the suprarenal vein.

ve'nae centra'les hep'atis [NA], central veins of liver: veins in the middle of the hepatic lobules, draining into the hepatic vein.

v. centra'lis ret'inae [NA], central vein of retina: the vein that is formed by union of the retinal veins; it passes out of the eyeball in the optic nerve to empty into the superior ophthalmic vein.

v. cephal'ica [NA], cephalic vein: the superficial vein that arises from the radial side of the dorsal rete of the hand, and winds anteriorly to pass along the anterior border of the brachioradialis muscle; above the elbow it ascends along the lateral border of the biceps muscle and the pectoral border of the deltoid muscle, and opens into the axillary vein.

v. cephal'ica accesso'ria [NA], accessory cephalic vein: a vein arising from the dorsal rete of the hand, passing up the forearm to join the cephalic vein just above the elbow.

ve'nae cerebel'li infe'rio/res [NA], inferior cerebellar veins: rather large veins from the inferior surface of the cerebellum which empty into the transverse, sigmoid, and inferior petrosal sinuses, or into the occipital sinus.

ve'nae cerebel'li superio/res [NA], superior cerebellar veins: veins from the upper surface of the cerebellum, emptying into the straight sinus and the great cerebral vein, or into the transverse and superior petrosal sinuses.

ve'nae cer'ebri [NA], cerebral veins: veins that drain blood from the brain.

v. cer'ebri ante'rior [NA], anterior cerebral vein: the vein that accompanies the anterior cerebral artery and joins the basal vein.

ve'nae cer'ebri infe'rio/res [NA], inferior cerebral veins: veins that ramify on the base and the inferolateral surface of the brain. Those on the inferior surface of the frontal lobe drain into the inferior sagittal sinus and the cavernous sinus; those on the temporal lobe, into the superior petrosal sinus and the transverse sinus; those on the occipital lobe, into the straight sinus.

ve'nae cer'ebri inter'nae [NA], internal cerebral veins: two veins that arise at the interventricular foramen by the union of the thalamostriate and the choroid veins; they pass backward through the tela choroidea, collecting blood from the basal nuclei, and unite at the splenium of the corpus callosum to form the great cerebral vein.

v. cer'ebri mag'na [NA], great cerebral vein: a short median trunk, formed by union of the two internal cerebral veins, which curves around the splenium of the corpus callosum and empties into, or is continued as, the straight sinus; called also *v. cerebri magna* [Galen].

v. cer'ebri mag'na [Gale'ni], *v. cerebri magna*.

v. cer'ebri me'dia, *v. cerebri media superficialis*.

v. cer'ebri me'dia profun'da [NA], deep middle cerebral vein: the vein that accompanies the middle cerebral artery in the floor of the lateral sulcus, and joins the basal vein.

v. cer'ebri me'dia superficia'lis [NA], superficial middle cerebral vein: a vein that drains the lateral surface of the cerebrum, follows the lateral cerebral fissure, and empties into the cavernous sinus; called also *v. cerebri media*.

ve'nae cer'ebri superio/res [NA], superior cerebral veins: about twelve veins that drain the superior, lateral, and medial surfaces of the cerebrum toward the longitudinal cerebral fissure, where they open into the superior sagittal sinus.

v. cervica'lis profun'da [NA], deep cervical vein: a vein that arises from a plexus in the suboccipital triangle, follows the deep cervical artery down the neck, and empties into the vertebral or the brachiocephalic vein.

v. chorioi'dea, *v. choroidea*.

v. chorioi'dea [NA], choroid vein: the vein that runs along the whole length of the choroid plexus, draining it and the hippocampus, fornix, and corpus callosum; it unites with the thalamostriate vein to form the internal cerebral vein. Called also *v. choroidea*.

ve'nae chorioi'deae oc'uli, NA alternative for *venae vorticosae*.

ve'nae cilia/res [NA], ciliary veins: veins that arise inside the eyeball by branches from the ciliary muscle and drain into the superior ophthalmic vein. The anterior ciliary veins follow the anterior ciliary arteries, and receive branches from the sinus venosus, sclerae, the episcleral veins, and the tunica conjunctiva bulbi. The posterior ciliary veins follow the posterior ciliary arteries and empty also into the inferior ophthalmic vein.

ve'nae cilia/res anterio/res, ve'nae cilia/res posterio/res, see *venae ciliares*.

ve'nae circumflex'ae fem'oris latera/les [NA], lateral circumflex femoral veins: *venae comitantes* of the lateral circumflex femoral artery, emptying into the femoral or the deep femoral vein.

ve'nae circumflex'ae fem'oris media/les [NA], medial circumflex femoral veins: *venae comitantes* of the medial circumflex femoral artery, emptying into the femoral or the deep femoral vein.

TABLE OF VENAE (Continued)

v. circumflex/a il'ium profun'da [NA], deep circumflex iliac vein: a common trunk formed from the venae comitantes of the homonymous artery and emptying into the external iliac vein.

v. circumflex/a il'ium superficia'lis [NA], superficial circumflex iliac vein: a vein that follows the homonymous artery and empties into the great saphenous vein.

v. col'ica dex'tra [NA], right colic vein: a vein that follows the distribution of the right colic artery and empties into the superior mesenteric vein.

v. col'ica me'dia [NA], middle colic vein: a vein that follows the distribution of the middle colic artery and empties into the superior mesenteric vein.

v. col'ica sinis'tra [NA], left colic vein: a vein that follows the left colic artery and opens into the inferior mesenteric vein.

v. com'itans [NA], an accompanying vein: such veins (venae comitantes), usually two in number, closely accompany their homonymous artery and are found especially in the extremities.

ve'nae comitan'tes arte'riae femora'lis, accompanying veins of the femoral artery, which empty into the external iliac vein.

v. com'itans ner'vi hypoglos'si [NA], accompanying vein of hypoglossal nerve: a vessel, formed by union of the vena profunda linguae and the vena sublingualis, that accompanies the hypoglossal nerve; it empties into the facial, lingual, or internal jugular vein.

ve'nae conjunctiva'les [NA], conjunctival veins: small veins that drain blood from the conjunctiva to the superior ophthalmic vein.

ve'nae conjunctiva'les anterio'res, **ve'nae conjunctiva'les posterio'res**, see *venae conjunctivales*.

ve'nae cor'dis [NA], cardiac veins: the veins of the heart, which drain blood from the various tissues making up the organ.

ve'nae cor'dis anterio'res [NA], anterior cardiac veins: small vessels from the anterior wall of the right ventricle that empty into the right atrium or join the lesser cardiac vein.

v. cor'dis mag'na [NA], great cardiac vein: a vein that collects blood from the anterior surface of the ventricles, follows the anterior longitudinal sulcus, and empties into the coronary sinus.

v. cor'dis me'dia [NA], middle cardiac vein: a vein that collects blood from the diaphragmatic surface of the ventricles, follows the posterior longitudinal sulcus, and empties into the coronary sinus.

ve'nae cor'dis min'imae [NA], smallest cardiac veins: numerous small veins arising in the muscular walls and draining independently into the cavities of the heart, and most readily seen in the atria.

v. cor'dis par'va [NA], small cardiac vein: a vein that collects blood from both parts of the right heart, follows the coronary sulcus to the left, and opens into the coronary sinus.

v. corona'ria ventric'uli, see *v. gastrica dextra*, *v. gastrica sinistra*, and *v. prepylorica*.

ve'nae costoaxilla'res, costoaxillary veins: veins that arise from the areolar venous plexus, anastomose with the upper six or seven posterior intercostal veins, and empty into the axillary vein.

v. cuta'nea [NA], cutaneous vein: one of the small veins that begin in the papillae of the skin, form subpapillary plexuses, and open into the subcutaneous veins.

v. cys'tica [NA], cystic vein: a small vein that returns the blood from the gallbladder to the right branch of the portal vein, within the substance of the liver.

ve'nae digita'les commu'nes pe'dis, common digital veins of foot: short veins formed by union of the dorsal digital and the intercarpal veins of the foot.

ve'nae digita'les dorsa'les pe'dis [NA], dorsal digital veins of foot: the veins on the dorsal surfaces of the toes that unite in pairs around each cleft to form the dorsal metatarsal veins; called also *venae digitales pedis dorsales*.

ve'nae digita'les palma'res [NA], palmar digital veins: the venae comitantes of the proper and common palmar digital arteries, which join the superficial palmar venous arch.

ve'nae digita'les pe'dis dorsa'les, *venae digitales dorsales pedis*.

ve'nae digita'les planta'res [NA], plantar digital veins: veins from the plantar surfaces of the toes which unite at the clefts to form the plantar metatarsal veins of the foot.

ve'nae digita'les vola'res commu'nes, see *venae digitales palmares*.

ve'nae digita'les vola'res pro'priae, see *venae digitales palmares*.

ve'nae diplo'icae [NA], diploic veins: veins of the skull, including the frontal, occipital, anterior temporal, and posterior temporal diploic veins, which form sinuses in the cancellous tissue between the laminae of the cranial bones. They send branches to the external and the internal lamina, the periosteum, and the dura mater, and empty in part inside and in part outside the skull.

v. diplo'ica fronta'lis [NA], frontal diploic vein: a vein that drains the frontal bone, emptying externally into the supraorbital vein or internally into the superior sagittal sinus.

v. diplo'ica occipita'lis [NA], occipital diploic vein: the largest of the diploic veins, which drains blood from the occipital bone and empties into the occipital vein or the transverse sinus.

v. diplo'ica tempora'lis ante'rior [NA], anterior temporal diploic vein: a vein that drains the lateral portion of the frontal and the anterior part of the parietal bone, opening internally into the sphenoparietal sinus and externally into a deep temporal vein.

v. diplo'ica tempora'lis poste'rior [NA], posterior temporal diploic vein: a vein that drains the parietal bone and empties into the transverse sinus.

v. dorsa'lis clitor'idis profun'da [NA], deep dorsal vein of clitoris: a vein that follows the course of its homonymous artery and opens into the vesical plexus.

ve'nae dorsa'les clitor'idis superficia'les [NA], superficial dorsal veins of clitoris: veins that collect blood subcutaneously from the clitoris and drain into the external pudendal vein.

ve'nae dorsa'les lin'guae [NA], dorsal lingual veins: veins that unite with a small vena comitans of the lingual artery and join the main lingual trunk.

v. dorsa'lis pe'nis profun'da [NA], deep dorsal vein of penis: the single vein lying subfascially in the midline of the penis between the dorsal arteries; it begins in small veins around the corona glandis, is joined by the deep veins of the penis as it passes proximally, and passes between the arcuate pubic and transverse perineal ligaments, where it divides into a left and right vein to join the prostatic plexus.

ve'nae dorsa'les pe'nis subcuta'neae, *venae dorsales penis subcutaneae*.

ve'nae dorsa'les pe'nis superficia'les [NA], superficial dorsal veins of penis: veins that collect blood subcutaneously from the penis and drain into the external pudendal vein; called also *venae dorsales penis subcutaneae*.

ve'nae duodena'les, duodenal veins: veins draining blood from the duodenum.

v. emissa'ria [NA], emissary vein: one of the small, valveless veins that pass through foramina of the skull, connecting the dural venous sinuses with scalp veins or with deep veins below the base of the skull; called also *emissarium*.

v. emissa'ria condyla'ris [NA], condylar emissary vein: a small vein running through the condylar canal of the skull, connecting the sigmoid sinus with the vertebral or the internal jugular vein; called also *emissarium condyloideum*.

v. emissa'ria mastoi'dea [NA], mastoid emissary vein: a small vein passing through the mastoid foramen of the skull and connecting the sigmoid sinus with the occipital or the posterior auricular vein; called also *emissarium mastoideum*.

v. emissa'ria occipita'lis [NA], occipital emissary vein: an occasional small vein running through a minute foramen in the occipital protuberance of the skull and connecting the confluence of the sinuses with the occipital vein; called also *emissarium occipitale*.

v. emissa'ria parieta'lis [NA], parietal emissary vein: a small vein passing through the parietal foramen of the skull and connecting the superior sagittal sinus with the superficial temporal veins; called also *emissarium parietale*.

v. epigas'trica infe'rior [NA], inferior epigastric vein: a vein that accompanies the inferior epigastric artery and opens into the external iliac vein.

v. epigas'trica superficia'lis [NA], superficial epigastric vein: a vein that follows its homonymous artery and opens into the great saphenous or the femoral vein.

ve'nae epigas'tricae superio'res [NA], superior epigastric veins: the venae comitantes of the superior epigastric artery, which open into the internal thoracic vein.

ve'nae episclera'les [NA], episcleral veins: the veins that ring the cornea and drain into the vorticosae and ciliary veins.

ve'nae esopha'geae [NA], esophageal veins: small vessels that drain blood from the esophagus into the hemiazygos and azygos veins, or into the left brachiocephalic vein.

ve'nae ethmoida'les [NA], ethmoidal veins: veins that follow the anterior and posterior ethmoidal arteries, emerge from the ethmoidal foramina, and empty into the superior ophthalmic vein.

v. ethmoida'lis ante'rior, **v. ethmoida'lis poste'rior**, see *venae ethmoidales*.

v. facia'lis [NA], facial vein; the vein that begins at the medial angle of the eye as the angular vein, descends behind the facial artery, and usually ends in the internal jugular vein; formerly called the *anterior facial vein* or *vena facialis anterior*, this vessel sometimes joins the retromandibular vein to form a common trunk previously known as the *common facial vein* or *vena facialis communis*.

v. facia'lis ante'rior, **v. facia'lis commu'nis**, see *v. facia'lis*.

v. facia'lis poste'rior, **v. retromandibularis**, **v. facie'i profun'da** [NA], deep facial vein: a vein draining from the pterygoid plexus to the facial vein.

v. femora'lis [NA], femoral vein: a vein that lies in the proximal two-thirds of the thigh; it is a direct continuation of the popliteal vein, follows the course of the femoral artery, and at the inguinal ligament becomes the external iliac vein. NOTE: Vascular surgeons refer to the portion of the femoral vein proximal to the branching of the deep femoral vein as the *common femoral vein*, and to its continuation distal to the branching as the *superficial femoral vein*.

v. femoropoplite'a, femoropopliteal vein: a superficial descending vein draining the lower and back part of the thigh and opening into the small saphenous vein just before it perforates the deep fascia.

ve'nae fibula'res, NA alternative for *venae peroneae*.

ve'nae fronta'les, *venae supratrochleares*.

ve'nae gas'tricae bre'ves [NA], short gastric veins: small

vessels draining the left portion of the greater curvature of the stomach and emptying into the splenic vein.

v. gas'trica dex'tra [NA], right gastric vein: the vena comitans of the right gastric artery, emptying into the portal vein.

v. gas'trica sinis'tra [NA], left gastric vein: the vena comitans of the left gastric artery, emptying into the portal vein.

v. gastroepiplo'ica dex'tra [NA], right gastroepiploic vein: a vein that follows the distribution of its homonymous artery and empties into the superior mesenteric vein.

v. gastroepiplo'ica sinis'tra [NA], left gastroepiploic vein: a vein that follows the distribution of its homonymous artery and empties into the splenic vein.

ve'nae ge'nus [NA], genicular veins: veins accompanying the genicular arteries and draining into the popliteal vein.

ve'nae gluta'cae inferio'res, *venae gluteae inferiores*.

ve'nae gluta'cae superio'res, *venae gluteae superiores*.

ve'nae glute'ae inferio'res [NA], inferior gluteal veins: vena comitantes of the inferior gluteal artery; they drain the subcutaneous tissue of the back of the thigh and the muscles of the buttock, unite into a single vein after passing through the greater sciatic foramen, and empty into the internal iliac vein.

ve'nae glute'ae superio'res [NA], superior gluteal veins: vena comitantes of the superior gluteal artery; they drain the muscles of the buttock, pass through the greater sciatic foramen, and empty into the internal iliac vein.

ve'nae haemorrhoida'les inferio'res, *venae rectales inferiores*.

v. haemorrhoida'lis me'dia, see *venae rectales mediae*.

v. haemorrhoida'lis supe'rior, *v. rectalis superior*.

v. hemiaz'ygos [NA], hemiazygos vein: an intercepting trunk for the lower left posterior intercostal veins; it arises from the ascending lumbar vein, passes up on the left side of the vertebrae to the eighth thoracic vertebra, where it may receive the accessory branch, and crosses over the vertebral column to open into the azygos vein.

v. hemiaz'ygos accesso'ria [NA], accessory hemiazygos vein: the descending intercepting trunk for the upper, often the fourth through the eighth, left posterior intercostal veins. It lies on the left side and at the eighth thoracic vertebra joins the hemiazygos vein or crosses to the right side to join the azygos vein directly; above, it may communicate with the left superior intercostal vein.

ve'nae hepat'icae [NA], hepatic veins: several veins that receive blood from the central veins of the liver; two or three large vessels in an upper group and six to twenty small veins in a lower group form successively larger vessels which ultimately open into the inferior vena cava on the posterior aspect of the liver.

ve'nae hepat'icae dex'trae [NA], the right hepatic veins that drain into the vena cava inferior.

ve'nae hepat'icae me'diae [NA], the middle hepatic veins that drain into the vena cava inferior.

ve'nae hepat'icae sinis'trae [NA], the left hepatic veins that drain into the vena cava inferior.

v. hypogas'trica, *v. iliaca interna*.

v. ileocol'ica [NA], ileocolic vein: a vein that follows the distribution of its homonymous artery and empties into the vena mesenterica superior.

v. ili'aca commu'nis [NA], common iliac vein: a vein that arises at the sacroiliac articulation by union of the external iliac and the internal iliac vein, and passes upward to the right side of the fifth lumbar vertebra where the two unite to form the inferior vena cava.

v. ili'aca exter'na [NA], external iliac vein: the continuation of the femoral vein from the inguinal ligament to the sacroiliac articulation, where it joins with the internal iliac vein to form the common iliac vein.

v. ili'aca inter'na [NA], internal iliac vein: a short trunk formed by union of parietal branches; it extends from the greater sciatic notch to the brim of the pelvis, where it joins the external iliac vein to form the common iliac vein; called also *v. hypogastrica*.

v. iliolumba'lis [NA], iliolumbar vein: a vein that follows the distribution of the iliolumbar artery and opens into the internal iliac or the common iliac vein, or it may divide to end in both.

inferior v. cava, *v. cava inferior*.

ve'nae intercapita'les [NA], intercapital veins: veins at the clefts of the fingers which pass between the heads of the metacarpal bones and establish communication between the dorsal and the palmar venous system of the hand; called also *venae intercapitulares manus*.

ve'nae intercapit'ulares ma'nus, *venae intercapitales*.

ve'nae intercapitula'les pe'dis, intercapitular veins of foot: veins at the clefts of the toes which pass between the heads of the metatarsal bones and establish communication between the dorsal and the plantar venous system.

ve'nae intercosta'les, veins that accompany the intercostal arteries; see *venae intercostales anteriores*, *venae intercostales posteriores*, *v. intercostalis superior dextra*, *v. intercostalis superior sinistra*, and *v. intercostalis suprema*.

ve'nae intercosta'les anterio'res [NA], anterior intercostal veins: the twelve paired vena comitantes of the anterior thoracic arteries, which drain into the internal thoracic veins.

ve'nae intercosta'les posterio'res IV-XI [NA], posterior intercostal veins IV-XI: vena comitantes of posterior intercostal

arteries IV to XI, draining on the right side into the azygos vein and on the left side into the hemiazygos or accessory hemiazygos vein.

v. intercosta'lis supe'rior dex'tra [NA], right superior intercostal vein: a common trunk formed by union of the second, third, and sometimes fourth posterior intercostal veins, which drains into the azygos vein.

v. intercosta'lis supe'rior sinis'tra [NA], left superior intercostal vein: the common trunk formed by union of the second, third, and sometimes fourth posterior intercostal veins, which crosses the arch of the aorta and joins the left brachiocephalic vein.

v. intercosta'lis supre'ma [NA], highest intercostal vein: the first posterior intercostal vein of either side, which passes over the apex of the lung and ends in the brachiocephalic, vertebral, or superior intercostal vein.

ve'nae interloba'les re'nis [NA], interlobar veins of kidney: veins that drain the venous arcades of the kidney, pass down between the pyramids, and unite to form the renal vein.

ve'nae interlobula'les hep'atis [NA], interlobular veins of liver: the veins that arise as tributaries of the portal vein between the hepatic lobules.

ve'nae interlobula'les re'nis [NA], interlobular veins of kidney: veins that collect blood from the capillary network of the cortex and empty into the venous arcades of the kidney.

ve'na intervertebra'lis [NA], intervertebral vein: any one of the veins that drain the vertebral plexuses, passing out through the intervertebral foramina and emptying into the regional veins: in the neck, into the vertebral; in the thorax, the intercostal; in the abdomen, the lumbar; and in the pelvis, the lateral sacral veins.

ve'nae intestina'les, the veins draining blood from the small intestines (*venae jejunaes et ilei* [NA]).

ve'nae jejuna'les et il'ei [NA], jejunal and ileal veins: veins draining blood from the jejunum and the ileum into the superior mesenteric vein; called also *venae intestinales*.

v. jugula'ris ante'rior [NA], anterior jugular vein: a vein that arises under the chin, passes down the neck, and opens into the external jugular or the subclavian vein or into jugular venous arch.

v. jugula'ris exter'na [NA], external jugular vein: the vein that begins in the parotid gland behind the angle of the jaw by union of the retromandibular and the posterior auricular vein, passes down the neck, and opens into the subclavian, the internal jugular, or the brachiocephalic vein.

v. jugula'ris inter'na [NA], internal jugular vein: the vein that begins as the superior bulb in the jugular fossa, draining much of the head and neck; it descends with first the internal carotid and then the common carotid artery in the neck, and joins with the subclavian vein to form the brachiocephalic vein.

ve'nae labia'les anterio'res [NA], anterior labial veins: veins that collect blood from the anterior aspect of the labia and drain into the external pudendal vein; they are homologues of the anterior scrotal veins in the male.

ve'nae labia'les inferio'res [NA], inferior labial veins: veins that drain the region of the lower lip into the facial vein.

ve'nae labia'les posterio'res [NA], posterior labial veins: small branches from the labia which open into the vesical venous plexus; they are homologues of the posterior scrotal veins in the male.

v. labia'lis supe'rior [NA], superior labial vein: the vein that drains blood from the region of the upper lip into the facial vein.

ve'nae labyrin'thi [NA], veins of labyrinth: several small veins that pass through the internal acoustic meatus from the cochlea into the inferior petrosal or the transverse sinus; called also *venae auditivae internae*.

v. lacrima'lis [NA], lacrimal vein: the vein that drains blood from the lacrimal gland into the superior ophthalmic vein.

v. laryn'gea infe'rior [NA], inferior laryngeal vein: a vein draining blood from the larynx into the inferior thyroid vein.

v. laryn'gea supe'rior [NA], superior laryngeal vein: a vein that drains blood from the larynx into the superior thyroid vein.

v. liena'lis [NA], splenic vein: the vein formed by union of several branches at the hilus of the spleen, passing from left to right to the neck of the pancreas, where it joins the superior mesenteric vein to form the portal vein.

v. lingua'lis [NA], lingual vein: the deep vein that follows the distribution of the lingual artery and empties into the internal jugular vein.

ve'nae lumba'les, see *venae lumbales* [I et II] and *venae lumbales* [III et IV].

ve'nae lumba'les [I et II] [NA], lumbar veins I and II: vena comitantes of the first and second lumbar arteries, which drain into the ascending lumbar vein and thence into the azygos or hemiazygos vein.

ve'nae lumba'les [III et IV] [NA], lumbar veins III and IV: vena comitantes of the third and fourth lumbar arteries, which usually drain into the inferior vena cava.

v. lumba'lis ascen'dens [NA], ascending lumbar vein: an ascending intercepting vein for the lumbar veins of either side; it begins in the lateral sacral veins and passes up the spine to the first lumbar vertebra, where by union with the subcostal vein it becomes on the right side the azygos vein, and on the left side, the hemiazygos vein.

v. mamma'ria inter'na, see *venae thoracicae internae*.

TABLE OF VENAE (Continued)

ve'nae masseter'icae, masseteric veins: veins from the masseter muscle that empty into the facial vein.

ve'nae maxilla'res [NA], maxillary veins: veins from the pterygoid plexus, usually forming a single short trunk, passing back and uniting with the superficial temporal vein in the parotid gland to form the retromandibular vein.

v. media'na antebra'chii [NA], median antebrachial vein: a vein that arises from a palmar venous plexus and passes up the forearm between the cephalic and the basilic veins to the elbow, where it either joins one of these, bifurcates to join both, or joins the median cubital vein. Called also *v. mediana antibrachii*.

v. media'na antibra'chii, *v. mediana antibrachii*.

v. media'na basil'ica [NA], median basilic vein: a vein sometimes present as the medial branch, ending in the basilic vein, of a bifurcation of the median antebrachial vein.

v. media'na cephal'ica [NA], median cephalic vein: a vein sometimes present as the lateral branch, ending in the cephalic vein, formed by bifurcation of the median antebrachial vein.

v. media'na col'li, median vein of neck: a vein formed when the anterior jugular veins unite as they pass down the neck.

v. media'na cu'biti [NA], median cubital vein: the large connecting branch that arises from the cephalic vein below the elbow and passes obliquely upward over the cubital fossa to join the basilic vein.

ve'nae mediastina'les [NA], mediastinal veins: numerous small branches that drain blood from the anterior mediastinum into the brachiocephalic vein, azygos vein, or the superior vena cava; called also *venae mediastinales anteriores*.

ve'nae mediastina'les anterio'res, *venae mediastinales*.

ve'nae menin'geae [NA], meningeal veins: the *venae comitantes* of the meningeal arteries, which drain the dura mater, communicate with the lateral lacunae, and empty into the regional sinuses and veins.

ve'nae menin'geae me'diae [NA], middle meningeal veins: the *venae comitantes* of the middle meningeal artery, which end in the pterygoid venous plexus.

v. mesenter'ica infe'rior [NA], inferior mesenteric vein: a vein that follows the distribution of its homonymous artery and empties into the splenic vein.

v. mesenter'ica supe'rior [NA], superior mesenteric vein: a vein that follows the distribution of its homonymous artery and joins with the splenic vein to form the portal vein.

ve'nae metacar'peae dorsa'les [NA], dorsal metacarpal veins: veins that arise from the union of dorsal veins of adjacent fingers and pass proximally to join in forming the dorsal venous rete of the hand.

ve'nae metacar'peae palma'res [NA], palmar metacarpal veins: the *venae comitantes* of the palmar metacarpal arteries, which open into the deep palmar venous arch; called also *venae metacarpeae volares*.

ve'nae metacar'peae vola'res, *venae metacarpeae palma'res*.

ve'nae metatar'seae dorsa'les [NA], dorsal metatarsal veins: veins that are formed by the dorsal digital veins of the toes at the clefts of the toes, joining the dorsal venous arch.

ve'nae metatar'seae planta'res [NA], plantar metatarsal veins: deep veins of the foot that arise from the plantar digital veins at the clefts of the toes and pass back to open into the plantar venous arch.

ve'nae muscula'res, muscular veins: veins that drain blood from the levator palpebrae, superior rectus, superior oblique, and medial rectus muscles into the superior ophthalmic vein.

ve'nae musculophren'icae [NA], musculophrenic veins: the *venae comitantes* of the musculophrenic artery, draining blood from parts of the diaphragm and from the wall of the thorax and abdomen.

ve'nae nasa'les exter'nae [NA], external nasal veins: small ascending branches from the nose that open into the angular and facial veins.

v. nasofronta'lis [NA], nasofrontal vein: a vein that begins at the supraorbital vein, enters the orbit, and joins the superior ophthalmic vein.

v. obli'qua a'trii sinis'tri [NA], oblique vein of left atrium: a small vein from the left atrium that opens into the coronary sinus; called also *v. obliqua atrii sinistri* [Marshalli].

v. obli'qua a'trii sinis'tri [Marshalli], *v. obliqua atrii sinistri*.

ve'nae obturato'riae [NA], obturator veins: veins that drain the hip joint and the regional muscles, enter the pelvis through the obturator canal, and empty into the internal iliac or the inferior epigastric vein, or both.

v. occipita'lis [NA], occipital vein: a vein in the scalp that follows the distribution of the occipital artery and opens under the trapezius muscle into the suboccipital venous plexus; it may continue with the occipital artery and end in the internal jugular vein.

ve'nae oesopha'geae, *venae esophageae*.

v. ophthal'mica infe'rior [NA], inferior ophthalmic vein: a vein formed by confluence of muscular and ciliary branches, and running backward either to join the superior ophthalmic vein or to open directly into the cavernous sinus; it sends a communicating

branch through the inferior orbital fissure to join the pterygoid venous plexus.

v. ophthal'mica supe'rior [NA], superior ophthalmic vein: the vein that begins at the medial angle of the eyelid, where it communicates with the frontal, supraorbital, and angular veins; it follows the distribution of the ophthalmic artery, and may be joined by the inferior ophthalmic vein at the superior orbital fissure before opening into the cavernous sinus.

v. ophthalmomenin'gea, ophthalmomeningeal vein: a small inferior meningeal vein that opens usually into the superior ophthalmic vein, or occasionally into the superior petrosal sinus.

v. ova'rica, see *v. ovarica dextra* and *v. ovarica sinistra*.

v. ova'rica dex'tra [NA], right ovarian vein: a vein that drains the pampiniform plexus of the broad ligament on the right into the inferior vena cava.

v. ova'rica sinis'tra [NA], left ovarian vein: a vein that drains the pampiniform plexus of the broad ligament on the left into the left renal vein.

v. palati'na, *v. palatina externa*.

v. palati'na exter'na [NA], external palatine vein: the vein that drains blood from the tonsils and the soft palate into the facial vein; called also *v. palatina*.

ve'nae palpebra'les [NA], palpebral veins: small branches from the eyelids that open into the superior ophthalmic vein.

ve'nae palpebra'les infe'rio'res [NA], inferior palpebral veins: branches that drain the blood from the lower eyelid into the facial vein.

ve'nae palpebra'les superio'res [NA], superior palpebral veins: branches that drain the blood from the upper eyelid into the angular vein.

ve'nae pancreat'icae [NA], pancreatic veins: numerous branches from the pancreas which open into the splenic and the superior mesenteric vein.

ve'nae pancreaticoduodena'les [NA], pancreaticoduodenal veins: four veins that drain blood from the pancreas and duodenum, closely following the homonymous arteries. A superior and an inferior vein originate from both an anterior and a posterior venous arcade. The anterior superior vein joins the right gastroepiploic vein; the posterior superior vein joins the portal vein. The anterior and posterior inferior veins join, sometimes as one trunk, the uppermost jejunal vein or the superior mesenteric vein.

ve'nae paraumbilica'les [NA], paraumbilical veins: veins that communicate with the portal vein and anastomose with the superior and inferior epigastric and the superior vesical veins in the region of the umbilicus. They form a part of the collateral circulation of the portal vein in event of hepatic obstruction. Called also *venae parumbilicales* [Sappeyi].

ve'nae paroti'deae [NA], parotid veins: small veins from the parotid gland that open into the superficial temporal vein; called also *venae parotideae posteriores*.

ve'nae paroti'deae anterio'res, *rami parotidei venae faciales*.

ve'nae paroti'deae posterio'res, *venae parotideae*.

ve'nae parumbilica'les [Sappeyi], *venae paraumbilicales*.

ve'nae pectora'les [NA], collective term for branches of the subclavian vein that drain the pectoral region.

ve'nae perforan'tes [NA], perforating veins: the *venae comitantes* for the perforating arteries of the thigh, which empty into the deep femoral vein; called also *venae perforantes femoris*.

ve'nae perforan'tes fem'oris, *venae perforantes*.

ve'nae pericardi'acae [NA], pericardiac veins: numerous small branches that drain blood from the pericardium into the brachiocephalic, inferior thyroid, and azygos veins, and the superior vena cava.

ve'nae pericardiophren'icae [NA], pericardiophrenic veins: small veins that drain blood from the pericardium and diaphragm into the left brachiocephalic vein; called also *venae phrenicae superiores*.

ve'nae perone'ae [NA], peroneal veins: the *venae comitantes* of the peroneal artery, emptying into the posterior tibial vein; called also *venae fibulares* [NA alternative] or *fibular veins*.

ve'nae pharyn'geae [NA], pharyngeal veins: veins that drain the pharyngeal plexus and empty into the internal jugular vein.

ve'nae phren'icae infe'rio'res [NA], inferior phrenic veins: veins that follow the homonymous arteries, the one on the right entering the inferior vena cava, and the one on the left entering the left suprarenal or renal vein or the inferior vena cava.

ve'nae phren'icae superio'res, *venae pericardiophrenicae*.

v. poplite'a [NA], popliteal vein: a vein following the popliteal artery, and formed by union of the *venae comitantes* of the anterior and posterior tibial arteries; at the adductor hiatus it becomes continuous with the femoral vein.

v. por'tae [NA], portal vein: a short thick trunk formed by union of the superior mesenteric and the splenic vein behind the neck of the pancreas; it passes upward to the right end of the porta hepatis, where it divides into successively smaller branches, following the branches of the hepatic artery, until it forms a capillary-like system of sinusoids that permeates the entire substance of the liver.

v. poste'rior ventric'uli sinis'tri cor'dis [NA], posterior vein of left ventricle: the vein that drains blood from the posterior surface of the left ventricle into the coronary sinus.

TABLE OF VENAE (Continued)

v. prepylo'rica [NA], prepyloric vein: a vein that accompanies the prepyloric artery, passing upward over the anterior surface of the junction between the pylorus and the duodenum and emptying into the right gastric vein.

ve'nae profun'dae, deeply situated veins, including *v. profunda femoris*, *v. profunda linguae*, and *v. profunda penis*.

ve'nae profun'dae clitor'idis [NA], deep veins of clitoris: small veins of the clitoris that drain into the vesical venous plexus.

v. profun'da fem'oris [NA], deep femoral vein: a vein that follows the distribution of the deep femoral artery and opens into the femoral vein.

v. profun'da lin'guae [NA], deep lingual vein: a vein that drains blood from the deep aspect of the tongue and joins the sublingual vein to form the vena comitans of the hypoglossal nerve.

ve'nae profun'dae pe'nis [NA], deep veins of penis: veins that follow the distribution of the homonymous artery and empty into the dorsal vein of the penis.

ve'nae puden'dae exter'nae [NA], external pudendal veins: veins that follow the distribution of the external pudendal artery and open into the great saphenous vein.

v. puden'da inter'na [NA], internal pudendal vein: a vein that follows the course of the internal pudendal artery, and drains into the internal iliac vein.

ve'nae pulmona'les [NA], pulmonary veins: the four veins, the right and left superior and inferior pulmonary veins, that return aerated blood from the lungs to the left atrium of the heart.

ve'nae pulmona'les dex'trae, see *v. pulmonalis inferior dextra* and *v. pulmonalis superior dextra*.

v. pulmona'lis infe'rior dex'tra [NA], right inferior pulmonary vein: the vein that returns blood from the lower lobe of the right lung (from the apical branch and from the common, superior, and inferior basal veins) to the left atrium of the heart.

v. pulmona'lis infe'rior sinis'tra [NA], left inferior pulmonary vein: the vein that returns blood from the lower lobe of the left lung (from the superior apical branch and the common basal vein) to the left atrium of the heart.

ve'nae pulmona'les sinis'trae, see *v. pulmonalis inferior sinistra* and *v. pulmonalis superior sinistra*.

v. pulmona'lis supe'rior dex'tra [NA], right superior pulmonary vein: the vein that returns blood from the upper and middle lobes of the right lung (from the apical, anterior, and posterior branches and the middle lobar branch) to the left atrium of the heart.

v. pulmona'lis supe'rior sinis'tra [NA], left superior pulmonary vein: the vein that returns blood from the upper lobe of the left lung (from the apicoposterior, anterior, and lingular branches) to the left atrium of the heart.

ve'nae radia'les [NA], radial veins: the venae comitantes of the radial artery, which open into the brachial veins.

ve'nae recta'les infe'iores [NA], inferior rectal veins: veins that drain the rectal plexus into the internal pudendal vein; called also *venae haemorrhoidales inferiores*.

ve'nae recta'les me'diae [NA], middle rectal veins: veins that drain the rectal plexus and empty into the internal iliac and superior rectal veins.

v. recta'lis supe'rior [NA], superior rectal vein: the vein that drains the upper part of the rectal plexus into the inferior mesenteric vein and thus establishes connection between the portal and the systemic system; called also *v. haemorrhoidalis superior*.

ve'nae rena'les [NA], renal veins: short thick trunks, the one on the left longer than that on the right, that pass from the kidneys to the inferior vena cava.

ve'nae re'nis [NA], the veins within the kidney, including the *venae interlobares renis*, *venae arcuatae renis*, *venae interlobulares renis*, *venulae rectae renis*, and *venulae stellatae renis*.

v. retromandibula'ris [NA], retromandibular vein: the vein that is formed in the upper part of the parotid gland behind the neck of the mandible by union of the maxillary and superficial temporal veins; it passes downward through the gland, communicates with the facial vein, and emerging from the gland joins with the posterior auricular vein to form the external jugular vein. Called also *v. facialis posterior*.

ve'nae revehen'tes, channels in the early embryo that convey blood from the sinusoids of the liver to the sinus venosus and later become the hepatic veins.

ve'nae sacra'les latera'les [NA], lateral sacral veins: veins that follow the homonymous arteries, help to form the lateral sacral plexus, and empty into the internal iliac vein or the superior gluteal veins.

v. sacra'lis me'dia, *v. sacralis mediana*.

v. sacra'lis media'na [NA], middle sacral vein: a vein that follows the middle sacral artery and opens into the common iliac vein; called also *v. sacralis media*.

v. saphe'na accesso'ria [NA], accessory saphenous vein: a vein that, when present, drains the medial and posterior superficial parts of the thigh and opens into the great saphenous vein.

v. saphe'na mag'na [NA], great saphenous vein: the longest vein in the body, extending from the dorsum of the foot to just below the inguinal ligament, where it opens into the femoral vein.

v. saphe'na par'va [NA], small saphenous vein: the vein that continues the marginal vein from behind the malleolus and passes

up the back of the leg to the knee joint, where it opens into the popliteal vein.

v. scapula'ris dorsa'lis [NA], a branch of the subclavian vein.

ve'nae scrota'les anterio'res [NA], anterior scrotal veins: veins that collect blood from the anterior aspect of the scrotum and drain into the external pudendal vein.

ve'nae scrota'les posterio'res [NA], posterior scrotal veins: small branches from the scrotum that open into the vesical venous plexus.

v. sep'ti pellu'cidi [NA], vein of septum pellucidum: a vein from the septum pellucidum that empties into the thalamostriate vein.

ve'nae sigmoi'deae [NA], sigmoid veins: veins from the sigmoid colon that empty into the inferior mesenteric vein.

v. spermat'ica, spermatic vein: the vein that drains blood from the testis and epididymis, forms the pampiniform plexus of the spermatic cord, and accompanies the internal spermatic artery. The vein on the right enters the inferior vena cava; that on the left enters the left renal vein.

ve'nae spina'les [NA], spinal veins: anastomosing networks of small veins that drain blood from the spinal cord and its pia mater into the internal vertebral venous plexuses.

ve'nae spina'les exter'nae anterio'res, small longitudinal veins draining blood from the anterior part of the pia mater of the spinal cord; see *venae spinales*.

ve'nae spina'les exter'nae posterio'res, small longitudinal veins draining blood from the posterior part of the pia mater of the spinal cord; see *venae spinales*.

ve'nae spina'les inter'nae, minute veins draining blood from the substance of the spinal cord; see *venae spinales*.

v. spira'lis modi'oli [NA], spiral vein of modiolus: a small vein in the spiral modiolus, a tributary of the labyrinthine veins.

ve'nae stella'tae re'nis, *venulae stellatae renis*.

v. sternocleidomasto'i'dea [NA], sternocleidomastoid vein: a vein that follows the course of the homonymous artery and opens into the internal jugular vein.

v. stria'ta [NA], striate vein: the vein that arises from the anterior perforated substance of the brain and joins the basal vein.

v. stylomasto'i'dea [NA], stylomastoid vein: a vein following the stylomastoid artery and emptying into the retromandibular vein.

v. subcla'via [NA], subclavian vein: the vein that continues the axillary as the main venous stem of the upper member, follows the subclavian artery, and joins with the internal jugular vein to form the brachiocephalic vein.

v. subcosta'lis [NA], subcostal vein: the vena comitans of the subcostal artery, which joins the ascending lumbar vein to form the azygos or hemiazygos vein, on the right or left side respectively.

ve'nae subcuta'neae abdom'inis [NA], subcutaneous veins of abdomen: the superficial veins of the abdominal wall.

v. sublingua'lis [NA], sublingual vein: a vein that follows the sublingual artery and opens into the lingual vein.

v. submenta'lis [NA], submental vein: a vein that follows the submental artery and opens into the facial vein.

superior v. cava, *v. cava superior*.

v. supraorbita'lis [NA], supraorbital vein: the vein that passes down the forehead lateral to the supratrochlear vein, joining it at the root of the nose to form the angular vein.

ve'nae suprarena'les, see *v. suprarenalis dextra* and *v. suprarenalis sinistra*.

v. suprarena'lis dex'tra [NA], right suprarenal vein: a vein that drains the right suprarenal gland into the inferior vena cava.

v. suprarena'lis sinis'tra [NA], left suprarenal vein: the vein that returns blood from the left suprarenal gland to the left renal vein.

v. suprascapula'ris [NA], suprascapular vein: the vein that accompanies the homonymous artery (sometimes as two veins that unite), opening usually into the external jugular, or occasionally into the subclavian vein; called also *v. transversa scapulae*.

ve'nae supratrochlea'les [NA], supratrochlear veins: two veins, each beginning in a venous plexus high up on the forehead and descending to the root of the nose, where it joins with the supraorbital to form the angular vein; called also *venae frontales*.

v. tempora'lis me'dia [NA], middle temporal vein: the vein that arises in the substance of the temporal muscle and passes down under the fascia to the zygoma, where it breaks through to join the superficial temporal vein.

ve'nae tempora'les profun'dae [NA], deep temporal veins: veins that drain the deep portions of the temporal muscle and empty into the pterygoid plexus.

ve'nae tempora'les superficia'les [NA], superficial temporal veins: veins that drain the lateral part of the scalp in the frontal and parietal regions, the tributaries forming a single superficial temporal vein in front of the ear, just above the zygoma. This descending vein receives the middle temporal and transverse facial veins and, entering the parotid gland, unites with the maxillary vein deep to the neck of the mandible to form the retromandibular vein.

v. termina'lis, *v. thalamostriata*.

v. testicu'laris, see *v. testicularis dextra* and *v. testicularis sinistra*.

TABLE OF VENAE (Concluded)

v. testicula'ris dex'tra [NA], right testicular vein: a vein that drains the right pampiniform plexus into the inferior vena cava.

v. testicula'ris sinis'tra [NA], left testicular vein: a vein that drains the left pampiniform plexus into the left renal vein.

v. thalamostria'ta [NA], thalamostriate vein: a vein that collects blood from the corpus striatum and thalamus, and joins with the choroid vein to form the internal cerebral veins; called also *v. terminalis*.

v. thoraca'lis latera'lis, *v. thoracica lateralis*.

ve'nae thora'cicae inter'nae [NA], internal thoracic veins: two veins formed by junction of the venae comitantes of the internal thoracic artery of either side; each continues along the artery to open into the brachiocephalic vein; called also (sing.) *v. mammaria interna*.

v. thora'cica latera'lis [NA], lateral thoracic vein: a large vein accompanying the lateral thoracic artery and draining into the axillary vein; called also *v. thoracalis lateralis*.

v. thoracoacromia'lis [NA], thoracoacromial vein: the vein that follows the homonymous artery and opens into the subclavian vein.

ve'nae thoracoepigas'tricae [NA], thoracoepigastric veins: long, longitudinal, superficial veins in the anterolateral subcutaneous tissue of the torso, which empty superiorly into the lateral thoracic and inferiorly into the femoral vein.

ve'nae thy'micae [NA], thymic veins: small branches from the thymus gland that open into the left brachiocephalic vein.

v. thyreo'i'dea i'ma, an occasional vein formed by high junction of the right and left inferior thyroid veins, and emptying usually into the left brachiocephalic vein.

ve'nae thyreo'i'deae inferio'res, see *v. thyroidea inferior*.

ve'nae thyreo'i'deae superio'res, 1. see *vena thyroidea superior*. 2. veins draining blood from the upper portion of the thyroid gland into the posterior facial vein.

v. thyroi'dea infe'rior [NA], inferior thyroid vein: either of two veins, left and right, that drain the thyroid plexus into the left and right brachiocephalic veins; occasionally they may unite into a common trunk to empty, usually, into the left brachiocephalic vein.

ve'nae thyroi'deae me'diae [NA], middle thyroid veins: veins that drain blood from the thyroid gland into the internal jugular vein.

v. thyroi'dea supe'rior [NA], superior thyroid vein: a vein arising from the upper part of the thyroid gland on either side, opening into the internal jugular vein, occasionally in common with the facial vein.

ve'nae tibia'les anterio'res [NA], anterior tibial veins: venae comitantes of the anterior tibial artery, which unite with the posterior tibial veins to form the popliteal vein.

ve'nae tibia'les posterio'res [NA], posterior tibial veins: venae comitantes of the posterior tibial artery, which unite with the anterior tibial veins to form the popliteal vein.

ve'nae trachea'les [NA], tracheal veins: small branches that drain blood from the trachea into the brachiocephalic vein.

ve'nae transver'sae col'li [NA], transverse cervical veins: veins that follow the transverse artery of the neck and open into the subclavian vein.

v. transver'sa facie'i [NA], transverse facial vein: a vein that passes backward with the transverse facial artery just below the zygomatic arch to join the retromandibular vein.

v. transver'sa scap'ulae, *v. suprascapularis*.

ve'nae tympan'icae [NA], tympanic veins: small veins from the tympanic cavity that pass through the petrotympanic fissure, open into the plexus around the temporomandibular articulation, and finally drain into the retromandibular vein.

ve'nae ulna'res [NA], ulnar veins: the venae comitantes of the ulnar artery, which unite with the radial veins at the elbow to form the brachial veins.

v. umbilica'lis, umbilical vein: former NA term for either of the paired veins that carry blood from the chorion to the sinus venosus and heart in the early embryo; they later fuse and a single vessel persisting in the umbilical cord carries all the blood from the placenta to the ductus venosus of the fetus. See *v. umbilicalis sinistra*.

v. umbilica'lis sinis'tra [NA], left umbilical vein of the fetus, the vein formed by fusion of the atrophied right umbilical vein with the left umbilical vein, which carries all the blood from the placenta to the ductus venosus.

ve'nae uteri'nae [NA], uterine veins: veins that drain the uterine plexus into the internal iliac veins.

ve'nae vaso'rum, small veins that return blood from the tissues making up the walls of the blood vessels themselves.

v. vertebra'lis [NA], vertebral vein: a vein that arises from the suboccipital venous plexus, passes with the vertebral artery through the foramina of the transverse processes of the upper six cervical vertebrae, and opens into the brachiocephalic vein.

v. vertebra'lis accesso'ria [NA], accessory vertebral vein: a vein that sometimes arises from a plexus formed around the vertebral artery by the vertebral vein, descends with the vertebral vein, and emerges through the transverse foramen of the seventh cervical vertebra to empty into the brachiocephalic vein.

v. vertebra'lis ante'rior [NA], anterior vertebral vein: a small vein arising from the venous plexus around the transverse processes of the upper cervical vertebrae, and descending to end in the vertebral vein.

ve'nae vesica'les [NA], vesical veins: veins passing from the vesical plexus to the internal iliac vein.

ve'nae vestibula'les [NA], vestibular veins: branches draining blood from the vestibule into the labyrinthine veins.

ve'nae vortico'sae [NA], vorticosae veins: four veins that pierce the sclera and carry blood from the choroid to the superior ophthalmic vein; called also *venae choroideae oculi* [NA alternative].

venacavogram (ve'nak-ka'vo-gram) the film obtained by venacavography.

venacavography (ve'nah-ka-vog'rah-fe) radiography of a vena cava, usually of the inferior vena cava.

venae (ve'ne) [L.] plural of *vena*.

Vena medinensis (ve'nah med'i-nen'sis) *Dracunculus medinensis*.

venation (ve-na'shun) [L. *vena* vein] the manner of distribution of the veins of a part.

venectasia (ve'nek-ta'ze-ah) phlebectasia; varicosity.

venectomy (ve-nek'to-me) phlebectomy.

vener (vè-nèr) in the construction of crowns or pontics, a layer of tooth-colored material, usually porcelain or acrylic resin, attached to the surface by direct fusion, cementation, or mechanical retention.

venenation (ven'è-na'shun) [L. *venenum* poison] poisoning; a condition of being poisoned.

veneniferous (ven'è-nif'er-us) [L. *venenum* poison + *ferre* to bear] carrying poison.

venenific (ven'è-nif'ik) [L. *venenum* poison + *facere* to make] forming poison.

Venenosa (ven'è-no'sah) [pl., L. *venenosus* poisonous] a term once used to designate venomous snakes collectively; thanatophidia.

venenosalivary (ven'è-no-sal'i-ver'e) venomosalivary.

venenosity (ven'è-nos'i'te) the condition of being venomous.

venenosus (ven'è-nus) [L. *venenosus*] venomous.

venenum (ve-ne'num), pl. *vene'na* [L.] a poison.

venepuncture (ven'e-punk'tūr) venipuncture.

venereal (ve-ne're-al) [L. *venereus*] due to or propagated by sexual contact; see under *disease*.

venereologist (ve-ne're-ol'o-jist) a practitioner who specializes in venereal disease.

venereology (ve-ne're-ol'o-je) the branch of medicine which deals with venereal disease.

venerology (ven'er-ol'o-je) venereology.

venerupin (ven'er-oo'pin) [*Venerupis* (L. *veneris*) the Venus shell + *-in*, suffix for chemical compounds] a toxic substance, believed to be an amine, found in certain Japanese pelecypods which were formerly placed in the genus *Venerupis*; this toxin, the exact chemical nature of which is unknown, is entirely distinct from the paralytic shellfish poison found in other bivalves.

venery (ven'er-e) [L. *venereus* pertaining to Venus] coitus; sexual intercourse.

venesection (ven'è-sek'shun) [L. *vena* vein + *sectio* cutting] phlebotomy.

venesuture (ven'è-su'tūr) phleborrhaphy.

veniplex (ven'i-pleks) [L. *vena* vein + *plexus* plexus] a venous plexus.

venipuncture (ven'i-punk'tūr) puncture of a vein.

venisection (ven'i-sek'shun) phlebotomy.

venisuture (ven'i-su'tūr) [L. *vena* vein + *sutura* stitch] phleborrhaphy.

veno- (ve'no) [L. *vena* vein] a combining form denoting relationship to a vein. See also words beginning *phlebo-*.

venoatrial (ve'no-a'tre-al) pertaining to the vena cava and the right atrium.

venoauricular (ve'no-aw-rik'u-lar) venoatrial.

venoclysis (ve-nok'li-sis) [*vena* + Gr. *klysis* injection] phlebotoclysis.

venofibrosis (ve'no-fi-bro'sis) a disease of the veins characterized by hyperplasia of the fibrous connective tissue of the median coat of the vein.

venogram (ve'no-gram) 1. phlebogram. 2. a venous-pulse tracing.

venography (ve-nog'rah-fe) phlebography. **intraosseous v.**, roentgenography of the veins after injection of the contrast medium into bone marrow at an appropriate site, such as the iliac crest, ischium, pubic bones, greater trochanter, spinous processes

of the vertebrae, or sternum. **portal v.**, portography. **spleenic v.**, splenic portography.

venom (ven'um) [L. *venenum* poison] a poison; specifically, a toxic substance normally secreted by a serpent, insect, or other animal. **Russell's viper v.**, the venom of Russell's viper, *Vipera russelli*, which acts *in vitro* as an intrinsic thromboplastin and is useful in defining deficiencies of blood coagulation Factor X. **snake v.**, the poisonous secretion of snakes, containing hemotoxins, hemagglutinins, neurotoxins, leukotoxins, or endothelotoxins. The venoms of various species have been used as hemostatics. See also *antivenomous serum*, under *serum*. **spider v.**, the venom of a spider such as *Latrodectus*, *Atrax*, *Ctenus*, and *Lycosa*.

venomization (ven'um-i-za'shun) treatment of a substance with snake venom.

venomosalivary (ven'o-mo-sal'i-ver'e) secreting a poisonous saliva.

venomotor (ve'no-mo'tor) pertaining to or producing constriction or dilatation of the veins.

venomous (ven'o-mus) secreting venom; poisonous.

veno-occlusive (ve'no-ō-kloo'siv) pertaining to or characterized by obstruction of the veins.

venoperitoneostomy (ve'no-per'i-to'ne-os'to-me) [*veno* + *peritoneum* + Gr. *stomoun* to provide with an opening, or mouth] anastomosis of the saphenous vein with the peritoneum for permanent drainage of the peritoneal cavity in ascites.

venopressor (ve-no-pres'or) 1. pertaining to venous blood pressure. 2. an agent that causes venous constriction.

venosclerosis (ve'no-sklē-ro'sis) phleboscrosis.

venose (ve'nōs) provided with veins.

venosinal (ve'no-si'nal) pertaining to the venae cavae and the right atrium of the heart.

venosity (ve-nos'i-te) 1. excess of venous blood in a part. 2. a plentiful supply of blood vessels or of venous blood.

venostasis (ve'no-sta'sis) [*veno* + Gr. *stasis* stopping] retardation of venous outflow from a part, as from the leg on standing when venous valves are incompetent; see *phlebostasis*.

venotomy (ve-not'o-me) phlebotomy.

venous (ve'nus) [L. *venosus*] of or pertaining to the veins.

venovenostomy (ve'no-ve-nos'to-me) phlebophlebostomy.

vent (vent) [Fr. *fente* slit] 1. any opening or outlet; especially the anus. 2. an opening that discharges pus. **pulmonic alveolar v's**, interalveolar pores.

Ventaire (ventār) trademark for a preparation of protokylol hydrochloride.

venter (ven'ter), pl. *ven'tres* [L. "belly"] 1. any belly-shaped part; [NA] a general term for a fleshy contractile part of a muscle. 2. the abdomen or stomach. 3. any hollowed part or cavity. **v. anterior mus'culi digas'trici** [NA], anterior belly of digastric muscle: the shorter belly of the digastric muscle, arising from the digastric fossa on the mandible and extending backward to join the posterior belly through an intermediate tendon attached to the hyoid bone. **v. fronta'lis mus'culi occipitofronta'lis** [NA], the frontal belly of the occipitofrontal muscle, originating from the galea aponeurotica and inserting into the skin of the eyebrows and the root of the nose. Called also *musculus frontalis*. **v. il'i**, the free (pelvic) portion of the sacropelvic surface of the ilium. **v. i'mus**, the lowermost of the great body cavities, the abdominal cavity (cavum abdominis). **v. infe'rior mus'culi omohyo'i'dei** [NA], the lowermost belly of the omohyoid muscle. **v. me'dius**, the middle of the great body cavities, the thoracic cavity (cavum thoracis). **v. mus'culi** [NA], belly of muscle: the fleshy contractile part of a muscle. **v. occipita'lis mus'culi occipitofronta'lis** [NA], the occipital belly of the occipitofrontal muscle, originating from the highest nuchal line of the occipital bone and inserting into the galea aponeurotica; called also *musculus occipitalis*. **v. poste'rior mus'culi digas'trici** [NA], posterior belly of digastric muscle: the longer belly of the digastric muscle, arising from the mastoid notch of the temporal bone and extending forward to join the anterior belly through an intermediate tendon attached to the hyoid bone. **v. propen'dens**, pendulous abdomen. **v. scap'ulae**, fossa subscapularis. **v. supe'rior mus'culi omohyo'i'dei** [NA], the uppermost belly of the omohyoid muscle. **v. supre'mus**, the uppermost of the great body cavities, the cranial cavity.

ventilation (ven'ti-la'shun) [L. *ventilatio*] 1. the process or act of supplying a house or room continuously with fresh air. 2. in respiratory physiology, the process of exchange of air between the lungs and the ambient air. *Pulmonary ventilation* (usually measured in liters per minute) refers to the total exchange, whereas *alveolar ventilation* refers to the effective ventilation of the alveoli, in which gas exchange with the blood takes place. 3. in psychiatry, the open discussion of grievances. **alveolar v.**, the amount of gas expelled from the alveoli to the outside of the body per minute. **downward v.**, that in which the outlets have places lower than those of the inlets. **exhausting v.**, ventilation by means of the exhausting fan or by some other

process which withdraws the foul air. **mechanical v.**, ventilation accomplished by extrinsic means as under positive end-expiratory pressure. **minute v.**, the total amount of gas (in liters) expelled from the lungs per minute. Called also *total ventilation*. **natural v.**, ventilation effected without any special appliance to render it certain. **plenum v.**, the supply of fresh air to a building by fan blowers. **upward v.**, that which introduces air below the place of its withdrawal. **vacuum v.**, that which is effected by the forced extraction of air.

ventilator (ven'ti-la'tor) an apparatus designed to qualify the air that is breathed through it or to assist or control pulmonary ventilation, either intermittently or continuously.

ventouse (vaw-too'z') [Fr.] a cupping glass.

ventrad (ven'trad) [L. *venter* belly + *ad* to] toward a belly, venter, or ventral aspect.

ventral (ven'tral) [L. *ventralis*] 1. pertaining to the belly or to any venter. 2. denoting a position more toward the belly surface than some other object of reference; same as *anterior* in human anatomy.

ventralis (ven-tra'lis) ventral; [NA] a general term used to designate a position closer to the belly surface. Cf. *anterior*.

ventralward (ven'tral-ward) ventrad.

ventri- see *ventro-*.

ventricle (ven'tri-k'l) a small cavity, such as one of the several cavities of the brain, or one of the lower chambers of the heart; called also *ventriculus*. **aortic v. of heart**, ventriculus sinister cordis. **v. of Arantius**, the fossa rhomboidea, especially its lower end; the eponym is also sometimes applied to the cavum septi pellucidi. **auxiliary v.**, an implanted pumping mechanism designed to assist the left ventricle of the heart in maintaining normal output, rate, and blood pressure; called also *booster heart*. **v's of the brain**, the cavities within the brain which are filled with cerebrospinal fluid, including the two lateral, the third, and the fourth ventricles. They are lined by ependyma which, in certain regions, is invaginated by vascular fringes of pia mater to form the choroid plexuses. The cavum septi pellucidi, to which the term ventricle is sometimes applied, is not a true ventricle. **v. of cord**, canalis centralis medullae spinalis. **double-outlet right v.**, incomplete transposition of the great vessels in which both the aorta and the pulmonary artery arise from the right ventricle, associated with a subaortic ventricular septal defect. In type I, the septal defect is posteroinferior to the crista supraventricularis and remote from the pulmonary valve. In type II, it is anterosuperior to the crista and close to the valve. **Duncan's v.**, **fifth v.**, cavum septi pellucidi. **first v. of cerebrum**, ventriculus lateralis cerebri. **fourth v. of cerebrum**, an irregularly shaped cavity in the rhombencephalon; see *ventriculus quartus cerebri* [NA]. **Galen's v.**, ventriculus laryngis. **v. of heart**, one of a pair of cavities, with thick muscular walls, that make up the bulk of the heart; see *ventriculus dexter cordis* and *ventriculus sinister cordis*. Called also *ventriculus cordis* [NA]. **v. of larynx**, ventriculus laryngis. **lateral v. of cerebrum**, the cavity in each hemisphere, derived (developed) from the cavity of the embryonic neural tube; see *ventriculus lateralis cerebri*. **left v. of heart**, ventriculus sinister cordis. **Morgagni's v.**, ventriculus laryngis. **pineal v.**, recessus pinealis. **right v. of heart**, ventriculus dexter cordis. **second v. of cerebrum**, ventriculus lateralis cerebri. **single v.**, cor triloculare biatriatum. **sixth v.**, Verga's v. **v. of Sylvius**, cavum septi pellucidi. **terminal v. of spinal cord**, ventriculus terminalis medullae spinalis. **third v. of cerebrum**, ventriculus tertius cerebri. **Verga's v.**, an occasional space between the corpus callosum and the fornix; called also *sixth v.* **Vieussens's v.**, cavum septi pellucidi.

ventricornu (ven'tri-kor'nu) [*ventri-* + L. *cornu* horn] cornu anterius medullae spinalis.

ventricornual (ven'tri-kor'nu-al) pertaining to the ventricornu.

ventricose (ven'tri-kōs) having an expansion or belly on one side.

ventricular (ven-trik'u-lar) pertaining to a ventricle.

ventriculi (ven-trik'u-li) [L.] plural of *ventriculus*.

ventriculitis (ven-trik'u-li'tis) inflammation of a ventricle, especially of a ventricle of the brain.

ventriculo- (ven-trik'u-lo) [L. *ventriculus*, dim. of *venter* belly] a combining form denoting relationship to a ventricle, of the heart or brain.

ventriculoatriostomy (ven-trik'u-lo-a'tre-os'to-me) surgical creation of a passage, by means of subcutaneously placed catheters with a one-way valve, permitting drainage of cerebrospinal fluid from a cerebral ventricle to the right atrium by way of the jugular vein; performed for relief of hydrocephalus.

ventriculocisternostomy (ven-trik'u-lo-sis'ter-nos'to-me) surgical establishment of a communication between the third ventricle and the cisterna interpeduncularis; see *ventriculostomy*.

ventriculocordectomy (ven-trik'u-lo-kor-dek'to-me) Chevalier Jackson operation for laryngeal stenosis with bilateral recurrent paralysis, done by excising with the punch forceps the entire

ventricular floor anterior to the vocal process and anteroexternal surface of the arytenoid.

ventriculogram (ven-trik'ū-lo-gram) a roentgenogram of the cerebral ventricles.

ventriculography (ven-trik'ū-log'rah-fe) [*ventriculo* + Gr. *graphein* to write] 1. roentgenography of the head following removal of cerebrospinal fluid from the cerebral ventricles and its replacement by air or other contrast medium. 2. roentgenography of a ventricle of the heart after injection of a contrast medium.

ventriculometry (ven-trik'ū-lom'ē-tre) [*ventriculo* + Gr. *metron* measure] the measurement of the intraventricular (intracranial) pressure.

ventriculomyotomy (ven-trik'ū-lo-mi-ot'o-me) incision of the obstructing muscular band in treatment of subaortic stenosis.

ventriculonector (ven-trik'ū-lo-nek'ter) [*ventriculo* + L. *nector* joiner] bundle of His.

ventriculopuncture (ven-trik'ū-lo-punk'tūr) puncture of a lateral ventricle of the brain by the insertion of a needle.

ventriculoscope (ven-trik'ū-lo-skōp) an endoscope for examining the cerebral ventricles and for cauterizing the choroid plexus.

ventriculoscopy (ven-trik'ū-lo-skōp) [*ventriculo* + Gr. *skopein* to examine] direct examination of the cerebral ventricles by means of an endoscope or cystoscope.

ventriculostium (ven-trik'ū-lost'i-um) [*ventriculo* + L. *ostium* mouth] the development of an opening between one of the cerebral ventricles and the external surface of the brain.

ventriculostomy (ven-trik'ū-lost'o-me) [*ventriculo* + Gr. *stomai* to provide with an opening, or mouth] the operation of establishing a free communication between the floor of the third ventricle and the underlying cisterna interpeduncularis; for the treatment of hydrocephalus.

ventriculosubarachnoid (ven-trik'ū-lo-sub'ah-rak'noid) pertaining to the cerebral ventricles and the subarachnoid spaces.

ventriculotomy (ven-trik'ū-lo-tō-me) [*ventriculo* + Gr. *tomē* a cutting] incision of a ventricle of the heart.

ventriculovenostomy (ven-trik'ū-lo-vē-nos'tō-me) creation of a communication from a cerebral ventricle to the internal jugular vein, for the treatment of hydrocephalus.

ventriculovenous (ven-trik'ū-lo-ve'nus) pertaining to or communicating with a cerebral ventricle and a vein.

ventriculus (ven-trik'ū-lus), pl. *ventriculi* [L., dim. of *venter* belly] [NA] 1. the stomach: the musculomembranous expansion of the alimentary canal between esophagus and duodenum. See also *stomach*. 2. a small cavity in an organ; called also *ventricle*.

v. cor'dis [NA], ventricle of heart: one of the pair of cavities, with thick muscular walls, that make up the bulk of the heart. See *v. dexter cordis* and *v. sinister cordis*.

v. dex'ter cer'ebri, the ventriculus lateralis cerebri of the right cerebral hemisphere.

v. dex'ter cor'dis [NA], right ventricle of heart: the cavity of the heart that propels the blood through the pulmonary trunk and arteries into the lungs. See Plate XX.

v. laryn'gis [NA], **v. laryn'gis** [Morgagni], ventricle of larynx: a lateral evagination of mucous membrane between the vocal and vestibular folds, reaching nearly to the angle of the thyroid cartilage.

v. latera'lis cer'ebri [NA], lateral ventricle of cerebrum: the cavity in each cerebral hemisphere, derived (developed) from the cavity of the embryonic neural tube; it consists of a pars centralis and three horns—anterior, inferior, and posterior in the frontal, temporal, and occipital lobes respectively. Each lateral ventricle communicates with the third ventricle by an interventricular foramen through which also the choroid plexuses of the lateral ventricles become continuous with that of the third ventricle. Cerebrospinal fluid formed in the lateral ventricle flows into the third ventricle through the interventricular foramina.

v. quar'tus cer'ebri [NA], fourth ventricle of cerebrum: an irregularly shaped cavity in the rhombencephalon, between the medulla oblongata, the pons, and the isthmus in front, and the cerebellum behind; it is continuous with the central canal of the cord below and with the cerebral aqueduct above, and through its lateral and median apertures it communicates with the subarachnoid space.

v. sinis'ter cer'ebri, the ventriculus lateralis cerebri of the left cerebral hemisphere.

v. sinis'ter cor'dis [NA], left ventricle of heart: the cavity of the heart that propels the blood out through the aorta into the systemic arteries. See Plate XX.

v. termina'lis medul'lae spina'lis [NA], terminal ventricle of spinal cord: a saclike expansion of the central canal of the spinal cord within the conus medullaris.

v. ter'tius cer'ebri [NA], third ventricle of cerebrum: a narrow cleft below the corpus callosum, within the diencephalon between the two thalami. Its floor is formed by the hypothalamus, its anterior wall by the lamina terminalis, and its roof by ependyma. It communicates with the lateral ventricles by the interventricular foramina, and with the fourth ventricle by the cerebral aqueduct.

ventricumbent (ven'tri-kum'bent) [*ventri* + L. *cumbere* to lie] lying upon the belly; prone.

ventriduct (ven'tri-duk't) [*ventri* + L. *ducere* to draw] to bring or carry ventrad.

ventriduction (ven'tri-duk'shun) the act of drawing a part ventrad.

ventriflexion (ven'tri-flek'shun) [*ventri* + *flexion*] flexion toward the belly or ventral surface.

ventrimesal (ven'tri-me'sal) pertaining to the ventrimeson.

ventrimeson (ven-trim'e-son) [*ventri* + Gr. *meson* middle] the middle line on the ventral surface.

ventro-, ventri- [L. *venter* belly or abdomen] combining form denoting relationship to the belly, or to the front (anterior) aspect of the body.

ventrocystorrhaphy (ven'tro-sis-tor'ah-fe) the stitching of a cyst, or of the bladder, to the abdominal wall.

ventrodorsad (ven'tro-dor'sad) from the ventral toward the dorsal aspect.

ventrodorsal (ven'tro-dor'sal) pertaining to the ventral and dorsal surfaces.

ventrofixation (ven'tro-fiks-a'shun) [*ventro* + L. *fixare* to fix] the operation of suspending the retroplaced uterus to the abdominal wall. Cf. *hysteropexy*.

ventrohysteropexy (ven'tro-his'ter-o-pek'se) ventrofixation of the uterus.

ventroinguinal (ven'tro-ing'gwī-nal) pertaining to the abdomen and the inguinal region.

ventrolateral (ven'tro-lat'er-al) both ventral and lateral.

ventromedian (ven'tro-me'de-an) both ventral and median.

ventroposterior (ven'tro-pos-te're-or) both ventral and posterior (caudal).

ventroptosis (ven'tro-ptō'se-ah) [*ventro* + Gr. *ptōsis* falling + *-ia*] gastropptosis.

ventroptosis (ven'tro-ptō'sis) gastropptosis.

ventroscopy (ven-tros'kō-pe) [*ventro* + Gr. *skopein* to examine] illumination of the abdominal cavity for the purpose of examination.

ventrose (ven'trōs) [L. *ventrosus*] having a belly-like expansion.

ventrosuspension (ven'tro-sus-pen'shun) ventrofixation.

ventrotomy (ven-trot'o-me) [*ventro* + Gr. *tomē* a cutting] celiotomy.

ventrovesicofixation (ven'tro-ves'i-kō-fiks-a'shun) [*ventro* + L. *vesica* bladder + *fixatio* fastening] (*obs.*) the operation of suturing the uterus to the bladder and the abdominal wall. Cf. *hysteropexy* and *ventrohysteropexy*.

venturimeter (ven'tu-rim'ē-ter) [G. B. Venturi (Italian physicist, 1746-1822) + Gr. *metron* measure] an instrument for measuring the flow of liquids, as of the blood in vessels, by relating difference of pressures between a constricted and a nonconstricted portion of a tube through which fluid is flowing.

venula (ven'u-lah), pl. *venulae* [L., dim. of *vena*] [NA] venule: any of the small vessels that collect blood from the capillary plexuses and join to form veins.

v. macula'ris infe'rior [NA], inferior macular venule: the inferior venule draining blood from the macula retinae.

v. macula'ris supe'rior [NA], superior macular venule: the superior venule draining blood from the macula retinae.

v. media'lis ret'inae [NA], medial venule of retina: a small branch draining blood from the central region of the retina to the central retinal vein; called also *v. retinae medialis*.

v. nasa'lis ret'inae infe'rior [NA], inferior nasal venule of retina: a small vein returning blood from the inferior nasal region of the retina to the central vein.

v. nasa'lis ret'inae supe'rior [NA], superior nasal venule of retina: a small vein returning blood from the superior nasal region of the retina to the central vein.

ven'ulae rec'tae re'nis [NA], straight venules of kidney: straight veins from the papillary part of the kidney, emptying into the arcuate veins.

v. ret'inae media'lis, *v. medialis retinae*.

ven'ulae stella'tae re'nis [NA], stellate venules of kidney: veins on the surface of the kidney that collect blood from the superficial parts of the cortex and empty into the interlobular veins; called also *venae stellatae renis*.

v. tempora'lis ret'inae infe'rior [NA], inferior temporal venule of retina: a small vein returning blood from the inferior temporal region of the retina to the central vein.

v. tempora'lis ret'inae supe'rior [NA], superior temporal venule of retina: a small vein returning blood from the superior temporal region of the retina to the central vein.

venulae (ven'u-le) [L.] plural of *venula*.

venular (ven'u-lar) pertaining to, composed of, or affecting venules.

venule (ven'ül) any of the small vessels that collect blood from the capillary plexuses and join to form veins; called also *venula* [NA].

macular v., inferior, venula macularis inferior.

macular v., superior, venula macularis superior.

medial v. of retina, venula medialis retinae.

nasal v. of retina, inferior, venula nasalis retinae inferior.

nasal v. of retina, superior, venula nasalis retinae superior.

postcapillary v., a venous capillary.

stellate v's of kidney, venulae stellatae renis.

straight v's of kidney, venulae rectae renis.

temporal v. of retina, inferior, venula temporalis

retinae inferior. **temporal v. of retina, superior**, venula temporalis retinae superior.

Veracillin (ver-'ah-sil'in) trademark for a preparation of dicloxacillin sodium.

Veraguth's fold (va-'rah-goots) [Otto Veraguth, Zurich neurologist, 1870–1940] see under *fold*.

Veralba (ver-al'bah) trademark for a mixture of protoveratrin A and B.

verapamil (ver-ap'ah-mil) chemical name: α -[3-[(2-(3,4-dimethoxyphenyl) ethyl) methylamino] propyl] - 3, 4 - dimethoxy - α - (1-methylethyl)benzeneacetoneitrile; a coronary vasodilator, $C_{27}H_{38}N_2O_4$, used in the treatment and prophylaxis of angina of effort.

veratroidine (ver-'ah-troi'din) a crystallizable base, $C_{32}H_{53}NO_8$, from the liliaceous plants *Veratrum album* L. and *V. viride* Aiton, a powerful nerve stimulant and cardiac inhibitor.

Veratrum (ve-ra'trum) [L.] a genus of poisonous liliaceous plants, including *V. album* L., or European white hellebore, and *V. viride* Aiton, or American or green hellebore, both of which are the source of antihypertensive alkaloids.

verbal (ver'bal) [L. *verbum*] consisting of words; pertaining to words or speech.

verbenol (ver-be'no'l) a terpene alcohol, $(CH_3)_2C:C_6H_6(OH) \cdot CH_3$, from *Boswellia carterii* Birdw. (Burseraceae), a tree of southern Europe, Arabia, and Somali; a source of the biblical frankincense.

verbenone (ver-be'nōn) a terpene ketone, $(CH_3)_2C:C_6H_5O \cdot CH_3$, from *Verbena triphylla*, an American herb.

verbigeration (ver-bij'er-a'shun) [L. *verbigerare* to chatter] the repetition of meaningless words and sentences; called also *catologia*. Cf. *polyphrasia*.

verbomania (ver'bo-ma'ne-ah) [L. *verba* word + Gr. *mania* madness] morbid talkativeness.

Vercyte (ver'sit) trademark for a preparation of pipobroman.

verdigris (ver'dī-gris) [Fr., from *vert de Grèce* green of Greece] a blue, hydrated, basic copper acetate, $(CH_3 \cdot COO)_2 \cdot Cu \cdot Cu(OH)_2$; astringent.

verdohem (ver'do-he'min) a compound analogous to hemin, in which one porphyrin ring is open.

verdohemochromogen (ver'do-he'mo-kro'mo-jen) a compound analogous to hemochromogen, in which one porphyrin ring is open.

verdohemoglobin (ver'do-he'mo-glo'bin) a compound analogous to hemoglobin, in which one porphyrin ring is open.

verdoperoxidase (ver'do-per-ok'sī-dās) [Fr. *vert* green + *peroxidase*] an enzyme (peroxidase) occurring in leukocytes and having a greenish color.

verdunization (ver'dun-i-za'shun) [*Verdun*, a French city besieged during World War I] (*obs.*) the addition of small amounts of chlorine and potassium permanganate to water for the purpose of sterilizing it.

Verga's lacrimal groove, ventricle (ver'gahz) [Andrea Verga, Italian neurologist, 1811–1895] see under *groove* and *ventricle*.

verge (verj) a circumference, or ring. **anal v.**, the external or distal boundary of the anal canal; the line where the walls of the anus come in contact during the normal state of apposition.

vergence (ver'jens) [L. *vergere* to be inclined] disjunctive movement of the eyes in opposite directions, as in convergence and divergence, that is, in adjusting from far to near or from near to far vision.

vergency (ver'jen-se) vergence.

Verheyen's stars (ver-hi'enz) [Philippe Verheyen, Flemish anatomist, 1648–1710] venulae stellatae renis.

Verhoeff's operation, stain (ver'hefz) [Frederick Herman Verhoeff, American ophthalmologist, born 1874] see under *operation* and *Table of Stains*.

Veriloid (ver'i-loid) trademark for a preparation of alkavervir.

Vermale's operation (ver-malz') [Raymond de Vermale, French surgeon of the 18th century] see under *operation*.

Vermes (ver'mēz) obsolete term for the group of invertebrates called worms.

vermetoid (ver'mē-toid) wormlike.

vermian (ver'me-an) pertaining to the vermis of the cerebellum.

Vermicella (ver'mī-sel'ah) [L.] a genus of mildly venomous Australian serpents.

vermicidal (ver'mī-si'dal) destructive to worms.

vermicide (ver'mī-sid) [*vermis* + L. *caedere* to kill] an anthelmintic drug or medicine destructive to intestinal animal parasites.

vermicular (ver-mik'u-lar) [L. *vermicularis*, from *vermis* worm] wormlike in shape or appearance.

vermiculation (ver-mik'u-la'shun) [L. *vermiculatio*, from *vermis* worm] peristaltic or wormlike movements, as of the intestine; peristalsis.

vermicule (ver'mī-kūl) a wormlike structure; see also *ookinete*. **traveling v.**, ookinete.

vermiculose (ver-mik'u-lōs) vermiculous.

vermiculous (ver-mik'u-lus) 1. wormlike. 2. infected with worms.

vermiform (ver'mi-form) [L. *vermiformis*, from *vermis* worm + *forma* shape] shaped like a worm.

vermifugal (ver-mif'u-gal) [*vermis* + L. *fugare* to put to flight] expelling worms or intestinal animal parasites.

vermifuge (ver'mī-fūj) an agent that expels worms or intestinal animal parasites; an anthelmintic.

vermilion (ver-mil'yun) cinnabar, or mercuric sulfide, HgS , a red pigment; see also under *border*.

vermilionectomy (ver-mil'yon-ek'to-me) excision of the vermilion border of the lip, the surgically created defect being resurfaced by advancement of the undermined labial mucosa.

vermin (ver'min) [L. *vermis* worm] an external animal parasite; animal ectoparasites collectively.

verminal (ver'mī-nal) pertaining to or due to worms; pertaining to or due to vermin.

vermination (ver'mī-na'shun) [L. *verminatio*] infection with worms; infestation with vermin.

verminosis (ver'mī-no'sis) vermination.

verminotic (ver'mī-not'ik) pertaining to or caused by infection with worms; pertaining to or caused by infestation with vermin.

verminous (ver'mī-nus) [L. *verminosus*] pertaining to, due to, or abounding in worms; pertaining to, due to, or abounding in vermin.

vermis (ver'mis) [L.] a worm or wormlike structure; often used alone to designate the vermis cerebelli. **v. cerebel'li** [NA], the median part of the cerebellum, between the two hemispheres; it comprises the lingula, lobulus centralis, culmen, declive, folium vermis, tuber vermis, pyramis vermis, uvula vermis, and nodulus. Called also *cauda cerebelli* and *vermiform process of cerebellum*.

inferior v., the inferior aspect of the vermis cerebelli, from the tuber vermis to the nodulus. **superior v.**, the superior aspect of the vermis cerebelli, from the lingula to the folium vermis.

vermix (ver'miks) appendix vermiformis.

vermography (ver-mog'rah-fe) roentgenography of the vermiform appendix.

vernal (ver'nal) [L. *vernalis* of the spring] pertaining to or occurring in the spring.

Vernes' test (vārnz) [Arthur Veres, French physician, born 1879] see under *tests*.

Vernet's syndrome (ver-nāz') [Maurice Vernet, French neurologist, born 1887] see under *syndrome*.

Verneuil's canals, etc. (ver-na'ēz) [Aristide August Stanislaus Verneuil, French surgeon, 1823–1895] see under *canal*, *disease*, and *neuroma*.

vernier (ver'ne-er) [Pierre Vernier, French physicist, 1580–1637] a finely graduated scale accessory to a more coarsely graduated one for measuring fractions of the divisions of the latter.

vernin (ver'nin) a pentoside of adenine found in *Vicia* seedlings.

vernix (ver'niks) [L.] varnish. **v. caseo'sa** ["cheesy varnish"], an unctuous substance composed of sebum and desquamated epithelial cells, which covers the skin of the fetus.

Vernonia anthelmintica Willd. (ver-no'ne-ah an'thel-min'ti-kah) a plant called *somraj* in India; it is anthelmintic. Also used there for skin diseases and leprosy and as an abortifacient.

Verocay bodies (ver'o-ka) [José Verocay, Prague pathologist, 1876–1927] see under *body*.

vérole (va-rōl') [Fr.] syphilis. **v. nerveuse** neurosyphilis.

Veronicella (ve-ron'i-sel'lah) a genus of slugs. **V. leydig'i**, an intermediate host of *Angiostrongylus cantonensis* in the Pacific, especially in Tahiti and Hawaii.

verruca (vē-roo'kah), pl. *verru'cae* [L.] 1. an epidermal tumor caused by a papillomavirus; the term is also loosely applied to any of various benign, epidermal proliferations of nonviral etiology, as *verruca senilis* (seborrheic keratosis). Called also *wart*, or *common wart*. 2. one of the wartlike elevations developing on the endocardium in various types of endocarditis. **v. acumina'ta**, condyloma acuminatum. **v. digita'ta**, a wart with finger-like excrescences growing from its surface. **v. filifor'mis**, a wart with soft, thin, threadlike projections on its surface. **v. gla'bra** (*obs.*), a wart with a smooth surface. **v. necrogen'ica**, tuberculosis verrucosa. **v. peru'a'na**, **v. peruvia'na**, *verruca peruana*. **v. pla'na**, **v. pla'na juveni'lis**, a small, smooth, usually skin colored or light brown, slightly raised wart sometimes occurring in great numbers, on the face, neck, back of the hands, wrists, and knees; seen most frequently in children but also in adults. Called also *flat wart*. See also *epidermodysplasia verruciformis*. **v. planta'ris**, plantar wart: a viral epidermal tumor on the sole. **v. seborrhe'ica**, seborrheic keratosis. **v. seni'lis**, seborrheic keratosis. **v. vulga'ris**, former name for *verruca*, or *common wart*.

verrucae (vē-roo'se) [L.] plural of *verruca*.

verruciform (vē-roo'si-form) [L. *verruca* wart + *forma* form] resembling or shaped like a *verruca*, or wart.

verrucose (ver'oo-kōs) [L. *verrucosus*] verrucous.

verrucosis (ver'oo-ko'sis) a condition marked by the presence of multiple warts, or verrucae.

verrucous (ver'oo-kus) rough; warty.

verruca (vē-roo'gah) [Sp.] verruca. **v. perua'na**, one of the characteristic hemangioma-like tumors or nodules which are sometimes the first manifestations of Carrión's disease (bartonellosis).

Versapen (ver'sah-pen) trademark for preparations of hetacilin.

versicolor (ver-sik'o-lor) [L. *vertere* to turn + *color* color] variegated; changing color.

version (ver-zhun) [L. *versio*] change of direction. In obstetrics, change of the polarity of the fetus with reference to the body of the mother, in order to convert an abnormal or relatively abnormal relation into a normal or relatively normal relation. **abdominal v.**, external v. **bimanual v.**, version done by combined external and internal manipulation, the cervix being open enough to admit the hand; called also *combined v.* **bipolar v.**, version done by purely external manipulation or by combined internal and external manipulation. **cephalic v.**, version in which the fetal head is brought down into the maternal pelvis. **combined v.**, bimanual v. **Denman's spontaneous v.**, see under *evolution*. **external v.**, manipulation of the fetal body applied through the abdominal wall of the mother. **internal v.**, turning of the fetus effected by the hand or fingers inserted through the dilated cervix. **pelvic v.**, version done by manipulating the buttocks of the fetus. **podalic v.**, version in which one or both legs of the fetus are brought down into the maternal pelvis. **Potter v.**, podalic version in head presentation when the cervix is fully effaced and dilated. **spontaneous v.**, conversion of an abnormal position of the fetus into a normal or relatively normal one, occurring without the aid of manipulation. **Wigand's v.**, external conversion of a transverse lie into a cephalic presentation, accomplished by pushing the fetal head down with one hand and its buttocks up with the other; called also *Wigand's maneuver*.

vertebra (ver'tē-brāh, pl. *ver'tebrae* [L.] any of the thirty-three bones of the spinal column (columna vertebralis), comprising the seven cervical, twelve thoracic, five lumbar, five sacral, and four coccygeal vertebrae. **abdominal vertebrae**, vertebrae lumbales. **basilar v.**, the lowest or last of the lumbar vertebrae. **caudal vertebrae**, caudate vertebrae, vertebrae coccygeae. **cervical vertebrae**, *ver'tebrae cervica'les* [NA], the upper seven vertebrae, constituting the skeleton of the neck. **ver'tebrae coccyg'ae [NA], **coccygeal vertebrae**, the lowest segments of the vertebral column, comprising three to five rudimentary vertebrae which form the coccyx. **ver'tebrae col/li**, vertebrae cervicales. **cranial v.**, the segments of the skull and facial bones, by some regarded as modified vertebrae. **v. denta'ta**, the second cervical vertebra (axis [NA]). **dorsal vertebrae**, vertebrae thoracicae. **false vertebrae**, the vertebrae that become fused, i.e., the sacral and coccygeal vertebrae. **ver'tebrae lumba'les [NA], **lumbar vertebrae**, the five vertebrae between the thoracic vertebrae and the sacrum. **v. mag'num**, os sacrum. **odontoid v.**, the second cervical vertebra (axis [NA]). **v. pla'na**, a condition of spondylitis in which the body of the vertebra is reduced to a sclerotic disk; often due to eosinophilic granuloma. **v. prom'inens [NA], **prominent v.**, the seventh cervical vertebra; so called because of the length of its spinous process. **sacral vertebrae**, *ver'tebrae sacra'les* [NA], the vertebrae below the lumbar vertebrae (usually five in number), which normally fuse to form the sacrum. **sternal v.**, sternebra. **terminal v.**, great, os sacrum. **ver'tebrae thoraca'les**, **thoracic vertebrae**, vertebrae thoracicae. **ver'tebrae thora'cicae [NA], thoracic vertebrae: the vertebrae, usually twelve in number, situated between********

Typical (sixth) thoracic vertebra viewed from above
(King & Showers).

the cervical and the lumbar vertebrae, giving attachment to the ribs and forming part of the posterior wall of the thorax; called also *vertebrae thoracales*. **tricuspid v.**, the sixth cervical vertebra

of quadrupeds. **true vertebrae**, the vertebrae that normally remain unfused throughout life, i.e., the cervical, thoracic, and lumbar vertebrae.

vertebrae (ver'tē-bre) [L.] plural of *vertebra*.

vertebral (ver'te-bral) [L. *vertebralis*] of or pertaining to a vertebra.

vertebrarium (ver'tē-bra're-um) [L.] the vertebral column.

vertebrarterial (ver'tē-brar-te're-al) pertaining to the vertebral artery.

Vertebrata (ver'tē-bra'tah) a subphylum of the Chordata comprising all animals that have a vertebral column, including mammals, birds, reptiles, amphibians, and fishes.

vertebrate (ver'tē-brāt) [L. *vertebratus*] 1. having a vertebral column. 2. an animal having a vertebral column; any member of the Vertebrata.

vertebrated (ver'tē-brāt'ed) made up of joints resembling the vertebrae.

vertebrectomy (ver'tē-brek'to-me) [*vertebro-* + Gr. *ektomē* excision] excision of a vertebra.

vertebro- [L. *vertebra*, from *vertere* to turn] a combining form denoting relationship to a vertebra, or to the vertebral column.

vertebroarterial (ver'tē-bro-ar-te're-al) vertebrarterial.

vertebrobasilar (ver'tē-bro-bas'i-lar) pertaining to or involving the vertebral and basilar arteries.

vertebrochondral (ver'tē-bro-kon'dral) pertaining to a vertebra and a costal cartilage.

vertebrocostal (ver'tē-bro-kos'tal) [*vertebro-* + L. *costa* rib] pertaining to a vertebra and a rib.

vertebrodidyms (ver'tē-bro-did'i-mus) [*vertebro-* + Gr. *didymos* twin] a twin monster united in the region of the spinal column.

vertebrodymus (ver'tē-brod'i-mus) vertebrodidymus.

vertebrofemoral (ver'tē-bro-fem'or-al) relating to the vertebrae and the femur.

vertebrogenic (ver'tē-bro-jen'ik) arising in a vertebra or in the vertebral column.

vertebroiliac (ver'tē-bro-il'e-ak) pertaining to the vertebrae and the ilium.

vertebromammary (ver'tē-bro-mam'er-e) pertaining to or extending between the vertebral column and the pectoral region.

vertebrosacral (ver'tē-bro-sa'kral) pertaining to the vertebrae and the sacrum.

vertebrosternal (ver'tē-bro-ster'nal) pertaining to the vertebrae and the sternum.

vertex (ver'teks), pl. *ver'tices* [L.] a summit or top; used as a general term in anatomical nomenclature. Sometimes used alone to designate the top of the head (*vertex crani*). **v. of bony cranium**, v. *cranii ossei*. **v. cor'dis**, vortex cordis. **v. of cornea**, v. *cor'neae* [NA], the central, thinner portion of the cornea. **v. cra'nii [NA], the top or crown of the head. **v. cra'nii os'sei** [NA], vertex of bony cranium: the highest point of the skull; although its position varies somewhat in different skulls, it is generally located on the sagittal suture, usually near the midpoint of the suture. **v. of urinary bladder**, v. *vesi'cae urina'riae*, apex vesicae urinariae.**

vertical (ver-ti-kal) 1. perpendicular to the plane of the horizon. 2. relating to the vertex.

verticalis (ver'ti-ka'lis) [L.] vertical, or perpendicular to the plane of the horizon; [NA] a general term used in reference to structures with the body in the anatomical, that is, upright, position.

verticillate (ver-tis'i-lāt) [L. *vertex* a whorl] arranged in the form of a whorl.

Verticillium (ver'ti-sil'e-um) a genus of imperfect fungi of the order Moniliales, family Moniliaceae, some species of which cause apple wilt. **V. gra'phii**, a species of uncertain identity, which is considered by some to be a species of *Trichosporon*, sometimes reported in otitis externa and mycotic keratitis.

verticine (ver'ti-sin) a crystalline alkaloid, C₂₇H₄₅NO₃, from *Fritillaria verticillata* Willd. (Liliaceae), a bulbous herb.

verticomental (ver'ti-ko-men'tal) pertaining to the vertex and the chin.

vertiginous (ver-tij'i-nus) [L. *vertiginosus*] pertaining to or affected with vertigo.

vertigo (ver'ti-go, ver-ti'go) [L. *vertigo*] an illusion of movement; a sensation as if the external world were revolving around the patient (*objective vertigo*) or as if he himself were revolving in space (*subjective vertigo*). The term is sometimes erroneously used to mean any form of dizziness. Vertigo may result from diseases of the inner ear or may be due to disturbances of the vestibular centers or pathways in the central nervous system. **v. ab au're lae'so**, Meniere's disease. **v. ab stom'acho lae'so**, stomachal v. **alternobaric v.**, a transient, true, whirling vertigo sometimes affecting those (caisson workers, air crew members, etc.) subjected to large, rapid variations in barometric pressure; called also *pressure v.* **angiopathic v.**, vertigo due

to arteriosclerosis of the cerebral vessels. **apoplectic v.**, scotodinia. **arteriosclerotic v.**, angiopathic v. **auditory v.**, **aural v.**, Meniere's disease. **benign paroxysmal positional (or postural) v.**, recurrent vertigo and nystagmus occurring when the head is placed in certain positions, usually not associated with lesions of the central nervous system. **cardiac v.**, vertigo due to some chronic disease of the heart. **cardiovascular v.**, vertigo due to sclerosis of the blood vessels and heart. **central v.**, vertigo due to disease of the central nervous system. **cerebral v.**, that which is due to some brain disease. **encephalic v.**, a sensation of movement of tissues within the skull, as of the brain turning over and over, or round and round. **endemic paralytic v.**, Gerlier's disease. **epidemic v.**, an epidemic condition characterized chiefly by vertigo but with some nausea and vomiting. See *epidemic nausea*, under *nausea*. Cf. *nausea epidemica*. **epileptic v.**, that which attends or follows an epileptic attack. **essential v.**, a vertigo, often severe, but of no discoverable cause; probably due to some disease or lesion in a brain center. **galvanic v.**, voltanic v. **gastric v.**, a form associated with disease or disorder of the stomach. **height v.**, dizziness (not a true vertigo) felt on looking down from a high location. **horizontal v.**, that which comes on when a person lies down. **hysterical v.**, vertigo associated with hysterical symptoms, often of a bizarre form. **labyrinthine v.**, a form associated with disease of the labyrinth of the ear. See *Meniere's disease*, under *disease*. **laryngeal v.**, tussive syncope. **lateral v.**, that which is caused by rapidly passing a row of similar objects, as a fence or series of pillars. **lithemic v.**, that which is associated with gout and lithemia. **mechanical v.**, vertigo due to long-continued turning or vibration of the body, as in seasickness. **neurasthenic v.**, a subjective form of vertiginous sensation associated with neurasthenia. **nocturnal v.**, a sensation of falling occurring as the subject is going to sleep. **objective v.**, a form in which the objects seen by the patient seem to be moving around him. **ocular v.**, a form due to eye disease, especially to paralysis of or lack of balance in the eye muscles. **organic v.**, vertigo due to vestibular brain disease or to tabes dorsalis. **paralyzing v.**, Gerlier's disease. **peripheral v.**, vestibular v. **pilot's v.**, spatial disorientation. **positional v.**, postural v. **postural v.**, vertigo associated with a specific position of the head in space or changes in the position of the head in space; called also *positional v.* **pressure v.**, alternobaric v. **primary v.**, vertigo resulting from a stimulus, e.g., an active disease process, within the vestibular system of the ear, and independent of body movement. **residual v.**, vertigo associated with motion, resulting from hypofunction or absence of vestibular sensory or neural elements; when it occurs only in one plane of movement, it is called *postural v.* **riders' v.**, motion sickness. **rotary v.**, **rotatory v.**, vertigo in which there is a definite feeling of rotation. **sham-movement v.**, vertigo attended by a sensation as if objects were circling around the body. **special sense v.**, aural (Meniere's disease) or ocular v. **stomachal v.**, vertigo associated with a disorder of the digestive system. **subjective v.**, that in which the patient seems to himself to be turning round and round. **systematic v.**, rotary v. **tenebriic v.**, scotodinia. **toxic v.**, **toxic v.**, a form of vertigo which results from poisoning, alcoholism, uremia, or lithemia. **vertical v.**, that which is caused by looking up or down at a distant object. **vestibular v.**, vertigo due to disturbances of the vestibular centers or pathways in the central nervous system; called also *peripheral v.* **villous v.**, that which is caused by a functional derangement of the liver. **voltaic v.**, an inclination of the head toward the shoulder on the side of the positive pole when a galvanic current is applied to the vestibular fibers of the eighth nerve.

vertigraphy (ver-tig'rah-fe) [L. *vertigo* a whirling + Gr. *graphein* to write] see *body section roentgenography*, under *roentgenography*.

verumontanitis (ve'ru-mon'tah-ni'tis) inflammation of the verumontanum (colliculus seminalis).

verumontanum (ve'ru-mon-ta-num) [L. "mountain ridge"] colliculus seminalis.

vesalian (ve-sa'le-an) named in honor of Andreas Vesalius, as the vesalian bone (os vesalianum) or vein.

vesalianum (ve-sa'le-a-num) [Andreas Vesalius] a name applied to several sesamoid bones: one on the outer border of the foot between the cuboid and fifth metatarsal bone, and one (sometimes more) in the tendon of origin of the gastrocnemius muscle.

Vesalius (ve-sa'le-us), Andreas (1514-1564) a Flemish anatomist and physician, the most eminent anatomist of the 16th century. His great work on anatomy (1543), entitled *De humani corporis fabrica libri septem* (Seven Books on the Structure of the Human Body), is said to be "one of the most remarkable known to science," and "one of the most noble and magnificent volumes in the history of printing" (Saunders & O'Malley). See also under *foramen* and *ligament*.

vesania (ve-sa'ne-ah) [L.] an old term for full-fledged mental disorder, marked by the four stages of mania, melancholia, paranoia, and dementia. Cf. *vecordia*.

vesanic (ve-san'ik) pertaining to or exhibiting vesania.

Vesic. abbreviation for L. *vesic'ula*, *vesicato'rium*, a blister.

vesica (vè-si'kah), pl. *vesic'ae* [L.] a membranous sac or receptacle for a secretion; [NA] a general term for such a structure. Called also *bladder*. **v. fel'lea** [NA], the gallbladder: the pear-shaped reservoir for the bile on the posteroinferior surface of the liver between the right and quadrate lobes. **v. prostat'ica**, utriculus prostaticus. **v. urina'ria** [NA], urinary bladder: the musculomembranous sac, situated in the anterior part of the pelvic cavity, that serves as a reservoir for urine; it receives the excretory products of the kidneys through the ureters, and expels them through the urethra.

vesicae (ve-si'se) [L.] plural of *vesica*.

vesical (ves'i-kal) pertaining to the bladder.

vesicant (ves'i-kant) [L. *vesica* blister] 1. causing blisters; blistering. 2. a blistering drug or agent.

vesication (ves'i-ka'shun) 1. the process of blistering. 2. a blistered spot or surface.

vesicatory (ves'i-kah-tor'ee) [L. *vesicare* to blister] vesicant.

vesicle (ves'i-k'l) [L. *vesicula*, dim. of *vesica* bladder] 1. a small bladder or sac containing liquid; see also *vesicula*. 2. a small (less than 1 cm. in diameter) blister; a small circumscribed elevation of the epidermis containing a serous liquid. Cf. *bullae* and *bleb*. 3. the swollen end of a conidiophore from which sterigmata are produced. **acoustic v.**, auditory v. **acrosomal v.**, a membrane-bounded vacuole-like structure containing the enlarging acrosomal granule, which undergoes collapse and spreads over the upper two thirds of the head (acrosome) of a spermatozoon to form a head cap. **allantoic v.**, see under *di-verticulum*. **amniocardiac v's**, fissures in the mesoderm of the early embryo representing the paired primordia of the pericardial sac and the heart. **archoplasmic v.**, a sac developed from the attraction sphere of a spermatid and growing into the sheath of the tail of the spermatozoon. **Ascherson's v's**, small vesicles formed by shaking together oil and liquid albumin; they consist of drops of oil enclosed in a layer of albumin. **auditory v.**, a detached ovoid sac formed by closure of the auditory pit, in embryonic development of the internal ear. **Baer's v.**, the vesicular ovarian follicle (graafian follicle) of the ovary with its contained ovum. **blastodermic v.**, the blastocyst. **brain v's**, the five divisions of the closed neural tube in the developing embryo, including, in craniocaudal sequence, the telencephalon, diencephalon, mesencephalon, metencephalon, and myelencephalon. **brain v's, primary**, the three earliest subdivisions of the embryonic neural tube, including the prosencephalon, mesencephalon, and rhombencephalon. **brain v's, secondary**, the four brain vesicles formed by specialization of the prosencephalon (the telencephalon and diencephalon) and of the rhombencephalon (the metencephalon and myelencephalon) in later embryonic development. **cephalic v's, cerebral v's, brain v's**. **cervical v.**, a temporary sac in the cervical region of the embryo formed by the closing off of the cervical sinus. **chorionic v.**, the mammalian chorion. **compound v.**, multilocular v. **concentrating v's**, condensing vacuoles. **encephalic v's, brain v's**. **germinal v.**, the fluid-filled nucleus of an oocyte toward the end of prophase of its meiotic division. **graafian v's**, folliculi ovarici vesiculosi. **intermediate v's**, transfer v's. **kerionic v.**, multilocular v. **lens v.**, a vesicle formed from the lens pit of the embryo and developing into the crystalline lens; called also *lens sac*. **Malpighi's v's**, alveoli pulmonis. **matrix v's**, small membrane-limited structures at sites of calcification of the cartilage matrix. **multilocular v.**, a vesicle having multiple chambers or compartments, usually by reason of intraepidermal origin, as from spongiosis, rather than of subepidermal origin; called also *compound v.* and *kerionic v.* **Naboth's v's**, nabothian follicles. **ocular v.**, vesicula ophthalmica. **olfactory v.**, 1. the vesicle in the embryo which later develops into the olfactory bulb and tract. 2. a bulbous expansion at the distal end of an olfactory cell, from which the olfactory hairs project. **ophthalmic v.**, **optic v.**, vesicula ophthalmica. **otic v.**, auditory v. **phagocytotic v.**, phagosome. **pinocytotic v.**, pinosome. **pituitary v.**, Rathke's pouch. **plasmalemmal v.**, caveola. **prostatic v.**, utriculus prostaticus. **Purkinje's v.**, germinal v. **secretory v's**, condensing vacuoles. **seminal v.**, vesicula seminalis. **sense v.**, the vesicular primordium of a sense organ in the embryo. **simple v.**, a vesicle on the skin having a single chamber or compartment. **spermatic v.**, **false**, utriculus prostaticus. **synaptic v's**, a profusion of small round structures in the end-feet of neurons, believed to contain protein-bound humoral transmitter substance. **transfer v's, transitional v's, transport v's**, small vesicles formed by budding off the granular endoplasmic reticulum, in which secretory material is transferred to the Golgi complex, where it is concentrated in condensing vacuoles (q.v.). Called also *intermediate v's*. **umbilical v.**, the pear-shaped expansion of the yolk sac growing out into the cavity of the chorion at the end of the fourth week of development, and joined to the midgut of the embryo by the yolk stalk. **Unna's v. (obs.)**, the teardrop vesicle, containing a clear serum, which is characteristic of chickenpox and herpes zoster.

vesico- [L. *vesica* bladder] a combining form denoting relationship to the bladder, or to a blister.

vesicoabdominal (ves'ī-ko-ab-dom'fī-nal) pertaining to the urinary bladder and abdomen, or communicating with the bladder and an abdominal viscus, as a vesicoabdominal fistula.

vesicocavernous (ves'ī-ko-kav'er-nus) both vesicular and cavernous.

vesicocele (ves'ī-ko-sēl') [*vesico-* + Gr. *kēlē* hernia] hernial protrusion of the bladder.

vesicocervical (ves'ī-ko-ser'vī-kal) [*vesico-* + L. *cervix* neck] pertaining to the urinary bladder and the cervix uteri, or communicating with the bladder and the cervical canal, as a vesicocervical fistula.

vesicoclysis (ves'ī-kok'li-sis) [*vesico-* + Gr. *klysis* washing] the injection of a fluid into the urinary bladder.

vesicocolic (ves'ī-ko-kol'ik) vesicocolonic.

vesicocolonic (ves'ī-ko-ko-lon'ik) pertaining to or communicating with the urinary bladder and colon, as a vesicocolonic fistula. Called also *vesicocolic*.

vesicoenteric (ves'ī-ko-en-ter'ik) vesicointestinal.

vesicofixation (ves'ī-ko-fiks-a'shun) 1. the stitching of the uterus to the urinary bladder. 2. the surgical fixation of the urinary bladder; cystopexy.

vesicointestinal (ves'ī-ko-in-tes'tī-nal) pertaining to or communicating with the urinary bladder and intestine, as a vesicointestinal fistula.

vesicoperineal (ves'ī-ko-per'ī-ne'al) pertaining to or communicating with the urinary bladder and perineum, as a vesicoperineal fistula.

vesicoprostatic (ves'ī-ko-pros-tat'ik) pertaining to the urinary bladder and the prostate.

vesicopubic (ves'ī-ko-pu'bik) pertaining to the urinary bladder and the pubes.

vesicopustule (ves'ī-ko-pus'tūl) a vesicle which is developing into a pustule by entry of leukocytes into its contents.

vesicorectal (ves'ī-ko-rek'tal) pertaining to the urinary bladder and the rectum.

vesicorenal (ves'ī-ko-re'nal) pertaining to the urinary bladder and the kidney.

vesicosigmoid (ves'ī-ko-sig'moid) pertaining to the urinary bladder and sigmoid flexure.

vesicosigmoidostomy (ves'ī-ko-sig'moi-dos'to-me) [L. *vesica* bladder + *sigmoid* + Gr. *stomoun* to provide with an opening or mouth] the operation of making a permanent communication between the urinary bladder and sigmoid flexure.

vesicospinal (ves'ī-ko-spi'nal) pertaining to the urinary bladder and the spine.

vesicostomy (ves'ī-ko-s'to-me) the formation of an opening into the bladder; cystostomy. **cutaneous v.**, surgical anastomosis of the bladder mucosa to an opening in the skin below the umbilicus, creating a stoma for bladder drainage.

vesicotomy (ves'ī-ko'to-me) [L. *vesica* bladder + Gr. *tomē* a cutting] incision of the urinary bladder; cystotomy.

vesicoumbilical (ves'ī-ko-um-bil'ī-kal) pertaining to the umbilicus and the urinary bladder.

vesicourachal (ves'ī-ko-u'rah-kal) pertaining to the urinary bladder and the urachus.

vesicoureteral, vesicoureteric (ves'ī-ko-u-re'ter-al; ves'ī-ko-u'rē-ter'ik) pertaining to or communicating with the urinary bladder and the ureter.

vesicourethral (ves'ī-ko-u-re'thral) pertaining to or communicating with the urinary bladder and the urethra.

vesicouterine (ves'ī-ko-u'ter-in) pertaining to or communicating with the urinary bladder and the uterus.

vesicouterovaginal (ves'ī-ko-u'ter-o-vaj'ī-nal) pertaining to or communicating with the urinary bladder, uterus, and vagina.

vesicovaginal (ves'ī-ko-vaj'ī-nal) pertaining to or communicating with the urinary bladder and vagina.

vesicovaginorectal (ves'ī-ko-vaj'ī-no-rek'tal) pertaining to or communicating with the urinary bladder, vagina, and rectum.

vesicula (vē-sik'u-lah), pl. *vesiculae* [L., dim. of *vesica*] a vesicle: a small bladder or sac containing liquid; used as a general term in anatomical nomenclature. **v. bi'llis**, **v. fel'lea**, vesica felea. **v. germinati'va**, germinal vesicle. **vesic'ulae graafia'nae**, folliculi ovarici vesiculosi. **vesic'ulae naboth'i**, Naboth's follicles. **v. ophthalmica** [NA], optic vesicle: an evagination developing on either side of the forebrain of the early embryo, from which the percipient parts of the eye are formed. **v. prostat'ica**, utriculus prostaticus. **v. semina'lis** [NA], seminal vesicle: either of the paired, sacculated pouches attached to the posterior part of the urinary bladder; the duct of each joins the ipsilateral ductus deferens to form the ejaculatory duct. **v. sero'sa**, chorion.

vesiculae (vē-sik'u-le) [L.] plural of *vesicula*.

vesicular (vē-sik'u-lar) [L. *vesicula* a little bladder] 1. composed

of or relating to small, saclike bodies. 2. pertaining to or made up of vesicles on the skin.

vesiculase (vē-sik'u-lās) a ferment from the prostate gland which coagulates semen.

vesiculated (vē-sik'u-lāt'ed) marked by the presence of vesicles.

vesiculation (vē-sik'u-la'shun) the presence or formation of vesicles.

vesiculectomy (vē-sik'u-lek'to-me) [*vesicle* + Gr. *ektomē* excision] excision of a vesicle, especially the seminal vesicle.

vesiculiform (vē-sik'u-lī-form') [*vesicle* + L. *forma* form] shaped like a vesicle.

vesiculitis (vē-sik'u-lī'tis) inflammation of a vesicle, especially of a seminal vesicle. **seminal v.**, inflammation of a seminal vesicle.

vesiculobronchial (vē-sik'u-lo-brong'ke-al) both vesicular and bronchial; bronchovesicular.

vesiculocavernous (vē-sik'u-lo-kav'er-nus) both vesicular and cavernous.

vesiculogram (vē-sik'u-lo-gram') a roentgenogram of the seminal vesicles.

vesiculography (vē-sik'u-log'rah-fe) roentgenography of the seminal vesicles.

vesiculopapular (vē-sik'u-lo-pap'u-lar) pertaining to or characterized by vesicles and papules.

vesiculopustular (vē-sik'u-lo-pus'tu-lar) consisting of or pertaining to vesicles and pustules.

vesiculotomy (vē-sik'u-lot'o-me) [*vesicle* + Gr. *tomē* a cutting] incision of a vesicle. **seminal v.**, the operation of exposing and opening the seminal vesicles.

vesiculotubular (vē-sik'u-lo-tu'bu-lar) having both a vesicular and a tubular quality; said of auscultatory sounds.

vesiculotympanic (vē-sik'u-lo-tim-pan'ik) having both a vesicular and tympanic quality; said of percussion sounds.

vesperal (ves'per-al) [L. *vespera* evening] pertaining to or occurring in the evening.

Vesprin (ves'prin) trademark for preparations of triflupromazine.

vessel (ves'el) any channel for carrying a fluid, such as the blood or lymph, see also *vas*. **absorbent v's**, lymphatic vessels. **afferent v. of glomerulus**, vas afferens glomeruli. **afferent v's of lymph node**, vasa afferentia nodi lymphatici. **anastomotic v.**, vas anastomoticum. **arteriololuminal v's**, small branches of coronary arterioles that lie near the endocardium, and after a short course open directly into the lumen of the heart. **arteriosinusoidal v's**, small branches of coronary arterioles that soon break up into sinusoids that lie between bundles or individual muscle fibers of the heart. **bile v.**, one of the vessels in the liver which conduct bile; called also *ductuli biliiferi* [NA]. **blood v.**, any of the vessels conveying the blood, and comprising the arteries, arterioles, capillaries, venules, and veins. **chyliferous v's**, lacteal v's. **collateral v.**, 1. a vessel that parallels another vessel, nerve, or other structure (vas collaterale [NA]). 2. a vessel important in establishing and maintaining a collateral circulation; see under *circulation*. **efferent v. of glomerulus**, vas efferens glomeruli. **efferent v's of lymph node**, vasa efferentia nodi lymphatici. **great v's**, the large vessels entering the heart, including the aorta, the pulmonary arteries and veins, and the venae cavae. **hemorrhoidal v's**, veins of the rectum which have become dilated and swollen; see *hemorrhoid*. **Jungbluth's v's**, vasa propria of Jungbluth. **lacteal v's**, any of the intestinal lymphatic vessels that transport chyle (q.v.); so called because during absorption they are white from absorbed fat. Called also *chyliferous v's* and *lacteals*. **lymphatic v's**, the capillaries, collecting vessels, and trunks that collect lymph from the tissues and carry it to the blood stream; called also *vasa lymphatica* [NA]. **lymphatic v's, deep**, vasa lymphatica profunda. **lymphatic v's, superficial**, vasa lymphatica superficialia. **nutrient v's**, vessels that supply nutritive elements to special tissues, such as arteries entering the substance of bone, or supplying walls of the blood vessels themselves.

vessicon, vessignon (ves'ik-non, ves'ēn-yaw) [Fr.] windgall.

vestibula (ves-tib'u-lah) [L.] plural of *vestibulum*.

vestibular (ves-tib'u-lar) pertaining to a vestibule.

vestibule (ves'ti-būl) a space or cavity at the entrance to a canal; called also *vestibulum* [NA]. **v. of aorta**, a space within the left ventricle at the root of the aorta. **buccal v.**, that portion of the vestibule of the mouth which lies between the cheeks and the teeth and gingivae, or the residual alveolar ridges. **v. of ear**, an oval cavity in the middle of the bony larynx; see *vestibulum auris* [NA]. **Gibson's v.**, v. of aorta. **labial v.**, that portion of the vestibule of the mouth which lies between the lips and the teeth and gingivae, or residual alveolar ridges. **v. of larynx**, vestibulum laryngis. **v. of mouth**, that portion of the oral cavity bounded on the one side by the teeth and gingivae, or the residual alveolar ridges, and on the other side by the lips (*labial v.*) and cheeks (*buccal v.*); called also *vestibulum oris*

- [NA]. **v. of nose**, vestibulum nasi. **v. of omental bursa**, vestibulum bursae omentalis. **v. of pharynx**, 1. fauces. 2. oropharynx. **Sibson's v.**, v. of aorta. **v. of vagina**, v. of vulva, vestibulum vaginae.
- vestibulogenic** (ves-tib'ū-lo-jen'ik) arising in a vestibule, as that of the ear.
- vestibulo-ocular** (ves-tib'ū-lo-ok'ū-lar) pertaining to the vestibular and oculomotor nerves; or to the maintenance of visual stability during head movements.
- vestibuloplasty** (ves-tib'ū-lo-plas'te) the surgical modification of the gingival-mucous membrane relationships in the vestibule of the mouth, including deepening of the vestibular trough, repositioning of the frenum or muscle attachments, and broadening of the zone of attached gingiva, after periodontal treatment.
- vestibulotomy** (ves-tib'ū-lo-tō'me) [vestibule + Gr. *tomē* a cutting] surgical opening of the vestibule of the inner ear.
- vestibulourethral** (ves-tib'ū-lo-ū-re'thral) pertaining to the vestibulum vaginae and to the urethra.
- vestibulum** (ves-tib'ū-lum), pl. *vestib'ula* [L.] a vestibule: a space or cavity at the entrance to a canal; [NA] a general term for such a structure. **v. au'ris** [NA], vestibule of ear: an oval cavity in the middle of the bony labyrinth, communicating anteriorly with the cochlea and posteriorly with the semicircular canals, and containing the sacculus and utriculus. **v. bur'sae omenta'lis** [NA], vestibule of omental bursa: that part of the omental bursa dorsal to the lesser omentum and adjacent to the epiploic foramen. **v. glot'tidis**, v. laryngis. **v. laryn'gis** [NA], vestibule of larynx: the portion of the laryngeal cavity above the vestibular folds. **v. na'si** [NA], vestibule of nose: the anterior part of the nasal cavity situated just inferior to the nares and limited posteriorly by the limen nasi. **v. o'ris** [NA], the part of the oral cavity exterior to the teeth; see *vestibule of mouth*. **v. vagi'nae** [NA], vestibule of vagina: the space between the labia minora into which the urethra and vagina open.
- vestige** (ves'tij) the remnant of a structure which functioned in a previous stage of species or individual development; called also *vestigium*. **coccygeal v.**, the remnant of the caudal end of the neural tube. **v. of vaginal process**, vestigium processus vaginalis.
- vestigia** (ves-tij'e-ah) [L.] plural of *vestigium*.
- vestigial** (ves-tij'e-al) of the nature of a vestige, trace, or relic; rudimentary.
- vestigium** (ves-tij'e-um), pl. *vestig'ia* [L. "a trace"] a vestige: the remnant of a structure which functioned in a previous stage of species or individual development; used in NA to designate the degenerating remains of any structure which served as a functioning entity in the embryo or fetus. **v. proces'sus vagina'lis** [NA], vestige of vaginal process: a band of connective tissue in the spermatic cord which is that vestige of the processus vaginalis; called also *rudimentum processus vaginalis*.
- vesuvin** (ve-su'vin) aniline brown.
- veta** (va'tah) [Sp.] mountain sickness of the Andes; see under *sickness*.
- veterinarian** (vet'er-i-nār'e-an) a person trained and authorized to practice veterinary medicine and surgery; a doctor of veterinary medicine.
- veterinary** (vet'er-i-ner'e) [L. *veterinarius*] pertaining to domestic animals and their diseases.
- V.F.** vocal fremitus.
- V.f.** field of vision.
- VIA** virus inactivating agent; see under *agent*.
- via** (vi'ah), pl. *vi'ae* [L.] a way or passage. **vi'ae natura'les**, the natural passages of the body. **pri'mae vi'ae**, canalis alimentarius.
- viability** (vi'ah-bil'i-te) ability to live after birth.
- viable** (vi'ah-b'l) capable of living; especially said of a fetus that has reached such a stage of development that it can live outside of the uterus.
- Viadril** (vi'ah-dril) trademark for a preparation of hydroxydione sodium.
- viae** (vi'e) [L.] plural of *via*.
- vial** (vi'al) [Gr. *phialē*] a small bottle.
- vibesate** (vi'bē-sāt) a modified polyvinyl plastic applied topically as a spray, to form an occlusive dressing for surgical wounds and other surface lesions.
- vibex** (vi'beks), pl. *vibi'ces* [L. *vibix* mark of a blow] a narrow linear mark or streak; a linear subcutaneous effusion of blood.
- vibices** (vi-bi'sēz) [L.] plural of *vibex*.
- Vibramycin** (vi-brah-mi'sin) trademark for a preparation of doxycycline.
- vibratile** (vi'brah-til) [L. *vibratilis*] having an oscillatory motion; swaying or moving to and fro.
- vibration** (vi-bra'shun) [L. *vibratio*, form *vibrare* to shake] 1. a rapid movement to and fro; oscillation. 2. the shaking of the body as a therapeutic measure. 3. a form of massage. **photo-electric v.**, a change in the position of the visual cells, and a series of photoelectric movements in the rods and cones under the influence of light.
- vibrative** (vib'rah-tiv) a conconantal sound like that of *r*, produced by so forcing the breath that the margins of a narrow portion of the respiratory canal are made to vibrate, the nasal cavity being shut off.
- vibratode** (vi'brah-tōd) the instrument or appliance at the end of a vibratory appliance by which the vibrations are applied to the body.
- vibrator** (vi'bra-tor) an instrument used in the mechanical treatment of disease.
- vibratory** (vi'brah-tor'e) [L. *vibratorius*] vibrating or causing vibration.
- Vibrio** (vib're-o) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of short, slightly curved, actively motile gram-negative rods, occurring singly and occasionally found end-to-end. The 34 species described include the cholera and El Tor vibrios pathogenic for man, agents of specific disease in lower animals, and paracholera or cholera-like water vibrios (nonagglutinating, or NAG, vibrios). See also *vibrio*. **V. chol'erae**, **V. chol'erae-asiat'icae**, the etiologic agent of Asiatic cholera in man; characterized as nonhemolytic (Greig test) and the somatic antigen of vibrio O group I. It may occur in one of three serological types, the distribution of which has no epidemiological significance. Called also *V. comma*. **V. co'li**, the etiologic agent of swine dysentery. **V. com'ma**, **V. cholerae**. **V. danu'bicus**, see *paracholera vibrios*. **V. el'tor**, 1. a biotype of *V. cholerae* that may or may not be hemolytic, the etiologic agent of the seventh pandemic of cholera. 2. a member of the El Tor group of vibrios, first isolated at the El Tor Quarantine Station on the Sinai Peninsula, some strains of which are immunologically related to *V. cholerae*. **V. fe'tus**, *Campylobacter fetus*. **V. fink'leri**, *V. proteus*. **V. ghin'da**, see *paracholera vibrios*. **V. je'ju'ni**, the etiologic agent of a diarrheal disease in cows and calves. **V. leonar'dii**, a species causing disease in insects, such as the wax moth and the European corn borer. **V. mas-sau'ah**, see *paracholera vibrios*. **V. mestchniko'vii**, a species morphologically and physiologically similar to the cholera vibrio, and highly pathogenic for pigeons and guinea pigs. In fowls, it produces an epidemic disease resembling fowl cholera. See *fowl septicemia*, under *septicemia*. **V. ni'ger**, an anaerobic species found frequently in man in certain pathologic conditions, such as purulent otitis, mastoiditis, or pulmonary gangrene. **V. para-haemoly'ticus**, the causative agent of a foodborne illness associated with eating contaminated raw or cooked fish, shellfish, salad, meat, and vegetables, and characterized by headache, chills, stomach pain, diarrhea, fever, and vomiting. **V. phosphores'cens**, a phosphorescent microorganism isolated from the intestinal contents of patients with cholera and other gastrointestinal infections. **V. pis'cium**, the etiologic agent of an epidemic disease of carp and other fish. **V. pro'teus**, a microorganism isolated from the feces of patients with a mild diarrheal disease. **V. sep'ticus**, *Clostridium septicum*. **V. tyrog'e-nus**, a curved, rod-shaped organism, somewhat smaller and more slender than *V. cholerae*, isolated from cheese.
- vibrio** (vib're-o), pl. *vib'rios* or *vibrio'nes*. An organism of the genus *Vibrio*, or other spiral motile organism. **Celebes v.**, the pathogenic El Tor biotype of *V. cholerae*, isolated in Celebes (Suluwasi); see *Vibrio eltor*, def. 1. **cholera v.**, the etiologic agent of classic (Asiatic) cholera, *Vibrio cholerae*. **El Tor v.**, see *Vibrio eltor*, def. 2. **NAG v's**, **nonagglutinating v's**, nonpathogenic paracholera vibrios, unrelated to the cholera vibrio O antigenic group. **paracholera v's**, microorganisms closely similar to *Vibrio cholerae*, but differing from it immunologically and having variable pathogenic properties. Many such organisms isolated from water and from the feces of individuals with mild diarrheal disease have been designated by the name of the place of their discovery, as *V. danu'bicus*, *V. ghin'da*, and *V. massau'ah*.
- vibriocidal** (vib're-o-si'dal) destructive to organisms of the genus *Vibrio*, especially *V. cholerae*.
- vibron** (ve'bre-on') [Fr.] a vibrio, or spiral motile organism. **v. septicum** (ve'bre-on'sep-tēk'), *Clostridium septicum*.
- vibriones** (vib're-o'nēz) plural of *vibrio*.
- vibriosis** (vib're-o'sis) infection with organisms of the genus *Vibrio*, especially infectious abortion of cattle, sheep, and goats caused by *Vibrio fetus* (it is a venereal disease of cattle and goats but is apparently spread by ingestion in sheep). A few human infections, resembling brucellosis, have been reported.
- vibrissa** (vi-bris'ah), pl. *vibris'sae* [L.] a long coarse hair, such as those occurring about the nose (muzzle) of an animal, as of the dog or cat. See also *vibrissae*.
- vibrissae** (vi-bris'e) [L. pl. of *vibrissa*] [NA] the hairs growing in the vestibular region of the nasal cavity.
- vibrocardiogram** (vi'bro-kar'de-o-gram') the graphic record produced by vibrocardiography.
- vibrocardiography** (vi'bro-kar'de-o-rah-fe) the graphic recording of vibrations produced by the heart, usually those in the nonaudible low-frequency range.

vibrolode (vi/'bro-lōd) vibratode.

vibromasseur (vib/'ro-mah-sūr') [Fr.] (obs.) an instrument used in vibratory massage of the ear.

vibrometer (vi-brom/'ē-ter) [L. *vibrare* to quiver + *metrum* measure] (obs.) a device used in the treatment of deafness due to deposits of plastic material or inspissated mucus; it acts by producing vibrations which tend to break up adhesions.

vibrophone (vib/'ro-fōn) [L. *vibrare* to quiver + Gr. *phōne* sound] (obs.) an instrument similar to a vibrometer, and used for the same purpose.

vibrophonocardiograph (vi/'bro-fo/'no-kar/'de-o-graf'') an instrument for recording heart vibrations and sounds.

vibrotherapeutics (vi/'bro-thē/'ah-pu/'tiks) [L. *vibrare* to shake + *therapeutics*] the therapeutic use of vibratory appliances.

Viburnum (vi-bur/'num) [L.] a genus of caprifoliaceous trees and shrubs. **V. op'ulus**, the high bush or cranberry tree, the dried bark (cramp bark) of which has been used as an antispasmodic, uterine sedative, and antiscorbutic. **V. prunifolium** L., black haw, the dried bark of the root or stem of which has been used as a uterine sedative.

vicarious (vi-kar/'e-us) [L. *vicarius*] acting in the place of another or of something else; occurring at an abnormal site, as vicarious menstruation.

vice (vis) [L. *vitium*] 1. a blemish, defect, or imperfection. 2. depravity; immorality.

vicho (ve/'cho) a vernacular Peruvian name for dysentery, the protrusion of the rectum being attributed to the presence of an insect (vicho).

Vicia (vish/'e-ah) a genus of herbs including the vetch and broad bean. **V. fa'ba** (fa/'va), a species whose beans or pollen contain a component that is capable of causing a condition known as *favism* in susceptible individuals; called also *fava*, *fava bean*, and *broad bean*.

vicianose (vis/'e-ah-nōs) a disaccharide, $C_{12}H_{22}O_{10}$, which on hydrolysis yields glucose and arabinose; obtained from the seeds of *Vicia angustifolia*.

vicilin (vi/'si-lin) a globulin from lentils and other legumes.

vicine (vi/'sin) a white crystalline glycoside, $C_{10}H_{16}N_4O_8$, found in *Vicia sativa* and other species of vetch; it is a mononucleoside and on hydrolysis yields dextrose.

vicious (vish/'us) [L. *vitio'sus*] 1. faulty or defective; malformed. 2. depraved; refractory or unruly.

Vicum album (vis/'kum al'bum) European mistletoe.

Vicq d'Azyr's band, etc. (vēk dah-'zēr) [Félix Vicq d'Azyr, French anatomist, 1748-1794] see under *band*, *body*, *fasciculus*, *foramen*, and *stripe*.

Vidal's disease (ve-dahlz') [Jean Baptiste Émile Vidal, dermatologist in Paris, 1825-1893] see *lichen chronicus simplex*.

Vidal's operation (ve-dahlz') [Auguste Théodore Vidal de Cassis, French surgeon, 1803-1856] see under *operation*.

vidarabine (vi-dār'ah-bēn) chemical name: 9-β-D-arabino-furanosyl-9H-purin-6-amine monohydrate. A purine analogue that inhibits DNA synthesis, $C_{10}H_{13}N_5O_4H_2O$, used as a topical antiviral agent in the treatment of herpes simplex keratitis and intravenously in the treatment of herpes simplex encephalitis. Sterile vidarabine conforms to USP specifications. Called also *adenine arabinoside* or *ara-A*.

videognosis (vid'e-og-'no'sis) [video, from L. *videre* to see + *diagnosis*] diagnosis based on the interpretation of roentgenograms transmitted by television techniques to a radiologic center.

vidian artery, canal, nerve (vid'e-an) [Guido Guidi (L. *Vidius*), Italian physician, 1500-1569] see *arteria canalis pterygoidei*, *canalis pterygoideus*, *nervus canalis pterygoidei*, and *nervus petrosus profundus*.

Vieussens' ansa, etc. (ve-uh-sahz') [Raymond de Vieussens, French anatomist, 1641-1715] see under *ansa*, *foramen*, *limbus*, *valve*, *vein*, and *ventricle*.

vigilambulism (vij'il-am'bu-lizm) a state resembling somnambulism, but not occurring in sleep; double or multiple personality.

vigilance (vij/i-lans) [L. *vigilantia*] wakefulness; watchfulness; arousal.

vigintinormal (vi-jin/'tī-nor'mal) [L. *viginti* twenty + *norma* rule] having one twentieth the strength of normal, as a solution.

Vignal's cells (vën-yahlz') [Guillaume Vignal, French physiologist, 1852-1893] see under *cell*.

vignin (vig/'nin) a protein from the cow pea.

vigor (vig/'or) [L. *vigere* to flourish] a combination of attributes of living organisms which expresses itself in rapid growth, high fertility and fecundity, large size, and long life. **hybrid v.**, heterosis.

Vigouroux's sign (vēg/'oo-rōōz') [Auguste Vigouroux, a French neurologist of the 19th century] see under *sign*.

Villard's button (ve-larz') [Eugène Villard, surgeon in Lyons, born 1868] see under *button*.

Villaret's syndrome (ve-lar-'āz') [Maurice Villaret, French neurologist, 1877-1946] see under *syndrome*.

Villarsia nymphaeoides (vil-lar'ze-ah nim/'fe-oi'dēz) an old world gentianaceous plant having antiscorbutic properties.

Villemain's theory (vēl-maz') [Jean Antoine Villemain, French surgeon, 1827-1892] see under *theory*.

villi (vil/'i) [L.] plural of *villus*.

villiferous (vil-lif'er-us) having or bearing villi.

villikinin (vil/'i-ki'nin) [*villi* + Gr. *kinein* to move] a hypothetical hormone said to stimulate villus movement and to be released by action of hydrochloric acid on the mucous membrane of the duodenum.

villoma (vil/'e-o'mah) villoma.

villitis (vil-'i-tis) [*villi* + *-itis*] inflammation of the villous tissue of the coronet and of the plantar substance of a horse's foot.

villoma (vil-lo'mah) a papilloma, chiefly of the rectum.

villonodular (vil'o-nod'u-lar) characterized by villous and nodular thickening; said of a proliferative disorder of the synovial tissue.

villose (vil-lōs') [L. *villosus*] shaggy with soft hairs; covered with villi.

villositis (vil'o-si'tis) a bacterial disease characterized by alterations in the villi of the placenta.

villosity (vil-lōs'i-te) 1. the condition of being covered with villi. 2. a villus.

villous (vil'us) villose.

villus (vil'us), pl. *vil'li* [L. "tuft of hair"] a small vascular process or protrusion, especially such a protrusion from the free surface of a membrane; [NA] a general term for such a structure. **amniotic v.**, one of the irregular, flat, opaque areas of imperfect skin on the amnion near the distal end of the umbilical cord. **anchoring v.**, a chorionic villus that attaches to the decidua basalis. **arachnoid villi**, 1. granulationes arachnoideales. 2. numerous microscopic projections of the arachnoid into some of the venous sinuses, which are thought by some to enlarge in man with advancing age to become the granulationes arachnoideales (q.v.). **chorionic v.**, one of the threadlike projections growing in tufts on the external surface of the chorion; see *primary*, *secondary*, and *tertiary v.* **free v.**, a chorionic villus that projects into the intervillous space. **intestinal villi**, *vil'li intestina'les* [NA], the multitudinous threadlike projections that cover the surface of the mucosa of the small intestine and

Intestinal villus (Routh).

serve as the sites of absorption (by active transport and diffusion) of fluids and nutrients. **lingual villi**, papillae filiformes. **pericardial v.**, one of the threadlike projections on the free surface of the pericardium. **pleural villi**, *vil'li pleura'les*, the shaggy appendages on the surface of the pleura near the costomediastinal sinus. **primary v.**, one of the earliest chorionic villi, composed of trophoblast only. **secondary v.**, an intermediate stage of chorionic villi, having a core of connective tissue (mesoblast) covered with trophoblast. **villi of small intestine**, *villi intestinales*. **synovial villi**, *vil'li synovia'les* [NA], slender projections of the synovial membrane from its free inner surface into the joint cavity. **tertiary v.**, one of the definitive type of chorionic villi, having trophoblastic cover, connective tissue (mesoblastic) core, and blood vessels.

villusectomy (vil'us-ek'to-me) synovectomy; excision of a synovial villus.

viloxazine hydrochloride (vi-loks'ah-zēn) chemical name: 2-[(2-ethoxyphenyl)methyl]morpholine hydrochloride; an antidepressant, $C_{13}H_{19}NO_3 \cdot HCl$.

Vinacane (vin-ak'tān) trademark for a preparation of viomycin.

vinbarbital (vin-bar'bi-tal) chemical name: 5-ethyl-5-(1-methyl-1-butenyl)-2,4,6(1H,3H,5H)-pyrimidinetrione. An intermediate-acting barbiturate, $C_{11}H_{15}N_2O_3$, it has been used as a hypnotic and sedative, administered orally. **v. sodium**, the sodium salt of vinbarbital, $C_{11}H_{13}N_2NaO_3$, having the same actions and uses as the base; administered orally and parenterally.

vinblastine sulfate (vin-blas'tēn) [USP] chemical name: vin-

caleukoblastine sulfate (1:1) (salt). The sulfate salt of an alkaloid extracted from *Vinca rosea* L. (Apocynaceae), $C_{46}H_{58}N_4O_6 \cdot H_2SO_4$, occurring as a white or slightly yellow, crystalline powder. It is used as an antineoplastic in the palliative treatment of lymphomas, including generalized Hodgkin's disease, lymphosarcoma, reticulum-cell sarcoma, and advanced mycosis fungoides, and of neuroblastoma, Letterer-Siwe disease, choriocarcinoma resistant to other agents, breast carcinoma resistant to other agents, and embryonal carcinoma of the testis. Administered intravenously.

Vinca (vin/'kah) a genus of apocynaceous woody herbs, including the periwinkles. *V. minor* L. is the common, or lesser, periwinkle. *V. rosea* L. (*Catharanthus roseus* G. Don), the Madagascan periwinkle, contains many alkaloids, including vinblastine and vincristine.

vincamine (vin/'kah-mēn) a major alkaloid, $C_{21}H_{28}N_2O_3$, obtained from *Vinca minor* L. (Apocynaceae); used to help improve intellectual capacity in patients with cerebrovascular disorders.

Vincent's angina, etc. (vin/'sents) [Henri Vincent, physician in Paris, 1862-1950] see under *angina*, *spirillum*, *stomatitis*, and *tonsillitis*.

vincofos (vin/'ko-fos) chemical name: phosphoric acid 2,3-dichloroethenyl methyl octyl ester; an anthelmintic, $C_{11}H_{21}Cl_2O_4P$.

vincristine sulfate (vin-kris/'tēn) [USP] chemical name: 22-oxovincaleukoblastine sulfate (1:1) (salt). The sulfate salt of an alkaloid extracted from *Vinca rosea* L. (Apocynaceae), $C_{46}H_{58}N_4O_{10} \cdot H_2SO_4$, occurring as a white to slightly yellow, amorphous or crystalline powder; used as an antineoplastic, especially in the treatment of acute leukemia, administered intravenously.

vincula (ving/'ku-lah) [L.] plural of *vinculum*.

vinculum (ving/'ku-lum), pl. *vin'cula* [L.] a band or bandlike structure; [NA] a general term for such a structure. **v. bre've** [NA], either of two fan-shaped expansions near the ends of the flexor tendons of a finger, one connecting the superficial tendon to the proximal interphalangeal joint and the other connecting the deep tendon to the intermediate interphalangeal joint. **v. lin'guae**, frenulum linguae. **vin'cula lin'guae cerebel'li**, lateral prolongations of the lingula of the cerebellum. **v. lon'gum** [NA], either of two independent pairs of slender bands in each finger, one connecting the deep flexor tendon to the superficial tendon after the latter becomes subcutaneous, and the other connecting the superficial tendon to the proximal phalanx. **vin'cula ten'dinum digito'rum ma'nus** [NA], vincula of tendons of fingers: small vascular bands that connect the tendons of the flexor digitorum profundus and flexor digitorum superficialis muscles to the phalanges and interphalangeal articulations of the hand. The tendon blood supply is also carried in them. See *v. breve* and *v. longum*. **vin'cula ten'dinum digito'rum pe'dis** [NA], vincula of tendons of toes: bands connecting the tendons of the flexor digitorum longus and flexor digitorum brevis muscles to the phalanges and interphalangeal articulations of the foot. They are similar to the vincula found in the hand. **vin'cula of tendons of fingers**, vincula tendinum digitorum manus. **vincula of tendons of toes**, vincula tendinum digitorum pedis.

vindesine (vin/'dē-sēn) chemical name: 23-amino-O⁴-deacetyl-23-demethoxyvincaleukoblastine; an antineoplastic, $C_{43}H_{55}N_5O_7$.

vinegar (vin-'e-gar) [Fr. *vinagre* sour wine] 1. a weak and impure dilution of acetic acid; especially a sour liquid consisting chiefly of acetic acid, formed by the fermentation of cider, wine, etc., or by the distillation of wood. 2. a medicinal solution of a drug in dilute acetic acid.

vinegaroon (vin-'e-gah-rōn') the whip-scorpion, *Mastigoproctus giganteus*, so called because it produces an irritating excretion which has an odor resembling that of vinegar.

Vinethene (vin/'ē-thēn) trademark for vinyl ether; see under *ether*.

vinic (vi/'nik) [L. *vinum* wine] pertaining to wine.

vinometer (vi-nom/'ē-ter) [L. *vinum* wine + L. *metrum* measure] an instrument for estimating the percentage of alcohol in wine.

vinous (vi/'nus) [L. *vinosus*, from *vinum* wine] pertaining to or containing wine.

Vinson's syndrome [Porter Paisley Vinson, American surgeon, 1890-1959] see *Plummer-Vinson syndrome*, under *syndrome*.

vinum (vi/'num), gen. *vi'ni* [L.] wine.

vinyl (vi/'nil) the univalent group $CH_2:CH-$. **v. acetate**, a vinyl group to which the monovalent radical CH_3COO- is attached, the monomer which polymerizes to polyvinyl acetate. **v. chloride**, a vinyl group to which an atom of chlorine is attached, $CH_2 \cdot CHCl$, the monomer which polymerizes to polyvinyl chloride.

viocid (vi/'o-sid) gentian violet.

Viocin (vi/'o-sin) trademark for a preparation of viomycin sulfate.

Vioform (vi/'o-form) trademark for preparations of iodochlorhydroxyquin.

Viokase (vi/'o-kās) trademark for a preparation of pancreatin.

Viola (vi/'o-lah) [L.] a genus of plants (family Violaceae), the vio-

lets and pansies. **V. odora'ta** L., a sweet-scented violet of Europe and Asia; mainly used in perfumery as a source of oil.

V. tri'color L., a species with emetic properties; it has been used in skin diseases and as an expectorant in cough preparations.

violacein (vi/'o-la'se-in) a bacterial pigment showing antibiotic activity, from *Chromobacter violaceum*.

Violaquercitrin (vi-'o'lah-kwer/'sī-trin) rutin.

violescent (vi/'o-les'ent) somewhat violet in color.

violet (vi/'o-let) 1. the hue seen in the most refracted end of the spectrum. 2. a violet-colored dye. **amethyst v.**, a tetraethylphenosafranin used in triple staining, $(C_2H_5)_2N \cdot C_6H_5 \cdot N_2Cl(C_6H_5) \cdot C_6H_5 \cdot N(C_2H_5)_2$. Called also *heliotrope B.* and *iris v.* **ammonium oxalate crystal v.**, a type of Gram stain prepared by mixing 2 gm. of crystal violet (90 per cent dye content) and 20 ml. of ethyl alcohol (95 per cent) with 0.8 gm. of ammonium oxalate and 80 ml. of distilled water. **v. 7 B or C**, gentian v.; see under G. **chrome v.**, a tricarboxyl derivative of parosolic acid, $COONa \cdot C_6H_5(O)(C_6H_5)(OH)(COONa)_2$. **cresyl v.**, **cresylecht v.**, a dye used in pathologic staining. **crystal v.**, gentian v.; see under G. **v. G**, gentian v.; see under G. **gentian v.** see under G. **hexamethyl v.**, gentian v. **Hofmann's v.**, **iodine v.**, dahlia. **iris v.**, amethyst v. **Lauth's v.**, thionine. **methyl v.**, gentian v.; see under G. **methylene v.**, one of the constituents of polychrome methylene blue, $(CH_3)_2N \cdot C_6H_5 \cdot (SN)CH_3 \cdot O$. **neutral v.**, a dye that resembles neutral red, but is more violet in color, $(CH_3)_2N \cdot C_6H_5 \cdot N_2 \cdot C_6H_5 \cdot (NH_2 \cdot HCl) \cdot NH_2 \cdot C_6H_5 \cdot N(CH_3)_2$. **Paris v.**, **pentamethyl v.**, gentian v.; see under G. **visual v.**, iodopsin.

viomycin sulfate (vi/'o-mi/'sin) the sulfate salt of an antibacterial antibiotic produced by *Streptomyces puniceus*, *S. floridae*, and *Actinomyces vinaceus*, or by other means, $C_{25}H_{43}N_{13}O_{10} \cdot xH_2SO_4$, occurring as a white to slightly yellow, crystalline powder; used as a tuberculostatic, administered intramuscularly.

viosterol (vi-os/'ter-ol) ergocalciferol.

viper (vi/'per) any venomous snake, especially any member of the families Viperidae and Crotalidae. See table accompanying *snake*. **European v.**, a venomous viperine snake, *Vipera berus*, native to Europe, North Africa, and the Near East; it may be red, brown, or gray with dark markings, or black; called also *adder*. **Gaboon v.**, a very deadly, brightly marked, viperine snake, *Bitis gabonica*, of tropical West Africa. **nose-horned v.**, sand v. **palm v.**, any of various small, greenish, arboreal pit vipers of the genera *Bothrops* and *Trimeresurus*, which have prehensile tails that enable them to move from tree to tree. **pit v.**, any of the venomous snakes of the family Crotalidae, having a depression or pit between the nostril and the eye. They include the habu, rattlesnake, copperhead, bushmaster, fer-de-lance, palm viper, and water moccasin. **rhinoceros v.**, a venomous, brightly colored, viperine snake, *Bitis nasicornis*, of tropical Africa, characterized by the presence on the snout of a pair of hornlike growths. **Russell's v.**, the daboia (*Vipera russelli*), an extremely venomous, brightly colored, viperine snake of southeastern Asia, Java, and Sumatra. **sand v.**, a snake, *Vipera ammodytes*, found from southern Europe to Asia Minor, which possesses a hornlike protuberance on the snout for burrowing; called also *nose-horned v.* **true v.**, any one of the snakes of the family Viperidae.

Vipera (vi/'per-ah) a genus of venomous snakes of the family Viperidae, including *V. ammodytes*, the sand viper, *V. berus*, the adder or European viper, and *V. russelli*, Russell's viper.

viperid (vi/'per-id) viperine.

Viperidae (vi-per/'fī-de) a family of venomous snakes, the true or Old World vipers, characterized by front, movable, hollow fangs. It includes the European viper, Russell's viper, sand viper, puff adder, Gaboon viper, and rhinoceros viper. Cf. *Crotalidae*.

viperine (vi/'per-in, vi/'per-in) 1. any snake of the family Viperidae; a true viper. 2. of or pertaining to the family Viperidae.

viraginity (vi/'rah-jin/'fī-te) [L. *virago* a manlike woman] a condition in which a woman has the sexual feelings and mentality of a man.

viral (vi/'ral) pertaining to, caused by, or of the nature of virus.

Virales (vi-ra/'lēz) the taxonomic order comprising the viruses; further classification under this taxon has been abandoned. See *virus*.

Virchow's angle, etc. (vē'r/'kōz) [Rudolf Ludwig Karl Virchow, German pathologist, 1821-1902] see under *angle*, *cell*, *corpuscle*, *crystal*, *degeneration*, *granulation*, *line*, and *node*, and see *psammoma*.

Virchow-Robin spaces (vē'r/'ko-ro-ba') [Rudolf Virchow; Charles Philippe Robin, French anatomist, 1821-1885] see under *space*.

viremia (vi-re/'me-ah) the presence of viruses in the blood, usually characterized by malaise, fever, and aching of the back and extremities.

virgin (vir/'jin) [L. *virgo*] a woman or girl who has not had sexual intercourse.

virginal (vir/'ji-nal) pertaining to a virgin or to virginity.

virginiamycin (ver-jin/'yah-mi/'sin) an antibiotic produced by

Streptomyces virginiae or by other means, consisting chiefly of two components, virginiamycin M₁ (factor M₁) and virginiamycin S₁ (factor S); used in animal feedstuffs and feed supplements and in infections due to sensitive organisms, especially gram-positive cocci.

virginity (vir-jin'fī-te) [L. *virginitas*] maidenhood; the condition of being a virgin.

virginium (vir-jin'e-um) a former name of the element francium.

viricidal (vir'fī-si'dal) virucidal.

viricide (vir'fī-sid) virucide.

viridin (vi-rid'in) 1. an oily principle, C₁₂H₁₆N, distilled from bone oil and from coal tar. 2. an antifungal antibiotic, C₂₀H₁₆O₆, isolated from *Gliocladium virens*.

viridobufagin (vir'fī-do-bu'fah-jin) a cardiac poison, C₂₃H₃₄O₆, from the skin glands of the toad, *Bufo viridis*.

virile (vir'il) [L. *virilis*] 1. peculiar to men or the male sex. 2. possessing masculine traits, especially copulative power.

virilence (vir'fī-les'ens) the development of male secondary sex characters in the female; virilization.

virilia (vi-ril'e-ah) [L.] the male genital organs (organa genitalia masculina) [NA].

virilgenic (vir'fī-li-jen'ik) promoting virility or promoting male characteristics.

virilism (vir'fī-lizm) [L. *virilis* masculine] masculinity; the development of masculine physical and mental traits in the female (see virilization). **adrenal v.**, virilism due to inappropriate adrenal androgen production; in it the body changes toward the masculine type. **protopopillary v.**, virilism marked by growth of hair on the face.

virility (vi'fī-ril'fī-te) [L. *virilitas*, from *vir* man] possession of the normal primary sex characters in one of the male sex.

virilization (vir'fī-li-za'shun) the induction or development of male secondary sex characters, especially the induction of such changes in the female, including enlargement of the clitoris, growth of facial and body hair, development of a hairline typical of the male forehead, stimulation of secretion and proliferation of the sebaceous glands (often with acne), and deepening of the voice. Called also *masculinization*.

virus (vi're-on) the complete viral particle, found extracellularly and capable of surviving in crystalline form and infecting a living cell; it comprises the nucleoid (genetic material) and the capsid. Called also *viral particle*.

viripotent (vi-rip'o-tent) [L. *viripotens*; *vir* man + *potens* able] 1. sexually mature; said of a male. 2. marriageable or nubile; said of the female.

virogene (vi'ro-jen) [*virus* + *gene*] in theoretical genetics, an RNA tumor virus assembled by the normal genetic complement of a cell.

virogenetic (vi'ro-jē-net'ik) having a viral origin; caused by a virus.

viroid (vi'roid) 1. a general term for any biological specific used in immunization. 2. a portion of a strand of infectious viral RNA.

virolactia (vi'ro-lak'she-ah) secretion of viruses in the milk.

virologist (vi'ro-lō-jist) a microbiologist specializing in virology.

virology (vi-rol'o-je) that branch of microbiology which is concerned with viruses and viral diseases.

viromicrosome (vi'ro-mi'kro-sōm) a name sometimes applied to an incomplete virus particle released by premature disruption of the host cell.

viropexis (vi'ro-pek'sis) [*virus* + Gr. *pēxis* fixation] the fixation of virus to the membrane of an animal cell and its subsequent engulfment by the cell.

viroplasm (vi'ro-plazm) plaques of very fine granular substance that appear in cells before virions are observed and which correspond to the DNA material, as in poxvirus infections.

virose (vi'rōs) [L. *virosus*, from *virus* poison] having poisonous qualities.

virosis (vi-ro'sis), pl. *viroses*. a disease caused by a virus.

virostatic (vi'ro-stat'ik) 1. inhibiting the replication of viruses. 2. an agent that inhibits the replication of viruses.

virous (vi'rus) virose.

virtual (vir'tu-al) [L., *virtus* strength] see under *focus*.

virucidal (vi'ru-si'dal) capable of neutralizing or destroying a virus.

virucide (vi'ru-sid) an agent that neutralizes or destroys a virus.

virulence (vir'u-lens) [L. *virulentia*, from *virus* poison] the degree of pathogenicity of a microorganism as indicated by case fatality rates and/or its ability to invade the tissues of the host. It is measured experimentally by the median lethal dose (LD₅₀) or median effective dose (ED₅₀). By extension, the competence of any infectious agent to produce pathologic effects.

virulent (vir'u-lent) [L. *virulentus*, from *virus* poison] pertain-

ing to or characterized by virulence; exceedingly pathogenic, noxious, or deleterious.

virulicidal (vir'u-lis'fī-dal) destructive of virulence; capable of destroying the deleterious potency of a virus or other noxious agent.

viruliferous (vir'u-lif'er-us) [L. *virus* poison + *ferre* to bear] conveying or producing a virus or other noxious agent.

viruria (vir-u're-ah) the presence of viruses in the urine.

virus (vi'rus) [L.] one of a group of minute infectious agents, with certain exceptions (e.g., poxviruses) not resolved in the light microscope, and characterized by a lack of independent metabolism and by the ability to replicate only within living host cells. Like living organisms, they are able to reproduce with genetic continuity and the possibility of mutation. They range from 200–300 nm. to 15 nm. in size and are morphologically heterogeneous, occurring as rod-shaped, spherical, or polyhedral, and tadpole-shaped forms; masses of the spherical or polyhedral forms may be made up of orderly arrays, to give a crystalline structure. The individual particle, or virion, consists of nucleic acid (the nucleoid), DNA or RNA (but not both) and a protein shell, or capsid, which contains and protects the nucleic acid and which may be multilayered. Viruses are customarily separated into three subgroups on the basis of host specificity, namely bacterial viruses, animal viruses, and plant viruses. They are also classified as to their origin (e.g., reoviruses), mode of transmission (arboviruses, tickborne viruses), or the manifestations they produce (polioviruses, polyomaviruses, poxviruses). They are sometimes named for the geographical location in which they were first isolated (e.g., coxsackievirus). **acute laryngotracheobronchitis v.**, parainfluenza 2 v.; see *parainfluenza v.* **adeno-associated v.**, a parovirus that apparently cannot replicate unless associated with an adenovirus. **Amapari v.**, an arbovirus isolated from rodents in Brazil. **animal v's**, viruses that produce diseases of man and other animals. **v. anima'tum**, a living animal poison. **arbor v's** (arthropod-borne), former name for *arbovirus*. **Argentinian hemorrhagic fever v.**, Junin v. **attenuated v.**, one whose pathogenicity has been reduced by serial animal passage or by other means. **Australian X disease v.**, see under *disease*. **avian leukosis v.**, any of a complex of leukoviruses causing erythroblastosis, granulomatosis, lymphomatosis, and myelocytomatosis in chickens; see *avian leukosis*, under *leukosis*. **B v.**, a herpesvirus causing a mild disease in monkeys, the natural host, but a severe and usually fatal disease in humans accidentally infected by exposure to infected monkeys. **bacterial v.**, a virus capable of producing transmissible lysis of bacteria; the virus particle attaches to the bacterial cell wall and viral nucleoprotein enters the cell, resulting in the synthesis of virus and its liberation on physical disruption of the cell. Bacterial viruses are usually specific for bacterial species, but they may be strain-specific or may infect more than one species of bacteria. Called also *bacteriophage* or *phage*. See *Twort-d'Herelle phenomenon*, under *phenomenon*.

Bittner v., mouse mammary tumor v. **Bolivian hemorrhagic fever v.**, Machupo v. **Brunhilde v.**, the prototype strain of poliovirus type 1. **Bunyamwera v.**, an arbovirus isolated from *Aedes* mosquitoes in an uninhabited part of the Semliki Forest in western Uganda; it causes a mild febrile disease.

bushy stunt v., a small spherical plant virus, which causes bushy stunt of tomatoes. **Bwamba fever v.**, an arbovirus, originally isolated from the blood of natives in Bwamba county in Uganda, which causes a mild febrile disease. **C v.**, coxsackievirus. **CA v.** (croup-associated), parainfluenza 2 virus. **Cache Valley v.**, an arbovirus, related to the Bunyamwera virus, first isolated from *Culiseta inornata* in the Cache Valley in northern Utah. It has also been found in Brazil, and was isolated from *Aedes scapularis* in Trinidad. **California v.**, a virus isolated in California in 1943 from species of mosquitoes, capable of causing disease in laboratory animals and the probable cause of fatal encephalitis in an infant. **cancer-inducing v.**, a virus that causes uncontrolled proliferation of infected cells, including both RNA and DNA viruses. **Catu v.**, an arbovirus closely related to Guama virus. **CCA v.** (chimpanzee coryza agent), respiratory syncytial v. **CELO** (chicken-embryo-fetthal orphan) v., an enteric orphan virus which is lethal for chicken embryos and induces tumors in newborn and weanling hamsters.

Chagres v., an arbovirus causing fever associated with malaise, headache, and pains of localized and generalized distribution, in Panama. **Chenuda v.**, an arbovirus closely related to Quarantilla virus. **chikungunya v.**, an arbovirus found in the Newala district of Tanzania as the etiologic agent of an epidemic dengue-like disease known as chikungunya. It is closely related to Semliki Forest virus. **Coe v.**, coxsackievirus type A21. **Colorado tick fever v.**, the etiologic agent of a febrile disease occurring in regions of the Rocky Mountains where the tick vector, *Dermacentor andersoni*, is prevalent. **Columbia SK v.**, an encephalomyocarditis virus originally isolated in 1940 from a monkey which had previously been inoculated with the Yale SK strain of poliovirus. **common cold v's**, a subgroup of rhinoviruses considered to cause the common cold. **coryza v.**, rhinovirus. **Coxsackie v.**, coxsackievirus. **Crimean hemorrhagic fever v.**, an arbovirus, transmitted by the tick *Hyalomma marginatum*, which causes hemorrhagic fever in the

Crimea and the Lower Don and Volga River Valleys of the U.S.S.R. **croup-associated v.**, parainfluenza 2 virus. **cytomegalic inclusion disease v.**, see *cytomegalovirus*. **defective v.**, one that cannot be completely replicated or cannot form a protein coat; in some cases replication can proceed if missing gene functions are supplied by other (helper) viruses; see *helper v.* **dengue v.**, the etiologic agent of dengue, existing as two immunological types, designated 1 and 2, and related to other arboviruses. **EB v.**, Epstein-Barr v. **Ebola v.**, an RNA virus almost identical to the Marburg virus but serologically distinct; it causes a highly fatal hemorrhagic fever closely resembling Marburg virus disease; outbreaks of the disease have occurred in Central Africa. **ECBO v.**, ecbovirus. **ECDO v.**, ecodovirus. **ECHO v.**, echovirus. **ECHO 28 v.**, echovirus 28. **ECMO v.**, ecmovirus. **ECSO v.**, ecsovirus. **EEE v.**, eastern equine encephalomyelitis v.; see *equine encephalomyelitis v.* **EMC v.**, encephalomyocarditis v. **encephalomyocarditis v.**, an enterovirus found in Africa, South America, and elsewhere, which causes mild aseptic meningitis and encephalomyocarditis; it is represented by four strains which appear to be substantially identical in immunological and other respects. It includes the Columbia SK, Mengo, and MM viruses. **enteric v.**, enterovirus. **enteric orphan v's**, viruses isolated from the intestinal tract of man and various other animals, called orphan viruses because they are often not specifically associated with illness; they include such viruses isolated from cattle (ecboviruses), dogs (ecodoviruses), man (echoviruses), monkeys (ecmoviruses), and swine (ecsovirus). **epidemic keratoconjunctivitis v.**, adenovirus type 8. **Epstein-Barr v.** (**EB v.**; **EBV**), a herpes-like virus that cause infectious mononucleosis and is associated with Burkitt's lymphoma and nasopharyngeal carcinoma. **equine encephalomyelitis v.**, a group of arboviruses causing encephalomyelitis in horses, mules, and man, with a reservoir of infection in birds, and transmitted by mosquitoes. The group includes *eastern equine encephalomyelitis virus* (**EEE v.**), the cause of equine encephalomyelitis in a region extending from New Hampshire to Texas, and as far west as Wisconsin in the United States, and also in Canada, the Caribbean, Mexico, and parts of Central and South America; *Venezuelan equine encephalomyelitis virus* (**VEE v.**), the cause of equine encephalomyelitis in Venezuela and other South American countries, and Mexico and Florida; and *western equine encephalomyelitis virus* (**WEE v.**), the cause of equine encephalomyelitis in the United States west of the Mississippi (with evidence suggesting its presence also in the Atlantic and Gulf Coast states), transmitted primarily by *Culex tarsalis*. **exanthematous disease v.**, any of a group of dermatropic viruses, including poxviruses, causing exanthematous disease in man and lower animals. **FA v.**, a strain of virus causing encephalomyelitis of mice. **filterable v.**, **filtrable v.**, a pathogenic agent capable of passing through fine filters of diatomite or unglazed porcelain; ultravirus. **v. fixé, fixed v.**, rabies virus whose virulence and incubation period have been stabilized by serial passage and remain fixed during further transmission; used for inoculating animals from which rabies vaccine is prepared. **fowl plague v.**, a virus causing a disease of fowl in northern Italy, Germany, and France. **Friend v.**, a murine leukemia virus causing malignant reticulopathy in mice. **Germistan v.**, an arbovirus of the Bunyamwera group, causing a mild febrile disease in South Africa. **Graffi v.**, a murine leukemia virus which causes chloroleukemia in mice. **granulosis v.**, baculovirus. **Gross v.**, a virus resembling the Rous sarcoma virus, which causes many kinds of leukemia in newborn mice and rats. **Guama v.**, an arbovirus isolated in the Belem region of Brazil from foresters suffering from hyperthermia, headache, muscular and articular pains, and occasionally nausea and vertigo. **Guaroa v.**, an arbovirus isolated in Colombia from the blood of patients with a febrile disease; a member of the Bunyamwera group of viruses. **helper v.**, a virus (e.g., the Rous-associated virus) that aids the development of a defective virus by supplying or restoring the activity of a viral gene or enabling a defective virus (e.g., the Rous virus) to form a protein coat. **hemadsorption v., type 1 (HA1)**, parainfluenza 3 virus. **hemadsorption v., type 2 (HA2)**, a parainfluenza 1 virus isolated from children with febrile respiratory disease. **hemagglutinating v. of Japan**, Sendai v. **hepatitis v.**, the etiologic agent of viral hepatitis. Three types are recognized: *hepatitis virus A* (*hepatitis virus IH*), the agent causing infectious hepatitis, acquired by parenteral inoculation or by ingestion, and *hepatitis virus B* (*hepatitis virus SH*), the agent causing serum hepatitis, transmitted by inadequately sterilized syringes and needles, or through infectious blood plasma, or certain blood products, and *non-A, non-B hepatitis virus*, which closely resembles hepatitis virus B and causes a similar disease. **herpangina v.**, one of the viruses of the coxsackievirus A group, causing a febrile disease, usually of children, characterized by small herpes-like lesions on the soft palate or in the faucial area. **herpes v.**, see *herpesvirus*. **Ilheus v.**, an arbovirus first isolated from species of *Aedes* and *Psorophora* in Brazil; and also found in Panama, where birds may be hosts. It is related to St. Louis encephalitis virus, Japanese B encephalitis virus, and West Nile virus. **infectious porcine encephalomyelitis v.**, Teschen v. **infectious wart v.**, a papil-

lomavirus that causes warts in man. **influenza v.**, any of a group of myxoviruses that cause influenza, including at least three serotypes (A, B, and C) and several antigenic variations, classified on the basis of their surface antigens (hemagglutinin and neuraminidase) as H_1N_1 , H_2N_2 , etc. Serotype A viruses are subject to major antigenic changes (antigenic shifts) as well as minor gradual antigenic changes (antigenic drift) and cause the major pandemics. Serotype B viruses appear to undergo only minor antigenic changes (antigenic drift) and cause more localized epidemics. Serotype C viruses appear to be antigenically stable and cause only sporadic disease. **insect v's**, viruses capable of causing disease in insects. **iridescent v.**, iridovirus. **Japanese B encephalitis v.**, the causative agent of Japanese B encephalitis, closely similar to the various agents causing the different types of equine encephalomyelitis and St. Louis encephalitis, but having a wider range of pathogenicity for experimental animals. **JH v.**, echovirus 28. **Junin v.**, an arenavirus first isolated in 1958 during an epidemic of hemorrhagic fever; it is serologically related to the Machupo virus. See *Argentinian hemorrhagic fever*, under *fever*. **K v.**, a nononcogenic polyomavirus that produces fatal pneumonia on inoculation into newborn mice. **Kemerova v.**, an arbovirus (tickborne) responsible for a benign febrile disease in western Siberia. **Kumba v.**, a virus isolated from mosquitoes in the Kumba region of the British Cameroons in West Africa; antigenically identical with the Semliki Forest virus. **Kyasanur Forest disease v.**, a tick-borne virus found in native monkeys in the Kyasanur Forest in Mysore, India, and the cause of a highly fatal disease in man; closely related to the Russian spring-summer encephalitis virus. **Langat v.**, a tickborne arbovirus that causes encephalitis in man and in mice. **Lansing v.**, the prototype strain of poliovirus type 2. **Lassa fever v.**, an extremely virulent arenavirus, originally isolated in Lassa, Nigeria, in 1969, which causes an acute, febrile disease with high fatality rate; it morphologically resembles the viruses of lymphocytic choriomeningitis and the Tacaribe-Junin-Machupo group. **latent v.**, masked v. **Latino v.**, an arenavirus isolated from rodents in Bolivia. **LCM v.**, lymphocytic choriomeningitis v. **Leon v.**, the prototype strain of poliovirus type 3. **louping ill v.**, a virus transmitted by the tick, *Ixodes ricinus*; it causes louping ill of sheep, is transmissible to man, and is closely related to Russian spring-summer encephalitis virus. **Lunyo v.**, a neurotropic variant of Rift Valley fever virus. **lymphocytic choriomeningitis (LCM) v.**, an arenavirus, the etiologic agent of lymphocytic choriomeningitis that occurs naturally in mice, dogs, and monkeys. **lytic v.**, one that is replicated in the host cell and causes death and lysis of the cell. **M-25 v.**, a virus with the properties of a myxovirus, although antigenically unrelated; isolated from a person with upper respiratory illness. **Machupo v.**, an arenavirus first isolated during an epidemic of hemorrhagic fever in Bolivia in 1959, indistinguishable from the Junin virus by complement fixation, but distinct by the neutralization test. See *Bolivian hemorrhagic fever*, under *fever*. **Makonde v.**, an arbovirus isolated along with the chikungunya virus in the region of the Makonde plateau in Tanzania. **mammary tumor v.**, mouse mammary tumor v. **Marburg v.**, an RNA virus occurring in Africa, transmitted by insect bite and causing Marburg disease. **masked v.**, a virus which ordinarily occurs in a noninfective state and is demonstrable by indirect methods which activate it, as by blind passage in experimental animals. **Mayaro v.**, an arbovirus found in Mayaro county, Trinidad, and in the region of the Guama River in Brazil as an etiologic agent of febrile disease; closely related to and possibly identical with Semliki Forest virus. **measles v.**, a paramyxovirus, the etiologic agent of measles. **Mengo v.**, an encephalomyocarditis virus isolated originally in 1948 from a captive monkey in Uganda and later from mosquitoes and a mongoose of the same area; identified also as the cause of an epizootic disease of swine in Panama. **MM v.**, an encephalomyocarditis virus originally isolated in 1943 from the brain of a hamster that was previously inoculated with material from a human case of paralytic disease. **molluscum contagiosum v.**, a poxvirus that causes molluscum contagiosum. **Moloney v.**, a murine leukemia virus which causes lymphoid leukemia in mice. **Mossuril v.**, a mosquito-borne arbovirus. **mouse mammary tumor v.**, a virus causing mammary adenocarcinoma in mice of certain genotype and influenced by estrogenic stimulation; it is usually transmitted from the mother to her offspring through the milk. Called also *Bittner agent*, *Bittner v.*, *mammary tumor agent*, *milk agent* or *factor*. **mumps v.**, a paramyxovirus that causes mumps and, in some cases, tenderness and swelling of the testes, pancreas, ovaries, or other organs. **murine leukemia v.**, any of a group of leukoviruses causing leukemia and solid tumors in rats, mice, hamsters, and other animals; the group includes the Gross, Rauscher, Friend, Moloney, and Graffi viruses. **Murray Valley encephalitis v.**, a virus closely resembling the Japanese B encephalitis virus; see under *encephalitis*. **Nakiwogo v.**, Semunya v. **neurotropic v.**, one that has a predilection for and causes infection in nervous tissues, e.g., the rabies virus. **newborn pneumonitis v.**, Sendai v. **Newcastle disease v.**, a virus causing disease in chickens and occasionally in man; related to the influenza viruses. Abbreviated NDV. **nononcogenic v.**, one that does

not cause cancer. **Ntaya v.**, a virus originally isolated in 1943 from various species of mosquitoes, including *Culex* and *Aedes*, in the Ntaya Swamp in western Uganda; it is fatal to mice infected by intracerebral inoculation. **Omsk hemorrhagic fever v.**, an arbovirus, closely related to the Kyasanur Forest disease virus, originally isolated in the Omsk region of the U.S.S.R., which causes a severe febrile illness in man. **oncogenic v.**, a cancer-inducing virus. **O'nyong-nyong v.**, an arbovirus found in Uganda and Kenya as the etiologic agent of an epidemic febrile, dengue-like disease. **Oropouche v.**, an arbovirus isolated from a patient with febrile disease in Trinidad; related to the Simbu virus. **orphan v's**, viruses which when isolated originally in tissue culture showed no specific association with disease, such as the enteric orphan viruses; some have since been found to occur in association with human disease. **papilloma v.**, papillomavirus. **pappataci fever v.**, the etiologic agent of phlebotomus (pappataci) fever, transmitted by *Phlebotomus*, and occurring as two serotypes, the Naples and Sicilian types. **parainfluenza v.**, a group of viruses isolated from patients with upper respiratory tract disease of varying severity. Parainfluenza viruses are classified as: *Parainfluenza 1 v.*, comprising two immunologically related but not identical viruses, *Sendai virus* and *hemadsorption type 2 (HA2) virus*; *Parainfluenza 2 v.*, a virus isolated from patients with acute laryngotracheobronchitis; called also *CA v.* or *croup-associated v.*; *Parainfluenza 3 v.*, a virus causing bronchitis and pneumonia, especially in children; called also *hemadsorption v., type 1 (HA1 v.)*; *Parainfluenza 4 v.*, a virus associated with respiratory disease in children. **Parana v.**, an arenavirus isolated from rodents in Paraguay. **pharyngoconjunctival fever v.**, adenovirus type 3. **Pichinde v.**, an arenavirus infecting rodents in Colombia, and isolated from human subclinical infections. **Piry v.**, an arbovirus isolated from East African patients with an acute febrile syndrome. **plant v's**, viruses that replicate in and may produce diseases of higher plants. **poliomyelitis v.**, see *poliovirus*. **polyoma v.**, polyomavirus. **Pongola v.**, an arbovirus causing a febrile disease in Africa. **Powassan v.**, a tickborne virus isolated from a fatal case of encephalitis in Ontario, Canada; closely related to Russian spring-summer encephalitis virus. **pox v.**, see *poxvirus*. **Quaranfil v.**, an arbovirus found in Egypt, where it was isolated from the blood of children with febrile disease, from the blood of young egrets, and from ticks (*Argas arboreus* and *A. hermanni*). **rabbit fibroma v.**, a poxvirus closely related to the rabbit myxoma virus, which causes rabbit fibroma. **rabbit myxoma v.**, a poxvirus, closely related to the rabbit fibroma virus, which causes infectious myxomatosis in rabbits. **rabbit papilloma v.**, a papillomavirus virus, morphologically the same as the infectious wart virus, which causes rabbit papilloma. **rabies v.**, the etiologic agent of rabies, one of the most neurotropic of the viruses. **Rauscher leukemia v.**, a murine leukemia virus that causes lymphoid leukemia in mice. **respiratory syncytial v.**, a paramyxovirus resembling the influenza virus; it is the cause of an epidemic acute respiratory disease that is more serious in children, in whom it causes bronchopneumonia and bronchiolitis. In tissue cultures, the virus causes syncytium formation. First isolated from chimpanzees with symptoms of respiratory disease. Called also *chimpanzee coryza agent (CCA)*, and *RS v.* **Rift Valley fever v.**, the etiologic agent of a febrile disease first seen in the Rift Valley of Kenya, South Africa, but now widespread in East and South Africa, transmitted by mosquitoes of the species *Aedes*, *Culex*, and *Erethmapodites*. **Rous-associated v. (RAV)**, a helper virus in whose presence a defective Rous sarcoma virus is able to form a protein coat. **Rous sarcoma v.**, a leukovirus producing fibrosarcoma in fowl, especially chickens; some strains have been shown to produce tumors in other animals. See *Rous sarcoma*, under *sarcoma*. **RS v.**, respiratory syncytial v. **Russian spring-summer encephalitis v.**, a tickborne virus which causes spring-summer encephalitis in Russia and Central Europe. **SA v.**, a virus isolated from the hamster brain following inoculation with a chick embryo allantoic culture of nasal washings from a person with acute upper respiratory infection. **St. Louis encephalitis v.**, the etiologic agent of St. Louis encephalitis, with a distribution similar to that of western equine encephalomyelitis virus, but differing from it immunologically. **salivary gland v.**, cytomegalovirus. **satellite v.**, a strain of virus unable to replicate except in the presence of helper virus; considered to be deficient in coding for capsid formation. **Schwartz leukemia v.**, a virus that causes lymphoid leukemia in Swiss mice. **Semliki Forest v.**, an arbovirus isolated from mosquitoes of the Semliki Forest of western Uganda; it is pathogenic for laboratory animals and man. **Semunya v.**, an arbovirus isolated from East African patients with an acute febrile syndrome; called also *Nakiwogo v.* **Sendai v.**, a parainfluenza 1 virus, which seems to have been the etiologic agent of a highly fatal epidemic pneumonitis of newborn infants in Japan, and has been found in infants in Germany and Russia. It is related to the mumps virus. **sigma v.**, a virus that induces carbon dioxide sensitivity in *Drosophila melanogaster* and other fruit flies. **Simbu v.**, a virus isolated from a species of mosquitoes (*Aedes circumlutealis*) in Africa. **simian v's**, viruses that have been recovered from monkeys; they belong to many different groups, including adenoviruses,

enteroviruses, herpesviruses, and reoviruses. **simian v. 40 (SV40)**, vacuinating v. **Sindbis v.**, an arbovirus first isolated from *Culex univittatus* and once from a hooded crow in the Sindbis district of northern Egypt, capable of causing infection in experimental animals. **slow v.**, any virus causing a disease characterized by a very long preclinical course and very gradual progression once the symptoms appear; slow viruses include etiologic agents of kuru, scrapie, and Aleutian disease of mink. **Spondweni v.**, an arbovirus originally isolated in 1955 from South African mosquitoes, which may cause a short-term febrile illness in man. **street v.**, rabies virus from a naturally infected animal, as opposed to a laboratory-adapted strain of the virus. **Tacaribe v.**, an arenavirus, isolated from bats in Trinidad, which is immunologically related to the Junin and Machupo viruses. **Tahyna v.**, a virus serologically related to the California virus, isolated in various European countries; it is suspected of causing human and animal disease. **Tamiami v.**, an arenavirus isolated from rodents in Florida. **temperate v.**, see under *bacteriophage*. **Teschen v.**, the etiologic agent of infectious porcine encephalomyelitis (Teschen disease). **Theiler's v.**, the etiologic agent of a spontaneous encephalomyelitis of mice (Theiler's disease); it resembles human polioviruses but is immunologically distinct from them. **tickborne v's**, viruses that are transmitted by ticks. **tobacco mosaic v.**, a plant virus containing RNA which causes mosaic disease of tobacco. **tumor v.**, a cancer-inducing v. **Turlock v.**, a mosquito-borne virus isolated from *Culex tarsalis* in California; it is unrelated to other arthropod-borne viruses and is not known to cause human disease. **2060 v.**, echovirus 28. **U v.**, a virus resembling the parainfluenza 2 virus but of uncertain status, found in children with subglottic laryngitis; called also *Uppsala v.* **Uganda S v.**, an arbovirus first isolated from species of *Aedes* in Bwamba county in Uganda. It causes mild febrile disease in certain areas in Africa, especially in Nigeria. **Uppsala v.**, U v. **Uruma v.**, an arbovirus causing epidemic febrile disease in Colombia. **vaccinia v.**, **v. vaccini/cum**, the virus of cowpox, used in inoculating against smallpox. See also *poxvirus*. **vacuulating v.**, a polyomavirus isolated from *Rhesus* monkey kidney tissue, which produces malignancy in human and newborn hamster kidney cell cultures and tumors on inoculation into newborn hamsters; called also *simian v. 40*. **VEE v.**, Venezuelan equine encephalomyelitis v.; see *equine encephalomyelitis v.* **vesicular stomatitis v.**, a rhabdovirus, the etiologic agent of vesicular stomatitis of swine, cattle, and horses. **wart v.**, see *infectious wart v.* **WEE v.**, western equine encephalomyelitis v.; see *equine encephalomyelitis v.* **Wesselsbron v.**, an arbovirus repeatedly isolated in South Africa from mosquitoes and from sheep and man, in whom it causes a mild febrile disease. **West Nile v.**, an arbovirus related to Japanese encephalitis B virus and St. Louis encephalitis virus, which causes a mild disease in humans; it was first isolated in Uganda, but is widespread in Africa and has been observed in Israel. *Culex univittatus* is the most probable vector. **Wyeomyia v.**, a virus of the Bunyamwera group originally isolated in Colombia from the mosquito *Wyeomyia melanocephala* and later from man in Panama; it produces encephalitis in the infant mouse after intracerebral inoculation. **Yaba v.**, a virus that produces superficial benign tumors in the monkey. **Yale SK v.**, a strain of poliovirus. **Zika v.**, an arbovirus originally isolated in 1947 from monkeys in the Zika Forest, Uganda, and later found to infect *Aedes africanus*; human infection also occurs. **Zimmermann v.**, a neurotropic arbovirus of the tickborne encephalitis group.

virusemia (vi'rus-e'me-ah) viremia.

virustatic (vi'r'u-stat'ik) [*virus* + Gr. *statikos* bringing to a standstill] inhibiting the replication of viruses.

vis (vis), pl. *vi'ses* [L.] force; energy. **v. a ter/go**, the factor of pressure transmitted through the capillaries to the veins by the blood pumped into the arteries by the heart. **v. conserva/-trix**, the natural power of the organism to resist injury and disease. **v. formati/va**, energy manifesting itself in the formation of new tissue to replace that which has been destroyed. **v. in si/tu**, power or force inherent in a particular tissue. **v. medica/trix natu/rae**, the healing power of nature; the natural curative power inherent in the organism. **v. vi'tae**, **v. vita/lis**, the vital, or life, force.

viscera (vis'er-ah) [L.] plural of *viscus*.

viscerad (vis'er-ad) toward the viscera.

visceral (vis'er-al) [L. *visceralis*, from *viscus* a viscus] pertaining to a viscus.

visceralgia (vis'er-al'je-ah) [L. *viscus viscus* + Gr. *algos* pain + *-ia*] pain in the viscera or in any bodily organ.

visceratism (vis'er-al-izm) the opinion that the viscera are the principal seats of disease.

viscerimotor (vis'er-i-mo'tor) [L. *viscus viscus* + *motor* mover] conveying motor impulses to a viscus.

viscero- [L. *viscus*, pl. *viscera*] a combining form denoting relationship to the organs (viscera) of the body.

viscerocranium (vis'er-o-kra'ne-um) that part of the skull which is derived from the branchial arches.

Influenza virus. (Williams and Wyckoff, S.A.B. LS-136.)

Bacteriophage (T_2) of *Escherichia coli*. (Williams and Frazer, Virology, vol. 2.)

Vaccinia virus. (G. G. Sharp, S.A.B. LS-142.)

Tobacco mosaic virus. (Williams and Wyckoff, S.A.B. LS-135.)

Rickettsiae: 1, epidemic typhus fever; 2, endemic typhus fever; 3, Rocky Mountain spotted fever; 4, American Q fever. (Plotz, Smadel, Anderson, and Chambers, S.A.B. LS-25.)

THORACIC AND ABDOMINAL VISCERA

viscerography (vis'er-og'rah-fe) roentgenography of the viscera.

visceroinhibitory (vis'er-o-in-hib'i-tor'e) inhibiting the essential movements of any viscus or organ.

visceromegaly (vis'er-o-meg'ah-le) [*viscero-* + Gr. *megas* large] enlargement of the viscera; organomegaly.

visceromotor (vis'er-o-mo'tor) concerned in the essential movements of the viscera.

visceroparietal (vis'er-o-pah-ri'ē-tal) pertaining to the viscera and the abdominal wall.

visceroperitoneal (vis'er-o-per'i-to-ne'al) pertaining to the viscera and the peritoneum.

visceropleural (vis'er-o-ploor'al) pertaining to both the viscera and the pleura.

visceroptosis (vis'er-op-to'sis) [L. *viscus* viscus + Gr. *ptōsis* fall] splanchnoptosis.

viscerosensory (vis'er-o-sen'so-re) pertaining to sensation in the viscera.

visceroskeletal (vis'er-o-skel'e-tal) pertaining to the visceral skeleton.

viscerosomatic (vis'er-o-so-mat'ik) pertaining to the viscera and body.

viscerotome (vis'er-o-tōm) 1. an instrument designed for obtaining specimens of liver tissue from cadavers by simple puncture. 2. an area on an abdominal viscus which is supplied with afferent nerve fibers by a single posterior root.

viscerotomy (vis'er-ot'o-me) [*viscero-* + Gr. *tomē* a cutting] incision of an organ, especially postmortem excision of a portion of the liver.

viscerotonia (vis'er-o-to'ne-ah) a group of traits characterized by general relaxation; love of comfort, sociability, and conviviality; and gluttony for food, people, and affection.

viscerotrophic (vis'er-o-trof'ik) trophic and dependent upon the viscera.

viscerotropic (vis'er-o-trop'ik) [*viscero-* + Gr. *tropos* a turning] primarily acting on the viscera; having a predilection for the abdominal or thoracic viscera.

viscid (vis'id) [L. *viscidus*] glutinous or sticky.

visciduity (vi-sid'i-te) the quality of being viscid.

viscin (vis'in) [L. *viscum* mistletoe] a glutinous principle obtainable from mistletoe.

viscogel (vis'ko-jel) a gel which on melting gives a sol of high viscosity. Cf. *liquogel*.

viscometer (vis-kom'ē-ter) viscosimeter.

viscometry (vis-kom'ē-tre) viscosimetry.

viscosaccharase (vis'ko-sak'ah-rās) an enzyme that catalyzes the synthesis of dextran and levan from sucrose.

viscose (vis'kōs) 1. a glutinous product of the viscous fermentation of dextrose or of invertin. 2. viscous. 3. a form of cellulose acetate, used in dialysis membranes, etc.

viscosimeter (vis'ko-sim'ē-ter) an apparatus used in determination of the viscosity of a substance. **Ostwald v.**, one which measures relative viscosity by comparing the time required for the meniscus of the solution under study to move a fixed distance with the time required for a meniscus of water to move the same distance. **Stormer v.**, an apparatus for determining viscosity by measurement of the time required, under controlled conditions, for a definite number of revolutions of a rotating cylinder immersed in the substance to be tested.

viscosimetry (vis'ko-sim'ē-tre) the measurement of the viscosity of a substance.

viscosity (vis-kos'i-te) a physical property of a substance that is dependent on the friction of its component molecules as they slide by one another.

viscous (vis'kus) [L. *viscosus*] characterized by a high degree of friction between component molecules as they slide by each other.

viscus (vis'kus), pl. *vis'cera* [L.] any large interior organ in any one of the three great cavities of the body, especially in the abdomen; see Plate LV.

visibility (viz'i-bil'i-te) [L. *visibilitas*] the quality of being visible.

visible (viz'i-b'l) [L. *visibilis*] capable of being seen; perceptible by the sight.

visile (viz'il) pertaining to vision; recalling most readily impression of vision; a term applied to a type of individual who uses chiefly the sense of sight.

Visine (vi'sēn) trademark for a preparation of tetrahydrozoline hydrochloride.

vision (vizh'un) [L. *visio*, *videre* to see] 1. the act or faculty of seeing; sight. 2. an apparition; a subjective sensation of vision not elicited by actual visual stimuli. 3. visual acuity; symbol V.

achromatic v., a condition in which the entire solar spectrum is seen as colorless, that is, in bands of grays; it occurs in two types, cone and rod, with and without loss of central foveal function.

binocular v., the use of both eyes together without diplopia.

central v., that which is elicited by stimuli impinging directly on

the macula retinae. **chromatic v.**, 1. color v. 2. chromatopsia. **color v.**, perception of the different colors making up the spectrum of visible light; it is mediated by the cones of the retina. **day v.**, visual perception in the daylight, or under conditions of bright illumination; see also *light adaptation*. **dichromatic v.**, a condition in which color perception is restricted to a pair of primaries, either blue and yellow or (rarely) red and green, the entire visible spectrum appearing either in various degrees of vividness and brightness of the effective color pair or the missing colors appearing as grays. The 150 hues discriminable in normal vision are reduced to two, with slight differences in saturation and brilliance doing duty for the varied hues. **direct v.**, central v. **double v.**, diplopia. **facial v.**, the power of judging of the distance, direction, etc., of objects in one's environment by the sensation felt in the skin of the face. **false v.**, pseudoblepsia.

finger v., the alleged ability to perceive colors and receive other sensations ordinarily elicited by visual stimuli, as a result of stimuli received through the skin of the fingertips. **foveal v.**, central v. **half v.**, hemianopia. **halo v.**, perception of a colored halo about a light source, one of the symptoms of glaucoma. **haploscopic v.**, stereoscopic v. **indirect v.**, peripheral v. **iridescent v.**, halo v. **low v.**, impairment of vision such that there is significant visual handicap but also significant usable residual vision; such impairment may involve visual acuity, visual fields, or ocular motility. **monocular v.**, vision with one eye. **multiple v.**, polyopia. **night v.**, visual perception in the darkness of night, or under conditions of reduced illumination; see also *dark adaptation*. **v. nul.**, the existence of scotomas in the field of vision of which the patient is not aware. **v. obscure**, the existence of scotomas in the field of vision of which the patient is aware. **oscillating v.**, oscillopsia. **peripheral v.**, that which is elicited by stimuli falling on areas of the retina distant from the macula. **photopic v.**, day v. **Pick's v.**, a visual condition in which objects lose their normal horizontal-vertical alignment and converge toward or diverge from one another. **pseudoscopic v.**, the reverse of stereoscopic vision, an object appearing not as a solid body, but as a hollow one. **rainbow v.**, halo v. **rod v.**, vision in which the cones of the retina play little or no part, as in scotopic vision. **scoterythrous v.**, a form of anomalous color vision in which there is failure of perception of wavelengths at the red end of the spectrum. **scotopic v.**, night v. **shaft v.**, tunnel v. **solid v.**, stereoscopic v. **stereoscopic v.**, perception of the relief of objects or of their depth; vision in which objects are perceived as having three dimensions, and not merely as two-dimensional pictures. **triple v.**, the perception of three images of a single object; triplopia. **tunnel v.**, a condition characterized by great reduction in the visual field, as though the subject were looking through a long tunnel. **twilight v.**, night v. **violet v.**, ianthinopsia. **word v.**, the ability to perceive printed or written words.

visna (vis'nah) a viral disease of sheep affecting primarily the central nervous system, characterized by insidious onset and paresis of the hind limbs which progresses to total paralysis and death.

Vistaril (vis'tah-ril) trademark for preparations of hydroxyzine.

visual (vizh'u-al) [L. *visualis*, from *videre* to see] 1. pertaining to vision or sight. 2. a person in whom the visual centers are predominant in memory and learning.

visualization (vizh'u-al-i-za'shun) the act of viewing, or of achieving a complete visual impression of an object, as by roentgenography. **double contrast v.**, see *mucosal relief roentgenography*, under *roentgenography*.

visualize (vizh'u-al-iz) 1. to achieve a complete view of; to become visible. 2. to picture in the mind.

visuoauiditory (vizh'u-o-aw'di-tor'e) audiovisual.

visuognosis (vizh'u-og-no'sis) [L. *visus* sight + Gr. *gnōsis* knowledge] the recognition and interpretation of visual impressions.

visuolexic (vizh'u-o-lek'sik) [L. *visus* sight + Gr. *lexis* speech, word] pertaining to the visual aspects of language, as in perception of written language.

visuometer (vizh'u-om'ē-ter) [L. *visus* sight + *metrum* measure] an instrument for measuring the range of vision.

visuopsychic (vizh'u-o-si'kik) visual and psychic; a term applied to that area of the cerebral cortex concerned in the judgment of visual sensations.

visuosensory (vizh'u-o-sen'sor-e) pertaining to the perception of stimuli giving rise to visual impressions.

visuospatial (vizh'u-o-spa'shal) pertaining to visual perception of spatial relationships.

vitagonist (vi-tag'o-nist) a vitamin antagonist; a substance that produces deficiency of a given vitamin.

vital (vi'tal) [L. *vitalis*, from *vita* life] 1. necessary to or pertaining to life. 2. (pl.) the parts and organs necessary to life.

Vitali's test (ve-tal'ēz) [Dioscoride *Vitali*, Italian physician, 1832-1917] see under *tests*.

vitalism (vi'tah-lizm) [L. *vita* life] the theory that biological activities are directed by a supernatural force; opposed to mechanism (def. 3).

vitalist (vi'tal-ist) a believer in vitalism.

vitalistic (vi-'tal-is'tik) pertaining to vitalism.

vitality (vi-tal'i-te) 1. the life principle. 2. the condition of being alive.

vitalize (vi-'tal-iz) to give life to.

Vitallium (vi-tal'e-um) trademark for a cobalt-chromium alloy used in dentures and in surgical appliances, prostheses, and instruments.

vitamer (vi-'tah-mer) any of a number of compounds that possess a given vitamin activity, i.e., that act to overcome a given vitamin deficiency in one or another organism, plant or animal. Thus, there are biotin vitamers, niacin vitamers, thiamine vitamers, pyridoxin vitamers, A vitamers, D vitamers, K vitamers, etc. (Dean Burk).

vitameter (vi-tam'ē-ter) an instrument for assaying vitamins.

vitamin (vi-'tah-min) [L. *vita* life + *amine*] a general term for a number of unrelated organic substances that occur in many foods in small amounts and that are necessary in trace amounts for the normal metabolic functioning of the body. They may be water-soluble or fat-soluble. See *Table of Vitamins*. **anticanitic v.**, a substance that counteracts or prevents graying of the hair; see *para-aminobenzoic acid*. **antihemorrhagic v.**, a substance that counteracts a hemorrhagic tendency; see *vitamin K* in *Table of Vitamins*. **anti-infection v.**, one that is useful in preventing infection; see *vitamin A* in *Table of Vitamins*. **antineuritic v.**, thiamine. **antipellagra v.**, niacin. **antiscorbutic v.**, ascorbic acid. **antisterility v.**, a substance that promotes fertility; see *vitamin E* in *Table of Vitamins*. **antixerophthalmic v.**, a substance that counteracts xerophthalmia; see *vitamin A* in *Table of Vitamins*. **fat-soluble v's**, those (vitamins A, D, E, and K) that are soluble in fat solvents and are absorbed along with dietary fats; they are not normally excreted in the urine and tend to be stored in the body in moderate amounts. **permeability v.**, a substance necessary to insure integrity of the capillary walls. **water-soluble v's**, all the vitamins soluble in water (i.e., all but vitamins A, D, E, and K); they are excreted in the urine and are not stored in the body in appreciable quantities.

vitaminogenic (vi-tam'ī-no-jen'ik) caused by or due to a vitamin.

vitaminoid (vi-'tah-min-oid) 1. resembling a vitamin. 2. a substance having vitamin-like activity, e.g., a bioflavonoid.

vitaminology (vi-'tah-min-ol'o-je) the study of vitamins.

vitaminoscope (vi-'tah-min'o-skōp) [*vitamin* + Gr. *skopein* to examine] an instrument for measuring the time required for re-

covery from glare as an indication of the vitamin A reserve of the body.

vitantion (vi-'tan-ish'un) nutritional disorder due to vitamin deficiency.

vitellarium (vit'ē-lār'e-um) an accessory genital gland found in flukes and tapeworms which secretes the yolk and shell for the fertilized egg; called also *vitelline gland*.

vitellary (vit'ē-lār'e) pertaining to the vitellus, or yolk.

vitellicle (vi-tel'i-k'l) [L. *vitellus* yolk] the yolk sac.

vitellin (vi-tel'in) [L. *vitellus* yolk] a phosphoprotein found in the yolk of eggs.

vitelline (vi-tel'in) [L. *vitellus* yolk] resembling or pertaining to the yolk of an egg or ovum.

vitellogenesis (vi-'tel-o-jen'ē-sis) production of yolk.

vitellolutein (vi-'tel-o-lu'te-in) [L. *vitellus* yolk + *luteus* yellow] a yellow pigment obtainable from lutein.

vitellorubin (vi-'tel-o-ru'bin) [L. *vitellus* yolk + *ruber* red] 1. a reddish pigment obtainable from lutein. 2. crustaceorubin.

vitellose (vi-tel'ōs) a form of proteose derived from vitellin.

vitellus (vi-tel'us) [L.] the yolk of an egg, or of an ovum.

vitiatin (vi-ti'ah-tin) a compound sometimes occurring in the urine along with creatine and creatinine; it is a homologue of choline.

vitiation (vish'e-a'shun) [L. *vitiatio*] impairment of efficiency; the perversion of any process so as to render it faulty or ineffective.

vitaligines (vit'i-lij'i-nēz) [pl. of *vitaligo*] depigmented areas of the skin, as those occurring in vitiligo, or the whitened lines of striae atrophicae.

vitaliginous (vit'i-lij'i-nus) relating to or affected with vitiligo.

vitiligo (vit'i-li'go) [L.] an idiopathic, probably autoimmune, condition characterized by destruction of melanocytes in small or large circumscribed areas of the skin, resulting in patches of depigmentation often having a hyperpigmented border, and often enlarging slowly. Cf. *piebald skin* and *leukoderma*. **Caze-nave's v.**, alopecia areata. **circumscribed v.**, halo nevus. **v. iridis**, depigmentation of the iris. **perinevic v.**, halo nevus.

Vitis (vi'tis) [L.] a genus of plants of the family Vitaceae, including various species of grape or grape vine. **V. vinifera**, L., a species affording most of the more valuable varieties of cultivated and wine-producing grapes. Various preparations of the fruit have numerous medicinal uses by the laity.

vitium (vish'e-um), pl. *vit'ia* [L.] fault, defect. **v. conformatio'nis**, a defect in shape; a malformation. **v. cor'dis**, an

TABLE OF VITAMINS

Individual vitamins are listed here under their different designations (letters and subscript numbers or letters), with description or cross reference to the name of the specific compound.

v. A, a fat-soluble vitamin occurring in nature in two forms: retinol and dehydroretinol. Deficiency in the diet causes (a) inadequate production and regeneration of the visual purple of the retina with resulting night blindness and (b) disturbances in epithelial tissue resulting in keratomalacia, xerophthalmia, and lessened resistance to infections through the epithelial surfaces. Vitamin A is present in the liver oils of the cod and other fish, in butter, egg yolk, cheese, and liver as well as in tomatoes and many other vegetable foods in most of which it exists in precursor form as carotene. Vitamin A is toxic when taken in excess; see *hypervitaminosis A*. The term vitamin A is used sometimes to mean retinol alone. See *retinol* and *dehydroretinol*.

v. A₁, retinol.

v. A₂, dehydroretinol.

v. B, a member of the vitamin B complex.

v. B complex, a group of water-soluble substances including thiamine, riboflavin, niacin (nicotinic acid), niacinamide (nicotinamide), the vitamin B₆ group (including pyridoxine, pyridoxal, pyridoxamine), biotin, pantothenic acid, folic acid, possibly para-aminobenzoic acid, inositol, vitamin B₁₂, and possibly choline. Niacin and niacinamide are also known, together, as the pellagra-preventing factor, P-P factor, or antipellagra factor.

v. B₁, thiamine.

v. B₂, riboflavin.

v. B₆, water-soluble substances (including pyridoxine, pyridoxal, and pyridoxamine) found in most foods, especially meats, liver, vegetables, whole grain cereals, and egg yolk, and concerned in the metabolism of amino acids, in the degradation of tryptophan, and in the breakdown of glycogen to glucose-1-phosphate.

v. B₁₂, cyanocobalamin.

v. B_{12b}, hydroxycobalamin.

v. B_c, folic acid.

v. B_c conjugate, folic acid.

v. C, ascorbic acid.

v. D, any one of several fat-soluble compounds, including chole-

calciferol and ergocalciferol, which have antirachitic properties. Known collectively as *calciferol*, they may be produced artificially by the irradiation of ergosterol and a few related sterols. See *ergosterol*. Deficiency of vitamin D tends to cause rickets in children and osteomalacia and osteoporosis in adults. It is present in the liver oils of various fish, in butter and egg yolk, and is produced in the body on exposure to sunlight. Ingestion of excess amounts of vitamin D leads to hypercalcemia, weakness, loss of weight and other symptoms.

v. D₂, ergocalciferol.

v. D₃, cholecalciferol.

v. E, a fat-soluble vitamin necessary in the diet of many species for normal reproduction, normal development of muscles, normal resistance of erythrocytes to hemolysis, and various other biochemical functions. Chemically it is alpha-tocopherol, one of the three tocopherols (alpha, beta, and gamma) occurring in wheat germ oil, cereals, egg yolk, and beef liver. It is also prepared synthetically. Tocopherols act as antioxidants.

v. G, riboflavin.

v. H, biotin.

v. K, a group of fat-soluble vitamins (see *v. K₁*, *v. K₂*, *v. K₃*) which promote clotting of the blood by increasing the synthesis of prothrombin by the liver. They occur naturally in alfalfa, spinach, cabbage, putrefied fish meal, hog-liver fat, egg yolk, hempseed. Vitamin K and its synthetic analogues have an antihemorrhagic activity with a specific effect on prothrombin deficiency. They are used in obstructive jaundice, in hemorrhagic states associated with intestinal diseases and with disease of the liver, in the hypoprothrombinemia of the newborn, administered parenterally to the infant or to the mother during labor.

v. K₁, phytonadione.

v. K₂, menaquinone.

v. K₃, menadione.

v. L, a factor necessary for lactation in rats, L₁ is found in beef-liver extract, L₂ in yeast.

v. M, folic acid.

organic heart defect. **v. pri'mae formatio'nis**, a developmental anomaly.

vitochemical (vi'to-kem'i-kal) organic; pertaining to organic chemistry.

vitodynamics (vi'to-di-nam'iks) biodynamics.

vit. ov. sol. abbreviation for L. *vitel'lo o'yi solu'tus*, dissolved in yolk of egg.

vitrectomy (vi-trek'to-me) [L. *vitreus* glassy + Gr. *ektomē* excision] surgical extraction via the pars plana of the contents of the vitreous chamber of the eye and their replacement by a physiological solution; done in diabetic retinopathy with vitreous hemorrhage.

vitrecapsulitis (vit're-o-kap'su-li'tis) [L. *vitreus* glassy + *capsula* capsule + *-itis*] inflammation of the capsule enclosing the vitreous; hyalitis.

vitreodentin (vit're-o-den'tin) [L. *vitreus* glassy + *dentin*] an unusually hard and glasslike form of dentin.

vitreoretinal (vit're-o-ret'i-nal) of or pertaining to the vitreous and retina.

Vitreoscilla (vit're-os-sil'ah) a genus of schizomycetes of the family Vitreoscillaceae.

Vitreoscillaceae (vit're-os'sil-la'se-e) a family of Schizomycetes (order Beggiatoales), made up of saprophytic microorganisms, found in decaying organic matter, occurring in colorless trichomes of varying flexibility, which show a gliding motion when attached to a substrate. It includes three genera, *Bactoscil'la*, *Microscil'la*, and *Vitreoscil'la*.

vitreous (vit're-us) [L. *vitreus* glassy] glasslike or hyaline; often used alone to designate the vitreous body of the eye (corpus vitreum [NA]). **detached v.**, vitreous separated from its attachments, as from the retina. **primary v.**, the earliest vitreous in the embryo, formed from a mass of ectodermal and mesodermal fibrils and vascularized by the proliferating hyaloid system. It ceases to be formed when the hyaline capsule of the lens is formed, and is then enveloped by secondary vitreous. **primary persistent hyperplastic v.**, a congenital anomaly, usually unilateral, due to persistence of embryonic remnants of the fibromuscular tunic of the eye and part of the hyaloid vascular system. Clinically, there is a white pupil, elongated ciliary processes, and often microphthalmia; the lens, although clear initially, may become completely opaque. **secondary v.**, embryonic vitreous composed of densely packed fine fibrils formed around the primary vitreous by the inner layer of the optic cup. **tertiary v.**, embryonic zonular fibers derived from the primary vitreous and the basement membrane of the nonpigmented epithelium of the ciliary body; the fibers eventually attach to the lens capsule, giving rise to the zonule of Zinn.

vitreum (vit're-um) the vitreous body of the eye (corpus vitreum [NA]).

vitrina (vi-tri'nah) [L. *vitrum* glass] a translucent or glassy material. **v. auditó'ria**, **v. au'ris**, endolymph. **v. ocula'ris**, **v. oc'uli**, corpus vitreum.

vitriol (vit're-ol) [L. *vitriolum*] any crystalline sulfate. **blue v.**, the pentahydrate form of cupric sulfate. **elixir of v.**, aromatic sulfuric acid. **green v.**, ferrous sulfate. **oil of v.**, sulfuric acid. **white v.**, **zinc v.**, zinc sulfate.

vitriolated (vit're-o-lāt'ed) containing vitriol; containing sulfuric acid.

vitrum (vit'rum) [L.] glass.

Vivactil (vi-vak'til) trademark for a preparation of protriptyline hydrochloride.

vivi- [L. *vivus* alive] a combining form meaning alive or denoting relationship to life.

vidiagnosis (viv'i-di-al'i-sis) removal by dialysis through a living membrane (the peritoneum). Cf. *peritoneal lavage*, under *lavage*.

vidiagnosis (viv'i-di-fu'zhun) removal of diffusible substances from the circulating blood of living subjects by dialysis, performed by the continuous passage of the blood from an artery through a system of tubes made of celloidin immersed in saline solution, and its return to a vein, thus yielding by dialysis certain of its constituents to the fluid surrounding the tubes.

vivification (viv'i-fi-ka'shun) [L. *vivificatio*, from *vivus* living + *facere* to make] the conversion of lifeless into living protein matter in the process of assimilation.

viviparity (viv'i-par'i-te). the quality of being viviparous.

viviparous (vi-vip'ah-rus) [*vivi-* + L. *parere* to bring forth, produce] bearing living young which derive nutrition directly from the maternal organism.

Viviparus (vi-vip'ah-rus) a genus of fresh-water snails. **V. javan'icus**, a second intermediate host of the fluke *Echinostoma ilocanum* in Java.

vivipation (viv'i-pa'shun) the form of reproduction in which the embryo develops within and derives nutrition directly from the maternal organism.

viviperception (viv'i-per-sep'shun) the study of the vital processes of the living organism.

vivisection (viv'i-sek'shun) the performance of surgical procedures upon living animals for purposes of research.

vivisectionist (viv'i-sek'shun-ist) one who practices or defends vivisection.

vivosphere (vi'vo-sfēr) [L. *vivus* alive + *atmosphere*] the region between the atmosphere above and the petrosphere below, in which life is found most abundantly; biosphere.

VLDL very low-density lipoprotein.

Vleninckx solution (vlem'inks) [Jean François *Vleminckx*, Belgian physician, 1800–1876] sulfurated lime solution.

V.M.D. Doctor of Veterinary Medicine [L. *Veterinariae Medicinae Doctor*].

vocal (vo'kal) [L. *vocalis*, from *vox* voice] pertaining to the voice.

Voegtlin's unit (vegt'lin) [Carl *Voegtlin*, American pharmacologist, born in Basel, 1879–1960] see under *unit*.

Voges-Proskauer test (reaction) [O. *Voges*, German physician; Bernhard *Proskauer*, German hygienist, 1851–1915] see under *tests*.

Vogt's angle (fögts) [Karl *Vogt*, German naturalist and physiologist, 1817–1895] see under *angle*.

Vogt's point (fögts) [Paul Frederick Emmanuel *Vogt*, surgeon in Greifswald, 1844–1885] see under *point*.

Vogt's syndrome (disease) (fögts) [Oskar *Vogt*, German neurologist, 1870–1959] see under *syndrome*.

Vogt-Hueter point (fögth-e'ter) [P. F. E. *Vogt*; Karl *Hueter*, German surgeon, 1838–1882] see *Vogt's point*, under *point*.

voice (vois) [L. *vox* voice] a sound produced by the larynx and modified by the vocal tract. **amphoric v.**, cavernous v. **cavernous v.**, a hollow sound heard on auscultation when the patient speaks; it indicates a cavity in the lung. **double v.**, diphonia. **eunuchoid v.**, a high falsetto voice in a man, resembling that of a eunuch or a woman. **whispered v.**, the transmission of a whisper to the auscultating ear, heard in pulmonary consolidation.

void (void) to cast out as waste matter.

Voigt's boundary lines (voits) [Christian August *Voigt*, Austrian anatomist, 1809–1890] see under *line*.

Voillemier's point (vwal-me-äz') [Léon Clément *Voillemier*, French urologist] see under *point*.

Voit's nucleus (foits) [Carl von *Voit*, physiologist in Munich, 1831–1908] see under *nucleus*.

voix (vwah) [Fr.] voice. **v. de polichinelle** (vwah'dē-pol'-ish-i-nel') [Fr. "voice of Punch"], a variety of egophony.

vola (vo'lah) [L.] a concave or hollow surface. **v. ma'nus**, the hollow of the hand (palma manus [NA]). **v. pe'dis**, the hollow of the foot (planta pedis [NA]).

volar (vo'lar) pertaining to the palm or sole; indicating the flexor surface of the forearm, wrist, or hand.

volar dorsal (vo'lar-dor'sal) from the volar to the dorsal surface.

volaris (vo-la'ris) palmar; designating relationship to the palm of the hand.

volatile (vol'ah-til) [L. *volatilis*, from *volare* to fly] tending to evaporate rapidly.

volatilization (vol'ah-til-i-za'shun) the conversion into vapor or gas without chemical change.

volatilize (vol'ah-til-iz) to convert into vapor.

volatilizer (vol'ah-til-iz'er) an apparatus for producing volatilization.

vole (völ) a mouselike rodent of the genus *Microtus*. The field vole of Great Britain is affected by a disease resembling tuberculosis, being caused by *Mycobacterium microti*, formerly called the *vole bacillus*. From this organism has been prepared a vaccine for use in tuberculosis of man and cattle.

Volhard's test (föhl'harts) [Franz *Volhard*, German internist, 1872–1905] see under *tests*.

volition (vo-lish'un) [L. *velle* to will] the act or power of willing.

volitional (vo-lish'un-al) pertaining to the will.

Volkman's canal, membrane (fölk'mahnz) [Alfred Wilhelm *Volkman*, German physiologist, 1800–1877] see under *canal* and *membrane*.

Volkman's contracture, etc. (fölk'mahnz) [Richard von *Volkman*, German surgeon, 1830–1889] see under *contracture*, *disease*, *operation*, *splint*, *paralysis*, and *spoon*.

volley (vol'e) a rhythmical succession of muscular twitches artificially induced; the aggregate of nerve impulses set up by a single stimulus. **antidromic v.**, the backfire excitation traveling centrad through the anterior root during the reflex arc.

volsella (vol-sel'ah) [L.] vulsella.

volt (völt) [Alessandro *Volta*, Italian physiologist and physicist, 1745–1827] the unit of electromotive force in the M.K.S. system of measurement, being the force necessary to cause one ampere of current to flow against one ohm of resistance. **electron v.**, the energy acquired by an electron when accelerated by a potential of one volt, being equivalent to 3.82×10^{-20} small

calories, or 1.6×10^{-12} ergs; usually expressed in million electron-volts, or Mev.

voltage (vôl'tij) electromotive force measured in volts.

voltaic (vol-ta'ik) galvanic (def. 2).

voltaism (vol'tah-izm) galvanism.

voltammeter (vôlt-am'me-ter) an instrument for measuring both volts and amperes.

voltampere (vôlt-am'pêr) the product of multiplying a volt by a milliampere.

voltmeter (vôlt'me-ter) an instrument for measuring electromotive force in volts.

Voltolini's disease, tube (vol'to-le'nêz) [Frederic Edward Rudolf *Voltolini*, rhinologist and otologist in Breslau, 1819-1889] see under *disease* and *tube*.

volume (vol'üm) the measure of the quantity or capacity of a substance. **atomic v.**, the value obtained by dividing the atomic weight of an element by its specific gravity in the solid condition. **blood v.**, the total quantity of blood in the body, usually expressed in liters or in liters per kilogram of body weight. **circulation v.**, **v. of circulation**, the amount of blood pumped through the lungs and out to all the organs of the body by the heart, expressed in liters of blood flow per minute. **v. of distribution**, a dilution method for determining the volume of fluids, e.g., plasma, in a body fluid compartment. A solute (e.g., inulin) is injected into the compartment and, after it is equally distributed, a sample is taken. Then the quantity of solute removed (as by metabolism, excretion, etc.) is subtracted from the quantity administered, and the result is divided by the concentration per milliliter in the sample. **end-diastolic v.**, the volume of blood in each ventricle at the end of diastole, usually about 120-130 ml. but sometimes reaching 200-250 ml. in the normal heart. **end-systolic v.**, the volume of blood remaining in each ventricle at the end of systole, usually about 50-60 ml. but sometimes as little as 10-30 ml. in the normal heart. **expiratory reserve v.**, the maximal amount of gas that can be expired from the resting end-expiratory level. Abbreviated ERV. See illustration accompanying *capacity*. **inspiratory reserve v.**, the maximal amount of gas that can be inspired from the end-inspiratory position. Abbreviated IRV. **mean corpuscular v.**, see *MCV*, def. 1. **minute v.**, the quantity of gas expelled from the lungs per minute. Abbreviated MV. **packed-cell v.**, the number of packed red cells in milliliters per 100 ml. of centrifuged blood. Abbreviated PCV. **residual v.**, the amount of gas remaining in the lung at the end of a maximal expiration. Abbreviated RV. See illustration accompanying *capacity*. **stroke v.**, the amount of blood ejected from a ventricle at each beat of the heart. **tidal v.**, the amount of gas that is inspired and expired (i.e., ventilation) during one respiratory cycle. Abbreviated $\dot{V}_T$. See illustration accompanying *capacity*.

volumenometer (vol'üm-nom'ê-ter) volumometer.

volumetric (vol'u-met'rik) [*volume* + *metric*] pertaining to or accomplished by measurement in volumes.

volumette (vol'u-met') an instrument for delivering repeatedly quantities of fluid in accurate predetermined amounts.

volumination (vol'u-mi-na'shun) the swelling of the bodies of bacteria produced by blood serum; normal serum produces a certain amount of swelling, but immune serum produces much more.

volumometer (vol'u-mom'ê-ter) [*volume* + Gr. *metron* measure] an instrument for measuring volume or changes in volume.

voluntary (vol'un-târ'e) [L. *voluntas* will] accomplished in accordance with the will.

voluntomotory (vo'lun-to-mo'tor-e) [L. *voluntas* will + *motor* mover] subject to voluntary motor influence.

volute (vo-lût') rolled up.

volutin (vo-lu'tin) bacterial polymetaphosphate occurring as cytoplasmic granules (metachromatic granules) having a marked affinity for basic dyes.

volvulate (vol'vu-lât) [L. *volvere* to twist round] to twist or form a knot (volvulus).

volvulosis (vol'vu-lo'sis) onchocerciasis caused by *Onchocerca volvulus* (q.v.).

volvulus (vol'vu-lus) [L. *volvere* to twist round] intestinal obstruction due to a knotting and twisting of the bowel. **v. neonatorum**, volvulus occurring in the newborn.

vomer (vo'mer) [L. "plowshare"] [NA] the unpaired flat bone that forms the inferior and posterior part of the nasal septum.

vomerine (vo'mer-in) of or pertaining to the vomer.

vomerobasilar (vo'mer-o-bas'i-lar) pertaining to the vomer and to the basilar portion of the cranium.

vomeronasal (vo'mer-o-na'sal) pertaining to the vomer and the nasal bone.

vomicia (vom'i-kah), pl. *vom'icae* [L. "abscess"] 1. the profuse and sudden expectoration of pus and putrescent matter. 2. an abnormal cavity in an organ, especially in the lung, caused by suppuration and the breaking down of tissue.

vomicose (vom'i-kôs) full of ulcers; ulcerous.

vomit (vom'it) [L. *vomitare*] 1. to cast up from the stomach by the mouth. 2. matter cast up from the stomach; vomited matter. 3. an emetic. **Barcoo v.**, vomiting and nausea, with bulimia, occurring in southern Australia. **bilious v.**, vomited matter stained with bile. **black v.**, blackish matter consisting of blood which has been acted upon by the gastric juice, cast up from the stomach in yellow fever and other conditions in which blood collects in the stomach. **coffee-ground v.**, vomit containing dark altered blood mixed with stomach contents; see *black v.*

vomiting (vom'it-ing) the forcible expulsion of the contents of the stomach through the mouth. **cerebral v.**, spontaneous vomiting without nausea, frequently seen in intracranial disease. **cyclic v.**, vomiting recurring at irregular intervals, especially in children; called also *periodic v.* and *recurrent v.* **dry v.**, nausea with attempts at vomiting, but with the ejection of nothing but gas. **fecal v.**, stercoraceous v. **hysterical v.**, vomiting accompanying an attack of hysteria. **nervous v.**, vomiting as a symptom of gastric neurosis. **periodic v.**, cyclic v. **pernicious v.**, vomiting in pregnancy, so severe as to threaten the life of the mother. **v. of pregnancy**, vomiting occurring in pregnancy, especially the early morning vomiting common in that condition. **projectile v.**, vomiting in which the vomitus is ejected with force. **recurrent v.**, cyclic v. **stercoraceous v.**, the vomiting of fecal matter; it is seen in intestinal obstruction, appendicitis, etc., when bacterial overgrowth in the upper intestine has modified the intestinal contents.

vomitive (vom'i-tiv) emetic.

vomito (vom'i-to) [Sp.] vomit. **v. negro** (vom'i-to na'gro) [Sp.], 1. black vomit. 2. yellow fever.

vomitory (vom'i-tor'e) an emetic.

vomituration (vom'it-u-rish'un) repeated ineffectual attempts at vomiting.

vomititus (vom'i-tus) [L.] 1. vomiting. 2. matter vomited. **v. cruen'tus**, bloody vomit. **v. matuti'nus**, the morning vomiting of chronic gastric catarrh.

von Behring see *Behring*.

von Bekhterev see *Bekhterev*.

von Bergmann see *Bergmann*.

von Bezold see *Bezold*.

von Economo see *Economo*.

von Frisch (von frish), Karl Ritter, Austrian-born German zoologist, born 1886; co-winner, with Konrad Lorenz and Nikolaas Tinbergen, of the Nobel prize in medicine and physiology for 1973, for his work on the behavior of bees.

von Gierke see *Gierke*.

von Graefe see *Graefe*.

von Haller see *Haller*.

von Hippel see *Hippel*.

von Jaksch see *Jaksch*.

von Kossa see *Kossa*.

von Langenbeck see *Langenbeck*.

von Leyden see *Leyden*.

von Mikulicz see *Mikulicz*.

von Monakow see *Monakow*.

von Pirquet see *Pirquet*.

von Recklinghausen see *Recklinghausen*.

von Ruck see *Ruck*.

von Wahl see *Wahl*.

von Zenker see *Zenker*.

Vontrol (von-trôl') trademark for preparations of diphenidol.

Voorhees' bag (voor'êz) [James Dittmars *Voorhees*, obstetrician in New York, 1869-1929] see under *bag*.

Voranil (vor'ah-nil) trademark for a preparation of clortermine hydrochloride.

Voronoff's operation (vo'ro-nofs) [Serge *Voronoff*, Russian physician in Paris, 1866-1951] see under *operation*.

vortex (vor'teks), pl. *vortices* [L. "whirl"] a whorled arrangement, design, or pattern, as of muscle fibers, or of the ridges or hairs on the skin; [NA] a general term for a structure having a whorled arrangement, design, or pattern. **coccygeal v.**, **v. coccyg'eus**, a spiral arrangement of hairs over the region of the coccyx. **v. cor'dis** [NA], **v. of heart**, the whorled arrangement of muscle fibers at the apex, in the left ventricle of the heart, through which the more superficial fibers pass to the interior of the left ventricle toward the base. **Fleischer's v.**, a rare congenital opacity characterized by ochre-colored whorls which radiate from the center of the cornea at the level of Bowman's membrane; called also *cornea verticillata*. **v. len'tis**, a spiral figure on the surface of the lens of the eye produced by the concentric arrangement of the fibers composing it; called also *nuclear arc* or *zone*. **vor'tices pilo'rum** [NA], whorled patterns of hair growth on the body, as that on the crown of the head.

Vorticella (vor'ti-sel'ah) a genus of ciliate protozoa of the order Peritrichida, found attached to aquatic plants and animals.

vortices (vor'tī-sēz) [L.] plural of *vortex*.

v. o. s. abbreviation for L. *vitel'lo o'vi solu'tus*, dissolved in yolk of egg.

Vossius lenticular ring (vos'e-us) [Adolf Vossius, German ophthalmologist, 1855–1925] see under *ring*.

vox (voks), pl. *vo'ces* [L.] voice. **v. cholera'ica**, the peculiar suppressed voice of true cholera.

voyeur (voi-yer') a person who practices voyeurism.

voyeurism (voi'yer-izm) a form of paraphilia in which sexual gratification is derived from watching or looking at others, particularly the genitals, or from observing sexual objects or acts.

V.R. vocal resonance.

V.S. volumetric solution.

v.s. vibration seconds (the unit of measurement of sound waves.)

V.T. vacuum tuberculin.

vuerometer (vu'er-om'ē-ter) [Fr. *vuesight* + Gr. *metron* measure] an instrument for measuring the distance between the eyes.

vulcanite (vul'kan-it) vulcanized caoutchouc or India rubber, formerly used as a base for artificial dentures.

vulcanize (vul'kah-nīz) to subject caoutchouc, in the presence of sulfur, to heat and high steam pressure, producing a flexible or hard rubber, as desired.

vulgaris (vul-ga'ris) [L.] ordinary; common. See *acne vulgaris*, *lupus vulgaris*, etc.

vulnerability (vul'ner-ah-bil'i-te) susceptibility to injury or to contagion.

vulnerant (vul'ner-ant) 1. inflicting injury or causing a wound. 2. an agent that causes injury.

vulnerary (vul'ner-er'e) [L. *vulnerarius*, from *vulnus* wound] 1. pertaining to wounds or the healing of wounds. 2. an agent that promotes the healing of wounds.

vulnerate (vul'ner-āt) [L. *vulnerare*] to wound.

vulnus (vul'nus), pl. *vul'nera* [L.] a wound.

Vulpian's atrophy, law, test (vul'pe-anz) [Edme Felix Alfred Vulpian, French physician, 1826–1887] see under *atrophy, law, and tests*.

vulsella, vulsellum (vul-sel'ah, vul-sel'um) [L.] a forceps with clawlike hooks at the extremity of each blade.

vulva (vul'vah) [L.] the region of the external genital organs of the female, including the labia majora, labia minora, mons pubis, bulb of the vestibule, vestibule of the vagina, greater and lesser vestibular glands, and vaginal orifice. See *pudendum femininum* [NA]. **fused v.**, synechia vulvae.

vulval, vulvar (vul'val; vul'var) pertaining to the vulva.

vulvectomy (vul-vek'to-me) excision of the vulva.

vulvismus (vul-viz'mus) vaginismus.

vulvitis (vul-vi'tis) [*vulva* + *-itis*] inflammation of the vulva. **diabetic v.**, vulvitis occurring in diabetes. **eczematiform v.**, vulvitis marked by the formation of vesicular pustules. **leukoplakic v.**, kraurosis vulvae. **phlegmonous v.**, see *noma*. **plasma cell v.**, Zoon's erythroplasia. **pseudoleukoplakic v.**, vulvitis in which the mucosa is whitish and opaque, resembling leukoplakia. **ulcerative v.**, a form with ulceration, pain, and lymphangitis.

vulvocrural (vul-vo-kroo'ral) pertaining to the vulva and the thigh.

vulvopathy (vul-vop'ah-the) [*vulva* + Gr. *pathos* disease] any disease of the vulva.

vulvorectal (vul'vo-rek'tal) pertaining to or communicating with the vulva and rectum, as a vulvorectal fistula.

vulvouterine (vul'vo-u'ter-in) pertaining to the vulva and uterus.

vulvovaginal (vul'vo-vaj'i-nal) pertaining to the vulva and vagina.

vulvovaginitis (vul'vo-vaj'i-ni'tis) inflammation of the vulva and vagina, or of the vulvovaginal glands. **infectious pustular v.**, an acute contagious nonvenereal viral disease of cattle characterized by inflammation, necrosis, and pustule formation of varying degree in the vulva and vagina; in the male, similar lesions occur on the skin of the penis. **senile v.**, see *atrophic vaginitis*.

vv. abbreviation for L. *ve'nae* (veins).

v/v volume (of solute) per volume (of solvent).

V.W. vessel wall.

W

W chemical symbol for *tungsten*.

W. wehnelt (a unit of hardness of roentgen rays).

w. watt.

Ω symbol for *ohm*.

Wachendorf's membrane (vahk'en-dorfs) [Eberhard Jacob Wachendorf, German anatomist of the 18th century] see under *membrane*.

wagaga (wah-gag'ah) Fiji name for filariasis.

Wagner's corpuscles, spot (vahg'nerz) [Rudolf Wagner, German physiologist, 1805–1864] see *Corpuscula tactus*, and see under *spot*.

Wagner's disease (vahg'nerz) [Ernst Leberecht Wagner, Leipzig pathologist, 1829–1888] colloid milium.

Wagner's hammer (vahg'nerz) [Johann Philip Wagner, German physicist, 1799–1879] Neef's hammer.

Wagner's operation (vahg'nerz) [Wilhelm Wagner, German surgeon, 1848–1900] see under *operation*.

Wagner's theory (vahg'nerz) [Moritz Wagner, German zoologist, 1813–1887] see *migration theory*, under *theory*.

Wagner-Jauregg treatment (vahg'ner-yow'reg) [Julius Wagner von Jauregg, Austrian neuropsychiatrist, 1857–1940, noted for his research on cretinism and for treatment of dementia paralytica by malarial infection; winner of the Nobel prize for medicine in 1927] see under *treatment*.

Wagstaffe's fracture (wag'stafs) [William Warwick Wagstaffe, English surgeon, 1843–1910] see under *fracture*.

waist (wäst) the portion of the body between the thorax and the hips.

wakamba (wa-kam'bah) an African arrow poison.

wakefulness (wāk'ful-nes) a state marked by indisposition to sleep; sleeplessness; arousal.

Waksman (waks'man), Selman A. A Russian microbiologist in the United States, born 1888, noted for his research in the field of antibiotics; winner of the Nobel prize for medicine and physiology in 1952.

Walcheren fever (vah'l'ka-ren) [Walcheren, a region in Holland] see under *fever*.

Waldenburg's apparatus (vah'l'den-boorgz) [Louis Waldenburg, German physician, 1837–1881] see under *apparatus*.

Waldenström's disease (vah'l'den-stremz) [Johan Henning Waldenström, orthopedic surgeon in Stockholm, born 1877] see *osteochondrosis*.

Waldenström's macroglobulinemia (vah'l'den-stremz) [Jan Waldenström, Swedish biochemist, born 1906] see under *macroglobulinemia*.

Waldeyer's fluid, etc. (vah'l'di-erz) [Heinrich Wilhelm Gottfried von Waldeyer, anatomist in Berlin, 1836–1921] see under *fluid, fossa, gland, layer, ring, and sulcus*.

walk (wok) 1. to move on foot. 2. the manner in which one moves on foot; see also *gait* and *walking*.

walking (wok'ing) progressing on foot, or the manner in which one moves on foot. **heel w.**, a gait marked by walking on the heels to avoid the pain of pressure upon the hyperalgesic soles of the feet in cases of peripheral neuritis. **sleep w.**, somnambulism, def. 1.

wall (wawl) the limiting structure of a space, as of the chest, abdomen, or hollow organ, or of a definitive mass of material. For official names of specific walls of various anatomical structures, see under *paries*. **axial w.**, in a cavity involving an axial surface of a tooth, that wall which lies nearest the pulp (parallel with the long axis of the tooth). **cavity w.**, a plane surface of a tooth cavity prepared to receive a restoration, being named for the surface which it faces, or most closely approximates, as buccal, distal, incisal, labial, lingual, mesial, occlusal; depending on the situation of the cavity there are also axial, gingival, pulpal, and subpulpal walls. **cell w.**, a rigid structure that lies just outside of and is joined to the plasma membrane of plant cells and most prokaryotic cells; it protects the cell and maintains its shape. **germ w.**, a ringlike thickening around the blastoderm of the bird, consisting of the advancing boundary zone at its margin. **gingival w.**, in a cavity involving an axial surface of a tooth, that wall which is nearest the gingiva. **nail w.**, **w. of nail**, vallum unguis. **parietal w.**, somatopleure. **periotic w.**, the wall of the otic vesicle. **pulpal w.**, in a cavity involving the occlusal or incisal surface of a tooth, that wall which overlies the pulp. **splanchnic w.**, splanchnopleure. **subpulpal w.**, the exposed inner surface of the pulp chamber of a tooth after the pulp has been removed.

Wallenberg's syndrome (vah'l'en-bergz) [Adolf Wallenberg, German physician, 1862–1949] see under *syndrome*.

wallerian degeneration, law (wahl-le're-an) [Augustus Vol-

ney Waller, English physician, 1816–1870] see under *degeneration* and *law*.

walleye (wahl'i) 1. leukoma of the cornea. 2. exotropia.

Wallhauser-Whitehead method [A. Wallhauser; J. M. Whitehead, American physicians] see under *method*.

wall-plate (wahl'plāt) an electrical apparatus for giving off a current of low tension and low voltage.

Walter's bromide test (wahl'terz) [Friedrich Karl Walter, Bremen neurologist, born 1881] see under *tests*.

Walther's islets (cell rests, inclusions) [Max Walther, Swiss gynecologist, 1867–1933] see under *islet*.

Walther's ducts, ganglion, oblique ligament, (wahl'terz) [August Friedrich Walther, German anatomist, 1688–1746] see *ductus sublinguales minores, glomus coccygeum*, and *ligamentum talofibulare posterius*.

wambles (wahn'b'lz) milk sickness.

wandering (wahn'der-ing) moving about freely, as a wandering cell; abnormally movable; too loosely attached. **mind w.**, reverie, day dreaming, and similar states. **w. of a tooth**, displacement of a tooth due to destruction of the periodontal membrane by resorption or to absence of an adjacent tooth in the dental arch.

Wang's test (wangz) [Wang Chung Tik, Chinese physician, 1888–1931] see under *tests*.

wanganga (wan-gang'gah) a term applied to elephantoid fever in Fiji.

Wangensteen drainage, tube (apparatus, suction) (wan'-gen-stēn) [Owen Harding Wangensteen, American surgeon, born 1898] see under *drainage* and *tube*.

Wanner's symptom (vahn'enz) [Friedrich Wanner, Munich otologist, born 1870] see under *symptom*.

Wanscher's mask (vahn'sherz) [Oscar Wanscher, Danish physician, 1846–1906] see under *mask*.

warbles (war'b'lz) see *Hypoderma*. **ox w.**, larvae of flies of the genus *Hypoderma* (*H. bovis* and *H. lineatum*) which infest cattle of the Northern Hemisphere.

Warbug's coenzyme (war'boorgs) [Otto Heinrich Warburg, German physiological chemist, born 1883, noted for his research on the chemistry of respiration and on enzymes; winner of the Nobel prize for medicine and physiology in 1931] see *nicotinamide-adenine dinucleotide phosphate*, under *dinucleotide*.

ward (ward) a large room in a hospital for the accommodation of several patients. **isolation w.**, a hospital ward for the isolation of persons having or suspected of having infectious disease. **psychopathic w.**, a ward in a general hospital for temporary reception of psychiatric patients.

warfarin (war'fah-rin) [named for Wisconsin Alumni Research Foundation] chemical name: 4-hydroxy-3-oxo-1-phenylbutyl-2H-1-benzopyran-2-one. One of the synthetic coumarin anticoagulants, $C_{19}H_{16}O_4$. **w. potassium [USP]**, the potassium salt of warfarin, $C_{19}H_{15}KO_4$, occurring as a white crystalline powder, having anticoagulant actions and uses similar to those of the sodium salt; administered orally. **sodium w. [USP]**, the sodium salt of warfarin, $C_{19}H_{15}NaO_4$, occurring as a white, amorphous or crystalline powder, the anticoagulant action of which is of intermediate duration and cumulative; administered orally, intravenously, or intramuscularly. It is also used as a rodenticide.

Waring's method (system) (wār'ings) [George Edward Waring, American sanitarian, 1833–1898] see under *method*.

Warren's fat columns, incision (war'enz) [John Collins Warren, Boston surgeon, 1778–1856] see *fat columns*, under *column*, and see under *incision*.

wart (wort) [L. *verruca*] an epidermal tumor caused by a papillomavirus; the term is also loosely applied to any of various benign, wartlike, epidermal proliferations of nonviral etiology, as a senile wart (seborrheic keratosis); called also *verruca*. **acuminate w.**, condyloma acuminatum. **anatomical w.**, the wart in tuberculosis verrucosa. **cattle w.**, a condition of viral origin in cattle, characterized by development of nodular tumors, usually in the skin of the head, neck, and shoulders, and often on the udder. **common w.**, verruca (def. 1). **digitate w.**, verruca digitata. **flat w.**, verruca plana. **filiform w.**, verruca filiformis. **fugitive w. (obs.)**, verruca plana. **Hassall-Henle w's**, hyaline excrescences in the periphery of Descemet's membrane (lamina limitans posterior corneae) occurring with advancing age. **juvenile w.**, verruca plana. **moist w.**, condyloma latum. **mosaic w.**, an irregularly shaped lesion on the sole of the foot, with a granular surface, formed by an aggregation of contiguous plantar warts. **mother w.**, a solitary wart that, after long period of slow growth, appears to give rise to eruption of many new warts. **mucocutaneous w.**, a variant of the common wart, found in the mucocutaneous junctional areas of the genitalia and anus, and occasionally of the nostrils and mouth. **necrogenic w.**, a warty lesion of tuberculosis verrucosa. **periungual w.**, a common wart occurring around the nails, where it is likely to become fissured and tender. **peruvian w.**, verruca peruana. **pitch w's**, precancerous, keratotic, epidermal tumors occurring in individuals who work in gas, tar, pitch, or various oils derived

from coal. **plane w.**, verruca plana. **plantar w.**, verruca plantaris. **pointed w.**, condyloma acuminatum. **postmortem w.**, prosector's w., tuberculosis verrucosa. **seborrheic w.**, seborrheic keratosis. **seed w.**, verruca or common wart; so called because of the minute black specks or "seeds" within it, which are actually thrombosed elongated capillary loops extending up into the substance of the wart. **senile w.**, seborrheic keratosis. **soot w.**, chimney-sweeps' cancer. **telangiectatic w.**, a misnomer for the verrucous papule of angiokeratoma. **tuberculous w.**, tuberculosis verrucosa. **venereal w.**, condyloma acuminatum.

Wartenberg's disease, etc. (wor'ten-bergz) [Robert Wartenberg, American neurologist, 1887–1956] see under *disease*, *sign*, and *symptom*.

wash (wash) a solution used for cleansing or bathing a part, as an eye or the mouth. **eye w.**, collyrium. **mouth w.**, see *mouthwash*.

Wasielwskia (was'e-el-u'ske-ah) *Naegleria*.

Waskia (was'ke-ah) *Retortamonas*.

wasp (wosp) [L. *vespa*] any stinging hymenopterous insect of the family Vespidae, of which the genus *Vespa* is the type. Its venom contains histamine, 5-hydroxytryptamine, etc.

wasserhelle (vos'er-hel'lē) [Ger. "water-clear"] see *water-clear cells*, under *cell*.

Wassermann reaction (test) (vos'er-man) [August Paul von Wassermann, bacteriologist in Berlin, 1866–1925] see under *reaction*.

Wassermann-fast (vos'er-man fast') showing a persistent positive Wassermann reaction despite antisyphilitic treatment.

Wassilieff's disease (was-sil'e-efs) [Nikolai Porfiryevich Wassilieff, Russian physician, born 1861] leptospiral jaundice.

waste (wäst) 1. gradual loss, decay, or diminution of bulk. 2. useless and effete material, unfit for further use within the organism. 3. to pine away or dwindle. **phonetic w. of the breath**, a too rapid expiratory act, due to paralysis of a lateral cricoarytenoid muscle.

water (wah'ter) 1. a tasteless, odorless, colorless liquid, $(H_2O)_n$, used as the standard of specific gravity and of specific heat. It freezes at 32° F. (0° C.) and boils at 212° F. (100° C.). It is present in all organic tissues and in many other substances, and is the most universal of the solvents. 2. aromatic water. 3. purified water. **ammonia w.**, diluted ammonia solution. **ammonia w., stronger**, strong ammonia solution. **aromatic w.**, a solution, usually saturated, of a volatile oil or other aromatic or volatile substance in purified water, prepared by distillation or solution; called also *aqua aromatica*. **bound w.**, water in the tissues of the body bound to macromolecules or organelles. **capillary w.**, the water contained in the soil above the water table of the ground water. **carbon dioxide-free w.**, purified water which has been boiled vigorously for 5 minutes or more and protected from absorption of carbon dioxide from the atmosphere while it is cooling. **chlorine w.**, a saturated solution of chlorine in water. **cinnamon w.**, a clear, saturated solution of cinnamon oil in purified water, used as a flavored vehicle in pharmaceutical preparations; called also *aqua cinnamomi*. **w. of combustion**, metabolic w. **w. of crystallization**, that which is an ingredient of many salts, forming a structural part of the crystal. **distilled w.**, water which has been purified by distillation; called also *aqua distillata*. **egg w.**, 1. water that has bathed eggs of various invertebrates and acquired one or another substance detectable by a physiological reaction; e.g., oyster egg water may stimulate spawning of male oysters. 2. water containing fertilizin exuded from the ripe eggs of sea urchins and other aquatic animals, by which the spermatozoa are agglutinated. **free w.**, that portion of the water in body tissues which is not bound by macromolecules or organelles. **Goulard's w.**, diluted lead subacetate solution. **ground w.**, the water which lies in the depth of soils, being carried along under ground over impervious strata. **hamamelis w.**, an astringent solution prepared by maceration in water of cut dormant twigs of *Hamamelis virginiana*; called also *aqua hamamelidis* and *witch-hazel water*. **hard w.**, water that contains salts of calcium or magnesium, which resist the action of soap, so that it does not readily form lather. **heavy w.**, a compound analogous to water, but containing deuterium, the mass two isotope of hydrogen, the formula being D_2O or 2H_2O . It differs from ordinary water in having a higher freezing point (3.8° C.) and boiling point (101.4° C.), and in the fact that it is incapable of supporting life. It is the stable isotope used as a moderator in nuclear reactors. Called also *deuterium oxide*. **Hiss' serum w.**, see *serum w.* **w. for injection [USP]**, water for parenteral use, prepared by distillation, and meeting certain standards as to sterility and clarity. **w. for injection, bacteriostatic [USP]**, sterile water for injection, containing one or more suitable antimicrobial agents. **w. for injection, sterile [USP]**, water for injection that has been sterilized and suitably packaged. **lead w.**, diluted lead subacetate solution. **lime w.**, calcium hydroxide solution. **metabolic w.**, water in the body derived from metabolism of a food element such as starch, glucose, or fat; called also *w. of combustion*. **mineral w.**, water containing mineral salts in solution in suffi-

cient quantity to give it special properties and taste. **orange flower w.** [NF], a saturated solution of the odoriferous principles of the flowers of *Citrus aurantium* Linné, used as a vehicle, flavor, and perfume in pharmaceutical preparations; called also *aqua aurantii florum*. **peppermint w.** [NF], a clear, saturated solution of peppermint oil in purified water; used as a vehicle in pharmaceutical preparations; called also *aqua menthae piperitae*. **peptone w.**, a solution of peptone, usually 1 per cent, used as a culture medium, especially as an enrichment medium for the isolation of the cholera vibrio. Called also *peptone water culture medium*. **potable w.**, water that is suitable for drinking purposes. **purified w.** [USP], water obtained by distillation or de-ionization, used for pharmaceutical or other purposes requiring mineral-free water. **rose w.**, a solution prepared by diluting stronger rose water with an equal volume of purified water; used as a perfuming agent in pharmaceutical preparations. **rose w., stronger** [NF], a saturated solution of the odoriferous principles of the flowers of *Rosa centifolia* Linné, used as a perfuming agent in pharmaceutical preparations; called also *aqua rosae fortior*. **saline w.**, water which contains neutral salts. **serum w.**, a mixture of blood serum and distilled water, with sugar and indicator added, used in preparing bacteriological culture mediums; called also *serum culture medium* and *Hiss' serum w.* **soft w.**, water that contains little or no mineral matter. **witch-hazel w.**, hamamelis w.

water brash (wah'ter brash') hearburn with regurgitation of sour fluid or almost tasteless saliva into the mouth.

waterpox (wah'ter-poks) (obs.) ground itch.

water-bite (wah'ter-bit') see *trench foot*, under *foot*.

water-borne (wah'ter-born') propagated by contaminated drinking water; said of diseases.

Waterhouse-Friderichsen syndrome (wah'ter-hous frid'-er-ik'sen) [Rupert Waterhouse, British physician, 1873-1958; Carl Friderichsen, Danish physician, born 1886] see under *syndrome*.

watermelon (wah'ter-mel'on) the edible fruit of the plant *Citrullus vulgaris* (Cucurbitaceae), whose seeds are the source of cucurbitol and cucurbitacin.

waters (wah'terz) a popular name for the amniotic fluid.

watershed (wah'ter-shed) a ridge which directs drainage toward either side. **abdominal w's**, the ridges formed in the supine position by the forward projection of the lumbar vertebrae and the projecting brim of the pelvis, causing free effusions to gravitate into the lumbar fossae and pelvis.

Watkins' operation (wot'kinz) [Thomas James Watkins, gynecologist in Chicago, 1863-1925] see under *operation*.

Watson (wot'son), James Dewey. United States biochemist, born 1928; co-winner, with Maurice Wilkins and Francis Crick, of the Nobel prize in medicine and physiology for 1962, for the discovery of the molecular structure of deoxyribonucleic acid.

Watson-Crick helix (wat'son-crik) [James Dewey Watson; Francis Harry Compton Crick, English biochemist, born 1916] see under *helix*.

Watson-Schwartz test (wot'son-shwartz) [Cecil James Watson, American physician, born 1901; Samuel Schwartz, American physician, born 1916] see under *tests*.

Watsonius watsoni (wot-so'ne-us wot-so'ni) [Malcolm Watson, British physician, 1873-1955] a pear-shaped amphistome trematode found in the intestines of man and monkeys in Africa; called also *Amphistoma watsoni*.

watt (wot) [after James Watt, 1736-1819] a unit of electric power, being the work done at the rate of 1 joule per second. It is equivalent to a current of 1 ampere under a pressure of 1 volt.

wattage (wot'ij) the power output or consumption of an electrical device expressed in watts.

watt-hour (wot'our) a unit of electrical work or energy, equal to the wattage multiplied by the time in hours.

wattmeter (wot'me-ter) an instrument for measuring electric activity in watts.

wave (wāv) a uniformly advancing disturbance in which the parts moved undergo a double oscillation; any wavelike pattern. **a w.**, see *phlebogram*. **alpha w's**, brain waves in the electroencephalogram which have a frequency of 8 to 13 per second; they are typical of the normal person awake and in a quiet resting state, and occur principally in the occipital region. **anacrotic w., anadicrotic w.**, see under *pulse*. **beta w's**, brain waves in the electroencephalogram, which have a frequency of 18 to 30 per second; they are typical during periods of intense activity of the nervous system, and occur principally in the parietal and frontal regions. **brain w's**, the fluctuations of electrical potential in the brain, as recorded by electroencephalography. See *alpha, beta, delta, and theta w's*. Some observers distinguish three types of waves: (1) *trains*, which correspond to alpha waves; (2) *spindles*, short series with a frequency of 14 per second; and (3) *random w's*, irregular changes of potential with no fixed frequency which appear at the beginning of sleep. **c w.**, see *phlebogram*. **cat-acrotic w., catadicrotic w.**, see under *pulse*. **contraction w.**, the wave of progression of the contraction in a muscle from the point of stimulation; also the graphic representation of

a contracting muscle. **delta w's**, 1. waves in the electroencephalogram which have a frequency below 3½ per second; they are typical in deep sleep, in infancy, and in serious brain disorders. 2. an early QRS vector in the electrocardiogram characteristic of Wolff-Parkinson-White syndrome. **dicrotic w.**, 1. the second portion of the arterial pulse or arterial pressure recording after the dicrotic notch and aortic valve closure. 2. recoil wave. **electroencephalographic w's**, see *brain w's*. **electromagnetic w's**, the entire series of ethereal waves which are similar in character, and which move with the velocity of light, but which vary enormously in wavelength. The unbroken series is known from the hertzian waves used in radio transmission which may be miles in length (one mile equals 1.6×10^5 cm.) through heat and light, the ultraviolet, roentgen rays, and the gamma rays of radium to the cosmic rays, the wavelength of which may be as short as 0.0004 of an Angström unit (4×10^{-12} cm.). **Erb's w's**, undulations in a muscle stimulated by a moderately powerful constant current; sometimes seen in myotonia congenita. **excitation w.**, an electric wave flowing from a muscle just previous to its contraction. **F w's**, a series of rapid minute waves in the venous pulse in atrial flutter. **fibrillary w's**, small irregular deflections in the electrocardiogram in atrial fibrillation. **h w.**, see *phlebogram*. **hertzian w's**, electromagnetic waves resembling light waves, but having greater wavelength; they are used in wireless telegraphy. **Liesegang's w's**, see under *phenomenon*. **light w's**, the electromagnetic waves that produce sensations in the retina; see *light*. **longitudinal w.**, one in which the oscillatory motion is parallel to the direction of propagation of the wave. **P w.**, a deflection in the electrocardiogram produced by excitation of the atria; see *electrocardiogram*. **papillary w., percussion w.**, the chief ascending portion of a sphygmographic tracing. **phrenic w.**, see *diaphragm phenomenon*, under *phenomenon*. **pulse w.**, the elevation of the pulse felt by the finger or shown graphically in a recording of pulse or pressure. **Q w.**, in the QRS complex, the initial downward (negative) deflection, related to the initial phase of depolarization (excitation) of the ventricular myocardium; see *electrocardiogram*. **R w.**, the initial upward deflection of the QRS complex, following the Q wave in the normal electrocardiogram. See *electrocardiogram*. **radio w's**, electromagnetic radiation of wavelength between 10^{-1} and 10^6 cm. and frequency of about 10^{11} to 10^4 cps. **random w's**, see *brain w's*. **recoil w.**, the second of the two principal waves of a dicrotic pulse, attributed to the reflected impulse of the closure of the aortic valves. **S w.**, a downward deflection of the QRS complex following the R wave in the normal electrocardiogram. See *electrocardiogram*. **short w.**, a wave having a wavelength of 60 meters or less. **sine w.**, the wave form of an alternating current characterized by a rise from zero to maximum positive potential, descending back through zero to its maximum negative value, and then rising back to zero. **sonic w's**, audible sound waves. **stimulus w.**, the wave which passes along a muscle as a result of a stimulus applied at a certain point. **supersonic w's**, a term applied to waves similar to ordinary sound waves but of frequencies from 200,000 to 1,500,000 cycles per second; they are highly destructive to some organisms and some chemical substances. **T w.**, the second major deflection of the normal electrocardiogram, reflecting the potential variations occurring with repolarization of the ventricles; see *electrocardiogram*. **theta w's**, brain waves in the electroencephalogram which have a frequency of 4 to 7 per second; they occur mainly in children but also in adults during periods of emotional stress. **tidal w.**, the sphygmographic wave next after the percussion wave; the second elevation of the sphygmographic tracing between the percussion wave and the dicrotic elevation. **transverse w.**, one in which the oscillatory motion is perpendicular to the direction of propagation of the wave. **Traube-Hering w's**, rhythmical rises and falls in the arterial pressure, attributed to rhythmical activity of the vasoconstrictor center. **tricrotic w.**, a third wave in the sphygmographic curve in addition to the tidal and dicrotic waves, occurring during systole. **U w.**, see *electrocardiogram*. **ultrashort w.**, an electromagnetic wave of wavelength of less than 10 meters; called also *microwave*. **ultrasonic w's**, waves similar to sound waves but of such high frequency that the human ear does not perceive them as sound; see *ultrasonics*. **v w.**, see *phlebogram*. **ventricular w.**, the part of the tracing of the venous pulse occurring during ventricular systole. **x w.**, see *phlebogram*. **y w.**, see *phlebogram*.

wavelength (wāv'length) the distance between the top of one wave and the identical phase of the succeeding one. **effective w., equivalent w.**, in radiology, the wavelength of monochromatic x-rays which would undergo the same percentage attenuation in a specified absorber as the heterogeneous beam under consideration. **minimum w.**, the shortest wavelength in an x-ray spectrum.

wax (waks) [L. *cera*] a plastic substance deposited by insects or obtained from plants. Waxes are esters of various fatty acids with higher, usually monohydric alcohols. The wax of pharmacy is principally yellow wax (beeswax), the material of which honeycomb is made. It consists chiefly of cerotic acid and myricin and is used in making ointments, cerates, etc. When yellow wax is bleached it becomes white (*white w.*). **bone w.**, see *Mosetig-*

- Moorhof bone w.* **boxing w.**, wax used for boxing impressions for dental prostheses. **candelilla w.**, a wax obtained from the plant *Euphorbia antisyphilitica* Zucc. (Euphorbiaceae), and used as a substitute for beeswax. **carnauba w.** [NF], a wax obtained from the leaves of *Copernicia cerifera* Mart., a palm of South America; used as a tablet coating agent. **casting w.**, a compound of various waxes, having controlled properties of thermal expansion and contraction, which is used in making patterns for metal castings for dental prostheses. **cetyl esters w.** [NF], a mixture consisting primarily of esters of saturated fatty alcohols and saturated fatty acids; used as a stiffening agent in pharmaceutical preparations. Called also *synthetic spermaceti*. **Chinese w.**, a hard white wax deposited by certain insects on trees, such as the Chinese ash, *Fraxinus chinensis*; also a similar wax from the plant *Ligustrum madra*. **ear w.**, cerumen. **emulsifying w.** [NF], a waxy solid prepared from cetostearyl alcohol, containing a polyoxyethylene derivative of a fatty acid ester of sorbitan; used as an emulsifying and stiffening agent in pharmaceutical preparations. **grave w.**, adipocere. **Horsley's w.**, a mixture of wax, petrolatum, and phenol, used for packing small bone cavities, as in the bones of the skull, and for controlling bleeding from them. **inlay w.**, wax used in preparation of the pattern from which a dental inlay is cast, the main ingredient generally being paraffin, with other natural substances from mineral or vegetable sources. **Japan w.**, a fat from the fruit of *Myrica cerifera* L. (Myricaceae) and other species of the same genus. **Mosetig-Moorhof bone w.**, a preparation for filling sterile bone cavities; it consists of equal parts of spermaceti and oil of sesame, which are sterilized in a water bath. To 60 parts of this is added 40 parts of iodoform. **palm w.**, 1. carnauba wax. 2. a wax from *Ceroxylon andicola*, a South American palm. **tubercle bacillus w.**, a complex phosphatide extracted from *Mycobacterium tuberculosis*. **vegetable w.**, a waxy substance, resembling beeswax, derived from various vegetable sources. **white w.** [NF], the bleached, purified wax from the honeycomb of the bee, *Apis mellifera*, used as an ingredient in several ointments. **yellow w.** [NF], the purified wax from the honeycomb of the bee *Apis mellifera*; used as a stiffening agent in pharmaceutical preparations and as an ingredient of yellow ointment. It was formerly used internally, in the treatment of diarrhea. Called also *beeswax* and *cera flava*.
- waxing** (wak/sing) the shaping of a wax pattern or the wax base of a trial denture into the contours desired; spoken of also as *waxing up*.
- Wb** weber.
- W.B.C.** white blood cell; white blood [cell] count (see *blood count*, under *count*).
- wean** (wēn) to discontinue the breast feeding of an infant, with substitution of other feeding habits.
- weanling** (wēn/ling) 1. newly changed to nourishment other than breast feeding. 2. an animal newly changed to other forms of nourishment than breast feeding.
- weasand** (we/zand) the trachea.
- web** (web) a tissue or membrane. **esophageal w.**, a congenital, soft, weblike stricture of the esophagus, usually of the lower portion, resulting in dysphagia. **laryngeal w.**, the most common congenital malformation of the larynx, it may be a thin, translucent diaphragm or thicker and more fibrotic; it is spread between the vocal folds near the anterior commissure and may cause obstruction, hoarseness, aphonia, etc. **subsynchronous w.**, a system of filaments or fine canaliculi which have been observed to penetrate at a varying distance into the postsynaptic cell. **terminal w.**, a feltwork of fine filaments in the cytoplasm immediately beneath the free surface of certain epithelial cells, especially those with a brush border of microvilli, such as the absorptive cells of the intestines and the hair cells of the inner ear; it is thought to have a supportive or cytoskeletal function.
- webbed** (webd) connected by a membrane.
- weber** (web/er) a unit of magnetic flux which, linking a circuit of one turn, produces in it an electromotive force of one volt as it is reduced to zero at a uniform rate in one second. In SI, it replaces the maxwell. Abbreviated *Wb*.
- Weber's corpuscle (organ), glands, zone** (va/berz) [Moritz Ignatz Weber, German anatomist, 1795–1875] see under *gland*, and see *utriculus prostaticus* and *zona orbicularis articulationis coxae*.
- Weber's disease** (web/erz) [Frederick Parkes Weber, British physician, 1863–1962] 1. localized epidermolysis bullosa. 2. Sturge-Weber syndrome.
- Weber's douche** (va/berz) [Theodor Weber, German physician, 1829–1914] see under *douche*.
- Weber's law, paradox, test** (va/berz) [Ernest Heinrich Weber, German anatomist and physiologist, 1795–1878] see under *law*, *paradox*, and *tests* (def. 1 and 2).
- Weber's sign (symptom), syndrome (paralysis)** (web/erz) [Sir Hermann David Weber, London physician, 1823–1918] see under *sign* and *syndrome*.
- Weber's test** (va/berz) [Friedrich Eugen Weber, German otologist, 1832–1891] see under *tests*.
- Weber-Christian disease (panniculitis, syndrome)** (web/er-kris/chan) [F. P. Weber; Henry Asbury Christian, American physician; 1876–1951] relapsing febrile nodular nonpurpurative panniculitis.
- Weber-Fechner law** (va/ber-fek/ner) [Ernest Heinrich Weber; Gustav Theodor Fechner, Prussian natural philosopher, 1801–1887] see under *law*.
- Webster's operation** (web/sterz) [John Clarence Webster, American gynecologist, 1863–1950] see under *operation*.
- Webster's test** (web/sterz) [John Webster, London chemist, 1878–1927] see under *tests*.
- WEE** western equine encephalomyelitis.
- Weeks' bacillus** (wēks) [John Elmer Weeks, New York ophthalmologist, 1853–1949] *Hemophilus aegyptius*.
- weep** (wēp) to slowly exude clear serum.
- Wegner's disease, sign** (veg/nerz) [Friedrich Rudolf Georg Wegner, German pathologist, born 1843] see under *disease* and *sign*.
- wehnelt** (va/nelt) the unit of hardness or penetrating ability of roentgen rays. Abbreviated *W*.
- Weichardt's antikenotoxin** (vi/karts) [Wolfgang Weichardt, German pathologist, 1875–1945] see *antikenotoxin*.
- Weichbrodt's reaction, test** (vik/brōts) [Raphael Weichbrodt, Frankfurt neurologist, born 1886] see under *reaction* and *tests*.
- Weidel's test** (vi/delz) [Hugo Weidel, Austrian chemist, 1849–1899] see under *tests*.
- Weigert's law, stain (method)** (vi/gerts) [Karl Weigert, German pathologist, 1845–1904] see under *law*, and *Table of Stains*.
- weight** (wāt) heaviness; the degree to which a body is drawn toward the earth by gravity. See accompanying tables of weights and measures. **apothecaries' w.**, a system of weights used in compounding prescriptions based on the grain (equivalent 64.8 mg.). Its units are the scruple (20 grains), dram (3 scruples), ounce (8 drams), and pound (12 ounces). **atomic w.**, the weight of an atom of a substance as compared with the weight of an atom of carbon-12 isotope, which is taken as 12.00000; see also *mass*. Abbreviated *At. wt.* **avoirdupois w.**, the system of weight commonly used for ordinary commodities in English-speaking countries; its units are the dram (27.344 grains), ounce (16 drams), and pound (16 ounces). **combining w.**, the relative weight, compared with that of hydrogen (which is considered as 1), of an element that enters into combination with other elements. **equivalent w.**, the weight in grams of a substance which is equivalent in a chemical reaction to 1.008 gm. of hydrogen. **gram molecular w.**, a quantity of a substance which has a weight in grams numerically equivalent to its molecular weight. See *mole*, def. 3. **molecular w.**, the weight of a molecule of a substance as compared with that of an atom of carbon-12; it is equal to the sum of the atomic weights of its constituent atoms. Abbreviated *Mol. wt.* **troy w.**, a system of weights used by jewelers for gold and precious stones.
- weights and measures** see *Tables of Weights and Measures*.
- Weil's basal layer (zone)** (vilz) [L. A. Weil, German dentist of the 19th century] see under *layer*.
- Weil's disease** (vilz) [Adolf Weil, physician in Wiesbaden, 1848–1916] leptospiral jaundice.
- Weil's stain** (wilz) [Arthur Weil, American neuropathologist, born 1887] see *Table of Stains*.
- Weil's test** (wilz) [Richard Weil, New York physician, 1876–1917] see under *tests*.
- Weil-Felix reaction (test)** (vil-fa/likes) [Edmund Weil, German physician in Prague, 1880–1922; Arthur Felix, Prague bacteriologist, 1887–1956] see under *reaction*.
- Weill's sign** (vélz) [Edmond Weill, French pediatrician, 1858–1924] see under *sign*.
- Weinberg's test (reaction)** (vin/bergz) [Michel Weinberg, French pathologist, 1868–1940] see under *tests*.
- Weinmannia** (win-man/eh-ah) a genus of saxifragaceous plants with an astringent medicinal bark.
- Weir's operation** (wēr/z) [Robert Fulton Weir, New York surgeon, 1838–1927] appendicostomy.
- Weir Mitchell treatment** (wēr-mich/el) see *Mitchell*, and under *treatment*.
- Weisbach's angle** (vis/bahks) [Albin Weisbach, Austrian anthropologist of the 19th century] see under *angle*.
- Weismann's theory** (vis/manz) [August Friedrich Leopold Weismann, German biologist, 1834–1914] weismannism.
- weismannism** (wis/man-izm) [named for August Weismann] the doctrine of the noninheritance of acquired characters.
- Weiss' reflex** (vis/) [Leopold Weiss, Austrian oculist, 1848–1901] see under *reflex*.
- Weiss' sign** (vis/) [Nathan Weiss, physician in Vienna, 1851–1883] Chvostek's sign.
- Weiss' test** (vis/) [Moriz Weiss, Vienna physician] see under *tests*.
- Weitbrecht's cord (ligament), foramen** (vit/brehts) [Josias

TABLE OF METRIC DOSES WITH APPROXIMATE APOTHECARY EQUIVALENTS

These *approximate* dose equivalents represent the quantities usually prescribed, under identical conditions, by physicians using, respectively, the metric system or the apothecary system of weights and measures. In labeling dosage forms in both the metric and the apothecary systems, if one is the approximate equivalent of the other, the approximate figure shall be enclosed in parentheses.

When prepared dosage forms such as tablets, capsules, pills, etc., are prescribed in the metric system, the pharmacist may dispense the corresponding *approximate* equivalent in the apothecary system, and vice versa, as indicated in the following table.

For the conversion of specific quantities in converting pharmaceutical formulas, exact equivalents must be used. In the compounding of prescriptions, the exact equivalents, rounded to three significant figures, should be used.

LIQUID MEASURE		LIQUID MEASURE

NOTE—A milliliter (ml.) is the equivalent of a cubic centimeter (cc.).

The above *approximate* dose equivalents have been adopted by the Pharmacopeia, National Formulary and New and Nonofficial Drugs, and these dose equivalents have the approval of the federal Food and Drug Administration.

Weitbrecht, German anatomist in Petrograd, 1702–1747] see *chorda obliqua membranae interosae antibrachii*, and see under *foramen*.

Welch's bacillus (welch'ez) [William Henry Welch, pathologist in Baltimore, 1850–1934] *Clostridium perfringens*.

Welcker's method (vel'kerz) [Hermann Welcker, German physician, 1822–1897] see under *method*.

well (wel) a vessel or space for containing fluid. **atrial w.**, an adjuvant device used during surgical repair of atrial septal defects. Attached to the right atrial wall, it permits blood to rise within it while the surgeon explores and repairs the defect below the surface of the blood.

Weller (wel'ler), Thomas H. United States physician and parasitologist, born 1915; co-winner, with John F. Enders and Frederick C. Robbins, of the Nobel prize in medicine and physiology for 1954, for the discovery that poliomyelitis viruses multiply in human tissue.

weltmerism (welt'mer-izm) [Sidney A. Weltmer] an obsolete system of treatment based on suggestion and aiming to bring the mind and body into harmony; it was devised by Sidney Weltmer, who coined such words as *neropathy* and *manual gerocomia* to denote the laying on of hands.

wen (wen) 1. epidermal cyst. 2. pilar cyst.

Wenckebach's disease, period (ven'kē-bahks) [Karel Frederik Wenckebach, Dutch internist in Vienna, 1864–1940] see *cardi-optosis*, and see under *period*.

Wender's test (ven'derz) [Neumann Wender, Austrian chemist] see under *tests*.

Wenzell's test (wen'zelz) [William Theodore Wenzell, American physician, born 1829] see under *tests*.

Werdnig-Hoffmann paralysis (atrophy, disease, syndrome, type) (verd'nig-hof'man) [Guido Werdnig, Austrian neurologist; Ernst Hoffmann, German neurologist, born 1868] see under *paralysis*.

Werlhof's disease (verl'hofs) [Paul Gottlieb Werlhof, German physician, 1699–1767] idiopathic thrombocytopenic purpura.

Werner-His disease (ver'ner-his') [Heinrich Werner, German physician, born 1874; William His, Jr., German physician, 1863–1934] trench fever.

Wernicke's aphasia, etc. (ver'nī-kez) [Karl Wernicke, German neurologist, 1848–1905] see under *aphasia*, *area*, *disease*, *fissure*, *reaction syndrome*, and *triangle*.

Wernicke-Mann hemiplegia (type) (ver'nī-kē-mahn) [Karl Wernicke; Ludwig Mann, German neurologist, 1866–1936] see under *hemiplegia*.

Wertheim's ointment (ver'timz) [Gustav Wertheim, physician in Vienna, 1822–1888] see under *ointment*.

Wertheim's operation (ver'timz) [Ernst Wertheim, gynecologist in Vienna, 1864–1920] see under *operation*.

Wertheim-Schauta operation (ver'tim-show'tah) [Ernst Wertheim; Friedrich Schauta, Vienna gynecologist; 1849–1919] see under *operation*.

Westberg's space (vest'bergz) [Friedrich Westberg, German physician of the 19th century] see under *space*.

Westergren method (west'er-gren) [Alf Westergren, Swedish physician] see under *method*.

Westphal's nucleus, sign (phenomenon, symptom) (vest'fahls) [Carl Friedrich Otto Westphal, German neurologist, 1833–1890] see under *sign*, and see *nucleus accessorius*.

Westphal's phenomenon, pupillary reflex (vest'fahlz) [Alexander Karl Otto Westphal, Austrian neurologist, 1863–1941] see *Westphal-Piltz phenomenon*, under *phenomenon*, and see under *reflex*.

Westphal-Piltz phenomenon, reflex (vest'fahl-pilts') [A. K. O. Westphal; Jan Piltz, Austrian neurologist, 1871–1930] see under *phenomenon* and *reflex*.

Westphal-Strümpell disease, pseudosclerosis (vest'fahl-strim'p'l) [C. F. O. Westphal; Ernst Adolf Gustav Gottfried von Strümpell, physician in Leipzig, 1853–1925] hepatolenticular degeneration.

wet-nurse (wet'nurs) a woman who nurses the child of another at her own breast.

wetpox (wet'poks) a disease resembling fowlpox, with lesions occurring in the mouth and frequently causing death by suffocation.

wet-scald (wet'skahld) eczema in sheep.

Wetzel's grid (wet'selz) [Norman Carl Wetzel, Cleveland pediatrician, born 1897] see under *grid*.

Wetzel's test (wet'selz) [Georg Wetzel, German anatomist, born 1871] see under *tests*.

Weyl's test (vilz) [Theodor Weyl, German chemist 1851–1913] see under *tests*.

Wharton's duct, jelly (gelatin) (hwar'tunz) [Thomas Wharton, English physician and anatomist, 1614–1673] see *ductus submandibularis*, and see under *jelly*.

wheal (hwēl, wēl) a smooth, slightly elevated area on the body

surface, which is redder or paler than the surrounding skin; it is often attended with severe itching, and is usually evanescent, changing its size or shape, or disappearing, within a few hours. It is the typical lesion of urticaria, the dermal evidence of allergy, and in sensitive persons may be provoked by mechanical irritation of the skin.

wheat (hwēt) the plant *Triticum vulgare* and its cereal grain. The grain is a source of energy and of protein which is of lower biological value than animal protein; the bran and germ of the grain contain iron, phosphorus, and vitamins of the B complex, which are lost when wheat is highly milled.

wheatmeal (hwēt'mēl) eighty-five per cent extracted wheat flour. **National w.** (British), wheatmeal to which calcium carbonate has been added at the rate of 14 ounces to every 280 pounds of flour.

Wheatstone's bridge (hwēt'stōnz) [Sir Charles Wheatstone, English physicist, 1802–1875] see under *bridge*.

Wheelhouse's operation (hwēl-hows-ez) [Claudius Galen Wheelhouse, English surgeon, 1826–1909] see under *operation*.

whoop (hwēz) a whistling sound made in breathing. **asthmatic w.**, a sound similar to the wheezing heard when the ear is placed close to the mouth of an asthmatic; heard in cases of foreign body in the trachea or bronchus. Called also *Jackson's sign*.

whelp (hwelp) 1. an unweaned puppy. 2. to give birth to; said of the female dog.

whey (hwa) the thin serum of milk remaining after the curd and cream have been removed. **alum w.**, a whey prepared by boiling milk with a piece of alum and removing the curd by straining. **litmus w.**, **Petruschky's litmus w.**, whey colored with litmus to a deep purplish-red color, and used as a culture medium. **wine w.**, a preparation of milk coagulated with white wine, strained from the curd, and sweetened with sugar.

whiplash (hwip'lash) a popular term for an acute cervical sprain; acceleration extension injury of the cervical spine.

Whipple's disease, tests (hwip'elz) [George Hoyt Whipple, American pathologist, born 1878; co-winner, with George R. Minot and William P. Murphy, of the Nobel prize in medicine and physiology for 1934] see *intestinal lipodystrophy*, under *lipodystrophy*, and see under *tests*.

Whipple's operation (hwip'elz) [Allen O. Whipple, American surgeon, 1881–1963] see under *operation*.

whipworm (hwip'worm) *Trichuris trichiura*.

whirlbone (hwir'l'bōn) 1. the patella. 2. the head of the femur (caput femoris [NA]).

whisper (hwis'per) a soft, low, sibilant breathing sound produced by the unvoiced passage of the breath through the glottis.

whistle (hwis'el) 1. a shrill musical sound produced by the forcing of air or steam against a thin edge or into a cavity. 2. a device or apparatus which produces a whistling sound. **Edelmann-Galton w.**, a modification of Galton's whistle once used for testing acuity of hearing. **Galton's w.**, a metallic whistle once used in testing the sense of hearing.

White (hwīt), Charles (1728–1813). English surgeon and obstetrician, whose *Treatise on the Management of Pregnant and Lying-in Women* (1773) antedated the work of Semmelweis in its appeal for surgical cleanliness to combat puerperal fever.

white (hwīt) reflecting all the rays of the spectrum; the opposite of black. **Spanish w.**, bismuth subnitrate. **visual w.**, leukopsin.

White's operation (hwits) [J. William White, Philadelphia surgeon, 1850–1916] see under *operation*.

whitecomb (hwit'kōm) favus of fowl.

whitehead (hwit'hed) milium.

Whitehead's operation (hwit'hedz) [Walter Whitehead, English surgeon, 1840–1913] see under *operation*.

Whitehorn's method (hwit'hornz) [John Clare Whitehorn, American biochemist, born 1894] see under *method*.

whiteleg (hwit'leg) phlegmasia alba dolens.

whitepox (hwit'poks) variola minor.

Whitfield's ointment (hwit'fēldz) [Arthur Whitfield, British dermatologist, 1868–1946] benzoic and salicylic acid ointment.

whitlow (hwit'lo) a felon. **melanotic w.**, a malignant tumor of the nail bed characterized by the formation of melanotic tissue about the nail border and under the nail. **thecal w.**, suppurative tenosynovitis of the terminal phalanx of a finger.

Whitman's operation (hwit'mahnz) [Royal Clare Whitman, New York orthopedic surgeon, 1857–1946] see under *operation*.

Whitmore's bacillus, disease (fever) (hwit'mōrz) [Major Alfred Whitmore, of the Indian Medical Service] see *Pseudomonas pseudomallei* and *melioidosis*.

W.H.O. World Health Organization, an international agency associated with the United Nations and based in Geneva.

whoop (hōop) the sonorous and convulsive inspiration of whooping cough.

whooping cough (hōop'ing kawf) an infectious disease caused by *Bordetella pertussis* and characterized by catarrh of the

respiratory tract and peculiar paroxysms of cough, ending in a prolonged crowing or whooping respiration. After an incubation period of about two weeks the *catarrhal stage* begins, with slight fever, sneezing, running at the nose, and a dry cough. In a week or two the *paroxysmal stage* begins, with the characteristic paroxysmal cough. This consists of a deep inspiration, followed by a series of quick, short coughs, continuing until the air is expelled from the lungs. During the paroxysm the face becomes cyanosed, the eyes injected, and the veins distended. The cough frequently induces vomiting, and, in severe cases, epistaxis or other hemorrhage. The close of the paroxysm is marked by a long-drawn, shrill, whooping inspiration, due to spasmodic closure of the glottis. The number of paroxysms varies from ten or twelve to forty or fifty in twenty-four hours. This stage lasts from three to four weeks, after which the paroxysms grow less frequent and less violent, and finally cease. The disease is most frequently met in children, is much more prevalent in cold weather, and is very contagious. Called also *pertussis*.

whorl (hwerl) a spiral turn or twist, such as one of the turns of the cochlea of the ear, the arrangement of muscle fibers in the heart (*vortex*), or a spiral arrangement of the ridges apparent in a finger print. **bone w.**, an enostosis. **lens w.**, the peculiar bowed appearance presented by the marginal portion of the lens in meridional sections.

Whytt's disease (hwits) [Robert Whytt, Scottish physician, 1714-1766] see under *disease*.

Wichmann's asthma (vik'mahnz) [Johann Ernst Wichmann, German physician, 1740-1802] laryngismus stridulus.

Wickersheimer's fluid (medium) (vik'er-shi'merz) [J. Wickersheimer, anatomist in Berlin, 1832-1896] see under *fluid*.

Wickham's striae (wik'amz) [Louis-Frédéric Wickham, Paris dermatologist, 1861-1913] see under *stria*.

Widal's syndrome, test (reaction, serum test) (ve-dahl') [Georges Fernand Isidore Widal, French physician, 1862-1929] see *icteroanemia*, and see under *tests*.

Widal-Abrami disease (ve-dahl'-ah-brahm'e) [G. F. I. Widal; Pierre Abrami, French physician, 1879-1943] acquired hemolytic anemia.

Wigand's version (maneuver) (ve'gants) [Justus Heinrich Wigand, German gynecologist, 1769-1817] see under *version*.

Wilbur-Addis test (wil'ber-ad'is) [Ray Lyman Wilbur, San Francisco physician, 1875-1949; Thomas Addis, San Francisco physician, 1881-1949] Schneider's test, def. 2.

Wildbolz test (reaction) (vilt'bölts) [Hans Wildbolz, Swiss urologist, 1873-1940] autourine test.

Wilde's cords, incision, etc. (wildz) [Sir William Robert Wills Wilde, Irish surgeon, 1815-1876] see *striae transversae corporis callosi*, and see under *incision*.

Wilder's diet (wil'derz) [Russell Morse Wilder, Sr., American physician, 1885-1959] see under *diet*.

Wilder's law of initial value (wil'derz) [Joseph Wilder, neuropsychiatrist in New York, born 1895] see under *law*.

Wilder's sign (wil'derz) [William Hamlin Wilder, ophthalmologist in Chicago, 1860-1935] see under *sign*.

Wildermuth's ear (vil'der-moots) [Hermann A. Wildermuth, alienist in Stuttgart, 1852-1907] see under *ear*.

Wilkins (wil'kinz), Maurice Hugh Frederick. English biochemist, born 1916; co-winner, with Francis Crick and James Dewey Watson, of the Nobel prize in medicine and physiology for 1962, for the discovery of the molecular structure of deoxyribonucleic acid.

Willan's lepra (wil'aniz) [Robert Willan, English physician, 1757-1812] psoriasis.

Willett forceps (wil'et) [J. Abernethy Willett, London obstetrician, died 1932] see under *forceps*.

Willia (wil'e-ah) former name for *Hansenula*.

Williams' sign (tracheal tone) (wil'yamz) [Charles J. B. Williams, English physician, 1805-1889] see under *sign*, def. 1.

Williamson's blood test (wil'yam-sunz) [Richard Thomas Williamson, English physician] see under *tests*.

Williamson's sign (wil'yam-sunz) [Oliver K. Williamson, London physician] see under *sign*.

Willis' antrum, circle, cords, nerve, paraculis (wil'is) [Thomas Willis, English anatomist and physician, 1621-1675] see *antrum pyloricum*, *circulus arteriosus cerebri*, and *nervus accessorius*, and see under *cord* and *paraculis*.

Wilms' tumor (vilmsz) [Marx Wilms, German surgeon, 1867-1918] see under *tumor*.

Wilson's degeneration (disease, syndrome) (wil'sunz) [Samuel Alexander Kinnier Wilson, English neurologist, 1878-1936] hepatolenticular degeneration.

Wilson's disease (wil'sunz) [William James Erasmus Wilson, English dermatologist, 1809-1884] dermatitis exfoliativa.

Wilson's muscle (wil'sunz) [James Wilson, English surgeon, 1765-1821] musculus sphincter urethrae.

wilt (wilt) a disease of plants characterized by plugging of the conducting tissues by a fungus, resulting in wilting; potato wilt is

caused by *Fusarium solanae*, banana wilt by *Fusarium oxysporum*, and apple wilt by species of *Verticillium*.

Wimshurst machine (wimz'hurst) [James Wimshurst, English engineer, 1832-1903] see under *machine*.

Winckel's disease (ving'kelz) [Franz Karl Ludwig Wilhelm von Winckel, gynecologist in Munich, 1837-1911] see under *disease*.

windburn (wind'burn) chapping of the skin caused by excessive exposure to wind.

windchill (wind'chil) loss of heat from bodies subjected to wind.

windgall (wind'gawl) a distention of the joint capsule, or of a tendon sheath in the region of the fetlock of a horse.

windigo (wind'di-go) [Ojibwa] a cannibalistic monster of the mythology of Eskimos and certain American Indians; also, a psychosis involving delusions of being possessed by the windigo, with fears of becoming cannibalistic, sometimes actual cannibalistic behavior, and agitated depression. Called also *witigo*.

windlass, Spanish (wind'las) an improvised tourniquet consisting of a handkerchief tied around a part and twisted by a stick passed under it.

window (win'do) [L. *fenestra*] a circumscribed opening in a plane surface. **aortic w.**, a transparent region below the aortic arch formed by the bifurcation of the trachea, visible in the left anterior oblique roentgenogram of the heart and adjacent vessels. **aorticopulmonary w.**, aortic septal defect. **oval w.**, fenestra vestibuli. **round w.**, fenestra cochleae. **skin w.**, see under *technique*.

windowing (win'do-ing) surgical creation of an opening in the cortex of a bone.

windpipe (wind'pip) the trachea.

windpuff (wind'puf) a swelling just below the fetlock joint of a horse, caused by a collection of synovial fluid between the tendons of the leg.

wind-sucking (wind'suk-ing) cribbing.

wineglass (win'glas) a measure approximately equal to 2 fluid ounces.

wing (wing) [L. *ala*] 1. either of the anterior appendages of birds, which are modified for flight. 2. a structure or part resembling the wing of a bird; called also *ala*. **ash-like w.**, trigonum nervi vagi. **great w. of sphenoid bone, greater w. of sphenoid bone**, ala major ossis sphenoidalis. **w. of ilium**, ala ossis ilii. **w's of Ingrassias**, w's of sphenoid bone. **lateral w. of sacrum**, pars lateralis ossis sacri. **lateral w. of sphenoid bone**, ala major ossis sphenoidalis. **lesser w. of sphenoid bone**, ala minor ossis sphenoidalis. **major w. of sphenoid bone**, ala major ossis sphenoidalis. **minor w. of sphenoid bone**, ala minor ossis sphenoidalis. **w. of nose**, ala nasi. **orbital w. of sphenoid bone**, small w. of sphenoid bone, ala minor ossis sphenoidalis. **w's of sphenoid bone**, the laterally projecting processes of the sphenoid bone; see *ala major ossis sphenoidalis* and *ala minor ossis sphenoidalis*. **superior w. of sphenoid bone**, ala minor ossis sphenoidalis. **temporal w. of sphenoid bone**, ala major ossis sphenoidalis. **w. of vomer**, ala vomeris.

WinGel (win'jel) trademark for a preparation of alumina and magnesia.

Winiwarter's operation (vin'i-var'terz) [Alexander von Winiwarter, German surgeon, 1848-1916] cholecystenterostomy.

winking (wingk'ing) quick closing and opening of the eyelids. **jaw w.**, involuntary closing movements of the eyelid occasionally associated with movements of the jaw; see *Gunn's syndrome*, under *syndrome*.

Winkler's disease (vink'lerz) [Max Winkler, Swiss physician, 1875-1952] chondrodermatitis nodularis chronica helices.

Winslow's foramen, etc. (winz'lōz) [Jacob Benignus Winslow, anatomist in Paris, 1669-1760] see under *foramen*, *ligament*, *pancreas*, and *star*.

Winstrol (win'strol) trademark for a preparation of stanozolol.

Winterbottom's sign (symptom) (win'ter-bot'umz) [Thomas Masterman Winterbottom, English physician, 1765-1859] see under *sign*.

wintergreen (win'ter-grēn) *Gaultheria procumbens*.

Winternitz's sound (vin'ter-nits'ez) [Wilhelm Winternitz, physician in Vienna, 1835-1917] see under *sound*.

Wintrich's sign (vin'triks) [Anton Wintrich, German physician, 1812-1882] see under *sign*.

wire (wir) 1. a long, slender, flexible structure of metal, used in surgery and dentistry. 2. to insert wires into a body structure, as into a broken bone to immobilize the fragments, or into an aneurysm to promote the formation of clots. **arch w.**, wire applied around the dental arch; used in correcting irregularities of the teeth. **ideal arch w.**, the configuration of an arch wire that conforms as closely as possible to the desired ultimate shape of the arch for a particular individual. **Kirschner w.**, a steel wire for skeletal transfixion of fractured bones and for obtaining skeletal traction in fractures; it is inserted through the soft parts and the bone and held tight in a clamp. **ligature w.**, a soft

thin wire used to tie an arch wire to band attachments or brackets. **separating w.**, wire used in orthodontics to create space between the teeth prior to banding.

wireworm (wir'werm) *Haemonchus contortus*.

wiring (wir'ing) the fixing into position by means of wire, as of segments of fractured bone. **circumferential w.**, a technique for fixation of mandibular fractures in which wires are passed around a section of bone with the ends exiting into the oral cavity and then around a fixed intraoral splint. **continuous loop w.**, wiring of the teeth for the reduction and fixation of fractures, by using a single length of wire to form wire loops on both the maxillary and mandibular teeth, over which intermaxillary elastics can be placed; called also *Stout w.* **craniofacial suspension w.**, wiring of noncontiguous areas of bone (piriform aperture, zygomatic arch, zygomatic process of the frontal bone) for the support of fractured jaw segments. **Gilmer w.**, a method of intermaxillary fixation in which single opposing teeth are wired circumferentially and the wires twisted together. **Ivy loop w.**, wiring of adjacent teeth in groups of two to provide an attachment for intermaxillary elastics. **perialveolar w.**, the fixing of a splint to the maxillary arch by passing a wire through the alveolar process from the buccal plate to the palate. **piriform aperture w.**, wiring through the nasal bones at the piriform aperture for the stabilization of fractures of the jaws. **Stout w.**, continuous loop w.

Wirsung's canal, duct (vēr'soongz) [Johann Georg Wirsung, German physician, 1600–1643] ductus pancreaticus.

Wishart test (wish'art) [Mary B. Wishart] see under *tests*.

withdrawal (with-draw'al) 1. a pathological retreat from external reality. 2. abstinence from drugs to which one is habituated or addicted. Also, denoting the symptoms occasioned by such withdrawal.

withers (with'erz) the top of the shoulders of the horse. **fistulous w.**, a name applied to a condition occurring in horses after a dual infection of the supraspinous bursa by *Brucella* and *Actinomyces*, leading to distention and sometimes to rupture of the bursa, with suppuration.

witigo (wī-ti'go) windigo.

witkop (wit'kop) favus in South African Bantus; called also *dikwakwadi*.

Witzel's operation (vit'selz) [Friedrich Oskar Witzel, German surgeon, 1856–1925] see under *operation*.

witzelsucht (vit'sel-zōōkt) [Ger.] a mental condition characteristic of frontal lobe lesions and marked by the making of poor jokes and puns and the telling of pointless stories, at which the patient himself is intensely amused.

Wladimiroff's operation (vlad'i-mer'ofs) [Russian surgeon, 1837–1903] Mikulicz operation, def. 3.

WMA World Medical Association.

wobbles (wob'b'lz) posterior incoordination in the horse, beginning with a slight swaying action of the hindquarters, or stumbling, with worsening of the condition until the animal cannot trot without rolling from side to side and falling; it is usually associated with spinal cord malacia but the cause is unknown.

Wohlfahrtia (völ-fahr'te-ah) a genus of flies of the family Sarcophagidae. **W. magnifica**, a very common flesh fly of the Old World; its larvae may produce wound myiasis in man and animals. **W. o'paca**, a North American species; its larvae cause cutaneous myiasis in man and animals, especially foxes and mink. **W. vig'il**, a North American species; its larvae may produce cutaneous myiasis in man and animals.

Wohlgemuth's test (völ'ge-moots) [Julius Wohlgemuth, German physician, born 1874] see under *tests*.

Wolbachia (wol-bak'e-ah) [Simeon Burt Wolbach, American physician, 1880–1954] a genus of microorganisms of the tribe Wolbachieae, family Rickettsiaceae, order Rickettsiales; nine species of these rickettsia-like microorganisms have been described, none of which is pathogenic for mammals.

Wolbachieae (wöl'bah-ki'e-e) [S. B. Wolbach] a tribe of the family Rickettsiaceae, order Rickettsiales, class Microtobiotes, made up of rickettsia-like organisms occurring symbiotically or parasitically within the cells of arthropod hosts. Many organisms previously classified in the genus *Rickettsia* have been assigned to this tribe, which includes three genera, *Rickettsiella*, *Symbiotes*, and *Wolbachia*.

Woldman's test (wold'manz) [Edward Elbert Woldman, American physician, born 1897] see under *tests*.

Wolfe's graft (wolfs) [John Reissberg Wolfe, Scottish ophthalmologist, 1824–1904] Krause-Wolfe graft.

Wolfe-Krause graft (wolfe-krowz) [J. R. Wolfe; Fedor Krause, German surgeon, 1857–1937] Krause-Wolfe graft.

Wolfenden's position (wöl'fen-denz) [Richard Norris Wolfenden, British laryngologist of the 19th century] see under *position*.

Wolff's law (wolfs) [Julius Wolff, German anatomist, 1836–1902] see under *law*.

Wolff-Eisner reaction (test) (völ iz'ner) [Alfred Wolff-Eisner,

German serologist, 1877–1948] see *ophthalmic reaction*, under *reaction*.

Wolff-Parkinson-White syndrome [Louis Wolff, American cardiologist, born 1898; Sir John Parkinson, British physician, born 1885; Paul Dudley White, American cardiologist, 1886–1973] see under *syndrome*.

wolfian (woolf'e-an) described by Kaspar Friedrich Wolff, German anatomist and embryologist, 1733–1794, as wolfian body (mesonephros), cyst, duct (ductus mesonephricus), and ridge (mesonephric ridge).

Wölfler's operation (vel'flerz) [Anton Wölfler, surgeon in Prague, 1850–1917] see under *operation*.

wolfram (woolf'fram) tungsten.

wolframium (wolf-ra'me-um) [L. "wolfram"] (obs.) tungsten.

Wolfring's glands (völf'ringz) [Emilij Franzevic von Wolfring, Polish ophthalmologist, 1832–1906] see under *gland*.

wolfsbane (wolfs'bān) 1. *Arnica*. 2. *Aconitum napellus*.

Wollaston's doublet (woolf'as-tonz) [William Hyde Wollaston, English physician, 1766–1828] see under *doublet*.

womb (wōm) the uterus.

Wong's method (wongz) [San Yin Wong, Chinese biochemist, born 1894] see under *method*.

Wood's light (filter, glass) (woodz) [Robert Williams Wood, American physicist, 1868–1953] see under *light*.

Wood's operation (woodz) [John Wood, English surgeon, 1825–1891] see under *operation*.

Woodbridge treatment (wood'brij) [John Eliot Woodbridge, American physician, 1845–1901] see under *treatment*.

wool (wool) [L. *lana*] the hair of sheep and lambs; by extension applied to any material existing as fine threads. **collodion w.**, pyroxylin. **gut w.**, catgut shredded into fine fibers. **lumpy w.**, dermatophilosis of sheep, characterized by erythematous, exudative, scaling lesions of the skin which develop into pyramidal scabby masses; called also *wool rot*. **styptic w.**, wool impregnated with ferric chloride. **synthetic w.**, thin fibers spun from a synthetic material, such as the precipitate of milk casein.

Woolner's tip (wool'nerz) [Thomas Woolner, English sculptor and poet, 1826–1892] tuberculum auriculæ.

word salad (werd sal'ad) a mixture of words and phrases which lack any comprehensive meaning or logical coherence to the listener.

work-up (werk'up) the procedures done to arrive at a diagnosis, including history taking, laboratory tests, x-rays, and so on.

worm (werm) [L. *vermis*] 1. any of the soft-bodied, naked, elongated invertebrates of the phyla Platyhelminthes, Annelida, Acanthocephala, and Aschelminthes. Formerly classified as Vermes. 2. any anatomical structure resembling a worm; see *vermis*. 3. the spiral tube of a distilling apparatus. **bilharzia w.**, *Schistosoma*. **bladder w.**, a cysticercus; bladder worms exist in various parenchymatous tissues of a host; being then transferred to the stomach of another host, they develop into tapeworms. **blinding w.**, *Onchocerca volvulus*. **case w.**, *Echinococcus*. **cayor w.**, the larva of *Cordylobia anthropophaga*. **w. of cerebellum**, vermis cerebelli. **dragon w.**, *Dracunculus medinensis*. **eel w.**, *Ascaris*. **eye w.**, *Loa loa*. **flat w.**, any member of the Platyhelminthes. **fluke w.**, see *fluke*. **guinea w.**, *Dracunculus medinensis*. **heart w.**, *Dirofilaria immitis*. **horsehair w.**, *Gordius*. **kidney w.**, *Dictyophyma renale*. **lung w.**, see *lungworm*. **maw w.**, *Ascaris*. **meal w.**, *Asopia farinalis*, *Tenebrio molitor*, and other grain beetles. **Medina w.**, *Dracunculus medinensis*. **palsade w.**, *Strongylus equinus*. **pork w.**, *Trichinella spiralis*. **ribbon w.**, see *Rhynchocoela*. **screw w.**, see *screwworm*. **serpent w.**, *Dracunculus medinensis*. **spinyheaded w.**, Acanthocephala. **stomach w.**, *Haemonchus contortus*. **thorny-headed w.**, Acanthocephala. **tongue w.**, Pentastomida. **trichina w.**, *Trichinella*.

Worm-Müller's test (vorm-mil'erz) [Jacob Worm-Müller, Norwegian physician, 1834–1889] see under *tests*.

wormian bones (wer'me-an) [Olaus Worm, Danish anatomist, 1588–1654] ossa suturarum.

Wormley's test (worm'lēz) [Theodore George Wormley, Philadelphia chemist, 1826–1897] see under *tests*.

wormseed (werm'sēd) 1. *santonica*. 2. *Chenopodium*.

wormwood (werm'wood) absinthium.

Woulfe's bottle (woolfs) [Peter Woulfe, English chemist, 1727–1803] see under *bottle*.

wound (wōond) [L. *vulnus*] a bodily injury caused by physical means, with disruption of the normal continuity of structures. **aseptic w.**, one which is not infected with pathogens. **blowing w.**, open pneumothorax. **contused w.**, a wound in which the skin is unbroken. **incised w.**, one made by a cutting instrument. **lacerated w.**, one in which the tissues are torn or mangled by a dull or blunt instrument. **nonpenetrating w.**, one in which there is no disruption of the skin but there is injury to underlying structures. **open w.**, one that

communicates with the atmosphere by direct exposure. **pene-
trating w.**, one caused by a sharp, usually slender object, such
as a nail or ice pick, which passes through the skin into the
underlying tissues. **perforating w.**, a penetrating wound
which extends into a viscus or bodily cavity. **poisoned w.**,
one into which septic matter has been introduced. **puncture
w.**, one made by a pointed instrument; penetrating wound.
septic w., one that is infected with pathogens. **seton w.**,
one which enters and exits on the same side of the injured part.
subcutaneous w., one which involves only the skin and subcu-
taneous tissue. **sucking w.**, a penetrating wound of the chest
through which air is drawn in and out. **summer w's**, see *es-
ponja* and *habronemiasis*, and *summer sores*, under *sore*. **tan-
gential w.**, an oblique glancing wound which results in one edge
being undercut. **traumatopneic w.**, sucking w.

W-plasty a technique in plastic surgery used mainly in the re-
pair of straight scars that require the redistribution of tension. It
consists in excising a series of consecutive small triangular areas
of tissue on each side of the wound or scar, and imbricating the
resultant triangular flaps.

W.R. Wassermann reaction.

wreath (rêth) an encircling structure, resembling a circlet of
flowers or leaves such as may be worn about the head.
daughter w., the amphiaster as viewed from its surface.
hippocratic w., the sparse peripheral rim of scalp hair which
is the ultimate stage of male pattern alopecia.

Wreden's sign (vra'denz) [Robert Robertovich Wreden, otologist
in Petrograd, 1837-1893] see under *sign*.

Wright's method, stain (ritz) [James Homer Wright, Boston
pathologist, 1871-1928] see under *method* and *Table of Stains*.

Wright's syndrome (ritz) [Irving Sherwood Wright, New York
physician, born 1901] see under *syndrome*.

Wrisberg's cartilage, etc. (ris'bergz) [Heinrich August Wrisberg,
German anatomist, 1739-1808] see under *cartilage*, *ganglion*,
ligament, *line*, *nerve*, and *tubercle*.

wrist (rist) the region of the articulation between the forearm
and hand, which is made up of eight bones. See *ossa carpi* and
names of specific bones. The term is also applied to the correspond-
ing part in the thoracic limb of quadrupeds. Called also *carpus*.
tennis w., tenovaginitis of the tendons of the wrist in tennis
players.

wristdrop (rist/drop) a condition resulting from paralysis of
the extensor muscles of the hand and fingers. Called also

carpoptosis and *drop hand*.

writing (rit'ing) the inscription of letters or other symbols, and
of words, phrases, and sentences, so that they may be perceived by
the eyes or, by the blind, through the fingertips. **mirror w.**,
specular w., writing in which the right and left relationships of
letters and words are reversed, as if seen in a mirror.

wryneck (ri'neck) torticollis.

wt. weight.

Wuchereria (voo'ker-e're-ah) [Otto Wucherer, German physician
in Brazil, 1820-1873] a genus of filarial nematodes (round-
worms) indigenous in various countries of warmer regions of the
world. **W. bancrofti**, a white threadlike worm which causes
elephantiasis, lymphangitis, and chyluria by interfering with the
lymphatic circulation. The immature forms, or microfilariae
(*microfilaria bancrofti*), are found in the circulating blood, espe-
cially at night, and are carried by *Culex* and other mosquitoes. In
the Pacific form of *W. bancrofti*, sometimes called *W. bancrofti* var.
pacifica, the microfilariae do not show the nocturnal periodicity
seen elsewhere. **W. ma'layi**, *Brugia malayi*.

wuchereriosis (voo-ker'e-ri'ah-sis) infection with worms of
the genus *Wuchereria*.

Wunderlich's curve (voo'n'der-lik-s) [Carl Reinhold August Wun-
derlich, German physician, 1815-1877] see under *curve*.

Wundt's tetanus (voonts) [Wilhelm Wundt, German physiologist,
1832-1920] see under *tetanus*.

Wurster's test (vurs'terz) [Casimir Wurster, Dresden physiologist,
1856-1913] see under *tests*.

Wutzer's operation (vet'zerz) [Karl Wilhelm Wutzer, German
surgeon, 1789-1863] see under *operation*.

w./v. weight (of solute) per volume (of solvent).

Wyamine (wi'ah-min) trademark for preparations of mephen-
termine.

Wycillin (wi-sil'lin) trademark for preparations of penicillin G
procaine.

Wydase (wi'dās) trademark for preparations of hyaluronidase
for injection.

Wyeomyia (we'o-mi'yah) a genus of culicine mosquitoes.

Wyeth's operation (wi'eths) [John Allan Wyeth, surgeon in New
York, 1845-1922] see under *operation*.

Wylie's drain, operation (wi'lēz) [Walker Gill Wylie, gynecolo-
gist in New York, 1848-1923] see under *drain* and *operation*.

X

X symbol for *Kienbock's unit* of x-ray exposure.

xanchromatic (zan'kro-mat'ik) xanthochromic.

xanoxate sodium (zah-noks'āt) chemical name: 7-(1-methyl-
ethoxy)-9-oxo-9H-xanthene-2-carboxylic acid sodium salt; a bron-
chodilator, C₁₇H₁₃ NaO₅.

xanthate (zan'thāt) any salt of xanthic acid.

xanthelasma (zan'thel-az'mah) [*xantho-* + Gr. *elasma* plate]
the commonest form of xanthoma affecting the eyelids and
characterized by soft yellowish spots or plaques; called also
xanthelasma palpebrarum. See *plane xanthoma*, under *xanthoma*.
generalized x., see *plane xanthoma*, under *xanthoma*.

xanthelasmatois (zan'thel-az'mah-to'sis) the generalized
form of plane xanthoma (q.v.).

xanthematin (zan-them'ah-tin) an ill-defined yellow substance
derivable from hematin, sometimes by the action of nitric acid.

xanthemia (zan-the'me-ah) [*xantho-* + Gr. *haima* blood + *-ia*]
presence of yellow coloring matter in the blood; carotenemia.

xanthene (zan'thēn) the compound, (C₈H₄)₂(OCH₃)₂, or dibenz-
pyran, from which the xanthene dyes and indicators are derived.

xanthic (zan'thik) 1. yellow. 2. pertaining to xanthine.

xanthin (zan'thin) any of the yellow pigments obtained from
yellow flowers and other plants, probably consisting of oxy-
gen-containing carotenoids.

xanthine (zan'thēn) [Gr. *xanthos* yellow: named from the yellow
color of its nitrate] a white, amorphous base, 2,6-dioxypurine,
C₅H₄N₄O₂, from most of the body tissues and fluids, urinary
calculi, and certain plants. It is formed by the oxidation of
hypoxanthine and may be oxidized to uric acid. It is insoluble in
cold water, but freely soluble in dilute acid and alkaline solutions.
It possesses stimulant properties to muscle tissue, especially that
of the heart. The three derivatives of xanthine most used in
medicine are caffeine, theobromine, and theophylline and their
derivatives. **dimethyl x.**, theobromine. **trimethyl x.**, caf-
feine.

xanthinin (zan'thī-nin) 1. a white, crystalline substance, C₄H₅-

N₃O₂, formed by heating ammonium thionurate. 2. a keto-lac-
tone from leaves of *Xanthium pennsylvanicum*, or cocklebur.

xanthinoxidase (zan'thin-ok'si-dās) an enzyme that oxidizes
xanthine and hypoxanthine into uric acid.

xanthinuria (zan'thin-u're-ah) [*xanthine* + Gr. *ouron* urine] a
rare hereditary disorder of purine metabolism due to deficiency of
the enzyme xanthine oxidase, which results in excessive urinary
secretion of xanthine and hypoxanthine, in place of uric acid, and
may lead to the formation of xanthine calculi in the urinary tract.

xanthinuric (zan'thin-u'-rik) pertaining to or resulting from
xanthinuria.

xanthiuria (zan'the-u're-ah) xanthinuria.

xantho- (zan'tho) [Gr. *xanthos* yellow] a combining form mean-
ing yellow.

xanthochromatic (zan'tho-kro-mat'ik) xanthochromic.

xanthochromia (zan'tho-kro'me-ah) [*xantho-* + Gr. *chrōma*
color + *-ia*] any yellowish discoloration, as of the skin or of the
spinal fluid.

xanthochromic (zan'tho-kro'mik) having a yellow color; ap-
plied almost exclusively to cerebrospinal fluid.

xanthocyanopsia (zan'tho-si'ah-nop'se-ah) [*xantho-* + Gr.
kyanos blue + *opsis* vision + *-ia*] ability to discern yellow and
blue tints, but not red or green.

xanthocystine (zan'tho-sis'tin) a substance found in tubercles
from a dead body.

xanthocyte (zan'tho-sit) a cell that contains yellow pigment.

xanthodontous (zan'tho-don'tus) [*xantho-* + Gr. *odous* tooth]
having yellowish teeth.

xanthoerythrodermia (zan'tho-ē-rith'ro-der'me-ah) a yel-
lowish red coloration of the skin. **x. per'stans**, parapsoriasis
en plaques.

xanthofibroma thecocellulare (zan'tho-fi-bro'mah the'ko-
sel'u-lah're) dermatofibroma.

xanthogranuloma (zan'tho-gran'u-lo'mah) a tumor having
the histologic characteristics of both granuloma and xanthoma.
juvenile x., a dermatosis, typically beginning in infancy or early

childhood, in which groups of yellow, yellow-brown, reddish yellow, or brown papules or nodules occur on the extensor surfaces of the extremities; the eyeball, meninges, and testes may also be involved. Spontaneous remission of the lesions usually occurs in one to three years. Formerly called *nevoxanthoendothelioma*.

xanthokyanopy (zan'tho-ki-an'o-pe) xanthocyanopsia.

xanthoma (zan'tho'mah) a papule, nodule, or plaque of a yellow color in the skin, due to deposits of lipids. Microscopically the lesions show light cells with foamy protoplasm (foam cells, or xanthoma cells). See also *xanthomatosis*. **craniohypophyseal x.**, deposits of cholesterol esters in bones around the hypophysis in Hand-Schüller-Christian disease. **diabetic x.**, **x. diabetico'rum**, an eruptive xanthoma associated with diabetes mellitus; when the diabetes is brought under control, the skin lesions disappear. **x. dissemina'tum**, a chronic, benign, normolipoproteinemic xanthomatosis characterized by small, yellowish red to brown papules and nodules chiefly affecting the flexural and intertriginous surfaces and the mucous membranes of the oropharynx, larynx, and bronchi. Diabetes insipidus has been reported in a large percentage of patients. Called also *x. multiplex*. **eruptive x.**, **x. erupti'vum**, xanthomatosis characterized by clusters of small yellow or yellowish-brown papules over the entire body; the lesions may be encircled by an erythematous halo. **generalized plane x.**, see *plane x.* **x. mul'tiplex**, *x. disseminatum*. **x. palpebra'rum**, xanthelasma. **planar x.**, **plane x.**, **x. planum**, xanthomatosis characterized by flat macules or slightly elevated plaques of yellowish to orange color, which may be localized to the eyelids (*xanthelasma*, *xanthelasma palpebralis*) or distributed over large areas of the skin (*generalized plane x.*, *generalized xanthelasma*, *xanthelasmatis*). It is usually associated with reticuloendothelial disorders, especially multiple myeloma. **x. stria'tum palma're**, xanthoma planum affecting only the palms. **x. tendino'sum**, a hereditary lipid storage disease marked by formation of papules or nodules in the tendons, especially the extensor tendons of the hands and feet and the Achilles tendon. **x. tubero'sum**, **x. tubero'sum mul'tiplex**, **tuberous x.**, a hereditary lipid storage disease characterized by groups of flat, or elevated and rounded, yellowish or orangish nodules on the skin over joints, especially the elbows and knees. It may be associated with types I and II hyperlipoproteinemia, biliary cirrhosis, and myxedema.

xanthomatosis (zan'tho-mah-to'sis) an accumulation of an excess of lipids in the body due to disturbance of lipid metabolism and marked by the formation of foam cells in skin lesions. See also entries under *xanthoma*. **biliary hypercholesterolemic x.**, widespread xanthomatosis resulting from hypercholesterolemia due to biliary tract obstruction. **x. bul'bi**, fatty degeneration of the cornea. **cerebrotendinous x.**, a lipid storage disease characterized by xanthomas of the tendons and the white matter of brain and by spasticity, ataxia, mental retardation, and early cataracts. The lesions contain cholesterol and dehydrocholesterol. **chronic idiopathic x.**, Hand-Schüller-Christian disease. **x. generalisa'ta os'sium**, lipid granulomatosis of the bones. **x. i'ridis**, the formation of yellow patches in the discolored iris of an eye blinded as the result of protracted iritis or glaucoma. **primary familial x.**, Wolman's disease. **Wolman's x.**, Wolman's disease.

xanthomatous (zan'tho'mah-tus) pertaining to or of the nature of xanthoma.

Xanthomonas (zan'tho-mo'nas) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as monotrichous cells producing a yellow pigment, the type species being *X. hyacin'thi*. Most of the 60 described species, as well as many of the 14 species provisionally included, are pathogenic for plants.

xanthone (zan'thōn) xanthene ketone, $\text{CO}:(\text{C}_6\text{H}_4)_2:\text{O}$, a derivative of xanthine.

xanthophane (zan'tho-fān) a yellow pigment from the retina.

xanthophore (zan'tho-fōr) [*xantho-* + Gr. *phoros* bearing] a chromatophore of cold-blooded animals containing granules of yellow-red pigment.

xanthophose (zan'tho-fōz) [*xantho-* + Gr. *phōs* light] any yellow or yellowish phase.

xanthophylase (zan'tho-fi'lās) an enzyme discovered in the rabbit that determines the presence of its yellow fat.

xanthophyll (zan'tho-fil) [*xantho-* + Gr. *phyllon* leaf] a yellow coloring matter of plants, one of a group of oxygenated carotenoids, e.g., 3,3-dihydroxy alpha-carotene, $\text{C}_{40}\text{H}_{56}\text{O}_2$, occurring along with carotene in green leaves, grass, and other vegetable matter.

xanthopia (zan'tho'pe-ah) xanthopsia.

xanthoproteic (zan'tho-pro-te'ik) pertaining to xanthoproteinein.

xanthoprotein (zan'tho-pro'te-in) an orange pigment produced by heating proteins with nitric acid.

xanthopsia (zan'tho'pe-ah) [*xantho-* + Gr. *opsis* vision + *-ia*] a form of chromatopsia in which objects looked at appear yellow.

xanthopsin (zan'tho'p-sin) all-trans retinal; see *retinal*.

xanthopsis (zan'tho'p-sis) [*xantho-* + Gr. *opsis* appearance] a yellow pigment or pigmentation in cancers.

xanthopter in (zan'tho'p-ter-in) [*xanto-* + Gr. *pteron* wing] chemical name: 2-amino-4,6-pteridinediol. A yellow pigment, $\text{C}_8\text{H}_5\text{N}_5\text{O}_2$, from the integument of wasps and hornets and from butterfly wings, which has some hematopoietic activity in anemic animals. It is an inhibitor of xanthine oxidase. See *pterin*.

xanthopuccine (zan'tho-puk'sin) [*xantho-* + *puccoon*, Algonquin name for plants used as pigments] an alkaloid from *Hydrastis canadensis* L. (Ranunculaceae), the goldenseal.

xanthorhammin (zan'tho-ram'nin) chemical name: 3,3',4',5'-tetrahydroxy-7-methoxyflavone-3-rhamnoside. A yellow glycoside, $\text{C}_{34}\text{H}_{42}\text{O}_{20}$, from the fruit of several species of *Rhamnus*.

xanthorubin (zan'tho-ru'bin) xantorubin.

xanthosarcoma (zan'tho-sar-ko'mah) giant cell tumor of the tendon sheath; see under *tumor*.

xanthosine (zan'tho-sēn) a nucleoside, xanthine-9-ribofuranoside, $\text{C}_{10}\text{H}_{12}\text{O}_6\text{N}_4$, which on hydrolysis yields xanthine and ribose.

xanthosis (zan'tho'sis) a yellowish discoloration; degeneration with yellowish pigmentation. **x. of septum nasi**, yellow pigmentation of the mucous membrane of the nose, due to degeneration of the blood after hemorrhage.

xanthotoxin (zan'tho-tok'sin) methoxsalen.

xanthous (zan'thus) yellow or yellowish.

xanthuria (zan'thu're-ah) [*xanthine* + Gr. *ouron* urine + *-ia*] xanthinuria.

xanthyl (zan'thil) the monovalent radical $\text{C}_{13}\text{H}_9\text{O}$.

xanthylic (zan-thil'ik) pertaining to xanthine.

xantorubin (zan'to-roo'bin) a yellow pigment found in the blood serum after hepatectomy.

Xe chemical symbol for *xenon*.

xenembole (zen-em'bo-le) [*xeno-* + Gr. *embole* insertion] the introduction of foreign substances into the system.

xenenthesi (zen'en-the'sis) [*xeno-* + Gr. *enthesi* putting in] xenembole.

xenia (ze'ne-ah) [Gr. "a friendly relation between two foreigners"] the appearance in the endosperm (seed) resulting from cross-pollination of dominant characters inherited from the male (pollen) plant.

xeno- [Gr. *xenos* a guest-friend; any stranger or foreigner] a combining form meaning strange, or denoting relationship to foreign material.

xenobiotic (zen'o-bi-ot'ik) a chemical foreign to the biologic system.

xenocytophilic (zen'o-si'to-fil'ik) [*xeno-* + Gr. *kytos* hollow vessel + *philein* to love] having an affinity for cells derived from a different species.

xenodiagnosis (zen'o-di-ag-no'sis) [*xeno-* + *diagnosis*] 1. diagnosis by means of finding, in the feces of clean laboratory-bred bugs fed on the patient, the infective forms of the organism causing the disease; used in the early stages of Chagas' disease. 2. diagnosis of trichinosis by means of feeding laboratory-bred rats or mice on meat suspected of being infected with *Trichinella*, and then examining the animals for the parasite.

xenodiagnostic (zen'o-di'ag-nos'tik) pertaining to xenodiagnosis.

xenodochia (zen'o-do'ke-ah) medieval hospital for poor and infirm pilgrims.

xenogeneic (zen'o-jen-a'ik) [*xeno-* + *gennan* to produce] in transplantation biology, denoting individuals or tissues from individuals of different species and hence of disparate cell type; called also *heterologous*. See *allogeneic*.

xenogenesis (zen'o-jen'ē-sis) 1. alternation of generation; heterogenesis. 2. the production of offspring unlike either parent.

xenogenous (zen-oj'ē-nus) [*xeno-* + Gr. *gennan* to produce] caused by a foreign body, or originating outside the organism.

xenograft (zen'o-graft) a graft of tissue transplanted between animals of different species. Called also *heterograft*, *heterologous graft*, and *heteroplastic graft*.

xenology (ze-nol'o-je) the science of the relations of parasites to their hosts.

xenomenia (zen'o-me'ne-ah) [*xeno-* + Gr. *mēniaia* menses] vicarious menstruation.

xenon (ze'non) [Gr. *xenos* stranger] a chemically unreactive gaseous element found in the atmosphere; atomic number, 54; atomic weight, 131.30; symbol, Xe.

xenoparasite (zen'o-par'ah-sit) an organism not usually parasitic on the host, but which becomes so because of a weakened condition of the host.

xenophobia (zen'o-fō-be-ah) [*xeno-* + Gr. *phobein* to be affrighted by + *-ia*] morbid dread of strangers.

xenophonia (zen'o-fō-ne-ah) [*xeno-* + Gr. *phōnē* voice + *-ia*] alteration of the accent and intonation of a person's speech.

xenophthalmia (zen'of-thal'me-ah) [*xeno-* + Gr. *ophthalmia* ophthalmia] ophthalmia caused by a foreign body in the eye.

Xenopsylla (zen'op-sil'ah) [*xeno-* + Gr. *psylla* flea] a genus of fleas, including more than 30 species, many of which transmit disease-producing microorganisms. **X. as'tia**, a rat flea of parts of Ceylon and India that has been implicated in the transmission of plague. **X. brasiliensis**, a rat flea of Africa, Brazil, and India, a transmitter of plague. **X. che'opis**, a rat flea of worldwide distribution, which transmits plague and murine typhus; called also *Pulex cheopis* and *Asiatic rat flea*. **X. hawaiiensis**, *X. vexabilis*. **X. vexabilis**, a species infesting field rats in the Hawaiian islands; called also *X. hawaiiensis*.

Xenopus (zen'o-pus) a genus of amphibians. **X. lae'vis**, the South African clawed toad; see *Xenopus test*, under *tests*.

xenorexia (zen'o-rek'se-ah) [*xeno-* + *orexis* appetite + *-ia*] perversion of appetite leading to the repeated swallowing of foreign bodies not ordinarily ingested.

xenyl (zen'il) the univalent chemical group, $C_6H_5 \cdot C_6H_4 \cdot$.

xerantic (ze-ran'tik) causing dryness; siccative.

xeraphium (ze-raf'e-um) a drying powder.

xero- [Gr. *xēros* dry] a combining form meaning dry, or denoting relationship to dryness.

xerocheilia (ze'ro-ki'le-ah) [*xero-* + Gr. *cheilos* lip + *-ia*] dryness of the lips, a form of simple cheilitis.

xerocollyrium (ze'ro-ko-lir'e-um) [*xero-* + Gr. *kollyrion* collyrium] a dry collyrium; an eye salve.

xeroderma (ze'ro-der'mah) [*xero-* + Gr. *derma* skin] a mild form of ichthyosis, marked by a dry, rough, discolored state of the skin, with the formation of a scaly desquamation. **follicular x.** (obs.), *keratosis pilaris*. **x. of Kaposi** (obs.), *x. pigmentosum*. **x. pigmentosum**, a rare and frequently fatal pigmented and atrophic disease in which the skin and eyes are extremely sensitive to light. It begins in childhood and progresses to early development of ephelides, telangiectases, keratoses, papillomas, carcinoma, and melanoma. Ocular symptoms include photophobia, lacrimation, keratitis, opacities, and tumors of the lid and cornea. The disease is inherited as an autosomal recessive trait involving a defect in the enzymes active in the excision and repair of DNA damaged by ultraviolet irradiation. Total protection from sunlight prevents development of lesions completely.

xerodermatic (ze'ro-der-mat'ik) pertaining to or of the nature of xeroderma.

xerodermia (ze'ro-der'me-ah) xeroderma.

xerogel (ze'ro-jel) a gel containing little liquid. Cf. *lyogel*.

xerography (ze-rog'rah-fe) xeroradiography.

xeroma (ze-ro'mah) an abnormally dry condition of the conjunctiva; xerophthalmia.

xeromammography (ze'ro-mam-mog'rah-fe) xeroradiography of the breast.

xeromenia (ze'ro-me'ne-ah) [*xero-* + Gr. *mēniaia* menses] a condition in which the bodily symptoms of menstruation occur without any bloody flow.

xeromycteria (ze'ro-mik-te're-ah) [*xero-* + Gr. *myktēr* nose] dryness of the nasal mucous membrane.

xerophagia (ze'ro-fa'je-ah) [*xero-* + Gr. *phagein* to eat] the eating of dry food.

xerophagy (ze-rof'ah-je) xerophagia.

xerophobia (ze'ro-fo-be-ah) inhibition of saliva flow because of fear, anger, or excitement.

xerophthalmia (ze'rof-thal'me-ah) [*xero-* + Gr. *ophthalmos* eye + *-ia*] dryness of the conjunctiva and cornea due to vitamin A deficiency. The condition begins with night blindness and conjunctival xerosis and progresses to corneal xerosis and, in the late stages, to keratomalacia.

xerophthalmus (ze'rof-thal'mus) xerophthalmia.

xeroradiography (ze'ro-ra'de-og'rah-fe) a dry, totally photoelectric process for recording x-ray images, using metal plates coated with a semiconductor, such as selenium.

xerosialography (ze'ro-si'ah-log'rah-fe) sialography in which the images are recorded by xerography.

xerosis (ze-ro'sis) [Gr. *xērosis*] abnormal dryness, as of the eye, skin, or mouth. **x. conjunctivae, conjunctival x.**, dryness of the conjunctiva. When associated with Bitot's spots, it is due to vitamin A deficiency and may progress to xerophthalmia and keratomalacia. **x. cor'neae, corneal x.**, dryness of the cornea, giving it a hazy or milky appearance; see *xerophthalmia*. **x. cu'tis, asteatosis cutis**. **x. parenchymato'sus**, xerophthalmia due to trachoma. **x. superficialis**, xerophthalmia due to abnormal exposure of the eyeball to the air.

xerostomia (ze'ro-sto'me-ah) [*xero-* + Gr. *stoma* mouth + *-ia*] dryness of the mouth from lack of the normal secretion, as in Sjögren's syndrome.

xerotes (ze'ro-tēz) [Gr. *xērotēs*] dryness.

xerotic (ze-rot'ik) characterized by xerosis or dryness.

xerotomography (ze'ro-to-mog'rah-fe) tomography in which the images are recorded by xeroradiography.

xerotripsis (ze'ro-trip'sis) [*xero-* + Gr. *tripsis* friction] dry friction.

xilobam (zi'lo-bam) chemical name: *N*-(2,6-dimethylphenyl)-*N'*-(1-methyl-2-pyrrolidinylidene)urea; a muscle relaxant, $C_{14}H_{19}N_3O$.

Ximenia (zi-me'ne-ah) a genus of African olacineous trees; the drupes of some species are edible and aromatic.

xipamide (zip'ah-mid) chemical name: 5-(aminosulfonyl)-4-chloro-*N*-(2,6-dimethylphenyl)-2-hydroxybenzamide; a diuretic and antihypertensive, $C_{15}H_{15}ClN_2O_4S$.

xiphi- see *xipho-*.

xiphin (zif'in) a protamine from the sperm of the sword fish, *Xiphias gladius*.

xiphisternal (zif'i-ster'nal) pertaining to the xiphisternum.

xiphisternum (zif'i-ster'num) [*xiphi-* + Gr. *sternon* sternum] the xiphoid process (processus xiphoideus [NA]).

xipho-, xiphi- [Gr. *xiphos* sword] a combining form denoting relationship to the xiphoid process.

xiphocostal (zif'o-kos'tal) [*xipho-* + L. *costa* rib] pertaining to the xiphoid process and the ribs.

xiphodidymus (zif'o-did'i-mus) [*xipho-* + Gr. *didymos* twin] xiphopagus.

xiphodymus (zi-fod'i-mus) xiphopagus.

xiphodynia (zif'o-din'e-ah) [*xipho-* + Gr. *odynē* pain + *-ia*] pain in the xiphoid process.

xiphoid (zif'oid) [*xipho-* + Gr. *eidos* form] 1. shaped like a sword. 2. the xiphoid process (processus xiphoideus [NA]).

xiphoiditis (zif'oi-di'tis) inflammation of the xiphoid process.

xiphopagotomy (zi-fop'ah-got'o-me) surgical separation of conjoined twins fused in the region of the xiphoid process.

xiphopagus (zi-fop'ah-gus) [*xipho-* + Gr. *pagos* thing fixed] symmetrical conjoined twins fused in the region of the xiphoid process.

X-linked (eks'linkt) transmitted by genes on the X chromosome; sex-linked.

XO symbol for the presence of only one sex chromosome, the other X or the Y chromosome being absent.

X-Prep (eks'prep) trademark for a preparation of senna.

x-ray (eks'ra) roentgen ray; see under *ray*. **spark x-r's**, brush discharge.

xylanthrax (zi-lan'thraks) charcoal.

xylazine hydrochloride (zi'lah-zēn) chemical name: *N*-(2,6-dimethylphenyl)-5,6-dihydro-4*H*-1,3-thiazin-2-amine monohydrochloride; an analgesic, sedative, and muscle relaxant, $C_{12}H_{16}N_2S \cdot HCl$, used in veterinary medicine.

xylem (zi'lem) [Gr. *xylon* wood] the tissue in woody plants which conducts water and dissolved salts up from the roots, characterized by the presence of tracheids. In bulk it forms wood. Cf. *phloem*.

xylene (zi'lēn) 1. dimethylbenzene; an antiseptic hydrocarbon, $C_6H_4(CH_3)_2$, from methyl alcohol or coal tar; used in microscopy as a solvent and clarifier. 2. a group of hydrocarbons of the benzene series.

xylol (zi'lēn) any of a series of colorless, crystalline substances, $(CH_3)_2C_6H_3OH$, resembling phenol. **x. salicylate**, a white antirheumatic powder, $OH \cdot C_6H_4 \cdot CO \cdot O \cdot C_6H_3(CH_3)_2$.

xylidine (zi'lī-din) a compound, dimethylaniline $(CH_3)_2C_6H_3 \cdot NH_2$, used as a dyestuff intermediate and for blending gasoline.

xylitol (zi'lī-tol) an alcohol, $CH_2OH(CHOH)CH_2OH$, from xylose.

xylitone (zi'lī-tōn) an oil, $C_{12}H_{18}O$, formed by treating acetone with hydrochloric acid.

xylo- [Gr. *xylon* wood] a combining form denoting relationship to wood.

Xylocaine (zi'lo-kān) trademark for preparations of lidocaine.

xylogen (zi'lo-jen) lignin.

xyloidin (zi-loid'in) [*xylo-* + Gr. *eidos* form] a white, explosive substance, $C_6H_5(NO_2)O_8$, prepared from starch by the action of nitric acid.

xyloketose (zi'lo-ke'tōs) xylulose.

xyloketosuria (zi'lo-ke'to-su're-ah) essential pentosuria.

xylol (zi'lol) [Gr. *xylon* wood] xylene.

xyloma (zi-lo'mah) a woody tumor on a tree or plant.

xylometazoline hydrochloride (zi'lo-met'ah-zo'lēn) [USP] chemical name: 2-(4-tert-butyl-2,6-dimethylbenzyl)-2-imidazoline monohydrochloride. An adrenergic, $C_{16}H_{24}N_2 \cdot HCl$, occurring as a white, crystalline powder; used topically as a vasoconstrictor to reduce swelling and congestion of the nasal mucosa.

xylonite (zi'lō-nit) a substance which resembles celluloid manufactured from pyroxylin.

xylopyranose (zi'lō-pi'rah-nōs) xylose in the cyclic pyranose form.

xylosazone (zi-lō'sa-zōn) the phenyl-osazone of xylose.

xylose (zi'lōs) a pentose, $CH_2OH(CHOH)_3CHO$, in a pyranose form, occurring in mucopolysaccharides of connective tissue and sometimes in the urine (see *xylosuria*); also obtained from vegeta-

ble gums, beechwood, and jute. The official preparation is used as a diagnostic aid in determining intestinal function.

xyloside (zi-lo-sid) a glycoside of xylose.

xylosidoglucose (zi''lo-sid''o-gloo'kōs) primaverose.

xylosuria (zi''lo-su're-ah) presence of xylose in the urine. A form of alimentary pentosuria reportedly occurring after ingestion of certain fruits, e.g., cherries, plums, and grapes; the identity of the urinary pentose(s) has not been crisply established. It is to be distinguished from essential pentosuria, which results from a genetic defect.

xylotherapy (zi''lo-ther'ah-pe) [*xylo-* + Gr. *therapeia* treatment] medical treatment by the application of certain woods to the body.

Y

Y chemical symbol for *yttrium*.

yahourth (yah'oort) yogurt.

yard (yard) a unit of linear measure, 3 feet, or 36 inches, being the equivalent of 86.44 cm.

yatobyo (yah'to-bi'yo) [Japanese *ya* wild, or field + *to* rabbit, or hare + *byo* disease] tularemia.

yaw (yaw) a lesion of yaws (q.v.). **guinea corn y.**, a lesion of yaws which resembles a grain of maize. **mother y.**, the initial cutaneous lesion of yaws. **ringworm y.**, a circular or ring-shaped lesion of yaws.

yawey (yaw'e) affected with yaws.

yawning (yawn'ing) a deep, involuntary inspiration with the mouth open, often accompanied by the act of stretching. Cf. *pandiculation*.

yaws (yawz) a usually nonvenereal, systemic, infectious disease, caused by the spirochete *Treponema pertenue*, and most commonly occurring in children in grain of maize. **mother y.**, the initial cutaneous lesion of yaws. **ringworm y.**, a circular or ring-shaped lesion of yaws. **increases in size, becomes crusted, and spontaneously disappears, leaving a scar; a secondary stage, which occurs weeks or months after the appearance of the primary lesion, and is marked by successive crops of granulomatous papules distributed over the body, especially the face, extremities, and anogenital area; and, rarely, a tertiary stage, in which gummatous lesions of the skin similar to those of syphilis and destructive lesions of the bones occur after an interval of several years. Called also Breda's or Charlouis' disease. Also known by numerous local names, e.g., frambesia, pian, parangi, and bouba. crab y., yaws characterized by hyperkeratosis with fissuring and ulceration of the soles of the feet, and less commonly involving the palms of the hands. forest y., pian bois.**

Ya Yan Tzu the Chinese species of the simaroubaceous plant of the genus *Brucea*, e.g., *B. antidysenterica* J.F. Mill., the seeds of which are used in treating amebic dysentery.

Yb chemical symbol for *ytterbium*.

yd. yard.

yeast (yēst) a general term including single-celled, usually rounded fungi that produce by budding (blastospore formation). Some yeasts transform to a mycelial (mold) stage under certain environmental conditions, while others always remain single-celled. The perfect yeasts are included in the class Ascomycetes, subclass Hemiascomycetes, order Endomycetales, and the imperfect yeasts in the class Deuteromycetes, order Moniliales, family Cryptococcaceae. A few are pathogenic for man. **bakers' y., brewers' y.,** *Saccharomyces cerevisiae*, used in brewing beer, making alcoholic liquors, and baking bread. **dried y.,** the dry cells of any suitable strain of *Saccharomyces cerevisiae*, usually a by-product of the brewing industry; used as a natural source of protein and B-complex vitamins. **imperfect y.,** one whose perfect (sexual) stage is unknown. **perfect y.,** one whose perfect (sexual) stage is known.

yeki (ya'ke) [Japanese] bubonic plague.

yellow (yel'o) 1. one of the primary colors of wavelength of 571.5 to 578.5 millimicrons. 2. a dye or stain that produces a yellow color. **acid y., fast y., alizarin y.,** an indicator used in the determination of hydrogen ion concentration with a pH range of 10.1–12.1. **brilliant y.,** an indicator used in determining hydrogen ion concentration of 6–8. **butter y., p-dimethylaminazobenzene. chrome y.,** lead chromate, PbCrO₄, used in paints and injection masses. **corallin y.,** yellow corallin. **fast y.,** a yellow, acid azo dye, (N·C₆H₄·SO₂ONa)₂·NH₃, used in staining bone. **imperial y.,** aurantia. **Manchester y., Martius y.,** a poisonous, yellow, azo dye, C₆H₅·(NO₂)₂OH, used as a stain and in the preparation of light filters. **metanil y., metaniline y. (extra),** an indicator used in the determination of hydrogen ion concentration, with a pH range of

xylulose (zi''lu-lōs) a pentose sugar, CH₂OH(CHOH)₂CO·CH₂·OH, occurring in two forms: L-xylulose, one of the few L sugars found in nature and sometimes excreted in the urine (see *pentosuria*), and D-xylulose.

L-xylulosuria (zi''lu-lo-su're-a) a pentosuria.

xylyl (zi'lil) the hydrocarbon radical, CH₃C₆H₄CH₂.

xyphoid (zi'foid) xiphoid.

xysma (zis'mah) [Gr. "that which is scraped or shaved off"] a material, like bits of membrane, seen in the stools of diarrhea.

xyster (zis'ter) [Gr. *xyster* a scraper] a surgeon's file or raspatory.

1.2–2.3. **naphthol y.,** Manchester y. **Philadelphia y.,** phosphine, def. 2. **visual y.,** all-trans retinal; see *retinal*.

yellow (yel'ōz) 1. a form of canine leptospirosis resembling leptospiral jaundice in man, caused by *Leptospira icterohaemorrhagiae*. 2. a disease affecting sheep and cattle in Scotland during June and July; it is marked by photosensitization and jaundice after ingestion of clover or alfalfa followed by exposure to sunlight; called also *headgrit*.

Yeo's treatment (ye'ōz) [Isaac Burney Yeo, London physician, 1835–1914] see under *treatment*.

yerba (yer'bah) [Sp.] herb. **y. santa** (yer'bah sahn'tah) [Sp. "sacred herb"], *Eriodictyon*.

yerbine (yer'bin) an alkaloid resembling caffeine, obtained from *Ilex paraguayensis*, a holly tree of Brazil, Argentina, and Paraguay.

Yerkes-Bridges test (yer'kēz-brij'ez) [Robert M. Yerkes, Boston psychiatrist, 1876–1956; James W. Bridges, Canadian psychiatrist, born 1885] see under *tests*.

yerli (yer'le) a fine quality of Turkish opium.

Yersin's serum (yer'sinz) [Alexandre Emil Jean Yersin, Swiss bacteriologist in Paris, 1863–1943] antiplague serum.

Yersinia (yer-sin'e-ah) [A.J.E. Yersin] a genus made up of non-motile, ovoid or rod-shaped, nonencapsulated, gram-negative bacteria of the family Enterobacteriaceae. **y. enterocolitica**, a ubiquitous species isolated from the feces and lymph nodes of animals and man; it is nonpathogenic for laboratory animals. **Y. pes'tis**, the etiologic agent of plague in man and rats, ground squirrels, and other rodents, transmitted from rat to rat and from rat to man by the rat flea, and from man to man by the human body louse; pathogenic for mice, guinea pigs, and rabbits. Formerly called *Pasteurella pestis*. **Y. pseudotuberculosis/osis**, a gram-negative, polymorphic, coccoid or ovoid, motile species of bacteria which is a common pathogen of rodents and birds. It causes mesenteric lymphadenitis in man and pseudotuberculosis in guinea pigs, rabbits, and, rarely, in other animals. Formerly called *Pasteurella pseudotuberculosis*.

-yl [Gr. *hylē* matter of substance] a chemical suffix signifying a radical, particularly a univalent hydrocarbon radical.

ylang-ylang (e''lahng-e''lahng) a tree of the Malayan Islands, *Cananga odorata* Hook and Thoms. (Anonaceae); its flowers afford a fragrant volatile oil used in perfumes.

-ylene a suffix used in chemistry to denote a bivalent hydrocarbon radical.

yochubio (yo-chu'be-o) scrub typhus.

Yodoxin (yo-dok'sin) trademark for preparations of iodoquinol.

yogurt (yo'goort) a form of curdled milk, produced by fermentation with organisms of the genus *Lactobacillus*.

yohimbine (yo-him'bēn) an alkaloid, C₂₁H₂₆N₂O₃, from *Corynanthe johimbe* K. Schum. (Rubiaceae) and from *Rauwolfia serpentina* L. Benth. (Apocynaceae). It possesses adrenergic blocking properties and is used in arteriosclerosis and angina pectoris, and formerly as a local anesthetic and mydriatic and for its purported aphrodisiac properties.

yoke (yōk) a connecting structure; a depression or ridge connecting two structures. Called also *jugum*. **aleolar y's of mandible,** juga alveolaria mandibulae. **alveolar y's of maxilla,** juga alveolaria maxillae. **cerebral y's of bone of cranium,** juga cerebralia ossium cranii. **sphenoidal y.,** jugum sphenoidale.

yolk (yōk) [L. *vitellus*] 1. the stored nutrient of the ovum. 2. crude wool fat or suint. **accessory y.,** the part of the yolk that serves for the nutrition of the formative portion. **egg y.,** the yellow portion of the egg of a bird. **formative y.,** that part of the ovum from which the embryo is developed. **nutritive y.,** accessory y.

Young's operation (yungz) [Hugh Hampton Young, Baltimore urologist, 1870–1945] see under *operation*.

Young's rule (yungz) [Thomas Young, English physician, physi-

cist, mathematician, and philologist, 1773–1829, the “father of physiologic optics”] see under *rule*.

Young-Helmholtz theory (yung-helm'hōlts) [Thomas Young; H. L. F. von Helmholtz, German physician, 1821–1894] see under *theory*.

yperite (i'per-it) dichlorodiethyl sulfide.

ypsiform (ip-sil'i-form) upsiloid.

ypsiloid (ip'si-loid) upsiloid.

Z

Z symbol for *atomic number*.

Z. abbreviation for Ger. *Zuckung*, contraction.

zacatilla (zak'ah-tēl'yah) [Sp.] the choicest quality of cochineal.

Zactane (zak'tān) trademark for a preparation of ethoheptazine citrate.

Zahn's lines (ribs) (zahnz) [Friedrich Wilhelm Zahn, Swiss pathologist, 1845–1904] see under *line*.

zaire (zi'ra) an epidemic form of cholera occurring in Portugal.

Zander apparatus (zan'der) [Jonas Gustaf Wilhelm Zander, Swedish physician, 1835–1917] see under *apparatus*.

Zang's space (zangz) [Christoph Bonifacius Zang, German surgeon, 1772–1835] fossa supraclavicularis minor.

Zangemeister's test (zan'gē-mis'terz) [Wilhelm Zangemeister, German gynecologist, 1871–1930] see under *tests*.

Zappert's chamber (tsap'ertz) [Julius Zappert, physician in Vienna, born 1867] see under *chamber*.

zaranthan (zah-ran'than) [Heb.] a hardening of the breast.

Zarontin (zah-ron'tin) trademark for a preparation of ethosuximide.

Zaroxolin (zah-roks'o-lin) trademark for a preparation of metolazone.

Zaufal's sign (tsow'fahlz) [Emanuel Zaufal, Prague rhinologist, 1833–1910] saddle nose.

Zea (ze'ah) 1. maize. 2. corn-silk, the fresh styles and stigmas of the flowers of American corn, *Zea mays* L. (Gramineae). Formerly used in the treatment of cystitis and urethritis.

zeatin (ze'ā-tin) [from *Zea mays*, the generic name for corn] a cytokinin, or growth-stimulating factor of plants, 6-(4-hydroxy-3-methyl-*trans*-2-butenylamino)purine, first isolated from young kernels of sweetcorn but now known to occur in peas and spinach as well.

zeaxanthin (ze'ah-zan'thin) [zea + Gr. *xanthos* yellow] a carotenoid, C₄₀H₅₆O₂, from yellow corn, egg yolk, and *Fucus vesiculosus*, a seaweed of the North Atlantic Ocean.

zedoary (zed'o-a're) [L. *zedoaria*] the rhizome of *Curcuma zedoaria*, a plant of India, which resembles ginger; used medicinally as an aromatic stimulant and carminative.

Zeeman effect (tse'man) [Pieter Zeeman, Dutch physicist, 1865–1943] see under *effect*.

zein (ze'in) a yellowish prolamin obtainable from corn; molecular weight is about 40,000. It does not contain tryptophan or lysine.

zeinolysis (ze'in-ol'i-sis) [zein + Gr. *lysis* dissolution] the decomposition or splitting up of zein.

zeinolytic (ze'in-o-lit'ik) pertaining to, characterized by, or promoting zeinolysis.

zeiosis (zi-o'sis) [Gr. *zeiein* to boil, seethe + *-osis*] bubbling or blebbing activity, giving the appearance of boiling in slow motion, observed at the periphery of cells cultured in artificial media.

zeisian gland, styte (zi'se-an) [Edouard Zeis, Dresden ophthalmologist, 1807–1868] see *glandulae sebaceae conjunctivales*, and see *external hordeolum*, under *hordeolum*.

zeism (ze'izm) [L. *zea* maize] any condition attributed to excessive use of maize in the diet, principally pellagra.

zeismus (ze-is'mus) zeism.

zeistic (ze-is'tik) pertaining to maize.

Zeller's test (zel'erz) [O. Zeller, German physician] see under *tests*.

Zenker's crystals, degeneration (necrosis), diverticulum (zeng'kerz) [Friedrich Albert von Zenker, German pathologist, 1825–1898] see *Charcot-Leyden crystals* under *crystal*, and see under *degeneration* and *diverticulum*.

Zenker's fixative (fluid, solution) (zeng'kerz) [Konrad Zenker, German histologist, died 1894] see under *fixative*.

zenkerism (zeng'ker-izm) [F. A. Zenker] Zenker's degeneration; see under *degeneration*.

zenkerize (zeng'ker-is) [K. Zenker] to treat with Zenker's fixative.

zeolite (ze'o-lit) a hydrated double silicate with ion-exchange properties; probably the active constituent in permutit.

y.s. yellow spot (of the retina); see *macula retinae*.

ytterbium (i-ter'be-um) [from *Ytterby*, in Sweden] a very rare metal; symbol, Yb; atomic number, 70; atomic weight, 173.04.

yttrium (i'tre-um) [from *Ytterby*, in Sweden] a very rare metal, allied to cerium; symbol Y; atomic number, 39, atomic weight, 88.905.

yukon (u'kon) [*Yukawa*, Japanese physicist] see *barytron*.

Yvon's coefficient, test (e'vonz) [Paul Yvon, French physician, 1848–1913] see under *coefficient* and *tests*.

zeoscope (ze'o-sköp) [Gr. *zeein* to boil, seethe + *skopein* to examine] an apparatus for determining the alcoholic strength of a liquid by means of its boiling point.

Zephiran (zef'i-ran) trademark for preparations of benzalkonium.

zeranol (zer'ah-nöl) chemical name: (3S,7X)-3,4,5,6,7,8,9,10,11,12-decahydro-7,14,16-trihydroxy-3-methyl-1*H*-2-benzoxacyclopentadecan-1-one; an anabolic-estrogenic agent, C₁₈H₂₆O₅, which has been used for estrogen replacement in human subjects, but is used chiefly in veterinary medicine.

zero (ze'ro) [Ital. “naught”] the point on a thermometer scale at which the graduation begins. The zero of the Celsius (centigrade) and Réaumur temperature scales is the ice point; that of the Fahrenheit scale is 32 degrees below the ice point. **absolute z.**, the lowest possible temperature, designated as 0 on the Kelvin or Rankine scale; by definition this is equivalent to −273.15° C. or −459.67° F. **limes z.**, see under *dose*. **physiologic z.**, the temperature at which a thermal stimulus ceases to cause a sensation.

Zero family see under *family*.

zerumbet (ze-rum'bet) [East Indian] a spice or drug, the dried rhizome of a species of ginger, *Zingiber zerumbet* (L.) Smith (Zingiberaceae), now little used.

zestocausis (zes'to-kaw'sis) [Gr. *zestos* boiling hot + *kausis* burning] the therapeutic application of a tube containing superheated steam.

zestocautery (zes'to-kaw'ter-e) a tube or appliance used in zestocausis.

zeugopodium (zu'go-po'de-um) zygodium (see *limb*).

zidometacin (zi'do-met'ah-sin) chemical name: 1-(4-azido-benzoyl)-5-methoxy-2-methyl-1*H*-indole-3-acetic acid; an anti-inflammatory, C₁₉H₁₆N₄O₄.

ziega (ze-a'gah) a kind of curd made by treating milk with rennet and afterward with acetic acid.

Ziegler's operation (zēg'lerz) [Samuel Louis Ziegler, ophthalmologist in Philadelphia, 1861–1926] see under *operation*.

Ziehen's test (ze'henz) [Georg Theodor Ziehen, German neurologist, born 1862] see under *tests*.

Ziehen-Oppenheim disease (ze'hen-op'en-him) [Georg Theodor Ziehen; Herman Oppenheim, German neurologist, 1858–1919] dystonia musculorum deformans.

Ziehl's carbolfuchsin stain, solution (zēlz) [Franz Ziehl, German bacteriologist, 1857–1926] carbolfuchsin stain; see *Table of Stains*.

Ziehl-Neelsen's carbolfuchsin method, stain (zēl-nēl'senz) [Franz Ziehl; German bacteriologist, 1857–1926; Friederich Karl Adolf Neelsen, 1854–1894] see *acid-fast stain* and *carbolfuchsin stain* in *Table of Stains*.

Ziemssen's motor points (zēm'senz) [Hugo Wilhelm von Ziemssen, physician in Munich, 1829–1902] see under *point*.

Ziffern's test (zif'ernz) [Sidney Edward Ziffern, Iowa City pathologist, born 1912] see under *tests*.

zigzagplasty (zig'zag-plas'te) the surgical technique of minimizing the visual impact of a long linear scar by breaking it up into short irregular segments at right or acute angles to each another.

zilantel (zil-an'tel) chemical name: (diethoxyphosphinyl)carbonimidodithioic acid 1,2-ethanediyil bis(phenylmethyl)ester; an anthelmintic, C₂₆H₃₈N₂O₈P₂S₄.

zimelidine hydrochloride (zi-mel'i-dēn) chemical name: (Z)-3-(4-bromophenyl)-N,N-dimethyl-3-(3-pyridinyl-2-propen-1-amine) dihydrochloride monohydrate; an antidepressant, C₁₆H₁₇BrN₂·2HCl·H₂O.

Zimmerlin's atrophy (type) (zim'er-linz) [Franz Zimmerlin, Swiss physician, 1858–1932] see under *atrophy*.

Zimmermann's arch, corpuscle (zim'er-mahnz) [Karl Wilhelm Zimmermann, German histologist, 1861–1935] see under *arch*, and see *achromocyte*.

zinc (zingk) [L. *zincum*] a blue-white metal, many of whose salts are used in medicine; symbol, Zn; atomic number, 30; atomic weight, 65.37. Zinc is necessary in trace amounts in the body (and

hence in the diet); it forms an essential part of many enzymes (e.g., carbonic anhydrase, important in carbon dioxide metabolism), and plays an important role in protein synthesis and in cell division. Deficiency in zinc is associated with anemia, short stature, hypogonadism, impaired wound healing, and geophagia. Zinc salts are often poisonous when absorbed by the system, producing a chronic poisoning resembling that caused by lead. **z. acetate**, [USP], a salt $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 2\text{H}_2\text{O}$, produced by the reaction of zinc oxide with acetic acid, used as a pharmaceutical necessity for zinc-eugenol cement and as an astringent, styptic, and formerly as an emetic. **z. carbonate**, a salt, $2\text{ZnCO}_3 \cdot 3\text{Zn}(\text{OH})_2$, used as a dusting powder or in the form of a cerate. **z. chloride** [USP], a white, or nearly white, odorless crystalline powder, ZnCl_2 , used topically as an astringent and desensitizer for dentin. It is also used topically as a caustic antiseptic, and deodorant. **z. hydroxide**, a white powder, $\text{Zn}(\text{OH})_2$, an ingredient of medicinal zinc peroxide. **z. iodide**, a white, granular powder, ZnI_2 , which has been used as a topical antiseptic and astringent. **z. oxide** [USP], a very fine, odorless, amorphous, white or yellowish white powder, ZnO , used topically as an astringent and protectant in various cutaneous conditions. Called also *white z.* **z. permanganate**, a salt, $\text{Zn}(\text{MnO}_4)_2 \cdot 6\text{H}_2\text{O}$, in violet crystals, formerly used in solution as an astringent and antiseptic in the treatment of urethritis. **z. peroxide**, a white to yellowish white odorless powder, ZnO_2 , used in pharmaceuticals. **z. peroxide, medicinal**, a mixture of zinc peroxide, zinc carbonate, and zinc hydroxide, used topically in a 40 per cent solution as a local anti-infective and oxidant. It is also used as an astringent and deodorant. **z. phenolsulfonate**, chemical name: *p*-hydroxybenzenesulfonic acid zinc salt. A colorless, crystalline salt, $(\text{HO} \cdot \text{C}_6\text{H}_4 \cdot \text{SO}_3)_2\text{Zn} \cdot 8\text{H}_2\text{O}$, formerly used as an antiseptic and astringent, and in the manufacture of insecticides. Called also *z. sulfocarbolate*. **z. pyrrhione**, chemical name: bis[1-hydroxy-2(1*H*)-pyridinethionato]zinc. A compound, $\text{C}_{10}\text{H}_8\text{N}_2\text{O}_2 \cdot \text{S}_2\text{Zn}$, used as an antibacterial, topical antifungal, and antiseborrheic. **z. salicylate**, a salt in colorless crystals, $(\text{C}_7\text{H}_5\text{O}_3)_2\text{Zn} \cdot 3\text{H}_2\text{O}$, which has been used as an antiseptic and astringent. **z. stearate** [USP], a compound of zinc with variable proportions of stearic acid and palmitic acid, containing 12.5 to 14.0 per cent of zinc oxide; used as a dusting powder. **z. sulfanilate**, chemical name: zinc sulfanilate tetrahydrate; an antibacterial, $\text{C}_{12}\text{H}_{12}\text{N}_2\text{O}_6\text{S}_2\text{Zn} \cdot 4\text{H}_2\text{O}$. **z. sulfate** [USP], the heptahydrate zinc salt of sulfuric acid, $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$, occurring as colorless, transparent prisms, or small needles; used as an astringent for the mucous membranes, especially for those of the eye, being considered specific for conjunctivitis due to *Hemophilus duplex*. It has also been used in various dermatological preparations, and internally as an antiemetic, especially in the treatment of poisoning. Called also *white vitriol* and *z. vitriol*. **z. sulfo-carbolate**, *z. phenolsulfonate*. **z. undecylenate** [USP], the zinc salt of undecylenic acid, $\text{C}_{22}\text{H}_{40}\text{O}_4\text{Zn}$, occurring as a fine, white powder; used in combination with undecylenic acid as a topical antifungal. **z. vitriol**, *z. sulfate*. **white z.**, *z. oxide*.

zincalism (zingk'al-izm) zinc poisoning; symptoms include fever, chills, myalgia, vomiting, headache, and pneumonitis.

zincative (zingk'ah-tiv) electrically negative, i.e., like the zinc in a Daniell cell.

zinciferous (zing-kif'er-us) containing zinc.

zincoid (zing'koid) [L. *zincum* + Gr. *eidos* form] pertaining to or resembling zinc.

zincum (zing'kum), gen. *zin'ci* [L.] zinc.

Zinn's artery, etc. (zinz) [Johann Gottfried Zinn, German anatomist, 1727-1759] see under *aponeurosis*, *artery*, *cap*, *circle*, *ligament*, and *zone*.

Zinsser inconsistency (zin'ser) [Hans Zinsser, American bacteriologist, 1878-1940] lack of parallelism between local and systemic anaphylactic symptomatology.

zinterol hydrochloride (zin'tē-rōl) chemical name: *N*-[5-[2-[(1,1-dimethyl-2-phenylethyl) amino]-1-hydroxyethyl]-2-hydroxyphenyl]methanesulfonamide monohydrochloride; a bronchodilator, $\text{C}_{19}\text{H}_{26}\text{N}_2\text{O}_4\text{S} \cdot \text{HCl}$.

zipp (zip) a paste made by grinding together 1 part of zinc oxide, 2 parts of iodoform, and 2 to 3 parts of liquid paraffin; it is applied to wounds in veterinary surgery.

zirconium (zir-ko'ne-um) a rather rare metallic element; symbol Zr; atomic number, 40; atomic weight, 91.22; chiefly obtained from a mineral called zircon. **z. dioxide**, **z. oxide**, a heavy white powder, ZrO_2 , formerly used as a radiopaque medium in roentgenography of the digestive tract, and once employed in an ointment for treating poison ivy dermatitis.

zisp (zisp) a modified form of zipp in which zinc peroxide is used in place of zinc oxide.

Zn chemical symbol for zinc.

ZnSO₄ zinc sulfate.

zoacanthosis (zo'ak-an-tho'sis) any dermatitis caused by the retention of animal structures, such as bristles, stings, hairs, etc.

zoamylin (zo-am'ti-lin) (*obs.*) glycogen.

zoanthropic (zo'an-throp'ik) pertaining to or characterized by zoanthropy.

zoanthropy (zo-an'thro-pe) [Gr. *zōon* animal + *anthrōpos* man] the abnormal belief of a patient that he has become a beast.

zooscope (zo'ē-skōp) [Gr. *zōē* life + *skopein* to examine] stroboscope.

zoetic (zo-et'ik) [Gr. *zōē* life] pertaining to life.

zoetrope (zo'ē-trōp) [Gr. *zōē* life + *trepein* to turn] an apparatus which affords pictures of objects apparently moving as in life.

zoic (zo'ik) [Gr. *zōikos* of or proper to animals] pertaining to or characterized by animal life.

zolamine hydrochloride (zo'lah-mēn) chemical name: *N*-[(4-methoxyphenyl)methyl]-*N,N'*-dimethyl-*N*-2-thiazolyl-1,2-ethanediamine monohydrochloride. An antihistaminic with local anesthetic action, $\text{C}_{18}\text{H}_{21}\text{N}_3\text{OS} \cdot \text{HCl}$, which has been used as a topical anesthetic in the treatment of earache associated with otitis media and in the treatment of hemorrhoids.

Zollinger-Ellison syndrome (zol'lin-jer-el'li-son) [Robert Milton Zollinger, American physician, born 1903; Edwin H. Ellison, American physician, born 1918] see under *syndrome*.

Zöllner's lines (figures) (zel'nerz) [Johann Carl Friedrich Zöllner, German physicist, 1834-1882] see under *line*.

zomepirac sodium (zo'mē-pēr'ak) chemical name: 5-(4-chlorobenzoyl)-1,4-dimethyl-1*H*-pyrrole-2-acetic acid sodium salt dihydrate; an analgesic and anti-inflammatory, $\text{C}_{18}\text{H}_{13}\text{ClNNaO}_3 \cdot 2\text{H}_2\text{O}$.

zometapine (zo-met'ah-pēn) chemical name: 4-(3-chlorophenyl)-1,6,7,8-tetrahydro-1,3-dimethylpyrazolo[3,4-*e*][1,4]diazepine; an antidepressant, $\text{C}_{14}\text{H}_{15}\text{ClN}_4$.

zomidin (zo'mī-din) [Gr. *zōmos* broth] a constituent of meat extract.

zomotherapy (zo'mo-ther'ah-pe) [Gr. *zōmos* broth + *therapeia* service done to the sick] the treatment of disease by muscle plasma, meat juice, or by meat diet.

zona (zo'nah), pl. *zo'nae* [L. "a girdle"] 1. a zone: an encircling region or area; [NA] a general term for an area with a specific boundary or characteristics. 2. herpes zoster. **z. arcua'ta**, canal of Corti. **z. cartilagin'ea**, limbus laminae spiralis osseae. **z. cilia'ris**, ciliary zone. **z. denticula'ta**, denticulate zone: the inner zone of the lamina basilaris ductus cochlearis with the limbus of the osseous spiral lamina. **z. dermat'ica**, an elevation of thick skin around the protruding mass in spina bifida. **z. epitheliosero'sa**, an area of membranous tissue inside the zona dermatica. **z. fascicula'ta**, fascicular zone: the thick middle layer of the cortex of the suprarenal gland. **z. gang-liona'ris**, a mass of ganglion tissue on the pars cochlearis nervi octavi. **z. glomerulo'sa**, glomerular zone: the thin outer layer of the cortex of the suprarenal gland, which is contiguous with the capsule. **z. granulo'sa**, the peripheral stratified cuboidal epithelium of the ovarian follicle. **z. hemorrhoida'lis** [NA], hemorrhoidal zone: that part of the anal canal extending from the anal valves to the anus and containing the rectal venous plexus; called also *annulus haemorrhoidalis*. **z. incer'ta** [NA], a narrow band of gray matter between the subthalamic nucleus and the fasciculus thalamicus. **z. ophthal'mica**, herpetic infection of the cornea. **z. orbicula'ris articulati-o'nis cox'ae** [NA], orbicular zone of hip joint: circular fibers of the articular capsule of the hip joint which form a ring around the neck of the femur; they are especially prominent at the inferior and posterior part of the capsule. **z. pectina'ta**, pectinate zone: the outer part of the lamina basilaris ductus cochlearis running from the rods of Corti to the spiral ligament. **z. pel-lu'cida**, 1. pellucid zone: a thick, transparent, noncellular layer or envelope of uniform thickness surrounding an oocyte; called also *olemma*. Under the light microscope, it appears as a radially striated layer, which can be seen to be microvillous under the electron microscope, and is therefore called *zona radiata*, *zona striata*, or *striated membrane*. 2. area pellucida. **z. perfora'ta**, the inner portion of the lamina basilaris ductus cochlearis. **z. radia'ta**, see *Z. pellucida*, def. 1. **z. reticula'ris**, reticular zone: the inner layer of the cortex of the suprarenal gland, consisting of cells arranged as clearly anastomosing cords, and abutting on the medulla. **z. rolan'dica**, the motor area of the cerebral cortex. **z. spongio'sa**, apex cornus posterioris medullae spinalis. **z. stria'ta**, see *Z. pellucida*, def. 1. **z. tec'ta**, canal of Corti. **zo'nae tendino'sae cor'dis**, anuli fibrosi cordis. **z. transfor'mans**, transformation zone: the connective tissue layer of the intestinal wall where bacteria penetrating from the intestine are destroyed; called also *Turck's zone*. **z. Valsal'vae**, lamina basilaris ductus cochlearis. **z. vasculo'sa**, vascular zone: a region in the supramastoid fossa containing many foramina for the passage of blood vessels. **z. Web'eri**, *z. orbicularis articulationis coxae*.

zonae (zo'ne) [L.] plural of *zona*.

zonal (zo'nal) [L. *zona*'lis] of the nature of a zone.

zonary (zo'ner-e) zonal.

Zondek-Aschheim test (tson'dek-ash'hīm) [Bernhardt Zondek, German gynecologist, born 1891; Selmar Aschheim, German gynecologist, 1878-1965] Aschheim-Zondek test.

zone (zōn) [Gr. *zōnē* a belt, girdle] an encircling region or area; by extension any area with specific characteristics or boundary;

called also *zona*. **abdominal z's**, three zones into which the surface of the abdomen is divided by transverse lines. These zones are the *subcostal* or *epigastric*—that above the subcostal line; the *mesogastric*—that between the subcostal and intertubercular lines; and the *hypogastric*—that below the intertubercular line. **androgenic z.**, the provisional cortex of the embryonic suprarenal gland, which is possessed of certain testicular hormonal functions. **anelectrotonic z.**, polar z. **apical z.**, a narrow area along the mucous membrane over the apexes of the roots of the teeth. **arcuate z.**, canal of Corti. **biokinetic z.**, the range of temperatures within which the living cell carries on its life activities, lying approximately between 10° and 45° C. **border z.**, a zone at the boundary of two contiguous structures, as that where the trophoblast and the endometrium meet. **cervical z.**, that third of the coronal zone which is nearest the cervix of the tooth, marked by the cemento-enamel junction of crown and root. **Charcot's z.**, hysterogenic z. **ciliary z.**, the outer of the two regions into which the anterior surface of the iris is divided by the angular line. Cf. *pupillary z.* **comfort z.**, an environmental temperature between 13° and 21° C. (55°–70° F.) with a humidity of 30 to 55 per cent. **contact area z.**, the zone which includes the contact area of adjoining teeth; usually it is in the middle third of the coronal zone between the occlusal and the cervical zone. **cornuadicular z.**, the outer part of the fasciculus cuneatus medullae spinalis. **coronal z.**, the entire enamel area of the tooth crown above the cemento-enamel junction, the demarcation between crown and root. The coronal zone is subdivided horizontally into three areas; the occlusal zone, the contact area zone, and the cervical zone. These divisions are also spoken of as the occlusal third, the middle third, and the cervical third. **Cozzolino's z.**, fissula ante fenestram. **denticulate z.**, zona denticulata. **dentofacial z.**, the entire lower part of the face; the region of the face overlying the teeth and the alveolar processes of the jaws. **z's of discontinuity**, zones of varying optic density, seen with the slit lamp, in the lens of the eye; these zones are formed at particular periods in the prenatal development of the lens. **dolorogenic z.**, an area stimulation of which produces pain, or excites an attack of neuralgia. **dorsal z. of His**, the smaller upper thickening of the dorsal portion of the embryonic spinal cord projecting into the central canal. **entry z.**, the area of the spinal cord where the dorsal roots enter. **ependymal z.**, see under *layer*. **epigastric z.**, see *abdominal z's*. **epileptogenic z.**, **epileptogenous z.**, an area stimulation of which may bring on an epileptic attack. **equivalence z.**, see *zone phenomenon*, under *phenomenon*. **erogenous z.**, **erotogenic z.**, a portion of the body stimulation of which produces erotic excitation; such are the genitals, urethra, lips, anus, and breasts. **z. of exclusion** the area of the cytoplasm devoid of all cytoplasmic components except the Golgi complex. **extraviscular z.**, that part of the dioptric surfaces and media outside the visual zone, which is practically incapable of accurately focusing light. **fascicular z.**, zona fasciculata. **Flechsig's primordial z's**, the cortex of the ascending frontal gyrus and the ascending parietal gyrus of the brain. **glomerular z.**, zona glomerulosa. **Golgi z.**, the intracellular zone close to the nucleus and containing the Golgi complex; in most secretory cells, it is between the nucleus and the apical surface through which expulsion of the secretion occurs. **Head's z's**, areas of cutaneous sensitiveness associated with diseases of the viscera; called also *z's of hyperalgesia*. **hemorrhoidal z.**, zona hemorrhoidalis. **His's z's**, four thickenings which run the entire length of the embryonic spinal cord. **z's of hyperalgesia**, Head's z's. **hyperesthetic z.**, a region of the body surface marked by abnormal sensibility. **hypnogenic z.**, **hypnogenous z.**, an area of the body on which pressure will characteristically induce sleep in particularly suggestible subjects. **hypogastric z.**, see *abdominal z's*. **hysterogenic z.**, **hysterogenous z.**, a region of the body on which pressure may elicit a hysterical attack; called also *Charcot's z.* **inhibition z.**, see *prozone*. **intermediate z.**, that portion of the field of vision which lies between the fifteenth and forty-fifth concentric circles. **interpallebral z.**, the part of the cornea not covered by the eyelids when the eye is open. **keratogenous z.**, the zone immediately above the dome of the dermal papilla, in which the cellular components of a hair follicle undergo keratinization and form the hair shaft. **language z.**, a general term referring to all cortical areas concerned with language mechanisms; usually in the dominant hemisphere. **Lissauer's marginal z.**, tractus dorsolateralis. **Looser's transformation z's**, dark lines seen on roentgenograms of bones, thought to represent pathological healing phases of fatigue fractures occurring in certain bone diseases. **mantle z.**, see under *layer*. **marginal z.**, 1. border zone. 2. marginal layer. **median root z.**, oval fasciculus. **mesogastric z.**, see *abdominal z's*. **motor z.**, an area of the cortex of the brain which, when electrically stimulated, causes contraction of voluntary muscles. **nephrogenic z.**, the subcapsular layer of the kidney. **neutral z.**, the potential space between the lips and cheeks on one side and the tongue on the other, natural or artificial teeth in this zone being subject to balancing forces from the surrounding musculature. **neutral z. of His**, a thickening of the dorsal portion of the embryonic spinal cord projecting

into the central canal. **Nitabuch z.**, see under *layer*. **ocular z.**, vortex lentis. **Obersteiner-Redlich z.**, see under *area*. **occlusal z.**, that third of the coronal zone of the teeth which is nearest the occlusal plane. **orbicular z. of hip joint**, zona orbicularis articulationis coxae. **z. of oval nuclei**, a narrow band of sustentacular cells with oval nuclei in the olfactory mucosa. **pectinate z.**, zona pectinata. **pellucid z.**, zona pellucida. **peripolar z.**, the region surrounding a polar zone. **placental z.**, the area of the uterus to which the placenta is attached. **polar z.**, the region immediately around an electrode applied to the body. **proagglutinoid z.**, prozone. **pupillary z.**, the inner of the two regions into which the anterior surface of the iris is divided by the angular line. Cf. *ciliary z.* **reticular z.**, zona reticularis. **Rolando's z.**, the motor area of the cerebral cortex. **root z.**, those parts of the spinal cord to which dorsal and ventral roots are attached. **z. of round nuclei**, a broad band of olfactory cells with round nuclei in the olfactory mucosa. **rugae z.**, see under *area*. **segmental z.**, a zone of undifferentiated mesoderm between somites already formed and the primitive knot, from which additional somites will be produced. **subcostal z.**, see *abdominal z's*. **sudanophobic z.**, a broad zone of cells which appears in the adrenal cortex of rats following hypophysectomy, and which does not stain with Sudan. **tendinous z's of heart**, anuli fibrosi cordis. **transformation z.**, zona transformans. **transition z.**, **transitional z.**, the circle in the equator of the lens of the eye in which epithelial fibers are developed into lens fibers. **transparent z.**, see *transparent dentin*, under *dentin*. **trigger z.**, dolorogenic z. **Turck's z.**, zona transformans. **umbau z's** [Ger.], Looser's transformation z's. **Valsalva's z.**, lamina basilaris ductus cochlearis. **vascular z.**, zona vasculosa. **visual z.**, that part of the dioptric surfaces and media around an optic axis in which there is practically no aberration of light rays. **Weber's z.**, zona orbicularis articulationis coxae. **Weil's basal z.**, see under *layer*. **Wernicke's z.**, see under *area*. **Westphal's z.**, a zone of the posterior gray column of the spinal cord in the lumbar region; it is said to contain the exocytic fibers concerned in the patellar reflex. **X z.**, androgenic z. **z. of Zinn**, zonula ciliaris.

zonesthesia (zo'nes-the'ze-ah) [Gr. *zōnē* girdle + *aisthēsis* perception + *-ia*] a sensation of constriction, as by a girdle.

zonifugal (zo-ni'fu-gal) [L. *zona* zone + *fugere* to flee from] passing outward from any area or region.

zoning (zōn'ing) the occurrence of a stronger fixation of complement in a lesser amount of suspected serum.

zonipetal (zo-nip'ē-tal) [L. *zona* zone + *petere* to seek] passing from outside into any area or region.

Zonomune (zo'no-mūn') trademark for a preparation of influenza virus vaccine.

zonoskeleton (zōn'o-skel'ē-ton) see *limb*.

zonula (zōn'u-lah), pl. *zon'ulae* [L., dim. of *zona*] a small zone, or zonule. **z. adherens**, that portion of the junctional complex of columnar epithelial cells, just deep to the zonula occludens, where the cell membranes diverge to form an intercellular space 150 to 200 Å wide and are supported on their inner aspect by moderately dense filamentous material forming a continuous band parallel to the zonula occludens. **z. ciliaris** [NA], **z. cilia'ris** [Zin'ni], ciliary zonule: a system of fibers extending between the ciliary body and the equator of the lens, holding the lens in place; called also *Zinn's membrane* or *zonule*. **z. occludens**, that portion of the junctional complex of columnar epithelial cells, just beneath the free surface, where the intercellular space is obliterated; it extends completely around the cell perimeter, above the zonula adherens. Called also *tight junction*.

zonulae (zōn'u-le) [L.] plural of *zonula*.

zonular (zōn'u-lar) pertaining to a zonule.

zonule (zōn'ul) a small zone; called also *zonula*. **ciliary z.**, zonula ciliaris. **lens z.**, zonula ciliaris. **z. of Zinn**, zonula ciliaris.

zonulitis (zōn'u-li'tis) inflammation of the ciliary zonule.

zonulolysis (zōn'u-lol'i-sis) [zonule + Gr. *lysis* dissolution] dissolution of the zonule of Zinn (zonula ciliaris) in surgery by means of enzymes such as alpha-chymotrypsin.

zonulotomy (zōn'u-lot'o-me) [zonule + Gr. *tomē* a cutting] incision of the ciliary zonule.

zonulysis (zōn'u-li'sis) zonulolysis.

zoo- [Gr. *zōon* animal] a combining form denoting relationship to an animal.

zoo-agglutinin (zo'o-ah-gloo'ti-nin) a substance in animal poisons having the power of agglutinating red blood cells.

zooamylon (zo'o-am'i-lon) [zoo- + Gr. *amylon* starch] (obs.) glycogen.

zoo-anaphylactogen (zo'o-an'ah-fi-lak'to-jen) a protein substance of animal origin capable of producing anaphylaxis; called also *zoosensitinogen*.

zoobiology (zo'o-bi-ol'o-je) [zoo- + Gr. *bios* life + *-logy*] the biology of animals.

zoobiotism (zo'o-bi'o-tizm) biotics.

- zooblast** (zo'o-blast) [zoo- + Gr. *blastos* germ] an animal cell.
- zoochemical** (zo'o-kem'fī-kal) pertaining to zoochemistry.
- zoochemistry** (zo'o-kem'fī-tre) the study of the chemical reactions occurring in animal tissues.
- zoodermic** (zo'o-der'mik) [zoo- + Gr. *derma* skin] performed with the skin of an animal; said of skin grafting in which the grafts are from the skin of an animal.
- zoodetritus** (zo'o-de-tri'tus) biodebris produced by the disintegration and decomposition of animal organisms. Cf. *phytodetritus*.
- zoodynamic** (zo'o-di-nam'ik) pertaining to zoodynamics (animal physiology).
- zoodynamics** (zo'o-di-nam'iks) [zoo- + Gr. *dynamis* power] animal physiology.
- zoerastia** (zo'o-e-ras'te-ah) [zoo- + Gr. *erastēs* lover] bestiality.
- zoofulvin** (zo'o-ful'vin) a yellow pigment from the feathers of certain birds.
- zoogenesis** (zo'o-jen'ē-sis) zoogeny.
- zoogenous** (zo-oj'ē-nus) 1. acquired from animals. 2. viviparous.
- zoogeny** (zo-oj'ē-ne) [zoo- + Gr. *gennan* to produce] the development and evolution of animals.
- zoogeography** (zo'o-je-og'rah-fe) the study of the distribution of animal life on the earth.
- zooglea** (zo'o-gle'ah) [zoo- + Gr. *gloios* gum] a colony of bacteria embedded in a gelatinous matrix.
- zoogleic** (zo'o-gle'ik) pertaining to or characterized by the presence of zooglea.
- Zoogloea** (zo'o-gle'ah) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as rod-shaped cells embedded in a gelatinous matrix. It includes two species, *Z. filipendula* and *Z. ramigera*.
- zoogloea** (zo'o-gle'ah) zooglea.
- zoogloeic** (zo'o-gle'ik) zoogleic.
- zoogonous** (zo-og'o-nus) viviparous.
- zoogony** (zo-og'o-ne) [zoo- + Gr. *gonē* offspring] the production of living young from within the body.
- zoografting** (zo-og'graft'ing) the grafting of animal tissue.
- zoography** (zo-og'rah-fe) [zoo- + Gr. *graphein* to write] a treatise on animals.
- zoohormone** (zo'o-hor'mōn) an animal hormone.
- zooid** (zo'oid) [zoo- + Gr. *eidos* form] 1. resembling an animal. 2. an object or form which resembles an animal. 3. one of the individuals in a united colony of animals.
- zookinase** (zo'o-kin'ās) a naturally occurring activator of autolytic activity in a cell.
- zoolagnia** (zo'o-lag'ne-ah) [zoo- + Gr. *lagneia* lust] sexual attraction toward animals.
- zoology** (zo-ol'o-je) [zoo- + Gr. *logos* treatise] the biology of animals; the sum of what is known regarding animals. **experimental z.**, the study of animals by means of experiments performed upon them.
- zoomania** (zo'o-ma'ne-ah) [zoo- + Gr. *mania* madness] a morbid love of animals.
- Zoomastigophora** (zo'o-mas'ti-gof'o-rah) a class of protozoa of the subphylum Mastigophora, including all the flagellates that parasitize higher animals; they are characterized by the absence of chromatophores and most have one nucleus, usually of the vesicular type. It includes the orders Rhizomastigida, Protomastigida, Protomonadina, Polymastigida, and Hypermastigida.
- zoonerythrin** (zo'on-er'fī-thrin) [zoo- + Gr. *erythros* red] crustaceorubin.
- zoonite** (zo'o-nīt) a cerebrospinal metamere.
- zoonomy** (zo-on'o-me) [zoo- + Gr. *nomos* law] zoobiology.
- zoonoses** (zo'o-no'sēz) plural of *zoonosis*.
- zoonosis** (zo'o-no'sis), pl. *zoonoses* [zoo- + Gr. *nosos* disease] a disease of animals that may be transmitted to man under natural conditions (e.g., brucellosis, rabies).
- zoonosology** (zo'o-no-sol'o-je) [zoo- + Gr. *nosos* disease + *logos* treatise] the classification of diseases of animals.
- zoonotic** (zo'o-not'ik) transmissible from animals to man under natural conditions; pertaining to or constituting a zoonosis.
- zooparasite** (zo'o-par'ah-sit) any parasitic animal organism or species; see *animal parasite*, under *parasite*.
- zooparasitic** (zo'o-par'ah-sit'ik) pertaining to or produced by zooparasites.
- zoopathology** (zo'o-pah-thol'o-je) animal pathology; the study of the diseases of animals.
- zooperal** (zo-op'er-al) pertaining to zooperly.
- zooperly** (zo-op'er-e) [zoo- + Gr. *peiran* to experiment] the performing of experiments on animals.
- zoophagous** (zo-of'ah-gus) [zoo- + Gr. *phagein* to eat] subsisting upon animal food.
- zoopharmacology** (zo'o-fahr'mah-kol'o-je) veterinary pharmacology.
- zoopharmacy** (zo-o-fahr'mah-se) veterinary pharmacy.
- zoophile** (zo'o-fil) [zoo- + Gr. *philein* to love] 1. zoophilic. 2. an antivivisectionist.
- zoophilia** (zo'o-fil'e-ah) abnormal fondness for animals.
- zoophilic** (zo'o-fil'ik) preferring animals to man; said of certain mosquitoes. Cf. *anthropophilic* and *anthropozoophilic*.
- zoophilism** (zo-off'i-lizm) 1. fondness for animals; antivivisection. 2. the state of being zoophilic. **erotic z.**, sexual pleasure experienced in the fondling of animals.
- zoophilous** (zo-off'i-lus) zoophilic.
- zoophobia** (zo'o-fō-be-ah) [zoo- + Gr. *phobein* to be affrighted by] abnormal dread of animals.
- zoophysiology** (zo'o-fiz'e-ol'o-je) animal physiology.
- zoophyte** (zo'o-fit) [zoo- + Gr. *phyton* plant] any plantlike animal, such as sponges or hydroids.
- zooplankton** (zo'o-plank'ton) [zoo- + Gr. *planktos* wandering] the minute animal organisms which, with those of the vegetable kingdom (phytoplankton), make up the plankton of natural waters.
- zooplasty** (zo'o-plast'te) [zoo- + Gr. *plassein* to form] zoografting.
- zooprecipitin** (zo'o-pre-sip'i-tin) a precipitin obtained by injections of protein substances of animal origin.
- zooprophylaxis** (zo'o-pro'fī-lak'sis) 1. prophylaxis applied to animals; veterinary prophylaxis. 2. the prevention or amelioration of disease (e.g., smallpox) in man as a result of previous exposure to heterologous infection of animal origin (e.g., cowpox). 3. protecting man from bites of mosquitoes by providing cattle or other animals for the mosquitoes to feed on.
- zoopsia** (zo-op'se-ah) [zoo- + Gr. *opsis* vision + *-ia*] a hallucination in which the patient thinks he sees animals.
- zoopsychology** (zo'o-si-kol'o-je) animal psychology.
- zoosadism** (zo'o-sa'dizm) sadism directed toward animals.
- zooscopy** (zo-os'ko-pe) [zoo- + Gr. *skopein* to view] 1. zoopsia. 2. the scientific study or observation of animals.
- zoosensitogen** (zo'o-sen'si-tin'o-je) zoo-anaphylactogen.
- zoosis** (zo-o'sis) [zoo- + *-osis*] any disease due to animal agents.
- zoosperm** (zo'o-sperm) [zoo- + Gr. *sperma* seed] spermatozoon.
- zoospermia** (zo'o-sper'me-ah) the presence of live spermatozoa in the ejaculated semen.
- zoosporangia** (zo'o-spo-ran'je-ah) plural of *zoosporangium*.
- zoosporangium** (zo'o-spo-ran'je-um), pl. *zoosporangia* [zoo- + Gr. *angeion* vessel] the structure in which zoospores are developed. See *spore*.
- zoospore** (zo'o-spōr) [zoo- + *spore*] a motile mitospore; a motile, flagellated, asexual spore, as produced by certain algae and fungi. Called also *flagellospore*, *flagellula*, and *swarm spore*. See *spore*.
- zoosteroid** (zo'o-ste'roid) any steroid of animal origin.
- zoosterol** (zo'o-ste'rol) any sterol of animal origin.
- zootechnics** (zo'o-tek'niks) [zoo- + Gr. *technē* art] the art of breeding, keeping, and handling animals in domestication or captivity.
- zootic** (zo-ot'ik) pertaining to the lower animals. Cf. *demic*.
- zootomist** (zo-ot'o-mist) a comparative anatomist.
- zootomy** (zo-ot'o-me) [zoo- + Gr. *tomē* a cutting] 1. the dissection of animals. 2. the anatomy of animals.
- zootoxin** (zo'o-tok'sin) [zoo- + Gr. *toxikon* poison] a toxic substance of animal origin, such as the venoms of snakes, spiders, and scorpions.
- zootrophic** (zo'o-trof'ik) [zoo- + Gr. *trophē* nutrition] pertaining to the nutrition of animals.
- zootrophotoxism** (zo'o-trof'o-tok'sizm) [zoo- + Gr. *trophē* nutrition + *toxikon* poison] poisoning with animal foods.
- Zopfius** (zop'fe-us) a former genus of bacteria, now named *Kurtia*.
- zorhamycin** (zor-bah-mi'sin) an antibacterial antibiotic derived from a variant of *Streptomyces bikiniensis*.
- zorubicin hydrochloride** (zo-ru'bi-sin) chemical name: (2S-cis)-benzoic acid[1-[4-[(3-amino-2,3,6-trideoxy- α -L-lyxo-hexopyranosyl)oxy]-1,2,3,4,6,11-hexahydro-2,5,12-trihydroxy-7-methoxy-6,11-dioxo-2-naphthacenyl]ethylidene]hydrazide; an antineoplastic, $C_{34}H_{38}N_3O_{10} \cdot HCl$.
- zoster** (zos'ter) [Gr. *zōstēr*] a girdle, or encircling structure or pattern; see *herpes zoster*.
- Zostera marina** (zos'ter-ah mah-ri'nah) seawrack or eelgrass, a marine plant.
- zosteriform** (zos-ter'fī-form) resembling herpes zoster.
- zosteroid** (zos'ter-oid) resembling herpes zoster.
- zoxazolamine** (zok'sah-zol'ah-mēn) chemical name: 2-amino-5-chlorobenzoazole. A plate-like substance, $C_7H_5ClN_3O$, occasionally used as a skeletal muscle relaxant and uricosuric agent in gout.

Z-plasty (ze-plas'te) a plastic operation for the relaxation of contractures, in which a Z-shaped incision is made, the middle bar of the Z being over the contracted scar, and the triangular flaps rotated so that their apices cross the line of contracture.

Zr chemical symbol for *zirconium*.

Zsigmondy's gold number method, test (sig-mon'dēz) [Richard Adolf Zsigmondy, German chemist, 1865–1929; winner of the Nobel prize in chemistry for 1925, for his work on colloids; inventor of the ultramicroscope in 1903] colloidal gold test.

Zuberella (zu'ber-el'ah) a genus of gram-negative anaerobic bacteria.

zuckergussdarm (tsook'er-goos'darm) [Ger. "sugar-ice skin"] peritonitis chronica fibrosa encapsulans.

zuckergussleber (tsook'er-goos'la-ber) [Ger. "sugar-ice liver"] perihepatitis chronica hyperplastica.

Zuckerkanal's body, convolution, gland, organs (tsook'er-kan'd'lz) [Emil Zuckerkanal, German anatomist, 1849–1910] see under *body, gland, and organ*, and see *gyrus paraterminalis*.

zuclomiphene (zoo-klo'mi-fēn) chemical name: (Z)-2-[4-(2-chloro-1,2-diphenylethenyl) phenoxy]-N,N-diethylethanamine; the *trans*-isomer of the gonad-stimulating principle clomiphene citrate (q.v.), C₂₈H₂₈ClNO. Called also *transclomiphene*. Cf. *enclomiphene*.

Zuntz's theory (zoont'zes) [Nathan Zuntz, Berlin physician, 1847–1920] see under *theory*.

zwieback (tsve'bak) pieces of bread made of rich dough and heated in the oven until they are deep yellow in color.

Zwischenferment (tsvish'en-fer'ment) [Ger.] glucose 6-phosphate dehydrogenase.

Zwischenkörper (tsvish'en-ker'per) [Ger.] amboceptor; antibody.

zwichenscheibe (tsvish'en-shi'bē) [Ger.] Z band; see under *band*.

zwitterion (tsvit'er-i'on) a dipolar ion, i.e., an ion that has both positive and negative regions of charge; amino acids, for example, occur as zwitterions in neutral solution, and the pH value at which the zwitterion state is at a maximum is the isoelectric point.

zwölffingerdarm (tsvel'fing'er-darm) [Ger. *zwölf* twelve + *finger* finger + *darm* bowel] the duodenum.

zygadenine (zi-gad'ē-nin) a crystalline alkaloid, C₃₉H₈₃NO₁₀, from the plant *Zygadenus intermedius*.

zygal (zi'gal) [Gr. *zygon* yoke] shaped like a yoke.

zygapophyseal (zi'gah-po-fiz'e-al) pertaining to a zygapophysis.

zygapophysis (zi'gah-poff'i-sis), pl. *zygapophyses*. An articular process of a vertebra; see *processus articularis inferior vertebrarum* and *processus articularis superior vertebrarum*.

zygia (zij'e-ah) plural of *zygion*.

zygion (zij'e-on), pl. *zygia* [Gr.] an anthropometric landmark, being the most laterally situated point on either zygomatic arch.

zygo- [Gr. *zygon* yoke] a combining form meaning yoked or joined, or denoting relationship to a junction.

Zygocotyle lunatum (zi'go-ko'ti-le lu-na'tum) a trematode parasitic in the intestine of a variety of hosts, including rats, cattle, and ducks in North America.

zygocyte (zi'go-sit) see *zygote*.

zygodactyly (zi'go-dak'ti-le) [*zygo-* + Gr. *daktylos* finger] a term sometimes used to designate simple syndactyly, as distinguished from syndactyly in which there is bony fusion between the phalanges of the digits involved; usually occurring in the hand between the third and fourth digits, and in the foot between the fourth and fifth.

zygoite (zi'go-it) an organism formed by zygosis; a zygote.

zygoma (zi-go'mah) [Gr. *zygōma* bolt or bar] 1. *processus zygomaticus temporalis*. 2. *arcus zygomaticus*. 3. a term sometimes applied to os zygomaticum.

zygomatic (zi'go-mat'ik) pertaining to the zygoma.

zygomaticofacial (zi'go-mat'i-ko-fa'shal) pertaining to the zygoma and the face.

zygomaticofrontal (zi'go-mat'i-ko-fron'tal) pertaining to the zygoma and the frontal bone.

zygomaticomaxillary (zi'go-mat'i-ko-mak'si-ler'de) pertaining to the zygoma and the maxilla.

zygomatico-orbital (zi'go-mat'i-ko-or'bī-tal) pertaining to the zygoma and the orbit.

zygomaticosphenoid (zi'go-mat'i-ko-sfe'noid) pertaining to the zygoma and the sphenoid bone.

zygomaticotemporal (zi'go-mat'i-ko-tem'por-al) pertaining to the zygoma and the temporal bone.

zygomaxillare (zi'go-mak'si-la're) [L.] a craniometric point at the lower end of the zygomatic suture.

zygomaxillary (zi'go-mak'si-ler'de) pertaining to the zygoma and the maxilla.

Zygomycetes (zi'go-mi-se'tēz) a subclass of phycomycetous fungi, including the orders Mucorales and Entomophthorales.

zygon (zi'gon) [Gr.] the bar or stem connecting the two branches of a zygial fissure.

zygoplast (zi'go-plast) [*zygo-* + Gr. *plassein* to form] rhizoplast.

zygopodium (zi'go-po'de-um) see *limb*.

zygosis (zi-go'sis) [Gr. *zygōsis* a balancing] the sexual union of two unicellular organisms.

zygosity (zi-gos'i-te) [Gr. *zygon* yoke + *-ity* state or condition] the condition relating to conjugation, or to the zygote, as (a) the state of a cell or individual in regard to the alleles determining a specific character, whether identical (homozygosity) or different (heterozygosity); or (b), in the case of twins, whether developing from one zygote (monozygosity) or two (dizygosity). Often used as a word termination affixed to a root descriptive of the condition.

zygosperm (zi'go-sperm) zygospore.

zygosphere (zi'go-sfēr) a gamete arising from a zygophore which unites with another to form a zygospore.

zygospore (zi'go-spōr) a spore formed by the conjugation of two cells (isogametes) which are morphologically identical, or in the Zygomycetes, from the fusion of like gametangia. See *spore*.

zygostyle (zi'go-stil) the last coccygeal vertebra.

zygote (zi'gōt) [Gr. *zygōtos* yoked together] the cell resulting from union of a male and a female gamete, until it divides; the fertilized ovum. More precisely, the cell after synapsis at the completion of fertilization until first cleavage. Also, used loosely to refer to the fertilized ovum and derivatives for an indefinite period, extending even to birth. Cf. *conceptus*. **duplex z.**, one possessing two identical genes for a given dominant character. **multiplex z.**, one possessing no gene for a given dominant character. **simplex z.**, one possessing only one gene for a given dominant character.

zygotene (zi'go-tēn) [Gr. *zygōtos* yoked together] the synaptic stage of the first meiotic prophase in which the two leptotene chromosomes undergo pairing by the formation of synaptonemal complexes to form a bivalent structure. See also *diplotene*, *leptotene*, and *pachytene*. Called also *amphitene*.

zygotik (zi-got'ik) pertaining to a zygote.

zygotoblast (zi-go'to-blast) [*zygote* + Gr. *blastos* germ] sporozoit.

zygotomere (zi-go'to-mēr) [*zygote* + Gr. *meros* part] sporoblast.

zylonite (zi'lo-nit) [Gr. *xylon* wood] xylonite.

Zyloprim (zi'lo-prim) trademark for a preparation of allopurinol.

zymase (zi'mās) [Gr. *zymē* leaven + *-ase*] 1. an enzyme. 2. the intracellular enzyme of yeast by which alcoholic fermentation is produced; called also *Buchner's z*.

zymasis (zi'mah-sis) the excretion of the active substance of yeast by hydraulic pressure.

zyme (zim) [Gr. *zymē* leaven] 1. enzyme. 2. any pathogenic agent that produces a zymotic disease.

zymic (zi'mik) pertaining to enzymes.

zymin (zi'min) 1. a pancreatic extract prepared for therapeutic use. 2. zyme.

zymo- [Gr. *zymē* leaven] a combining form denoting relationship to an enzyme, or to fermentation.

Zymbacterium (zi'mo-bak-te're-um) [Gr. *zymē* leaven + *baktērion* little rod] a genus of microorganisms of the family Propionibacteriaceae, order Eubacteriales, non-spore-forming, anaerobic to microaerophilic, gram-positive bacilli, nonpathogenic but occurring as parasites in the intestinal tract.

zymochemistry (zi'mo-kem'is-tre) the chemistry of fermentation.

zymoexcitator (zi'mo-ek'si-ta'tor) any substance which serves to convert zymogens into their enzymes. Cf. *kinase*, def. 2.

zymoexciter (zi'mo-ek-si'ter) zymoexcitator.

zymogen (zi'mo-jen) [*zymo-* + Gr. *gennan* to produce] an inactive precursor that is converted to active enzyme by the action of acid, another enzyme, or by other means. Called also *pre-enzyme* or *proenzyme*. **lab z.**, an enzyme in the stomach that is transformed into rennin by acids of the gastric juice.

zymogenesis (zi'mo-jen'ē-sis) the formation of an enzyme from a zymogen.

zymogenic (zi'mo-jen'ik) 1. causing a fermentation. 2. pertaining to a fermentation.

zymogenous (zi-moj'ē-nus) zymogenic.

zymogic (zi-moj'ik) zymogenic.

zymogram (zi'mo-gram) a graphic representation of enzymatically active components separated electrophoretically.

zymohexase (zi'mo-hek'sās) an enzyme that catalyzes the splitting of fructose 1,6-diphosphate into dihydroxy acetone phosphate and phosphoglyceric aldehyde; said to be increased in tumor-bearing animals.

zymohydrolysis (zi'mo-hi-drol'i-sis) zymolysis.

zymoid (zi'moid) [*zymo-* + Gr. *eidos* form] 1. resembling an en-

zyme. 2. any poison derived from a decaying tissue that has lost its power of decomposing the substratum, but not its power of uniting with it.

zymolysis (zi-mol'i-sis) [zymo- + Gr. *lysis* dissolution] fermentation or digestion by means of an enzyme.

zymolytic (zi'mo-lit'ik) pertaining to, characterized by, or promoting zymolysis.

Zymomonas (zi'mo-mo'nas) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as rod-shaped or ellipsoidal cells in fermenting beverages. It includes two species, *Z. anaero'bia* and *Z. mo'bilis*.

Zymonema (zi'mo-ne'mah) [zymo- + Gr. *nēma* thread] a name formerly given a genus of fungi. *Z. al'bicans*, *Candida albicans*. *Z. capsula'tum*, *Z. dermatit'idis*, *Z. gilchris'ti*, *Blastomyces dermatitidis*. *Z. farcimino'sum*, *Histoplasma farciminosus*.

zymophore (zi'mo-för) [zymo- + Gr. *phoros* bearing] the group of atoms in the molecule of an enzyme which is responsible for its specific effect; the active site of an enzyme.

zymophorous (zi-mof'o-rus) pertaining to the zymophore; responsible for the specific action of an enzyme.

zymophosphate (zi'mo-fos'fāt) hexosephosphoric acid occurring in yeast; it may accumulate in large amounts.

zymoprotein (zi'mo-pro'te-in) any of a class of proteins having catalytic powers. They include catalase, chymase, papain, pepsin, peroxidase, and urease.

zymosan (zi'mo-san) a mixture of polysaccharides, proteins, and ash, of variable concentration, derived from the cell walls, or the entire cell, of yeast, commonly *Saccharomyces cerevisiae*. It is anticomplementary, absorbing the C3 component of complement, and is used in assaying properdin.

zymoscope (zi'mo-skōp) [zymo- + Gr. *skopein* to examine] an apparatus for determining the zymotic (fermentative) power of yeast.

zymose (zi'mōs) invertin.

zymosis (zi-mo'sis) [Gr. *zymōsis* fermentation] 1. fermentation.

2. the development of any zymotic disease; the propagation and development of an infectious disease, known by the growth of bacteria and their products. 3. any infectious or contagious disease. *Z. gas'trica*, a condition marked by the formation of organic acids in the stomach, due to the action of yeasts.

zymosterol (zi-mos'ter-ol) mycosterol; a sterol, C₂₇H₄₄O, occurring in fungi and molds, which is second to ergosterol in abundance in yeast fat.

zymosthenic (zi'mos-then'ik) [zymo- + Gr. *sthenos* strength] increasing the activity of an enzyme.

zymotic (zi-mot'ik) 1. caused by or pertaining to zymosis. 2. a zymotic disease.

zymurgy (zi'mer-je) [Gr. *zymē* leaven + *ergon* work] (*obs.*) the art of brewing, distilling, and winemaking; the branch of chemistry that deals with the commercial application of fermentation.

zytase (zi'tās) an enzyme that changes xylan to xylose.

Zz. abbreviation for *L. zin'giber*, ginger.

Z.Z.'Z." increasing degrees of contraction.
